The island of Brava, or the Savage, or the Desart Island, is about four leagues to the south-west of Fuego. There are two or three small islands to the north of it. The best harbour lies on the south-east side of the island, where ships may anchor next to the shore in fifteen fathom water. There is an hermitage and an hamlet just above the harbour. On the west side of the island there is a very commodious road for such ships as want to get water.

SECT. XI.

Of the Canary Islands, particularly those of LANCEROTA, and FUERTEVENTURA; their Situation, Climate, Soil, Productions, Animals, &c.

THE Canary Islands, or, as they were antiently called, the Fortunato Islands, lie in the Atlantic ocean, near the continent of Africa, between the twenty-seventh degree thirty minutes and the twenty-ninth degree north latitude, and between the twelfth and seventeenth degrees fifty minutes west longitude from London. A judicious traveller observes, that on sailing four hundred and fifty miles to the south west, from the mouth of the straits of Gibraltar, along by the coast of Fez and Morocco, on the Atlantic ocean, we arrive at the south-west extremity of Mount Atlas; then leaving the land, and sailing into the ocean, directly west one hundred and sixty miles, we come to the island of Lancerota, the best of the Canary Islands in that course; the rest of these islands lie all to the west and south of Lancerota. The principal of the Canaries are seven in number; these are Lancerota, Fuerteventura, Canaria, Teneriff, Gomera, Hierro, or Ferro, and Palma, all of which lie from east to west, in the order in which they are here placed, and the last is about sixty-five leagues distant from the first. There are six more round Lancerota, namely, Graciosa, Rocca, Alegranza, Santa Clara, Infierno, and Lobos; but as these are not much better than rocks, navigators or geographers have not taken much notice of them.

John de Betancourt, a Frenchman, in the service of the king of Castile, discovered these islands in the year 1417, since which time they have been subject to the crown of Spain: he also subdued Fuerteventura and Lancerota, as others after him did the rest, from that time to the year 1496. In the days of Ferdinand, king of Castile, and Alphonso V. of Portugal, each of them claimed a right to the other's dominions, and assumed each other's titles, so that at length there ensued a bloody war between the Spaniards and the Portuguese, till both sides being spent, a peace was concluded in 1479, at Alcobazas, on the 4th of September, by which they reciprocally renounced their pretensions; and it was therein stipulated, that the Canary Islands should entirely belong to the crown of Castile, and the commerce and navigation of Guiney to that of Portugal exclusively.

The island of Lancerota is about fifteen miles long, and ten broad, and the center of it is in twenty nine-degrees eight minutes north latitude. It is very high, and may be discovered at a great distance; it appears, on approaching it, to be black, rocky, and barren.

Porto de Naos, on the south-east side of the island, is the principal harbour, and any vessel that does not draw above eighteen feet, may enter at high water, and be secure from all winds and weather; yet, in sailing along the coasts, the ships appear as if at anchor in an open road; for the harbour is formed by a ridge of rocks, which at a small distance cannot be perceived, as most of them lie under water; these breaking off the swell of the sea, the inside is perfectly smooth. This being the only convenient place among the Canary Islands for cleaning and repairing large vessels, it is much frequented for that purpose by the ships that trade to these islands. At the west end of the harbour is a square castle built of stone, and mounted with some cannon, but is of no great strength, as ships of war may approach it within musquet shot. There are some magazines at this port, in which corn is deposited for exportation, but here is no town or village.

A spacious harbour, called El Rio, is at the north end of Lancerota: this serves as a channel for dividing the island of Lancerota from the uninhabited island of Graciosa; and ships of any burthen may pass through it. That part of Lancerota which faces this harbour, is an exceeding high and steep cliff, from the bottom of which the shore is about two musket shot distant. The ground here is low, and in it is a salt-work, which is a square piece of land levelled, and divided by shallow trenches, about two inches deep; they let the sea-water into them, which is soon turned into salt, by the heat of the sun, and the nature of the soil. There is no other way of access into Lancerota, from the shore of this harbour, than by climbing up a narrow, steep, and intricate path, that leads to the top of the cliff, and it is scarce possible for a stranger to ascend it without a guide; for he would be in great danger of falling to the bottom should he wander from the path, which it would be difficult to regain.

On this island there are only two towns; one called Cayas, or Rubicon, which is situated about two leagues to the north-west of Porto de Naos, and may be termed the capital of the island, since it was formerly a bishop's see; but it contains only about two hundred houses, most of which have a mean appearance, an old castle mounted with some guns, a church, and a convent of friars.

The town of Haria, the next in size to Cayas, stands about two leagues within land, to the southward of the narrow part of the cliff at El Rio. All the buildings, except the church and three or four private houses, are very mean structures. The town contains about three hundred inhabitants.

Gracioſa lies on the north side of Lancerota. This island is barren, uninhabited, and destitute of water, though it is about three miles in length, and two in breadth.

The island of Fuerteventura is about eighty miles in length, and about fifteen in breadth. It belongs to the lord of Lancerota, and is about twenty-four leagues distant from Grand Canaria. The north end of this island lies about seven miles south and by west from the south-west point of Lancerota, and in the channel between them is the little uninhabited island of Lobos, or seals, which is about a league in circumference. The middle of Fuerteventura is narrow and low, being almost cut in two by the sea. That part of the island on the south-side of the isthmus is mountainous, sandy, barren, and almost uninhabited; but the northern part is also mountainous, yet it is fertile and well peopled within land.

There are several bays and harbours in this island, and three small towns, one of which, called Oliva, is situated somewhat less than two leagues within land from the road of Lobos, in the midst of a plain that abounds with cornfields. Here is a church and about fifty good houses.

The next town is La Villa, which is the chief in the island, and is situated in the centre of that part which lies north of the isthmus, and has a church, a convent of Franciscan friars, and near one hundred houses.

Here is also a town called Tunche, which contains about one hundred houses; but they are very mean, when compared with those of La Villa and Oliva.

Besides the above, there are many small villages scattered up and down in the northern and inland parts of the island, which stand extremely thick together.

A remarkable circumstance relating to these islands, is, that when there is a strong westerly wind, the sea breaks on the rocks, at the north-west end of Lobos, with such violence, as to strike the beholders with terror. "I may without exaggeration affirm, (says a gentleman who travelled to these parts) that I have seen breakers there near sixty feet high: were one of these to strike the strongest ship, she would be staved to pieces in a moment. When I saw those mighty breakers, our ship had just passed through the channel between Fuerteventura and Lobos: we had a fine brisk trade wind at north-north-east; and though we had no less than ten fathom water when we came into the westerly swell, yet we trembled for fear the waves would have broken, and thought ourselves happy when we got out of soundings. After we had passed these breakers six or seven leagues, we heard the noise of them like distant thunder."

We shall now give an account of the climate, soil, vegetables, and animals, &c. of Lancerota and Fuerteventura.

These islands have both of them the advantage of a wholsome climate, which perhaps is owing to the dryness of the soil, and the strong northerly winds that almost continually blow; whence the inhabitants in general live to a great age. From the middle or end of April, to the beginning or middle of October, the wind blows violently, and almost without intermission, from the north and north-east. From the middle of October, to the end of April, it most commonly blows in the same direction; but sometimes intermits, and gives place to other winds. The south-west wind always brings rain, and therefore is most welcome. Other winds, particularly the north-west, bring showers, but these are partial, and of short duration: but the rain which comes from the south-west frequently lasts two or three days. When these rains begin to fall, the natives sow their grain, and about fourteen or twenty days after the latter rains, that is towards the end of April, it is ready for reaping. The north, and north-north-east winds blow so hard and constantly, as to prevent the growth of all sorts of trees, especially in Lancerota, which is most exposed to their violence: yet we find there a few shrubs called tubaybas, which never grow to a great height any where; but here spread along the ground, except when sheltered from the wind by rocks and walls. In the gardens are fig-trees, or some low trees, or shrubs, which seldom shoot up higher than the walls of the garden.

This island, being less exposed to the wind than Lancerota, is not quite so bare of trees and shrubs, and produces the palm, the wild olive, and a sort of wild pine; also cotton and euphorbium shrubs, the shrub which bears the prickly pear, and fig-trees.

These islands though destitute of trees, abound in excellent herbage, and several kinds of odoriferous flowers. The great plenty and variety of these induced the inhabitants to bring bees from the other islands in order to propagate here; but they were disappointed; for none of those insects would remain with them, they not being able to bear the violent winds that prevail here.

Various kinds of corn grow in both these islands, as wheat, barley, and maize, which are produced in such abundance, as not only to serve the inhabitants, but also those off Teneriff and Palma, who depend greatly on these islands for their sustenance. No vines were produced at Lancerota till within thirty years past, when a volcano breaking out, covered many fields with ashes, which have so improved the soil, that vines are now planted and yield grapes; but the wine made from them is thin, poor, and so sharp as to resemble vinegar, yet is very wholsome. A greater quantity of wine, and of a quality something superior to that of Lancerota, is produced here.

On the sea coast grows a great quantity of orchilla-weed, an ingredient used in dying. It grows out of the pores of the rocks, to about three inches, and sometimes eight or ten inches. It is of a round form, and of the thickness of common sewing twine; it is of a grey colour, inclining to white, and on the stalk are white spots. Many stalks proceed from the root, at a distance from which they divide into branches. This weed dyes a beautiful purple, and is also much used for brightening and enlivening other colours. The best sort is that of the darkest colour, and of a form exactly round: the more it abounds with white spots or scabs, the more valuable it is. This weed also grows in the Madeira and Cape de Verd islands, and on the coast of Barbary; but the best sort, and the greatest quantity is found in the Canary islands. There is some reason to believe, that the orchilla was the getulian purple of the antients; and in support of this opinion, it is observed, that the coast of Africa adjacent to the Canary islands was called by the antients Getulia, and abounds with orchilla-weed.

Few springs or wells are in Lancerota. The inhabitants use for themselves and cattle rain water, which they preserve in pits and cisterns. This is also practised in Fuerteventura, though they have more springs and wells; but the water is generally brackish. At El Rio, to the northward of the salt works mentioned in the last section, is a well of medicinal water, esteemed a sovereign cure for the itch. It is also good for common drinking, and will keep sweet at sea for a considerable time.

Camels, horses, asses, bullocks, sheep, goats, and hogs are found here, all of which, except the sheep and goats, were brought from Barbary and Spain, since the conquests of these islands by the Spaniards. The horses are of the Barbary breed, and are much esteemed in Canaria and Teneriff, for their spirit and swiftness; but the natives of those two islands we are now describing have little or no use for them, on account of their having no great distance to travel, and therefore little care is taken to increase the breed; whence their number is at present very small. The natives use for travelling asses of a larger size than those of the other islands, which serve well enough for their short journies, and require little expence to keep them.

Their cattle, being fat and good, appear in the spring plump, sleek, and glisten as if rubbed with oil; but in the beginning of autumn, when all the grass is either withered or eaten up, they have a very different appearance, and are unfit for eating.

They generally plow here with a camel, or a couple of asses, for the soil is light, and they do not plow deep in the ground.

The want of trees or bushes occasions a scarcity of birds and wild fowl; yet there are some canary birds, and a bird called tubayba, about the size of a starling, speckled black and white. Here are likewise partridges and ravens, with plenty of dunghill fowls; but neither turkies, geese, nor ducks; the want of the two last species may probably be owing to the scarcity of water.

The black spider is the only venomous animal here, the bite of which the natives say occasions a swelling, at-

tended with a burning pain. Their cure for it is to eat a ſmall quantity of human ordure.

The inhabitants catch great quantities of fiſh of various kinds on the ſea coaſts of theſe iſlands, particularly a kind of cod, much better taſted than that of Newfoundland, or of the north ſea. Another fiſh of a ſtill more excellent taſte is caught here, called mero: it is as long as a cod; but much thicker, and has long ſtraps or whiſkers hanging at its mouth. There are many other ſorts of fiſh, for which they have no name; one of them however ought not to be omitted; this is the picudo or ſea pike, the bite of which is as poiſonous as that of a viper: yet when this fiſh is killed and dreſſed, it is good and innocent food. There are many ſhell-fiſh, and particularly limpets on the rocks by the ſea-ſhore.

In both theſe iſlands are many hills that were formerly volcanoes, the tops of which are of a ſmall circumference, and are hollow for a little way downwards; the edges of the tops being uſually narrow and ſharp, and on the outſide is generally ſeen a great deal of black duſt and burnt ſtone like pumice-ſtone, only darker and more ponderous. No eruptions have been known to happen for ſeveral ages, except that already mentioned at Lancerota, which about thirty years ago broke out on the ſouth-weſt part of the iſland, throwing out ſuch an immenſe quantity of aſhes and huge ſtones, and with ſo dreadful a noiſe, that many of the inhabitants leaving their houſes fled to Fuerteventura; but ſome time after, finding that thoſe who had ventured to ſtay had received no hurt, they took courage and returned. This volcano was near the ſea, in a place remote from any habitation. At a ſmall diſtance from the volcano a pillar of ſmoke iſſued from the ſea, and afterwards a ſmall pyramid rock aroſe, and ſtill continues. This rock was joined to the iſland by the matter thrown out of the volcano. The noiſe of this eruption was ſo loud, that it was heard at Teneriff, which ſtands at the diſtance of forty leagues; which was probably occaſioned by the winds generally blowing towards it from Lancerota.

With reſpect to the manners and cuſtoms of the ancient inhabitants of Lancerota and Fuerteventura, hiſtorians have furniſhed us with the following particulars; namely, That the people were in thoſe times of a larger ſize and better made than thoſe of the others, and ſo they are to day. The dreſs of the natives of Lancerota was made of goat-ſkins ſewed together, reached down to the knees, and was formed like a cloak with a hood. The ſeams of this habit were neatly ſewed with ſlender thongs of leather, which were as fine as common thread. Thoſe thongs they prepared with ſharp flints or ſtones, inſtead of knives or ſciſſars. They wore bonnets made of goats ſkins, with three large feathers ſtuck in the front. The women wore the ſame, with a fillet of leather dyed red with the bark of ſome ſhrubs. They had long hair, and wore their beards plaited. Their ſhoes were alſo of goats-ſkin, with the hairy ſide outwards. The king of the iſland wore a diadem like a biſhop's mitre, made of goat's leather, and adorned with ſea-ſhells.

Theſe people ate their victuals out of veſſels made of clay hardened by the heat of the ſun. Their food was barley-meal roaſted, which they called goſſio, and goat's fleſh boiled and roaſted; alſo milk and butter.

If any of them were ſick, which ſeldom happened, they cured themſelves with the herbs that grew in the country; and when they had acute pains, they ſcarified the part affected with ſharp ſtones, or burnt it with fire, and then anointed it with goat's butter. When any one died, they laid him between goat's ſkins in a cave, ſtretching out the body.

When they ſowed their land with barley, which was their own grain, they turned it up with goat's horns: the corn they threſhed with ſticks, winnowed it with their hands, and ground it with a hand-mill made of two ſtones. Their method of lighting a fire was by taking a ſtick of dry, hard, thorny wood, which they cauſed to turn rapidly round on the point, within a ſoft, dry, ſpongy thiſtle, and ſo ſet it on fire: and this method has been uſed to this day.

Each of theſe iſlands was divided into a certain number of lordſhips, and ſeparated one from another by a wall of looſe ſtones, that croſſed the iſland from ſea to ſea. Teneriff in particular, was ruled by nine different lords, or petty ſovereigns; and theſe had frequent wars with each other. But the inhabitants of theſe quarters had a great eſteem for the reſpective chiefs who governed them.

The inhabitants of both theſe iſlands were of humane, ſocial, and chearful diſpoſitions, extremely fond of ſinging and dancing. Their muſic was vocal, accompanied with a noiſe made by clapping their hands, and beating with their feet. They were remarkably nimble, and took great delight in leaping and jumping, which were their principal diverſions. Two men took a ſtaff, which they held by the ends, and lifted up as high above their heads as they could reach, keeping it parallel with the ground; and he who could leap over it was eſteemed very dextrous. Some of them were ſo active, that they could, at three leaps, bound over three poles placed in that manner behind each other. They alſo climbed up craggy rocks with amazing agility, and deſcended with equal eaſe. They frequently quarrelled, and then fought with ſticks a yard and an half long.

It was a cuſtom among them, that if a man entered the door of his enemy's houſe, and wounded or killed him, he was not puniſhed; but if he came upon him unawares, by leaping over the wall, and killed him, the captain, or chief, by whom the cauſe was tried, ordered him to be ſlain.

Their manner of executing criminals, was as follows: they carried them to the ſea-ſhore, and, placing their heads on a flat ſtone, took another of a round form, and with it daſhed out their brains. Their children were held infamous, after the parents had been thus puniſhed.

Theſe people were excellent ſwimmers, and uſed to kill the fiſh on their coaſts with ſticks. Their houſes were built of ſtone without cement, yet were ſtrong; and the entry was made ſo narrow, that only one perſon could paſs at a time. They had alſo houſes for worſhip and devotion; theſe were round, and compoſed of two walls, one within the other, with a ſpace between; and, like their dwelling-houſes, were built of looſe ſtones, with a narrow entry. They worſhipped only one God, and in theſe temples offered to him milk and butter. They adored him by lifting up their hands to heaven at their offerings on the mountains, at which they alſo poured out goats milk to him from earthen veſſels.

The dreſs of the inhabitants of Fuerteventura conſiſted of jackets made of ſheep-ſkins, with ſhort ſleeves that reached only to their elbows. They had ſhort breeches that left the knees bare, and ſhort ſtockings that reached but juſt above the calf of the leg. They dreſſed the hair of their heads and beards like the natives of Lancerota, wore the ſame ſort of ſhoes, and had high caps on their heads made of goat-ſkins.

With reſpect to the preſent inhabitants of theſe two iſlands, though they paſs for Spaniards, they are ſprung from a mixture of the antient inhabitants with the Normans and other Europeans, by whom they were ſubdued; and from ſome Mooriſh captives, whom the Spaniards had brought from the coaſt of Barbary to theſe iſlands.

The natives are generally tall, robuſt, ſtrong, and of a very dark complexion; but thoſe of the other iſlands account them rude and unpoliſhed in their manners and behaviour.

They neither ſpeak nor underſtand any other language but the Caſtilian, which they pronounce moſt barbarouſly. They dreſs coarſely, and after the Spaniſh faſhion; for the ſhort cloak and gobilla, formerly uſed by the Spaniards, are unknown here.

They build their houſes in general of ſtone and lime: thoſe belonging to the gentry are covered with pantiles; but the meaner ſort thatch theirs with ſtraw. They generally pave the floors with flag-ſtones. Few even of the better kind, have either cielings or lofts; but they are built in the form of large barns, and divided into apartments by boarded partitions that riſe no higher than the walls; ſo that all the rooms are open above, and have no other covering than the roof.

A diſh called goſſio, is the uſual diet of the peaſants: this is the flour of wheat, or barley, well heated by the fire, which they make into dough with water, and then eat it, without either knives, forks, or ſpoons, which are not wanted. They ſometimes make it up with their hands in balls or lumps, which they dip in honey or molaſſes; and, during the winter, when graſs is in perfection, and they have plenty of excellent milk, they put the goſſio into it, uſing ſea-ſhells inſtead of ſpoons. They alſo prepare goſſio by putting it into boiling milk, and ſtirring it about till it is ſufficiently boiled and thickened. On particular occaſions, ſuch as feſtivals and weddings, the poor eat fiſh and fleſh: but bread is rarely uſed by any but the gentry, and there are ſome people in thoſe iſlands who have never taſted it. Water is their uſual liquor, as they ſeldom drink any wine.

Few of the men in Lancerota and Fuerteventura, are artificers; for almoſt all their cloaths are made by the women,

women, and their houſhold furniture is brought from the other iſlands. The peaſants are employed in tilling the ground, ſowing, reaping, and other parts of huſbandry.

The claſs of people deemed gentry in theſe iſlands, are ſo averſe to leaving their country, and have ſo little curioſity, that few of them viſit Spain, or even Canaria, except when obliged to attend their law-ſuits in that iſland. A gentleman who poſſeſſes a few acres of land, a camel, a couple of aſſes, and a dozen ſheep, would chuſe rather to live all his days on goſſio, than venture to the Spaniſh Weſt-Indies, in order to better his fortune by trade, which, in his opinion, would diſgrace him and his family for ever; yet he will, without ſhame, oppreſs the poor peaſants, and deceive ſtrangers, in order to ſupport his imaginary rank, which, among the middling ſort, conſiſts wholly in not working, and riding a little way on an aſs, attended by a ragged ſervant.

The religion of the church of Rome is the only one profeſſed here; but there are but few monks, and no nuns among them: they are, however, in no want of prieſts, for there are ſeveral pariſh-churches, and an inferior court of inquiſition in each iſland, in order to prevent hereſy.

Though all the Canary iſlands are ſubject to Spain, yet the natives of the two we are now deſcribing, with thoſe of Gomera and Hierro, do not hold their lands of the crown, but of the family of Don Diego de Herrera, who conquered the iſland of Canaria. The chief part of the power originally poſſeſſed by the proprietors of theſe iſlands has been, however, taken from them, and annexed to the crown, probably on account of their making an ill uſe of ſuch an extenſive authority.

The government is now veſted in an alcalde major and a ſargento major, alſo called governador de las armis. The firſt is the head of the civil, and the other of the military government. There is an appeal from the deciſion of the alcalde major to the royal audience in the iſland of Canaria; and the ſargento major receives his orders from the governor-general of the Canary Iſlands, who uſually reſides in Teneriff. No ſtanding forces are kept here; but there is a militia properly regulated and divided into companies, to each of which is a captain, lieutenant, and enſign. The ſargento major is colonel, and takes care that their arms are kept in order, and that the companies may be raiſed at a ſhort notice.

Theſe iſlands, though but little eſteemed by the Spaniſh government, are really of great value; for were they once ſubdued by any other nation, Palma and Teneriff would fall of courſe, on account of their depending on Lancerota and Fuerteventura for their corn. Beſides, the forts in Lancerota would afford convenient retreats, where the cruiſing ſhips of an enemy might careen, and be ſupplied with proviſions and water.

The commodities exported from hence are entirely confined to the other iſlands, and conſiſt of wheat, barley, maize, cattle, fowls, cheeſe, orchilla wood, goats ſkins, and ſalt fiſh; but the two laſt are only exported from Lancerota. The wheat is ſmall grained, but hard, clean, and ſo good, that it always ſells at Teneriff at a higher price, by one-fifth, than either Engliſh or other European wheat. About ten years ago a number of camels were exported from Fuerteventura to Jamaica, and other parts of the Engliſh Weſt-Indies; but this trade was ſoon prohibited, for fear of loſing the breed, or at leaſt raiſing the price of thoſe animals to the natives.

The Spaniards having brought aſſes to Fuerteventura, they increaſed ſo faſt, that they ran wild among the mountains, and were ſo prejudicial to the natives by eating their corn and other grain, that in the year 1591, they aſſembled all the inhabitants and dogs in the iſland, in order to deſtroy them; and accordingly killed no leſs than fifteen hundred. Since that time there have been no more in the iſland than is ſufficient to ſupply the wants of the natives.

We before obſerved that they impoliticly prohibit the exportation of corn to any place except the other iſlands; whence in a year of great plenty it becomes of ſo little value, as ſcarcely to pay the expence of cutting it down. Hence they are very indifferent about raiſing more than what they can conſume themſelves, or ſell in the other iſlands; ſo that in a bad year the people ſtarve for want, eſpecially the inhabitants of Teneriff, unleſs they are ſo happy as to be ſupplied from Europe with that neceſſary article.

Moſt of the imports are from the other iſlands, eſpecially from Teneriff, which is the centre of trade for all the Canary Iſlands. Theſe conſiſt in Engliſh woollen goods, and German linens, both of the coarſeſt kinds, wine, brandy, oil, fruit, planks, and other timber, barks and fiſhing-boats, houſehold furniture, tobacco, ſnuff, bees-wax, ſoap, candles, and a conſiderable quantity of caſh, which they receive in the balance of trade, part of which is paid to the proprietors of the lands, and the reſt ſent to Grand Canaria, to ſupport the expence of their law-ſuits; the natives of all the Canary Iſlands being generally extremely litigious and quarrelſome.

SECT. XII.

Treating of the Iſland of GRAND CANARIA, both with reſpect to its Antient and Modern State.

THE iſland of Grand Canaria is greatly ſuperior to the reſt of theſe iſlands, not only on account of the delightful temperature of the air, and the plenty of good water, trees, herbs, and delicious fruits found upon it, but by reaſon of its being the ſeat of juſtice, and government for them all; ſo that the name of the Fortunate Iſland may juſtly be aſcribed to it.

From the traditions of the natives concerning this iſland, we are informed, that ſome time before the conqueſt of it by the Europeans, Canaria was governed by ſeveral petty ſovereigns, amongſt whom Antidamana, the queen of a moſt fertile diſtrict of the iſland, was celebrated for her wiſdom, equity, and eloquence; ſo that ſhe became revered by the people of the other diſtricts, and was appealed to as the general arbitrator of their differences. Her great influence, however, gave umbrage to, and raiſed the jealouſy of the other ſovereigns, who employed their utmoſt efforts to prejudice the Canarians againſt her, and repreſented, that it was ſcandalous for men to ſubmit their reaſon to the voice and deciſion of a woman, when they might have their cauſes decided in proper courts, and tried before competent judges, as their anceſtors had always done before them.

Theſe inſinuations anſwered the purpoſes for which they were deſigned, and the queen found her influence gradually decreaſe. This piqued her ſo much, that ſhe determined to give her hand to Gumiduff, a brave and popular officer. The nuptials were no ſooner performed, than the queen inveſted her huſband with half her power, and made him ſole commander of her army. Having put himſelf at the head of the troops, he ſucceſſively attacked the other petty ſovereigns, conquered them with great rapidity, and brought all their dominions beneath his own ſway.

This prince left a ſon by Antidamana, who ſucceeded him as king of the whole iſland; and this ſon, at his death, left two ſons, between whom he equally divided his dominions. Theſe were, on their reſpective thrones, trying to maintain what their father had left them, and the depoſed petty ſovereigns were aiming to regain what they had loſt, at the time the Spaniards conquered the iſland; which event, at the ſame time that it united them in one general calamity, put a final period to all their inteſtine diſputes.

Canaria is about forty-two miles in length, twenty-ſeven in breadth, and a hundred and five in circumference, reckoning the length from the north-eaſt point ſouthward to the point Arganeguin, and the breadth from the port of Agaete, on the weſt ſide of the iſland, to that of Gando on the Eaſt.

The north-eaſt point of Canaria lies at the diſtance of eighteen leagues from the ſouth-weſt end of Fuerteventura, and in clear weather either of thoſe iſlands may be ſeen from the other.

Towards the centre of the iſland, is a number of lofty mountains, which riſe ſo far above the clouds, as to ſtop the current of the north-eaſt wind that generally blows here; ſo that when this wind blows hard on the north ſide of the mountains, it is either quite calm on the other, or a gentle breeze blows from the ſouth-weſt. The calms and eddy winds cauſed by the height of the mountains above the atmoſphere, extend twenty or twenty-five leagues beyond them to the ſouth-weſt. There are alſo calms beyond ſome of the reſt of the iſlands; for thoſe of Teneriff extend fifteen leagues into the ocean, the calms of Palma thirty, and thoſe of Gomera ten. Upon firſt coming to the calms, the waves appear foaming and boiling like a pot, breaking in all directions; and when a veſſel enters the verge of them, ſhe is ſhaken and beaten by the waves on all ſides in ſuch a manner, that one would imagine it impoſſible to withſtand them. This confuſion, however, does not laſt long; for after a ſhip is once fairly entered into the calms, ſhe will either find a dead calm, and ſmooth water,

water; or a pleaſant and conſtant breeze at ſouth or ſouth-weſt, according as the wind blows without; for this eddy wind, as it may be called, conſtantly blows in an oppoſite direction.

There is a peninſula at the north-eaſt end of Canaria, about two leagues in circumference, which is connected with the main land by an iſthmus about two miles in length, and a quarter of a mile in breadth at the narroweſt part. On each ſide of the iſthmus is a bay, which on the north ſide is expoſed to the ſwell of the ſea. That on the other ſide is called by ſome Porto de Luz, and by others Porto de Iſletes, from ſome ſteep rocks or iſlands at the entrance of the bay, towards the north-eaſt. This is a good road for ſhips of any burthen, with all winds, except the ſouth-eaſt; but that wind is not common, and rarely blows ſo hard as to endanger ſhips. The landing-place is at the bottom of the bay, where ſtands a hermitage, or chapel, dedicated to St. Catharine, and a caſtle of no ſtrength.

At three miles diſtance is the city of Palmas, the capital of the iſland, between which and the above caſtle are two other forts, mounted with guns; but they have no garriſons, except a few invalids. At the other end of the city is another caſtle, called St. Pedro; but neither of them are capable of ſtanding againſt a regular attack. Though the city of Palmas is of no ſtrength, it is pretty large, and contains ſeveral fine buildings, particularly the cathedral of St. Anne, with many churches, convents of friars of all orders, and nunneries. The private houſes are in general good, and built with ſtone. The city is divided into two parts, which have a communication by a bridge, thrown over a ſmall ſtream of water, and there are ſuppoſed to be ſix thouſand inhabitants.

The port of Gando is ſituated on the ſouth-eaſt part of the iſland, and the port of Gaete, or Agaete, on the north-weſt part of the iſland, which has a caſtle for its defence. The whole coaſt, except theſe ports, is generally inacceſſible to boats and veſſels, on account of the breaking of the ſea upon it. This indeed is the caſe of the ſhores of all the Canary Iſlands, particularly at the full and change of the moon, except thoſe of Lancerota and Fuerteventura. There are no inland cities or large towns in Canaria, though there are many villages, the chief of which are Telde and Galdar.

The fruits of Grand Canaria are melons, pears, apples, oranges, lemons, pomegranates, figs, peaches, battatoes, or Spaniſh potatoes. The plantain grows near the ſides of brooks, is very ſtrait in the body, and has ſurprizing thick leaves, which grow not on the branches, but at the extremities of the tree. Every leaf is almoſt ſix feet long, and almoſt two broad. The fruit grows on the branches, of which each tree hath but three or four. The fruit in ſhape reſembles a cucumber, and, when ripe, turns black, at which time it is one of the moſt delicious conſerves in the univerſe. The plantain tree will bear fruit but once, when it is cut down, and another tree ſprings from the ſame root; the cutting down is therefore repeated every ſeaſon, as ſoon as the fruit is gathered. As this iſland hath a ſalubrious air, and is well watered, almoſt every thing thrives that is planted, ſuch as the pine, palm, wild olive, laurel, poplar, dragon-tree, lera nueſſa, or lignum rhodium, the aloe ſhrub, Indian fig, or prickly pear. Beſides thoſe above-mentioned, they have all the American and European fruits, except the anana. They have alſo wheat, barley, and maize, potatoes, yams, the beſt onions in the world, cabbages and ſallads, and many kinds of roots.

The climate in this iſland is extremely delightful; for the heat in ſummer ſeldom exceeds what is generally felt in England in July and Auguſt, and the coldeſt part of the winter is not ſharper than with us about the end of May, in a backward ſeaſon. The ſame winds blow here at the ſame periods as at Lancerota and Fuerteventura; but the northerly wind is leſs furious, and compared with that, is only a gentle breeze that cools the air, ſo as to render it agreeably temperate; and the ſky is continually ſerene, and free from ſtorms and thunder.

The only diſagreeable weather is, when the ſouth-eaſt wind blows from the deſart of Zaara; but this does not often happen. Theſe winds, being very hot, dry and ſtifling, are of great prejudice to the fruits of the earth, by their pernicious quality, and by their bringing clouds, which devour every green thing they light upon. In the mountains, indeed, the air is not only cold in winter, but their ſummits are uninhabitable, from the great quantities of ſnow that fall upon them in that ſeaſon, but the air is exceedingly wholeſome below.

Notwithſtanding there is in Canaria more level and arable land than in any of the iſlands to the weſtward of it, yet that bears no proportion to the barren, ſtrong and rocky ground. The mountain of Doramas is the moſt fertile part of this iſland: it is ſituated about two leagues from the city of Palmas, and ſhaded by groves of fragrant trees of different kinds, whoſe lofty boughs are ſo interwoven as to exclude the rays of the ſun. The rills that water theſe ſhady groves, the whiſpering breeze among the trees, and the ſinging of the canary-birds, form a delightful concert.

A modern naturaliſt gives us the following account of this moſt beautiful ſinging-bird: "This bird was originally peculiar to theſe iſles, to which it owes its name; the ſame that were known to the antients by the addition of the Fortunate. On the ſame ſpot theſe charming ſongſters are ſtill to be found; but they are now ſo plentiful among us, that we are under no neceſſity of croſſing the ocean for them. In its native regions, the canary-bird is of a duſky grey colour, and ſo different from thoſe ſeen in Europe, that doubts have ariſen whether it be of the ſame ſpecies. Next to the nightingale, the canary-bird is conſidered as the moſt celebrated ſongſter; it is alſo reared with leſs difficulty than any of the ſoft-billed birds, and continues its ſong throughout the year."

We cannot give a very agreeable deſcription of the upper part of this iſland, which is entirely barren and deſolate; for as it projects far above the clouds, neither dew nor rain fall upon it, ſo that it is expoſed to a dry, parching wind, entirely different from the trade-wind below, which generally blows from the weſt. This weſterly wind blows hard in the night, but abates in the day.

The amazing quantity of calcined ſtones, aſhes, and lava, that cover the greateſt part of all the Canary iſlands, greatly diſfigure them. But though it does not appear that any volcano has burnt in Canaria, ſince the iſland was conquered by the Spaniards, nevertheleſs the apertures from whence combuſtible matter proceeded may be diſcerned in all quarters of this and the other iſlands, as may alſo the channels made by the fiery ſtreams that flowed from the volcanos.

Olives have been planted in this iſland; but no oil is made of the fruit, which does not come to ſuch perfection as in Spain, Barbary, and other countries. Formerly much ſugar was made here; but the great demand for the wines and brandies of this iſland in the Spaniſh Weſt Indies, ſtopped the culture of the ſugar cane, and the natives find it more to their advantage to receive the produce of their wines at the Havannah in ſugar, than to raiſe it in their own country. Canaria alſo abounds in honey, which is good, though of a black colour. The wine of this iſland, though of a very agreeable taſte, has not ſuch a body as that of Teneriff, and is therefore leſs fit for exportation, yet many pipes of it are annually ſent to the Spaniſh Weſt Indies.

Camels, horſes, aſſes, a few mules, bullocks, ſheep, goats, hogs, and rabbits, are among the animals of this iſland. The poultry are dunghill fowls, turkies, geeſe, ducks, partridges; there are alſo crows and canary-birds.

There does not appear to be any ſerpents, ſcorpions, or other venomous creatures here, except the ſpider of Lancerota, and a very innocent kind of ſnake peculiar to the iſland of Gomera; but lizards abound in this and all the other iſlands.

We ſhall now treat of the antient inhabitants of Canaria, their perſons, dreſs, manners, and cuſtoms, &c.

It appears, by the accounts of the firſt diſcoverers of Grand Canaria, that the original inhabitants amounted to upwards of 14,000 men capable of bearing arms; excluſive of women, children, aged perſons, &c. which muſt have rendered the iſland extremely populous; but ſome time after the firſt arrival of the Europeans there, a peſtilence ſwept away two thirds of the inhabitants. Theſe were of a dark complexion, like the natives of Lancerota and Fuerteventura, of a good ſtature, and well proportioned, active, warlike, chearful, good-natured, and faithful to their promiſes; for they conſidered a lie as one of the greateſt crimes. They were fearleſs of dangers, and fond of hazardous enterprizes, ſuch as climbing to the tops of ſteep precipices, and there fixing poles of ſo great a weight, that one of them was of ſufficient burden for a man of common ſtrength to carry on level ground; and with theſe they would leap from one rock to another.

Their dreſs was a ſhort tight coat, with a hood to it like that of a Capuchin friar; it reached to the knees, and was faſtened to the waiſt by a leathern girdle. This garment was made of a kind of ruſh, which they beat

till it became ſoft like flax, and then they ſpun and wove it. Over this they had a goat-ſkin cloak, with the hairy ſide inward in winter, and outward in ſummer. They had likewiſe caps made of the ſkins of the heads of goats, taken off almoſt entire, which they formed in ſuch a manner that a goat's beard hung under each ear, and theſe they ſometimes tied under the chin. Some had bonnets of ſkins, adorned with feathers. Theſe garments were all neatly ſewed and painted, and were in every reſpect much more curious than thoſe of the natives of the other iſlands. Some of them wore ſhoes made of raw hides, the workmanſhip of which was very neat, and others went barefooted.

The noble or ſuperior rank of the Canarians had an external mark of diſtinction from thoſe of the vulgar or lower claſs, which was by the cut of their hair and beards; but a man could not be entitled to this honour, merely from his being the offspring of noble or rich parents; but was to be declared noble by the faycag, a perſon whoſe buſineſs it was to decide diſputes among the natives, and regulate the ceremonies of their religion; in ſhort, he was a prieſt, and acted alſo as a judge in civil affairs.

The manner in which nobility was conferred was very ſingular. At a particular time of life, the ſon of a nobleman let his hair grow long; and when he had obtained ſufficient ſtrength to endure the fatigues of war, went to the faycag and ſaid "I am the ſon of ſuch a nobleman, and deſire alſo to be ennobled." Upon this the faycag went to the town or village where the young man was brought up, and there aſſembled all the nobles, and other perſons of the place, whom he cauſed ſolemnly to ſwear by their god Acoran, to declare the truth. He then aſked them if they had ever ſeen the youth ſo far demean himſelf as to dreſs victuals, or to go into the folds to look after the ſheep or goats, and whether he was ever ſeen to milk or kill them? If he was ever known to ſteal cattle, or forcibly take them in time of peace from their owners? Whether he was ever diſcourteous, of a ſlanderous diſpoſition, or guilty of any indecent behaviour, eſpecially to women? If they all anſwered theſe queſtions in the negative, the faycag cut the youth's hair in a round form, ſo ſhort as not to hang below his ears, and giving him a ſtaff, declared him noble. But if any of the ſtanders by could charge him with any of the offences mentioned by the faycag, and bring ſufficient proof of them, inſtead of being declared noble, the faycag ſhaved his head, and ſent him away in diſgrace, by which means he was rendered incapable of nobility.

They eſteemed it baſe and mean to moleſt or injure the women and children of the enemy taken priſoners in war, whom they conſidered as weak and helpleſs, and therefore improper objects of their reſentment; nor did they offer the leaſt damage to the enemy's temples.

The antient Canarians uſed clubs and ſharp-pointed poles hardened by fire; but after the Europeans began to invade their iſland, they formed ſhields in imitation of theirs, and ſwords of pitch-pine, the edges of which were hardened by fire, and ſharpened in ſuch a manner, that it is ſaid they cut like ſteel; but their chief ſtrength lay in their wooden ſpears, and their throwing ſtones with great force and ſkill.

They appointed public places for fighting, in which a kind of ſtages were raiſed for the combatants, that they might be more eaſily ſeen by the ſpectators. On a challenge being given and accepted, the parties went to the council of the iſland, which conſiſted of twelve members, for a licence to fight, which was eaſily obtained, and then they went to the faycag, to have this licence confirmed. Afterwards they aſſembled all their relations and friends, that they might be ſpectators of their bravery and ſkill, and with them repaired to the public place or theatre, where the combatants mounting on two ſtones flat at the top, and placed at the oppoſite ſides, threw ſtones at each other, which, though good markſmen, they generally avoided, merely by their agility in writhing their bodies, without moving their feet. When each had thrown three ſtones at his antagoniſt, they armed themſelves with a cudgel in their right hand, and a ſharp flint in their left, then drawing near, they beat and cut each other till they were tired, and then retired with their friends to take ſome refreſhment; but ſoon returning, fought till the twelve members of the council called out, Gama, gama, or Enough, enough, when they inſtantly deſiſted, and ever after remained good friends. If during the combat one of the parties happened to break his cudgel, the other inſtantly deſiſted from ſtriking, and the diſpute was ended in an amicable manner, though neither of the parties was declared victor. Theſe combats were uſually fought on public feſtivals, rejoicings, or the like occaſions; and if either of the combatants was deeply wounded, they beat a ruſh till it became like tow, and dipping it in melted goat's butter, applied it to the wound as hot as the patient could bear it; and the older the butter was, the ſooner they ſay a cure was affected.

There were alſo public houſes or rooms, in which they aſſembled to dance and ſing. The Canarian dance is ſtill in uſe in theſe iſlands; it has a quick and ſhort ſtep, and is called Canario. Their ſongs were either amorous ſonnets, ſet to grave and plaintive tunes, or ſolemn dirges.

They build their houſes of ſtone, without cement, which were nevertheleſs ſo neat and regular, that they made a handſome appearance. The walls were very low, and the floors ſunk beneath the level of the ground on which they ſtood, being ſo contrived for the advantage of warmth in the winter ſeaſon. At the top they laid wooden beams, or rafters cloſe to each other, and covered them with earth. Their beds and bedding were the ſkins of goats dreſſed in their hair. Their other furniture conſiſted of baſkets and mats of palm leaves, and ruſhes very neatly made.

They had people among them whoſe ſole employment was building houſes and making of mats. The women were generally employed in painting and dying; and in the proper ſeaſon they carefully gathered the flowers and ſhrubs from which they extracted their ſeveral colours. The thread they uſed in ſewing was made of the nerves and tendons of the loins of ſheep, goats, or ſwine, with which they were ſupplied by the butchers. Theſe they firſt anointed with butter, and then prepared by fire in ſuch a manner, that they could ſplit them into fine threads at their pleaſure. Their needles were of bone, and their fiſh-hooks of horn. The veſſels they uſed in cookery were made of clay, which they placed in the ſun to harden.

The Canarians (eſpecially the better ſort) would not follow the trade of a butcher; for that employment was reckoned ſo ignominious, that they would not allow one of that profeſſion to enter any of their houſes, or to touch any thing belonging to them. It was even unlawful for the butchers to keep company with any that were not of their profeſſion; and when they wanted any thing of another perſon, they were obliged to carry a ſtaff, and ſtanding at a conſiderable diſtance, point at what they wanted; but, to compenſate for this abject ſtate, the natives were obliged to ſupply the butchers with every thing they wanted. It was unlawful for any Canarian, except the butchers, to kill cattle; and when any perſon wanted his beaſt to be ſlain, he was forced to lead it to the public ſhambles, but was not permitted to enter himſelf; even women and children were ſubject to this prohibition.

Their common food was barley-meal roaſted, which they eat with milk or goat's fleſh; and when they made a feaſt, they dreſſed the latter with hog's lard or butter. They ground their barley with a hand-mill. When they went to plough their lands, about twenty people aſſembled together, each had a wooden inſtrument reſembling a hoe, with a ſpur at the end of it, on which they fixed a goat's horn: with this they broke the ground, and if the rain did not fall in its proper ſeaſon, they moiſtened the earth with water, which they brought by canals from the rivulets. The corn was gathered in by the women, who reaped only the ears; theſe they threſhed with ſticks, or beat out the corn with their feet, and winnowed it with their hands. Their wealth conſiſted chiefly in their ſheep, goats, and hogs.

The lower claſs of people by the ſea-coaſt, lived chiefly on fiſh, which they uſually caught in the night, by making a great light with torches of pitch-pine. In the day-time, whenever they perceived a ſhoal of ſardinas, a ſmall fiſh that has ſome reſemblance to a pilchard, a multitude of men, women, and children, went at a ſmall diſtance into the ſea, and ſwimming beyond the ſhoal, chaſed the fiſh towards the ſhore, and with a net, made of a tough kind of ruſh, incloſed and drew them to land, where they equally divided their prize; but in doing this, every woman who had a young child, received a ſhare for each; or if ſhe happened to be pregnant, ſhe received the allowance of two perſons.

Theſe people had never more than one wife. When the parents were diſpoſed to marry their daughter, they fed her thirty days with large quantities of milk and goſſio; in order to fatten her; for they thought that lean women were leſs capable of conceiving children than thoſe who were

were fat, and that it was a bad omen for people to marry when lean.

The Canarians were very careful in the education of their children, and never failed to chaſtiſe them when they did amiſs. It was uſual to propoſe two of the youth as examples to the reſt, the one of virtue, the other of vice; and when a child did any thing that was praiſe-worthy, he was commended, and told that ſuch behaviour was amiable, and reſembled that of the good boy. On the other hand, when a child diſpleaſed its parents, they obſerved that ſuch an action reſembled thoſe of the perſon ſet up as a bad example. By this means they raiſed a ſpirit of emulation for excelling in virtue.

There were religious women, called Magadas, among the Canarians, a number of whom lived together in one houſe, or convent, of which there were many in Canaria; and theſe were held ſo ſacred, that criminals who fled to any of them were protected from the officers of juſtice. The Magadas maintained, that Acoran, their god, dwelt on high, and governed every thing on earth; and when they addreſſed him, lifted up their joined hands to heaven. Theſe women were diſtinguiſhed from others by their long white garments, which ſwept the ground as they paſſed.

In this iſland are two rocks, to which the inhabitants, in times of public calamity, went in proceſſion, accompanied by the religious women, carrying in their hands palm branches, and veſſels filled with milk and butter, which they poured on the rocks, dancing round them, and ſinging mournful ſongs; from thence they went to the ſea-ſhore, and all at once ſhouting together with a loud voice, ſtruck the water with their rods.

Good government was maintained, and juſtice ſtrictly adminiſtered, among the Canarians. At the time of the conqueſt of the iſland, it was governed by two princes, each of whom had his ſeparate diſtrict; but before they were ruled by captains, or heads of tribes, who preſided over ſmall circles. The people of each tribe were confined to their own diſtricts, and not allowed to graze their flocks on the ground belonging to another tribe. For crimes of a leſs criminal nature they uſed the law of retaliation (an eye for an eye, and a tooth for a tooth); but ſuch crimes as deſerved death were puniſhed by daſhing out their brains with a ſtone, in the manner already related.

When any of the nobles died, they brought out the corpſe, and placing it in the ſun, took out his entrails, and buried them in the earth; then drying the body, they ſwathed it round with bandages of goat-ſkins, and fixed it upright in a cave, cloathed with the ſame garments which the deceaſed wore when alive; but if no proper cave was at hand, the body was carried to one of the ſtony places, now called Mal Paices, where, after they had levelled the ground, and fixed the looſe ſtones, they made a ſort of artificial cave of large ſtones placed ſo as not to touch the body, and then taking another large ſtone two yards in length, wrought into a round form, with this cloſed the entrance, and afterwards filled up the outſide between the top of the round ſtone and the outward part of the other large ones with ſmall ones, in a very neat manner.

All the corpſes, except thoſe placed upright in the caves, were laid with their heads towards the north. Some of their dead bodies were put into cheſts, and afterwards depoſited in ſtone ſepulchres. People of the lower claſs were interred in the Mal Paices, in holes covered with ſtones.

SECT. XIII.

Containing a Deſcription of the Iſland and Pike of TENERIFF; alſo of the Iſlands of GOMORA and PALMA; their Situation, Towns, Harbours, Climate, Produce, Inhabitants, &c.

THE iſland of Teneriff was antiently called Nivaria, from the ſnow that incloſes the neck of the pike of Teyda, like a collar; the name of Teneriff, or the White Mountain, being given it by the natives of Palma, in whoſe language Tener ſignifies ſnow, and iffe, white; the ſummit of the pike of Teneriff being always covered with ſnow; the preſent names it Vinchoni, but it was called Chineche by the natives.

Point Nago, or Anaga, which is the north-eaſt point of Teneriff, bears north-weſt about ſixteen leagues diſtant from the north-weſt part of Canaria; but from that part of Canaria to the neareſt part of Teneriff, the diſtances does not exceed twelve leagues.

This iſland is nearly triangular, the three ſides being almoſt equal, and each about twelve leagues long. In the center is the famous pike of Teneriff which is ſaid to be the higheſt hill in the univerſe, and ſtrikes the beholder with amazement, both near and at a diſtance: This great mountain extends its baſe to Garrachino; from whence it is two days and a half's journey to the top; but we ſhall treat more particularly of this in the ſequel.

In coming in with Teneriff, in clear weather, the pike may be eaſily diſcerned at a hundred and twenty miles diſtance; and in ſailing from it, at the diſtance of a hundred and fifty miles, it then reſembles a thin blue vapour, or ſmoke, very little darker than the ſky; and at a farther diſtance, the ſhade diſappearing is not diſtinguiſhable from the azure of the firmament. Before we loſe ſight of this towering mountain, it ſeems a conſiderable height above the horizon, though from its diſtance, and the ſpherical figure of the earth, the reſt of the iſland is ſunk beneath the horizon, notwithſtanding its being exceedingly high.

There are ſeveral high perpendicular rocks near Punto de Nago; and on the ſouth-eaſt ſide of the iſland, about five or ſix leagues diſtant from them, is the harbour of Santa Cruz, the moſt frequented part in the Canary iſlands. The beſt road for ſhips is about a mile to the northward; between the middle of the town and fort or caſtle, ſhips may lie here ſecure from all winds, though the bay is expoſed to thoſe which blow from the north-eaſt coaſts, and ſouth-eaſt, yet theſe winds do not blow ſo hard as to cauſe any conſiderable damage above once in the ſpace of four or five years. However, ſome years ago moſt of the ſhipping in the road were driven on ſhore by one of theſe gales. Some Engliſh ſhips were then in the harbour; but the crews prudently cutting away their maſts, rode out the ſtorm.

A mole, built at a vaſt expence, for the convenience of landing, is in the middle of the town. It runs up to the northward and the outermoſt part turns towards the ſhore. However, in mild weather, goods are landed at a creek among the rocks, at the diſtance of a ſtone's caſt to the ſouthward of the mole, and near the cuſtom-houſe.

In the way from the mole into the town, there is a ſquare fort on the left hand, named St. Philip's; this is the principal one in the bay. To the northward of is are ſome forts and batteries mounted with guns, the moſt conſiderable of which it named Paſſo Alto. Near it is a ſteep rocky valley, which begins at the ſea-ſhore, and runs a great way within land. There are ſeveral batteries at the ſouth end of the town, and beyond them, cloſe to the ſhore, is a fort called St. Juan. All theſe forts are mounted with cannon, and joined to each other by a thick ſtone-wall, which begins near the above rocky valley, and continues, with little interruption, to Fort St. Juan. This wall is within only breaſt-high, but it higher on the out ſide facing the ſea; and from thence to the ſouthward, the ſhore, being naturally fenced with rocks, is generally inacceſſible.

Santa Cruz is a large town, and contains ſeveral churches, three convents of friars, an hoſpital, and the beſt conſtructed private buildings of any to be found in the Canary Iſlands. It is indeed the capital of them all; for though the epiſcopal ſee and courts of judicature are in the city of Palmas, in Canaria, the governor-general of the iſlands always reſides in Santa Cruz, where a great concourſe of foreigners continually reſort, on account of its being the centre of the trade between the Canary Iſlands with Europe and America. The number of inhabitants are ſuppoſed to amount to about five or ſix thouſand. The water drank by them is conveyed into the town in open wooden troughs, from a ſpring beyond the above-mentioned valley, and there are pits of water, which ſerve for other purpoſes, in many of the houſes.

Near twelve miles to the ſouthward of Santa Cruz, and cloſe to the ſea, there is a cave, with a church or chapel, called Our Lady of Candelaria, in which is a little image of the Virgin Mary, about three feet high, holding a green candle in one hand, and in the other an infant Jeſus, who has a gilt bird in each hand. This chapel received its name of Candelaria, from its being pretended, that on the eve of the Purification of the Holy Virgin, a great number of lights are conſtantly ſeen going in proceſſion round the cave in which the image is placed; and they aſſert, that in the morning drops of wax are ſcattered about the ſea-ſhore. This image is held in the higheſt veneration, on account of the many miracles it is ſaid to have performed, and her chapel is adorned with ſo many ornaments, that it is the richeſt place in all the ſeven iſlands. At a certain ſeaſon of the year, moſt of the inhabitants of the iſland go thither in pilgrimage; when troops of young girls march ſinging, in an agreeable manner,

ner, the praiſes of the Virgin, and the miraculous deeds the image is ſaid to have performed.

North-weſtward of the iſland is the bay of Adexe, or, as it is pronounced, Adehe, where large ſhips may anchor. On the north-weſt ſide is a haven called Garrachica, once the beſt port in the iſland; but it was deſtroyed in 1704, which the natives call the year of the earthquakes, and filled up by the rivers of burning lava that flowed into it from a volcano; ſo that houſes are now built where ſhips formerly lay at anchor; yet veſſels come there in the ſummer ſeaſon.

The earthquake above-mentioned began on the twenty-fourth of December; and, in the ſpace of three hours twenty-nine ſhocks were felt. After this they became ſo violent as to cauſe all the houſes to ſhake, and oblige the inhabitants to abandon them. The conſternation became univerſal, and the people, with the biſhop at their head, made proceſſions and public prayers in the open fields. On the thirty-firſt a great light was obſerved on Manja, towards the White Mountains, where the earth opening, two volcanoes were formed, that threw up ſuch heaps of ſtones, as to raiſe two conſiderable mountains; and the combuſtible matter continually thrown up, kindled in the neighbourhood above fifty fires.

Things remained in this ſituation till the fifth of January, and then the ſun was totally obſcured with clouds of ſmoke and flame, which continually increaſing, augmented the conſternation and terror of the inhabitants. Before night, the whole country, for nine miles round, was in flames by the flowing of the liquid fire, with the rapidity of a torrent, into all quarters from another volcano, which had opened by at leaſt thirty different vents within the compaſs of half a mile. The horror of this ſcene was greatly increaſed by the violence of the ſhocks, which never once intermitted, but by their force entirely overthrew ſeveral houſes, and ſhook others to their very foundations; while the wretched inhabitants were again driven defenceleſs and diſmayed into the open fields, where they every moment expected to be ſwallowed up by ſome new gulf. The noiſe of the volcano was heard at ſea at twenty leagues diſtance, where the ſea ſhook with ſuch violence as alarmed the mariners, who at firſt thought the ſhip had ſtruck upon a rock. Mean while a torrent of ſulphur, and melted ores of different kinds, ruſhed from this laſt volcano towards Guimar, where the houſes and public buildings were thrown down by the violence of the accompanying ſhocks.

On the ſecond of February another volcano broke out even in the town of Guimar, which ſwallowed up a large church. Thus, from the twenty-fourth of December to the twenty-third of February, the people were conſtantly alarmed by continual ſhocks of earthquakes, and the terrible volcanoes that burſt forth in different parts.

The town of Garrachica is ſtill pretty large, and contains ſeveral churches and convents of both ſexes. It has a ſmall trade for brandy and wine, which are uſually ſent from thence in barks, or large open boats, to Santa Cruz, or Port Orotava. Strong and durable ſhips are alſo built there, ſome of which are upwards of three hundred tons burthen.

About ſix miles to the eaſtward of Garrachica is the town of Port Orotava, which is a good harbour in the ſummer ſeaſon; but in the winter, ſhips are often obliged to ſlip their cables and put to ſea, for fear of being ſurprized with a north-weſt wind, which throws in a heavy ſea upon this coaſt. This is a place of conſiderable trade, it having flouriſhed greatly ſince the deſtruction of the harbour of Garrachica. It contains two churches, two convents of friars, two of nuns, and ſome good private buildings. At each end of the town is a black ſandy bay; along the northernmoſt is a low ſtone wall, built to prevent the landing of an enemy: at the other bay is a ſmall caſtle, or fort, for the ſame purpoſe, and at the landing-place between them is a battery of a few cannon: but the ſurf that continually breaks upon the ſhore, is the beſt defence of this port.

The town of La Villa de Orotava, which is about three miles within land from Port Orotava, is a large place, and contains ſeveral churches, convents of friars and nuns, with a number of ſtately ſtone buildings belonging to private perſons. A rivulet, which runs through the midſt of it, refreſhes their gardens and orchards, and ſupplies the inhabitants with water.

The city of St. Chriſtobal de la Lagona, that is, St. Chriſtopher of the Lake, extends four miles within land from Santa Cruz. The road to it from the above town is a pretty ſteep aſcent, till within a ſmall diſtance of the above town, which is ſeated in the corner of a plain, about four miles in length, and a mile in breadth. This city is the capital of the iſland, and contains two pariſh churches, three convents of friars, two of nuns, and three hoſpitals; two of which are for the venereal diſeaſe, and the other for foundlings. The jeſuits have alſo a houſe here, and, beſides theſe public ſtructures, there are many handſome private buildings. The water drank by the inhabitants is conveyed in troughs to the city, from the mountains ſituated to the ſouthward of the plain.

In this city there is not the leaſt ſhow of buſineſs, it being chiefly inhabited by the gentry of the iſland, particularly the officers of juſtice, ſuch as the corregidor and his tiniente, or lieutenant, the regidores, or cavildo, with the judge of the Indies, who preſides in the India-houſe, where all affairs relating to the Weſt-India commerce are conducted. Here is likewiſe an office of inquiſition, with its proper officer, ſubject to the tribunal of the Holy Office at Grand Canaria: yet the city appears to a ſtranger as if deſolate and uninhabited; for hardly any body can be ſeen in the ſtreets, and graſs grows in the moſt frequented places.

There is a laguna, or lake, behind the city, about half a mile in circumference, from which the city takes its name. It is dry in ſummer, but in winter is full of ſtagnant water. As this city is ſituated on a plain, elevated a conſiderable height above the ſea, it is extremely cold in winter, and in all ſeaſons expoſed to the wind.

The road deſcends, from the weſtern extremity of this plain, to La Montanza de Centejo, a large village in the mid-way between Santa Cruz and Port Orotava, chiefly inhabited by peaſants and labouring people. Some of the towns belonging to the villages are ſituated at no great diſtance from the ſea, from whence moſt of them may be ſeen, and indeed there are no habitations at a greater diſtance from each other than three leagues.

The whole iſland continues to riſe on all ſides from the ſea till it terminates in the pike, which we obſerved above is in the center. The north-ſide is the moſt fertile, and aſcends more gradually than the other, particularly a ſpace along the ſhore about three leagues broad, bounded on the ſides by high mountains, or rather cliffs; but it riſes upwards from the ſea, like a hanging garden, till you come within a league of the clouds, without any conſiderable intervention of hills and valleys.

A large town, called Realojo is ſituated in the weſtern border, and La Rambla on the eaſtern. The towns of Orotava and Port Orotava ſtood between them, with a number of detached habitations ſcattered about from the ſea-ſhore upwards to the clouds, in or beyond which there are no houſes; yet the clouds are not higher than the middle diſtance between the ſea and the ſummit of the pike.

All the fertile ground, within a league of the ſea, is covered with vines; corn grows in the next league; and, in the third, ſome corn, woods of cheſnut-trees, and many other different ſorts of trees. Above theſe woods are the clouds, which, in fine weather, generally deſcend gradually towards the evening, and reſt upon theſe woods till the morning, when they re-aſcend about a league, and there remain till the ſucceeding evening. There are ſeveral other towns, and many ſmall villages, beſides the towns already mentioned.

This iſland is ſo populous, that when the laſt account was taken it contained no leſs than ninety-ſix thouſand perſons, and is ſuppoſed to contain as many ſouls as all the reſt of the inhabited iſlands.

We ſhall now, for the ſatisfaction of the curious part of our readers, preſent them with the relation of a journey up the pike of Teneriff, including a brief account of the weather, and produce of the iſland. Theſe intereſting particulars are extracted from Mr. Glaſs's hiſtory of the Canary Iſlands, which valuable work is highly deſerving the public eſteem.

This gentleman begins his narrative with informing us, that "early in the month of September 1761, at about four in the afternoon, he ſet out on horſeback, in company with the maſter of a ſhip, to viſit the pike. They had with them a ſervant, a muleteer and a guide; and, after aſcending above ſix miles, arrived towards ſun-ſet at the moſt diſtant habitation from the ſea, which is in a hollow: here finding an aqueduct of open troughs that convey water down from the head of the hollow, their ſervants watered the cattle and filled ſome ſmall barrels to ſerve them in their expedition.

The gentlemen here alighted, and, walking into the hollow, found it very pleaſant, as it abounded with many trees

trees of an odoriferous ſmell; and ſome fields of maize or Indian corn are near the houſes. On their mounting again, they travelled for ſome time up a ſteep road, and reached the woods and clouds a little before night. They could not miſs their way, the road being bounded on both ſides with trees or buſhes, which were chiefly laurel, ſavine, and bruſh-wood. Having travelled about a mile, they came to the upper edge of the wood, above the clouds, where alighting, they made a fire, and ſupped; ſoon after which, they laid down to ſleep under the buſhes. About half an hour after ten, the moon ſhining bright, they mounted again, travelled ſlowly two hours through an exceeding bad road, reſembling the ruins of ſtone buildings ſcattered over the fields.

After they had paſſed over this road, they came upon ſmall light pumice-ſtone, like ſhingles; upon which they rode at a pretty good pace for near an hour. The air now began to be pretty ſharp and piercing, and the wind blew ſtrong from the ſouth-weſtward. Their guide adviſed them to alight here, as the place was convenient, and reſt till about four or five in the morning. To this they agreed, and entered the cave, the mouth of which was built up to about a man's height to exclude the cold. Near this place were ſome dry withered retamas, the only ſhrub or vegetable near the cave, and with theſe they made a great fire to warm themſelves, and then fell aſleep; but were ſoon awaked by an itching occaſioned by a cold thin air, want of reſt, and ſleeping in their cloaths. They here paſſed away their time as well as they could; but while they crept near the fire, one ſide was almoſt ſcorched, and the other was benumbed with cold. At about five in the morning they mounted again, and travelled ſlowly about a mile; for the road was rather too ſteep for travelling quick on horſeback, and their beaſts were now fatigued.

At laſt they came among ſome great looſe rocks, where was a kind of cottage built of looſe ſtones, called the Engliſh pitching place, probably from ſome of the Engliſh reſting here on their way to viſit the pike; for none take that journey but foreigners and ſome poor people who earn their bread by gathering brimſtone. There they alighted again, the remainder of their way being too ſteep for riding, and left one of the ſervants to look after the horſes, while they proceeded on their journey. They walked hard to get themſelves warm; but were ſoon fatigued by the ſteepneſs of the road, which was looſe and ſandy. On their reaching the top of this hill, they came to a prodigious number of large and looſe ſtones, or rocks, whoſe ſurfaces were flat, and each of them about ten feet every way.

This road was leſs ſteep than the other; but they were obliged to travel a conſiderable way round, to leap over the rocks, which were not cloſe to each other. Among them is a cavern, in which is a well, or natural reſervoir, into which they deſcended by a ladder placed there by the poor people for that purpoſe. This cavern is very ſpacious, it being almoſt ten yards wide, and twenty in height; but all the bottom, except juſt at the foot of the ladder, is covered with water, which is about two fathoms deep, and was then frozen towards the inner edges of the cave; but when they attempted to drink of it, its exceſſive coldneſs prevented them.

After travelling about a quarter or half a mile upon the great ſtones, they reached the bottom of the real pike or ſugar loaf, which is exceeding ſteep, and the difficulty of aſcending it increaſed, and was rendered more fatiguing by the ground being looſe and giving way under their feet; for though this eminence is not above half a mile in height, they were obliged to ſtop and take breath near thirty times; and when they at laſt reached the top, being quite ſpent with fatigue, they lay about a quarter of an hour to recover their breath, and reſt themſelves.

In the morning, when they left the Engliſh pitching place, the ſun was juſt emerging from the clouds, which were ſpread under them at a great diſtance below, and appeared like the ocean. Above the clouds, at a vaſt diſtance to the north, they perceived ſomething black, which they conjectured to be the top of the iſland of Madeira, and, taking the bearings of it by a pocket compaſs, found it to be exactly in the direction of that iſland from Teneriff, but before they reached to the top of the pike, it diſappeared. They could neither perceive Lancerota nor Fuerteventura from this place, they being not high enough to pierce the clouds; though they could ſee from hence the tops of the iſlands of Grand Canaria, Hiero, Palma and Gomera, which ſeem to be quite near.

After reſting for ſome time, they began to obſerve the top of the pike, which is about a hundred and forty yards in length, and a hundred and ten in breadth. It is hollow, and ſhaped like an inverted bell. From the edges of this bell, or cauldron, as it is called by the natives, it is about forty yards to the bottom, and in many parts of this hollow, they obſerved ſmoke and ſteams of ſulphur iſſuing forth in puffs; and the heat of the ground in particular places was ſo great, as to penetrate through the ſoles of their ſhoes to the feet. On obſerving ſome ſpots of earth, or ſoft clay, they tried the heat with their fingers, but could not thruſt them in farther than half an inch; for the deeper they went, the hotter it was. They then took their guide's ſtaff, and thruſt it about three inches deep into a hole or porous place, where the ſmoke ſeemed thickeſt; and having held it there about a minute, drew it out, and found it burnt to a charcoal. They gathered here many pieces of moſt curious and beautiful brimſtone of all colours, particularly an azure blue, violet, ſcarlet, green, and yellow.

The clouds beneath them, which are at a great diſtance, made from hence a very extraordinary appearance: they ſeemed like the ocean, only the ſurface was not quite ſo blue and ſmooth, but had the reſemblance of white wool; and where this cloudy ocean, as it may be called, touched the mountain, it ſeemed to foam like billows breaking on the ſhore. When they aſcended through the clouds, it was dark; but when they afterwards mounted again, between ten and eleven o'clock, and the moon ſhone bright, the clouds were then below them, and about a mile diſtant. They then miſtook them for the ocean, and wondered at ſeeing them ſo near; nor did they diſcover their miſtake till the ſun aroſe. When they paſſed through the clouds, in deſcending from the pike, they appeared as a thick fog or miſt, reſembling thoſe frequently ſeen in England; with which all the trees of the wood and their cloaths were wetted.

The air was thin, cold, and piercing on the top of the pike, like the ſouth-eaſterly winds felt in the great deſart of Africa. In aſcending the ſugar loaf, which is very ſteep, their hearts panted and beat violently, and, as hath been already obſerved, they were obliged to reſt above thirty times to take breath; and this was probably as much owing to the thinneſs of the air cauſing a difficulty of reſpiration, as to the uncommon fatigue they ſuffered in climbing the hill. Their guide, who was a thin, active old man, was far from being affected in the ſame manner; but climbed up with eaſe like a goat; for he was one of the poor men who earn their living by gathering brimſtone in the cauldron and other volcanos, the pike itſelf being no other, though it has not burned for ſome years; for the ſugar-loaf is entirely compoſed of earth mixed with aſhes and calcined ſtones, thrown out of the bowels of the earth, and the great ſquare ſtones before deſcribed, were probably thrown out of the cauldron, or hollow of the pike, when an eruption happened.

After they had ſurveyed every thing worthy of notice, they deſcended to the place where their horſes were left, which took them up only half an hour, though they were about two hours and a half in aſcending. It was then about ten in the morning, and the ſun ſhone ſo exceedingly hot, as to oblige them to ſhelter in the cottage, and being extremely fatigued, they laid down in order to ſleep; but were prevented by the cold, which was ſo intenſe in the ſhade, that they were obliged to kindle a fire to keep themſelves warm. After this, when they had taken ſome repoſe, they mounted their horſes about noon, and deſcending by the ſame way they went up, came to ſome pines, ſituated about two miles above the clouds. Between theſe pines and the pike, no herb, ſhrub, tree, or graſs can grow, except the before-mentioned retamas.

At about five in the evening they arrived at Orotava, not having alighted by the way to ſtop, only ſometimes to walk where the road was too ſteep for riding. The whole diſtance they rode in the five hours ſpent in coming down from the Engliſh pitching place at Orotava, they computed to be about fifteen Engliſh miles, travelling at the rate of three miles an hour.

Our author ſuppoſes, the perpendicular height of the Engliſh pitching-place to be about four Engliſh miles, and adding to that a mile of perpendicular height from thence to the pike, obſerves, that the whole will be about five Engliſh miles, and that he is very certain he cannot be miſtaken in this calculation above a mile either way." But Mr. Glaſs may here probably be miſtaken, owing perhaps to his not uſing any inſtruments proper for aſcertaining the exact altitude of this mountain, which is much higher than either the Alps, or the higheſt part of the Andes, according to this calculation.

In Teneriff, the weather is the ſame as in Grand Canaria; but the ſea-breeze generally ſets in at about ten o'clock in the morning on the eaſt and north-eaſt ſides of the iſland, and blows till about five or ſix in the evening, when it falls calm till midnight. The land wind then begins, and continues till ſeven or eight in the morning, when it is followed by a calm, which laſts till the ſea-breeze returns. In the bay of Santa Cruz, and on all the eaſt-ſide of the iſland, the ſea-breeze commonly blows at eaſt, and the land-wind at weſt. On the north-ſide, the ſea-breeze blows at north-eaſt by eaſt, or north-eaſt, and the land-wind directly oppoſite to it; but there is no land-wind at Point Nago, where the land ſtretches towards the north-eaſt far into the ſea.

At the brow of the hill above Santa Cruz, and at the city of Laguna, a freſh gale blows from the north-weſt all the time of the ſea-breeze, which is occaſioned by the mountains almoſt encompaſſing the plain. Theſe being ſo exceedingly high on the ſouth ſide of it, as to beat back the ſea-breeze, and throw it againſt the mountains that bound the north ſide of the plain, where finding no paſſage, it veers to the ſouth-eaſt, and there meeting with no reſiſtance, forces its way with great vehemence through the plain; till coming to the brow of the above-mentioned hill, part of the current of air pours down it towards Santa Cruz, advancing within a mile and a half of the ſea, where the true ſea-breeze checks it. Yet there is no regular ſea or land-breeze on the ſouth-weſt coaſt, which is ſheltered from the trade or north-eaſterly wind by the immenſe height of the pike, which towers above the region of the wind: hence on that ſide of the iſland, there is either an eddy wind at ſouth-weſt, or a calm.

This iſland produces nearly the ſame vegetables as that of Canaria, only there are more vineyards and leſs corn-land. The wines are ſtrong, good, and very fit for exportation, eſpecially into hot climates, by which they are greatly improved. Formerly a great quantity of Canary ſack was made here; but of late years they do not make above fifty pipes in a ſeaſon; for they now uſually gather the grapes when green, and make a dry hard wine of them, which when about two or three years old, can hardly be diſtinguiſhed from Madeira; but after four years of age it becomes ſo ſweet and mellow, as to reſemble the wine of Malaga in Spain. This like all the other Canary iſlands, affords orchilla-weed in great plenty.

The dragon-tree, aloe, and pine, are natives of Teneriff. The apricot, peach, and pear-trees, bear twice annually. The pregnada, lemon, and lignar wood are found here; as are the cotton-ſhrub and coloquintida. The roſe blows at Chriſtmas; the carnations are large and fine, but tulips will not thrive. The rocks abound with ſamphire, the meadows are covered with clover, and the beach produces a broad leaved graſs. About fourſcore ears of wheat ſpring from one root, the grains of which are as tranſparent as the pureſt yellow amber, and in a good ſeaſon one buſhel will produce a hundred fold; and the barley and maiz are not inferior to the wheat.

With reſpect to the animals, here are plenty of rabbits hogs, wild goats, &c. Quails and partridges are larger than thoſe in England, and extremely handſome. Wood-pigeons, turtles, and crows, abound in the ſpring. Several ſorts of wild-fowl reſort hither in the winter ſeaſon, affording plenty of game to the inhabitants of Laguna. The falcons, or rather ſtrong large hawks, which hover over the lake of Laguna, are thus deſcribed by a gentleman who lately travelled to theſe iſlands: "I cannot forbear mentioning the haggard falcons that ſoar every evening about this lake. It is very good diverſion to ſee the negroes fight them with ſlings; for they often ſtoop, ſeveral at a time; and beſides, they are the beſt mettled hawks in the world, being of a larger kind than the Barbary falcon. The viceroy (governor) being one evening to ſee the ſport, on the author's commending their ſtrength and mettle, aſſured him upon his honour that a falcon bred in that iſland, which he had formerly ſent to the duke of Larma did at one flight (unleſs ſhe reſted on any ſhip by the way) paſs from Andaluſia to Teneriff, which is two hundred and fifty Spaniſh leagues, and was taken up half dead, having on the vaſſals and bells belonging to the duke.

Fiſhes are found in great quantities here, particularly dolphins, ſharks, meros, lobſters, muſſels, periwinkles, the clacas (which is deemed the beſt ſhell-fiſh in the univerſe) and the cherna, that exceeds in reliſh any we have in England: here is alſo another fiſh which is called an eel, though with little propriety, for it has ſeven tails of a ſpan long joined to one body and one head, which are nearly of the ſame length. Silk-worms thrive exceedingly; and bees proſper in the rocks and mountains.

The city of Laguna, which ſtands near a lake about nine miles from the ſea, is the principal place in Teneriff: it is called by the Spaniards St. Chriſtoval de la Laguna, or St. Chriſtopher of the lake, and is handſomely built, having two fair pariſh-churches, and a palace for the governor who reſides here. The aldermen of this city pay a certain price to the king to ſerve their offices of magiſtrates; but this gives them great power over the inhabitants, who are divided into three claſſes; namely, gentlemen, merchants, and huſbandmen, or, as they are termed by the natives, idlemen, buſymen, and labouring-men. The land on each ſide of the road, leading to Laguna, is in general rocky, but ſome ſpots of corn-land are interſperſed here and there, and terminated by ſmall vineyards on the ſides of the mountains.

This city preſents the beholder with an agreeable proſpect, as it ſtands on the ſide of a hill, and ſtretches its ſkirts on the plains behind: it is large, compact, and populous: the houſes, though not uniform, have a pleaſant appearance; beſides the governor's houſe, and the two pariſh-churches, here are two nunneries, four convents, an hoſpital, and ſome chapels, beſides many gentlemen's houſes. The convents are thoſe of St. Francis, St. Auguſtine, St. Dominic, and St. Diego. The churches have pretty high ſquare ſteeples, which top the reſt of the buildings. The ſtreets are not regular, yet they are for the moſt part ſpacious, and pretty handſome, and near the middle of the town is a large parade, which has good buildings about it. There is a ſtrong priſon on one ſide of it, near which is a large conduit of good water that ſupplies all the town.

The inhabitants of Laguna have many gardens that are ſet round with orange, lime, and other fruit-trees, in the middle of which are pot-herbs, ſallading, flowers, &c. and indeed, if the people were curious this way, they might have very pleaſant gardens: for the town ſtands high from the ſea, on the brow of a plain that is all open to the eaſt, and has conſequently the benefit of the trade wind, which blows here, and is commonly fair; ſo that there are ſeldom wanting, at this town, all the day, briſk, cooling, refreſhing breezes.

There is a large plain on the back of the town, three or four leagues in length, and two miles broad, producing a thick, kindly ſort of graſs. On the eaſt ſide of the plain, near the back of this town, is a natural lake or pond of freſh water; but being ſtagnant, it is only uſed for cattle; it is about half a mile in circumference.

The ancient inhabitants of Teneriff were called Guanches, but their origin is not certainly known; they were, and the remainder of them ſtill are, without literature; but their language, which ſtill remains among the remnant of them, bears ſome affinity to that of the Moors in Barbary; it was formerly very guttural, and entirely different from that uſed in the other iſlands. They were of good ſtature, well made, and had tolerable complexions, but thoſe who dwelt on the north ſide of the iſland were much fairer and had lighter hair than thoſe in the ſouth.

Theſe people had ſome notion of a deity, and held that there was a ſupreme power, whom they diſtinguiſhed by the names Achguarergenan, Achoran, and Achaman, which ſignify the ſuſtainer of the heavens and the earth. They alſo gave him the titles of the Great, the Sublime, the Maintainer of all: but they did not worſhip idols, nor had any images of the deity. They believed that God created them of earth and water, and made as many women as men, giving them cattle, and every thing neceſſary for their ſubſiſtence; but that afterwards there appearing to him too few, he created more; but to theſe laſt gave nothing; and when they prayed to him for flocks of ſheep, and herds of goats, he bid them go and ſerve the others, who, in return, would give them food. From theſe, they ſaid, were deſcended their ſervants. They had ſome idea of the immortality of the ſoul, by ſuppoſing the exiſtence of places for future rewards and puniſhments. In particular, they ſuppoſed the pike of Teneriff to contain hell in its bowels, which they termed Echeyda; and gave the name of Guayotta to the devil.

In civil affairs they had ſome regulators, as each diſtrict had a ſovereign, whom they thought it their duty to obey as a ſupreme magiſtrate. They promiſed vaſſalage to him at a certain age, and confirmed the ſame promiſe when they happened to marry. The regal ſucceſſion was hereditary, and all children (except illegitimate) were permitted to reign. The kings, however, as well as the com-

mon

mon people, dwelt in caves, and had not the leaſt conception of architecture. One of their kings, named Adexe, ruled the whole iſland ſingly for many years, but having ſeveral children, they conſpired againſt him, depoſed him, and then divided his dominions among themſelves. They made war principally for the purpoſe of ſtealing cattle from each other, particularly ſpotted goats, which were highly eſteemed, and the remaining Guanches ſet a great value upon them to this day.

They were very neat and cleanly: always waſhing their hands and faces whenever they aroſe from ſleep, when they ſat down to eat, and after they had eaten. Their food was the fleſh of ſheep and goats, roaſted or boiled, which they ate alone, and not like the Europeans, with bread or roots. They alſo fed upon barley-meal, roaſted and dreſſed with milk and butter. After eating, they refrained from drink for about half an hour, from the opinion that drinking cold water, immediately after eating warm victuals, ſpoiled their teeth. Sheep and goats were their only cattle; and wheat and barley, beans and peaſe their only grain.

The ground was prepared for the ſeed by the men, who broke it up with a kind of wooden hoes; and the women ſowed the ſeed. When they were in great diſtreſs for want of corn, through drought, or any other calamity, they aſſembled with their children and flocks in certain places ſet apart for that purpoſe, where they ſat on the ground in a circle, weeping and making a mournful noiſe; their flocks at the ſame time bleating for want of food; both men and beaſts being debarred from all kinds of ſuſtenance on theſe occaſions; for they imagined that by theſe means they would appeaſe the wrath of the heavens, and obtain what they ſtood in need of.

In marriage, they paid no regard to kindred, except that of a brother or ſiſter, but no man had more than one wife. When a man had a mind to marry, all the preliminary ceremonies were, aſking the conſent of the girl's parents, and, if that was obtained, the marriage was immediately conſummated. They had a cuſtom, that in the houſe or cave, where the huſband and wife ſlept, no other perſon was allowed to ſleep: yet they did not lie together, but in ſeparate beds, which were made of herbs or graſs, covered with goats ſkins, neatly dreſſed and ſewed together, with coverings of the ſame ſkins. They could put away their wives when they pleaſed; but the children of the women, who were born after the parties were divorced, were deemed illegitimate, and could not inherit their father's effects; but, for ſucceſſion ſake, this cuſtom did not extend to the kings.

When a man accidentally met a woman alone, or in a ſolitary place, he was not to look at, or to ſpeak to her, unleſs ſhe ſpoke firſt, but to him out of the way; and if he made uſe of any indecent expreſſion, or behaved in an unbecoming manner, he was ſeverely puniſhed. If any perſon went to the houſe of another, inſtead of entering in, he was to ſit on a ſtone at the door, and either to whiſtle or ſing, till ſomebody came out, and deſired him to walk in. Whoever neglected this ceremony, and entered another perſon's houſe without being invited, was deemed guilty of a great affront, and liable to puniſhment. When their children were born, they were waſhed all over with water by virgins, who were ſet apart for that office, and never allowed to marry.

Their uſual diverſions were leaping, running, ſhooting the dart, throwing ſtones, dancing, &c. at all which they were extremely expert. The men wore a ſhort coat made of lamb ſkins, without plait, collar, or ſleeves, being faſtened together with ſtraps of the ſame leather, or ſkins: thoſe of the women were longer, and reached down to their feet, and underneath they had petticoats of the ſame ſkins. They lived, died, and were commonly buried in this garment, which was commonly called the tamarca.

In the ſummer ſeaſon the king reſided in the mountains, but in winter near the ſea ſhore. When he travelled, or went to change his place of reſidence, the elders of his tribe aſſembled, and carried before him a ſtaff and a lance, with a kind of flag upon it, to give notice of the king's approach, that all who were travelling upon the ſame road might pay him the cuſtomary homage, by proſtrating themſelves before him on the ground, wiping the duſt from his feet with the corner of their garments, and kiſſing them. The prince was obliged to marry a perſon who was his equal; but if ſuch an one could not be found, he took his own ſiſter to wife, for he was not permitted to debaſe his family by a mixture of plebeian blood.

They had a ſurpriſing facility in counting the number of their ſheep and goats, when iſſuing tumultuouſly out of a fold, without even pointing to them with their fingers, or moving their lips. Frequent diſputes happened among them about their flocks and paſtures, which often ended in war. Their offenſive weapons were darts made of pitch-pine, ſharpened and hardened in the fire, like thoſe uſed in Grand Canaria; they had alſo a weapon like a ſpear, very ſharp, and were ſo dextrous at throwing theſe, that they ſcarce ever miſſed their mark.

At the approach of an enemy they alarmed the country, by making a ſmoke, or by whiſtling, which they repeated from one to another: this laſt method is ſtill in uſe, and may be heard at an almoſt incredible diſtance. They were attended, in their wars, by their women, who brought proviſions, carried off their dead, and buried them.

On the death of any perſon, their friends carried the body to a cave, and ſtretching it on a flat ſtone, opened it, and took out the bowels, then twice a day waſhed the porous parts, that is, the neck, the arm-pits, behind the ears, the groin, and between the fingers, with cold water: after waſhing it ſufficiently, they anointed thoſe parts with ſheep's butter, and ſprinkled them with a powder made of the duſt of decayed pine-trees, and a kind of bruſh-wood, called by the Spaniards breſſos, and with the powder of pumice-ſtone. They then dried the body by extracting from it all its moiſture; after which, the relations of the deceaſed came, and ſwaddled it in dreſſed ſheep or goat-ſkins, and girding all tight with leather thongs, they put it in the cave which had been ſet apart by the deceaſed for his burying-place. The king could only be buried in the cave of his anceſtors, in which the bodies were ſo diſpoſed as to be known again.

A learned gentleman, who reſided ſeveral years in the iſland, tells us, that being one day hunting, a ferret, having a bell about his neck, ran after a coney into a hole, where the ſound of the bell was loſt. The owner being afraid he ſhould loſe his ferret, in ſeeking about the rocks and ſhrubs, found the mouth of a cave, and entering it, was ſo affrighted, that he cried out. His fright aroſe from one of thoſe corpſes, very tall and large, lying with the head on a great ſtone, the feet ſupported with a little wall of ſtone, the body itſelf reſting on a bed of wood. The man, being now a little recovered from his fright, went nearer, and cut off a great piece of the ſkin that lay on the breaſt of the body, which was more flexible and pliant than any kid's leather glove, yet not any ways rotten.

Particular perſons were ſet apart for the office of embalming; and there were men to embalm the bodies of the men, and women to perform that office for thoſe of their own ſex. During the proceſs, the bodies were watched by the embalmers with the greateſt care, to prevent their being devoured by the ravens; the huſband or wife of the deceaſed bringing them proviſions, and waiting on them during the time of their watching.

It is ſaid, that not many years ago, two of theſe embalmed bodies were taken out of a cave; they were entire, and as light as a cork; but quite freſh, and without any diſagreeable ſmell. Their teeth and garments were alſo freſh and ſound. It is obſerved, that in the poorer ſort, to ſave charges, they took out the brains behind, and ſewed them up in ſkins, with the hair on; whereas the richer ſort were put up in ſkins ſo finely and exactly dreſſed, that they remain extremely ſupple to this day. The bodies found in Grand Canaria, are ſaid not to have been ſo well embalmed as thoſe in Teneriff, as they are much more conſumed, and not ſo entire in the different parts. Their antient people ſay, that they have above twenty caves of their kings and great perſonages, with their whole families, yet unknown to any but themſelves, and which they will never diſcover.

The iſland of Gomera is ſituated to the weſt of Teneriff, in twenty-eight degrees north latitude, and eighteen degrees weſt longitude from London. It is about thirty miles long, twenty broad, and ſixty in circumference. The principal town is ſeated cloſe to the ſea-ſhore, in the bottom of a bay, where ſhips lie land-locked from all winds, except the ſouth-eaſt. On the north-ſide of this bay is a cove, where ſhips of any burden may haul cloſe to the ſhore, which is a high perpendicular cliff, and there with ſafety heave down, clean, and repair. From this cove is a path-way along the face of the cliff to the town; but it is ſo narrow that two perſons cannot walk a-breaſt. Near the end of this path-way is a gate, which is always ſhut when it grows dark.

About a ſtone's caſt from the beach the principal ſtreet of the town begins, and from thence runs ſtraight within land.

land. The town is called La Villa de Palmas, or the town of Palms, from the numbers of palm-trees growing there. There are here a church and convent of friars, with about a hundred and fifty private houſes, moſt of which are ſmall and mean. It is, however, well ſupplied with good water, which the inhabitants draw from wells in every part of the town. During the winter ſeaſon, a large rivulet, which then flows from the mountains, diſcharges its waters into the fort; and on the ſouth ſide of its mouth ſtands an old round tower; alſo on the top of the perpendicular cliff on the north ſide is a chapel, and the fort has a battery of a few pieces of cannon for its defence.

In this iſland many rivulets flow from the craggy mountains, which refreſh and fertiliſe the narrow valleys, and indeed water may be found in every part of the iſland, by digging to the depth of about five feet or upwards.

Gomera produces much the ſame as the iſlands of Teneriff and Canaria. The inhabitants have generally juſt corn enough for their own uſe, and ſeldom import or export any. In this particular it reſembles Canaria; for it has almoſt every neceſſary within itſelf, and therefore has little need of any thing from abroad; for cattle, fowls, corn, wine, roots, fruit, and honey, are here in great plenty; and if there was ſufficient encouragement for the exertion of their induſtry, the natives could eaſily manufacture a ſufficient quantity of wool and raw ſilk, to clothe themſelves: here is alſo ſtone, lime, timber, and all other materials for building, except iron. The wine of this iſland is in general weak, poor, and ſharp; it is therefore unfit for exportation, yet ſome of it, when two years old, excels the very beſt wine made in Madeira, both in taſte and flavour, though it is as clear as water, and as weak as ſmall beer.

The ſame animals are common here as in the reſt of the iſlands, and alſo plenty of deer, originally brought from Barbary. There are likewiſe more mules bred in Gomera than in any other of the Canary iſlands, and ſome ſnakes; but it does not appear that they are any ways noxious.

With reſpect to the original natives of the iſland of Gomera, they were of a lively diſpoſition, of the middle ſtature, extremely active, and dexterous in attacking and defending, and excellent ſlingers of ſtones and darts, to which they were trained from their infancy, it being the common amuſement of the young people to caſt ſmall ſtones and darts at each other; to avoid which they ſeldom moved their feet, but only waved their bodies to and fro; and ſo expert were they at this ſport, that they uſed to catch in their hands the ſtones and darts as they flew along.

The antient Gomerans uſed to dreſs themſelves in a ſort of cloak made of goat-ſkins, which reached to the calf of the leg; but the women were cloathed with a petticoat and a head-dreſs that hung down to their ſhoulders, both of which were made of goat ſkins dyed and curiouſly painted. The blue dye they extracted from an herb which they called paſtil, and the red from the foot of a tree, which they called taginaſte; all between the head-dreſs and petticoat were left bare. They wore ſhoes made of hog's ſkins. When the men had any quarrel, which was to be decided by a combat, they laid aſide their cloaks, tied a ſort of bandage round their waiſt, and bound their foreheads with a kind of painted turban. In their combats they uſed the ſame weapons as the natives of the other iſlands, which were ſticks or poles of hard wood, with the ends ſharpened. They have had amongſt them ſeveral men diſtinguiſhed by their bravery, whoſe fame they ſtill celebrate in their ballads.

The iſland of Palma lies in twenty-nine degrees north latitude, and eighteen degrees weſt longitude, about fifty miles to the weſt of Teneriff, and two hundred weſt of the continent of Africa. It is about thirty miles long, twenty broad, and ſeventy in circuit.

On the north-eaſt part of the iſland, within land, is a high and ſpacious mountain, ſteep on all ſides. This is called La Caldera, or the cauldron, from a hollow like that on the pike of Teneriff. The ſummit is about two leagues in circumference, and on the inſide the cauldron deſcends gradually from thence to the bottom, which is a ſpace of about thirty acres. On the declivity of the inſide ſprings ſeveral rivulets, which joining together at the bottom, iſſue in one ſtream through a paſſage to the outſide of the mountain from which this brook deſcends; and having run ſome diſtance from thence, turns two ſugar-mills. The water of this ſtream is unwholſome, on account of its being mixed with ſome water of a pernicious quality in the cauldron; all the inſide of which abounds with herbage, and is covered with palms, pitch-pine, laurel, lignum-rhodium, and retamas; which laſt have in this iſland a yellow bark, and grow to the ſize of large trees; but in the others they are only ſhrubs. The people here take great care not to let the he-goats feed on the leaves of the retama, on account of their breeding a ſtone in the bladder, which is mortal.

Two rivulets ſpring on the outſide of the cauldron; one of theſe runs northward to the village of St. Andrew, and turns two ſugar-mills, and the other runs to the town of Palmas, which lies to the eaſtward. Theſe are the only rivulets or ſtreams of any conſequence in the iſland: on which account the natives build tanks, or ſquare reſervoirs with planks of pitch-pine, which they make tight with caulking. Theſe they fill with the torrents of rain-water that in the winter ſeaſon ruſh down from the mountains, and preſerve it for themſelves and cattle: but the ſheep, goats, and hogs, in places at a diſtance from the rivulets, feed almoſt all the year round on the roots of fern and aſphodil, and therefore have little or no need of water, there being moiſture enough in thoſe roots to ſupply the want of that element. Though the ſouth part of the iſland is moſt deſtitute of water, yet there is a medicinal well of hot water ſo cloſe to the ſea-ſhore, that the tide flows into it at full ſea.

At Uguer is a cave, that has a long narrow entrance, ſo ſtraight that people paſs through it backwards, with their face to the mouth of the cave; but after they have got through this paſſage, they enter a ſpacious grotto, where water diſtils from between the large flakes of ſlate ſtones that hang from the roof; the leaſt blow given to theſe, reſounds with a noiſe like thunder through the cave.

In the diſtrict of Tifuya is a mountain, which appears to have been removed by an earthquake from its original ſituation. The natives have a tradition, that the ſpot on which it now ſtands was a plain, and the moſt fertile ſpot in the whole iſland, till it was deſtroyed by the burning lava, and the fall of the mountain. Indeed, the effects of volcanos are to be ſeen in almoſt every part of the iſland; for the channels where the burning matter, melted ores, and calcined ſtones and aſhes ran, may be eaſily diſtinguiſhed by a curious obſerver.

Nunno de Penna, in his Hiſtorical Memoirs, relates, that on the 13th of November 1677, a little after ſun-ſet, the earth ſhook for thirteen leagues with a dreadful noiſe, that continued five days, during which it opened in ſeveral places; but the greateſt gap was upon the mountain of La Caldera, a mile and a half from the ſea, from whence proceeded a great fire, which caſt up ſtones and pieces of rock. The like happened in ſeveral places thereabouts, and in leſs than a quarter of an hour were twenty-eight gaps about the foot of the mountain, which caſt forth abundance of flames and burning ſtones. The ſame perſon adds, that on the 20th of November following, there was a ſecond eruption of the ſame mount, from whence came forth ſtones and fire, with great earthquakes and thunders for ſeveral days, ſo that black cinders were taken up at ſeven leagues diſtance; the adjacent ground was entirely waſted, and the inhabitants forced to quit their dwellings. The laſt volcano that happened in this iſland was in 1750, when one of theſe rivers of fire ran, with great rapidity, from the mountains towards the town of Palmas, and diſcharged itſelf about a mile to the northward of the town, but we have not learnt that any conſiderable eruption hath happened ſince that time.

If we take a view of Palma at the diſtance of three leagues off at ſea, the mountains ſeem full of gutters or beds formed by torrents of rain water; but theſe only appear little from their height and diſtance; for we find them to be large vallies, abounding with woods, on a nearer approach.

In many places on the ſhore of this and the other iſlands, is found the black ſhining ſand uſed to throw upon writing, to prevent its blotting. It appears to have been caſt out of volcanos, for the load-ſtone, when held near it, will draw up every grain of it.

In this iſland, the air, weather, and winds are nearly the ſame as at Teneriff and Canaria, except that the weſterly winds and rain are more frequent at Palma, on account of its lying more to the weſtward and northward, and on that account is not ſo far within the verge of the north-eaſt trade winds as thoſe iſlands; whence it is particularly expoſed to the ſouth wind, which moſtly prevails in the latitudes adjacent to thoſe of the north-eaſt trade-winds, as well as to variable winds from other quarters.

The climate here, and in Teneriff, Canaria, and Gomera, differs greatly, according as a perſon lives in the

mountains, or near the ſea-ſhore. While there is a calm, the heat ſeems almoſt intolerable near the ſhore, in the months of July, Auguſt, and September; but the air is at the ſame time quite freſh and pleaſant on the mountains. In the middle of winter, the houſes far up the mountains, near the clouds, are extremely cold, and the natives keep fires burning in their habitations all day long; but this is far from being the caſe near the ſea, for there they uſe fires only in their kitchens.

The ſummits of all the Canary Iſlands, except Lancerota and Fuerteventura, are generally covered with ſnow for eight months in the year. The ſummit of Palma formerly abounded with trees, but a great drought in 1545 deſtroyed them all; and though others began to ſpring up ſome time after, they were deſtroyed by the rabbits and other animals, which finding no paſture below, went up there, and deſtroyed all the young trees and ſhrubs, ſo that the upper part of the iſland is at preſent quite bare and deſolate. Before the trees and ſhrubs were deſtroyed, a great deal of manna fell there, which the natives gathered and ſent to Spain. The rabbits were firſt brought to Palma by Don Pedro Fernandez de Lago, the learned lieutenant-general of Teneriff, and have ſince increaſed in a ſurprizing manner.

Palma affords nearly the ſame productions as Canaria: but a great quantity of ſugar is made here, particularly on the ſouth-weſt ſide of the iſland. Good wines are produced on the eaſt ſide; they have a different taſte and flavour from thoſe of Teneriff: the dry wine is ſmall bodied, and of a yellow colour. Theſe wines are, however, very difficult to preſerve, eſpecially when exported to cold climates, where they frequently turn ſour. The melvaria, or ſack, is not ſo luſcious or ſo ſtrong as that of Teneriff, but on its being about three years old, it obtains the rich flavour of a ripe pine apple.

They have here ſo great a plenty of all the kinds of fruit that grows in Teneriff and Canaria, that the natives cannot conſume them; but as they have abundance of ſugar, they make vaſt quantities of ſweetmeats and conſerves, which they export to the Indies, as well as to the neighbouring iſlands.

A great deal of good honey is produced here by the bees, eſpecially in the hives that are at a great diſtance from the vines; and the mocares, a fruit that reſembles an elder-berry; both theſe having a bad effect on its colour. In time of ſcarcity, they make good bread of the roots of corn, which is ſaid to be not inferior to that made of wheat-flour; but the corn of Palma is not eſteemed ſo good as that of Gomera. There is alſo much gum-dragon, and the natives extract great quantities of pitch from the pitch-pine.

Notwithſtanding the deſtruction that has happened to the trees, which formerly grew on the ſummit of Palma, there are nevertheleſs a great number in the region of the clouds, and beneath it; ſo that at about two leagues diſtance, the iſland appears like an entire wood. Pine grows here to ſuch a ſize, as to be fit for maſts of the larger ſhips; but as they are exceeding heavy, and the roads very rugged, the bringing them to the ſhore would be attended with a great expence. They have alſo much the ſame cattle and poultry as thoſe in the iſland of Canaria.

The principal port in Palma is called by the ſame name, and is ſituated on the ſouth-ſide of the iſland. The road is about a quarter of a mile from the ſhore, where veſſels generally ride in fifteen or twenty fathoms water, and are expoſed to eaſterly winds, yet with good anchors and cables they may ride with great ſafety in all the winds that blow in this part of the world; for the ground is clean and good, and the great height of the iſland, with the perpendicular rocks that face the road, repel the winds that blow upon it, though ever ſo ſtrong.

Palma is a large town, containing two pariſh churches, ſeveral convents of friars and nuns, with many neat and private buildings, though they are neither ſo good nor ſo large as thoſe in the city of Palmas in Canaria, or of the towns in Teneriff. Near the mole is a caſtle or battery, mounted with ſome pieces of cannon, for the defence of the ſhips in the bay, and to prevent the landing of an enemy. The inhabitants are ſupplied with plenty of good water, from fountains filled by a rivulet near the great church in the midſt of the town.

On the north-eaſt ſide of the port of Palma lies another, called Taſſacorta, but being expoſed to weſterly winds, it is little frequented by any other veſſels than boats: it has a village of the ſame name.

There are no other towns of any note in Palma; but many villages, the chief of which is called St. Andrew, where there are four engines for the making of ſugar; but the land hereabouts is very poor, ſo that the inhabitants are ſupplied from the iſland of Teneriff with grain and other neceſſary articles.

SECT. XIV.

Deſcribing the Iſland of FERRO; its Situation and Extent, Soil, Produce, Animals, &c. alſo a particular Deſcription of the preſent Natives of the Iſlands of CANARIA, TENERIFF, PALMA, GOMERA, and FERRO; with an Account of their Perſons, Habit, Diet, Buildings, Manners, Cuſtoms, &c.

THE Spaniards call this iſland Hierro; and the French L'Iſle de Fer, the Iſland of Iron. It is the moſt weſterly of all the Canaries, and lies between the twenty-ſeventh and twenty-eighth degrees of north latitude, and in eighteen degrees weſt longitude from London. It is about thirty miles long, fifteen broad, and ſeventy-five in circuit. The French navigators formerly placed in the center of this iſland their firſt meridian for reckoning the longitude, as the Dutch did theirs at the pike of Teneriff; but at preſent moſt geographers reckon their firſt meridian from the capital of their own country, as the Engliſh from London, the French from Paris, &c. it conveying a more diſtinct idea to ſay, that ſuch a place is ſo many leagues diſtant eaſt or weſt from the capital of his own country, than to reckon the longitude from a diſtant land.

Ferro riſes on all ſides ſteep and craggy from the ſea-ſhore above a league, ſo as to render the aſcent extremely difficult and fatiguing; but, after travelling thus far, the reſt of the iſland will be found to be tolerably level and fruitful, it abounding in many kinds of trees and ſhrubs, and producing better graſs, herbs, and flowers, than any of the other iſlands, whence bees thrive and multiply here in a very extraordinary manner, and excellent honey is made by them.

There are but three ſprings in the whole iſland. On account of the ſcarcity of water, it is ſaid that the ſheep, goats, and ſwine of this iſland, do not drink in the ſummer; but digging up the roots of the fern, they chew them to quench their thirſt. The great cattle are watered at the above fountains, and at a place where water diſtils from the leaves of a tree.

Many authors have made mention of this tree, ſome of whom repreſent it as miraculous; while others deny its very exiſtence: but the author of the Hiſtory of the Diſcovery and Conqueſt of the Canary Iſlands, gives a particular account of it, which we ſhall here inſert for the ſatisfaction of the curious.

"In the cliff or ſteep rocky aſcent by which the whole iſland is ſurrounded, is a narrow gutter which commences at the ſea, and is continued to the ſummit of the cliff, where it joins, or coincides, with a valley terminated by the ſteep front of a rock, on the top of which grows a tree called in the language of the antient inhabitants garſe, or ſacred, which for many years has been preſerved entire, ſound, and freſh.

"Its leaves conſtantly diſtil ſo great a quantity of water, that it is ſufficient to furniſh drink to every living creature in Hierro, nature having provided this remedy for the drought of the iſland. It is diſtinct from other trees, and ſtands by itſelf: its trunk is about twelve ſpans in circumference; its height from the ground to the top of the higheſt branch is forty ſpans, and the circumference of all the branches together is one hundred and twenty feet. The branches are thick and extended, and the loweſt begin about the height of an ell from the ground. Its fruit reſembles an acorn, but taſtes like the kernel of a pine apple, only it is ſofter, and more aromatic; and the leaves reſemble thoſe of the laurel, but are larger, wider, and more curved. Theſe come forth in a perpetual ſucceſſion, whence the tree always remains green. Near it grows a thorn, which faſtens on many of its branches, with which it is interwoven, and ſome beech trees, breſos, and thorns, are at a ſmall diſtance from it.

"On the north ſide of the trunk are two large tanks or ciſterns of rough ſtone, or rather one ciſtern divided; each half being twenty feet ſquare, and ſixteen ſpans deep. One of theſe contains water for the drinking of the inhabitants, and the other that which they uſe for their cattle, waſhing, and the like purpoſes.

"A cloud or miſt riſes from the ſea every morning, which the ſouth and eaſterly winds force againſt the above-mentioned

mentioned ſteep cliff; when the cloud having no vent but by gutter, gradually aſcends it, and advances ſlowly from thence to the extremity of the valley, and then reſts upon the wide-ſpreading branches of the tree, from whence it diſtils in drops during the remainder of the day, in the ſame manner as water drips from the leaves of trees after a heavy ſhower of rain. This diſtillation is not peculiar to the tree, for the breſos which grow near it, alſo drop water; but their leaves being only few and narrow, the quantity is ſo trifling, that though the natives ſave ſome of it, yet they make little account of any but what diſtils from the tree; which, together with the water of ſome ſprings, is ſufficient to ſerve the natives and their cattle. It has been remarked, that this tree yields moſt water in thoſe years when the eaſterly winds have moſt prevailed; for by them alone the clouds or miſts are drawn hither from the ſea.

A perſon lives near the ſpot on which the tree grows, who is appointed by the council to take care of it and its water, and is allowed a certain ſalary, with a houſe to live in. He daily diſtributes to each family of the diſtrict ſeven veſſels filled with water, beſides what he gives to the principal perſons of the iſland."

Mr. Glaſs ſays, he is unable to determine whether the tree which yields water at preſent be the ſame here deſcribed, but juſtly obſerves, that it is probable there have been a ſucceſſion of them. He himſelf did not ſee this tree, for this is the only iſland of all the Canaries which he did not viſit: but he obſerves, that he has ſailed with the natives of Hierro, who, when queſtioned about the exiſtence of this tree, anſwered in the affirmative; and takes notice, that trees yielding water are not peculiar to this iſland, ſince one of the ſame kind in the iſland of St. Thomas, in the gulf of Guiney, is mentioned by ſome travellers.

By reaſon of a ſcarcity of water, the ſoil in ſome parts of this iſland is very barren; but in others it is fertile, and produces all the neceſſary articles for the ſupport of the inhabitants. The ſheep, goats, and hogs, that are brought up in thoſe parts diſtant from the rivulets, feed almoſt all the year round on the roots of fern and aſphodil, and therefore have little occaſion for water, as the want of that element is ſupplied by the great moiſture that is naturally in thoſe roots.

There is only one ſmall town in this iſland, and the moſt diſtinguiſhed building in it is a pariſh church. Many ſmall villages are diſperſed about the town, but there are not any of them that deſerve a particular deſcription.

Small cattle, brandy, honey, and orchilla weed, are the chief articles of the trade carried on by the inhabitants of this iſland.

With reſpect to the original natives of the iſland of Ferro, we are told by travellers, that before it was rendered ſubject to Spain they were of a middle ſtature, and cloathed with the ſkins of beaſts. The men wore a cloak of three ſheep-ſkins ſewed together, with the woolly ſide outwards in ſummer, and next their bodies in winter. The women alſo wore the ſame kind of cloak, beſides which they had a petticoat, which reached down to the middle of their legs. They ſewed their ſkins with thongs cut as fine as thread, and for needles uſed ſmall bones ſharpened. They wore nothing on their heads, and their long hair was made up into a number of ſmall plaits. They had ſhoes made of the raw ſkins of ſheep, hogs, or goats.

Theſe people had a grave turn of mind, for all their ſongs were on ſerious ſubjects, and ſet to ſlow plaintive tunes, to which they danced in a ring, joining hands, and ſometimes jumping up in pairs, ſo regularly that they ſeemed to be united; they ſtill practiſe in Ferro this manner of dancing.

Their dwellings conſiſted of circular incloſures, formed by a ſtone wall without cement, each having one narrow entrance. On the inſide they placed poles or ſpears againſt the wall, one end reſting on the top, and the other extending a conſiderable diſtance to the ground; and theſe they covered with fern, or branches of trees. Each of theſe incloſures contained about twenty families. A bundle of fern, with goat-ſkin ſpread over it, ſerved them for a bed, and for bed-cloaths and coverings they uſed dreſſed goat-ſkins to keep them warm.

Before they offered the breaſt to a new-born child, they gave it fern roots roaſted, bruiſed, and mixed with butter; and at preſent they give them flour and barley-meal roaſted, and mixed with bruiſed cheeſe.

The natives uſually bake the fleſh of ſheep, goats and hogs; and as they had no kind of grain, their bread was made of fern roots, of which, with milk and butter, the principal part of their diet was compoſed.

One king governed them all; and having never any occaſion to go to war, had no warlike weapons: they indeed carried long ſtaves; but theſe were only to aſſiſt them in travelling; for the country being ſo rocky, as to make it neceſſary frequently to leap from one ſtone to another, this they performed by means of theſe poles.

Polygamy was not allowed; but they had no reſtrictions with reſpect to their marriages, except a man's not being allowed to marry his mother or ſiſter; for every man might take the woman he liked beſt, and whoſe conſent he could obtain, without the leaſt regard to rank or nobility. Indeed all, except the king, were in this reſpect upon an equality: the only diſtinction among them conſiſted in the number of their flocks. It was uſual for the man, when he choſe a wife, to make a preſent of cattle to her father, according to his ability, in return for the favour of letting him have his daughter.

The king received no particular tribute from his ſubjects; and every one made him a preſent of cattle; for they were not obliged to give him any thing, but according to their pleaſure or circumſtances.

For a feaſt, they killed one or two fat lambs, according to the number of their gueſts: theſe they placed in a veſſel on the ground, ſitting round it in a circle, and never riſing till they had eaten the whole. Theſe feaſts are ſtill continued among their deſcendants.

If a perſon fell ſick, they rubbed his body all over with butter and ſheep's marrow, covering him well up to keep him warm; but when a man happened to be wounded, they burned the part affected, and afterwards anointed it with butter.

They buried their dead in caves; and if the deceaſed was a man of wealth, they interred him in his cloaths, and put a board at his feet, and the pole he uſed to travel with at his ſide; and, in order to prevent his being devoured by ravens, they cloſed the mouth of the cave with ſtones.

Murder and theft were the only crimes for which they inflicted corporal puniſhment. The murderer was put to death in the ſame manner as he had killed the deceaſed; and the thief, for the firſt offence, was puniſhed with the loſs of one of his eyes, and for the ſecond, of the other. This was done that he might not ſee to ſteal any more. The office of executioner on theſe occaſions, was performed by a particular perſon ſet apart for that purpoſe.

As to their religion, they worſhipped two deities, one of whom was male, the other female; the male was named Eraoranzan, and was the object of the men's adoration; the other, worſhipped by the women, was called Moneyba. They had no images, or viſible repreſentations of theſe deities; nor did they ever ſacrifice to them, but only prayed to them in their neceſſities, as when they wanted rain to bring up the graſs for the ſubſiſtence of their cattle, &c. The natives pretended, that when the gods were inclined to do them good, they came to the iſland, and alighted on two great rocks, which are in a place to which they gave the name of Ventayca, where they received the petitions of the people, and afterwards returned to their celeſtial abode; theſe rocks are now called by the Spaniards Los Antillos de los Antiquos, or the hills of the antients.

We ſhall now, as we propoſed, give a particular deſcription of the preſent natives of Canaria, Teneriff, Palma, Gomera, and Ferro, with an account of their perſons, dreſs, &c. previous to which it will be neceſſary to obſerve, that the deſcendants of this mixed nation are at preſent denominated Spaniards, whoſe language is that of the Caſtilian, which the gentry ſpeak in perfection; but the peaſants, in the remote parts of the iſlands, in an almoſt unintelligible manner, ſo that they are ſcarcely underſtood by ſtrangers.

The greateſt part of the natives are ſmall of ſtature, well made, and have good features; but they are more ſwarthy than the inhabitants of the ſouthern parts of Spain; their eyes, however, are fine, large, and ſparkling, and their countenances exceedingly expreſſive; but the old people have a very diſagreeable aſpect.

Perſons of diſtinction wore in common a camblet cloak of a dark red or black colour, a linen night cap, bordered with lace; and a broad flouched hat. When they pay viſits, a coat, ſword, and white peruke are added, the latter of which forms a very odd contraſt to their duſky complexions, and what is ſtill more ſingular, they keep their large flouched hat upon their heads always in the houſe; but when they are out of doors, they carry them

under their arm. Neither do they put on their perukes, upper coats, or ſwords, but when they walk in proceſſion, pay formal viſits, or go to church, on high feſtivals.

The lower claſs of people wear their own black, buſhy hair, and tuck ſome of it behind the right ear; and their principal garment is a white looſe coat with a friar's cape, and girded round the middle with a ſaſh. This garment is long and narrow, and made of the wool of their own ſheep.

Women of inferior rank wear a piece of gauze on their heads, which falls down the ſhoulders, is pinned under the chin, and covers the neck and breaſt. A part of their dreſs is a broad-rimmed ſlouched hat, but they uſe this with more propriety than the men; for abroad they wear it upon their heads, whereby their faces are ſcreened from the ſcorching beams of the ſun. They throw a mantle over their ſhoulders, the goodneſs of which is in proportion to the condition of the wearer. They wear jackets inſtead of ſtays, and are all very fond of a great number of petticoats.

The principal ladies of Grand Canaria and Teneriff dreſs after the faſhion of France and England, and pay viſits in chariots: but none walk the ſtreets without being vailed, though ſome are ſo careleſs in the uſe of their vails, that they take care to let their faces and necks be ſeen. Some ladies have their hair curiouſly plaited, and faſtened to the crown of their head with a gold comb. Their mantles are very rich, and they wear a profuſion of jewels; but they render their appearance ridiculous to ſtrangers, from that clumſineſs of dreſs, and aukwarkneſs of gait, which is obſervable in both ſexes.

The poorer ſort of people are afflicted with many loathſome diſorders, and are naturally very filthy; the gentry, however, affect great delicacy. Both ſexes go every morning to hear maſs; and moſt of them go before they take any refreſhment. Their breakfaſt is uſually chocolate: they dine at noon: and ſhut up the doors till three o'clock. People in good circumſtances have four courſes brought to table. The firſt diſh conſiſts of ſoup made of beef, mutton, pork, bacon, potatoes, turnips, carrots, onions, and ſaffron, ſtewed together, with thin ſlices of bread put into the diſh. The ſecond courſe conſiſts of roaſted meat, fowls, &c. The third is the olio, or ingredients of which the ſoup was made. After which comes the deſert, conſiſting of fruit and ſweet-meats.

The company drink freely of wine, or wine and water, while at dinner; but have no wine after the cloth is removed. While drinking, their toaſts are much like ours. When dinner is over, a large ſilver diſh, filled with water, is ſet upon the table; when the whole company, all at once, waſh in it; and then a ſervant, who ſtands at the lower end of the table, cries, "Bleſſed and praiſed be the moſt holy ſacrament of the altar, and the clear and pure conception of the moſt holy virgin, conceived in grace from the firſt inſtant of her natural exiſtence. Ladies and gentlemen, much good may it do you!" After which, making a low bow to the company, he retires. They then riſe, and each goes to his apartment, to take a nap for about an hour; which proves a great refreſhment in this warm climate.

Perſons of higher ſtations have generally a friar for one of their gueſts, who we may ſuppoſe is the confeſſor to ſome of the family, and frequently behaves with great rudeneſs; yet neither the maſter of the houſe, nor any of the company, chuſe to take much notice of it. Mr. Glaſs was once invited to dine with a gentleman, where a Franciſcan friar made one of the company; but no ſooner had they begun to eat, than the friar aſked him if he was a chriſtian? He anſwered, that he hoped ſo. He was then deſired to rehearſe the Apoſtle's creed; but anſwering, that he knew nothing about it, the reverend father ſtared full in his face, and exclaimed, "O thou black aſs!" Offended at this piece of ill manners, our author aſked, What he meant by treating him in that manner? When the friar only anſwered by repeating the abuſe; the maſter of the houſe endeavoured in vain to perſuade him to give over; but as the perſon did not at that time underſtand Spaniſh ſo well as to expreſs himſelf fluently, he aroſe and left the houſe, after telling the gentleman, that he ſaw he was unable to protect him from inſults at his own table.

They treat with chocolate and ſweet-meats in the morning and evening viſits; but in the ſummer evenings with ſnow-water. People ſup between eight and nine, and retire to reſt ſoon after.

The diet of the common people conſiſts of goſſio, fruit, and wine, with ſalt-fiſh brought from the coaſt of Barbary. Some think their being ſubject to the itch, is owing to their eating ſo much of this laſt food. In the ſummer ſeaſon freſh fiſh is pretty plentiful, but more ſcarce and dear at other times of the year.

People of rank here have houſes two ſtories high, which are handſome ſquare buildings, of ſtone and mortar, with an open court in the middle like our public inns in England, and like them have balconies running round, which are on a level with the floor of the ſecond ſtory. The ſtreet-door is placed in the middle of the front of the houſe, and within that door is a ſecond, the ſpace between them being the breadth of the rooms of the houſe. The court-yard, which is on the inſide, is large or ſmall according to the ſize of the building, and is uſually paved with flags, pebbles, or other ſtones. In the centre of the court is a ſquare or circular ſtone-wall about four feet high, filled with earth, in which are commonly planted orange, banana, or other trees common in theſe parts.

The lower ſtory of each quarter of the houſe conſiſts entirely of ſtore-rooms, or cellars. The ſtairs leading to the ſecond ſtory uſually begin at the right or left hand corner of the entrance of the court, and conſiſt of two flights of ſteps, which lead into the gallery, from which one may enter any room on the ſecond ſtory. The principal apartments are generally in that quarter of the houſe facing the ſtreet, which contains a hall with an apartment at each end. Theſe rooms are the whole breadth of the quarter, and the hall is twice the length of any of the apartments at its extremities. The windows of theſe rooms are formed of wooden lattices, curiouſly wrought; none of them looking inwards to the court; but they are all in the outſide wall.

Some great houſes have balconies in the middle of the front, on the outſide above the gate, equal with the floor of the ſecond ſtory; and ſome have a gallery which runs from one end of the front to the other, but the outſide of the houſe has ſeldom any.

They white-waſh all the apartments; and thoſe at the extremities of the great halls, with ſome of the reſt, are lined with fine mats about five feet high, and the floor is ſometimes covered with the ſame. The ſides of the windows of all the rooms are lined with boards to prevent people's cloaths being whitened; for they commonly ſit in the window, there being benches on each ſide of it for that purpoſe; and when the maſter of the houſe intends to ſhew a ſtranger reſpect, he always conducts him to the window, to converſe with him.

The great hall, and the walls of ſome of the apartments, are hung with paintings, repreſenting the virgin, the twelve apoſtles, ſaints, and martyrs, uſually drawn as large as life, and diſtinguiſhed by ſome circumſtance of their hiſtory. Thus St. Peter is uſually preſented looking at a cock and weeping, and a great bunch of keys always hangs at his girdle. St. Anthony preaching to the fiſhes, is one of their favourite paintings.

Their beds have ſeldom any curtains, for theſe they conſider as receptacles for fleas and bugs, which abound here extremely. They chiefly uſe matraſſes ſpread on the floor upon fine mats; beſides the ſheets, there is a blanket, and above that a ſilk quilt. The ſheets, pillows, and quilt are frequently fringed or pinked, like the ſhrouds uſed for the dead with us.

There is a place, in a particular apartment, raiſed a ſtep higher than the floor, covered with mats or carpets; and there the women generally ſit together upon cuſhions, both to receive viſits from their own ſex, and give directions concerning their houſhold affairs.

The houſes of the peaſants and lower ſort of people, though only one ſtory high, are built of ſtone and lime, and the roofs either thatched or tiled. Theſe are generally neat, clean, and commodious. Indeed there is but little dirt or duſt in theſe iſlands to make them uncleanly; for the ground is moſtly rocky, and ſeldom wet, from the almoſt continual fine weather.

The deportment of the natives is grave, but at the ſame time tempered with great quickneſs and ſenſibility; the women, in particular, are remarkable for their ſprightlineſs, and vivacity of their converſation, which is ſaid greatly to exceed that of the Engliſh, French, or northern nations. The great families in theſe iſlands would be highly offended, ſhould any one tell them, they are deſcended from the Moors, or even from the ancient inhabitants of theſe iſlands; yet it would not perhaps be difficult to prove, that moſt of their cuſtoms have been handed down to them from thoſe people. The gentry boaſt much of their birth; and indeed that they are deſcended from the beſt families in Spain, there is no reaſon to doubt.

They

They have the utmoſt contempt for the employment of a butcher, taylor, miller, or porter. It is not indeed very ſurpriſing, that they ſhould not have any great eſteem for the profeſſion of a butcher, or that the employment of a taylor ſhould be conſidered as ſomewhat too effeminate for a man; but it is difficult to imagine why millers and porters ſhould be deſpiſed, eſpecially the former; but it muſt be conſidered that the millers here are generally eſteemed great thieves; and as the maſter of every family ſends his own corn to be ground, unleſs it be narrowly watched, the miller will take too much toll. It is ſaid that when any criminal is to ſuffer death, and the executioner happens to be out of the way, the officers of juſtice have the power of ſeizing the firſt butcher, miller, or porter they can find, and of obliging him to diſcharge that office; ſuch is their diſlike to perſons of theſe occupations.

It may not be amiſs to mention a circumſtance given us by Mr. Glaſs, who once touching at the iſland of Gomera to procure freſh water, hired ſome poor ragged fiſhermen to fill the water caſks, and bring them on board; but ſome time after, going to the watering place to ſee what progreſs they had made, he found the caſks full, and all ready for rolling down to the beach, with the fiſhermen ſtanding by, and talking together, as if they had nothing farther to do. He reprimanded them for their lazineſs in not diſpatching the buſineſs in which he had employed them; when one of them, with a diſdainful air, replied, "What do you take us to be, Sir? Do you imagine we are porters? No, Sir, we are ſeamen." Notwithſtanding all his intreaties and promiſes of reward, he was unable to prevail upon any of them to roll the caſks to the water ſide; but was at laſt obliged to hire porters, to do the buſineſs.

The gentry of theſe iſlands, though for the moſt part poor, yet are extremely polite and well bred; the very peaſants and labouring people have a conſiderable ſhare of good manners, with little of that ſurly ruſticity which is too common among the lower claſs of people in England; yet they do not ſeem to be abaſhed in the preſence of their ſuperiors. A beggar aſks charity of a gentleman, by ſaying "For the love of God, Sir, pleaſe to give me half a rial," and if the other gives him nothing, he returns, "For the love of God, I beg your worſhip's pardon," and then departs.

The common people and ſervants here are much addicted to private pilfering, for which they are uſually puniſhed by being diſcharged the ſervice, beaten, or impriſoned for a ſhort time. Highway robberies are ſeldom or ever known; but murder is more common than in England: and they have no notion of duels, for they cannot imagine that becauſe a man has the courage to fight, he thereby atones for the injury done to another, or that it ought to give him a right to do him a greater.

When the murderer has killed a man, he flies to a church for refuge, till he can find an opportunity to eſcape to another iſland; and if he had been greatly provoked or injured by the deceaſed, and did not kill him deſignedly, every body will be ready to aſſiſt him to eſcape, except the near relations of the perſon who has loſt his life, yet quarrels are far from being frequent here, which may be owing to the want of taverns and other public houſes, their polite behaviour, the little intercourſe there is between them, and their temperance in drinking.

People of the lower claſs never fight in public, but if one perſon puts another into a violent paſſion, the injured party, if able, takes his revenge in the beſt manner he can, till he thinks he has had ſatisfaction, without any regard to the equity of the method he uſes for this purpoſe.

The inhabitants of the Canary iſlands are in general extremely temperate; or at leaſt, if they are otherwiſe, it is in private only; for nothing can be a greater diſgrace there, than to be ſeen drunk; and a man who can be proved a drunkard, is not permitted to give evidence, or take his oath, in a court of judicature. Hence thoſe that are fond of liquor, intoxicate themſelves in their chambers, and then lie down, in order to ſleep till they are ſober.

Perſons of all ranks in theſe iſlands are extremely amorous; but their notions of love are pretty ſingular; which may perhaps be attributed to the want of innocent freedom between the ſexes. However, they do not ſeem to be inclined to jealouſy, any more than the Engliſh or French. It is uſual for young people here to fall in love at ſight; and if the parties agree to marry, but find their parents averſe to their union, they complain to the curate of the pariſh, who goes to the houſe were the girl lives, and endeavours to perſuade them to agree to her marriage; but if they refuſe to conſent to their union, he takes her away before their faces, without their being able to hinder him, and either places her in a convent, or with ſome of her relations, where ſhe muſt remain till they conſent to her marriage.

We are told, that a lady will ſometimes ſend a man an offer of her perſon in an honourable way; if he declines it, he keeps the matter ſecret till death; ſhould he do otherwiſe, he would be looked upon by all people in the moſt deſpicable light. Young men are not allowed to court the youth of the other ſex without an intention to marry them; for if a woman can prove that a man has, in any inſtance, endeavoured to engage her affections, ſhe can oblige him to marry her. This, like many other good laws, is abuſed; for looſe women taking advantage of it, frequently lay ſnares to entrap the ſimple and unwary; and ſometimes worthleſs young men, form deſigns upon the fortunes of ladies, without having the leaſt regard for their perſons: there are not, however, many mercenary lovers in this part of the world, their notions in general being too refined and romantic to admit the idea of that paſſion being made ſubſervient to their ambition or intereſt; and yet there are more unhappy marriages here than in the countries where innocent freedoms being allowed between the ſexes, lovers are not ſo blinded by their paſſions, as not to perceive the frailty and imperfections of their miſtreſſes.

On the death of a man's wife, it is uſual for ſome of his relations to come to his houſe, and reſide with him for ſome time, in order to divert his grief, and do not leave him till another relation comes to relieve the firſt, the ſecond is relieved by a third, and thus they ſucceed each other for the ſpace of a year.

Each of the Canary iſlands, as well as every town and family, hath a peculiar tutelary ſaint for its patron, whoſe day is celebrated as a feſtival, by a ſermon preached in honour of the ſaint, and a ſervice ſuited to the occaſion. On theſe days, the ſtreet near the church is ſtrewed with flowers and leaves, a multitude of wax candles are lighted, and a conſiderable number of fireworks played off.

A kind of fair is generally held on the eve of theſe feſtivals, to which the people of the adjacent country reſort, and ſpend the greateſt part of the night in mirth and dancing to the ſound of the guittar, accompanied with the voices not only of thoſe who play on that inſtrument, but by thoſe of the dancers. The dances practiſed here are ſarabands and folias, which are ſlow dances; thoſe which are quick are the canario, firſt uſed by the Canarians; the fandango, which is chiefly practiſed by the vulgar; and the rapetes, which nearly reſembles our hornpipe. Some of theſe dancers may be termed dramatic, as the men ſing verſes to their partners, who anſwer them in the ſame manner. Moſt of the natives of theſe iſlands can play on the guittar, and they have in general excellent voices.

Plays are acted in the ſtreets for the entertainment of the populace, at the feaſts of the tutelar ſaints of Teneriff, Canaria, and Palma; but the performers cannot be ſuppoſed to riſe to any degree of perfection, as they are not profeſſed actors, but only ſome of the inhabitants of the place who ſeem to have a natural turn for acting.

The gentry frequently take the air on horſeback; but when the ladies are obliged to travel, they ride on aſſes, and inſtead of a ſaddle they uſe a kind of chair, in which they ſit very commodiouſly. The principal roads are paved with pebble-ſtones, like thoſe uſed in the ſtreets of London. There are a few chariots in Canaria, the town of Santa-Cruz, and the city of Laguna in Teneriff; theſe are all drawn by mules, but they are kept rather for ſhew than uſe; for the roads are not proper for wheel carriages, being ſteep and rocky.

The lower claſs of people divert themſelves with dancing, ſinging, and playing on the guittar; likewiſe with throwing a ball through a ring placed at a great diſtance, cards, wreſtling, and quoits. The peaſants, particularly thoſe of Gomera, have the art of leaping from rock to rock when they travel, which is thus performed: the long ſtaff or pole uſed on theſe occaſions, has an iron ſpike at the end of it, and when a man wants to deſcend from one rock to another, he aims the point of the pole at the place where he intends to alight, and then throws himſelf towards it, pitching the end of the pole ſo as to bring it to a perpendicular, and then ſlides down it to the rock on which he fixed it.

In the convents, children are taught reading, writing, Latin, arithmetic, logic, and other branches of philoſophy. The ſcholars read the claſſics; but the Greek is never

never taught here, and is entirely unknown even to the ſtudents in divinity. They are particularly fond of civil law and logic, but the latter is chiefly preferred.

The people belonging to theſe iſlands have a genius for poetry, and compoſe verſes of different meaſures, which they ſet to muſic. Some of their ſongs, and other poetical pieces, would be greatly eſteemed in a country where taſte for poetry prevails. Few of thoſe books called profane (to diſtinguiſh them from thoſe of a religious kind) are read here, ſince they cannot be imported into the iſland without being firſt examined by the inquiſition; a court which nobody cares to have any concern with. The hiſtory of the wars in Granada is in every body's hands, and is read by people of all ranks; they have alſo ſome plays, moſt of which are very good. Thomas a Kempis, and the Devout Pilgrim, are in every library, and much admired. But the books moſt read by the laity are the Lives of the Saints and Martyrs, which may be conſidered as a kind of religious romances, ſtuffed with legends, and the moſt abſurd and improbable ſtories.

With reſpect to the civil government of the iſlands of Canaria, Teneriff, and Palma, which are called the king's iſlands, it will be proper to obſerve, in the firſt place, that the natives, on their ſubmitting to the crown of Spain, were ſo far from being deprived of their liberty, that they were put on an equality with their conquerors, in which the Spaniards ſhewed great wiſdom and policy; but how they came afterwards to act in a quite contrary manner in America, is hard to determine; perhaps they might be apprehenſive, that if they proceeded with too much rigour againſt them at firſt, they might in time be induced to ſhake off the yoke, and diſpoſſeſs their tyrannical maſters, which we are informed, by late events, has proved to be the caſe in South America, as the following piece of intelligence, publiſhed in September 1782, announces: "You have repeatedly heard it reported, that there was a rebellion in Chili and Peru, in South America; and though the Spaniards do all they can to keep it a ſecret, I can aſſure you, from undoubted authority, that all the mines in Peru and the city of Pez, which is ſituated in the interior parts of the country, where they lodged their bars of gold and ſilver, and other valuables, are taken from them, and there were one hundred and fifty millions of piaſtres taken out of the ſtrong cheſts. The natives will very ſoon have the whole country in their poſſeſſion, for they deſtroy every white man, woman, and child, and even kill every one begot between a Spaniard and a native." But to return. After the conqueſt of the Canary Iſlands, the Spaniards incorporated with the natives in ſuch a manner as to become one people with them, and in conſequence of this political union, the king of Spain is able to raiſe in theſe iſlands more ſoldiers and ſeamen than in any other part of his dominions of three times their extent.

The alcalde, who is a juſtice of peace, is the loweſt officer except the alguazils; there is one of them in every town or village of note. Theſe magiſtrates are appointed by the royal audience of the city of Palmas, in Canaria; they hold their places only for a certain time, and, in caſes of property, can take cognizance of no diſputes where the value of what is contended for exceeds ſeventeen rials, or ſeven ſhillings ſterling. Over theſe magiſtrates is the alcalde major, who is appointed in the ſame manner as the other, and cannot decide any caſe relating to property, that exceeds the ſum of two hundred dollars.

From the deciſion of thoſe magiſtrates, appeals lie to the tiniente and corregidor: the firſt of whom is a lawyer, and nominated by the royal audience; but the latter, who is appointed by the king, is not obliged to be a lawyer, yet muſt have a ſecretary, clerk, or aſſiſtant bred to the law. The corregidor generally holds his place five years, and ſometimes longer. Few of the natives enjoy this honourable office, which is commonly filled by Spaniards.

The proceedings of the corregidor's court, and in that of the tiniente, are the ſame; theſe courts ſeeming to have been originally intended as a check upon each other. Appeals are made from the corregidor and tiniente to the royal audience of Grand Canaria; a tribunal compoſed of three oidores, or judges, a regent, and fiſcal, who are uſually natives of Spain, and are always appointed by the king. The governor-general is preſident of this court, though he reſides in Teneriff. In criminal cauſes there is no appeal from their determination; but appeals are carried to the council or audience of Seville in Spain, in matters reſpecting property.

In the Canary Iſlands, the ſtanding forces amount only to about an hundred and fifty men; but there is a militia of which the governor-general of the iſland is always commander in chief, and the officers, as colonels, captains, and ſubalterns, are appointed by the king. There are alſo governors of forts and caſtles, ſome of which are appointed by the king, and others by the twelve regidors of the iſlands, called the cavildo; ſome of the forts belong to the king, and the reſt are under the direction of the regidors, or ſub-governors, who alſo take care of the repair of the highways, prevent nuiſances, and the plague from being brought into the iſland by ſhipping; for no man is allowed to land in theſe iſlands from any ſhip, till the maſter produces a bill of health from the laſt port, or till the crew have been examined by the proper officers.

The royal revenue ariſes from the following articles: A third of the tithes, which ſcarcely amounts to a tenth part of them, the clergy appropriating almoſt the whole to themſelves. This third part was given by the pope to the king of Spain, in conſideration of his maintaining a perpetual war againſt the infidels. The ſecond branch conſiſts in the monopoly of tobacco and ſnuff, which the king's officers ſell on his account, no other perſons being allowed to deal in thoſe articles. Another branch of the revenue ariſes from the orchilla-weed, all of which in the iſlands of Teneriff, Canaria, and Palma, belong to the king, and is part of his revenue; but the orchilla of the other iſlands belongs to their reſpective proprietors. The fourth branch conſiſts of the acknowledgment annually paid by the nobility to the king for their titles, which amounts to a mere trifle. The fifth branch is a duty of ſeven per cent. on imports and exports: and the ſixth duty on the Canary Weſt India commerce. All theſe branches, the ſixth excepted, are ſaid not to bring into the king's treaſury above fifty thouſand pounds per annum, clear of the expences of government, and all charges relating thereto.

SECT. XV.

Containing an Account of the Manufactures and Commerce of the Iſlands of CANARIA, TENERIFF, PALMA, GOMERA, and FERRO; alſo of their Fiſhery on the Coaſt of BARBARY, their Eccleſiaſtical Government, and the Coins, Weights, and Meaſures uſed in the Canary Iſlands.

WITH reſpect to the manufactures of the iſlands in general, they conſiſt of taffeties, knit ſilk hoſe, ſilk garters, and quilts for beds. In Canaria and Teneriff, coarſe linens and gauzes are made of the flax imported from Holland. In Canaria are alſo made white blankets and coarſe cloths, from the wool of their own ſheep. The reſt of the iſlands alſo make a coarſe kind of cloth, which is worn by the peaſants; but on feſtivals, weddings, &c. the labouring people uſually wear Engliſh coarſe cloth. The exportation of raw ſilk is now prohibited, in order to encourage their ſilk manufactures. In the large towns men are employed in weaving, and as tailors; but thoſe trades are exerciſed in the villages only by the women.

We may divide the commerce of the Canary Iſlands into theſe proportions following; namely, that to Europe, and to the Engliſh colonies in America; that to the Spaniſh Weſt Indies; that carried on between the iſlands themſelves, and the fiſhery on the Barbary coaſt.

The iſlands of Ferro and Gomera are ſo poor, as to be viſited by no ſhips from Europe or America; nor are the natives of thoſe iſlands allowed any ſhare of the Spaniſh Weſt India commerce; they being not entirely under the juriſdiction of the crown of Spain, but ſubject to the count of Gomera, who is the lord and proprietor of them.

The iſland of Teneriff is the centre of the trade to Europe, and the Britiſh American colonies. A few ſhips trade to Canary and Palma, but theſe are not to be compared to the numbers that arrive at Teneriff. This trade is carried on entirely in foreign bottoms, eſpecially in Engliſh, the natives being afraid of ſailing in thoſe ſeas where they are in danger of being taken by the corſairs of Algiers, Sallee, and other ports of Barbary. The greateſt part of this trade is in the hands of the Iriſh Roman Catholic merchants ſettled in Teneriff, Canaria, and Palma, and the deſcendents of the Iriſh who formerly ſettled there, and married Spaniſh wives; and, the Engliſh and Dutch conſuls, and two or three merchants who live at Teneriff, are the only proteſtants who reſide there.

The commodities imported from Great Britain to theſe iſlands conſiſt chiefly of woollen goods of various kinds, hats, hard-ware, red-herrings, pilchards, and wheat when it is ſcarce in the iſlands, with many other articles. They import from Ireland beef, pork, pickled-herrings, butter, and candles. From Holland and Hamburgh, linens of all ſorts, to a very great amount, are imported; alſo gunpowder, cordage, coarſe flax, and other goods. From Biſcay, a conſiderable quantity of bar iron is annually brought hither.

The articles they import from Majorca, Italy, Barcelona, Cadiz, and Seville, conſiſt chiefly of velvets, ſilks, oil, ſalt, and cordage made of baſs or ſpartrem, with many little articles for the conſumption of the Canary iſlands, and the Spaniſh Weſt Indies. This trade is almoſt entirely carried on in the French and Malteſe tartans.

The Malteſe veſſels, before they ſail to theſe iſlands, make the tour of all the European harbours to the weſtward of Malta, trading from one part to the other. They go from the Mediterranean to Cadiz, and from thence to the Canaries, where, beſides the commodities of Italy, France, and Spain, they ſell the cotton manufactures of their own iſland; all cottons, imported into the Canary iſlands, except thoſe from Malta, paying ſuch an exorbitant duty as almoſt amounts to prohibition. The people of Malta have engaged to wage perpetual war with the Turks and Moors, which is the reaſon that this privilege is allowed them.

From the Britiſh colonies in America they import, dried cod, rice, beef, pork, hams, bees-wax, deal boards, pipe ſtaves, and wheat, flour, and maize, when the crops in the iſland fail.

Thoſe iſlands, in return for the above goods, export to Great Britain and Ireland, wine, orchilla-weed, campeachy wood, and a conſiderable quantity of Mexican dollars. The ſame articles to Holland and Hamburgh; but a greater quantity of dollars, and little or no orchilla-weed. To Marſeilles, Malta, Italy, and Spain, they ſend the commodities they receive from the Spaniſh Weſt Indies, particularly ſugar, hides, Campeachy log-wood, ſome orchilla-weed, and dollars: they export a great quantity of wine, but no other articles, to the Britiſh colonies in America.

The above goods in general pay a duty of ſeven per cent. on the eſtimated value, whether they are imported into, or exported from theſe iſlands.

There are particular regulations, to which the commerce of the Canary iſlands with the Spaniſh ſettlements in the Weſt Indies are ſubject, and no foreigners are allowed to have any ſhare in it; nor are any ſhips ſuffered to ſail to the Spaniſh ports of that part of America, from any of the iſlands except Teneriff, Canaria, and Palma; and the trade there is confined to the ports of the Havannah, Campeachy, and La Guaira on the coaſts of Caraccas, St. Domingo, Porto Rico, and Maracaroa: the three firſt are called the greater parts, and the others the leſſer, becauſe the trade of the latter, when compared with that of the former, is very inconſiderable.

Every thing relating to this trade is managed by a judge, a ſecretary, and other officers, who reſide in the city of St. Chriſtobal La Laguna; and before a ſhip takes in her loading for any of their ports, ſhe muſt obtain a licence from the judge of the India trade, which is generally granted, if it be her turn; for although intereſt and money are frequently found to prevail againſt juſtice, yet this is not the caſe here, for all ſhips are regiſtered, and muſt have their turns.

The produce of the Canaries conſtitute the whole of their trade to the Spaniſh Weſt Indies; ſuch as, wines, brandy, almonds, raiſins, figs, &c. of which they can annually ſend one thouſand tons; and are only allowed, beſides, what is termed a general for each ſhip, which conſiſts of all kinds of goods thought neceſſary for the uſe of the veſſel, crew, and paſſengers, during the voyage; and is more or leſs extenſive in proportion to the ſize of the ſhip. But though they are reſtricted by theſe rules, this trade is extended much farther; and it is ſaid they export at leaſt two thouſand tons of the produce of the iſlands, and alſo European commodities to a very great amount.

The imports from the Weſt Indies into theſe iſlands conſiſt of commodities of the ports from whence they came, and are chiefly logwood, hides, cocoa-nuts, ſugar, and Mexican dollars; all which they are obliged to land at Santa Cruz, in Teneriff, but cochineal and indigo are prohibited from being landed there. The ſilver they bring is limited to fifty Mexican dollars per ton, according to the regiſtered tonnage; yet ſome of theſe ſhips are ſaid to bring home a hundred and twenty dollars to Teneriff.

There are commonly employed in this trade ſhips of about two hundred and fifty, or three hundred tons burthen. Some of them are built in the iſlands, and others at the Havanna, or Old Spain. No foreign bottoms can be employed in this trade; for which reaſon the freight from the Canaries to the Weſt Indies is extremely high; for the Canary ſhipping carry ſo many uſeleſs hands, particularly chaplains; lie ſo long in the road of Santa Cruz, waiting their returns; and are at ſuch vaſt expence of anchors and cables, that the owners cannot afford to take leſs freight for a pipe of wine, from the Canaries to La Guaira, than ten pounds ſterling; and yet the run from Teneriff to that port being all the way before the wind, is uſually performed in leſs than thirty days: yet our author obſerves, that were the natives allowed to employ Engliſh ſhips in this trade, they would ſoon find a ſufficient number ready to carry their wine at the rate of twenty ſhillings for each pipe of it.

The trade carried on from one iſland to another, is as follows: The natives of Canaria export to Teneriff ſome raw and wrought ſilk, coarſe woollen blankets, proviſions of all ſorts, particularly cattle and fowls, orchilla-weed, ſquare flags for pavements, ſome ſalt, and filtering-ſtone veſſels for purifying water. In return for theſe commodities, they chiefly receive caſh, and the other produce of the Spaniſh Weſt Indies. Palma exports to Teneriff boards, pitch, raw ſilk, orchilla weed, ſugar, almonds, and ſweet-meats; and receives in return European and Weſt India goods. The natives of Gomera export to Teneriff cattle, brandy, orchilla-weed, a great deal of raw ſilk and ſome wrought, and in return receive European and Weſt India goods. The inhabitants of Ferro export to Teneriff cattle, brandy, orchilla-weed. Lancerota and Fuerteventura export a great quantity of corn to Teneriff, beſides cattle, fowls, and orchilla-weed; and, in return, generally receive European goods and caſh, with ſome wine. The natives of the ſame iſlands ſend corn to Palma, for which they receive ſugar, wine, caſh, boards, and other timber. The natives of Lancerota alſo export to Teneriff and Palma ſome dried fiſh and ſalt.

The veſſels employed in this trade are built in the iſlands, and are from twenty to fifty tons burthen; they are about twenty-five in number, and each of them navigated by ten hands, on account of the great labour required in loading and unloading.

The fiſhery here is carried on by the natives of the Canary Iſlands on the coaſt of Barbary. It employs about thirty veſſels, from fifteen to fifty tons burthen, the ſmalleſt carrying fifteen men, and the largeſt thirty. The owners having fitted out a veſſel for this voyage, put on board a quantity of ſalt ſufficient to cure the fiſh, with bread enough to ſerve the crew till their return. Each man has his own fiſhing tackle, which conſiſts of a few lines, hooks, one or two ſtout fiſhing rods, a little braſs wire, and a knife for cutting open the fiſh. If any of the crew carry wine, brandy, fleſh-meat, or any other ſtores, it muſt be at his own expence; for only bread is provided by the owners.

On the north, this fiſhery is bounded by the ſouthern extremity of Mount Atlas, in the latitude of twenty-nine degrees; and on the ſouth, by Cape Blanco, in the latitude of twenty degrees thirty minutes; an extent of about ſix hundred miles; in all which tract there is neither town nor village, and but few ſettled habitations. The wandering Arabs who frequent this part of the world live in tents, and have neither barks, boats, nor canoes; and the king of Morocco's cruiſers never venture ſo far to the ſouthward.

As ſoon as the fiſhermen arrive on the coaſt, they endeavour to catch bait, which is done as we do trouts with a fly, only the rod is three times as thick as ours, and does not taper ſo much towards the point. The line is formed of ſix braſs wires twiſted together; the hook is about five inches in length, and is not bearded; the ſhaft is loaded ſo as to lie horizontally on the ſurface of the water, and the hook is covered with a fiſh's ſkin, except where it bends to the point. The fiſhermen getting within a quarter or half a mile of the ſhore, carry ſo much ſail as to cauſe the bark to run about four miles an hour, when two or three men throw their lines over the ſtern, and let the hooks drag along the ſurface of the water. The fiſh taking the hooks for ſmall fiſh, ſnap at them; and they are no ſooner hooked, than the fiſhermen ſwing them with their rods into the bark.

The Canarians call theſe fiſh taſſarte; they have no ſcales, and are ſhaped like a mackarel, but are as large as a ſalmon; and they are ſo voracious, as to ſwallow all the

hook, notwithſtanding its being ſo large; and was it barbed, it would be impoſſible to extract it, without cutting open the fiſh. Three men, in the ſtern of a bark, have been ſeen to catch a hundred and fifty taſſarte in half an hour, and a bark will ſometimes complete her lading with theſe fiſh only.

Another ſort of fiſh which they call anhoua is taken in the ſame manner; this is rather bigger than a large mackarel, and alſo ſerves for a bait; as does alſo another fiſh called cavallos, which is ſhaped like a mackarel, but is ſomewhat more flat and broad; it is about a ſpan long, and is catched with an angle-rod and line, with a very ſmall hook, baited with almoſt any thing that can be procured.

As ſoon as a bark has obtained a ſufficient ſtock of bait, ſhe leaves her boat with five or ſix men to catch more, and runs out to ſea till ſhe gets into a great depth of water; there ſhe anchors, and all the crew heave their lines and hooks over-board, baited with the above fiſh, in order to catch bream and cod. The lines are loaded ſo as to cauſe the hooks to ſink near the bottom of the ſea, where theſe fiſh ſwim; and when a bark meets with fine weather, and is well provided with bait, ſhe will be able in four days to complete her cargo.

The fiſhermen make but one meal in the whole day, which is in the evening, after they have cleaned and ſalted the fiſh they have taken; they then dreſs their ſupper in the following manner. In every bark the crew have a long flat ſtone for a hearth, upon which they light a fire, and hang a large kettle over it, in which they boil ſome fiſh: they then take a platter, with ſome broken biſcuit, onions ſhred ſmall, to which they add pepper and vinegar, and then pour in the broth of the fiſh, which is ſaid to be delicious. Having eaten of this excellent ſoup, they finiſh their meal with roaſted fiſh; for they throw that of which the ſoup was made into the ſea. Soon after this repaſt they lie down to ſleep in the moſt commodious part of the veſſel, for they have no bedding, and about five or ſix in the morning riſe, leave the boat near the ſhore, weigh anchor, and ſtand out to ſea as before, never taſting food before the next evening, at the ſame time.

Their cargoes conſiſt chiefly of large bream, nevertheleſs, they catch many other ſorts. The taſſarte, juſt mentioned, is a delicious fiſh, which taſtes like a large and fat mackarel; but, when dried, is not to be diſtinguiſhed from ſalmon. The cod caught here is better than that of Newfoundland: the anhoua is extremely good; the corbino is a large fiſh that weighs about thirty pounds. There are alſo a number of flat fiſh, with many others of various kinds.

They cure them by the following method: after cutting them open, and having thoroughly cleaned and waſhed them, they chop off their heads and fins, and pile them up to drain off the water; after which they are ſalted, and ſtowed in bulk in the hold, and in this ſtate they remain till fit for uſe.

"It is ſtrange, ſays a judicious author, to think that the Spaniards ſhould want to ſhare the Newfoundland fiſhery with the Engliſh, when they have one much better at their own doors. I ſay better, for the weather here, and every thing elſe, concurs to make it the beſt fiſhery in the univerſe. What can be a ſtronger proof of this, than the Moors on the continent drying and curing all their fiſh without ſalt, or any other proceſs than expoſing them to the ſun-beams? For the pure wholſome air of that climate, and the ſtrong northerly wind which almoſt conſtantly prevails on this coaſt, totally prevents putrefaction, provided the fiſh are ſplit open, well waſhed, and then perfectly dried in the ſun."

The barks uſed by the Canarians make eight or nine voyages in a year; for, having unloaded their cargoes, they leave the fiſh with their agents to ſell them at their leiſure, while they go in ſearch of more. They are commonly ſold at three half pence for a pound of thirty-two ounces, which is the weight uſed for fiſh and fleſh in theſe iſlands.

The magiſtrates, inſtead of encouraging this uſeful and profitable branch of trade, take every method to injure it, by fixing the price of the fiſh, clogging the trade with unreaſonable duties, and forbidding the fiſhermen to have any intercourſe with the Moors on the coaſt, where they ſometimes go to fiſh; which is a great hardſhip, as they are frequently obliged, when they meet with bad weather, to go aſhore for fuel and water. They correſpond, however, privately to their mutual advantage: for the Canarians give the inhabitants of the deſart old ropes, which the latter untwiſt and ſpin into yarn or twine for fiſhing-nets; they alſo give them bread, potatoes, onions, and many kinds of fruit; in return for which the Moors make them preſents of oſtrich's eggs and feathers, and allow them to take wood and water on their coaſt, whenever they are in want of thoſe neceſſary articles.

With reſpect to the eccleſiaſtical government of the Canary Iſlands in general, it muſt be obſerved, that the biſhop is ſuffragan to the archbiſhop of Seville, in Spain, and has a revenue of ſix thouſand pounds ſterling per annum. He reſides in the city of Palma, in Canaria, where he is treated with as much reſpect and homage as a ſovereign prince. The ſuperior of the various orders of friars and nuns reſides in the city of St. Chriſtobal de la Laguna, and are only accountable to the generals of their reſpective orders at Rome.

There is a houſe in each of the iſlands belonging to the inquiſition, with its proper officers, in order to prevent all appearances of hereſy or diſreſpect to the clergy. They have power to apprehend and confine ſuſpected perſons, without giving any reaſon for it to the civil magiſtrates; and, after examining them, they are either ſent to the tribunal at Canaria, or diſcharged.

On the arrival of any foreign ſhips at the iſlands, the firſt time the maſter goes aſhore, he is conducted to an officer of the inquiſition, who examines him whether he has any books or pictures in his ſhip againſt the doctrine or ceremonies of the church of Rome: and he is obliged to ſign a paper, by which he engages, if he has any, not to land or expoſe them to view; and that, while he remains in the country, he will neither ſpeak againſt the Romiſh religion, nor ridicule its rights and ceremonies. As all the natives are zealous members of the Romiſh church, this tribunal has ſeldom an opportunity of exerciſing its extenſive authority over them.

The gentry are generally poor, and unable to give fortunes to their younger ſons and daughters, many of the former being educated for the church; and not a few young ladies ſhut themſelves in convents for life, becauſe they cannot find huſbands ſuitable to their rank, and are unwilling to depend upon their elder brothers, or other relations, for ſubſiſtence: others take the ſame ſtep from their having met with diſappointments in love; and a few take the vail from religious motives, being flattered by the nuns and clergy into a high conceit of their own ſanctity.

In theſe iſlands the prieſts are far from being ſatisfied with their tithes, or the friars with the revenues of their convents, and have therefore found means to load the inhabitants with many impoſitions, which, though not eſtabliſhed by law, it would be dangerous for them to preſume to refuſe paying. Thus every fiſhing-bark from the coaſt of Barbary is obliged to deliver a certain quantity of fiſh to each convent; and when the Mendicant friars go begging from houſe to houſe, they are liberally ſupplied; and, was any to refuſe giving them alms, they would be marked out as objects of their vengeance, and be expoſed to the inquiſition. In ſhort, all ranks of men, who have any great point in view, take care, in the firſt place, to ſecure in their intereſt the leading men of the clergy: and it is eaſy to ſurmount every other obſtacle when this is accompliſhed.

As the Catholics of theſe iſlands ſeem to think, that all excellence is confined to thoſe of their religion; therefore when they ſee any of a different perſuaſion behave with common decency, they appear greatly ſurpriſed, imagining that thoſe they call heretics differ but little from brutes. Such is the prevalence of ſuperſtition and bigotry over the minds of the ignorant!

The Mexican dollar, and the half, quarter, eighth, and ſixteenth parts of a dollar, are the current coin in the Canaries. There is alſo the provincial rial of plate, which is a ſmall ſilver piece worth five-pence ſterling; alſo the quart, a copper coin of the value of an halfpenny, ten of which make a rial of plate. The provincial ſilver coin is never exported, on account of its paſſing in the iſlands for more than its intrinſic value. Accounts are kept in imaginary money, that is, current dollars of ten rials of vellon each. The rial of vellon is equal in value to eight of the above quarts, and the current dollar is exactly three ſhillings and four-pence, and therefore ſix of them make one pound ſterling. Three ſixteenths of the Mexican dollar paſs for two rials of plate. Gold coin is very ſcarce here.

The quintil, which is their hundred weight, weighs only an hundred and four pounds. The arroba is twenty-five pounds. The pound and ſmaller weights are nearly the ſame as thoſe in Europe.

The

The following are the measures used in the Canaries; namely, the fanega or hanega, the almud, the liquid arroba, the quartillo, and the var. The fanega is a measure for corn, cocoa, salt, &c. and contains nearly the quantity of two English bushels. Twelve almuds make a fanega. The liquid arroba contains little more than three gallons, and the quartillo is nearly the same as our quart. The var (which is somewhat less than the English yard) is a measure for cloth, &c.

We have now compleated our description of the Canary Island, but cannot with propriety conclude this section, without first giving a concise account of the islands or rocks named the Salvages, which lie between the Canaries and Madeira.

These islands are situated twenty-seven leagues north from Point Nago in Teneriff, in thirty degrees twenty minutes north latitude, and in sixteen degrees twenty-five minutes west longitude from London; the most considerable of which is high and rocky, and is about three miles in circumference. Three or four leagues to the south-west of this island is another, not unlike the largest Needle rock at the west end of the Isle of Wight. Between these islands are a considerable number of rocks and sands, some above and others under water, so that it is dangerous for those unacquainted with these islands to approach them, except on the east side of the great island, which produces nothing but orchilla-weed.

There are great numbers of cormorants, or sea fowls that nearly resemble them. Some barks and boats belonging to the Canary Islands frequent the Salvages in the summer season, in search of wrecks, and those sea fowls, for they catch the young in their nests, kill and salt them, and afterwards dispose of them at Teneriff.

These islands, though uninhabited, are claimed by the Portuguese, who consider them as dependent on the island of Madeira, and, notwithstanding they scarcely ever visit them, will not allow the Spaniards to gather orchilla-weed there. A few years ago some fishermen went in a bark from Teneriff to these islands in quest of wrecks, but finding none, went ashore, and gathered about half a ton of orchilla-weed. But this was no sooner known at Madeira, than the Portuguese complained of it to the governor-general of the Canary Islands, and would not be satisfied till the master of the bark was thrown into prison, where he was a long time confined.

SECT. XVI.

Of the MADEIRA or MADERA ISLANDS; their Situation, and first Discovery of them; also their Soil, Produce, principal Towns, Inhabitants, Trade, &c.

THESE islands are only three in number; namely, Madeira, properly so called; the island of Puerto, or Porto Santo; and Isla Deserta, or the Desolate Isle. They are situated to the north of the Salvages, and in the Atlantic ocean, between thirty-two and thirty-three degrees, and seventeen and eighteen degrees west longitude, two hundred and fifty miles north by east from Teneriff, three hundred and sixty from Cape Cantin on the coast of Africa, and three hundred north of the island of Farro. They were thus named from the principal of them, which was called by the Portuguese Madeira, signifying a wood or forest, from its being overgrown with trees. They were first discovered by an English gentleman, and many years after by the Portuguese; and as there is something extremely singular in both these occurrences, but more particularly the first, we shall, for the entertainment of our readers, relate the circumstances attending it.

In the reign of Edward III. king of England, a young gentleman, named Robert Machin, conceived a violent passion for Ann D'Arfet, a beautiful and accomplished lady of a noble family. Machin, with respect to birth and fortune, was inferior to the lady; but his personal qualifications overcame every scruple on that account, and she rewarded his attachment with a reciprocal affection. Their friends, however, beheld the young gentleman in a different light; they fancied their blood would be contaminated by an alliance with one of a lower rank, and therefore determined to sacrifice the happiness of the young lady, to the hereditary pride of blood, and their own mercenary and interested motives.

In consequence of those ideas, a warrant was procured from the king, under the sanction of which Machin was apprehended, and kept in close confinement, till the object of his affections was married to a nobleman, whose chief merit lay in his honorary title and large possessions; and immediately after the nuptial ceremony was over, the peer took his beautiful bride with him to a strong castle which he had in the neighbourhood of Bristol, and then the unfortunate lover was set at liberty.

After being released from his cruel confinement, Machin was acquainted that his mistress had been compelled to give her hand to another. This rendered him almost frantic, and he vowed to revenge the violence done to the lady, and the injury which he himself had sustained; and with this view, imparted his design to some of his friends and companions, who engaged to accompany him to Bristol, and assist him in whatever enterprize he undertook.

Accordingly one of his comrades contrived to get himself hired by the nobleman as a servant, and by that means being introduced into the family, he soon found an opportunity to let the lady know the sentiments and intentions of her lover; when she fully entered into all his projects, and promised to comply with whatever he should propose.

In order to facilitate the design, the lady appeared more chearful than usual, which lulled asleep every suspicion that her lord might otherwise have entertained; she also entreated permission to ride out daily to take the air for the benefit of her health, which request her consort easily granted. This point being gained, she did not fail to take advantage of it, by riding out every morning accompanied by one servant only, which was her lover's companion, he having been previously pitched upon always to attend her by her own contrivance.

Matters being thus prepared, she one day rode out as usual, when her attendant conducted her to his friend, who waited at the sea-side to receive her. They all three immediately entered a boat, and soon reached a ship that lay at some distance ready to receive them on board; and Machin, having the object of his wishes on board; immediately, with the assistance of his associates, set sail, intending to proceed to France; but all on board being ignorant of maritime affairs, and the wind blowing a hard gale, they missed their port, and the next morning, to their astonishment, found themselves driven into the main ocean. In this miserable condition, they abandoned themselves to despair, and committed their fates to the mercy of the waves. Without a pilot, almost destitute of provisions, and quite devoid of hope, they were tossed about for the space of thirteen days. At length when the morning of the fourteenth day began to dawn, they fancied they could descry something very near them, that had the appearance of land; and when the sun rose, to their great joy they could distinctly perceive it was such. Their pleasure, however, was in some measure lessened by the reflection, that it was a strange country; for they plainly perceived it was covered with a variety of trees, whose nature and appearance they had not the least knowledge of.

Soon after this, some of them landed from the sloop, in order to make their observations on the country; when, returning soon after to the ship, they highly commended the place, but at the same time believed there were no inhabitants in it.

The lover and his mistress, with some of his friends, then landed, leaving the rest to take care of the ship. The country appeared beautifully diversified with hills and dales, shaded with various trees, and watered by many clear meandring streams. The most beautiful birds of different species perched upon their heads, arms, and hands, unapprehensive of danger; and several kinds of wild beasts approached, without offering any violence to them.

After having penetrated through several woody recesses, they entered a fine meadow admirably incircled with a border of laurels, finely enamelled with various flowers. Upon an eminence in the midst of this meadow, they saw a lofty spreading tree, the beauty of which invited them to repose under its shade, and partake of the shelter it would afford them from the piercing rays of the sun. They at length attempted to make a temporary residence beneath this tree; and, providing themselves boughs from the neighbouring woods, they built several small huts, or arbours. They passed their time very agreeably in this place, from whence they made frequent excursions into the neighbouring country, admiring its strange productions and various beauties. Their happiness, however, was of no very long continuance; for one night a terrible storm arose from the north-east, which tore the ship from her anchor, and drove her to sea. The crew were obliged to

submit

ſubmit to the mercy of the elements, when they were driven to the coaſt of Morocco, where the ſhip being ſtranded, the whole crew was made captives by the Moors.

Machin and his companions, having miſſed the ſhip the next morning, they concluded ſhe had foundered, and was gone to the bottom. This new calamity plunged them into the deepeſt melancholy, and ſo greatly affected the lady, that ſhe could not ſupport herſelf under it. She had indeed before continually fed her grief, by ſad preſages of the enterprizes ending in ſome fatal cataſtrophe to all concerned; but the ſhock of the late diſaſter ſtruck her dumb; ſo that ſhe expired in three days afterwards, in the moſt bitter agonies.

The death of the lady affected Machin to ſuch a degree, that he ſurvived her but four days, notwithſtanding the utmoſt endeavours of his companions to afford him conſolation. Previous to his death, he begged them to place his body in the ſame grave with her's, which they had made at the foot of an altar, erected under the beautiful lofty tree before-mentioned. They afterwards placed upon it a large wooden croſs; and near that an inſcription, drawn up by Machin himſelf, containing a ſuccinct account of the whole adventure; and concluded with a requeſt, that if any Chriſtians ſhould come thither to ſettle, that they would build and dedicate a church to Jeſus Chriſt upon that ſpot.

The remaining companions of Machin, after his death, determined to attempt returning to England in the ſloop, which had been ſo well ſecured near the ſhore, as not to be in the leaſt damaged by the ſtorm which had driven away the ſhip. But, happening to take the ſame courſe the others had been forced upon, they unfortunately arrived in like manner upon ſome part of the coaſt of Morocco, where they met with exactly the ſame fate, being ſeized in a ſimilar manner, and carried to the ſame priſon. Here they met with ſeveral other Chriſtian ſlaves, beſides their own companions; particularly one John de Morales, a Spaniard of Seville. This man was an excellent ſailor, and took a peculiar delight in hearing the Engliſh captives rehearſe their adventures, by which means he learnt the ſituation and particular marks of this new diſcovered country, which he took care to retain in his memory.

In proceſs of time, John I. king of Portugal, having entered into a war with the Moors, paſſed over into Africa with a formidable army; and in the year 1415 laid ſiege to and took Ceuta. In this expedition he was accompanied by his ſons, one of whom, prince Henry, took great delight in the ſtudy of the mathematics, particularly geography and navigation. Upon this occaſion, they had a great opportunity of converſing with the Moors and African Jews; and informing himſelf, by their means, of the ſituation of ſeveral foreign countries, the ſeas about them, their coaſts, &c. Hence grew an inſatiable thirſt for making new conqueſts; and from this time he was determined to devote his attention to the diſcovery of unknown countries. In conſequence of which reſolution, he retired, after the reduction of Ceuta, to the Algarves, where he found a new town within a league of Cape St. Vincent, erected a fort to defend it, and determined to ſend out ſhips from thence upon diſcoveries.

The perſon he intended to employ as chief commander, upon theſe occaſions, was a gentleman of extraordinary abilities, named Juan Gonſalvo Zarco, who became famous not only for his maritime diſcoveries, but for being the firſt perſon who introduced the uſe of artillery on board ſhips. In 1418 he diſcovered Puerto Santo, one of the Madeiras; and in 1420 he paſſed the ſtraits, and ſurveyed a conſiderable extent of the coaſt of Africa. In the mean time, a Spaniſh prince dying, left by his will a large ſum of money for the purpoſe of redeeming Spaniſh Chriſtians, who were kept as ſlaves in Morocco. Terms being agreed upon between the emperor of Morocco and the commiſſioners, for the redemption of thoſe captives, a Spaniſh ſhip was ſent to Morocco to fetch home the redeemed Chriſtians, among whom was John de Morales before-mentioned.

On the return of this ſhip to Spain, it happened to fall in with the ſquadron commanded by Juan Gonſalvo Zarco, who was, as we have juſt noticed, then paſſing the ſtraits to make obſervations on the coaſt of Africa. Spain and Portugal being at this time at war, Juan Gonſalvo Zarco made prize of the Spaniſh ſhip; but finding it contained only redeemed captives, he was touched with compaſſion at the miſeries they had already ſuffered during their ſlavery, and generouſly diſmiſſed them, taking out only John de Morales, who he found to be a very intelligent perſon, an able ſailor, and an expert pilot.

When Morales was informed of the reaſon of his detention, and the diſcoveries that the Portugueſe were upon, he was mightily rejoiced, and offered voluntarily to enter into the ſervice of prince Henry. He then told the Portugueſe commander of the iſland which had been lately diſcovered by the Engliſh, related the ſtory of the two unfortunate lovers, and every other circumſtance, which during his captivity, he had heard from Machin's companions.

Gonſalvo was ſo delighted with his relation, that he tacked about, and returned to the new town which prince Henry had built, called Terra Nabal. On his arrival, he introduced Morales to the prince, when the Spaniard again repeated all that he had before told to Juan Gonſalvo. The prince thought this worthy of becoming a national affair; and therefore, communicating the whole to the king his father, and the Portugueſe miniſtry, they determined to purſue the diſcovery; and for that purpoſe fitted out a good ſhip, well manned and provided, and a ſloop to go with oars, when occaſion required: and Juan Gonſalvo was appointed to the whole command.

Some Portugueſe, on the diſcovery of Puerto Santo, a ſhort time before, had been left by Gonſalvo on that iſland; and judging by the account of Morales, concerning the ſituation of the iſland they were in queſt of, that it could not be far from Puerto Santo, he determined to ſail thither. Where when he arrived, the Portugueſe whom he had left behind, informed him, that they had obſerved to the north-eaſt a thick impenetrable darkneſs, which conſtantly hung upon the ſea, and extended itſelf upward to the heavens. That they never knew it to de diminiſhed; but a ſtrange noiſe, which they could not account for, was often heard from thence.

John de Morales appeared to be convinced that this was the iſland they were in ſearch of; and Juan Gonſalvo was inclined to coincide with him; but all the reſt were terrified at the accounts they had heard. It was therefore concluded to remain at Puerto Santo till the change of the moon, to ſee what effect that would have upon the ſhade, or whether the noiſe would ceaſe. But perceiving no alteration of any kind, the panic increaſed among the generality of the adventurers. Morales, however, ſtood firm to his opinion of that being the iſland they were looking for; and very ſenſibly obſerved, that, according to the accounts he had received from the Engliſh, the ground was covered over with lofty ſhady trees; it was no wonder, therefore, that it ſhould be exceeding damp, and that the humid vapors might exhale from it by the power of the ſun, which, ſpreading themſelves to the ſky, occaſioned the dark clouds they ſaw; and with reſpect to the noiſe, that might be occaſioned by certain currents daſhing againſt the rocks on the coaſt of the iſland.

Notwithſtanding theſe obſtacles, Juan Gonſalvo determined to proceed; and, ſetting ſail the next day, he at length made land; and the fear of thoſe who had been all along terrified, now vaniſhed. The firſt point they ſaw, they named St. Lawrence's Point: doubling this, they found to the ſouthward, riſing land, whither Morales and others were ſent in a ſloop to reconnoitre the coaſt; and came to a bay which ſeemed to anſwer the deſcription given by the Engliſh. Here they landed; and finding the croſs and inſcription over the grave of the two lovers, they returned to Juan Gonſalvo, with an account of their ſucceſs; whereupon he immediately landed, and took poſſeſſion of the place, in the name of John I. king of Portugal, and prince Henry his ſon.

Having built an altar near the grave, they ſearched about the iſland, in order to diſcover if it contained any cattle; but not finding any, they coaſted weſtward till they came to a place where four fine rivers come into the ſea, of the waters of which Juan Gonſalvo filled ſome bottles, to carry as a preſent to prince Henry. Proceeding farther, they came to a fine valley, which was interſected by a beautiful river, and after that to a pleaſant ſpot covered with trees, ſome of which being fallen down, Juan Gonſalvo ordered a croſs to be erected of the timber, and called the place Santa Cruz, or Holy Croſs.

After this, they began to look out for a place proper to fix their reſidence in while they ſtayed: and at length found a fine tract of land, not ſo woody as the reſt of the country, but covered over with fennel, which, in the Portugueſe language, is called Funcho; from thence the town of Fonchal, or Funchiale, took its name, which was afterwards built on the ſame ſpot.

Juan Gonſalvo, after having viewed other parts of the iſland, and finding daily cauſe for new admiration of the beauties continually diſcovered, returned to Portugal, and arrived at Liſbon in the end of Auguſt 1420, without having loſt a ſingle man in the whole enterprize; and a day of audience being appointed for him to make his report of his voyage, the king gave the name of Madeira to the new diſcovered iſland, on account of the great quantity of excellent wood found upon it.

An order was ſoon after made for Juan Gonſalvo to return to Madeira in the enſuing ſpring, with the title of captain-governor of Madeira, to which title the heir of his family at preſent adds that of count. He accordingly ſet ſail on his ſecond voyage in May 1421, taking with him the greateſt part of his family, and arriving at Madeira he caſt anchor in the road, till then called the Engliſh Port; but Gonſalvo, in honour of the firſt diſcoverer, then called it Puerto de Machino, from which name it was corrupted to Machico, which it now bears.

He then ordered the large ſpreading beautiful tree before-mentioned (under which Machin and his companions had taken up their reſidence) to be cut down, and a ſmall church to be erected with the timber; which, agreeable to Machin's requeſt, he dedicated to Jeſus Chriſt, and interſected the pavement of the choir with the bones of the two unfortunate lovers. He ſoon after laid the foundation of the town of Funchal, which afterwards became famous; and the altar of the new wooden church was dedicated to St. Catherine, by his wife Conſtantia, who was with him.

John I. king of Portugal, dying, his eldeſt ſon and ſucceſſor Duarte, in conſideration of the great ſums of money expended in peopling this iſland, by prince Henry his brother, gave him the revenues of it for life. He likewiſe gave the ſpiritualities of it to the order of Chriſt, which endowment Alonzo XV. afterwards confirmed.

The iſland of Madeira, properly ſo called, is compoſed of one continued hill of a wonderful height, extending from eaſt to weſt; the declivity of which, on the ſouth-ſide, is cultivated and interſperſed with vineyards; and, in the midſt of this ſlope, the merchants have fixed their country ſeats, which help to render the proſpect very agreeable.

The air of Madeira is more moderate than that in the Canary Iſlands, and the ſoil more fertile in corn, wine, ſugar, and fruits. Fine ſprings abound almoſt in every part, beſides which there are eight good rivers. The great plenty of water firſt ſuggeſted the hint to prince Henry of ſending ſugar-canes to Madeira from Italy, which greatly improved through the increaſe of heat, and produced more than in their native ſoil.

This iſland affords plenty of citrons, bananas, peaches, apricots, plums, cherries, figs, and walnuts; with oranges of all ſorts, and lemons of a prodigious ſize. Fruit-trees from Europe thrive here in perfection; and the natives are ſaid to make the beſt ſweetmeats of any in the world, and particularly greatly excel in preſerving citrons and oranges, and in making marmalade and perfumed paſtes, which greatly excel thoſe of Genoa.

The ſugar made here is very fine, and has the ſmell of violets; this, indeed, is ſaid to be the firſt place in the weſt where this manufacture was ſet on foot, and from thence was carried to America: but afterwards the ſugar-plantations at Brazil proſpering extremely, the greateſt part of the ſugar-canes in this iſland were pulled up, and vineyards planted in their ſtead, that produce excellent wines, which, the author of Lord Anſon's voyage obſerves, ſeems to be deſigned by Providence to exhilerate and comfort the inhabitants of the torrid zone.

The cedar-tree here is very ſtrait, tall, and thick, and has a rich ſcent. The wood of the naſſo-tree is of a red roſe colour; here are alſo the maſtic and gum-dragon trees; and beſides fruit-trees there are a variety of other trees, which are common both to Europe and Africa. The everlaſting-flower is a great curioſity; for when it is plucked it cannot be perceived to fade; it grows like ſage, flowers like camomile, and always appears freſh and blooming.

Vines are here found in abundance; and from the grapes which they produce a vaſt quantity of the moſt delicious wines are made. Indeed the ſoil is ſo well adapted for the cultivation of vines, that the grapes exceed the leaves in number, and ſome of the bunches are ſixteen or eighteen inches in length.

There are ſeveral ſorts of theſe wines; one is of the colour of champagne, but is not much valued; another ſort is a white wine, much ſtronger than the former. A third ſort is excellent, and reſembles malmſy, it being of the ſame nature with that which grows in Teneriff: and another reſembles Alicant wine, but is much inferior to it in taſte, and is never drank alone, but mixed with the other ſorts, to which it gives a colour and ſtrength to keep. It is obſervable of the Madeira wines, that they are greatly improved by the heat of the ſun, when expoſed to it in the barrel, after the bung is taken out. In the whole iſland they annually make about twenty-eight thouſand pipes, eight thouſand of which are drank there, and the reſt exported, the greateſt part being ſent to the Weſt-Indies. The wines that are brought directly to England, are not equal in goodneſs to ſuch as are firſt carried to the Weſt Indies; and their flavour is exceedingly heightened, if they remain ſome time in Barbadoes.

The product of each vineyard is uſually divided equally between the proprietor, and the perſon who gathers and preſſes the grapes; it commonly happens, however, that while the merchant is rich, the gatherer is poor. The people here trade among themſelves, or barter.

The principal town in the whole iſland is Funchal, or Fonchiale, and is ſeated in the ſouth part of the iſland at the bottom of a large bay. Towards the ſea it is fortified by a high wall, with a battery of cannon, beſides a caſtle on the Loo, which is a rock ſtanding in the water at a ſmall diſtance from the ſhore. This town is the only place of trade, and indeed the only place where it is poſſible for a boat to land: and even here the beach is covered with large ſtones, and a violent ſurf continually beats upon it. The only good time for landing is before the ſea-breeze comes on. The town is very populous, but the majority of the inhabitants are not natural-born Portugueſe; for a great number of Engliſh and French Roman catholics ſettled there, who live after the Portugueſe manner; ſome Engliſh proteſtants, and a prodigious number of negroes and mulattoes, both freemen and ſlaves. The ſtreets are ſtraight, and drawn by a line, and their houſes are pretty well built; their churches are well-built beautiful ſtructures, enriched with gilding, fine pictures, and plate, and people are ſaid to meet in them upon buſineſs that has little relation to devotion.

Thoſe women who have no domeſtic chapels, never go to church but on Sundays and holidays; when, if there be ſeveral daughters, they walk two and two before the mother, each having a large thin vail over her face; but their breaſts and ſhoulders are quite bare. By their ſide walks a venerable old man, with a ſtring of beads in his hand, and armed with a ſword and dagger.

This town is the ſee of a biſhop, who has the whole iſland under his ſpiritual juriſdiction, and is ſuffragan to the archbiſhop of Liſbon. The governor of the iſland alſo reſides here.

Here are two other towns; one called Manchico, which has a church named Santa Cruz, or the Holy Croſs, and a convent of Bernardine friars: the other town is named Moncerito. In ſhort, the iſland lately contained thirty-ſix pariſhes, a college, and a monaſtery of jeſuits, five other monaſteries, eighty-two hermitages, and five hoſpitals. There are ſeveral fine ſeats and caſtles about the country, in which the merchants chiefly reſide.

The ordinary food of the poorer people, in the time of vintage, is little elſe than bread and rich grapes; and were it not for their abſtemiouſneſs, fevers in the hot ſeaſons would be frequent; therefore even the rich, in the hot months, are very moderate in their diet and drinking.

The generality of people in Madeira affect great gravity in their deportment, and uſually dreſs in black; but they cannot diſpenſe with the ſpado and dagger, which even ſervants wear; ſo that you may ſee a footman waiting at table with a ſword at leaſt a yard long, and a great baſket hilt to it. The houſes are generally plain, as the inhabitants put themſelves to no great expence in furniſhing them. The windows are ſecured by wooden ſhutters at night, and inſtead of being glazed, are latticed.

With reſpect to their marriages here, affection is never conſidered, the principal enquiries are into family deſcent and circumſtances; the women are prohibited from marrying Engliſhmen, unleſs the latter conſent to embrace the Roman catholic religion.

In this iſland murders are very frequent, on account of the great number of places deemed ſanctuaries, and the eaſe with which a murderer can thereby ſcreen himſelf from juſtice. But if the criminal is taken before he can reach the ſanctuary, the puniſhment is only either baniſhment or impriſonment, both which, by a pecuniary compoſition, may be evaded.

Here

Here are great numbers of clergy, who are generally rich; but none who are deſcended from Moors or Jews are admitted to take orders. The churches are made repoſitories for the dead, and the corpſe is curiouſly dreſſed and adorned; yet in the interment, ſtore of lime is uſed, in order to conſume the body as ſpeedily as poſſible, which uſually happens in a fortnight; ſo that there is then room for another corpſe. The bodies of proteſtants are not allowed to be buried, but muſt be thrown into the ſea; nevertheleſs they are permitted to be interred in conſecrated ground, provided a handſome ſum of money is paid to the clergy.

Porto Santo is generally termed one of the Madeira iſlands, and lies to the north-eaſt of Madeira, in the thirty-ſecond degree thirty minutes north latitude, and in the ſixteenth degree five minutes weſt longitude from London, and is only about fifteen miles in circumference. It was diſcovered in the year 1412, by two Portugueſe gentlemen, one of whom was Don Juan Gonſalvo, ſent by Prince Henry, ſon to John I. king of Portugal, to double Cape Bajador, in order to make farther diſcoveries; but being ſurpriſed by a violent ſtorm, were driven out to ſea, and, when they gave themſelves over for loſt, had the happineſs to find this iſland, which proving a ſafe aſylum to them, they called it Porto Santo, or the Holy Port.

This iſland produces wheat and other corn, juſt ſufficient for the ſupport of the inhabitants; here alſo are plenty of oxen, wild hogs, and a vaſt number of rabbits. There are trees which produce the gum called dragon's blood, and likewiſe a little honey and wax, which are extremely good. It has properly no harbour, but there is good mooring in the road, which affords a convenient retreat for ſhips going to Africa, or coming from the Indies; ſo that merchantmen often ſtop there, which affords conſiderable profit to the inhabitants, who are deſcended from the Portugueſe, to whom the iſland is ſubject.

The inhabitants of this iſland are all Roman catholics, being under the ſpiritual juriſdiction of the biſhop of Funchal in Madeira: They would live a very quiet life, were it not for the pirates, who often pay them troubleſome viſits. In the year 1617, they landed here, and carried off ſix hundred and ſixty-three priſoners, beſides plundering the place.

There is a little iſland called the Deſart, which produces only orchilla-weed, and ſome goats are on it: it lies on the eaſt ſide of Madeira, at about ſix leagues diſtance.

SECT. XVII.

Treating of the Iſlands of St. THOME, PRINCES ISLAND, FERNANDO PO, ANNABON, St. MATTHEW, and ASCENSION; by whom diſcovered; their Situation and Extent, Soil, Produce, Animals, Inhabitants; their Manners, Cuſtoms, Dreſs, Religion, &c.

THE iſland of St. Thome, or St. Thomas, is directly under the equinoctial line, and about two hundred and forty miles north-weſt from the city of Loango. The air here is ſo exceſſively hot that Europeans ſoon die, though the blacks will live to near an hundred years of age. Being ſituated under the equator, the days and nights are conſequently of an equal length. The only rainy months are March and September, when the ſun paſſes vertically over the iſland; but at other times they have nocturnal dews, which refreſh and fertilize the ſoil. It produces leſs ſugar than it formerly did, but is extremely fruitful in wheat, wine, millet, rye, barley, melons, cucumbers, figs, ginger, red parſnips, cabbages, French turnips, lettuces, radiſhes, ſage, beet, parſley, &c. Olive, peach, and almond-trees thrive well in timber, but exceſſive heat and moiſture prevent their bearing fruit. Partridges, quails, ouzels, parrots, &c. abound here; ſo does the ſea with excellent fiſh, and large whales. A mountain, in the center of the iſland, hath its top covered with a cloud, which moiſtens the trees, and greatly nouriſhes them. The higher the ſun aſcends above the horizon, the more moiſture the cloud affords. The Portugueſe built a town, called Pavoaſan, with a harbour towards the continent. This town is exceeding pleaſant, and the inhabitants barter ſugar for cloths, leather, wine, and cheeſe.

Nearly under the equinoctial line is Prince's Iſland, in latitude one degree thirty minutes. It is woody and mountainous, abounding in fruit, rice, Indian corn, ſugar, herbs, roots, &c. It contains alſo cattle, hogs, and goats, but the vaſt number of aſſes are both troubleſome and dangerous, for they will attack and tear in pieces a man, if they find him ſingle and unarmed, and will wantonly deſtroy many of the fruits of the earth.

The iſland of Fernando Po is ſituated about thirty miles to the weſtward of the continent, in four degrees north latitude. It is near thirty miles long, and twenty broad, and belongs to the Portugueſe government. The produce and inhabitants reſemble in all reſpects thoſe of Prince's Iſland.

Annabon was diſcovered by the Portugueſe on New Year's Day, and was on that account named Annabon, which ſignifies the good or the new year. It lies to the eaſt of St. Matthew, in two degrees ſouth latitude, and five degrees ten minutes eaſt longitude, being near two hundred miles from the coaſt of Loango, and is near thirty miles in compaſs. Theſe are two high mountains, which being continually covered with clouds, occaſion frequent rains. In the ſeveral fertile vallies of it are produced plenty of bananas, potatoes, oranges, pine-apples, tamarinds, and cocoa-nuts; beſides which the iſland abounds with lemons, citrons, nuts, figs, Turkiſh corn, and millet. Here are alſo oxen, cows, hogs, goats, fowls, pigeons, and plenty of fiſh. The iſland alſo produces great quantities of cotton. The governor is a Portugueſe, who has very few white people with him; all the other inhabitants are blacks, who are nevertheleſs very ſubmiſſive to the governor, and zealouſly attached to the Roman catholic religion.

On the ſouth-eaſt part of the iſland there are two rocks, one of which is very low, and almoſt even with the ſurface of the ſea; the other is much higher, and very large. On theſe rocks are a multitude of birds, ſo tame that they ſuffer themſelves to be taken with the hand. The water is very deep between theſe two rocks, ſo that ſhips may eaſily paſs between them. There is a very good watering-place on the ſame ſide of the iſland, the water running down from the mountain into a valley full of orange and other fruit trees; but it is a difficult matter to come at that water, becauſe of the violent breakings of the ſea; and the negroes have raiſed an intrenchment of ſtone there from which they can very much incommode thoſe who go thither for water.

The road for ſhipping is on the north eaſt ſide of the iſland, where one may anchor in ſeven, ten, thirteen, or ſixteen fathoms water, on a ſandy ground, cloſe to the land, over-againſt the village where the above-mentioned intrenchment is. When the inhabitants cannot prevent a deſcent, they leave their houſes, which are only of timber and ſand, and retire into the mountains. They are very well armed.

The inhabitants are poorly cloathed; the women go bareheaded, and have alſo the upper part of their body naked, wearing only a piece of linen wrapped round them, which reaches from the pit of the ſtomach to juſt below the knee. In the mountains are ſome civet-cats, which nevertheleſs afford but little profit. The revenue of the iſland conſiſts chiefly of cotton.

The iſland of St. Matthew lies to the north of St. Helena, under the ſecond degree of ſouth latitude. It was ſo called by the Portugueſe, becauſe they diſcovered it on that ſaint's day. It is a deſart, though there is a fine rivulet of freſh water running through it. Garcias de Loaiſa, a gentleman of Biſcay in Spain, who commanded the fleet which the emperor Charles V. cauſed to be fitted out at the Groyne, for the purpoſe of conquering the Molucca iſlands, having landed at the iſland of St. Matthew, found it uncultivated, but full of large orange-trees. He found alſo ſome poultry there, and on the barks of trees there were inſcriptions in the Portugueſe tongue, which proved that ſome of that nation had been there before; they are ſaid to have continued on that iſland ſeveral years.

Aſcenſion Iſland is ſituated almoſt exactly between Africa and America, being nearly at an equal diſtance from Loango in Africa, and Fernanbue in Braſil, lying in the ſame parallel, in ſeven degrees ſouth latitude, and thirteen degrees ten minutes weſt longitude from London. This iſland was diſcovered in the year 1508, by Tuſtan de Avigna, on his return from the Eaſt Indies, who called it Aſcenſion, becauſe he firſt perceived it on Aſcenſion-day. It is about twelve miles long, not above three broad, and nearly twenty-five miles in circumference.

The whole iſland is quite mountainous, and almoſt barren; yet it is generally uſed by our homeward-bound Eaſt India ſhips as a place of refreſhment. Great quantities of aſhes and cinders are found upon the ſoil, which induces ſome to imagine, that a volcano muſt have formerly been here. The harbour, however, is exceeding-

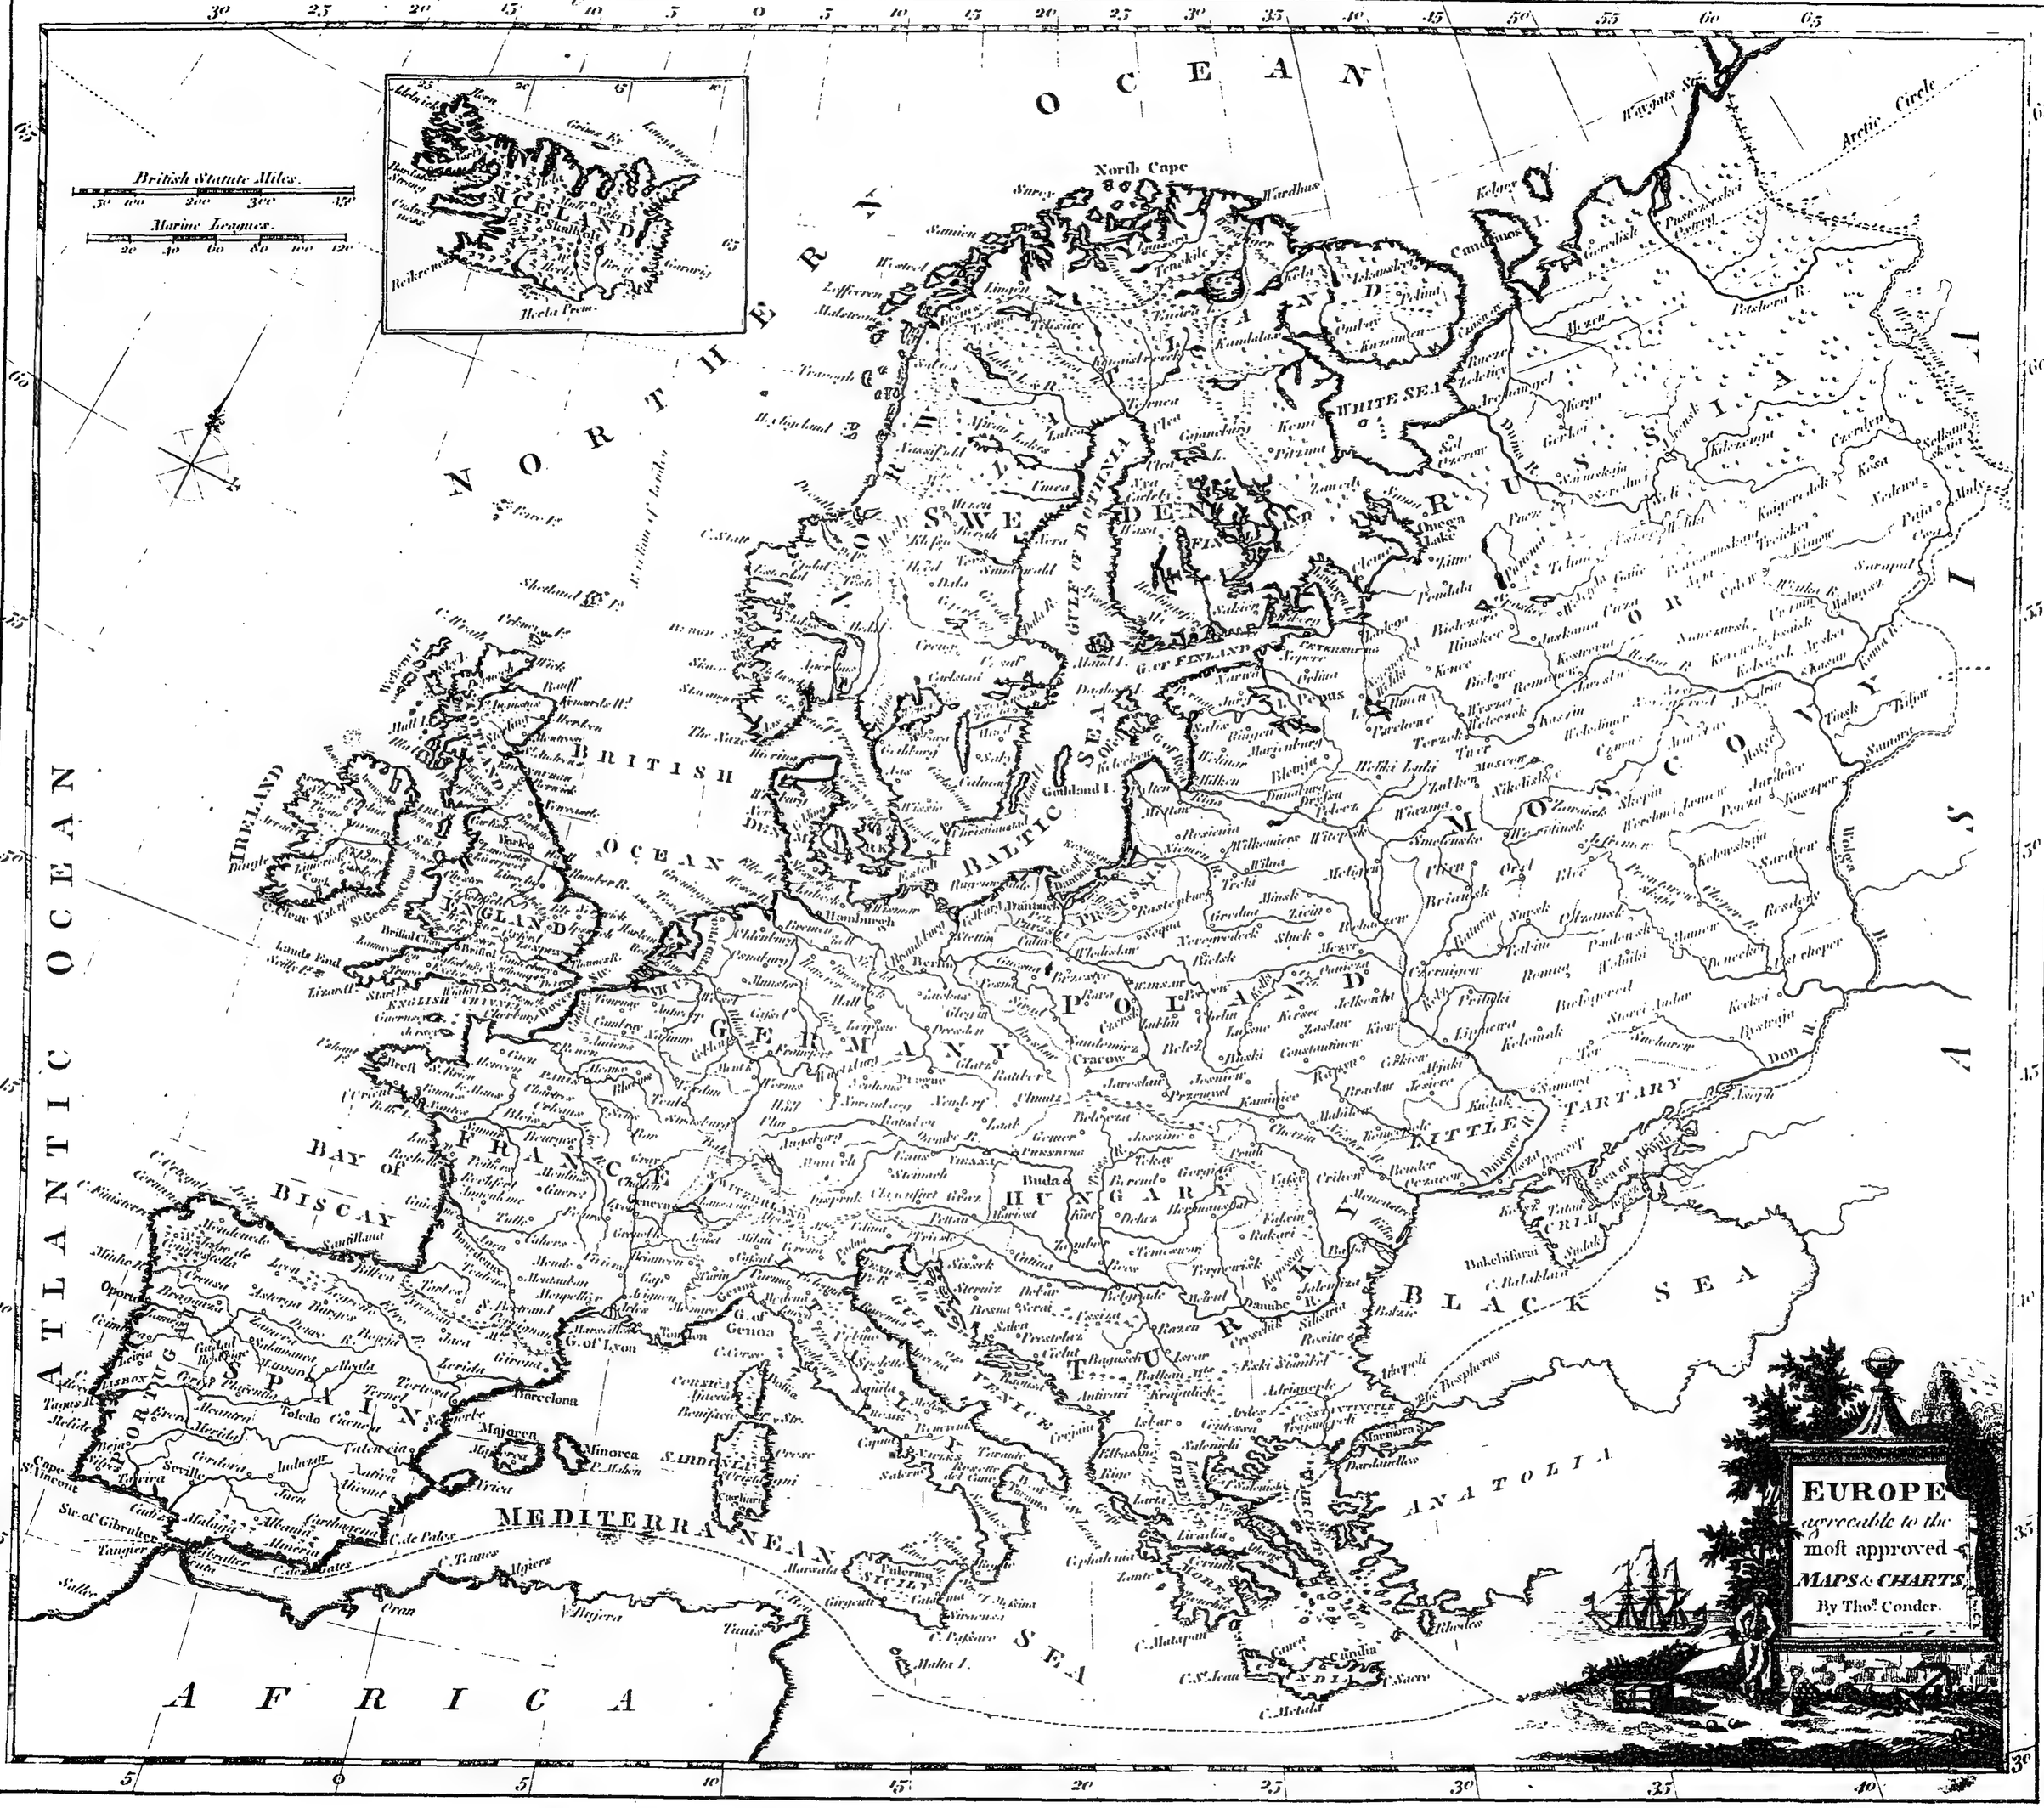
ly convenient, and ſome few places are fit for tillage.

When the ſhips touch here, their crews ſometimes live upon turtle for a fortnight, and deem it not only pleaſant but wholſome food. The goats that run here wild are very lean, and indifferent eating; and though there are various kinds of birds, yet none of the ſailors can uſe them for food, on account of their diſagreeable taſte.

There is a place on this iſland, which ſeamen term the Poſt-office, and where they leave letters. The method they take is, to put them into bottles, which they cloſely cork, when the people in the next ſhip that comes take out the letters, and leave others in their ſtead.

Though neither the Portugueſe, or any other nation, have thought proper to take, plant, or cultivate this iſland, it is notwithſtanding very convenient for Eaſt India ſhips to call at, when they happen to go beyond, or miſs of St. Helena. Juſt before the ſhips leave this place, the ſailors after having themſelves feaſted ſufficiently upon turtle, take a large parcel of thoſe amphibious animals on board, in order to gratify the luxurious palates of the Engliſh epicures.

The ſailors uſually diſtinguiſh turtles into four kinds; namely, the trunk turtle, the loggerhead, the hawk's bill, and the green turtle. The trunk turtle is generally larger than the reſt, and its back is higher and round; but the fleſh is ſomewhat rank. The loggerhead has obtained his name from the ſize of his head, which is much larger in proportion than that of the other kinds; but the fleſh, like that of the former, being very rank, is very ſeldom eaten. The hawk's-bill turtle has a long and ſmall mouth, reſembling the bill of a hawk. The fleſh is but indifferent, but the ſhell ſerves for many valuable purpoſes, ſuch as making ſnuff-boxes, various trinkets, &c. The green turtle is the moſt celebrated and moſt valuable of the turtle kind. The delicacy of its fleſh, and its nutritive qualities, have rendered it highly eſteemed. It forms a principal diſh in the banquet of the epicures, and at the ſame time refreſhes and feaſts the ſailor.



Conveniencies are made in ſhips for bringing theſe over alive, which cannot, however, be always effected: for though they ſcarcely require any proviſions in the voyage, yet the waſhing of the ſhip occaſions them to be beat againſt the ſides of the boat that contains them, by which they become battered and lean; ſo that in order to eat this animal in perfection, the epicure ought to be tranſported to the turtle, inſtead of bringing the turtle to him. The colour of the ſhell of the latter ſort is rather greener than that of the others, from which circumſtance it derives its name. Some of them are ſaid to exceed five hundred pounds weight, but thoſe of about two hundred are the moſt common.

This animal ſeldom leaves the ſea, except to depoſit its eggs, or to ſport in freſh water. In about twenty-five days after laying, the eggs are hatched by the heat of the ſun, and the young turtles, about the ſize of quails, are ſeen burſting from the ſand, as if earth-born, and running directly to the ſea, with inſtinct only for their guide. But it ſometimes happens, that the ſurges of the ſea beat them back upon the ſhore, when they become a prey to the multitude of birds that haunt the coaſt at that time.

When the ſailors are diſpoſed to catch turtles upon this iſland, they go aſhore in the night, where they find great numbers on the ſtrand, which, from their natural ſlowneſs, cannot get away before they turn them upon their backs, and leave them till morning, when they can take them at pleaſure; for a turtle cannot again get upon its feet without aſſiſtance, when once it is turned on its back, being prevented by the ſhell.

Supplement to MILLARS new improved & universal SYSTEM of GEOGRAPHY.

THE NEW AND UNIVERSAL

SYSTEM OF GEOGRAPHY;

BEING A COMPLETE

HISTORY AND DESCRIPTION OF THE WHOLE WORLD.

BOOK III.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

EUROPE.

OF EUROPE IN GENERAL.

THE etymology of the name of Europe has been variouſly given, by different authors; ſome of whoſe conjectures concerning it have been ſo romantic, that it would tend rather to perplex than inform the reader to mention them. However it was antiently known to the Romans, as it is at preſent to the Italians and Spaniards, by the name of Europa; Europe by the Engliſh and French; the Turks call it Rumeli, or Afrank; the Georgians, Frankoba; and the reſt of Aſia, Frankiſtan.

On the north, Europe is bounded by the Frozen Ocean; on the ſouth, by the Mediterranean ſea; which divides it from Africa; on the eaſt, by Aſia, from which it is parted by the Archipelago, the Euxine or Black Sea, and the Palus Mœotis; and thence by a line drawn from the river Tanais, or Don, almoſt to the river Oby, in Muſcovy; and it is bounded by the Atlantic Ocean, on the weſt.

As a continent, Europe contains in breadth, from the North Cape to Cape Matapan, in the Morea, about two thouſand two hundred miles; and in length, from the north of the river Oby, in the eaſt, to Cape St. Vincent, it is near three thouſand ſix hundred miles. It lies between nine degrees, thirty-five minutes weſt, and ſeventy-two degrees, twenty-five minutes eaſt longitude, and between thirty-five and ſeventy-two degrees of north latitude, though it does not fill up all that ſpace.

This diviſion is the ſmalleſt of the four parts of the world, but is much to be preferred to the other three for the mildneſs of the air, the fertility of the ſoil throughout, the many navigable rivers, the great plenty of corn, cattle, wine, oil, and all things requiſite not only for the ſuſtenance but even for the luxury of human life; but eſpecially for the beauty, ſtrength, courage, ingenuity, wiſdom, and learning of its inhabitants; the excellency of their governments, the equity of their laws, the freedom of their ſubjects; and above all, for the ſanctity of their religion, where it is profeſſed in its purity.

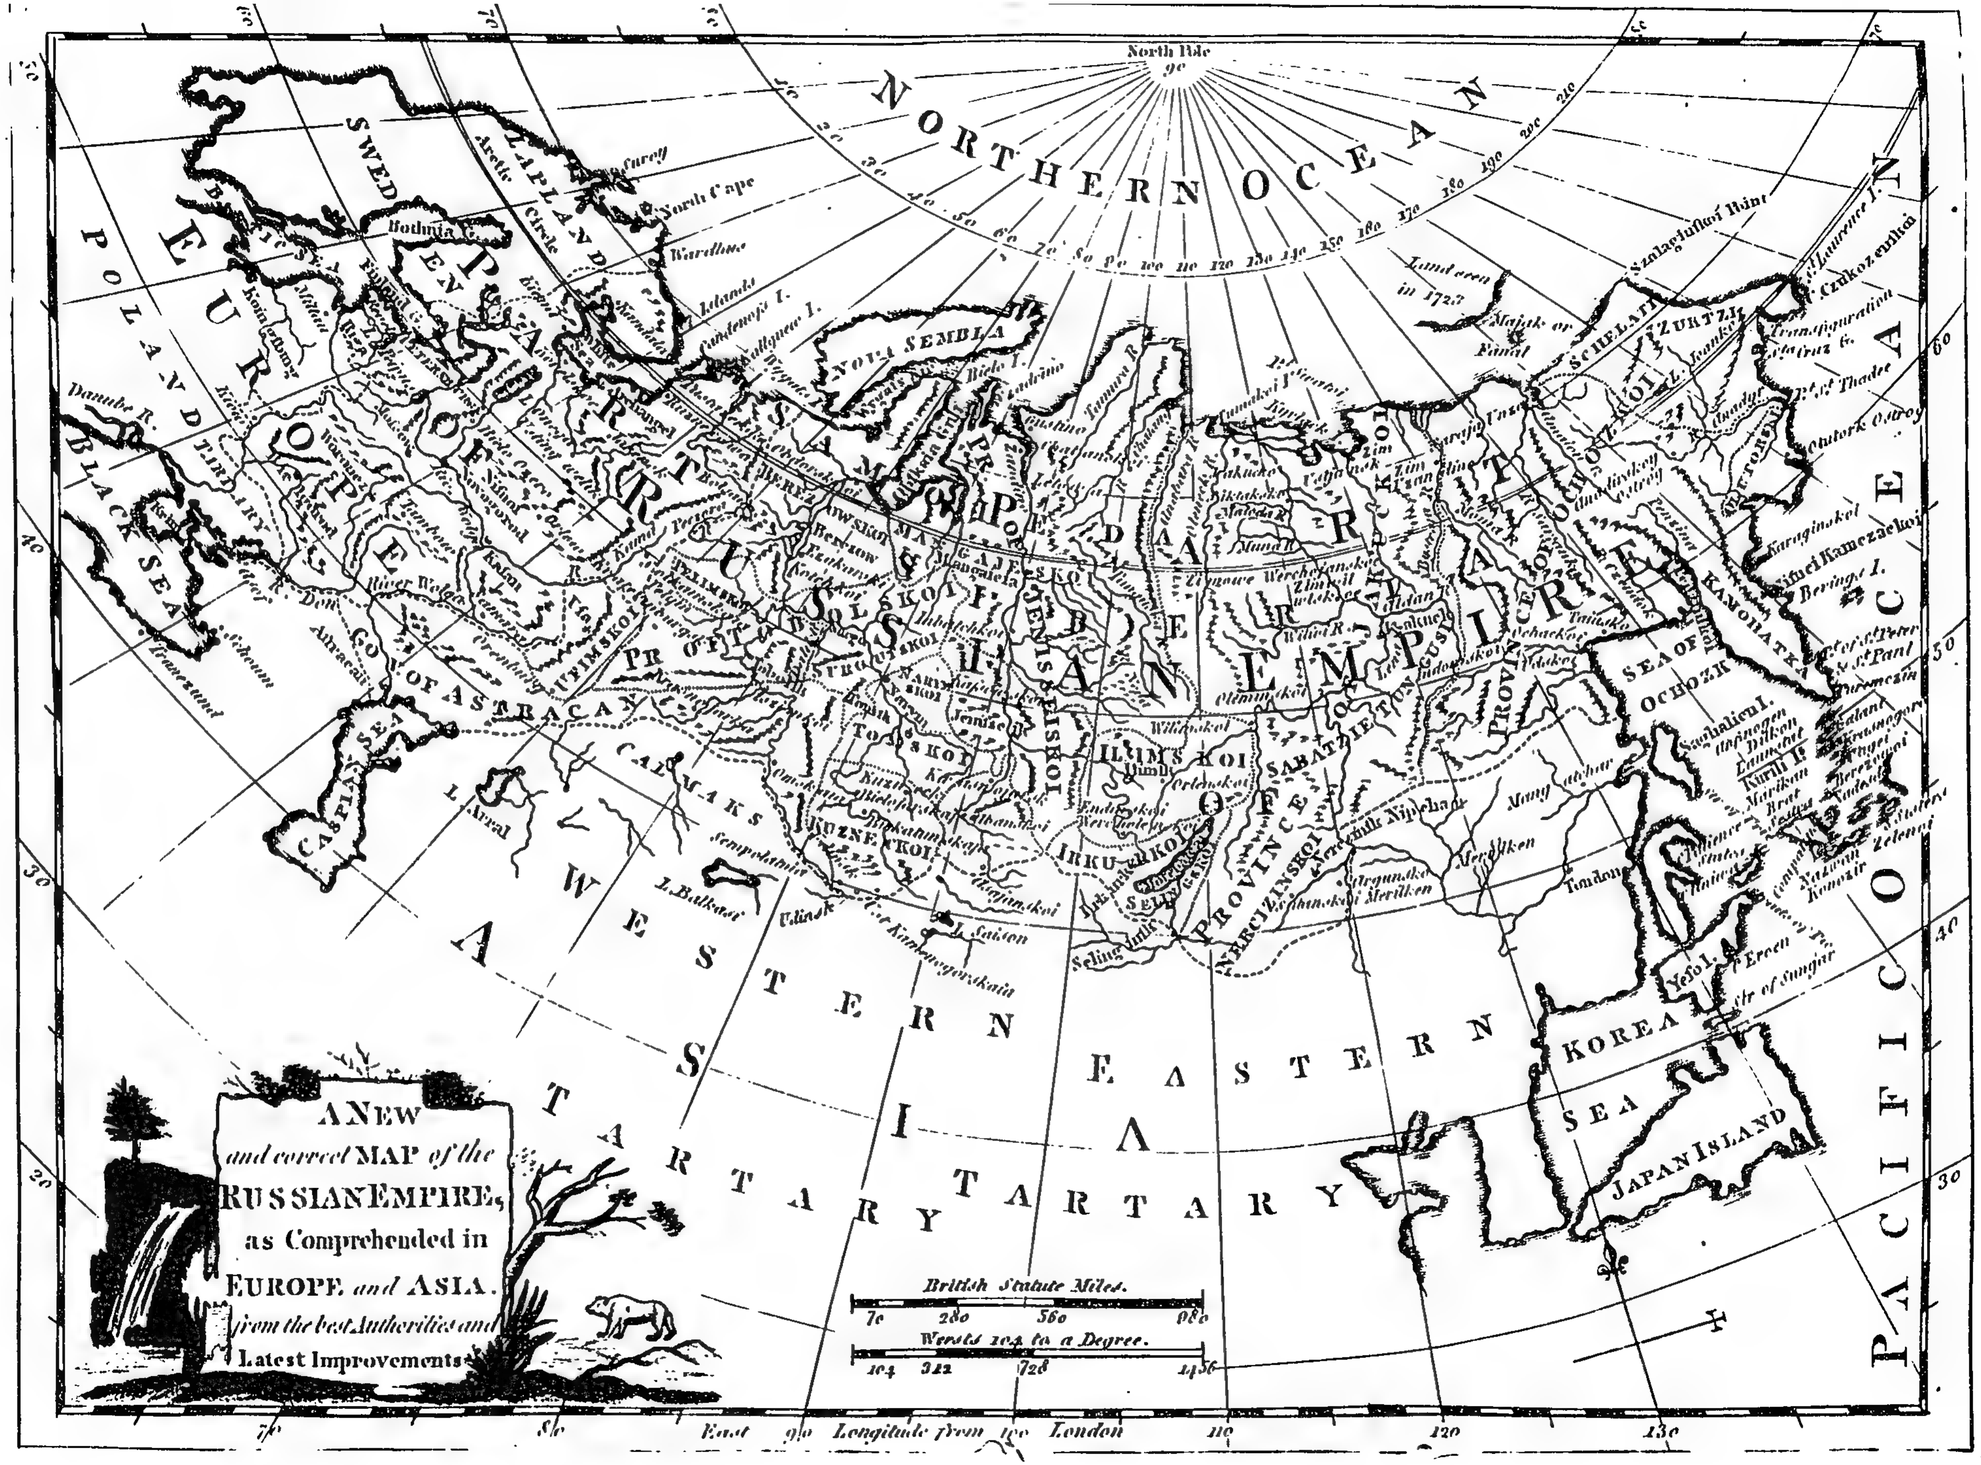
The European languages are all derived from the ſix original ones; namely, the Greek, Latin, Teutonic or Old German, Celtic, Sclavonic, and Gothic; different dialects whereof with accidental additions, being the languages of all the conſiderable parts of Europe; Turky and Tartary excepted.

Though moſt of the European governments are monarchical, yet their adminiſtrations are far leſs arbitrary, and their ſovereigns much leſs abſolute than thoſe of Aſia and Africa. Excluſive of thoſe monarchies, in which one man only bears ſway; here are ariſtocracies, or governments of the nobles, ſuch as Venice, &c. and democracies, or governments of the people, of which kind are Holland, Switzerland, and ſome of the Italian ſtates.

There are in Europe, three empires, namely, Germany, Ruſſia, and Turky; one ſpiritual or eccleſiaſtical ſovereignty, called the Popedom; eleven kingdoms, namely, Great Britain, France, Spain, Portugal, Poland, Pruſſia, Denmark, Sweden, Sardinia, Hungary, and the two Sicilies: one archdukedom, which is Auſtria; one great dukedom, Tuſcany; four great republics, namely, Venice, the United Provinces, Swiſs Cantons, and Genoa; four inferior republics, which are Geneva, Lucca, San Marino, Raguſa; and one Cham, viz. European Tartary. Excluſive of theſe, are the electorates of Germany, and about three hundred ſmaller ſovereignties in Germany, Italy, &c. the ſovereigns of which are either ſpiritual, as archbiſhops, &c. or temporal, as princes, landgraves, dukes, marquiſſes, counts, margraves, hoſpodars, and ſome others.

Europe contains, beſides the circumſcribing oceans and ſeas, one ocean, called the German Ocean, between Germany and England. Five ſeas; namely, the Mediterranean, between Aſia and Europe; Adriatic, between Italy and Turky; Black, between Europe and Aſia; White, between Ruſſia, Sweden, Lapland, &c. and the Baltic, between Sweden, Denmark, and Poland. Two channels; Engliſh, between England and France; St. George's, between England and Ireland. One bay; the Bay of Biſcay, between France and Spain. And three gulfs, viz. Bothnian, between Norway and Finland; Finland, between Sweden and Ruſſia; and the Venetian, between Turky and Italy.

The following are ſome of the principal rivers in Europe; namely, the Danube and the Rhine, in Germany; Volgo and Dwina in the Ruſſian empire; the Loire and Seine in France; the Thames and Severn in England, &c. The chief lakes are Conſtance, in Germany; Geneva and Guarda in Italy; Wenner, in Sweden; Ladoga and Onega in Ruſſia; Lochaber, in Scotland; and Neagh in Ireland. The principal mountains are, the Pyrenean between France and Spain; the Alps between France and Italy; the Doſrin hills in Sweden; the Grapach hills in Hungary; ſome hills in the Highlands of Scotland; and ſeveral in Wales, particularly Snowdon, &c.



That our readers may form at once a more clear and diſtinct idea of the continent, iſlands, and other remarkable parts of this quarter of the globe, we have here annexed a general Inſpection Table for Europe, comprehending the different nations thereof with their length, breadth, chief cities, diſtance and bearings from London, religions, &c.

CHAP. I.

THE NEW HISTORY AND DESCRIPTION OF

GREAT RUSSIA.

SECT. I.

Containing a general Account of the RUSSIAN Empire, its vaſt Extent, Soil, Climates, Situation, Rivers, Lakes, Springs, Minerals, and Animals; alſo of the Inhabitants, their Perſons, Dreſs, Manners, Houſes, Diet, &c.

RUSSIA is deemed the moſt extenſive empire in the univerſe, and larger than all the other dominions of Europe taken collectively. It is bounded, towards the north and eaſt, by the main ocean, and towards the weſt its limits are ſettled by treaties concluded with ſeveral far diſtant powers; with Sweden, the Poles, Turks, Perſians, and Chineſe, by whoſe dominion this immenſe country is bounded. It is a greater extent (Voltaire juſtly obſerves) than the Roman empire in the zenith of its power, or the empire of Darius ſubdued by Alexander; for it contains more than eleven hundred thouſand ſquare leagues. Neither the Roman empire, nor that of the Macedonian conqueror, compriſed more than five hundred and ſixty thouſand each; and there is not a kingdom in Europe the twentieth part ſo extenſive as the Ruſſian empire. In length, from the iſle of Dago, as far as its utmoſt limits, it contains very near a hundred and ſeventy degrees; ſo that when it is noon-day in the weſt, it is very near midnight in the eaſtern part of this empire. From north to ſouth, it ſtretches three thouſand werts, which makes eight hundred leagues, in breadth.

This country received the name of Muſcovy from the river Moſco, which gave name likewiſe to the city of Moſcow, once the metropolis of the whole empire. It hath likewiſe been called White Ruſſia, on account of the ſnow with which it is covered the greateſt part of the year; but at preſent it is uſually diſtinguiſhed by the name of Great Ruſſia.

Geographers uſually divide this extenſive empire into ſix grand diſtricts; namely, Livonia and Ingria; Muſcovy, Proper, or Weſtern Ruſſia; Eaſtern Muſcovy, or Ruſſia; Muſcovite Tartary; Ruſſian Lapland, and Nova Zembla; and the countries diſmembered from Poland. Theſe are again ſubdivided into a great number of provinces, which include ſeveral kingdoms, duchies, &c. which have been ſubdued at different periods, and annexed to the Ruſſian dominions.

It ſeems needleſs to remark, that as this empire conſiſts of a great number of provinces, many of which are very extenſive, the ſoil and temperature of the air muſt of conſequence be extremely various in different parts of it. In thoſe which lie beyond the ſixtieth degree of latitude, there are few places where corn will grow to maturity; and in the northern parts of the empire, which reach beyond the ſeventieth degree, no garden-fruits are produced, except in the country about Archangel, where many buſhes and ſhrubs grow ſpontaneouſly, and yield ſeveral ſorts of berries: horned cattle are alſo bred, and there are plenty of wild beaſts and fowls; and in the neighbourhood of that city are ſeveral ſorts of fiſh.

Moſt kinds of trees and garden-fruits, corn, honey, &c. are produced in the middle provinces of the empire. Horned cattle are likewiſe very numerous here; the rivers are navigable, and full of the beſt ſorts of fiſh; and the woods abound with game.

The climate is hot in the ſouthern provinces; and though there are many barren waſtes in ſome parts, yet in others the land is covered with verdure and flowers. Tobacco, wine, and ſilk might be there produced, as the two firſt are at Aſtracan and the Ukraine; they have game in proportion to the extent and number of the woods; and the country is well-watered with rivers, which afford plenty of fiſh.

In the northern parts of the empire, and alſo in the middle, the cold is very ſevere, and the days extremely ſhort in winter, but the ſummers are warm and delightful, and the twilight is very luminous even in the ſhorteſt nights. At the winter-ſolſtice, when the day is at the ſhorteſt, the ſun riſes at Archangel at twenty-four minutes after ten in the morning, and ſets at thirty-ſix after one. At Peterſburgh the ſun riſes at fifteen minutes after nine, and ſets at forty-five minutes after two; but at Aſtracan the ſun riſes at forty-eight minutes after ſeven, and ſets at twelve minutes after four. At the ſummer-ſolſtice, when the day is at the greateſt length, this order is reverſed, and the ſun riſes at Aſtracan at twelve minutes after four, and ſets about forty minutes after ſeven; and it riſes at thirty-ſix minutes after one, and ſets at twenty-four minutes after ten, at Archangel.

Eaſtern countries are in general much colder in winter, and hotter in ſummer, than the weſtern that lie in the ſame latitude; and this is particularly true with reſpect to Ruſſia, for the river Neva, at Peterſburgh, is in ſome years covered with ice ſo early as the 24th of October; and in other years, about the 22nd of November, at the lateſt; but it generally thaws about the 26th of April, old ſtyle, and is never known to exceed that time.

With reſpect to the ſeaſons at Peterſburgh, Mr. Hanway has obſerved, that February generally brings with it a bright ſun and clear ſky; every object ſeems to glitter with gems, and the nerves become braced with the cold. There is then no ſmall amuſement in riding in ſledges upon the ſnow, to thoſe, who from the length of the winter, have loſt ſight of the ſuperior pleaſure which nature yields when cloathed in her ſummer apparel.

The month of March is frequently attended with ſhowers, which, with the heat of the ſun, penetrate the ice: this is generally three quarters of an inch thick on the Neva, and much thicker in ſome great rivers to the north-eaſt. This renders it like a honey-comb; and it uſually breaks up about the end of that month.

April is frequently very warm; ſummer ſeems to precede the ſpring; for it is ſometimes the firſt of June before any conſiderable verdure appears, and then the intenſe heat brings it on ſo faſt, that the eye can diſcover its progreſs from day to day. It ſeems to be one continued day till the middle of July, the ſun not entirely diſappearing above two hours in the twenty-four; but the extreme heat of the weather conſiderably leſſens the delight which this ſeaſon naturally affords: however, a week ſeldom paſſes without the air being refreſhed by ſoutherly and weſterly winds, which often bring gentle ſhowers. The above gentleman, who reſided about five years in this city, once experienced a delighful autumn to the end of September; but this rarely happens. Auguſt cloſes the ſcene, ſo that the ſummer hardly continues above three months.

The month of September generally brings rain and froſt; the ſeverity of both is increaſed in October, and the Neva is always frozen in November. Then comes in the ſeaſon for the eaſy and ſpeedy conveyance on the ſnow, which brings freſh proviſions to market a thouſand Engliſh miles by land, and the inhabitants of Peterſburgh often eat the beef of Archangel.

In December and January the cold is ſo very intenſe, that the poor, who are overtaken by liquor, or expoſed to the air in open places, are frozen to death. But the birch

and alders with which the Ruſſians are ſupplied, and the commodiouſneſs of the ſtoves, enable them to introduce into their houſes any degree of heat.

Not one tenth of the Ruſſian empire is ſufficiently peopled, nor a tenth part of it properly cultivated: for, notwithſtanding its prodigious extent, the number of inhabitants who pay the poll-tax is computed only at five millions one hundred thouſand; and the reſt, including the females, amount to about ten millions excluſive of the inhabitants of the provinces added to the empire by conqueſt.

With reſpect to the boundaries of the weſtern part of the Ruſſian empire, towards the eaſt, they are the ſame with the limits between Europe and Aſia; extending on the eaſt, to the Wercoturian mountains, and to the part of the Wolga, which ſeparate it from Siberia; on the ſouth it is bounded by the river Don, and a line drawn from the Nieper to the mouth of the Don, at its entrance into the ſea of Aſoph; on the weſt, by the Nieper, which ſeparates it from Poland, the gulf of Riga, the gulf of Finland, Sweden, and Swediſh Lapland; and by the Frozen ocean, on the north. It is one thouſand five hundred miles in length, and a hundred and ten in breadth; and extends from the twenty-third degree to the ſixty-fifth degree of eaſt longitude, and from the forty-ſeventh to the ſeventy-ſecond degree of north latitude.

The following are the principal rivers of Ruſſia: 1. Volga, Wolga, or Rha; 2. Don, or Tanais; 3. Dwina, formed by the conflux of the Succhana and the Juga; 4. Occa; 5. Kama; 6. Oby; 7. Jeneſaida.

1. The river Wolga is the moſt conſiderable in all Ruſſia, and one of the largeſt in the world, as it traverſes the far greater part of Ruſſia; and, after a long winding courſe of upwards of two thouſand Engliſh miles, falls into the Caſpian ſea. It hath its ſource at the lake of Uronow, at a ſmall diſtance from the city of Rzeva Ulodimerſki, near the frontiers of Lithuania, about fifty-ſix degrees fifteen minutes of north latitude, and begins to be navigable, and to carry veſſels of a conſiderable burden, ſix miles below its ſpring. In its courſe, which is moſtly from eaſt to weſt, it receives near forty rivers, ſome of them very large, waters the walls of near double that number of towns, fertilizes all the lands on each ſide, and ſupplies them with prodigious quantities of fiſh, particularly ſturgeon, ſalmon, pike, &c. of a large ſize and exquiſite taſte. There grow likewiſe along its banks the fineſt truffles, and a kind of large aſparagus, of a ſpontaneous growth, and delicious taſte and flavour; and we are told, that along its banks are to be found the only oaks that Muſcovy produces. But it unfortunately happens that a great part of that fruitful tract of land along this noble river is ſo expoſed to the incurſions of the Cuban Tartars, that it lies altogether uncultivated, and is almoſt without inhabitants. To remedy this, the late Czar Peter I. cauſed an intrenchment to be made from that river a little on the ſide the city of Zantza, quite to the river Don, near the city of Twia; by which means he has ſecured all that part of the country which lies within the trench; but the reſt, which reaches above eighty leagues in length and breadth, is ſtill expoſed to thoſe freebooters, and lies neglected. The Wolga, towards the latter end of its courſe, takes a winding current towards the ſouth, and falls into the Caſpian ſea, about thirty-ſix miles below Aſtracan, in latitude forty-five degrees, forty minutes, longitude fifty degrees thirty minutes eaſt. Towards the end of the ſpring this river is ſo ſwelled by the melting of the ice and ſnow, as to cauſe great inundations, particularly in the months of May and June. The maſters of the veſſels which ſail down the Wolga to Aſtracan, carefully obſerve the ſeaſon, as at this time they have not only an opportunity of a ſafe paſſage over the ſhallows, but alſo over ſeveral flat iſlands which then lie a conſiderable depth under water. Trees are often torn away by the roots from the banks of this river by the violence of the current; and the anchors of the veſſels are frequently ſo entangled amongſt them, that there is a neceſſity of cutting the cables, ſo that many anchors are ſuppoſed to lie at the bottom. The Wolga abounds with a fine fiſh called beluga, which is about eight or ten feet in length.

2. The river Don, which is the Tanais of the ancients, is called Tuna or Dunna by the Tartars, and divides this country, in its moſt eaſtern parts, from Aſia. It has its ſource in the province of Rezan, on the north eaſt of the lake Iwano-Oſſero, or St. John's Lake; and, in its courſe towards the eaſt, comes ſo near the Wolga abovementioned, that in one place the diſtance between them is about a hundred and forty werts, or about eight Engliſh miles. The late Czar had undertaken to cut a communication between them, by a canal; but this deſign, grand and uſeful as it would have proved, he was forced to lay aſide; the Nagayan Tartars, who at that time were poſſeſſed of the kingdom of Aſtracan, having with an army driven the workmen from it. From thence the Don, turning its courſe towards the ſouth-weſt, and having received ſeveral rivers, reſumes a great number of cities, and forms many beautiful iſlands, eſpecially below Teharcuſhy, which is built upon one of them, but at length dividing into three channels, it falls into the Palus Mœotis, at the famed fortreſs of Acoph. The whole length of its courſe is very conſiderable, on account of the many turnings and windings; on meaſuring it in a direct line, it is no more than four hundred Engliſh miles. The waters of the Don are thick and chalky, conſequently not very wholeſome to drink. This river is very ſhallow in ſummer, when it is full of ſand-banks; it affords, however, plenty of large and ſmall fiſh.

2. The river Dwina (Dowina) hath no ſpring head of its own, but is formed, as was lately obſerved, from thoſe called Suchana, and Juga, or Jugh: theſe join their ſtreams at the city of Ouſtiough, capital of the province of that name; its name ſignifies double, as it is compoſed of thoſe two rivers, and its courſe bends northwards; in which it receives the Vitſogda, and ſeveral other rivers, and, having paſſed through Archangel, empties itſelf at two mouths, parted by a ſmall iſland, into the White ſea.

3. The river Occa hath its ſpring in a large plain in Ukrania, and runs its courſe towards the north, croſſes the fens of Vorochel, and after having received a good number of other rivers, falls into the Wolga, in the lower principality of the Novogorod. On each ſide of the ſprings of the Occa, and, at a ſmall diſtance from it, ariſe thoſe of the Sem, on the weſt, which, falling into the Deſna, is carried with it into the Boryſthenes; which laſt hurries them into the Black ſea; and, on the ſouth, that of Sneſna: which, after a ſhort courſe, falls into the Don.

4. The river Kama ſprings from the fens that lie on the ſouth of the foreſt of Zirania, in the country of the Xeremiſſes, thence winding northwards along the ſide of that foreſt, and watering the city of Kaigorod, it winds again ſouth-eaſtwards and weſtwards, and falls at laſt into the Wolga in the kingdom of Caſan. It is wide and rapid, and of a blackiſh hue, but very ſweet to the taſte.

5. The river Oby, or Vmar, ſprings out of the lake Kilhai, or Kariſan, in the kingdom of Altin, in Great Tartary, and thence paſſes into the Muſcovite Tartary, forming ſeveral lakes and iſlands in its courſe; and, receiving many other rivers, empties itſelf at laſt into the northern ſea at Samojedia, ſouth of Nova Zembla. Among the ſeveral rivers which it takes in its way, ſuch as Salim, Ket, Vaga, Traſagam, &c. is that of Irtis, which is wide and rapid, and greatly increaſes the ſtream and force of it; and, at their confluence, is the city of Sammarock, built juſt upon the point of the two ſtreams. As it winds farther northwards towards the ſixty-ſixth degree of latitude, it extends its waves ſo wide as to form a conſiderable gulf, with a number of iſlands, five of which are of a conſiderable bigneſs. This gulf grows afterwards narrower and narrower, as it draws nearer to the ſea, or rather the ſtreights of Naſſau, which divide this part of the continent from Nova Zembla.

6. The river Jeneſaida, or Jeniſcia, and Jeniſia, which is no leſs conſiderable than the former; hath its riſe likewiſe in Great Tartary, and falls into the ſame northern ocean, about one hundred leagues eaſt of the mouth of the Oby, and properly belongs to Muſcovy in Aſia; therefore ſhall take no further notice of it in this place.

We are now to deſcribe the principal lakes in this part of the Ruſſian empire, which are thoſe of Ladoga and Onega.

Ladoga is reckoned one of the largeſt lakes in Europe. It is formed by four rivers, which continually pour in their ſtreams, and thoſe of other ſmaller lakes into it: the two principal ones are the Vozen, or Corela the Fair, which flows from the lake of Onega; and the Volchova, which flows thither from the ſouth. To prevent its overflow from ſo many ſtreams, it hath a channel, by which it diſcharges itſelf into the gulf of Finland, and thence into the Baltic. It is computed to be above forty leagues long, and about thirty-five in breadth, where wideſt. It extends itſelf in length from ſixty to ſixty-one degrees fifty minutes of latitude, and hath the province of Carelia on the north, and thoſe of Ingria and Novogorod on the ſouth.

ſouth. The late Czar Peter I. not finding the ſouth part of it ſo navigable as he wiſhed, cauſed a canal to be dug, by which he hath opened a communication with Peterſburg, which canal reaches to the river Volchova; by which means one may now ſail even from thence quite to Aſtracan, by the help of that and ſome other rivers which fall into the Wolga above-mentioned. As for the lake, it breeds prodigious quantities and variety of good fiſh; ſuch as ſalmon, ſturgeon, and a pecular kind called ladog, of the bigneſs of a herring, but of a finer taſte, from which the lake is ſuppoſed to have its name.

Onega is the next in bigneſs, and lies about fifty miles eaſtward of Ladoga. It extends itſelf in length from north to ſouth, from ſixty degrees thirty minutes to ſixty-three degrees of latitude, and is about forty leagues in length, and eighteen in breadth; having the country of Carelia on the north, the lake of Ladoga on the weſt, the province of Velogda on the ſouth, and the Cargapol, and territory of Onega on the eaſt. It receives the rivers of Povenza, near the city of that name on the north; that of Zelmoſa, on the eaſt; thoſe of Vitegra and Suſta, on the ſouth; thoſe of Saala, Pudoa, Nikiſſima, Andama, and ſome others of leſs note on the eaſt. Laſtly, the Suir carries the waters out of this lake into that of Lagoda. On the ſouth of that of Onega is that called the White Lake, about twenty leagues from it, which diſcharges itſelf into it by the river Coeſchea, and is about half the bigneſs of that. Along the coaſt of Onega are ſeveral conſiderable cities, ſituate moſtly upon, or near the mouths of thoſe rivers that fall upon it from all the four ſides, for the convenience of commerce. This lake gives name likewiſe to a conſiderable river, and to a territory through which it runs till it empties itſelf into the White Sea. This tract of land, which extends itſelf on each ſide of that river, the only one it hath, quite to the ſame White Sea, is obſerved to have neither town nor city, but a vaſt number of foreſts and woods.

There is alſo the lake of Peipus, in Livonia, which is near ſeventy miles in length, and about forty in breadth. It runs into the gulf of Finland, by the river Narva, and abounds with fiſh.

All the lakes in this country breed ſuch innumerable ſwarms of flies, gnats, and other inſects, during two or three months of intenſe heat, as makes the ſummer nearly as troubleſome as the winter to the inhabitants.

There are ſeveral medicinal and ſaline ſprings in Ruſſia. Fine ſilver, which alſo yields ſome gold, is dug out of the mines of this country; here is alſo iſinglaſs and precious ſtones, exceeding fine copper, iron, and many other minerals.

Ruſſia is moſt fertile near the frontiers of Poland, where the inhabitants are able to ſupply their neighbours with corn. The northern parts are not only extremely cold, but marſhy, and over-run with foreſts, chiefly inhabited by wild beaſts. Beſides domeſtic animals, there are in Ruſſia, hyænas or gluttons, wild beeves, rein-deer, martens, white and black foxes, ermines, and ſables, whoſe ſkins make the beſt furs in the world.

The ſoil of Ruſſia is rather more various than the climate. The ſouthern provinces produce wheat, barley, rye, oats, peas, herbs, with various kinds of fruits, and all theſe grow ſo uncommonly faſt, that corn is commonly reaped in two months after it begins to appear above the ſurface of the ground. This is attributed to the ſnow, which not only enriches and mellows the land, but cheriſhes and ſhelters the product of it, and makes it take deeper root in the ground.

In many parts the ſowing-time muſt follow the harveſt immediately; becauſe the former, not laſting above three months, there can be no ſowing after the froſt is begun. But in more moderate climes, they will not ſow till April or May, and then their reaping time comes on in Auguſt, and ſometimes in July. They have no need of manure, the ſnow ſupplying that in every reſpect.

Beſides grain, and fruits of various ſorts, the country produces plenty of rhubarb, flax, hemp, good paſture for cattle, honey, wax, &c. The aſtoniſhing quantity of muſhrooms produced ſpontaneouſly in Ruſſia, are a great benefit and relief to the poor, while at the ſame time they are deemed delicacies at the tables of the rich and luxurious. At Moſcow, about a thouſand load of muſhrooms have been ſold annually.

Till the time of Peter the Great, agriculture was but little underſtood in this country; but that monarch, brought his ſubjects, in ſome meaſure, to a better knowledge of it. The principal articles in a Ruſſian farm are wax and honey, which ſometimes produce to the peaſant a competency; as he ſells the wax and part of the honey, and makes a domeſtic drink of the reſt. This drink is a kind of metheglin, extremely ſtrong and very palatable.

The Ruſſian method of forming bee-hives is as follows: the peaſant cuts down a tree, ſaws the trunk into many parts, hollows the pieces, then ſtops up the extremities, and bores ſmall holes into the body for the admittance of the bees; then the beehive is made, and the honey ſecured from all the attacks of the bear, who is exceedingly fond of it, and, in order to make himſelf maſter of the ſweet treaſure, will often try a variety of experiments and ſtratagems.

In this country, the rye ſerves not only for bread, but a ſtrong liquor is extracted from it, which is preferred to brandy by the Ruſſians.

In the northern and weſtern provinces, the wild beaſts are much the ſame as thoſe in Lapland, Norway, Sweden, &c. ſuch as rein-deer, foxes, martens, hares, bears, ermines, ſables, and ſquirrels. In the ſouthern provinces are bred black cattle, camels, ſmall horſes, goats, ſheep, &c. The whole empire abounds with poultry, wild-fowl, game, birds of prey, &c. and the different parts of it are plentifully ſupplied with various kinds of fiſh, by means of the northern ocean, Baltic, Gulf of Finland, White Sea, Black Sea, and Cyprian Sea; and the innumerable rivers, lakes, rivulets, &c. produce immenſe quantities of ſalmon, trout, pike, ſturgeon, &c.

SECT. II.

Containing a Deſcription of the firſt grand Diviſion of GREAT RUSSIA, namely LIVONIA and INGRIA.

THE *province of Livonia, or Leiſland, is bounded on* the north by the gulf of Finland; on the ſouth, by the duchy of Courland and Lithuania; on the eaſt, by Ingria and part of Ruſſia; and, on the weſt by the gulf of Riga. It is admirably ſituated for commerce, having the ſea on the north and weſt, the great lake Popus on the eaſt, and the river Dwina on the ſouth. Three other internal lakes, and many ſmall rivers, likewiſe greatly contribute to the advantage of this province, by facilitating the inland navigation. From eaſt to weſt, where broadeſt, it is about one hundred and ten miles in length, and about one hundred and fifty from north to ſouth. Though extremely marſhy, it is in general very beautiful, having many paſture grounds, and producing in great plenty corn, cattle, honey, &c.

About the twelfth century, the Livonians were involved in pagan ſuperſtitions, and were to a great degree ferocious and ſavage in their manners. They were brought to embrace Chriſtianity by their neighbours the Germans, who, in order to convince their new converts, were obliged to uſe the compulſive means of fire and ſword.

Albert the canon of Bremen, who built Riga, held Livonia as chief of the empire; he afterwards obtained permiſſion to coin money, and to inſtitute a new order of knighthood, called the ſword-bearers. Theſe knights, attempting to make converts among their neighbours, ſhed oceans of blood. In the year 1234, they were united to the Pruſſian, or knights of the Teutonic order; when, in conjunction, they maintained very long and bloody wars againſt the Poles, Ruſſians, and other neighbouring powers. Albert of Brandenburgh, *in the ſixteenth century*, became a Lutheran, which occaſioned a ſeparation between the Livonian order and that of Pruſſia. About 1535, notwithſtanding the menaces and intrigues of the emperor Charles V. the principal part of the Livonians declared for proteſtantiſm.

The Germans, Ruſſians, Poles, and Swedes, have alternately ravaged this fine country. By the treaty of Oliva, in 1660, it was entirely ceded to the Swedes, who kept poſſeſſion of it till the beginning of the preſent century, when, during the wars of Charles XII. the Ruſſians ſubdued the whole duchy of Livonia, as well as Ingria, both which were afterwards, by the treaty of Naeſtadt, confirmed to Ruſſia.

With reſpect to the native peaſants of Livonia, they are of ſtrong conſtitutions, fit to undergo hardſhips, but even to this time retain a great part of their ferocious and ſavage diſpoſition; they call themſelves Lutherans, but are ſo extremely ignorant of religion in general, that they ſcarce know an article of that which they pretend to profeſs.

We ſhall here relate ſome remarkable peculiarities in their marriage ceremonies, and other ſuperſtitious obſervances among them. When a country fellow is diſpoſed to marry a laſs out of another village, he goes on

horſeback to fetch her, and makes her embrace him with the right hand. He hath in his hand a ſtick cleft at the top, where he puts a piece of braſs money, which he gives to him who opens the wicket through which he is to paſs. Before him rides a man that plays upon the bagpipe, as alſo two of his friends, who, having naked ſwords in their hands, give two ſtrokes therewith acroſs the door of the houſe where the marriage is to be conſummated, and then they thruſt the point of one of the ſwords into a beam over the bridegroom's head; this is done to prevent charms, which, they ſay, are common in that country. To the ſame end the bride ſcatters little pieces of cloth or red ſerge by the way, eſpecially where croſs ways meet, near croſſes, and upon the graves of little children dead without baptiſm, whom they bury in the highways. She hath a vail over her face while ſhe is at table, which is not long; for, as ſoon almoſt as the gueſts are ſeated, the married couple riſe and retire. About two hours after they get up, and are brought to ſit down at the table. Having drank and danced till ſuch time as they are able to ſtand no longer, they lie down on the floor, where, like ſo many ſwine, they ſleep all together.

Their notions reſpecting religion are very extravagant: however, they believe there is another life after this. A Livonian woman, being preſent at her huſband's burial, put a needle and thread into the grave, giving this reaſon for it, that her huſband being to meet in the other world with perſons of good rank, ſhe was aſhamed he ſhould be ſeen with his cloaths rent. Nay, they pay ſo little regard to a future ſtate, that in the oath they take to decide any difference at law, inſtead of intereſting the ſalvation of their ſouls therein, their preſent and temporal advantages are the principal objects of their conſideration.

Theſe people are greatly addicted to ſorcery; and think it ſo neceſſary for the preſervation of their cattle, that fathers and mothers teach their children; ſo that there is ſcarce any peaſant but is a ſorcerer. They all obſerve certain ſuperſtitious ceremonies, by which they think to elude the effects of it: on which account they never kill any beaſt, but they caſt ſome part of it away; nor do they ever make a brewing but they ſpill ſome part of the liquor, that the ſorcery may fall upon that. They have alſo a cuſtom of rebaptizing their children, if, during the firſt ſix weeks after their birth, they happen to be ſick, or troubled with fits, when they think the cauſe to ariſe from the name given them at their birth not being proper for them; wherefore they give them another; but they uſe their utmoſt endeavours to conceal this practice, which is deemed both ſinful and criminal, and, if known, would be ſeverely puniſhed by the magiſtrate.

They are not leſs attached to the exact obſervance of their cuſtoms, than obſtinate in their ſuperſtitions. There is a very pleaſant ſtory related of an old country fellow, who, being condemned, for ſome great crime, to lie along upon the ground to receive his puniſhment, and Madame de la Barré, pitying his almoſt decrepid age, having ſo far interceded for him, as that his corporal puniſhment ſhould be changed into a pecuniary mulct of about fifteen or ſixteen pence, he thanked her for the kindneſs intended him; but ſaid, that, for his part, being an old man, he would not introduce any novelty, nor ſuffer the cuſtoms of the country to be altered, but was ready to receive the chaſtiſement which his predeceſſors had not thought it a hardſhip to undergo; whereupon he put off his cloaths, laid himſelf upon the ground, and ſuffered the puniſhment ordered to be inflicted upon him.

We may here obſerve, that in Livonia, this is accounted no puniſhment, but only a cuſtomary chaſtiſement: for the people, being of a refractory nature, muſt be treated with that ſeverity which in other places would be inſupportable. They are not permitted to make any purchaſe; and to prevent their ſo doing, they have only ſo much ground to manage as will afford them a ſubſiſtence. Yet they will venture to cut down wood in ſome places of the foreſts, and, having prepared the ground, ſow wheat in it, which they hide in pits underground, to be ſecretly ſold. If they are taken in this, or any other fault, they make them ſtrip themſelves naked down to the hips, and to lie down upon the ground, or are tied to a poſt, while one of their comrades laſhes them with a ſwitch or holly wand, till the blood comes on all ſides, eſpecially if theſe words,—ſelcke nack maha pexema, beat him till the ſkin falls off from the fleſh, are pronounced by the maſter.

The uſe of money is likewiſe prohibited to this claſs of people; for as ſoon as it is known they have any, the gentlemen and their officers, who are paid by the peaſantry, take it from them; but this cruelty of the maſters frequently overwhelms theſe poor people with deſpair; of which there ſome years ago happened a ſad example: a peaſant, preſſed by his officer for what he neither had nor ought to pay, and being deprived of the means whereby he might maintain his family, ſtrangled his wife and children. The officer coming the next day to the houſe, thinking to receive the money, ſtruck his head againſt the man's feet that was hanging, and then perceived the miſerable cataſtrophe of which he was the occaſion.

The province of Livonia is divided into two diſtricts; namely, Eſtonia and Letten; the former of theſe, which is the moſt northern part, is bounded, on the ſouth, by Letten; on the eaſt, by Ruſſia; on the weſt, by the gulf of Riga; and, on the north, by the gulf of Finland.

The chief cities and towns are, 1. Revel, the capital of Eſtonia, it is ſituated partly on a plain, and the other part on the declivity of a mountain, at the top of which there is a ſtrong caſtle. It is a hundred and twenty-five miles from Stockholm, and ſtands on the gulf of Finland. Waldemar, the ſecond king of Denmark; founded Revel, but ſold it, together with Narva and Reſemberg, to the grand maſter of the Teutonic order. Revel was one of the places originally admitted into the confederacy of the Hanſe-Towns, and was a commercial place of ſome note till 1550, when the Ruſſians removed the commerce of Revel to Narva, after having ſubdued the latter. But in 1711, when the Ruſſians conquered the former, they again turned its trade into the old channel, and ſince that period the place hath in ſome degree increaſed in wealth and importance. The citizens ſtill preſerve the privileges granted by their former patrons the grand maſters, the kings of Sweden, &c. and alſo enjoy their own forms of government, though a Ruſſian garriſon ſecures the place. The market-place, however, is guarded by a band of their own.

The civil government is democratic, conſiſting of elective magiſtrates, counſellors, &c. who are obliged occaſionally to conſult their conſtituents; and their religion is Proteſtantiſm, according to the Augſbourg confeſſion of faith. The Daniſh peaſants, who formerly ſettled here, are ſtill diſtinguiſhable from the original inhabitants by their habits, cuſtoms, manners, &c. During the laſt ſiege of Revel, fifty thouſand of the inhabitants died of the plague, which was probably owing to the want of room, proper proviſions, &c. as many people had taken ſhelter in the city from the neighbouring parts of the country.

2. The other town is Narva, ſituated on the river Narva, which divides Livonia from Ingria. It was originally built by Waldemar II. king of Denmark; taken by John Baſilowitz, czar of Muſcovy or Ruſſia; retaken by the Swedes; and finally reduced by Peter the Great, in the year 1700. Previous to its reduction, when the Ruſſians laid ſiege to it with an army of eighty thouſand men, under the command of the duke of Cray, Charles XII. king of Sweden, advanced to its relief, at the head of only eight thouſand men; attacked the Ruſſians in their lines, gave them a total overthrow, ſlew twenty thouſand men on the ſpot, took the general, moſt of the officers, and a great number of private men priſoners, with a hundred and ninety pieces of cannon and mortars, a hundred and ſeventy-one colours and ſtandards, the whole baggage of the army, &c. &c. But Peter afterwards moſt ſeverely revenged the diſhonour of his arms on that unfortunate day, when he afterwards took Narva, and tranſported the wretched inhabitants to Aſtracan, the moſt remote part of his dominions. They yet ſhew the baſtion where he gave the aſſault; and it is ſaid, that on his entering the place; and finding the Swediſh governor in his robe de chambre, unapprehenſive of ſuch an event, he ſtruck him ſeveral times, reproaching him for his inattention to his ſovereign's intereſt, and for having been found in a dreſs ſo unworthy of a ſoldier, while the place was in ſuch imminent danger.

The Livonian dreſs is thus deſcribed by a late Engliſh traveller: "I had the pleaſure, ſays he, to dine yeſterday in company with four ladies, who were habited in the Livonian dreſs. Nothing could more aptly realize that barbarous ſplendor which has been ſo frequently depicted but is now ſo rarely to be ſeen, in any parts of Europe. It was expenſive, and might have been worn by perſons of the firſt eminence, without degradation of their rank. Their heads were covered with a complete bonnet of pearls, which were not worth leſs than two thouſand rubles (four hundred and fifty pounds ſterling, at four ſhillings and ſixpence the ruble); and round their necks were ſeveral ſtrings of the ſame; a part of their necks was left expoſed, but the lower part was concealed by a veſt

veſt of red ſilk, which ſat cloſe to the breaſt, and was bordered with a very broad gold lace, which deſcended to the feet. Their arms had no other covering than the ſleeves of their ſhifts; and when they walked out, they threw over their heads and ſhoulders a piece of ſilk reſembling a highland plaid, and which anſwers to the ſilk cloaks of our ladies."

On the other ſide of the river, and juſt oppoſite to Narva, is the fortreſs of Iwanogorod, upon a rock which it almoſt ſurrounds. At the foot of this rock there is a little town called Ruſſian Narva, inhabited only by Ruſſians. Among other ridiculous ſuperſtitions, the people have a cuſtom of obſerving the eve of Whitſunday as a feſtival ſacred to the memory of the dead. On this occaſion the women aſſemble in the church-yard, ſpread clean napkins on the graves and tomb-ſtones, and cover them with painted eggs, fiſh dreſſed various ways, cakes, cuſtards, &c. The prieſt then prays over, and perfumes theſe with frankincenſe; the clerk follows, and gathers up the offerings for the uſe of the church; and the women make the moſt diſmal lamentations during the whole ceremony.

Near two miles from the city, an impetuous cataract ruſhes violently down a precipice with a moſt tremendous noiſe, and daſhes ſo furiouſly againſt the rooks, that a miſt or vapour continually aſcends from its foam, which produces a beautiful rainbow when the morning ſun obliquely ſhines upon it. The river Narva, which flows from the lake Peibus, and empties itſelf into the gulf of Finland, is alſo exceeding rapid; and on the banks of this river, near where it iſſues out of the above lake, is a ſtrong fortreſs called Nieſlat or Newfort. There is another ſtrong fortification, called Weiſenburgh, in the river Weiſs, about twenty miles weſt of Narva; and thirty miles ſouth of Weiſſenburgh, in the midſt of a moraſs, is ſituated Weſſenſtein, another ſtrong fortreſs.

A ſmall ſea-port town, called Tolſburg, is ſituated near the gulf of Finland, at the mouth of the river Semiteback, and is about ninety miles diſtant from Narva, to the eaſt. Badis, or Padis, a fort ſeated on the river Aſſa, is about twenty miles from Revel to the weſt. Hapſal, or Hapſel, is ſituated on a ſmall gulf of the Baltic, to which it gives its name, over againſt the iſle of Dagho, about thirty miles from Revel, to the ſouth-eaſt. It was formerly the ſee of a biſhop, and ſubject to the Danes; but in 1572 it was taken by the Ruſſians. The Swedes ſeized it in 1581, and in the beginning of this century it became again ſubject to the Ruſſians.

The town of Lehal is a place of great ſtrength, and has a caſtle of good force. It ſtands on the Baltic, or rather on the gulf of Riga, ſixty miles from Hapſal, to the ſouth-eaſt.

The town of Parnaw, or Pernaw, ſtands on the gulf of Riga, at the mouth of the river Parnaw, ſixty-five miles from Revel, to the ſouth. It is a ſmall city, but a place of good trade, a great quantity of corn, eſpecially, being ſhipped hence for the Netherlands. It is divided into the old and new city, and was formerly one of the Hanſe-Towns. It is pretty well fortified, but owes its ſtrength chiefly to its caſtle; though it is built only of timber, as are all the houſes and churches. The Polanders made this the capital of one of their palatinates, when it was under their juriſdiction. It became ſubject to the Swedes in 1617, after it had been taken and retaken many times in the laſt century; and in 1710 it ſurrendered to the Ruſſians. A univerſity was removed hither from Derpt, in the year 1685, but it is not much frequented. The river Parnaw, on which this town is ſituated, has its ſpring in a large foreſt near the little river Beca, and the caſtle of Weſienſtein: this river falls into the gulf of Riga at Parnaw, receiving, in its courſe, the rivers Fela and Pernkeia.

The large and antient city of Derpt, or, as the inhabitants call it, Derpat, and the Ruſſians Junogorod, is ſituated on the river Eimbeck, between the lakes Peibus and Wertzi, which have a communication together by that river. It is ſixty miles diſtant from Narva to the ſouth, and ſeventy-five from Parnaw to the eaſt. It was formerly the ſee of a biſhop, and was adorned with an univerſity in 1632; by king Guſtavus Adolphus, on account of its being a pleaſant healthy place, abounding with proviſions, and all neceſſaries: but the univerſity, as we obſerved above, has been ſince removed to Parnaw. The buildings at Derpt are of ſtone and brick, but the town is not ſo populous as it was formerly. It has a ſtrong caſtle for its defence, ſeated on a hill; but it has, however, been ſubject to many maſters. The Teutonic knights took it from the Ruſſians in 1580, the Poles ſeized it in 1582, afterwards the Swedes drove them out; but in 1603, they regained and kept it till 1625, when the Swedes took it again; and at length, in 1704, it ſurrendered to the Ruſſians, who have ever ſince kept poſſeſſion of it.

The town of Felin, with a caſtle belonging to it, ſtands on a ſmall river, which runs from the lake Wertzy to Parnaw, ſeventy miles from that city to the eaſt, and as many from Derpt to the weſt. Ringon is a fort thirty-five miles diſtant from Felin to the ſouth. Tarneſt, another fort, formerly very ſtrong, but ſo demoliſhed when the Poles took it, that though the Swedes were at great expence in repairing it while in their poſſeſſion, they could not reſtore it to its former ſtrength, nor has it been much improved by the Ruſſians, in whoſe poſſeſſion it now is.

Letten is the other diviſion of Livonia: this diſtrict is bounded on the eaſt, by Ruſſia; on the weſt, by the Baltic; on the ſouth and ſouth-weſt, by the river Dwina; and, on the north, by Eſtonia.

The principal city is Riga, which is the capital, not only of Letten, but of all Livonia: but a judicious traveller, in ſpeaking of it, ſays, "My ſtay in the city has been rather regulated by caprice, than ſtrictly proportioned to the number of objects it preſents, either reſpecting elegant amuſement or inſtruction. It would be difficult to find a ſpot more deſtitute of any natural beauties and advantages, to induce an adventurer to fix in, than in that where Riga ſtands. Deep barren ſands encompaſs it on every ſide; and a traveller, who regulated his ideas by that part of it he ſaw here, would accuſe thoſe authors of groſs impoſition who have called Livonia the granary of the north. Commerce evidently gave birth to the place; and by the genius of commerce it is ſtill protected and enriched."

The river Dwina is an inexhauſtible ſource of plenty, and makes ample amends for every other deficiency. It runs a vaſt length into the interior parts of Poland, and conveys down all the articles of trade exported from hence. Timber is one of the chief; and many of the largeſt trees do not arrive in Riga, within two years, being cut near Bender, on the banks of the Nieſter, from whence they are drawn over the ſnow to the Dwina, in winter; and the enſuing ſeaſon are brought down to the harbour for ſhipping.

The city of Riga ſtands in a large plain on the weſtern banks of the river Dwina, ſix miles above the mouth of it, which makes a commodious harbour from the gulph of the Baltic, called from thence the gulph of Riga, though by ſome the gulph of Livonia. The city is one hundred and twenty miles diſtant from Revel to the ſouth, and one hundred and ſixty-five from Narva, to the ſouth-weſt. It is ſeated in the fifty-ſixth degree fifty-three minutes north latitude, and in the twenty-fourth degree eaſt longitude from London, on the north-eaſt ſide of the Dwina; and though it is not of any great extent, it is populous, well fortified, and famed for its trade and opulence. The houſes are handſome, and for the moſt part built of ſtone. They are ſeldom above two ſtories high, and have ſteep roofs, for the better carrying off the water, which is very penetrating on the melting of the ſnow, wherein they have the advantage of the Ruſſians, who have ſtill greater occaſion to provide againſt the like inconveniencies. The cellars are uſed as warehouſes for flax, and other goods; and the entrance or firſt apartment in many houſes is the coach houſe, through which you muſt paſs to the parlour and dining-room. The ſtreets are narrow. The Lutheran churches, as the cathedral, St. James's, St. Mary Magdalene's, St. Peter's, and St. John's, are handſome ſtructures. The ſeminaries, called the imperial Lyceum, and the city Gymnaſium, are in a flouriſhing condition; and the maſters have very conſiderable ſalaries. Here are alſo a ſtrong citadel, and two arſenals well ſtored with arms, one at the charge of the crown, and the other of the city. The fortifications both on the land and water ſide, have been improved under its preſent maſters, and thoſe toward the ſea are enlarged by additional works. The city, by means of its excellent harbour, has, during the ſummer ſeaſon, a good trade with England and Holland, and in winter a trade with the Ruſſian provinces by ſledges, which renders it extremely populous, and very conſiderable. There are in the town almoſt as many ſhops as houſes; and proviſions are very plentiful and cheap here. About one thouſand veſſels arrive yearly at Riga, laden with corn, hemp, flax, pitch, tar, plants, furs, ſkins of all ſorts, Ruſſian leather, aſhes to make ſoap, glaſs, &c. which are exchanged in trade for the commodities of the more ſouthern climates.

This city is defended by ſtrong walls, bulwarks, and a very large trench on the land-ſide, and a ſtrong caſtle on the

the river, where the governor-general of Livonia reſides; it is called fort Robber, or Robruns. The harbour is ſecurely guarded by the Dunamunde fort, ſituated near the mouth of the Dwina, where the ſhips which ſail out of the Baltic into the river pay cuſtoms. This place was taken by the Swedes in 1609 and 1618; and by the Saxons in 1700, who gave it the name of Auguſtuſburg. In 1701 it ſurrendered a third time to the Swedes, and was taken by the Ruſſians in 1710, who threw eight thouſand bombs into it, which reduced it almoſt to a heap of rubbiſh.

The city of Riga was built in the year 1200, and ſoon after incloſed with a wall. It has ſuffered much by fires and ſieges. Charles IX. king of Sweden, beſieged it unſucceſsfully in 1605, and again in 1609; but his ſon and ſucceſſor, Guſtavus Adolphus, was more fortunate, and took it in 1620. He gave the jeſuits and all the Roman catholics leave to retire with all their effects. In 1656, while this prince was making war in Poland, the czar of Muſcovy entered Livonia, and attacked Riga; but after a ſiege of ſeven months, he was obliged to retire. Its privileges are very conſiderable, which were confirmed by the empreſs Anne: the ſupreme court of judicature and the high conſiſtory are held here.

The inhabitants of Riga are a frank kind of people, and very polite to ſtrangers; they live by their trade, and have by their policy kept up hitherto their ſhare of liberty. Their city is governed by four magiſtrates, and they have alſo a great number of counſellors, and a ſyndic. Their magiſtrates have a ſalary annexed to their office, and they are not permitted to trade during their magiſtracy, which, though elective, may continue as long as they live, provided they pleaſe their council. They have great power in the city; but if they think they have not obtained juſtice, they appeal to St. Peterſburgh, and frequently get the ſentence of the magiſtrates reverſed. The women are very pretty, rather inclinable to be fat, but have fine agreeable features; the unmarried women are kept in very good order; but it is ſaid, that after marriage, they do not pay a great regard to chaſtity, againſt which they offend not by ſtealth, but pretty openly. The ladies of quality are very vain, but at the ſame time polite to thoſe who pay them great reſpect. Merchants wives, and other idle women, are to be ſeen at the doors of their houſes almoſt through the whole day, for no other reaſon than to ſee the gentlemen paſs by, and receive their compliments. To ſuch a length is this fooliſh cuſtom come, that the men ſcarcely can be covered one moment; and therefore walk with their hats under their arms, like ſo many petit-maitres. Such is the account given of the people of this city by Dr. Cook, who was many years a phyſician to the empreſs of Ruſſia.

The town of Rokerhauren, or Rokenhuys, formerly ſtood on the river Dwina, ninety miles above Riga, to the eaſt. It was ſtrong by its ſituation on a hill, rather than by its fortifications, but was defended by a good citadel. It had been the reſidence of the archbiſhop of Riga. The Ruſſians, in 1701, blew up this town, after Riga had been unſucceſsfully beſieged by them.

The town of Nienhaus, or Nyenhauſen, on the borders of Muſcovy, near the river Peddes, is forty miles diſtant from Derpt to the ſouth, and one hundred and eighty from Riga to the eaſt. Marienburgh is twenty-five miles from Nienhaus, to the ſouth-weſt. Warbeck ſtands at the mouth of the river Eimbeck, near the lake Peipus. Theſe three laſt are ſtrongly fortified. Sewold, or Segenwold, is ſituated forty-five miles from Riga towards the eaſt, on the ſouth bank of the river Treiden; and over againſt it, on the other ſide of the river, lies Treiden, from which it takes its name. The town of Wilmer ſtands eighty miles from Riga, to the north-eaſt, and on the bank of the ſame river.

The province of Ingria, or Ingermanland, which compriſes the ſecond part of the grand diviſion of Ruſſia, is bounded, on the ſouth, by the river Luga, on the north, by the gulph of Finland, lake Ladoga, and the river Nieva; on the weſt by lake Peibus, and the river Nieva: and, on the eaſt, by an imaginary line ſuppoſed to be drawn between the town of Lubo, to the river Lugo. It is one hundred and thirty miles long, ſeventy in breadth, and abounds in cattle. In the winter here are a great number of elks, which in the ſummer ſwim in the river Nieva, and make incurſions into Carelia. The czar, Peter the Great, being deſirous of opening a communication between Archangel and the Baltic, by means of the gulph of Finland, in order to improve the commerce of his dominions, determined to make himſelf maſter of Ingria, which he accordingly did in the beginning of this century. Then to make it an European maritime power, he determined on one of the moſt arduous undertakings that ever was entered upon by human reſolution, viz. building the city of Peterſburgh, which he deſigned to make not only the capital of Ingria, but of the whole Ruſſian empire, the centre of trade, and the principal ſeat of the imperial reſidence.

The city of Peterſburgh is ſituated between Ingria and Finland, in a ſenny iſland, ſurrounded by the river Nieva, in ſixty degrees north latitude, and thirty-one degrees thirty-four minutes eaſt longitude, being diſtant from Revel, one hundred and eighty miles; from Stockholm, three hundred and eighty-ſeven; from Moſcow, three hundred and thirty; from Warſaw, five hundred and ſeventy; from Vienna, eight hundred and forty; and from London, one thouſand one hundred and ten. The iſland on which this fine city has been ſo wonderfully raiſed, was nothing but a heap of mud in the ſhort ſummer of theſe climates, and a frozen pool in winter, not to be approached by land, but by paſſing over wild foreſts and deep moraſſes, and had been till then the habitation of bears and wolves, till it was in 1703, inhabited by above three hundred thouſand Ruſſian, Tartar, Coſſack, &c. peaſants, whom the czar called together from all corners of his vaſt empire, ſome near one thouſand two hundred miles; and theſe made a beginning of this work.

To accompliſh his deſign, this enterprizing prince was obliged to break through foreſts, open ways, dry up moors, and raiſe banks, before he could lay a foundation. At firſt, the workmen had neither ſufficient proviſions, or even pick-axes, ſpades, wheel-barrows, planks, &c. or huts to ſhelter in; and yet the work went on ſo expeditiouſly, that in five months the fortreſs was raiſed, though earth thereabouts was ſo ſcarce, that the greateſt part of the labourers carried it in the ſkirts of their cloaths, or in bags made of old rags and mats, barrows being then unknown to them. It is computed, that at leaſt one hundred thouſand periſhed at the place; for the country had been deſolated by war, and ſupplies by Ladoga lake were often retarded by contrary winds.

The czar himſelf drew the whole chief plan. While the fortreſs was going on, the city began gradually to be built. He obliged many nobility, merchants, and tradeſmen, to go and live there, and trade in ſuch commodities as they were ordered. Proviſions being ſcarce, and conveniencies wanting, the place at firſt was far from being agreeable to perſons of diſtinction, who had in Moſcow large buildings, and ſeats in the country with fiſh-ponds, gardens, &c. However, he little regarded the complaints of thoſe who only conſidered their own eaſe. The Boyars (nobility) brought great retinues with them, and merchants and ſhopkeepers ſoon found their account in ſettling here. Many Swedes, Finlanders, Livonians, from towns nearly depopulated by the wars, repaired hither. Artificers, mechanics, ſeamen, were invited alſo, to encourage ſhipping; who, having worked out the time agreed on for the czar, were employed by the noblemen; and ſome built for themſelves and ſettled, each man being allowed to pitch on the ſpot he liked beſt. In one year, thirty thouſand houſes were erected, and, in two or three more, double the number, which doubtleſs are very much increaſed ſince. Some, indeed, but chiefly in the ſlabodas or ſuburbs, are mean, and may be taken to pieces in two or three hours, and ſet up elſewhere.

To build this town, the czar cauſed that of Ninſchans, a ſtrong fort on the Nieva, not far from Noteburg, to be demoliſhed for the materials, and the inhabitants removed hither: and as he intended to transfer the trade of Archangel to Peterſburgh, in 1713, he made one thouſand families come from Moſcow, and offered great advantages to all foreigners that ſhould ſettle there; and ordered that all goods, uſually ſent to Archangel, to be ſold, &c. to ſtrangers, ſhould be ſent hither, and the duties to be in every reſpect the ſame; but the commerce, &c. were not entirely removed till ſome years after. In 1714 it was ordered that all future houſes ſhould be built of brick, and tiled.

The citadel is a long and irregular hexagonal, with ſix baſtions parallel to each other, except the two middlemoſt, one of which, oppoſite to Carelia, has two orillons or blinds; that over againſt the river, none; each of the four others, one. They were all at firſt but earth and turf; but in 1710, the czar reſolved to have them all lined with ſtrong walls; thoſe on Carelia ſide were finiſhed in his life-time, and the work has been carried on and completed by his ſucceſſors. The wall is thirty feet high to the parapet, and the faces are all lined with large iron and braſs guns. On

A Perspective View *of* PETERSBURG, *the* Capital *of* Ruſsia.

the flanks, which are pretty ſhort, are two rows of caſemates, one above another, arched over, and covered with beams, and turf bomb-proof. The curtains on the right ſide of this citadel's gates has one of the fineſt royal diſpenſaries in Europe, both for the great quantity of drugs and medicines, and the large number of beautiful porcelain veſſels from China and Japan, contained therein. This citadel has two gates, one adorned with ſtatues, particularly of St. Peter, with his two emblematical keys, and on its inſide the black eagle of Ruſſia, with the globe and the ſceptre in its two talons; and below the figure, the Ruſſian tutelar patron, St. Nicholas. Before that gate is a ravelin; from whence is a bridge, with two draw-bridges over an arm of the river. Gallies and ſmall veſſels are ſheltered from bad weather in this place.

It being the deſign of Peter the Great to introduce as much as poſſible politeneſs and refinement amongſt his ſubjects, he therefore, in 1719, cauſed aſſemblies to be opened at Peterſburg; which he put under ſeveral excellent regulations, being ſeven in number, and which were printed in the Ruſſian tongue. In theſe aſſemblies, there is dancing in one room; in another playing at cards, draughts, or cheſs, in which laſt game the meaneſt Ruſſians excel; in a third room, there are commonly people ſmoking and converſing together; and in the fourth, are ladies and gentlemen diverting themſelves with queſtions and commands, croſs-purpoſes, and ſuch like innocent amuſements, that promote mirth and good humour. Although none of the company are obliged to drink more wine or brandy than they aſk for, except on the tranſgreſſing the eſtabliſhed rules of the aſſembly, which happens very often; yet there are many Ruſſians who embrace that opportunity of regaling themſelves at other men's coſt, and conſider aſſemblies as one of the moſt laudable of the late czar's innovations. Every great man of the court keeps, in his turn, an aſſembly once in the winter at leaſt; and the maſter of the police has notice ſent to him, if the czar pitches upon a particular perſon for that purpoſe.

Peter the Great alſo eſtabliſhed an academy here, which has in it a great number of profeſſors in moſt ſciences, and the belles lettres, who have liberal ſalaries. The building is a ſuperb pile, containing two ſtories, with a beautiful cupola in the middle, and an obſervatory. Here is a good library, and all manner of natural and artificial curioſities. Dr. Cook ſays concerning it, "In one of the galleries, in a caſe, is the ſkin of a Frenchman tanned and ſtuffed: this has been the talleſt man I ever ſaw. In another caſe, is his ſkeleton, and a pair of breeches made of his wife's ſkin, alſo dreſſed; the leather was like buff. On the bottom, or pavement, ſtands the ſkin of an Engliſh cheſnut horſe, ſtuffed, ſaddled and bridled, and beſide it the ſkeleton: Peter the Great uſed to ride this horſe. Here I ſaw the head of the unfortunate Miſs Hamilton, a Swediſh lady, who was put to death for having murdered her child unlawfully begotten; and this is the only murder of that kind I ever heard of in Ruſſia. It is ſaid, Peter went and ſaw her executed; he wept much; but could not prevail upon himſelf to pardon her, for fear, they tell us, that God would charge him with the innocent blood ſhe had ſhed. He cauſed her head to be capped and injected. The forehead is almoſt complete. The face is the beautifulleſt my eyes ever beheld. The dura mater and brain are all preſerved in their natural ſituation. This is kept in ſpirits in a large cryſtal veſſel." Beſides the above, here are depoſited great quantities of earths, foſſils. ſtones, ores, natural metals, minerals, ſhells, moſſes, corals, &c.

In one room is a figure of Peter the Great in wax-work, as large as the life; he ſits in an elbow chair croſs-legged, dreſſed in a blue ſuit of cloaths, and has a hanger by his ſide. He has ſhort black hair, his head covered, and is ſurrounded by mathematical, philoſophical, and mechanical inſtruments.

The plan of this academy was drawn up by Peter the Great himſelf, and conſiſts of eleven articles; ſpecifying the number of members, &c. the ſciences to be taught; directions to the members, relating to their ſtudies; their times of meeting; public lectures once a day, and ſyſtems of the ſciences profeſſed; filling up vacancies, &c.

Beſides the above, here is alſo an academy for the improvement of arts, furniſhed with ſeveral Greek and Roman models, &c. But this is ſtill in its infancy, and Ruſſia hath as yet produced no great genius in this way to render it famous.

On the ſouth ſide of the river, oppoſite to the academy, is the admiralty, which is a noble ſquare building. It is fortified, hath three entrances by means of drawbridges, and contains a great variety of offices, magazines, &c. Many large men of war, ſloops, &c. are built here. On the top of a tower belonging to the admiralty is a high ſpire covered with copper, double gilt; and a ſhip made of the ſame metal, and alſo double gilt, is placed on the ſummit.

To the eaſtward of the admiralty ſtands the caſtle, a royal foundery, in which are caſt ſome of the beſt cannon, mortars, bombs, &c. in the univerſe. It is a noble building, and on the top of it is the figure of a burning bomb, double gilt.

An academy of the marine was alſo eſtabliſhed at Peterſburg by the late czar, to which he obliged every conſiderable family in Ruſſia to ſend one or more of their ſons or kinſmen, above ten and under eighteen years of age, where they were inſtructed in navigation: they were here kept under a ſtrict diſcipline; taught the languages, alſo to ride and fence, and other exerciſes proper for gentlemen.

There is a wharf at the weſt end of Peterſburg for building ſmall veſſels; and machines called camels, which are uſed to carry great ſhips over the bar for Cronſtadt: and on the weſt end of the weſternmoſt iſland belonging to St. Peterſburg, there is an excellent well-fortified haven, where near three hundred Ruſſian gallies may ride with great ſecurity.

On the weſt end of the above-mentioned iſland is the cuſtom-houſe, and a fine exchange, (though only a wooden fabric) well frequented by merchants. It is an extenſive and uniform building, with convenient warehouſes for the preſervation and ſtowing of goods. Not far from the caſtle is a noble ſquare magazine, built of brick, for preſerving merchandize It has only one gate, which is very large, and is guarded conſtantly by one hundred ſoldiers.

On the ſouthernmoſt part of the city ſtands the grand market-place, in which are many warehouſes to depoſit all kinds of commodities, domeſtic and foreign, for ſale. It is a large ſquare, with four entries, and a range of ſhops on each ſide, both within and without, with covered galleries, to ſecure from the rain thoſe who frequent it. A learned traveller obſerves, that a ſtranger need not, as in other places, hunt through this for what he wants to buy: a pleaſant walk in theſe galleries will give him an opportunity of ſeeing at the ſame time all ſorts of commodities in the world, as well as many of the beſt people in Peterſburg.

They have eſtabliſhed here both woollen and linen manufactures, of which the latter is brought to great perfection, as is evident from the quantities lately imported from thence. Here is alſo a workhouſe, where an old Dutch woman has employed eighty girls at the ſpinning-wheel; and ſeveral regulations are made for improving the plantations of hemp and flax. Paper mills and powder mills have alſo been erected, with laboratories for gunnery and fire-works; and other places for preparing ſalt-petre and brimſtone. They have ſet up here rope yards, like thoſe in England and Holland, for the making of cables and tackling for the navy. The great forge at Peterſburg furniſhes anchors, and ſupplies all neceſſary ſorts of iron-work for building ſhips and houſes: and they burn bricks, and uſe them in their buildings, inſtead of wood. A printing-houſe is alſo eſtabliſhed, and newſpapers are now as regularly printed as in other countries of Europe: ſeveral uſeful books have been tranſlated out of the High Dutch, and printed, the government encouraging the ſubjects to enquire into the ſtate of the world abroad, inſtead of keeping them in ignorance, according to their antient maxims.

There are a great number of palaces and fine buildings in Peterſburg; of which the moſt remarkable are, a ſmall houſe, which is the moſt ancient and reſpected, as being erected by Peter the Great. It is built of wood, and conſiſts only of a little kitchen and a ſmall bed-chamber, not bigger than a common bed-chamber, and an anti-chamber for buſineſs. A covered gallery goes round, where that monarch uſed to walk when it rained. At the end of this miniature palace is placed the firſt boat ever built at Peterſburg: the houſe, gallery, boat, &c. are all, at preſent, ſheltered with a cover of timber, to preſerve them from the injuries of the weather. This little palace ſtands near the citadel, on the north ſide of the river Nieva; and on the ſouth ſide of the ſame river there is another wooden palace, which was likewiſe erected by Peter the Great: it is large, contains many handſome rooms, rich apartments, &c. and adjoining to it are ſpacious gardens, pavilions, pleaſure-houſes, ſhell-work, water-works, fine ſtatues, a

private play-houſe, and a large lake well ſtored with fiſh. Before this palace there is a ſmall ſhip mounting ſix cannon, which was ſaid to have been built, and afterwards preſented to Peter the Firſt, by a Ruſſian peaſant.

About half a mile further down, on the ſouth ſide of the Nieva, is the winter-palace, which is a ſuperb ſquare ſtone building, the inſide excelling the outſide, though with reſpect to its external appearance it is deemed one of the moſt magnificent in Europe. The furniture is made of the nobleſt materials, and moſt excellent workmanſhip. The royal family, with the proper retinue, attendants, &c. are all lodged here; as are likewiſe five hundred of the military, who regularly mount guard, and are relieved every day. And upon a canal, at ſome little diſtance from the Nieva, there is another elegant wooden palace, built upon piles, and two others in an inferior ſtyle.

A noble ſeminary for the education of females only, and founded by the late empreſs Elizabeth, ſtands at a little diſtance from the town. The whole contains about eight hundred young ladies. The building is capacious and grand; and here children of diſtinction are kept ſeparate from thoſe of an inferior rank.

There are ſeveral admirable buildings on the great quay, or rather angle parade, which runs above a mile in length by the water ſide; and a bridge of pontons is built over the narroweſt part of the water. Canals are cut from this excellent river to all parts of the city, the whole of which is laid out with great regularity; there is not any thing in it that looks old, though many things appear imperfect and unfiniſhed. The buildings which are finiſhed are handſome, and formed on a larger ſcale than is uſually ſeen in other places.

A gentleman who was lately at Peterſburg has favoured us with the following account of it: "The ſtreets, ſays he, are moſtly paved; but they have a cuſtom here of laying, in many places, a flooring of timber on the ground. This, I am told, was yet more common formerly in Moſcow, where, in the frequent fires they uſed to have, the ſtreet itſelf caught the flames, and the conflagration became terrible. The public buildings of different kinds are ſo prodigiouſly numerous in this city, that I am inclined to believe they conſtitute a fifth or ſixth part of the whole capital. Some of them are ſtone, but the larger part are only brick or wood plaiſtered." The ſame perſon obſerves, "Near the Nieva is a ſmall palace, built by the preſent empreſs, and called, I know not why, the Hermitage; for it no more reſembles our idea of a hermitage, than it does that of a temple; but when her majeſty reſides in this part of the building, ſhe is in retreat, and there is no drawing-room or court. I was admitted a few days ago to ſee theſe apartments, which are very elegant, and furniſhed with great taſte. There are two galleries of paintings, which have been lately purchaſed, at an immenſe expence, in Italy. The crown, which I ſaw in the palace itſelf, is perhaps the richeſt in Europe. It is ſhaped like a bonnet, and totally covered with diamonds. In the ſceptre is the celebrated one purchaſed by prince Orloff for five hundred thouſand rubles (a hundred and twelve thouſand five hundred pounds) and preſented by him to his ſovereign miſtreſs only a few years ago. It far exceeds Pitt's diamond in ſize, and is not inferior in water. Lapidaries declare it to be the moſt beautiful and rare ever brought from Golconda.

"One of the nobleſt monuments of the gratitude and veneration univerſally paid to Peter I. is an equeſtrian ſtatue, which her preſent majeſty ordered to be erected, and had been for ſome years under the hands of Monſieur Falconer, but which is now completely executed. In this production the artiſt has united the greateſt ſimplicity with the trueſt ſublimity of conception. No other ſtatue, whether antient or modern, gave him the deſign, which is ſingular in its kind, and admirably adapted to expreſs the character of the man, and of the people over whom he reigned. Inſtead of a pedeſtal adorned with inſcriptions, or ſurrounded by ſlaves, he appeared mounted on a rock or ſtone of a prodigious ſize; up the aſcent of which the horſe labours, and appears nearly to have reached its ſummit. This attitude has given him room to exert great anatomical beauty and ſkill in the muſcles of the horſe's hind thighs and hams, on which the whole of his body is neceſſarily ſuſtained. The czar's figure is full of fire and ſpirit; he ſits on a bear-ſkin, and is clad in a ſimple habit, not characteriſtic of any particular country, but ſuch as may be worn without violation of propriety by an inhabitant of any country. The following circumſtantial account of the opening of this magnificent ſtatue has been lately tranſmitted to us from Peterſburg, dated Auguſt 19, 1782.

"On Sunday laſt the celebrated braſs equeſtrian ſtatue of the Emperor Peter the Firſt was opened to public view. At about five o'clock in the afternoon her Imperial Majeſty, after having dined at the Hermitage, came in her barge, attended by ſeveral of the firſt nobility, and landed on the New Quay; from whence, on a platform covered with red baize, ſhe proceeded to the ſenate-houſe; where, from a balcony handſomely fitted up for her Majeſty's reception, ſhe had a full view of the ſtatue, the royal yachts on the river, of which there were ſeveral, all dreſſed in the various colours of different nations, and of the prodigious concourſe of the people aſſembled on the occaſion. On her arrival her Majeſty found the ſtatue incloſed with a ſcreen, on which were painted rocks, uncultivated ſpaces, and other emblems of the rude ſtate in which the emperor found his country. Her majeſty had not been long on the balcony, when, on a ſignal given by a rocket, the ſcreen, which concealed the ſtatue, on a ſudden, and as it were by magic, fell, and diſcovered one of the fineſt pieces of workmanſhip, I believe, that was ever known to any age or country. The ſudden appearance of the ſtately figure, big with majeſtic fire, galloping up a precipice on a furious ſteed, moſt exquiſitely finiſhed, in all the action of contending eagerneſs, together with the firing of cannon from the caſtle, admiralty, and yachts, and a running fire of about ten thouſand ſoldiers, produced an effect on the mind not eaſily deſcribed. After the firing ceaſed, and the Empreſs had contemplated the ſtatue for ſome time with the greateſt ſeeming ſatisfaction, all the regiments of guards, the regiment of artillery, and three other regiments, which were drawn up on the occaſion, marched round it, lowering their colours as they paſſed by the balcony where the Empreſs was placed. After this part of the ceremony was ended, her majeſty was rowed back to the Hermitage in the ſame manner ſhe came. In the evening the city was illuminated, and every face manifeſted joy at the happy remembrance of the father of their country."

In the winter ſeaſon, the Ruſſians contrive to make the warmth of their houſes ſuitable to the ſeverity of the climate. They give a proper degree of heat to the different rooms, by means of an oven conſtructed with ſeveral flues, and their ovens conſume a ſmaller quantity of wood than might at firſt be imagined; a ſingle ſmall faggot only is put in, and ſuffered to burn till the black thick ſmoke is evaporated. The chimney is then ſhut, by which the heat is retained, and the place kept warm for the ſpace of twenty-four hours; and this fire ſerves not only to warm the rooms, but to dreſs the food. The windows, in the houſes of the poorer ſort of people, are very ſmall, that as little cold as poſſible may be admitted; but in the houſes of the wealthier ſort, they are large; and in order to guard againſt the inclemencies of the weather, they have double glaſs frames, which are caulked up in the winter. All ranks of people are very expert and nice in regulating the proper heat in their houſes by means of a thermometer, when they increaſe or diminiſh the heat to a great degree of exactneſs, by opening and ſhutting the flues.

They have here a ſet of Italian ſingers; beſides which, there are French, German, and Ruſſian players, who perform before the court in their reſpective languages. No perſon pays either to the play or concert, but none are allowed to enter except ſuch as have tickets by authority. The play-houſe doors are guarded: and if any one ſhould get in without a proper right, they would be ſeverely puniſhed. Some few years ſince, an Engliſh company of comedians went over to St. Peterſburg, where they met with great countenance and encouragement.

The beautiful palace of Peterſhoff is ſituated about twenty miles weſt from Peterſburg: it is built on an eminence, in a large garden, commanding a fine view, and ſurrounded by many out-houſes, offices, &c. for ſervants and attendants. It faces the ſouth, and in the front there is a beautiful canal of clear, tranſparent water, from which three fountains are ſupplied, and conſtantly play. When the empreſs is here, the guards are encamped in a part of the garden, where their tents make a very agreeable appearance. In ſpeaking of one of theſe jet-d'eaus, or fountains, Doctor Cook ſays, "out of the water, much to my agreeable ſurpriſe, aroſe a dog and three ducks, made of copper or iron, and, in appearance, alive. The ducks flutter through the water quacking; the dog follows after them barking." There is, in a ſubterraneous place, a charming chime of bells, which play by water. The grotto, which is covered before by a caſcade, has two entries,

entries, one on each ſide. The entries are guarded by ſtatues, which, when you are in, prevent any from getting out till the keeper, by turning a handle, puts a ſtop to them. Theſe ſtatues emit ſo much water, by vomiting and ſhooting out of ſtone piſtols and guns, that the keeper ſaid, it would overwhelm any man.

Beſides the curioſities before-mentioned, there is a beautiful gallery full of the fineſt china in the world; at one end of which is a ſmall, but commodious room, with a bed in it, whither the empreſs ſometimes retires to repoſe herſelf. The apartments are all ſplendid and nobly furniſhed, and among the paintings there are five matchleſs portraits of the ſovereigns of Ruſſia; namely, 1. Peter the Great. 2. The Livonian Villager, whoſe virtues raiſed her from a cottage to an imperial diadem, and to ſhare the bed of Peter the Great. 3. The empreſs Ann. 4. The empreſs Elizabeth; and, 5. The ſovereign now on the throne.

A few years ago there happened a moſt dreadful hurricane and inundation at Peterſburg, which did incredible damage, and by which the lives and property of many perſons were deſtroyed. The ducheſs of Kingſton, who was there at the time, was a great ſufferer by it; her yacht not only loſt its rudder, but all its maſts and ſails; the organ, which coſt her grace one thouſand five hundred pounds, was entirely broke to pieces; and the elegant coach, which lay in the hold, totally deſtroyed: the loſs was computed at upwards of three thouſand pounds. The bridge of boats thrown acroſs the river Nieva was entirely deſtroyed; ſo that the inhabitants have been obliged to paſs that rapid river, which is about half a mile broad and very deep, in ſingle boats, which was practiſed with great danger before Peter the Great would conſent to the formation of the grand bridge of pontons. An account of this calamitous event was inſerted in the London Gazette, October 18th, 1777, from a narrative dated at Peterſburg, in the ſame year: and is as follows: "On Sunday laſt (September 1777,) an inundation happened here, more extenſively deſtructive than has ever been remembered in theſe parts. A violent hurricane of wind at weſt ſouth-weſt, which began about two o'clock in the morning, raiſed the water, in the ſhort time of four hours, to the height of fourteen feet above the ordinary level of the Nieva, by which the whole town, and a great extent of the flat country in the neighbourhood, was rapidly overflowed. The water remained about half an hour at its extreme height; and the wind getting a little to the northward between ſix and ſeven o'clock it returned in a very ſhort time to its uſual bounds. It is impoſſible to eſtimate, with any degree of exactneſs, the loſs which the ſtate and individuals have ſuffered. The number of perſons drowned muſt amount to ſeveral hundreds. In the beſt parts of the town many houſes were unroofed, and the loſs of liquors and other proviſions in the cellars and lower apartments is very great. In the ſhops, which are all in the ſame quarter of the town, goods were deſtroyed to a very conſiderable amount. In the gardens of the ſummer-palace, great numbers of the fineſt trees are broken or torn up by the roots. The lower ſkirts of the town, where the houſes are moſtly of wood, and inhabited by the poorer ſort of people, preſented a ſcene of deſolation which can be more eaſily imagined than deſcribed. Many perſons were drowned in their beds, and others, who ſought for ſafety from the waters on the roofs of their houſes, were carried from thence by the violence of the wind; and thoſe who eſcaped with life were left deſtitute of habitations and effects.

"Great damage is done at the quay of the exchange, and the lower magazines and warehouſes. Numbers of barks, laden with iron, hemp, grain, wood, &c. to a very great amount, were ſtaved, ſunk, or driven to pieces in the ſtreets or fields. Several large veſſels, lying between this place and Cronſtadt, were driven aſhore into the woods and gardens. Many of the country houſes in the neighbourhood are deſtroyed. The village of Catherinehoff, and ſome others on the ſame coaſt, were intirely ſwept away, with all the cattle; and many lives were loſt there, as well as on the ſide of the Galley Haven, where the ground is very low. The great bridge of boats over the Nieva was carried away, and moſt of the bridges in the town, except thoſe on the new ſtone quay, no part of which has ſuffered any material damage, were torn up. We have the ſatisfaction, however, to hear, that the works or ſhipping at Cronſtadt, have received little or no damage.

"It appears from accurate obſervations, that the waters were a foot and a half higher than in the great inundation which happened here in the year 1752. The plays at the court theatre are ſtopped for ſome time, on account of this public calamity. Meaſures are taking to relieve the poor ſufferers by every poſſible means.

"It gives us ſome ſatisfaction to add, after the above melancholy account, that the empreſs, with a degree of humanity, that will ever do honour to her character, ordered the royal coffers to be opened to thoſe who have ſuffered moſt materially by the tempeſt; and that advice was received from St. Peterſburg, that four of the ſhips, which were ſuppoſed to have been loſt in the hurricane, were returned to that port, but in a very ſhattered condition; and likewiſe that nine of the Engliſh merchant ſhips had ſuffered."

Peter the Great, after having laid the foundation of his new city of Peterſburg, and made ſome progreſs in the buildings, thought it neceſſary to have a convenient harbour, in which the ſhipping might ride ſecure; and, for this purpoſe, pitched upon the iſland of Retriſani, at the mouth of the gulph of Finland. There he built a new town called Cronſtadt, and ſecured it with a caſtle called Cronſlot, ſituated on a ſand-bank near the ſide of Ingria; ſo that between the caſtle and the town, the ſhipping ride in a ſafe, deep and commodious harbour. The caſtle is built in the form of a round tower, and three tier of galleries, well furniſhed with cannon, ſurround it. Two ſmall batteries are at preſent placed on the oppoſite iſland, and, in caſe of emergency, the piers of the harbour may be mounted with a conſiderable train of artillery.

There are many elegant houſes between Cronſtadt and Peterſburg; and on an iſland formed by the river Nieva, near the weſtern banks of the lake Ladoga, is the ſtrong fortreſs and ſea-port of Noteburg or Oreſco. It was taken from the Swedes by Peter the Great, in the year 1702. The town of Nieuſcham is demoliſhed: Iwanogorod is a ſtrong caſtle oppoſite the Narva, from which, at the diſtance of forty-five miles, is the fortreſs of Caporia, ſituated on the banks of a ſmall river. Jama is another fortreſs, built on a river of the ſame name, fifteen miles to the north eaſt of Iwanogorod.

SECT. III.

Compriſing the ſecond Grand Diviſion of RUSSIA, containing MUSCOVY PROPER, or WESTERN RUSSIA.

WESTERN Ruſſia, or Muſcovy Proper, contains twenty-two provinces; namely, 1. Pleſkow, or Pſkow; 2. Great Novogorod Veleki; 3. Twere; 4. Rzeva or Reſchaw; 5. Biela or Bielſki; 6. Smolenſko; 7. Severia; 8. Czernichow; 9. Vorotin; 10. Rezan; 11. Bielgorod; 12. Mordoa; 13. Niſi-Novogorod; 14. Volodimer; 15. Suſdal; 16. Moſcow; 17. Roſtow; 18. Yeroſlawla; 19. Bilejeſora or Relozero; 20. Vologda; 21. Cargapol; 22. Dwina.

I. The lordſhip of Pleſkow or Pſkow, is ſituate between the duchy of Novogorod on the eaſt, Ingria and Eſtonia on the north, Livonia on the weſt, and the palatine of Polockz on the ſouth. It was formerly a republic, after which it had the title of duchy. It was at length ſubdued by Iwan Baſilowitz, anno 1509. It hath a lake of its name, which lies on the confines of Ingria and Livonia, and empties itſelf into the larger one of Peopus or Crudkow. It lies under fifty-ſix, fifty-ſeven, and fifty-eight degrees of latitude, and twenty-eight and thirty-two of eaſt longitude.

The chief towns in it are, Pleſkow, Abdova, Ferzur, Oſtrova, Fieburgh, Voronecks, and Poſtarzova.

Pleſkow, the capital, is ſeated on the mouth of the river Muldow, on the right hand of the lake of its name. It is divided into four wards or quarters, each of which is encompaſſed with its own walls, and is moreover defended by a ſtout caſtle built on a high rock. It is a Ruſſian archiepiſcopal ſee, and a conſiderable populous city. It ſtands in fifty-ſeven degrees, forty minutes of latitude, and twenty-nine degrees thirty minutes of eaſt longitude.

In this territory are ſome other inconſiderable cities, not worth farther notice, except for the ſtrength and fortifications, which gave the late czar no ſmall trouble to reduce; and are ſtill carefully kept up, for the defence of this advanced frontier. But that of Pleſkow is looked upon as the ſtrongeſt in all the north part of Ruſſia.

II. Great Novogorod Velcki, or the duchy of Novogorod, is ſituated on the eaſt of Pleſkow, laſt mentioned, with Ingria, and the lake of Ladoga, on the north; on the eaſt of the duchy of Belozera and Twere; and the province of Rzeva on the ſouth. It is divided into

into five principal diſtricts, viz. Ob Oneſkaia Petina or diſtrict on this ſide the Onega, Graſina Pagoſt or Graſinean tribe, Vichny Volock and Zauzolſi Volock, or the republics of Vichni and Zauzolſki, and Beſvolki Petina, or the dry or barren quarter. It hath four lakes, called the Ilmen, Voldai, Lutinſch, and Mſtim. It hath no leſs than ſixteen rivers, the moſt conſiderable of which are the Wolohowa, Vitegra, Bagda-konſa, Nieſca, Mſtaſua, Paiamil, Vidoca Phchega, and Longa. The moſt conſiderable cities and towns in it are, the Great Novogorod or Novogorod Veliki, Staraia or Old Ruſſia, Nova or New Ruſſia, Parcoff, Vitzgora al. Vitegra, Ochloma, Tiffina, Ladoga al. Ladiſkia, Soltza, Gorodna, Poliſſa, Crocka, Quelcor, Niewbochi, and S. Nicolas.

This duchy is called Novogorod Veliki, or ſuperior, to diſtinguiſh it from the Inferior or Niſi Novogorod. Its extent from eaſt to weſt, on the ſouthern part, is computed to be near two hundred and fifty miles, but grows more and more narrow towards the north. Its chief produce is corn, flax, hemp, wax, honey, and leather; in all which it drove a conſiderable traffic, when it was governed by its own princes, though, even then, it was very often obſtructed by its wars with Moſcovy; but ſince it has become under its ſubjection, it is much decayed from its flouriſhing condition. In the middle of the ſouthern part is the lake Ilmen, out of which flows the river Wolohowa abovementioned, which paſſes through part of this province into the Ladogan lake.

Novogorod Veliki, the capital of this province, called by the French, Neugard, and by the Dutch, New Garten, ſtands on the Wolohowa abovementioned, and is a large and conſiderable place, very populous and well fortified. But it is plain from the remains of ſome old walls, towers, ſteeples, &c. that it was formerly a great deal more ſpacious: and, indeed, when one beholds the great number of thoſe towers and ſteeples which it hath ſtill ſtanding, one is apt to expect to find ſomething grand in the place, whereas it is indeed but ill built, the walls being made of timber and mud, as well as the greateſt part of the houſes. This change is owing to the ſeveral diſaſters that it ſuffered from the Polanders, Ruſſians, and other nations; for it was once in ſuch a flouriſhing condition, that it was a common ſaying, Who can hurt God or Novogorod? but ſince it fell into the hands of the Ruſſians, its great trade and ſplendor have ſenſibly decreaſed. It is however an archbiſhopric of the Ruſſian rite. The cathedral, called Santa Sophia, is large and beautiful, though in the antique ſtyle.

The caſtle is on the other ſide of the river, and is joined to the city by a large bridge, famed for the many thouſands of clergy, citizens, and others, whom the tyrant of Novogorod, duke Iwan Baſilowick, cauſed to be thrown from it into the river, anno 1569. The caſtle is the reſidence of the Vaivode, and near unto it is the archiepiſcopal palace, and a monaſtery dedicated to the miraculous St. Anthony of Padua, mentioned a little higher. There is another monaſtery, called Perunki Monaſtir, ſaid to have been built on the ruins of an antient temple, dedicated to Perun, or the God of Fire, formerly worſhipped here, under the figure of a deity, holding a thunderbolt in its hand. Here are beſides about a hundred churches, moſt of whoſe ſpires and towers are covered with copper gilt, eſpecially the cathedral; and about ſeventy monaſteries. It ſtands in fifty-eight degrees twenty minutes of latitude, and thirty-four degrees of eaſt longitude, about one hundred and fifty miles north-eaſtward from Pleſkow, one hundred and ſix almoſt ſouth from Peterſburg, and two hundred and ten north weſt from Moſcow.

Staraia, Stara Ruſſa or Old Ruſſa, from which ſome authors affirm the country of Ruſſia to have had its name, ſtands on the oppoſite ſhore of the lake Ilmen, from whence flows the river Lovat, which runs through the town, out of which the inhabitants make a good ſalt, of which they drive a conſiderable traffic. It ſtands about forty-two miles ſouth of Novogorod, and is well built and populous.

The town of New Ruſſa ſtands on the above-mentioned river, about ten miles from Old Ruſſa, but does not contain any thing worthy of particular notice.

Ladoga is about eighty miles north of Novogorod, in latitude fifty-nine forty-five, and thirty-four forty each. It ſtands on the left ſhore of the river Velcot or Velkova, which falls into the Ladogan lake.

Mologa ſtands on the confines of the duchy of Belozera; and at the confluence of the rivers Niſſa and Wolga.

St. Nicholas is a large and populous town, near the Wolga, and is famed for a ſpacious monaſtery dedicated to that ſaint.

III. The duchy of Twere is ſmall and compact, but populous and fertile, and takes its name from its capital, and that from the river Twerza. It is bounded on the north and weſt by the Great Novogorod laſt deſcribed, on the eaſt by the duchy of Roſtow, and on the ſouth by that of Moſcow, and the province of Rzeva. Its chief cities and towns are, Twere, Tuerſock, Wolkofkoi Starica, Preziſta, Oleſchna, Coſſin, Sattrite, Gerodin al. Gorodna, Clin, Maigrova, Czornaia-Sloboda, and Mitre.

The capital city Twere, is ſituate on the confluence of the rivers Twertza and Wolga; which laſt is by this time become ſo wide, that they are obliged to croſs it in ferry-boats. It is pleaſantly ſituated on the ſide of a riſing hill, on the banks of the Twertza, from which it has its name; and is a large, rich, and populous city, having no leſs than ſixty churches, and an epiſcopal ſee; and is the ſtation of a mint. It ſtands about ſixty leagues eaſt ſouth-eaſt of Pleſkow, and twenty-five north weſt of Moſcow. Latitude fifty-ſix fifteen, and longitude thirty-ſeven twenty eaſt.

A little below it, on the ſame river, ſtands the large town of Terſack, Torſack, or Tarſock, about twenty miles north from Twere. The other towns have nothing that merits particular attention.

IV. The duchy of Rzeva or Reſchaw, is bounded on the north, by that of Twere laſt deſcribed, and by that of Moſcow; on the ſouth, by the principality of Biela, and palatinate of Witepſk; on the weſt by the lordſhip of Pleſkow; and on the eaſt, by part of the territory of Moſcow. The towns belonging to it are,

Rzeva the deſart, Rzeva Volodimerſki, Toropeckz, Velikie-Louki, Borgo Cove, Boroveo, Zari, Lubieckze, and Dudure. Moſt of them are inconſiderable.

Rzeva the deſart, ſo called becauſe ruined and abandoned, was the capital, and ſtood on the weſtern ſide of the province, on the ſouth-weſt of Velikie-Louki; but hath yielded its dignity to Rzeva Volodimerſki.

This town is pleaſantly ſituated on the Wolga, on the eaſtern ſide of this province, near the ſmall lake Wolga, which is one of the head ſprings of that river. It is ſaid to have been built by prince Volodimer, who made very conſiderable conqueſts in this and the neighbouring provinces. It is but indifferently built, but well peopled, and drives ſome ſort of trade in hemp, fiſh, and other articles.

The town of Toropeckz is ſmall, but neat, and pleaſantly ſituated on a little river that falls into the Dwina.

V. The principality of Biela or Belſki, is bounded by Rzeva, on the north and eaſt, by Lithuania, and the palatinate of Witepſk on the weſt; and by Smolenſko on the ſouth. It was formerly governed by its own princes, though ſubject to Lithuania; and was then a conſiderable place, till ſubdued by the czar Baſilowitz. It ſtands on the river Opſcha or Oſca, which diſcharges itſelf into the Dwina.

VI. The province of Smolenſko extends about two hundred miles from eaſt to weſt, and is uſually ſtiled the duchy and palatinate of Smolenſko. It hath, on the north, the principality of Biela; Lithuania, on the weſt; the duchy of Severia, on the ſouth; and Moſcow, on the eaſt. It hath been alternately ſubdued by the Poles and Ruſſians, and at length was finally ceded to the latter, by treaty, towards the concluſion of the laſt century. It is watered by the Nieper or Boriſthenes; the land is in general deſart; but the inhabitants derive ſome profit from the ſkins of the wild beaſts, with which it abounds.

The capital is called by the ſame name, and is agreeably ſituated on the banks of the Nieper, near the confines of Lithuania. It is a large, populous, and well finiſhed city, and contains eight thouſand houſes tolerably well built. It is two hundred and ten miles from Moſcow, has a citadel and garriſon to defend it, was once a metropolitan, and is now a biſhop's ſee. The ſurrounding woods are ſaid to produce the beſt furs in Ruſſia.

The town of Dragobuſa is ſituated on the ſame river, about fifteen leagues from Smolenſko, but is of no conſiderable note.

VII. The duchy of Severia or Severiſki, is ſituated to the weſtward of Little Ruſſia, to the eaſtward of Czernikow, to the weſtward of Bielgorod, and to the ſouthward of Smolenſko. It had formerly princes of its own, till the country was ſubdued by the czar Baſilowitz. It afterwards fell into the hands of Sigiſmund III. king of Poland, who incorporated it with his own dominions; but it was at length finally ceded to Ruſſia, as a member of the antient palatinate of Smolenſko.

The

The chief rivers that water this province are, the Ubick, Dwina, and Newin. The northern part is very full of woods; but the reſt is fertile and populous, though woody. In the ſouthern part there is one vaſt, extenſive foreſt, which is computed to be one hundred miles ſquare.

The chief town of this duchy, named Nogogrodeck, ſtands on the river Domza, and is tolerably well fortified in the Ruſſian manner.

Branſki, or Branzo, is another ſmall, but neat and ſtrong town in this duchy; it is about ſixty miles from Nogogrodeck.

Demetriowick is ſituated on the moſt northern verge of the province; was formerly in the palatinate of Smolenſko, and ſtands about forty leagues ſouth-eaſt of that capital.

VIII. The duchy of Czernichow is bounded on the weſt and ſouth, by the river Nieper, and the palatinates of Kiow; and on the north-eaſt by Servia and part of Lithuania. The river Domza waters it; but the land is exceedingly ſteril. The principal town, called Czernichow, is ſmall, thinly peopled, and inconſiderable. The town of Borma is only noticed for ſome fortifications to guard it againſt Poland. Others, ſtill leſs worth mentioning, are, Omby, Perecop, Vibbi, Soſnica, Kwalcſin, Puſca, &c.

IX. The principality of Vorotin, or Vorotinſki, is bounded northward by the river Ugra, and part of the duchy of Rezan; on the ſouth by Leſſer Tartary, or the land of the Coſſacks; on the weſt by the duchy of Severia; and, on the eaſt, by another part of the ſaid duchy of Rezan.

That portion of the province which is ſituated near the Leſſer Tartary has been almoſt deſolated by the continual incurſions of the Coſſacks; but the other parts, which are watered by the river Occa, are populous and fertile.

Verotin, the capital of the province, ſtands on the banks of the Occa. It is only a ſmall town, but well ſecured by a caſtle and other fortifications; and higher upon the ſame river ſtand the towns of Bolgoff, Aarol, and Crom, which are the ſtrongeſt and moſt conſiderable in this province.

X. The duchy of Reſan or Rheſan (now called the province of Veronis) includes a very large track of land lying between the Don, or Tanais, and the Occa, and extending near three hundred miles in length. It is watered by the above rivers; hath Little Ruſſia to the ſouth, Smolenſko to the weſt; Niſi-Novogorod to the eaſt, and the duchy of Moſcow to the north. The Ruſſians deem the ſoil of this province the moſt fertile in the univerſe; and affirm, that the corn grows ſo thick and ſtrong, that a horſe cannot make his way through it. This muſt be owing to the quantity of ſalts with which the ſnow enriches the ground by laying ſo many months upon it, as was hinted at the beginning of this article. The people here, likewiſe, are ſaid to be courageous and warlike, civil, and polite, and ſo very numerous, that they are able to ſend fifteen thouſand foot and forty thouſand horſe to the wars.

This country was formerly governed by its own dukes, who were eſteemed very powerful princes; but it hath long ſince been ſubdued by the czar, and become ſubject to Ruſſia, ſince which time it hath decreaſed much of its ancient ſplendor and traffic. It continues, however, ſtill fertile in corn, millet, and other grain, and abounds with all kinds of game, as the rivers do with fiſh; particularly the great river Don, which hath its ſpring head in this province, and runs almoſt acroſs it, and, after a long ſerpentine courſe, diſcharges itſelf into the Palus Mæotis at Aſoph.

Theſe towns were moſt of them formerly conſiderable, rich, and well peopled; but have been ſo miſerably plundered and abuſed by the Crim-Tartars in the year 1568, and following, that they have not been able to recover themſelves ſince; particularly

Reſan or Rheſan, the ancient capital of this province, was formerly a fair, large, and populous city, and advantageouſly ſituated on the Occa. It is chiefly famed for the noble reſiſtance which it made againſt the Tartars in the year 1570, by which the whole empire was preſerved from their fury, though the city itſelf and almoſt the whole duchy, were deſtroyed by them. Since that time, the fertility of that ground, which reaches from this city and the river Occa, quite to the intrenchments which were afterwards made on the confines of Tartary, to prevent the incurſions of thoſe free-booters, induced the Moſcovites to gather up all the diſperſed inhabitants of this once flouriſhing place, and to cauſe the materials of the ruined city to be conveyed about eight leagues off, and to build the new town with them called Pereſta Rezanſki, becauſe many of the inhabitants of Pereſta went likewiſe and ſettled there. All that the antient Rezan now retains of its former grandeur, is its archiepiſcopal ſee, and its being ſtill the reſidence of that metropolitan.

The town of Voronetz, Woronitz, commonly now Veronis, is the moſt conſiderable place in this duchy, on account of the great ſhips of war built there by the direction and inſpection of the late czar Peter the Great; it being ſituated on a ſmall river of its own name, which falls into the Don, or Tanais, a little below it, and is deep enough to carry them into the great river, and thence down to the Black ſea, to which that prince opened himſelf a free paſſage by the taking of Aſoph. It is ſituated on a hill, and ſurrounded with a wooden wall almoſt rotten. It is divided into three parts; one of which, called Jakatoff, is the common reſidence of the Ruſſian merchants: it hath large and extenſive rope walks, and a ſpacious ſubterranean magazine of powder without the walls.

On the declivity of the hill, and along the water-ſide, are ſeveral ſpacious houſes, ſome of them four hundred paces long; which belong ſome to the Ruſſian admirals, vice-admirals, and perſons of rank. Moſt of them ſtand facing the citadel, and behind them are ſtreets for thoſe that are employed in ſhip-building. The city ſtands on the weſt ſide of the Veronis, and the citadel on the other; and a large bridge is built over it for communication between them.

The citadel is a large ſquare building, flanked with a tower on each corner, hath large apartments in it, and makes a great figure without. It is ſurrounded with ſtrong palliſadoes, and a wet foſſe, and is defended by a ſtrong garriſon. This is the chief magazine in this part of Ruſſia, in which there are about one hundred and fifty cannon, moſtly unmounted for ſpeedy carriage, conveniences for ſhip-building, and apartments three ſtories high for all kinds of naval ſtores; and the town is computed to have about ten thouſand ſouls in it. There are ſome handſome churches in it after the Ruſſian taſte; and at a ſmall diſtance from the town there is a high mountain almoſt mouldered away, and full of cracks, on which are ſome ancient monuments. It ſtands nearly twenty-five leagues ſouth of Moſcow, in about fifty-five degrees forty minutes of latitude, and forty degrees twenty-five minutes of eaſt longitude.

The town of Taverhoff was built by Peter the Great, on the ſouth banks of the river Veronis, and two thirds of the town are waſhed by that river and the Don. The place is very healthy, on account of the circumjacent low flat grounds being covered either with wood or water. This town is regularly built with ſtreets, interſecting each other at right angles; but the houſes are of wood, as is a palace which ſtands at the weſt end of the town. The citadel is made of earthen ramparts, palliſadoes, with baſtions at the corners, mounted with cannon. Taverhoff itſelf is inhabited principally by ſailors and fiſhermen; and what is very ſingular, three thouſand ſoldiers, who are the garriſon, and appointed to defend the place, dwell all together in a neighbouring village, and not in the town.

The other towns in this duchy, worth mentioning, are Donkarod, a large place about fourteen leagues ſouth from Rezan, ſituate near the ſpring-head of the Don, or Tanais, and Toul, or Tula, on the weſtern confines, near the borders of Vorotin, which is defended by a ſtout caſtle, built by the czar Baſilowick ſoon after he took it.

XI. The province of Bielgorod: it was formerly called Organia; but we find it ſtiled, in the map of the curious Mr. Theſing, the palatinate of Belgorod, or Bielgorod. It is a large tract of land lying on the ſouth of the province of Rezan laſt deſcribed; and is bounded by it on the north, as it is on the ſouth by the Nogay, and Don Coſſacks; on the weſt, by the Ukraine and palatinate of Kiow; on the eaſt, by the Don; and, farther north, by the Wolga. It is watered by ſeveral other rivers, and hath a ſoil ſufficiently fertile, were it well cultivated; but its vicinity to Little Tartary expoſes it ſo much to the continual inroads of the Coſſacks above mentioned, that it is neither rich, fruitful, nor well inhabited. It hath a conſiderable number of ſmall towns, moſt of them poor, and half-ruined; but it hath no cities, except that of Bielgorod, from which it hath its name, and which is itſelf hardly remarkable upon any other account. The Don Coſſacks on the ſouth-eaſt, called alſo Rodoni Donſki,

becauſe they chiefly inhabit along the Don, and the Nogay Coſſacks on the ſouth-weſt, are either very boggy or woody, and have few towns in their territory; which, with the palatinate of Bielgorod, was formerly part of Tartary, but hath been conquered from it by the Ruſſians.

Having now gone through the weſtern provinces of Ruſſia, from the lakes Ladoga and Onega, to the ſouthernmoſt part of it, called Little Tartary; we ſhall proceed towards the north, where, in our courſe, we meet the provinces above-named; the firſt of which is called

XII. Mordwa, or Mordva, and the inhabitants Morduates, or Mordua Tartars. They are ſurrounded on the ſouth by the Leſſer Tartary and Rezan, laſt deſcribed; on the weſt, by the dutchies of Moſcow, Volodomir, and Niſi Novogorod, or Leſſer Novogorod; on the north, by part of the ſame laſt named, and the river Wolga; and, on the eaſt, by the ſouthern Czeremiſſe. The inhabitants of this province are ſaid to be the moſt civilized of all the Tartarian Moſcovy, and have ſome towns; the chief of which are Adema, about forty leagues eaſt from Volodimir, and twenty from Niſi Novogrodeck; and Moruma, ſeated on the river Occa; but neither of them worth deſcribing. The people here are heathen, and worſhip one God, and a devil, the former out of love, the latter out of fear; but have neither temples, altars, or prieſts. Their country is ſmall, and full of large foreſts, and is by M. de L'Iſle placed between the rivers Occa, Sura, and Mokſcha-Reka.

The province or diſtrict of Czeremiſſe, or Scheremiſſe, which lies on the eaſt-ſide of the former, is a vaſt tract of land, extending from fifty-four to ſixty-one degrees of latitude; and is divided by the river Wolga into two parts; the ſouthern diſtrict, which adjoins to Mordva, has the name of Nagorho, which implies mountainous; the northern is called Logoai, or lowland.

The inhabitants, who are deemed the moſt ſavage of all the Tartars, breed vaſt herds of cattle. They are without towns, faithleſs in their dealings, ſuperſtitious in their notions, and cruel in their diſpoſitions. Some are called Mahometans; but the greater part, eſpecially towards Cazan, know nothing either of that or the Chriſtian religion. Their way of naming their children is, by chuſing a day ſix months after birth, and giving the name of the firſt perſon they meet.

They have no notion of a future life; but believe that God bleſſes, and the devil puniſhes, according to their deſert in this life. They go to a place called Nemda, forty leagues from Cazan, full of marſhes, to pay their devotions to the deity; and believe if they go empty handed, the devil will puniſh them with a lingering and incurable diſeaſe. They worſhip ſun, moon, ſtars, and animals; but to God they ſacrifice a horſe, ox, or ram, roaſted and baſted with liquor made of honey. A man is allowed three or four wives.

The women wear only a coarſe linen gown, which covers their whole body; and the head-tire of the married ones riſes over their heads like a horn growing out of their ſkulls, at the top of which hangs a little bell by a ſilk ſtring of ſeveral colours. The men have much the ſame garb about their bodies, with drawers under. The married ſhave their heads, and the unmarried let their hair grow to a conſiderable length. They are ſubject to the czar, and are free from all tribute except voluntary preſents. Their language is peculiar, underſtood neither by Ruſſian nor Tartar.

XIII. The duchy or lordſhip of Niſi Novogorod lies to the ſouth-weſt of Cazan, and to the eaſt of Moſcow. It is watered by the Wolga and Occa, abounds with foreſts, but is nevertheleſs pleaſant, populous, and fertile.

Niſi-Novogorod, the capital city, is ſituated on a rock at the confluence of the Wolga and Occa, ſurrounded by a ſtone wall, and defended by a ſtrong citadel. Near the river-ſide, and before the ſtately gate of the city called Iwanoffki, there is a ſpacious market-place. A noble ſtreet interſected by others, runs through the whole town; the cathedral, which is built after the model of Santa Sophia at Conſtantinople, is a ſtately edifice; it has five cupolas beautifully varniſhed with green, and adorned at the top with elegant croſſes. The ſuperb archiepiſcopal palace is near the cathedral, but contains a church within its own walls. The governor's palace, and the chancery, are noble fabricks, and the houſes in general are well built of timber. The city itſelf is ſmall, but the ſuburbs are large, and the whole has a good trade, and is well furniſhed with proviſions. The luxuries, as well as the neceſſaries of life, are remarkably cheap; but the inhabitants of both ſexes are given to exceſſive drinking.

The village of Baſiligorod is ſaid to have neither walls nor ſtone houſes, either public or private. It ſtands at the foot of a riſing ground near the Wolga, and was originally founded by the czar Baſilius, as a check upon the Tartars; but as the Ruſſian frontiers at preſent extend much farther, the fortifications have been ſuffered to go to decay. The other towns of inferior note are, Paſtoff, Balagna, Slaboda, and Niſi-Novogorod, the latter of which is computed to be diſtant from Moſcow about eight hundred werſts, or ſixty German, and one hundred common leagues, by water, but by land it is not above an eighth part ſo far.

XIV. The province, called alſo the duchy, of Volodimer, is bounded by that of Niſi-Novogorod, on the eaſt; by the duchy of Moſcow, on the ſouth; by thoſe of Roſtow and Suſdal, on the weſt; and the river Wolga, on the north. It is in many parts fertile, well watered by the rivers Occa, Cleſma, and Wolga, and hath a great number of foreſts and fens.

The capital city Volodimer, ſtands about ſeventy-five miles from Moſcow to the north-eaſt; it is ſituated on a fine hill, which is beautifully diverſified with plantations. Hence a moſt noble appearance is exhibited to the diſtant eye. It was built by prince Volodimer, in the commencement of the tenth century, and he and his ſucceſſors reſided here till the court was removed to Moſcow, ſince which period its ſplendor hath gradually decayed. There are, however, ſeven or eight fine ſtone churches in it, and ſeveral more of wood, and the territory about it is extremely fertile. The other towns are, Gorachowitz; Baluchna, which ſtands on the banks of the Wolga; and Ileſs, ſituated on the river Cleſma.

XV. The duchy of Suſdal is bounded, on the north, by the Wolga; on the ſouth and eaſt, by Volodimer; and, on the weſt, by the duchies of Roſtow and Jeroſlaw. It is very narrow, but extends in length near one hundred and twenty miles, and is watered by ſeveral rivers, which render the low lands exceedingly rich and fertile. It however contains many foreſts, which are well ſtored with fallow and other game, and with wild beaſts, whoſe furs bear a good price. This duchy was beſtowed, by the czar Jeroſlaws, on his ſon Andrew, who became a branch of the dukes of Suiſki, from whom Baſilowitz Suiſki was deſcended, who was choſen czar after the defeat of the ſham Demetrius, as was hinted at in the beginning of this article. John Baſilowitz ſubdued this whole country in 1565, and incorporated it with his own eſtates.

Its chief towns are Suſdal, the capital, Caſtro-Moigorod, Louch, and Yourieff.

The town of Suſdal is ſituate on the river Cleſma, on the ſouthern part of the duchy. It is an archiepiſcopal ſee, and was formerly the metropolis of Ruſſia, but is gone to decay ſince the ſeat was removed from it. It is built moſtly of wood, after the Ruſſian manner, and retains but little of its priſtine grandeur. It is, however, famed for a ſtately monaſtery of nuns, and for ſome other antient buildings. It ſtands about ſeven leagues north-weſt from Volodimir, and twenty north-north-eaſt from Moſcow; latitude fifty-ſix degrees twenty-five minutes, longitude forty degrees eaſt.

XVI. The province of Moſcow, or Moſcovy, properly ſo called, to diſtinguiſh it from the great empire of which it is the principal province, bears alſo the name of duchy, becauſe, for a long time, the princes of it took only upon themſelves the title of dukes. It hath its name from its capital, Moſcow, or Moſcova; and this from the river of that name on which it is ſituated.

This province is bounded on the north by the duchies of Twerc, Roſtow, Suſdal, and Volodimer, already deſcribed; on the ſouth, by that of Rezan, from which it is parted by the river Occa; on the eaſt, by the little principality of Cachine and the ſame river Occa, which parts it from Niſi-Novogorod; and on the weſt, by the duchies of Rzeva, Biela, and Smolenſko. Its extent, from eaſt to weſt, is computed about ſixty-eight leagues, or a little above two hundred miles; and its breadth, from north to ſouth, about thirty-three leagues, or one hundred miles.

The chief rivers that run through it are, the Moſka, Occa, and Cleſma; all which fall into the Wolga: and on the weſtern ſide of this province is a large foreſt, out of which flows that famous one called the Boryſthenes, which, croſſing the duchy of Smolenſko, makes its courſe to Ukrania, Lithuania, and Poland. The ſoil, however, is nothing near ſo fertile as in ſome of the provinces we have lately gone through; but the air, though ſharp, is here very healthy; which, with the advantage of its ſituation,

tion, amidſt ſome of the beſt provinces, induced ſome of the monarchs to make it their chief reſidence, and the metropolis of the empire.

The chief cities and towns are, Moſcow, the capital, Treytza, Columna, Colomenſko, Moſaiſk, Wieſma, Golutwina-Slaboda, and Dmitroff.

The city of Moſcow, or Moſkova, which is the greateſt in the whole Ruſſian empire, is ſeated in a fine ſpacious plain, on the river of its name, over which it hath a ſtately bridge of twelve arches, of a prodigious height and breadth, becauſe that river often overflows. It was built by prince Gafiſchin, on the deſign of a Poliſh monk, and is the only ſtone bridge that we know of in all Ruſſia. The town ſtands in a gravelly ſoil, and wholeſome air, and almoſt in the centre of the beſt provinces of Moſcovy. It was founded in the year 1334, and we are told very ſtrange things concerning its largeneſs, populouſneſs, and number of houſes, which it ſeems once amounted to above eighty thouſand; though, if we may gueſs at theſe by what they are now, the far greater part of them might be more properly called low wooden huts than houſes; on which account, this city has been always liable to ſuch violent conflagrations as ſeldom failed of conſuming near two parts in three of it.

It was taken, and almoſt burnt down, by the Tartars, in 1572, and by the Poles, in 1611, in which laſt, we are told, forty-one thouſand houſes were deſtroyed, beſides the vaſt numbers of men and women that periſhed, either in the flames, or by the ſword. Notwithſtanding which loſs, we find in 1662, when lord Carliſle was ambaſſador there from king Charles II. it was ſo well recovered as to be twelve miles in compaſs, full of houſes and inhabitants; inſomuch that the number of the former is, by the loweſt calculations, ſaid to have amounted to forty thouſand; and by the Ruſſians affirmed to have been about double that number.

This city ſtands about ſix hundred and fifty miles from Caffa in Crim Tartary, nine hundred and fifty miles north-eaſt from Conſtantinople, ſeven hundred and twenty eaſt frow Cracow, ſix hundred and ſixty eaſt from Stockholm, and one thouſand three hundred and twenty from London; latitude fifty-five degrees forty-two minutes; longitude thirty-eight degrees forty-five minutes eaſt. It is of a circular form, and conſiſts of four diſtinct parts, or quarters, all ſurrounded with a diſtinct wall; viz. 1. Cataigorod. 2. Czargorod. 3. Skorodom. 4. Strelitze-Slaboda, ſo called becauſe it was formerly the quarter of the ſtrelitzes, or czar's guards, mentioned hereafter. The Cataigorod, or middle city, is ſurrounded with a brick wall; and on this ſtands the caſtle, which is two miles in circuit, and fortified with three ſtout walls, ſtately towers, and a foſſe: and in the caſtle are, 1. Two palaces of the czars, one of timber, the other of ſtone, and built after the Italian manner. 2. The patriarchal palace, a large antient building. 3. The exchequer, chancery, and other offices. 4. The grand magazine. 5. Two handſome monaſteries. 6. Five large churches, among which is that noble one of St. Michael, in which are, among other enrichments, the tombs of the great dukes, or czars. We omit ſeveral other ſtately buildings that are in this great caſtle, at whoſe gate ſtands that ſtately antient fabric called the church of Jeruſalem; and fronting the caſtle is the great market and monſtrous bell, mentioned farther on. This quarter is waſhed on the ſouth-weſt by the river Moſca, and on the north, or north-weſt, by the Negliga, which falls into the former on the back of the caſtle. It is called Cataigorod, not on account of its being ſituated in the middle of the city, as Olearius fancies, but from Catai, the antient and Ruſſian name of China, becauſe the chief merchandizes ſold in it came from that country: ſo that the name implies the ſame as the Chineſe city.

The quarter called Czargorod, or ducal city, encompaſſes the Cataigorod, and is itſelf ſurrounded with a white ſtone wall called Biela Stena; whence it is alſo called Biela Gorod, or White City. It contains, among other buildings, the great arſenal, and is watered by the Negliga, which runs through it, and thence flows into the ditch that ſurrounds the middle city.

The Skorodom, or Scoradum quarter, ſtands on the north-weſt ſide of the Czargorod, and is chiefly inhabited by timber-mongers and carpenters, who ſell houſes ready made. Theſe houſes are moveable, and ſold very cheap, and in great numbers: and, indeed, conſidering the frequent fires that happen in this city, owing, moſtly, either to their drunkenneſs, a reigning vice here; or to their neglect of putting out the candles which they light to ſome favourite ſaint in their houſes and chambers; they have need of ſuch a large market to repair to on thoſe occaſions. It is called Scoradum, which, in the Ruſſian language, ſignifies done in haſte, alluding to the mud wall that ſurrounds it. And it well deſerves that name, if what they tell us be true, that it was finiſhed in four days, on a report of the Tartars approaching, though it was fifteen or ſixteen miles in compaſs, and the earth every where ſupported by planks and beams of fir.

The quarter, called Strelitze-Slaboda, formerly that of the ſoldiers or guards, ſtands on the eaſt and ſouth-eaſt ſide of the Cataigorod and the caſtle; is ſurrounded and fortified with wooden ramparts; and is divided from the reſt by the river Moſca; for which reaſon it is ſtyled ſuburb, or ſlaboda.

As the houſes are ſo meanly built, for the moſt part, except thoſe of the noblemen, gentlemen, and rich merchants, the furniture of the inſide cannot be expected but to be of a piece; ſo that, excepting the lives and merchandize that may be loſt in ſuch frequent conflagrations, the damage is generally looked upon as ſo inconſiderable, that they never attempt to extinguiſh the fire, but by pulling down ſuch a great number of them as will prevent its ſpreading farther. But the merchants who have much to loſe, take care to depoſit their choiceſt wares in vaults of ſtone, which are proof againſt ſuch diſaſters.

There are reckoned in this whole city about three thouſand ſuch houſes of ſtone, or brick; which, if they ſtood cloſe to one another, would make a noble ſhew; but they ſtand at ſuch vaſt diſtances from each other, and are intermingled with ſuch long rows of theſe wooden huts, that they are almoſt loſt, eſpecially as they do not ſtand in the ſtreets, but, like moſt of our colleges at Cambridge, on the backſide of them, for the convenience of large courts and gardens, which moſt of them have, ſpacious and in ample order, and ſurrounded with high and ſtrong walls, to keep off thieves and fire. The ſtreets are not paved with ſtones, but boarded with thick fir planks; and the deſcription we have given of the houſes may afford ſome idea of their beauty.

Their churches and chapels, including thoſe that belong to monaſteries, are ſo numerous, as to be computed by ſome to amount to above one thouſand five hundred, and by others to two thouſand: and ſome of them are very large and ſtately; that, particularly, which is in the Kremelin, or palace in the caſtle, is a vaſt, antient, maſſy building: on the right ſide of the altar is the czar's throne, on the left that of the patriarch; and in the body of the church hangs a chandelier, of immenſe weight and value. The very jewels, and other coſtly ornaments, that enrich a picture of the Virgin Mary here, are valued at half a tun weight in gold, beſides a vaſt number of chalices, pixes, patins, ſtatues, and other church utenſils of gold and ſilver, finely wrought, and enriched with precious ſtones; a vaſt number of other prieſtly veſtments of great value, and an immenſe quantity of donatives and preſents offered to the reliques of three eminent Ruſſian ſaints; which makes the treaſures of this church equal to that of any European cathedral.

The learned and ingenious Dr. Cook has favoured us with the following account of the celebrated great bell of Moſcow: "I went, ſays he, to the great bell, which was then in a large pit. A fire had about two months before burnt down about two thirds of this great city; and the belfry, being all of timber, ſhared the ſame fate; the bell fell into the bottom of the pit, and had a piece broken out of its edge, large enough to admit a man into it. Its weight is four hundred and forty-three thouſand ſeven hundred and ſeventy-two pounds, and its height about twenty-one feet four inches and a half. I then went to the top of a very high tower called Joan Velike, or the Great John. From this tower I had a complete view of the whole city, which indeed made a grand appearance. The weather being very cold, the Ruſſians heat their ſtoves before day-light, and make uſe of fire at no time of the day, except to get dinner ready, ſo that the view is never obſtructed by the ſmoke but at theſe times. On the top of this tower there are three bells, the leaſt of which, I think, exceeds in ſize the largeſt in London. The antient imperial palace, which is a large ſtone Gothic building, is under the tower. All theſe which I have mentioned, and all the imperial antient archives and different courts of juſtice, are in that part of the city called the Crimline, ſaid to be about two thouſand and ninety paces in circumference, and is ſurrounded by a high brick wall."

The magnificent church of the Saboor is ninety feet in length, hath a ſtately dome ſupported by four large pillars,

and is, though in the antient ſtile, quite ſuperb within and without, and ninety feet in length. That of St. Michael is the repoſitory of the dead czars, and of all the royal family of the male ſex. The bodies of the princeſſes of the blood are interred in the ſtately abbey of the nuns called Tzudoff Monaſtir, in the ſame caſtle, and near the church above-mentioned. The tombs of the princes who never reigned here, are in a ſeparate chapel. But nothing is more magnificent than the palls with which their coffins are covered; not conſtantly indeed, but only on holidays; thoſe of the czars, particularly, are of the fineſt velvet, and have either a maſſy or embroidered golden crucifix upon them, of curious workmanſhip, and enriched with a vaſt variety of coſtly ornaments, eſpecially inſcriptions, which are moſtly done with pearls and other precious ſtones of great value.

Here are many monaſteries of men and women, not only in the city and caſtle, but in the ſuburbs and avenues of the town. We have no room to enter into a detail of them; we can only ſay in general, that they are, next to the palaces and noblemens houſes, ſome of the beſt edifices in the city; the founders of them having ſpared no coſt to adorn them with curious architecture, paintings, gardens, and every thing that is convenient and beautiful. The only one we ſhall mention here, is that called Dewitze Monaſtir, about a mile out of the city; and is that in which the ambitious princeſs Sophia, who had hatched ſo many plots againſt her brother the late czar Peter I. was, at length, confined, and ended her days. It is ſituated on a ſpacious plain, and hath three hundred nuns belonging to it, who lead a very regular life, and never ſtir out of their limits, as ſome other ſorts are permitted to do: theſe are only allowed, on holidays, to walk on the terraces round their gardens, which are raiſed to a convenient height for them to enjoy the proſpect of the adjacent plain.

Peter I. the late czar, founded here three colleges, which he took care to fill up with men verſed in arts and ſciences, and all kinds of literature, for the poliſhing of the next ſpringing generation. The firſt is for humanity, rhetoric, and philoſophy; the ſecond for mathematics; and the third for navigation, aſtronomy, and other ſciences ſubſervient to it. In all theſe the youths that are taught are kept under ſtrict diſcipline, and have, at the ſame time, all due encouragement to excel in their reſpective ſtudies. To theſe the ſame prince added a diſpenſatory, which is not only one of the fineſt ſtructures in Moſcow, but, by all report, one of the beſt furniſhed with all ſorts of medicines, drugs, &c. in all Europe. It is put under the care of ſome Germans, who are allowed the beſt maſters in that art, though the moſt ſlovenly in their compoſitions, they never ſtudying to pleaſe the eye or taſte in their preſcriptions, as we do in England, but nauſeate their patients by the inelegance of their compoſitions, and, in that ſenſe, may do beſt for that country. This diſpenſatory hath a yearly revenue of twenty thouſand rubles, to renew their Materia Medica; and furniſhes not only all the army, but likewiſe all the principal cities in the empire with medicines.

In this city the courts of judicature, cuſtom-houſe, and other offices, are generally large, and built of ſtone; and ſome of them rather reſemble a gaol, and, indeed, are ſuch, in ſome ſenſe; they having apartments for debtors, as well as criminals, who are kept there chained up. But this, and other particulars relating to the political government of this city, we ſhall avoid enlarging upon; and only obſerve here, for the benefit of thoſe who may have occaſion to viſit theſe parts, that though juſtice is, in general, adminiſtered with ſome ſtrictneſs and ſeverity, yet the Ruſſians being naturally lazy, and given to drinking, the whole city ſwarms with beggars and vagabonds, and moſtly of ſuch a ſturdy breed, that it is dangerous to deny them an alms. This makes it very dangerous to walk the ſtreets in the night; for they generally lurk in corners, with a ſhort truncheon, or bludgeon, in their hands, which they throw at the heads of paſſengers, with ſuch dexterity, that they ſeldom fail of knocking them down; after which, they rob and murder them, and go off. Theſe diſaſters happen more frequently on holidays, and eſpecially during the carnival; and when a perſon is found murdered, they carry the body to a certain place, where it lies expoſed a day or two; and, if it is not owned, it is flung into a deep large pit, made to ſerve on ſuch occaſions; and on the Whitſuntide holidays ſome prieſts come thither, to ſay maſs for the ſouls of the deceaſed.

Moſcow is much decayed from its antient grandeur and opulence, ſince the building of the city of Peterſburg, and the court ſo often repairing thither; however, it is ſtill very full of inhabitants; and all kinds of proviſions are brought in, in great plenty, and ſold very cheap. Fiſh is the only dear food, occaſioned both by the number of inhabitants, and the four lents, and other faſts, that are obſerved by the Ruſſians: and this great cheapneſs hath ſo far lowered the price of the land all about the country, that the nobility and gentry are great ſufferers by it, their eſtates being reduced to little more than one third of what they formerly brought in, when the city was in a flouriſhing ſtate.

We cannot omit ſaying a word or two of its fine canal, made by the order and direction of the late Peter the Great, to open a communication between this metropolis and his new-built and favourite city of Peterſburgh, and by that means, to the Baltic and German Ocean. This great and noble work, which has been ſome time finiſhed, at at immenſe charge and labour, between two cities, which, in a direct line, ſtand near ninety leagues aſunder, begins at Peterſburgh, on the river Nieva, or Neva, which empties itſelf into the gulph of Finland, and, going up that river quite to the lake of Ladoga, formerly deſcribed, croſſes it at the ſouth end, and enters into the Woltoff, another river, which flows thither from the province of Novorogod. From the capital of that province, begins what is properly called the artificial canal, which, paſſing through the territories of Brognitz, Chreſtitz, Chilolova, Witſchan-Voloſcha, Torſchock, the province of Twere, and the diſtrict of Kiln, reaches, at length, the city of Moſcow, and enriches it by the vaſt quantities of merchandizes that are brought to and from thence.

A late traveller into Ruſſia gives the following account of the monaſtery and church of Jeruſalem: "The church, biſhop's, and prieſts houſes, are all incloſed with high brick walls; the wall, forming one ſide of the biſhop's palace, is built on a beautiful detached hill, having on the eaſt, north, and weſt, the fineſt lawns in the world, through which glides a noble river. In the plain, upon the banks of the river, ſtands the builder's romantic houſe, all built of ſtone. It is quite alone, three ſtories in height, in every one of which are four rooms, except the ground ſtory, where are his kitchen, ſtore-room, and another room, I imagine for his attendants. The area of each of theſe rooms is about eight, or at moſt but nine feet ſquare. In every one is a ſmall ſtove; his bedſtead is of ſtone, as are his bed and pillow. His chairs are of the ſame materials; every ſtory of his houſe is vaulted, and is flat on the roof, for the conveniency of taking a view of the country. It has but one entry, and every room receives light from one window of the leaſt ſize. The builder was a hermit, and a profeſſed religious. The hoſpital is not large, but well enough provided with every neceſſary except medicine, prayers being, in their opinion, ſufficiently efficacious for the cure of all diſeaſes which appear in this holy place.

"At the weſt end of the church is one of the moſt capacious cupolas I have ever ſeen, only the middle of the arch had fallen down ſome years ago. The dome is very magnificent and high, with a gallery that ſurrounds it near the top: it is well lighted, the windows being large, and the walls are all hung round with various pictures of the ſaints, very richly adorned with ſilver, gold, pearls, and precious ſtones; and the altar is very grand, and adorned with various pieces of curious workmanſhip. This dome is a noble ſtructure; but I cannot ſay whether it is as large as that of St. Paul's or not."

Treytza, or Treytzki, is a ſmall, but handſome town, famed for the ſtately monaſtery of that name, or convent of the Trinity, a ſpacious building, with three large gates, and a noble church, ſtanding in the middle of the ſquare. The abbot here is ſo rich, that he has fifty-ſix thouſand peaſants dependent on him, beſides other revenues. The czars have here ſome apartments for themſelves, and a noble palace, ſtrongly fortified. In this monaſtery it was that the late czar Peter I. in his younger days, was forced to retire, to ſecure himſelf from the fury of the Boyard Couvanſki and his ſtrelitzes, who plundered and murdered all opponents in his metropolis; and from the plots and conſpiracies of his ambitious ſiſter.

The town of Columna, or Kolumna, is ſituated near the confines of the duchy of Rezan on the weſtern ſhore of the river Occa, which divides it from a ſlabode, or ſuburb, on the oppoſite ſide. It is almoſt of a round figure, half a mile in compaſs, well fortified with a ſtone wall, ſix fathoms high, and two thick, and flanked with ſtout and high towers, at the diſtance of two hundred paces from each other; but is now gone to decay, and is almoſt ruined on one ſide. The ſuburb, which is called Colutwina ſlaboda, is the place where the merchandizes

are expoſed to ſale. As for the city, it hath nothing conſiderable in it except the fine ſtately church of the Virgin Mary, and the archiepiſcopal palace; the city being dignified with the title of an archbiſhopric. It ſtands about fifteen leagues ſouth-eaſt from Moſcow; latitude fifty-five degrees, longitude thirty-nine degrees twenty-eight minutes eaſt.

Colomenſko, or Kolommenſki, is a ſmall city in the neighbourhood of Moſcow, ſituated on an eminence, from which it yields a beautiful proſpect. It hath a handſome church, with two high towers, and a ſtately monaſtery. It hath two avenues to it over the Moſca, which muſt be croſſed over a float of timber faſtened together, ſo as to be looſened and divided, to give paſſage to the veſſels that go up and down that river.

The town of Moſaiſch, ſituated on the ſame river, about nine leagues ſouth-weſt of the city of Moſcow, but not conſiderable enough at preſent to merit a particular deſcription.

XVII. The duchy of Roſtow, or Roſtoft, is bounded on the ſouth by that of Moſcow; on the north by that of Jaroſlaw, on the eaſt by that of Suſdal, and on the weſt by that of Twere. It is a rich and plentiful country, and was formerly the firſt duchy in all Ruſſia, next to that of Novogorod; and was governed by its own duke, till the czar Iwan Baſilowitz put the laſt of them to death, and ſeized on this territory, anno 1564. It was afterwards aſſigned for the maintenance of the zarowitz, or heir apparent. Roſtow abounds with corn, fruits, herbs, game, &c. The capital, called alſo Roſtow, is a large town and metropolitical ſee, ſituated on the lake of Roſtow, from whence iſſues the ſmall river Cobris, or Colſpar, which runs into the Wolga. There are ſome elegant ſtone churches in this city: it ſtands about one hundred and twenty miles to the north of Moſcow.

The town of Uglitz, ſituated on the Wolga, about eighty miles to the weſtward of Roſtow is celebrated for the excellency of the bread made in it. Here the young prince Demetrius, ſon of the czar Iwan Baſilowitz, was murdered by order of his brother-in-law Trederowitz Gadenaw, during a tumult which was occaſioned by a conflagration made on purpoſe, and the throne was uſurped by the murderer. The town of Chlopigorod is now gone to decay, though it was formerly a place of conſiderable trade.

The town of Penſtaw is large and populous, ſtanding at an equal diſtance from Moſcow and Roſtow. The other towns and villages are known by the names of Mologa, Semabrataff, Guo, Imbilowa-Uova, and Baſnia Nova, but there is nothing remarkable in any of them.

XVIII. The duchy of Yeroſlawla lies between Moſcow and Vologda: it is exceedingly fertile, abounds with corn, cattle, and honey, and is watered by the Wolga, which runs through the heart of it. The capital of the ſame name, is a ſtrong, well-fortified, large, populous city, containing forty thouſand inhabitants. It is about thirty-ſix miles to the northward of Roſtow, and has a conſiderable trade in corn, cattle, leather, honey, &c. Roma Nova and Darnalofke, which are of little note, are the other towns of this diſtrict.

XIX. The dutchy of Bilejeſora is a very ſmall province, nearly circular, and derives its name from a lake called Biele-Ozoro, or the White Lake, which is forty miles long and twenty broad, and on the banks of which ſtands the capital of the ſame name.

This duchy is bounded, on the ſouth, by that of Twere; on the weſt, by Great Novogorod; on the north by Vologda; and, on the eaſt, by Yeroſlawla. The whole is ſo much encumbered with lakes, fens, bogs, woods, &c. that the roads in general are uſeleſs, except in the winter, when the froſt renders them paſſable. Some parts of the province afford corn and paſture; and there is plenty of fiſh: Biele-Ozoro, or Belozero, the capital, is a large populous, rich place, is ſtrongly fortified, hath an important caſtle, and is ſurrounded by the waters of the before-mentioned lake.

XX. The duchy of Vologda is bounded, on the weſt, by Bilejeſora; on the eaſt, by the river Dwina, on the north, by Cargapol and Ouſtriaug; and, on the ſouth, by Yeroſlawla. It abounds with fiſh and game, but is deſtitute of moſt other kinds of proviſions; being woody, mountainous, full of lakes, firs, &c.

The capital, which is called by the name of the province, is ſituated on both ſides of the river Vologda; is a capacious, populous, and commercial place, as, beſides natives, many Engliſh, Dutch, and other merchants reſide in it. This city is one of the moſt ancient Ruſſian archiepiſcopal ſees; is near two hundred and thirty miles to the northward of Moſcow, ſurrounded by a ſtone wall, and defended by a ſtrong fortreſs. The ſtreets are opened regular, the houſes handſome, and the markets well furniſhed, every commodity being ſold in a diſtinct quarter. The river is broad and navigable, and the cathedral magnificent, beſides which, here are twenty ſtone, and forty-three wooden churches, beſides three nunneries, each of which has an elegant chapel.

The town of Dwinitza, ſituated on a river of the ſame name, which falls in the Vologda, a ſmall, but well-peopled town. There are likewiſe two other inconſiderable towns, named Sooſka and Strelitz, on the river Vologda.

XXI. The province of Cargapol is ſituated to the north of Vologda, from hence it ſtretches almoſt to the White Sea. It is woody and fenny, contains many lakes and rivers, but has no town except Cargapol, which is ſituated on the weſtern banks of the river Onega. The people are exceedingly rude and barbarous. The diſtrict of Wiga, which lies to the north weſt of Cargapol, is wild and deſolate, and contains only two ſmall towns called Waga Wied; and the diſtrict of Onega, which lies to the weſtward of that of Waga, is equally barren and wild, very thinly inhabited, and hath only one town named Korelſkoi, ſituated on the ſouthern coaſt of the Red-ſea, and near the mouth of the river Onega.

XXII. The province of Dwina is very extenſive, being computed near one hundred leagues long, in form of a lozenge or rhomb. It is bounded on the north and north-weſt by the White Sea, and part of Ingria; on the weſt by the provinces of Vaga and Onega, laſt mentioned, from which it is parted by the river Dwina; on the ſouth by that of Ouſtioug, or Uſtiug; and on the eaſt by part of that of Zirania. It is watered by ſeveral rivers, beſides the Dwina above mentioned; ſome of which, particularly the Pinega, fall into it a little above the town of Upſnaga, and run with it into the White Sea at the city of Archangel, or St. Michael the Archangel, called by the Ruſſians, Archania; it is advantageouſly ſeated on the eaſt ſide of the Dwina, which falls into the White Sea ſix leagues below it. It extends itſelf along that river only about two miles, or three quarters of a league, in length; and about one quarter in breadth; but yet is rich and populous, and of modern ſtructure; being chiefly become conſiderable by the Engliſh ſhips coming thither to traffic, and thereby bringing a great reſort of merchants thither from moſt parts of Moſcovy, as well as from Holland, Sweden, Denmark, &c. inſomuch that thoſe months in which the river is not frozen, for it will freeze at leaſt three months in winter, one may ſee between three and four hundred, and ſometimes more, ſail of ſhips, in that harbour.

This city was firſt diſcovered by the Engliſh, anno 1553, when Sir Hugh Willoughby having received a commiſſion to go to find out the north-eaſt paſſage to China, Richard Chancellor, maſter of one of the ſhips, was ſeparated from the reſt of the fleet, and accidentally fell into the bay of St. Nicolas, on the White Sea; from whence he was ſent for, and kindly received by the then czar Iwan Baſilowitz, who ſoon after granted the Engliſh free liberty to trade into his dominions. A company of merchants was accordingly incorporated in London, anno 1555, and had large privileges granted to them by that monarch; upon which encouragement, a conſiderable traffic was ſet on foot, to the great profit of both nations, which ours enjoyed ſolely, for ſome time. Till then, the Ruſſian commodities uſed to be conveyed to Narva, a ſea-port on the gulf of Finland, but this latter hath yielded, ſince, to Archangel, which is now, in a manner, the only port, of any conſideration, in Moſcovy.

After the Engliſh, the Dutch and other nations, ſoon ſtruck in for a ſhare of this traffic, though not with the ſame advantage with ours, by reaſon of the peculiar privileges granted to our company; but theſe were unhappily loſt in the time of our grand rebellion, when the czar was ſo exaſperated againſt the Engliſh nation, on his hearing of the murder of King Charles I. that he wholly deprived them of it; ſince which time, all our efforts have not been able to regain them: ſo that our merchants now trade thither upon the ſame footing with other Europeans.

The palace, or hall, is the moſt conſiderable edifice in this city: it is built of large ſquare ſtones, after the Italian manner, and divided into three parts: in one of which the merchants, both Ruſſians and ſtrangers, have large and convenient apartments, for themſelves and their wares; but after the ſhips are ſailed away, which they commonly do in October, they then are obliged to remove to other lodgings. This palace is a large ſtately building, with a

ſpacious court before it, which reaches quite to the river. The courts of juſtice, both civil and criminal, are held in it in their proper apartments.

The citadel, where the governor reſides, is built after the Ruſſian manner, and ſurrounded with wooden walls, which reach, alſo, quite to the river. In it are a vaſt quantity and variety of ſhops, where the Ruſſians ſtore up their merchandize againſt the fair: theſe, as well as the houſes of the town, are all of wood, but ſtout and large, and well furniſhed within, eſpecially thoſe of foreign merchants. They have all of them a ſtove within-ſide every chamber, to fence againſt the extreme cold. The ſtreets are paved with broken ſtumps, pieces of timber, and other rubbiſh, ſo roughly laid, that one is in continual danger of falling; only in winter the ſnow, which lies pretty thick and hard upon them, makes them ſmooth and eaſy, during that ſeaſon, which is here ſo ſevere, that there is no divine ſervice performed all that while. However, here is plenty of all proviſions, as fleſh, fowl of all ſorts, eſpecially wild; fiſh in great variety, and all ſold extraordinarily cheap: particularly partridges, which commonly ſell at about three-pence or four-pence per brace, and of which here are two kinds; one like the common ſort, and the other which turn white in winter, and reſume their natural colour in ſummer.

The government of this city was wholly lodged in the governor till the year 1700, when the czar created four burgomaſters to take care of the civil and mercantile affairs; ſo that the governor's power is now confined to the militia only. The court ſends hither yearly, a commiſſioner, to receive the cuſtoms laid on all merchandizes; and he, in his abſence, appoints four ſublegates, to collect and get them ready againſt the next year. The revenue which the czar receives from theſe cuſtoms, has been computed to be between one hundred and fifty thouſand and two hundred thouſand rubles per annum, and the number of ſhips that come hither from the foreign nations, is, communibus annis, between three and four thouſand. The chief commodities that are brought into this port are, gold and ſilver ſtuffs, ſilks, gold and ſilver lace, other ſorts of lace, gold wire, cochineal, indigo, and other drugs for dying; wines, brandies, and other diſtilled liquors. However, the trade of this place is vaſtly decreaſed ſince the czars, by the conqueſt of Livonia, have made the ports of Peterſburg and Riga the rivals of this, and cauſed the flow of trade to paſs in a great meaſure, from it to them.

Archangel is the ſee and reſidence of a Ruſſian archbiſhop. Its latitude is variouſly fixed by geographers: Father Riccioli places it under ſixty-ſix degrees forty minutes, and the Dutch maps, after De Liſle, remove it farther north by almoſt three degrees. We hope ours will be found more exact, which give it ſixty-four degrees thirty-ſix minutes, and longitude forty degrees five minutes eaſt.

St. Nicolas is another ſea-port in this province, and ſtands on the ſouth coaſt of the White Sea, about ſeven leagues weſt of Archangel. It ſeems to have been formerly more conſiderable than it is; ſeeing it gave name to this whole bay, or ſea, which was, from it, ſtyled St. Nicholas's bay.

Colmogorod is ſituated on the weſt ſhore of the Dwina, about nine or ten leagues above, or ſouth of Archangel, and is reckoned one of the moſt conſiderable towns, next to it, in this province. It ſtands a little above the confluence of the river Pinega into the Dwina. M. Le Brun, who calls it Colmogora, ſays it is large, and the ſeat of a Ruſſian archbiſhop.

Here is a ſtrong fortreſs, called Nova Dwiniſka; it was lately built to defend the mouth of the new canal, or moſt northern mouth of the Dwina, on the White Sea. It hath a large wooden bridge over that river, with a draw-bridge in the middle, wide enough for two ſhips to paſs abreaſt of each other.

The city of Sottolitza is very populous and conſiderable, and inhabited by many wealthy merchants, and ingenious mechanics: it ſtands upon the ſouth limits of this province, in latitude ſixty-three degrees. A territory named Wollo-ſtuſgy, is near this place: it is inhabited by men of a different language, who are civilized, and belong to the Greek church: they are ſuppoſed to have come hither from Livonia.

There are a few iſlands near this part of the Ruſſian ſhore, but they are of very little importance: namely, Martinowitz, which is about one hundred and thirty miles long, and upwards of fifty broad. It ſtands near two degrees to the northward of the arctic pole, is full of woods, and watered by ſeveral rivers: this iſland is generally called Candenora, or Kandenoſs. Farther north there is another called Kelgon, from the extreme ſeverity of the climate. Theſe are but thinly inhabited, and but little known. The White Sea contains, beſides theſe, a few other ſcattered iſlands, which are for the moſt part uninhabited and barren.

SECT. IV.

Deſcribing the third grand Diviſion of RUSSIA, called EASTERN MUSCOVY, or RUSSIA. EASTERN MUSCOVY conſiſts of ten Provinces which follow: namely, 1. MAZZEN; 2. JUGORA; 3. CONDORA; 4. TEESCA; 5. PETZORA; 6. VOGULIZI; 7. PERMIA; 8. OUSTIOUG, 9. ZIRANIA; 10. VAITKA, or VIATKA.

I. THE territory of Mezzen is ſituated to the northward of Dwina and the river Prega, and extends northward to Jugora and the ſtraights of Kandanoſs. It is a long tract of land, narrow, woody, fenny, mountainous, cold, and barren. The whole region is gloomy and uncomfortable; and the chief town, called Mezzen, and the few villages which this province contains, are wretched places.

II. The province of Jugora, or Jugorſki, is bounded, on the ſouth-weſt, by Mezzen; on the north, by the northern ocean; on the eaſt, by the province of Petzora; and, on the ſouth, by thoſe of Ouſtioug and Permia. It is a very large territory, divided by the polar circle into two parts, the far greater of which lies on this ſide; however, its ſituation is cold enough to make the land barren and uncultivated; ſo that the country is almoſt over-run with foreſts, and covered with lakes and bogs: it hath alſo abundance of rivers, the principal of which are, the Fitza, Goloebintza, Goloebeica, Otma, Oymitza, Peitza, Peizitza, Voloingha, and Sudega; all which flow northwards into the gulf of Teeſca, called by the Ruſſians, Teeſkaia Gouba. There are ſeveral others on the ſouth end of the province, which take different courſes from theſe, and empty themſelves ſome into the Dwina, and others into lakes. The territory of Vaconitza Voloſt is in the middle of this province: it hath a few towns or great villages; and on the ſouth parts are the Jugorian mountains, which divide that part from the province of Zirania, and are always covered with ice and ſnow.

The town of Jugora, or Juhora, ſtands on a ſmall bay of that name, on the northern coaſt, in the latitude of ſixty-eight degrees, between the iſland of Candenois on the weſt, and the gulf of Petzerſkaia on the north-eaſt; and the iſland of Colgoya lies over againſt it, about twenty leagues from the land.

III. The province of Condora, or Condieſki, lies between the Dwina, on the weſt, Jugora on the north, Petzora on the eaſt, and Permia on the ſouth. It is a large province with the title of duchy, but ſo boggy, woody, and mountainous, that it ſcarce deſerves notice, otherwiſe than Wireatoura, the capital, ſeated on the northern parts in the latitude of ſixty-ſix degrees. Antient maps place this province between the White Sea and Siberia, which is the land of the Samoieds.

IV. The territory of Teeſca, north of Condora and Juhorſki, on the northern ſea; having the ſtraits of Candenois, and its iſland, on the weſt, and Samoieda, on the eaſt. It hath but one town worth naming, viz. Gorodiſche, which ſtands on a ſmall river that falls in about ten leagues below it, into the gulf of Teeſca; ſixty-ſeven degrees latitude, and fifty degrees twenty minutes eaſt longitude.

V. The province of Petzora is a vaſt territory, extending itſelf from the lake Petzerſkie, on the ſouthernmoſt part of it, quite to the northern or Frozen ocean; that is, from the ſixty-third to almoſt the ſeventieth degree of north latitude. It is bounded, on the weſt, by Jugora; on the eaſt, by the Riphæan or Obian mountains; on the ſouth, by the province of Vogulizi; and by the northern ſea, on the north. The river Petzora, which riſes out of that lake, runs quite through it, in a direct courſe, from ſouth to north, and diſcharges itſelf into the above-mentioned ſea, by ſix different mouths, near the ſtrait of Weigatz, a little above the city of Petzora, which is ſituated upon the ſame river, about thirty leagues from the ſea; it is but a ſmall place, and is ſuppoſed to have been formerly called Puſte Oſoro, from ſome golden mines, or ſands, that fell from thoſe Obian mountains into that river. The cold is ſo extenſive and laſting here, that the rivers are frozen about eight months in the year. They begin to thaw in May, and in Auguſt freeze again.

Beſides the capital, there are three towns in this province: namely, Weliki Poyaſſa, near the ſpring head of

the above-named river; Papynowgorod, about thirty-four leagues below it; Botwanſkaia, on the gulf of its name, near the mouth of the Petzora; Puterſerſkoy, on the eaſt of the ſame; with ſome others.

VI. The territory of the Vogulizi, called alſo Vogulitzi, Vogolſkoi, and Volgolitzes, is ſeated ſouth of the laſt named province, and north of that of Permia. Their country is alſo divided by the Obian mountains from the country of Siberia, on the eaſt, and extends itſelf weſtward to the river Irtis. Theſe people differ ſo much from all their neighbours round about, that they have been ſuppoſed to be of Tartaric extraction, but without any probability; ſince all the Tartars, either of Siberia, Cazan, or Aſtracan, are all Mahometans; whereas theſe Vogulizi are heathens, and reſemble moſt, in their religion and cuſtoms, the Siberian pagans, but are more civilized than they are. The country reaches from ſixty-two degrees thirty minutes to almoſt ſixty-three degrees of north latitude.

With reſpect to their religion, they acknowledge a ſupreme Being, the creator and preſerver of all things; and ſacrifice to him once a year, at the end of ſummer, in one of the neareſt foreſts, ſome of the beſt cattle they are maſters of, one of each ſort; but can give no reaſon for ſo doing, but that their fathers did ſo. They believe in a future life of rewards and punithments, but will not bear being told that there are any devils, or malevolent ſpirits; alledging, that they have no inſtances among them of any ſuch. Their dreſs reſembles that of the Ruſſian peaſants, and they bury their dead in their beſt cloaths, together with ſome money. As little corn comes to perfection in their country, they live chiefly upon the milk of their cattle, and ſuch game as they kill. They never marry within the forbidden degrees of conſanguinity; but in other reſpects may have as many wives as they can maintain, which they purchaſe of their parents.

Here are neither cities nor towns, but villages made up of huts of a conic figure, with a hearth in the middle, and a hole at the top, to let the ſmoke out; which hole, however, they cover with a thin tranſparent piece of ice, to let ſome light into their huts, as ſoon as their fuel is burnt to a coal. When a woman is near the time of her delivery, ſhe is obliged to go into a private hut raiſed on purpoſe for her, and to live in it ſeparate from her huſband, and all matrimonial intercourſe. The men go a ſhooting of elks, fallow deer, and other game: they live quietly under the Ruſſian government, and pay their tribute in ſkins and furs, which are ſent into the public repoſitory at Siberia.

VII. The province of Permia, or Permeſky, is one of the largeſt in the Ruſſian empire, and is bounded, on the north, by the country of the Vogulizi; on the eaſt, by Siberia; on the ſouth, by the province of Vaſtka; and on the weſt by that of Ouſtioug, or Uſtiug, and reaches almoſt from fifty-two to ſixty-one degrees of north latitude, and in breadth above ſixty leagues where broadeſt, though much narrower in the ſouthern part towards Cazan, or Caſan. Notwithſtanding this vaſt extent, it is far from being conſiderable upon any account, if we except its rivers, ſome of which are large, and run a vaſt length; the moſt remarkable one is the Kama, which receives ſeveral others, and ſprings from that long chain of mountains which part it from Siberia, and which extend themſelves from the kingdom of Cazan quite to the Frozen Sea; that is, from fifty-five to almoſt ſeventy degrees of latitude. Beſides this ridge, the country abounds with many more, as well as lakes, ſo that its ſoil is ſo far from fertile, that the inhabitants are obliged to eat peas, beans, and other pulſe, inſtead of bread. They differ likewiſe much from the neighbouring nations in other reſpects, as in their cuſtoms, religion, &c. and have a language peculiar to themſelves. They are ſubject to the Ruſſians, and pay their tribute in horſes, and ſeveral kinds of furs. The chief town is Perma Velikaia, which authors repreſent as a place of little note, though its name implies ſomething conſiderable.

VIII. The country of Ouſtioug, or Uſtiug, hath its name from the capital, and is bounded, on the eaſt, by Permia, and by the foreſts of Zirania; on the north, by the rivers Waga and Dwina; on the weſt, by the province of Cargapol; and on the ſouth, by that of Vologda. It is not only ſmall, but barren, a great part being covered with vaſt and impenetrable woods. Theſe harbour ſuch a prodigious number of black foxes, that their furs are one of the chief commodities of this country. The rivers Jugh and Suchana riſe in this province, the former on the eaſt ſide; and the Suchana on the weſt; and both ſtreams meeting near the middle, form the great Dwina, or as its name imports, the double river. Other rivers, which fall into the Suchana on the eaſt ſide, are the Peetzenga Recca, which divide Ouſtioug from Vologda, the Bronſnaia, and Stritiuſka. There fall into it, on the weſt ſide, thoſe of Relſona, Ouſtioug, Souzenga, Verchna, Jorga, and a ſmaller one, at the mouth of which ſtands the monaſtery of Teelego. The Waga, which likewiſe falls into the Dwina, runs through ſome of the frontiers of this province; that of Ouſtioug, which hath its ſpring-head alſo in this province, and runs its courſe about four or five leagues from that of the Waga, and falls into the Suchana. This province abounds with the fineſt black foxes, whoſe ſkins bear a great value.

The chief town is Ouſtioug, Uſtiug, or Uſt Jugh: it is ſituated on the weſtern ſhore of the Suchana, which receives the Jugh a little below it. It is an archiepiſcopal ſee of the Ruſſian church, and hath ten or twelve neat churches built of white ſtone, the cupolas and ſpires of which are covered over with tin. The other churches, as as well as the houſes, are built of wood. The archbiſhop's palace, which is a large building, and the beſt edifice of this city, is on the weſt ſide of the river. The other part of it, over the water, is leſs conſiderable, but extends itſelf along the ſide of it, in form of a creſcent, a league in length, and a quarter in breadth. It is chiefly noted for a yearly fair for the ſale of fox-ſkins, and other furs. In Olearius's time it was, it ſeems, the only city in all the empire that was ſurrounded with ſtone walls: the reaſon of which was, that the czars uſed to ſend part of their moſt valuable treaſure thither in time of war. It is two hundred and twenty miles ſouth-eaſt from Archangel, in latitude ſixty-one degrees thirty-five minutes, longitude forty-five degrees fifty-five minutes eaſt.

IX. The province of Ziranza, or country of the Zarani, is a long deſart, woody tract of land, running from ſouth to north, from the ſixtieth to the ſixty-fifth degree of north latitude, but much narrower from eaſt to weſt. It deſerves rather the name of a foreſt than of a province, and ſo indeed it is called by ſeveral authors, there being but few ſpots inhabited, in compariſon of the vaſt and impenetrable woods that ſpread themſelves over it, and abound with innumerable herds of wild beaſts. The people who are here ſcattered in villages, or groups of ſorry huts, are fierce, brutiſh, and untractable; they live upon the game they kill, pay their tribute to the ſovereign in furs, and alſo make cloathing with it for themſelves, and covering for their houſes, and the reſt they ſell and exchange for other goods.

X. The province of Vaitka, or Viatka has the title of a duchy, and is the laſt province in this diviſion of Ruſſia. It is bounded, on the north, by Permia, Zirania, and Ouſtioug; on the weſt, by Vologda and Peroſlaw; on the ſouth, by the kingdom of Cazan; and on the eaſt, by that part of Siberia called the territory of Stoutka. It is moſtly woody, marſhy, and barren; yet yields great quantity of honey, wax, and furs. It was conquered from the Tartars by the czar Iwan Baſilowitz, but was at that time ſo ſubject to the incurſions of the Scheremiſſe Tartars, that he found it half abandoned, and nearly deſart. But ſince both nations have been ſubdued by the Ruſſians, it hath fared much better. It is watered by the river of its name, which ſprings a little above the town of Sextanoff, or Seſtakoff, and running through that and ſeveral other towns falls into the Kama; this laſt falls into the Wolga, a little above Cazan, and runs through another part of the country.

The principal towns in this province are, Viatka the capital, Coteliniz, Orlowa, or Orloof, Glinow, Overtoi, Catharina, Verſchoſenſkoi, Roigorod, Koigorodoc, Urſum, Seſtanoz, or Sextakoff, and Slaboda.

The town of Viatka is ſituated on the river of its name, or, according to Olearius, on a ſmall river that falls into it, a little below that city. It hath little or nothing worth notice, except its biſhop's ſee, and a good ſtout caſtle, built by the czar above-mentioned; to ſuppreſs the incurſions of the Scheremiſſe Tartars. There are two high roads that lead from hence to Moſcow; the one through Caſtroma and Galica; the other through Uſtioug; the former is much ſhorter, but the moſt troubleſome and dangerous, on account of the Scheremiſſe freebooters that infeſt thoſe parts, and alſo the vaſt marſhes that muſt be croſſed by the traveller.

The town of Coliſnitz, which is pretty conſiderable, is ſituated near the confines of the kingdom of Cazan, or Caſan: and Sladboda, another town, ſtands more to the north-weſt, on the borders of the Scheremiſſe Tartars.

This

This dutchy includes, beſides the above, Clinow, Kaigerod, and Ortow, all fortified in the Ruſſian ſtyle.

SECT. V.

Containing the fourth grand Diviſion of RUSSIA, termed MUSCOVITE TARTARY.

THIS diviſion of the Ruſſian empire compriſes the Crim, Leſgee, Baſkeer, Ralmuck, Uſbeak, and ſome leſs conſiderable tribes of Tartars; part of Circania, Siberia, Kamſchatka, Samoieda, and the kingdoms of Aſtracan, Cazan, and Bulgaria; but as the principal part of theſe belong to Aſia, we ſhall therefore refer our readers to that part of this work for an account of them, and confine ourſelves to a deſcription of the kingdoms of Cazan and Bulgaria, which are in the European quarter.

The kingdom of Caſan, which the Ruſſians call Czarſtwo Cazanſkoy, that is the Czariate, or Czarine kingdom of Cazan, was formerly ſubject to its own princes, who were eſteemed powerful monarchs; but was at length ſubdued by the czar Baſilowitz, after a long and bloody war: his ſon Iwan Baſilowitz, ſurnamed the Great, finiſhed the conqueſt, anno 1554, and added to it the kingdom of Aſtracan; ever ſince which theſe two kingdoms have been looked upon as the two richeſt jewels in the Czariſh diadem: this of Caſan, on account of its extraordinary richneſs and fertility; and that of Aſtracan, on account of its vaſt and valuable traffic.

Caſan is bounded on the north by the provinces of Vaitka laſt deſcribed, and Permia; on the eaſt by the Tumæan Tartary; on the ſouth by Baſkiria Bulgaria, and Aſtracan; on the weſt, by the Lower Novogorod, and Moſcovy, properly ſo called; but, according to Mr. Iſbrand's map, not ſo far to the eaſt as the common ones do generally place it. It is watered by the two rivers Wolga and Kama, which run through it, and enrich both its ſoil and its traffic.

The chief towns in this kingdom are, Caſan the capital, Laiſoff, Sabackzar, Pagantzina, Swiatſk, Koleio, Kockſcaga, Malmiſh, Tetul, Karakul, Sundir, Batula, Simburſki, Bur, Uza, and ſome others of leſs note.

The town of Caſan, Cazan, or Cazanum, is ſeated on a river of the ſame name, near its confluence with the Wolga, is a large and populous city, and the ſeat of a Ruſſian metropolitan. The vaſt number of churches, monaſteries, and ſteeples which adorn it, make it yield a fine proſpect both from the land, and from the veſſels that ſail up and down the Wolga. The deſcription which Olearius, who had been there, gives us of it, is to this purport: that it is ſituated on a fine ſpacious plain on the river Caſanka, about ſeven werſtes from the place where it falls into the Wolga, in latitude fifty-eight degrees thirty-eight minutes. Moſt of its houſes are of wood, as well as its ramparts, and towers. The caſtle alone is ſurrounded with ſtone walls; and this is well ſtored with artillery, and warlike ammunition; and the river which runs round it, ſerves it inſtead of a ditch, which renders the place very ſtrong. A garriſon is kept in it, all of Ruſſian ſoldiers; and the Tartars which inhabit the town are forbid to enter it, under pain of death. The caſtle is governed by its own Waywode, and the city by its own governor. About ſeven werſtes below the town, in a reach where the river is broad, there is a large dock for building ſhips of a conſiderable bulk, which are afterwards ſent down into the Caſpian ſea. The city is excellently well ſituated for being well ſupplied with all manner of neceſſaries and proviſions by land and water, and which are here in great plenty and cheapneſs.

The town of Kockſcaga, about ſeventy miles from Cazan, on the banks of the Wolga, is very ſmall. There is alſo an inconſiderable town on the ſide of the river Caſanka, near the frontiers of Bulgaria, ſurrounded by a wooden wall, and but thinly peopled.

At the diſtance of about three miles from the Wolga are the rivers of Scrilierſki; which was once an opulent city between Cazan and Aſtracan, till Tamerlane the Great deſtroyed it.

The kingdom of Bulgaria, otherwiſe ſtyled the Horda, or region of the Zavolani, was anciently inhabited by the Bulgares, or Volgares, a ſtrange race of men, who broke into theſe parts from Aſia, and ſo diſſolute in their morals, that their very name became a term of reproach among their neighbours; and from them the whole kingdom had that of Bulgaria given to it: it is divided into Great and Little, or Aſiatic and European. The latter, which lies along the ſouth coaſts of the Danube, having the Black Sea on the eaſt, and Macedonia on the weſt, became formerly part of the kingdom of Hungary, till ſubdued by Sultan Amurat II. ſince which it hath been, and is ſtill, part of Turky in Europe, and therefore is foreign to this article of Ruſſia, and will be ſpoken of in its proper place.

Bulgaria the Great is that of which we are now going to ſpeak, as part of Ruſſia in Europe, conquered from the Tartars by ſome of the former czars of Muſcovy. It hath its name, as well as Bulgar its capital, from the Bulgares before-mentioned, and is bounded on the north by the kingdom of Cazan, laſt deſcribed; on the eaſt, by Baſkiria; on the ſouth, by the Samara, which divides it from the kingdom of Aſtracan, and, on the weſt, by the Wolga. The large lake Kerghewl lies on the ſouthern ſide; and this is the moſt we can meet worth mention concerning the Ruſſian Bulgaria, whoſe capital ſtands on the north part of it, about twenty-four miles from Caan.

The city of Samara is ſituated on the left ſhore of the river of its name, eaſtward of the Wolga, into which it falls a little below it. It ſtands on the declivity of a mountain of a moderate height, and which terminates at the ſhore on which the city ſtands. It is large, but wretchedly built, of wood, as well as the walls and towers that ſurround it. The town covers almoſt the whole mountain, and the ſuburb extends itſelf along the banks of the river, about forty leagues ſouth of Bulgar, and in latitude fifty-two degrees forty minutes, and longitude fifty degrees thirty minutes eaſt.

SECT. VI.

Comprehending the fifth Diviſion of the Empire of RUSSIA, called RUSSIAN LAPLAND, and NOVA ZEMBLA.

RUSSIAN Lapland is bounded, on the north, by the northern ocean; on the eaſt and ſouth, by the White Sea; which forms there a ſpacious gulf; and by the river Zoloticza, which diſcharges itſelf into it on the eaſt ſide of Kierni, and on the weſt it hath the Daniſh Lapland. It is further divided into three parts, according to their ſituation; whereof one is called Leporia Mouremanſkoi; or maritime Leporia. Terrſkoi, or Inland Leporia; and Bellamoureeſkoi Leporia. The firſt is ſituated on the north and eaſt ſide, having the Norwegian or Daniſh Lapland on the north-weſt; the Swediſh, on the weſt; Terrſkoi on the ſouth-weſt; and Bellamourerſkoi on the outh-eaſt.

The circumjacent country is mountainous, woody, and barren; the air extremely cold; the inhabitants are as rude as ignorant; and, in general, the country is much like the Swediſh and Daniſh Lapland.

Moſt of the iſlands, cities, and towns, ſtand on the ſea-coaſts, and are as follow: Kierni, ſituated near the mouth of the river Zoloticza. Zoloſki a town and iſland, in which is a monaſtery of the ſame name. Kerſelli, or Kierlit, on the mouth of the freſh-water river. Kemelco, a town and iſland, with ſome ſmall ones about it. Kovoda, ſituated on the mouth of a river which flows from the lake Pajorſwoi into the gulf Ombai, on the mouth of a river of the ſame name, which empties itſelf into the Gouba, or Salt River, Wolna Oſtrof, or Iſland of Deer, with a town of the ſame name. Cape Touria, Soutkete, Caſcavaron, Warſiga, Palenga, and Pelitza; which are but ſmall towns. Sonſnowitz, or Iſland of the Croſs; three others on the mouth of the river Ponoi; Cape Orlogone, with a bay and haven, at the entrance into the White Sea. The iſles of Lombacho; the cape and iſles of Swetenoes, in a bay; at the further end of which is the town of Jockna, ſituated on a river of the ſame name, which affords plenty of fiſh. Nookoſtrof, called by the Dutch Nagel Eyland, or Nail Iſland; the Mariners Bay. Seven iſlands more on the mouth of a nameleſs river, well-ſtored with ſalmon, as are indeed moſt of the rivers on this coaſt. The Golden Bay, Daelna Olignia, or Farther Olignia; to diſtinguiſh it from another of the ſame name, and nearer the coaſt, namely, Daelna Silenſi, or Farther Silenſi, ſo named, on the ſame account; port Gabriel; port of Waronia; Bliesna, or Nearer Olignia; the iſland and town of Kildwin; the town, iſland, and lake of Kola; the Fiſhermen's iſland; Petzinſka river; with a monaſtery ſo named.

The lake of Polina, or Polina Ozero, with a town of the ſame name, are in the interior part of the country.

Mouſemanſkoi Leporia, is a mountainous and woody country, and hath few towns of note except Kola, a ſmall

ſmall port, ſituated on the mouth of a river of the ſame name, which falls into the ocean. It lies in latitude ſixty-eight degrees fifty-five minutes, longitude thirty-four degrees twenty-five minutes eaſt; is the chief place in the whole country, and ſtands between the town of Wardways and the White Sea.

The inland part of the Ruſſian Lapland, called Terrſkoi Leporia, is almoſt ſurrounded with the ſea, and is the land that makes the gulf of the White Sea. It is no leſs woody and barren than the reſt, and the chief town in it is Warſign, ſituated on the ſouth coaſt, over againſt Archangel; latitude ſixty-four degrees twenty-five minutes, longitude forty degrees eaſt. Lochena is another ſmall ſea-port, in latitude ſixty-eight degrees, at the mouth of a river of its name, which falls into the northern ocean.

The other diſtrict, called Bellamoureſkoi Leporia, lies at the bottom of the above-mentioned gulf called the White Sea, and, like the reſt, is cold, barren, and thinly inhabited. The chief town is Soma, ſituated on the frontiers of the province of Moſcovitiſh Carelia, and at the very entrance into the Ruſſian Lapland, on the White Sea; latitude ſixty-four degrees twenty minutes.

We ſhall cloſe our account of the different provinces of the Ruſſian empire with a deſcription of Nova Zembla, which name, in the Ruſſian language, ſignifies New Land: it is ſeparated from the northern part of Ruſſia by the ſtrait called Veigatz, or Wygatz, which lies in north latitude ſeventy degrees. The land that forms this ſtrait is a promontory, advancing ſouthward from the main country, which is ſuppoſed to extend itſelf much farther north. It was long doubted whether this country joined to the continent of Greenland on the weſt, or of Tartary on the eaſt; but it is now known to be an iſland of great extent.

The Engliſh were the firſt diſcoverers of this country in the year 1553, when Captain Hugh Willoughby ſailed thither with three veſſels, and advanced from the north cape of Finmark as far north as the ſeventy-ſecond degree of latitude, where he thought he had deſcried this land; but being obliged, through ſtreſs of weather, to put into a port of Lapland, he there periſhed with cold, with all his company. Three years afterwards, Captain Burroughs ſailed in ſearch of it; and having doubled the above-mentioned cape, diſcovered the ſtrait of Wygatz, between the ſouth part of Nova Zembla, and the north coaſt of Samoieda. Since that time it hath been often viſited, both by Dutch and Engliſh, in hopes of finding out the north-eaſt paſſage; but the coldneſs of the climate, and the mountains of ſnow that covered the whole country, prevented their making any great diſcoveries. Some Dutchmen wintered there, anno 1598, but found the cold ſo exceſſive, that they with great difficulty kept themſelves alive till the next ſummer. They ſaw no ſun from January 4th to June 24th, during which long and dark interval they had no light, except what the moon afforded them from the firſt to the laſt quarter, in which ſhe ſhone by day and night without intermiſſion. From their accounts of this country, it appears, that ſome part of it is inhabited by a people of low ſtature, who are idolaters, and barbarous. The attempts made afterwards by Captain Barentz, a Hollander, by Hudſon, Wood, and Haws, proved likewiſe of little or no conſequence to the public, and of a bad one to them, except that Wood made ſome remarks, which gave him reaſon to think there was a paſſage between this country and that of Greenland. He repreſents Nova Zembla as the moſt forlorn ſpot in all the world, the greateſt part of which is laid under ſnow and ice; and, where there are neither of theſe, one meets with nothing but diſmal quagmires, covered with moſs, and ſome blue and yellow flowers. Upon digging two or three feet into the earth, they find the ice as hard as marble, which ſhews how vain it would be to attempt to winter there in caves dug under ground. In other northern countries the ice and ſnow is obſerved to melt much ſooner on the ſea-coaſts than in the inland parts; but here it is quite the reverſe; and the ſea, which beats againſt mountains of it of a prodigious height, hath ſo undermined it, that it ſeems to hang in the air, and diſcovers ſuch monſtrous chaſms as ſtrike the beholder with horror.

As far as a view could be taken of this country, it is ſaid to breed ſome ſorts of wild creatures, ſuch as large and white bears, foxes, ſome little creatures like rabbets, but not bigger than rats, large penguins, &c. The laſt mentioned bird is of the ſize of a gooſe, and the feathers are ſomewhat like hairs, and are of an aſh colour. The wings are very ſhort, in proportion to the body, and the bill is black, but the legs are of a bright green. They keep in the water all the day, where they feed upon fiſh. As they cannot fly, they are unable to ſhun their enemies, except by leaping along, which they do pretty well, by the help of their ſhort wings. However, this bird is active upon the water, and ſeems to be very ſkilful in catching its food. When the ſun begins to ſet, they retire to the rocks near the ſea, where they continue till morning, at which time they are eaſily taken. Their eggs are very good; but the fleſh has a fiſhy taſte, and is never eaten but in caſes of great neceſſity. They build their neſts on the craggy points of the rocks, to which theſe birds can very eaſily climb.

The penguin is not only common in theſe northern parts of Ruſſia, but likewiſe in ſeveral countries of North America, and is every where known by the ſame name, with little or no variation, which in the Celtic, and in our preſent Welſh, ſignifies a white head, as that bird actually hath. This, together with ſome great affinity which is found in many of the radical words, and proper names uſed by people in thoſe diſtant regions, confirms a curious conjecture we have borrowed from the authors of the Univerſal Hiſtory, and before taken notice of, namely, that the deſcendants of Gomer, the eldeſt ſon of Japhet, were not only the firſt peoplers of Europe even in its remoteſt parts, but have preſerved their antient language more than any other nation we know of, except the Chineſe. The ſouthern part hath been ſince found to be inhabited by a ſquat, ſwarthy ſort of people, who cloath themſelves with ſeal-ſkins, or with the ſkins of a large bird, which they call penguin, with the feathers. They worſhip the ſun and moon, and have little wooden idols in human ſhape, but wretchedly carved, or rather notched. They live upon what game or fiſh they catch.

With reſpect to the late acquiſition of Carelia, or the government of Wiburgh, it muſt be obſerved that it compoſes part of the great duchy of Finland, which the Swedes ceded to Ruſſia, and contains the three diſtricts of Finlandiſh Carelia, Kexholm, and Sawolex.

This province hath frequently proved a bone of contention between Ruſſia and Sweden. In 1293 it fell under the Swediſh dominion, but in 1338 part of it was yielded up to Ruſſia. By the peace of Nyſtadt, concluded in 1721, a ſtill greater part was reſigned to the Ruſſians, the weſtern part alone being left in the poſſeſſion of the Swedes. Afterwards Sweden was obliged to give up, by the treaty of Abo, the fort of Frederiſham and Wilmanſtrand, with part of the pariſh of Pythis, ſituated on the other ſide of the eaſtern branch of the river Kymmene. In this part of Carelia are the following places:

The town of Suſterbec, which is ſeated in the gulf of Finland, is remarkable for the excellence of its muſkets, ſwords, and iron utenſils. The greateſt part of the arms uſed by the Ruſſian troops are made in this place.

The town of Wiburgh, once the capital of Carelia, a biſhop's ſee, and the bulwark of Sweden againſt Ruſſia, is ſituated on the gulf of Finland, has a convenient harbour, and carries on a conſiderable trade. Peter the Great having taken this town by capitulation, in the year 1710, improved its fortifications, which have ever ſince been kept in good condition, that Wiburgh may now be conſidered as the bulwark of Ruſſia againſt Sweden.

The town of Wilmanſtrand is ſeated on the lake Saima, and is called by the Finlanders Lappi Weſſi, or Lapp Water. It had formerly the name of Lapſtrand, and was only a market-place, but was afterwards made a town; yet it has no magiſtrate of its own, it being dependent on Frederiſham. It was a conſiderable mart for tar, and the reſidence of a Swediſh governor. On the twenty-third of Auguſt, 1741, an obſtinate battle was fought about an Engliſh mile from this town between three thouſand Swedes and ſixteen thouſand Ruſſians; but the former were at laſt obliged to yield to ſuperiority of numbers. The Ruſſians, after they had gained the victory, burnt Wilmanſtrand, which was before fortified with a wall and moat; but they have ſince cauſed it to be rebuilt.

The town of Frederiſham is ſituated on the gulf of Finland. The town was governed by two burgomaſters, and was defended by a caſtle built in 1722; it hath alſo a good harbour and a conſiderable trade in tar; but in the laſt war between the Ruſſians and Swedes it was burnt to the ground, and ceded to the latter; afterwards it was rebuilt, and the limits between Sweden and Ruſſian Carelia were fixed near this place.

Kexholm is a very extenſive diſtrict; but is chiefly covered with rocks and lakes. It has been frequently contended for by the Ruſſians and Swedes, and was reſtored to the former by the treaty of Nyſtadt. The moſt remarkable place in it is, the town of Kexholm, which

is a place of great ſtrength: it is ſituated on two ſmall iſlands at the influx of the river Woxen into the lake of Ladoga. The principal part of the town is built on one of theſe iſlands; but the houſes are all of wood; and the caſtle ſtands on the other iſland.

SECT. VII.

Giving an Account of the Perſons, Dreſs, and Manners of the RUSSIANS; the Houſes and Furniture of the common People; their Food, Fondneſs for ſtrong Liquors, their Roads, Manner of Travelling, Language, &c.

AMONGST ſuch a variety of people as are contained in this extenſive empire, the ſtature, features, complexion, genius and habits of the natives differ from one another, as they are differently ſituated.

The Laplanders and Samoieds, in the north, are low of ſtature, have flat faces, ſmall eyes, and tawny complexions; for it is obſerved, that extreme cold is as great an enemy to beauty as exceſſive heat; here they cloath themſelves with ſkins and furs from head to foot, and uſually ſew two ſkins together, that they may have the fur next their ſkins, as well as on the outſide.

The natives about Moſcow, Peterſburg, and in the middle provinces, are of a moderate ſtature, have good complexions, and hale, vigorous conſtitutions; but nothing is ſo much admired as a ruddy countenance: they are aſhamed of looking pale, and if they want red, do not fail to lay it on pretty thick. They are, it is ſaid, inclined to be corpulent, but thoſe I have ſeen, and we may ſee them every week at the Greek chapel in York-Buildings, are of a moderate ſize, both men and women. The veſt, gown and cap, were the uſual cloathing of the men; till Peter the Great obliged them to wear ſhort cloaths, like their ſouthern neighbours; and the people of faſhion now generally conform to the French mode; though I obſerved, that ſeveral had coats down to their heels, like a ſeaman's watch-coat; and it ſeems a little barbarous to compel the poor people to leave off theſe ſort of cloaths in ſo cold a climate as Ruſſia. The men and women both wear their hair long, and the virgins had their hair braided, as ſome of them have ſtill; the married women put theirs under a cap, but the gentry in general conform to our dreſs. The greateſt difficulty czar Peter met with, was, to make the men part with their long beards, which they ſeemed to look upon as ſacred, and took it as a favour (when they found they muſt part with them) if he would return them again after they were cut off, that they might be buried with them.

The women in general, ſays Mr. Hanway, are not ſo amiable in Ruſſia as in many other countries: indeed, they daub themſelves ſo much with artificial charms, as to conceal thoſe graces, which, it may be preſumed, nature has beſtowed on them. In general they profeſs, that if nature gives them ſufficient plumpneſs, they can procure beauty themſelves; and to this purpoſe we may obſerve, from the very idiom of their language, that craſna devitza, which literally ſignifies a red virgin, is a term for a pretty girl. Although it has been obſerved, that very cold climates produce the ſame diſpoſition to amour as very hot ones; yet this does not appear to be entirely the caſe in Ruſſia. Chaſtity, as a virtue, is not, indeed, more in repute in this country than in the ſouthern parts of Europe; but it ſeems as if the ſame cauſes in nature, which reſtrain them from a fierce reſentment of the illegal commerce of the ſexes, check, in ſome meaſure, their eager deſire of ſuch gratifications. As the Ruſſians are not ſo refined in their manners as to have a very delicate ſenſe of honour, ſo we find that the chaſtiſement of female infidelity is ſeldom carried beyond a beating, which the adulterer generally may compound for his offence by a pecuniary mulct. Among the common people, the eccleſiaſtical laws oblige a man to marry a woman whom he has debauched.

The Ruſſians, the ſame writer obſerves, are of a middle ſtature, though many of them are tall: the common people ſtill are fond of their ancient cuſtoms; and though a majority of them ſubmit to modern improvements, others chooſe to ſuffer great inconveniencies, and pay additional taxes, rather than forſake their beards, and ſome idle diſtinctions with regard to religion.

The common people, both men and women, are cloathed in long coats made of ſheepſkins with the wool inwards, which are very proper for that climate, and coſt only two rubles (nine ſhillings) and ſwaddle up their legs and feet in coarſe cloth: their caps are lined with fur, and cover their ears and neck as well as the head: they wear a ſaſh about the loins, and have double gloves, one pair of woollen and another of leather, which have no partitions for their fingers, only a place for the thumb. People of condition follow our modes, only they have a full great coat over all, lined with furs, and a deep quilted or furred cap when they go abroad. The ladies wear flowered ſilk cloaks lined with furs, uſually made of the ſkins of white hares.

Perſons of both ſexes hang on their breaſt a croſs, which is put on when they are baptized, and this they never lay aſide as long as they live. The croſſes of the peaſants are of lead, but thoſe worn by perſons of wealth are of gold or ſilver.

The Ruſſians ſeldom fail of bathing twice a week; for which purpoſe almoſt every houſekeeper is provided with a bath; and he that has none of his own, goes to thoſe that are public; and baron Mayerburgh affirms, that they pay ſo little regard to decency, that men and women make no ſcruple to go into them promiſcuouſly, and there appear naked to each other. It is alſo obſerved that they will often ſally out naked from the warm bath, run about in the cold, roll themſelves in the ſnow, and plunge again into the warm water: and this viciſſitude of heat and cold they conſider as beneficial to the conſtitution, by rendering them healthy and hardy.

In viſits of ceremony, the men and women uſually welcome each other with a kiſs; but thoſe of the lower claſs ſhew their profound reſpect for perſons of high rank, by proſtrating themſelves on the ground before them. Even the common people ſalute each other with great civility; but before a Ruſſian welcomes his gueſt, the viſitor is obliged to make the ſign of the croſs, and at the ſame time to bow to a picture of ſome ſaint, which is ſo placed as to be ſeen immediately at coming in.

With reſpect to their method of building, their moſt uſual way, both in the towns and country villages, is, to lay one beam of wood upon another; and, faſtening them at the four corners, fill up the crevices between the beams with moſs. The houſe is afterwards covered with ſhingles, and holes are made in the timber for doors and windows. A brick ſtove or large oven is commonly made in the houſes of the peaſants, and takes up a fourth part of the area: this is flat at the top, and boarded, and upon it, and on a kind of ſhelves round the room, the whole family ſleep without beds. The houſes in the villages are contiguous and built cloſe together, as thoſe in towns commonly are. Three benches, an oblong table, and the picture of a ſaint or two, compoſe the principal part of their furniture. Inſtead of candles or lamps, the peaſants uſually burn long ſplinters of deal. The apartments are as black as ſo many chimnies; for the fire-hearth being within the ſtove above-mentioned (which has no other vent for the ſmoke but into the room), the walls are covered with ſoot. It is no ſooner dark, than the houſes ſwarm with a ſpecies of inſects called tarralans, which are a kind of goat-chaffers. The beſt method of keeping them out is burning a light in the room till break of day.

As to their diet, the common people of Ruſſia, and indeed the whole nation, are much more uſed to fiſh than fleſh, eſpecially ſalt fiſh; their faſts taking up near two thirds of the year, when they are abſolutely prohibited by their religion to taſte of fleſh: and in this they ſeem to place the greateſt part of religion, even their children obſerving it with the utmoſt ſtrictneſs; and as they eat no fleſh at theſe times, neither will they taſte of milk or eggs, or any thing that has any relation to it. They eat melons, cucumbers, turnips, and other garden ſtuff in great abundance, and chuſe rye bread rather than wheat, though they have enough of both. They will march a fortnight or three weeks very contentedly when they are in the army, if you ſupply them but with ſaccary, which is rye bread broken into ſmall pieces and baked a ſecond time, eſpecially if they are allowed a dram now and then. Caviere made of the roes of ſturgeon ſalted and dried, is a great diſh amongſt them; and people of condition have out of Lent a variety of fleſh and fowl at their tables. But before the company ſits down, the maſter or miſtreſs of the houſe, of what quality ſoever, always preſents every one of the gueſts with a cup of brandy on a plate with her own hands; and among particular friends all the company ſalute the lady. The firſt courſe at an entertainment uſually conſiſts of hams, tongues, and other cold ſavoury diſhes, that the liquor may reliſh the better, I preſume; with theſe ſtand ſeveral made diſhes, dreſſed with oil, olives, onions, and garlick; which having remained upon the table about an hour, the ſecond courſe, conſiſting of ſoups and boiled

and roaſt meat, is brought in; after which follows the deſert, and liquor in abundance; though this goes round pretty freely all the time, the healths being began at the beginning of the meal, in large cups made in the faſhion of a bell.

Their liquors are either mead, or quaz, a ſort of ſmall mead made with honeycombs; but they are of late years pretty much come into the drinking of beer: the profit of which the government engroſſes, all the brewhouſes and places where beer is retailed being the czarina's, and private houſes forced to have licences of the government to brew. It is generally very ſtrong, or the Ruſſians would not value it; and as it is, they ſeldom conclude without a dram of brandy or ſpirits, of which laſt they diſtil great quantities, and it may be had at reaſonable rates; but of theſe alſo the government has the profit. They uſed to begin their entertainments at ten in the morning, and by twelve or one would drink themſelves aſleep; and after a ſhort repoſe begin to drink afreſh: for it is a general cuſtom among the Ruſſians, whether rich or poor, to ſleep after dinner; and this probably may be one reaſon of plying foreigners ſo hard with liquor, ſo much complained of, that they want to get rid of them, that they may retire to reſt.

In Ruſſia, a perſon may travel cheap, and with great expedition both in ſummer and winter; the poſt-roads leading to the chief towns are very exactly meaſured, with the werſts marked, and the poſt-ſtage fixed at proper diſtances; for throughout the whole empire, and even in Siberia, a pillar, inſcribed with the number of werſts, is erected at the end of each. The expence of travelling in this manner is ſo eaſy, that between Riga and Peterſburgh the hire of a poſt-horſe for every werſt is no more than two copeiks and a half, which is one penny three farthings ſterling; between Novogorod and Peterſburgh, only one copeik; but between Novogorod and Moſcow, but half a copeik.

Carriages for merchants are drawn by one horſe: theſe vehicles are nine or ten feet long, and two or three broad, and are principally compoſed of two ſtrong poles, ſupported by four wheels of near an equal ſize, and about as high as the fore wheels of our ordinary coaches, but made very ſlight: many of the rounds of the wheels are of one piece of wood, and open in one part for near an inch; and ſome of them are not ſhod with iron.

Spring and autumn are very bad ſeaſons for travelling; as my caravan at this time experienced, ſays Mr. Hanway. There is a law in force, made in favour of the carriers, by which, any contract for tranſporting merchandize in the winter, becomes null and void, if the roads are broke up by a thaw, and thereby rendered impracticable to travel in ſledges; in which caſe, the carriers have the liberty of taking out their horſes, and leaving a caravan in any town they can moſt eaſily reach.

The caravans generally ſet out about twelve, both in the night and day, except in the heat of ſummer. In the winter, between Peterſburgh and Moſcow, they uſually travel ſeventy werſts in twenty-four hours (forty-ſeven miles Engliſh) but from Moſcow to Zaritzen, only forty or fifty werſts.

Nothing, ſays our author, can be accommodated more for eaſe and diſpatch, than travelling in ſledges in froſty weather, when the ſnow is well trodden. As a proof of this, I may mention, continues he, that I ſlept without waking whilſt I was carried a hundred werſts (ſixty-ſix miles Engliſh.) The whole road was marked out with fir-trees, ſet in the ſnow on both ſides, at the diſtance of about twenty yards; the conſumption of timber on theſe occaſions, at a moderate computation is a hundred and twenty-eight thouſand, four hundred and eighty trees. There were alſo great piles of wood at certain diſtances, to be ſet on fire, to give light to the empreſs and her court, if they paſſed by in the night.

Her imperial majeſty is drawn, on theſe occaſions, in a houſe or room, which contains her bed, a table, and other conveniencies; where four perſons may lodge, and be accommodated with every thing they want. This machine is ſet on a ſledge, and drawn by twenty-four poſt-horſes; if any of them fail on the road, others are ready to ſupply their place: ſhe is generally three days and three nights on the way: there are ſeveral ſmall palaces on the road, where ſhe ſometimes ſtops. Peter the Great once made the journey from Peterſburgh to Moſcow in forty-ſix hours, being four hundred and eighty-eight Engliſh miles. We are told, that it is not uncommon to go it with poſt-horſes in ſeventy-two hours; and that for fourteen or fifteen rubles a commodious ſledge may be hired for that journey, drawn by a pair of poſt-horſes.

The Ruſſian language is moſtly the old Sclavonic, or rather a dialect of it, as that was of the old Scythian; but is ſo corrupt, and intermingled with other languages, that it is hard for a perſon who hath been uſed only to the pure Sclavonian to underſtand it; and yet that is ſtill retained in their divine ſervice, in their bibles and homilies; and ſuch as affect any degree of learning or politeneſs, affect to ſpeak and write in it. Their character is a corrupt ſort of Greek, ill-ſhaped, whoſe letters they have increaſed to the number of thirty-eight; but ignorance, till of late, had ſo thoroughly covered this whole country, that even the clergy and nobility, as well as the common people, neither could write, or ſcarcely read. A greater encouragement was given to it, and to arts and ſciences, by their late great monarch, who, by beſtowing his favours, and places of honour and profit, on thoſe who were moſt learned, foreigners as well as ſubjects; and by ſetting up ſchools and academies, and inciting and careſſing ſuch as were moſt famed for all ſorts of learning, and ſending his young noblemen and gentlemen into foreign countries for education, hath gone a great way towards tranſplanting the muſes into a climate till then unknown to them: and, had he lived longer, would in all likelihood have wholly effected it, in ſpite of the innate averſion of his ſubjects to them. There are not many univerſities in this country, nor any ſeminaries of learning, except two or three academies for arts and ſciences, ſet up in the capital, and a few colleges or ſchools there, and in ſome other principal cities, for the inſtruction of youth, which yet, it is to be feared, have not met with that encouragement after that monarch's death as they did in his life-time, though more owing perhaps to the troubles that have happened in the enſuing reigns, than to diſlike in any of his ſucceſſors. But of this we ſhall treat more particularly under the article of learning.

SECT. VIII.

Of the Religion, Marriages, and Funeral Ceremonies of the RUSSIANS.

THE Ruſſians boaſt, that they profeſs Chriſtianity according to the pure antient rites and doctrine of the Greek church, though in many reſpects they have ſo far deviated from it, that they have introduced even more ſuperſtitious and ridiculous cuſtoms, and lay greater ſtreſs upon them, than the moſt bigotted papiſts in the world. They pretend, though without any foundation, that the apoſtle St. Andrew, whom they hold in great veneration, planted the goſpel among them; when it plainly appears, according to Zonaras, that they were all ſunk into the loweſt pit of idolatry till the time of the great Volodomir, duke of Ruſſia, in the year 989, when, having made ſeveral conſiderable conqueſts, he was honoured with a grand embaſſy from the emperor Baſilius, and with him a biſhop, and other clergymen, to convert the Ruſſians to Chriſtianity. Volodomir himſelf became one of the firſt converts, after which, having married the daughter of that emperor, he contributed all he could to eſtabliſh the Chriſtian faith through his dominions, and had the pleaſure to ſee it effected, in a little time; and as they received it from a Conſtantinopolitan prelate, ſo they have always continued in the faith and communion of the Greek church, ſome few articles and ſuperſtitious cuſtoms excepted, not worth troubling our readers with. They differ from the church of Rome in their diſbelief of tranſubſtantiation, purgatory, the Pope's ſupremacy and infallibility, &c. but they ſeem even to out-do them in their worſhip of the Virgin, and other ſaints, croſſes, reliques, and the like. They uſe auricular confeſſion; communicate in both kinds; make the Athanaſian creed the rule of their faith; and have a ſettled liturgy, viz. that of St. Baſil, which they uſe three times a day. They obſerve four lents in the year with great ſtrictneſs, beſides faſting every Wedneſday and Friday in the year. They reckon the creation of the world, which uſed to be their common æra, to have been above 7250 years ago, that is, about 1500 years earlier than any Chriſtian nation hath fixed it, but can give no ſhadow of reaſon for it. They begin, alſo, the year in September; alledging, that it was more probable that the earth was created in autumn, ſtored with all its fruits in full maturity, than in March, when its whole ſurface is covered with ice and ſnow. But the czar hath ſince introduced the Roman calculation, though not without great ſtruggle and difficulty. The time he choſe to do it in was on the firſt of January 1700, in which a grand

grand jubilee was celebrated, at his metropolis, with the ringing of bells, firing of guns, and other ſolemn rejoicings.

The common people, and even ſome perſons of rank, eitheir by way of penance, or from other motives of humiliation, proſtrate themſelves on their faces at the entrance of the churches: and thoſe that are conſcious of having contracted any impurity, forbear entering the church, but ſtand at the door. The church bells are often rung; and as ringing is counted a branch of devotion, the towns are provided with a great number of bells, whoſe ſound is almoſt continually heard.

They perform divine ſervice entirely in the Sclavonian tongue, which the people do not underſtand, as it is very different from the modern Ruſſian; and this ſervice conſiſts of abundance of trifling ceremonies, long maſſes, ſinging, and prayers; all which are performed by the prieſts, the congregation only repeating, "Lord be merciful to me." They ſometimes add a lecture from one of the fathers; but there are few churches in which ſermons are ever delivered, and even in thoſe they ſeldom preach.

There are neither ſeats nor forms in the Ruſſian churches, but the whole congregation perform their devotion ſtanding. On feſtival days the clergy are adorned with very rich veſtments, ſomewhat reſembling thoſe of the Levitical prieſts deſcribed in the Old Teſtament. The people know very little of the Bible, which has never yet been tranſlated into their language. They have, however, one in the Sclavonian tongue, with annotations; nor are there any proper meaſures taken for the inſtruction of young people among the vulgar, in the principles of religion. The people never ſing pſalms or hymns, nor have any hymn books in their houſes; for none but the choriſters are allowed to ſing pſalms in the churches, that office being conſidered as their peculiar province, on which account they are held in ſome eſteem among them.

Some of their great feſtivals are ordained by the Ruſſian church, beſides which there are every year others appointed by the civil power, when all public buſineſs and trades are ſuſpended with greater ſtrictneſs than even during the former; ſuch as the anniverſary of the birth, inauguration, and coronation of the perſon on the throne, and on the ſaint's day whoſe name he or ſhe bears; and likewiſe the feſtival of the birth and name-day of other perſons of the royal family; that of St. Alexander Neuſki, is kept on the thirtieth of Auguſt; and on the twenty-ſeventh of June the anniverſary of the battle of Pultowa.

In the Ruſſian empire, there are a great number of convents for the religious of both ſexes; but Peter I. prudently ordered that no perſon ſhould be allowed to enter on a monaſtic life before fifty years of age: yet this regulation has been repealed ſince his death, it being thought proper to ſhew a greater condeſcenſion to the monaſteries: however, no man is permitted to turn monk till he is thirty, nor no woman to turn nun till ſhe is fifty; and even then not without the expreſs approbation and licence of the holy ſynod. The abbot, or head of an abbey, is here called archimandrite, and the prior of a convent, igumen; and an abbeſs, igumenia.

There is in every village a church and a prieſt to officiate in it, and in the towns there is a church almoſt in every ſtreet. A creſcent under the croſs is erected on the tops of the towers of all the old churches.

As they acknowledge themſelves conceived and born in ſin, they therefore baptize their children immediately after the birth: if they are weak, this is done at home; but if well, in the church; the child being received at the church-door by the prieſt, who, ſigning the forehead with the ſign of the croſs, ſays, "The Lord preſerve thy coming in and going out." He then faſtens nine wax candles given by the godfathers, ready lighted, round the font. Having incenſed the godfathers, and conſecrated the water, each of them takes a wax-candle, and they all walk three times round the font, which always ſtands in the middle of the church, the clerk carrying the picture of St. John before them, and the prieſt reading out of a great book. The prieſt then aſks the godfathers the name of the child, which having given him in writing, he puts it upon a ſmall picture, which he holds upon the child's breaſt, while he mutters certain prayers; and then aſks, whether the child believes in God the Father, the Son and the Holy Ghoſt; and the godfathers having anſwered in the affirmative, they inſtantly turn their backs to the font, to ſhew their averſion to the three next queſtions, whether the child forſakes the devil, his counſels, and his works? To each queſtion the godfathers anſwer, yes, and as often ſpit on the ground. Then turning again to the font, the prieſt aſks, whether they promiſe that the child ſhall be brought up in the true Greek religion? and then, laying his hands upon him, ſays, "get out of this child, thou unclean ſpirit, and make room for the Holy Ghoſt." He then blows upon the child three times to drive away the devil, by whom they ſuppoſe children before baptiſm are poſſeſſed. After this, he cuts off a little of the child's hair, which he puts into a book; and having aſked the godfathers, whether they deſire the child ſhould be baptiſed, he dips him three times in the water; with the uſual words. He then puts a corn of ſalt into the child's mouth, and making the ſign of the croſs on his forehead, hands, breaſt, and back, with conſecrated oil, puts him on a clean ſhirt, ſaying, "Thou art as clean from original ſin as this ſhirt." They afterwards put a ſmall croſs on the child's neck, which he muſt wear till his death, or be denied Chriſtian burial; a peculiar ſaint is alſo aſſigned him.

They never baptiſe two children in one font at the ſame time, as they imagine that the water is defiled by the original ſin of the preceding child. As they ſuppoſe that children are regenerated by baptiſm, they therefore adminiſter the ſacrament to the infant, who is ever afterwards admitted to partake of it. They baptiſe their adult proſelytes in a river, immerſing them three times, mentioning the uſual words.

The government of the church was, till the late czar Peter's time, by patriarchs, archbiſhops, and biſhops. The metropolitan of Moſcow was patriarch of all Ruſſia, but was ordained by that of Conſtantinople till about the year 1588, when one Hieronymo, then the worthleſs patriarch of Conſtantinople, having been degraded by his clergy, came into Moſcovy, and, under pretence of having been depoſed and perſecuted by the Turks, found means to revenge himſelf on his clergy, and to get an immenſe ſum of money for himſelf, by propoſing to the then czar, Theodore Iwanowitz, to make his capital the patriarchal ſee of the whole Greek church, and thereby ſaving the trouble and charge of going to receive of its metropolitan his induction from that of Conſtantinople, as they had done till then. His propoſal was accepted by the czar, and the whole clergy; and Hieronymo having, January 15, of that year, met the whole body of them in his pontificals, in the cathedral of Moſcow, and made an harangue to them, ſuitable to the occaſion, did, with great ceremony, reſign his patriarchal ſtaff, tiara, &c. into the hands of Jacob, the then metropolitan, and inſtalled him, in a ſolemn manner, patriarch and head of the Greek church. This was followed by an inſtrument of his reſignation, and his ſucceſſor's inſtallation, drawn in form, and laid up among the archives of that cathedral; after which, he retired, with all his wealth, to Rome.

On the elevation of this metropolitan (who had been, till then, the only one in all Ruſſia) to his new patriarchate, two other archbiſhops were made metropolitans; viz. that of Novogorod Veliki, and that of Roſtow; and ſince then two more were added, whereof one reſideth at Caſan, the other at Sarſcow. Theſe metropolitans, we are told, were choſen by the czar, and the patriarch by them and the biſhops; but ſince by the czar alone. This patriarchal dignity continued till the time of the late Peter the Great, who being juſt returned from his travels, upon the demiſe of the laſt incumbent, declared, that he would have no more prelates raiſed to that dignity, but that himſelf would be ſole head and governor of the Ruſſian church. However, he nominated the metropolitan of Rezan, a Pole by birth, and a man of learning, to take upon him the adminiſtration of all eccleſiaſtical affairs under him, and to be accountable only to him. Such oppoſition was made to this great change, by the biſhops and clergy, that the czar, who could brook no controul, cauſed one of thoſe biſhops to be degraded, in order to deter the reſt; and theſe inſiſting, that they had no power to depoſe one of their claſs, the Poliſh metropolitan was ordered to do it, who took away his mitre and dignity accordingly. Ever ſince, the czar hath taken upon himſelf the ſupreme authority in the Ruſſian church, and hath introduced learning among his biſhops and clergy, who were before ſo groſsly ignorant, that they could not ſo much as preach to their flocks, but, inſtead of ſermons, uſed only ſome ſhort homilies of ſome of their Greek ſaints, with which they generally concluded the divine ſervice, after they had ſung ſome pſalms and hymns, the Athanaſian creed, and the goſpodo, or litany. The monaſtic life is indulged to both ſexes, though of the women more are forced into it than take it up out of choice.

Till the late glorious reign of Peter I. not only perſons of different religions, but even of any country, were for-

bid to come into these dominions; at present, that absurd law is repealed, and all strangers are invited to come and settle there, of what country or religion soever. The Lutherans and Calvinists have the free exercise of theirs, excepting that they are not allowed bells in their churches. Those of the church of Rome are the only ones, of all Christian denominations, that ever, till of late, could obtain that privilege, though no endeavours and interpositions from Poland, France, Germany, and other Roman Catholic countries, have been spared to obtain it; and though there are great multitudes of artists, merchants, soldiers, and officers of that religion, settled in Moscovy. But though they are tolerated, the Jesuits are forbid to come among them. The Arminians have their churches without bells, and other sects meeting houses. The Mohamedans are also tolerated, and make up about a thirtieth part of the inhabitants; and the Pagans are still more numerous, especially towards the north: these differ much in their notions and worship, and some of them are so stupid and ignorant, that they are but one remove from brutes.

Several popes, in the thirteenth century, laboured hard to put the great duke of Russia out of conceit with the Greek religion, but without success. The doctors of the Sorbonne at Paris have since made the same attempt; for, when Peter the Great suppressed the patriarchate, they endeavoured, but in vain, to persuade him to bring about an union with the church of Rome. For further particulars relative to the Greek church, we must refer our readers to what we have given on that head, in treating of their religion in the Ottoman empire, p. 155.

We shall now proceed to give an account of the marriages and funeral ceremonies of the Russians. With respect to the former, when every thing is agreed upon between the parents, if they are of quality, a woman, called the suacha, is appointed by the friends of the bridegroom, and another by those of the bride, to take joint care of the nuptials: and these provide every thing fit for the chamber of the new-married couple. The bed is made of forty sheaves of rye laid in good order, and encompassed with several barrels of wheat, barley, and oats: when all is ready, the bridegroom goes late in the evening, accompanied by his kindred, the priest who is to marry him leading the van on horseback. They are received at the bride's door by her relations, invited to come in, and to sit down at table, where only three dishes of meat are served up, and even these are not to be touched by any one present. At the upper end of the table a place is left for the bridegroom, which is taken up by a young lad appointed for that purpose, while the bridegroom is talking with the bride's friends: but at length he having prevailed on the youth by some presents to resign his place to him, takes his seat, and the bride, richly dressed, is brought in with a vail over her face, and placed next the bridegroom; two lads, at the same time holding a piece of taffety between them, to prevent their seeing each other. The suacha then comes in, and paints her, ties up her hair in two knots, puts a coronet on her head, and all the ornaments of a married woman. The coronet is of gold or silver gilt, and lined with silk, having on both sides, near the ears, five or six rows of pearls, hanging down in strings on her breast. The upper garment, which has sleeves an ell and a half wide, is embroidered at the edges with gold and silver, especially about the neck, where it is stiff with embroidery, for the breadth of three inches. They sometimes bestow a thousand crowns upon this robe. The bridegroom is then painted by his suacha, whilst the women upon the benches sing together. After this, the company go to church, where the young couple stand upon a piece of taffety, and have a canopy of the same silk over their heads. Here having made offerings of fryed meats, fish, and pastry, the priest gives them his benediction, and taking the man by his right hand, and the woman by her left, he asks them three times, whether they are both willing to be married, and to love one another as they ought to do. To which having answered yes, the whole company join hands, and the priest sings the 128th psalm; which being ended, he puts a garland of rue upon the heads of the young couple, and if one of them be a widow or a widower, about their shoulders, saying, "Increase and multiply. Whom God hath joined together, let no man put asunder." While the priest pronounces these words, each of the people invited to the wedding lights a wax candle, and one of them gives a glass of wine to the priest, which he drinks; and the married couple having pledged the same three times each, the bridegroom throws down the glass, and he and the bride, treading it under their feet, say, "May they thus fall under our feet, and be trodden to pieces, who shall endeavour to sow division or discontent between us." The women then throw some flax or hempseed on the young couple, wishing them much prosperity; and some pull the bride by the robe, as if they would take her from the bridegroom, to whom she sticks close, while they seem unable to remove her away from him.

When the nuptial ceremony is ended, the bride returns in a sledge or coach by the light of six flambeaux, and the bridegroom on horseback. The men immediately sit down at the table, which is covered with provisions; while the women conduct the bride into her chamber, undress her, and, having put her to bed, come to the bridegroom, who rising from the table, is conducted to the bride's chamber by six or eight young men, each with a wax candle in his hand, which they stick in the barrels of wheat, barley, and oats, that stand round the bed. The bride no sooner sees the bridegroom, than she slips on a morning-gown lined with fur, and rising meets and salutes him with a low inclination of the head; and this used to be the first time of the bridegroom's seeing her face. They then sit down to a table, where, among other provisions, they have a roasted fowl, which the bridegroom pulls asunder, and throwing over his shoulder the part he lights on first, they eat the rest, and then go to bed; while the guests employ themselves in several charms to promote the happiness of the new-married couple. Some time after, an old servant of the house, who attends at the door, comes and asks whether the business be done; and the bridegroom answering, yes, the word is given for the trumpets and timbrels to strike up, and these sound till the new-married couple are conducted to the stoves, where they bathe themselves apart. After they have been well washed in the bath with water, mead, and wine, the bride sends the bridegroom a shirt richly embroidered, especially at the neck, and a rich habit. The two next days they spend in the farther celebration of their nuptials.

The lower class of people are satisfied with fewer ceremonies; for the night before the wedding the bridegroom sends some clothes, a comb, and a looking-glass; and the next day the priest is brought in by two lads, carrying lighted wax-candles. As soon as he enters the house, he gives his benediction first to the lads, and then to the guests. The young couple being set down at the table, the lads holding a piece of taffety between them, the suacha dresses the bride's head, which being done, a looking-glass is brought, and the young couple joining their cheeks, look and smile one upon the other, while the two suachas cast hops upon them; after which they go to church, where they are married with the usual ceremonies.

Marriage being esteemed a very sacred thing among them, polygamy is forbidden under pain of death, the emperor himself being allowed only one wife at a time; though if she proves barren, he may send her into a monastery, and marry another. Second marriages they consider as allowable, but not very commendable; a third marriage is not to be undertaken but upon very weighty considerations; and a fourth deemed a capital offence.

Funerals, like other public actions here, are performed with great ceremony; for the soul of the sick person is no sooner departed than the widow sends for her kindred and friends, who standing round the corpse break out into lamentations. They then wash the body, and having put a clean shirt or shroud about him, with a new pair of thin Russia leather shoes on his feet, they lay him, with his arms across his breast, in a coffin made of the trunk of a tree, and in the mean while send a present to the priest to pray for his soul. The coffin is covered with a piece of cloth, or the coat of the deceased.

The richer sort, if the season will permit, keep the body eight or ten days, during which the priest comes every day to purify it with incense, and by sprinkling it with holy water. At length the priest proceeds with the picture of the patron saint of the deceased, followed by four virgins, who are nearest related to the latter, and make very mournful lamentations, but begin and leave off exactly at a time. Then comes the dead body, carried by six men upon their shoulders; but if the deceased be a monk or a nun, this office is performed by those of his or her own profession. The corpse is surrounded by several priests, who pour incense upon it to keep off the evil spirits, all the while they are singing psalms: then follow the kindred and friends with wax-candles, but without any order.

On their coming to the grave, the coffin is uncovered; and the priest holding over it the picture of the patron saint, says several prayers, in which he often repeats, "Lord, look upon this soul in righteousness." Mean while the widow continues her lamentations, and the re-

lations and friends, after kiſſing either the deceaſed or his coffin, take their leave. The prieſt then takes a piece of paper, which is a kind of ticket for his entrance into paradiſe, ſigned by the biſhop of the place and the confeſſor. This he puts into the coffin, which is then ſhut and put into the grave, with the face turned towards the eaſt; while thoſe who return to the houſe of mourning are ſupplied with good liquor to drown ſorrow.

They allot forty days for the time of mourning; during which three feaſts are made for the relations of the deceaſed, on the third, ninth, and twentieth day after the burial; during which the prieſt ſays certain prayers morning and evening over the grave, which for that purpoſe is covered with a ſmall hut of mats: for though the Ruſſians do not believe in purgatory, they maintain that there are two places to which the ſouls retire after their ſeparation from the body, there to wait till the day of judgment, ſome in a pleaſant and delightful abode, where they enjoy the converſation of angels; others in a gloomy and diſmal valley, where they ſee nothing but devils; and believe that, while the ſoul is yet on its way, it may be diverted from the evil road by the prayers of the prieſts and monks, provided they are ſufficiently fee'd for that buſineſs.

SECT. VIII.

Treating of the Learning, Arts, Manufactures, Trade, Weights, Meaſures, Coins, &c. of the RUSSIANS.

BEFORE the reign of Peter the Great, learning was but little known in Ruſſia; but this illuſtrious monarch ſpared neither expence nor pains to diſpel the clouds of ignorance which overſpread his empire, and to inſpire his ſubjects with a taſte for arts and ſciences: he founded an academy of ſciences, an univerſity, and a ſeminary at Peterſburg, beſides other ſchools in the different parts of his empire; invited perſons of learning from England, Germany, France, and Holland. to ſettle at Peterſburg; collected a great number of books; and encouraged his ſubjects to travel into thoſe countries where the arts and ſciences flouriſhed. The Ruſſians are far from wanting talents and a diſpoſition for learning. Hiſtory, geography, and the mathematics, are the ſtudies to which they chiefly apply themſelves.

There are only three univerſities in this vaſt empire; namely, thoſe of Peterſburg, Moſcow, and Kiow; ſo that learning may be ſaid to be yet only in its infancy; however, the members of the academy of ſciences not only publiſh collections of their own memoirs, but compoſe a variety of books for the inſtruction of youth in the ſciences, and make tranſlations of the moſt uſeful books publiſhed in foreign countries. Peter the Great eſtabliſhed the myſtery of printing, that everlaſting guardian and friend of the arts, in Ruſſia. His types, and other implements for that purpoſe, were brought from Holland. A preſs, with types, had been indeed ſent from Poland to Moſcow, and a printing-houſe erected, by the approbation of one of the former czars; but the building was ſet on fire in the night, and burnt to the ground, by the procurement, as was generally ſuppoſed, of the ignorant and ſuperſtitious prieſts, who thought all books, eſpecially ſuch as treated on their own hiſtory and the miracles of the ſaints, to be of very miſchievous tendency.

In Ruſſia, the mechanic arts and trades, are continually improving, and theſe improvements are far from being entirely owing to the foreigners who reſide among them; for the natives being ſpurred on by emulation, frequently equal, and ſometimes excel their maſters. They were formerly almoſt ſolely employed in agriculture, feeding of cattle, hunting and fiſhing. It is true, they excelled in making Ruſſia leather, which had been long practiſed by them; but they were entirely unacquainted with the more ingenious mechanic arts. Great numbers of excellent artificers, invited hither by Peter the Great, ſettling in his dominions, the Ruſſians ſhewed that, with proper inſtructions, they did not want the capacity of being taught; and they have now flouriſhing manufactures of velvet, ſilk, linen, and woollen ſtuffs; alſo copper, braſs, iron, ſteel, and tin, are wrought; and great guns, fire arms, gunpowder, wire, cordage, ſail-cloth, paper, parchment, and glaſs, are made in Ruſſia. All theſe manufactures, however, are not brought to ſuch perfection as to be carried on without the aſſiſtance of foreigners, and the additional ſupplies of thoſe commodities from abroad. Beſides, thoſe made by Ruſſian workmen are ſold for one half, or a third part leſs than thoſe made by foreigners at Peterſburg and Moſcow; and the latter ſort will not do more than half or a third part of the ſervice. The Ruſſian peaſants are their own artiſts, and make all the utenſils they want. Shipbuilding is carried to great perfection here, the Ruſſian navy conſiſting, at this time, of a great number of capital ſhips of war.

It may not be improper, in this place, to relate the manner in which caviar is prepared, as it forms a conſiderable branch of their commerce. It is made of the roes of the fiſh called beluga, and the ſturgeon. The beſt is made of the beluga roes, and is of two ſorts, the granulated, and the preſſed. The former, which is moſt eſteemed, is prepared in autumn and winter, but the latter is made in ſummer, and both ſorts are expoſed to the ſouthern parts of Europe. The granulated ſort is firſt ſalted, after taking away the ſtringy part, with ſalt well cleaned, and made into brine: and, being drained from the oily parts, it is put into kegs for exportation. Caviar is moſt palatable when freſh and ſpread on bread with ſalt, leeks, and pepper, and is therefore ſent in the winter, frozen, to all parts of the empire; but it cannot well be exported freſh, as, without ſalt, it is ſoon tainted by warmth.

The Ruſſian empire is extremely well ſituated for commerce; and her exports are, iron, hemp, wood, hides, grain, pot-aſh, wax, cordage, copper, flax, furs, lintſeed, fiſh, leather, tallow, materials for ſhip-building, &c. The imports are, ſugar, beaver-ſkins, tin, dye-woods, ſhalloons, Norwich ſtuffs, braſs-wire, ſpirituous liquors, ſilk, ſpices, indigo, Engliſh beer, lead, cloths, flannels, Mancheſter velvets, wines, fruits, china, paper, &c. The commerce is with Great Britain, Ireland, Holland, France, Germany, Poland, Turky, Perſia, China, &c.

The Ruſſians were ſtrangers to the courſe of exchange, till it was introduced among them in the year 1670. Money was then ſo very ſcarce in this empire, that foreigners were obliged to barter their goods for thoſe of Ruſſia. Moſt of the foreign merchants then reſided at Moſcow, but took a journey in the ſummer to Archangel, where they had their warehouſes and factors. This practice continued till 1721, when, by order of Peter the Great, the ſeat of commerce was removed from Archangel to Peterſburg; on which the foreign traders removed their factories thither, where they are not allowed to keep the goods conſigned to them in their own warehouſes, but are obliged to depoſit them in magazines built for that purpoſe by the government, to which they pay rent for warehouſe room, in proportion to the quantity of their goods.

In Peterſburg, the merchants and traders, as in other countries, conſiſt of natives and foreigners. The former may ſell either by wholeſale or retail; but the latter by wholeſale only, and that to none but the natives: for they are not permitted to ſell any thing to one another, or to have any commercial dealings together. Moſt of the foreign traders at Peterſburg are only factors, and the reſt, who trade on their own bottoms, deal chiefly in grocery. The factors are intruſted with large capitals, and, without engaging in commerce for themſelves, may raiſe handſome fortunes. The Ruſſian traders, who bring goods to Peterſburg, and carry foreign commodities farther into the continent, do not reſide in that city, but annually bring their goods thither in May or June by water, and in September, October, and December, return with foreign commodities; but the wealthy ſave the fatigue of travelling, by ſending their factor to Peterſburg.

Foreign merchandize is generally ſold at a twelvemonth's credit; but Ruſſian commodities muſt be paid for on the delivery of the goods, except the natives find a difficulty in ſelling their ſtock; in which caſe they deal by way of exchange; yet will not barter goods for goods, but generally inſiſt on one fourth, one third, or one half of the value of the whole in ſpecie; and of late foreign merchants deal for the Ruſſian commodities by contract, and even advance the money to the Ruſſians in winter, upon condition of their delivering in the goods at a ſettled price the following ſummer; but theſe contracts are entered in the cuſtom-houſe books, for the greater ſecurity.

Conſiderable privileges in trade were enjoyed by the Engliſh, ſo early as the reign of the czar Iwan Baſilowitz, to whom Captain Chancellor delivered a letter from Edward VI. in 1553, and received a licence to trade, which was renewed by Peter the Great. In 1742 a treaty of commerce was concluded between Ruſſia and England, by which it was ſtipulated, that the Engliſh ſhould be allowed the privilege of ſending goods through Ruſſia into Perſia; but Captain Elton, an Engliſhman, having entered into the ſervice of Nadir Shah, and built ſhip on the Caſpian Sea

Sea for that monarch, the Ruſſians put a ſtop to this trade, to which the troubles in Perſia contributed. The Engliſh, however, ſtill carry on a conſiderable trade with Ruſſia, which exceeds that of any other nation.

Next to the Engliſh, the Dutch carried on the greateſt trade with the Ruſſians. Bills of exchange are drawn at Peterſburgh on Amſterdam only; on which account the traders of other countries, who give commiſſion for buying Ruſſian commodities at Peterſburgh, are obliged to procure credit, or to have proper funds at Amſterdam.

The trade to Peterſburgh is now carried to a great height, for the number of ſhips which entered that port in 1751, from England, Holland, France, Norway, Denmark, Lubec, Hamburgh, Stetin, Roſtoc, Kiel, Pruſſia, Sweden, and Dantzic, amounted to two hundred and ninety. Indeed there is no nation in the world more inclined to commerce than the Ruſſians are at preſent; but they are ſo full of chicanery and art, that a foreigner cannot be too much on his guard in his dealings with them.

The Ruſſian weights are a ſolothnic, which is one ſixth of an ounce, and is divided into halves, quarters, and eighths: a Ruſſian pound, equal to ninety-ſix ſolothnics: a pud, or pood, equal to thirty-ſix pounds averdupois: a berkowetz, equal to ten puds. The other weights are the ſame with thoſe of Germany. The meaſures of length are the arſhine, or Ruſſian ell, equal to twenty-eight inches and one tenth Engliſh meaſure; a werſoc, which is one ſixteenth of an arſhine; and a ſarſhen, or fathom, contains three arſhines.

The Ruſſian coins, ducats excepted, have all of them inſcriptions in the Ruſſian tongue. The gold coins are imperial ducats; and the largeſt ſilver coin is the ruble, the value of which riſes and falls according to the courſe of exchange. A ruble in Ruſſia is equal to an hundred copeiks, or four ſhillings and ſixpence ſterling. The other ſilver coins are half rubles, which are called poltinnics, and quarter rubles. A gryphe, or griwe, is of the value of ten copeiks, and ten griwes are equal to a ruble. The copper coins are, a copeik, which is of the value of about a halfpenny; a denga, or denuſhka, two of which make a copeik; and a poluſhka, which is a quarter of a copeik.

No foreign pieces are current in Ruſſia except ducats, Holland rixdollars, and Albert dollars.

The following coins, beſide the Ruſſian, are all current in Livonia: a white ſchelling, which is worth two black ſchellings: three of the former make one groſh; which is ſeven fifteenths of a penny: a farding, which is one groſh and a half: a Riga mark, which is ſix groſhes: a Poliſh guider, which is five Riga marks: a kopa-ſhock, or lowenthaler, equal to twenty-five groſhes; and a rix-dollar, at ſixty fardings value.

SECT. IX.

Containing the Ancient and Modern Hiſtory of the RUSSIAN EMPIRE.

IF we trace the Ruſſians to their original, they will appear to be as antient a people as any upon the face of the earth: for their anceſtors were thoſe Scythians who poſſeſſed Mount Caucaſus, or the Dagiſtan mountains, which lie between the Euxine and the Caſpian Seas, immediately after the flood; even before their brethren deſcended from the mountains of Armenia or Arrarat, into the plains of Meſopotamia between the Tigris and Euphrates, as has been ſhewn in the hiſtory of Germany. The term Ruſſe ſignifies a wanderer, as all the Scythians, or northern nations were, till very lately. If we only regard the time, when the Ruſſians and other tribes of Scythians, or Tartars, came to fix their habitations, and live in towns, we need not deſcend far into antiquity: for Kioff, or Kiow, upon the borders of Poland, is held to be the firſt town the Ruſſians built, and Volodomir their firſt prince, who reigned about the year of our Lord 1000. But it is not to be underſtood that the Scythians lived without any government till then; for government was certainly coeval with the world; but till then, the patriarchal form generally prevailed in Scythia, as it does in ſome parts of it (now called Tartary) to this day: and, indeed, in many other parts of the world, both in the eaſtern and weſtern continent, we find the patriarchial government ſtill prevail; and theſe, like other ſtates, will probably be united in time by force or compact, and grow up into kingdoms and empires. This country of Ruſſia, after the patriarchal form was aboliſhed, was governed by a multitude of petty ſovereigns, which are uſually ſtiled dukes, till Volodomir united ſeveral of theſe dukedoms into one, about the year 1000, and obtained the name of The Great Duke, and ſometimes was called Czar or Cæſar; forming one potent ſtate, which the ſovereigns of Cazan and Aſtracan becoming jealous of, made war upon the Ruſſians, and compelled them to become tributary to thoſe princes.

After this, John Baſilowitz, or Vaſiliwits Grotzden, united many more of theſe duchies under his government, and expelled the Tartars, who were then in poſſeſſion of the caſtle of Moſcow, in 1450, and ſubdued the provinces of Novogorod and Twere. His ſon added thoſe of Pleſkow and Smolenſko, and John Baſilowitz his grandſon, in 1540, conquered the kingdoms of Cazan and Aſtracan, and added Siberia to the Ruſſian domninions: and in his reign it was, that the Engliſh, commanded by captain Chancellor, arrived at Archangel, and began to trade with Ruſſia, which till then had never been viſited by the ſhips of any nation. The Caſſacks and Circaſſians, ſituated near the mouths of the Wolga, Don, and Nieper, ſubmitted to the czar Alexis Michaelowitz; and many of the Calmucks alſo acknowledged themſelves to be the ſubjects of this kingdom.

In 1613 Michael, deſcended from the czar John Baſilowitz, aſcended the throne of Ruſſia, by the unanimous conſent of the ſtates. He was ſucceeded in 1645, by his ſon Alexis Michaelowitz; after whoſe death, his ſon Theodore Alexowitz ſucceeded to the throne; who dying without iſſue in 1682, appointed John, his brother by the ſame mother, and Peter his half-brother, to reign, jointly, which they did, until the year 1696, when czar John died, leaving three daughters by his conſort Proſcovia Federowna Solticow, viz. the princeſs Anne, married to Frederic William, duke of Courland, the 13th of November, 1710; the princeſs Catherine, married to Charles Leopold, duke of Mecklenburg Schwerin, the 10th of April 1716, and the princeſs Proſcovia, who died unmarried.

The czar Peter was the ſon of czar Alexis Michaelowitz, by his ſecond wife Natolia Keritroun Neriſkin: he married the princeſs Ottokeſa Federowna, a ſubject of Ruſſia, by whom he had iſſue the czarowitz Alexis, born in 1690; but was divorced from his wife, in 1692. The young czar married the princeſs Charlotta Chriſtina Sophia, daughter of Lewis Adolphus, duke of Brunſwick-Wolfenbuttle, and ſiſter of the empreſs, conſort of Charles VI. in 1711, and died in priſon in 1721, being then under ſentence of death for a conſpiracy againſt his father Peter the Great, leaving iſſue a ſon named Peter Alexowitz, born in 1715, and afterwards emperor.

Peter the Great married to his ſecond wife the lady Catherina Alexonna, in 1711 (with whom he had cohabited ſome years before;) he had iſſue by her the princeſs Anne, married to Frederick duke of Holſtein, and the princeſs Elizabeth, who was afterwards crowned empreſs of Ruſſia. In the year 1695, Peter the Great entered into a war with the Turks; and the year following took Aſoph ſituated near the Palus Mæotis, which opened him a way into the Euxine ſea; and having determined to build a fleet, and ſhare the navigation of that with the Turks, and traffick with the nations bordering upon it (though he had not at that time a ſingle ſhip of war, or a ſhip carpenter in all his dominions) he reſolved to travel into the maritime countries of Europe, where he might meet with artiſts that could inſtruct him in ſhip-building, and to procure carpenters to return home with him, and aſſiſt in raiſing a royal navy. Nor did he propoſe only to qualify himſelf and his people for the ſea-ſervice, but to encourage all other arts and ſciences; and, by offering great rewards to learned men and mechanics, induce them to accompany him to Ruſſia.

Peter the Great firſt viſited Holland incognito, and, arriving at Amſterdam, took a houſe near the principal dock-yards, where he lived with ſome of his noblemen, and worked part of the day with the ax among the ſhipbuilders, as he obliged the noblemen, who attended him, to do, dreſſed in the habit of Dutch ſkippers. Another part of the day was taken up with rowing and ſailing upon the water; and ſometimes he made viſits to the Dutch burghers, with whom he would be very merry, having learned Dutch of the factors of that nation, before he ſet out from Moſcow; but having ſeen ſome Engliſh ſhips while he was in Holland, he was much better pleaſed with their beauty and proportion, than with thoſe of the Dutch: whereupon he determined to viſit England, and having communicated that deſign to king William, who was then in Holland, a convoy was provided to attend him thither; but

but ſtill chuſing to remain incognito, a houſe was taken for him, when he arrived at London, in York Buildings, near the Thames, where he reſided but a little while; for the conſtruction of ſhips being his chief buſineſs, he removed to Mr Evelin's houſe at Deptford, which opened into the king's yard, being attended by the marquis of Carmarthen, ſon to the duke of Leeds, who was then one of the Engliſh admirals. Here the builders communicated to the czar their draughts, and the manner of laying down by proportion any ſhip or veſſel of any bulk whatever, with the rules for, and building a ſhip according to it, which he ſaw practiſed with much pleaſure both in the king's and merchants yards, which made him repent his having ſpent ſo much time in Holland, where their method is leſs artificial, obſerving, that he ſhould have been a bungling ſhip-builder, if he had not viſited England, and declaring he would have all his ſhips built after the Engliſh model: he took ſeveral builders home with him, to whom he offered conſiderable ſalaries. The chief of theſe builders, was a ſon of Sir Anthony Dyer, who was ſent to France by the court of England, in the reign of Charles II. to inſtruct the French in ſhip building, who choſe alſo to follow our models, and, it is ſaid, have improved upon us of late. He ſeemed extremely pleaſed with the marquis of Carmarthen, who worked with him in the king's yards, and ſailed with him on the Thames, ſhewing him how near the wind a veſſel might ſail, and what way ſhe would make when the wind was contrary, as well as when it was fair; and as an acknowledgment for the ſervices the marquis had done him, he made him a grant of the ſole importation of Tobacco in his dominions.

During his ſtay in London, the czar was never idle: he attended the founderies for great guns and mortars, and enquired into almoſt every mechanic art: and having reſided here between three and four months, king William made him a preſent, on his return, of the fineſt yacht in England, called the Royal Tranſport, built like a frigate, and carrying twenty-four guns, which had been contrived by the marquis of Carmarthen, to carry the king over to Holland, during the war with France.

In 1698, the czar arrived at Vienna, in his way from England towards Ruſſia, and received advice of a conſpiracy in his dominions to depoſe him, and declare his throne vacant, ſince he had remained ſo long abſent from his dominions: but arriving at Moſcow, he found that general Gordon, a native of Scotland, had defeated the diſaffected, and all was quiet there. The next year was taken up in improving his revenues, and diſciplining his army; but, above all, in increaſing his navy, which, in three years time conſiſted of forty men of war, ten frigates, bomb-veſſels, &c. twenty whole gallies, and thirty half gallies.

This prince, in the year 1700, entered into a confederacy with the Poles, Danes, and Brandenburghers, againſt the young king of Sweden, under pretence that the Swedes had poſſeſſed themſelves of ſome places in Ingria that belonged to the Ruſſians; and the reſt of the confederates made much the ſame pretenſions; for which ſome of them paid very dear in the enſuing war, and particularly the czar, who having beſieged Narva with one hundred thouſand men, his army was defeated by eighteen thouſand Swedes commanded by Charles XII. in perſon, and the ſiege raiſed. Voltaire relates, that there were but eight thouſand men in the Swediſh army, and that it was one of the moſt terrible defeats that ever was known, the Swedes killing eighteen thouſand Ruſſians, and taking as many priſoners, among whom were moſt of their general officers. But a more particular account of this battle will be found in the hiſtory of Sweden.

The czar, at the time of this battle, was marching at the head of forty thouſand men towards Narva, in order to ſurround the Swedes on every ſide; but receiving advice of the defeat of his army before that town, he thought fit to retire; ſaying, "he knew the Swedes would be victorious for ſome time; but, they would, in the end, teach the Ruſſians to beat the Swedes." The citizens of Moſcow were in ſuch a conſternation, when they underſtood the ill ſituation of their affairs, that they imputed their misfortunes to the force of magick: nothing but a ſupernatural power, they imagined, could have defeated ſo fine an army as lay before Narva: ſo much were they perſuaded of this, that prayers were ordered to be put up to St. Nicholas, the patron of their nation, to protect them againſt theſe deviliſh Swedes: the form of one of them being of the following tenor: "O thou, who art our perpetual comforter in all our adverſities, great St. Nicholas, infinitely powerful; by what ſin have we offended thee, in our ſacrifices, genuflexions, bowings, and thankſgivings, that thou haſt forſaken us? We have implored thy aſſiſtance againſt theſe terrible, inſolent, enraged, dreadful, inſuperable deſtroyers; when, like lions and bears, who have loſt their young, they have fallen upon us, terrified, wounded, and ſlain by thouſands, us who are thy people. As it is impoſſible this ſhould have happened without diabolical influence and inchantment, we beſeech thee, O great St. Nicholas, to be our champion and ſtandard-bearer, to deliver us from this troop of ſorcerers, and drive them far from our coaſts, with the recompence which they deſerve."

After the victory gained by the king of Sweden at Narva, he marched the whole length of Livonia, and having obliged the Saxons to raiſe the ſiege of Riga, gained another victory over them upon the banks of the Dwina. He then purſued the Saxons into Poland, and obtained a third victory near Cracow: but having left no more than eight thouſand men in Livonia, the Ruſſians, who had introduced near one hundred thouſand men into that province, ſurrounded the Swediſh general Slippenbock, and deſtroyed all his infantry, though that general broke through with his horſe, and retreated to Pernaw, a port-town on the Livonian ſea; and there remaining no force to defend the open country, the Ruſſians plundered Livonia from one end to the other, making a multitude of priſoners, and driving them in chains as far as Aſtracan, where moſt of them periſhed. The Ruſſians afterwards ſurpriſed Dorpt, and took Narva by ſtorm, putting to death all they found in arms, and giving the plunder of the town to the ſoldiers. Thus did this hero, the king of Sweden, abandon his faithful Livonian ſubjects, in order to depoſe Auguſtus king of Poland.

Riga was afterwards ſurrendered to the czar, being in a manner depopulated by the plague: the whole province was ſoon after reduced by the czar's forces, and Marienburg among the reſt, where a young virgin, or, as ſome relate, a wife, was taken priſoner, in 1702, whom czar Peter advanced to the imperial throne in his life-time, and appointed his ſucceſſor after his deceaſe. She was called by the name of Catharine, being the daughter of a poor woman, who lived in a neighbouring village, as Voltaire relates. She never knew her father, but was baptized by the name of Martha, and regiſtered among the baſtard children. The vicar of the pariſh took her, and charitably provided for her until ſhe was fourteen years of age, and then ſhe was retained in the ſervice of a Lutheran miniſter, whoſe name was Gluck, in the city of Marienburg. Being about eighteen years old, ſhe married a Swediſh dragoon, in 1702, who going out the ſame day, or the next, upon a party that was defeated by the Ruſſians, he was never heard of more; and ſome few days after, ſhe herſelf was made priſoner by the Ruſſian general Czeremetoff, who made a preſent of her to prince Menzikoff, who finding her genius as well as beauty, exceeding any thing he had ever met with in the ſex, could not forbear boaſting before the czar, of the preſent which had been made him; and he repreſented her in ſo amiable a light to that prince, that he immediately commanded her to be ſent for; at which, it is ſaid, Menzikoff trembled, when, too late he ſaw his error, being deeply ſmitten with her charms himſelf, as the czar alſo was, as ſoon as ſhe appeared; and from that hour he entertained her in his palace, he obſerving in her an aſtoniſhing capacity; and after a thorough experience of the greatneſs of her ſoul, he proceeded to marry her in the year 1711. During his reign, ſhe acted the part both of a miniſter and a general; her advice was regarded more than that of any of his council, and ſhe attended him both in his land and naval expeditions, extricating him out of the greateſt difficulties, particularly in the battle he fought with the Turks on the banks of the river Pruth, and in the ſea-fight with the Swedes in the gulf of Finland: ſhe renounced the Lutheran religion, in which ſhe had been educated, on her marriage with the czar, and profeſſed herſelf of the Greek communion, being re-baptized according to the rites of the Ruſſian church. But to return to the part the Ruſſians had in this war.

While the king of Sweden was employed in depoſing king Auguſtus, and advancing Staniſlaus to the throne of Poland, the czar marched into Lithuania at the head of fifty thouſand men, and made himſelf maſter of that whole province, and of the duchy of Courland: king Charles being at that time purſuing Auguſtus into his German dominions: The Ruſſians and Saxons alſo having united their forces in Great Poland, defeated an army of eight thouſand Swedes and fourteen thouſand Poles, of

the

the party of king Staniſlaus, commanded by the Swediſh general Mardefield, which would have given Auguſtus an opportunity of remounting his throne, if his plenipotentiaries, appointed to treat with thoſe of Sweden, had not, at that inſtant, concluded a treaty, whereby king Auguſtus was obliged to relinquiſh the crown of Poland, and acknowledge Staniſlaus the lawful king; which he thought fit to ſubmit to, rather than provoke king Charles to deſtroy Saxony, of which he was then poſſeſſed.

As the czar paid no regard to the treaty Auguſtus had concluded with the Swedes, he therefore introduced ſtill more forces into Poland, with which he plundered the eſtates of all ſuch as appeared to be in the intereſt of Staniſlaus, ſending all the furniture, pictures, libraries, ſtatues and curioſities he found in the palaces or noblemen's houſes, to Moſcow, and rendering the country a perfect deſart. The czar afterwards taking up his quarters at Grodno, and cantoning the greateſt part of his army in the province of Lithuania, the king of Sweden advanced towards him in the month of January, and having paſſed the river Niemen, within two leagues of Grodno, before the czar knew any thing of his march, the czar left the town by the north gate, when Charles entered by the ſouth. The king had with him about ſix hundred of his guards, the reſt not being able to follow him, and the czar fled with above two thouſand men, upon ſuppoſition that the whole army was entering into Grodno; but having learnt that very day from a Poliſh deſerter, that he had quitted the place to no more than ſix hundred men, and that the body of the enemy's army was ſtill above five leagues diſtant, he loſt no time, but ſent a detachment of one thouſand five hundred horſe in the evening to ſurprize the king of Sweden in the town. The one thouſand five hundred Muſcovites, aſſiſted by the darkneſs of the night, advanced as far as the firſt Swediſh guard without being known; this guard conſiſted of thirty men, and they alone ſuſtained the effort of one thouſand five hundred for half a quarter of an hour.

The king, who lay at the other end of the town, came up preſently with his ſix hundred guards, and the Muſcovites fled with precipitation: his army was not long without joining him, nor he without purſuing the enemy. All the Muſcovite troops, diſperſed in Lithuania, retired in haſte eaſtward into the Palatinate of Minſky, near the frontiers of Moſcovy, where the rendezvous was appointed. The Swedes, whom the king alſo divided into ſeveral bodies, did not ceaſe to purſue them for above thirty leagues of their way: thoſe who fled, and thoſe who purſued, made exceſſive hard marches almoſt every day, though in the midſt of winter. All ſeaſons had been long equal to the ſoldiers of Charles and of the czar; the ſole terror which the name of Charles carried with it, then made the difference between the Moſcovites and the Swedes.

Nothing but moraſſes, deſarts, mountains, and immenſe foreſts, lie eaſtward from Grodno to the Boriſthenes: in ſuch places as are cultivated, there was no proviſion to be found: the country people buried all their grain under-ground, and whatever elſe could be preſerved there. In order to diſcover theſe ſubterraneous magazines, they were obliged to ſound the earth with long poles pointed with iron. The Muſcovites and Swedes ſerved themſelves with theſe proviſions by turns: but they were not always found, and, when they were, they did not prove ſufficient.

Theſe difficulties were foreſeen by the king of Sweden, who had provided biſcuit for the ſubſiſtence of his army, ſo that he met with no interruption in his march. After he had croſſed the foreſt of Minſky, where his men were obliged to cut down trees to make way for his artillery and baggage, he found himſelf, on the 25th of June 1708, before the river Berezine, over againſt Boriſlow. The czar had collected together in that place the beſt part of his troops, and intrench'd himſelf to advantage; his deſign being to hinder the Swedes from paſſing that river. Charles poſted ſome of his regiments on the banks of the Berezine, directly againſt Boriſlow, as though he meant to attempt the paſſage in ſight of the enemy. At the ſame time he led his army about three leagues up the river; and having thrown a bridge over it, made his way through a body of three thouſand men, who defended that poſt, and marched to the enemy without ſtopping. The Muſcovites did not wait, however, for his coming up, but immediately decamped, and retreated towards the Boriſthenes, ſpoiling all the roads, and ſpreading deſtruction wherever they paſſed, that by this means they might retard the progreſs of the Swedes. But Charles ſurmounted all difficulties; and advancing ſtill towards the Boriſthenes, he met with twenty thouſand Muſcovites in his way, intrenched in a place called Holloſin, behind a moraſs, which could not be come at without paſſing a river. The Swediſh hero did not wait for the aſſault till the reſt of his infantry joined him, but threw himſelf into the water at the head of his foot guards, and croſſed the river, with the water ſometimes above his ſhoulders. While he thus marched againſt the enemy, he ordered his horſe to paſs round the moraſs, and fall upon them in flank.

The Muſcovites, aſtoniſhed that no barrier could defend them, were routed; and the Swediſh horſe, having made their way through the enemy, joined the king in the midſt of the battle. He then mounted on horſeback; but ſome time after, finding a young Swediſh gentleman, named Gullenſtiern, whom he very much eſteemed, wounded in the field, and unable to march, he obliged him to take his horſe, and continued to command on foot at the head of his infantry. Of all the battles he had ever fought, this, in all probability, was the moſt glorious; for here he was expoſed to the moſt dangers, and ſhewed the greateſt abilities: the memory of it is preſerved by a medal, with the inſcription, "Sylvæ, paludes, aggeres, hoſtes victi, that is, "woods and marſhes paſſed, armies and enemies ſubdued," on one ſide; and on the other, "Victrices copias alium laturum in orbem," that is, "marching with his victorious troops into a new world." The Muſcovites, being thus obliged to fly, repaſſed the Boriſthenes, which ſeparates the dominions of Poland from their own country.

Charles loſt no time in the purſuit; he croſſed that river after them at Mohilou, the laſt town in Poland, which ſometimes belongs to the czar, and ſometimes to the Poles, according to the common fate of frontier places. And the czar, thus ſeeing his empire, in which he was giving birth to arts and trade, become a prey to a war which in a little time might ruin all his projects, and perhaps take from him his throne, was inclined to a peace, and even condeſcended to tranſmit propoſals, by a Poliſh gentleman, to the Swediſh army. Charles XII. who had not been uſed to grant peace to his enemies, anſwered, "I will treat with the czar at Moſcow." When this haughty anſwer was reported to the czar, "my brother Charles, ſays he, ſtill affects to act the Alexander; but I flatter myſelf he will not find a Darius in me." About thirty leagues northward from Mohilou, the place where the king paſſed the Boriſthenes, along the river, and ſtill upon the frontiers of Poland and Moſcovy, is ſituated the country of Smolenſko, in which lies the great road from Poland to Moſcow. The way the czar retreated, and the Swedes followed by long marches, and ſo cloſe, that part of the rear-guard of the Moſcovites was frequently engaged with the dragoons of the Swediſh van-guard. The latter had generally the advantage; but they weakened themſelves even by conquering, in theſe ſmall ſkirmiſhes, which were never deciſive, and in which they always loſt abundance of men.

On the 22d of September, in the year 1708, the king attacked a body of ten thouſand horſe, and ſix thouſand Calmucks near Smolenſko. He fell upon this army with only ſix regiments of horſe, and four thouſand foot, broke their ranks upon the firſt onſet, at the head of his Oſtrogothick regiment, and forced the enemy to retreat. He advanced upon them through rough and hollow ways, where the Calmucks lay hid; they then appeared again and threw themſelves between the regiment where the king was fighting, and the reſt of the Swediſh army. The Moſcovites and Calmucks in an inſtant ſurrounded this regiment, and made their way quite up to his majeſty. They killed two aides de camp who fought near his perſon; the king's horſe was ſlain under him, and as one of his equerries was preſenting him another, both the equerry and horſe were ſhot dead upon the ſpot.

Charles fought on foot, encircled by ſome of his officers, who immediately flew to relieve him by ſurrounding him. Several of them were taken, wounded or ſlain, or carried off to a diſtance from the king by the multitude that fell upon them, ſo that only five men were left about him. He was quite ſpent with fatigue, having killed above a dozen of the enemy with his own hand, without receiving ſo much as one wound, by that inexpreſſible good fortune, which, till then, had ever attended him, and upon which he ſtill relied. At laſt Colonel Dardoff forced his way through the Calmucks, with a ſingle company of his regiment, and came time enough to diſengage the king. The reſt of the Swedes put the Tartars to the ſword, the army recovered its ranks, Charles mounted his horſe,

horſe, and fatigued as he was, purſued the Moſcovites for ſeveral miles.

The king was ſtill in the great road from Smolenſko (near to which this great battle was fought) to Moſcow, which is about three hundred miles diſtant, and the roads in themſelves not worſe than thoſe through which the Swedes had already paſſed; but they had information, that the czar had not only made all theſe roads impaſſable, either by laying ſuch parts of them under water as lay near the marſhes, or by digging very deep ditches at certain diſtances, or by covering the way with the wood of whole foreſts, which his ſoldiers had cut down; but alſo they learnt that he had ſet fire to all the villages, both on the right and left of the road.

The winter was now coming on, and there was little appearance of making any ſpeedy advances into the country, and none of ſubſiſting there; and as the whole body of Moſcovite forces might unexpectedly fall upon the king of Sweden through bye-ways, which he was not acquainted with; Charles therefore made a review of his whole army, and by an account taken of their proviſions, found that he had not enough to ſubſiſt them above fifteen days. General Lewenhaupt, who was appointed to bring him a ſupply, with a reinforcement of fifteen thouſand men, was not come up; ſo he reſolved to quit the road to Moſcow, and turn to the ſouth towards Ukrania, into the country of the Coſſacks; whereupon the Swediſh army was ordered to march towards that ſide of the country, to the great aſtoniſhment of all the officers.

Charles ſent orders to Lewenhaupt to bring his troops and proviſion with all ſpeed into Ukrania, where he deſigned to paſs the winter; that having ſecured that country to himſelf, he might conquer Moſcovy the next ſpring, and in the mean time he advanced towards the river Deſna, which falls into the Boriſthenes at Kiof. The obſtacles they had hitherto encountered in their march, were trifles to thoſe they met with in this new road. They were obliged to croſs a foreſt full fifty leagues broad, which abounded in marſhes. General Lapcom, who marched before with five thouſand men and pioneers, led the army thirty leagues eaſtward out of the right way, and they had marched four days before the king diſcovered the miſtake. They with difficulty gained the right road again, but left almoſt all their artillery and waggons behind, which were either ſtuck faſt, or quite ſunk in the mud. In this painful and laborious manner they marched for twelve days, till they had eat up the little biſcuit that was left, and then they arrived, quite ſpent with hunger and wearineſs, upon the banks of the Deſna, in the place where Mazeppa, general of the Coſſacks, had appointed to meet them; but inſtead of that prince, they found, on the other ſide of the river, a body of Muſcovites advancing towards them.

Charles was very much aſtoniſhed, but reſolved immediately to paſs the Deſna, and attack the enemy. The banks of the river were ſo ſteep, that they were obliged to let the ſoldiers down with cords; and they croſſed it in the uſual manner, ſome by ſwimming, and others by floats haſtily made. The body of Moſcovites, which arrived at the ſame time, were not above eight thouſand men, ſo that they made but ſmall reſiſtance, and this obſtacle was alſo ſurmounted. The king advanced farther into this wretched country, uncertain of his road, and Mazeppa's fidelity. Mazeppa appeared at laſt, but rather as a fugitive, than a powerful ally. The Muſcovites had diſcovered and prevented his deſign of joining the Swedes: they had fallen upon the Coſſacks, and cut off many of them: his principal friends were taken, and thirty of them had been broke upon the wheel. His towns were laid in aſhes, his treaſures plundered, the proviſions he was preparing for the king of Sweden ſeized; and he was ſcarce able to eſcape himſelf with 6000 men, and ſome few horſes loaded with gold and ſilver. However, he gave the king hopes of ſupporting him by his intelligence in this unknown country; and the Coſſacks, enraged againſt the Muſcovites, came in troops to the camp, and brought them proviſions. Charles hoped alſo that general Lewenhaupt would have come and repaired this ill fortune. He was to bring with him fifteen thouſand Swedes, (more valuable than one hundred thouſand Coſſacks) with proviſions and ammunition; and he arrived at laſt, but almoſt in the ſame condition as Mazeppa had done.

General Lewenhaupt had paſſed the Boriſthenes above Mohilou, and advanced twenty leagues farther on the road to Ukrania, with eight thouſand waggons, and the money he had raiſed in Lithuania; but as he was upon his march near the place where the rivers Pronia and Soſſa join and fall into the Boriſthenes, the czar appeared at the head of fifty thouſand men. The Swediſh commander, who had not quite ſixteen thouſand men, reſolved not to intrench. Their many victories had inſpired the Swedes with ſo much confidence, that they never enquired after the number of the enemy, but only where they lay. Lewenhaupt therefore marched againſt them without heſitation, on the 7th of October, 1708, in the afternoon. Upon the firſt onſet, they killed fifteen hundred Muſcovites. The czar's army fell into confuſion, and fled on all ſides, and the emperor of Ruſſia was upon the point of ſeeing himſelf entirely defeated. He perceived that the ſafety of his dominions depended upon the action of that day, and that he was utterly undone, if Lewenhaupt joined the king of Sweden with a victorious army. As ſoon as he ſaw his troops begin to fall back, he ran to the rear guard where the Coſſacks and Calmucks were poſted: "I charge you (ſays he) to fire upon every man that runs away, and even to kill me, if I ſhould be ſo cowardly as to turn my back." From thence he returned to the van guard, rallied his troops in perſon, aſſiſted by Prince Menzikoff and Prince Galliciſin. Lewenhaupt, who had preſſing orders to join his maſter, choſe rather to continue his march, than renew the fight, thinking he had done enough to diſcourage the enemy from haraſſing him in his way. The czar, at eleven the next morning, attacked him at the entrance of a moraſs, and drew out his army at length, that he might ſurround him. The Swedes faced about, and the fight laſted two hours with equal reſolution. The Muſcovites loſt three times as many men as the Swedes; but ſtill kept their ground. At four in the afternoon, general Bauer brought the czar a ſupply of troops: The battle was then renewed for the third time, with more fury than ever, and laſted till night came on: at laſt numbers carried it. The Swedes were broke, routed, and driven as far as to their baggage: Lewenhaupt rallied his troops behind his waggons, and though the Swedes were conquered, they did not fly; they were about nine thouſand, and not a man of them ran away; and the general drew them up as eaſily in order, as though they had never been beaten. The czar, on the other ſide, paſſed the night under arms, and commanded his officers under pain of being caſhiered, and his ſoldiers under pain of death, not to ſtir for plunder.

The next morning at day-break, he ordered a freſh aſſault; Lewenhaupt having retired to an advantageous ground at ſome miles diſtance, after having nailed down part of his cannon, and ſet fire to his waggons. But the Muſcovites coming time enough to hinder the whole convoy from being conſumed in the flames; they ſeized upon ſix thouſand waggons, which they ſaved. The czar, who was deſirous of completing the defeat of the Swedes, ſent General Flug to fall upon them again, the fifth time; and the general offered them an honourable capitulation. Lewenhaupt refuſed it, and the fifth battle was as bloody as any of the former: Of the nine thouſand ſoldiers he had left he loſt one half, and the other remained unbroken. At laſt, night coming on, Lewenhaupt, after having ſuſtained five battles againſt fifty thouſand men, ſwam over the Soſſa, followed by the five thouſand men, he had left alive, and the wounded were carried over on floats. The czar loſt about twenty thouſand Muſcovites in theſe five engagements, in which he had the glory of conquering the Swedes, and Lewenhaupt the reputation of diſputing the victory for three days, and of retreating without being broken at laſt. He then came to his maſter's camp with the honour of having made ſo good a defence, but brought with him neither ammunition nor army. King Staniſlaus would have been glad to have joined Charles at the ſame time; but the Muſcovites, who had defeated Lewenhaupt, lay in his way. The king of Sweden thus found himſelf without proviſions or communication with Poland, ſurrounded with enemies, in the midſt of a country where he had ſcarce any refuge but his courage.

The memorable winter of 1708, which was ſtill more terrible in thoſe frontiers of Europe, than it was in France, carried off part of his army. Charles reſolved to brave the ſeaſons, as he had done his enemies, and ventured to make long marches with his troops during the exceſſive ſeverity of the weather. It was in one of thoſe marches, that two thouſand of his men were ſtarved to death, almoſt before his eyes: The horſemen had no boots, and the foot had no ſhoes, and almoſt without cloaths: they were forced to make ſtockings of the ſkins of beaſts in the beſt manner they could: they often wanted bread: they were obliged to throw the beſt part of their cannon into quagmires and rivers, for want of horſes to draw them. So that this once flouriſhing army was reduced to twenty-four thouſand men, ready to periſh with hunger. They neither received news from Swe-

den,

den, nor were they able to ſend thither. In this condition, one ſingle officer complained: how, ſays the king, are you uneaſy, that you are ſo far from your wife? if you are a ſoldier indeed, I will carry you to that diſtance, that you ſhall ſcarce hear from Sweden once in three years. A ſoldier grumbling, ventured to preſent him, in the preſence of the whole army, with a piece of bread that was black and mouldy, made of barley and oats, the only food they then had; nor had enough of this. The king received the piece of bread without the leaſt emotion, ate it up entirely, and then ſaid coldly to the ſoldier, "It is not good, but it may be eaten." This little turn (if any thing may be called little that ſerves to increaſe reſpect and confidence) contributed more than all the reſt to ſupport the Swediſh army under thoſe extremities, which under any other general would have been intolerable.

The czariſh monarch, who was as active as the king of Sweden, after having ſent freſh forces into Poland, to the aſſiſtance of the confederates united under general Smianſki againſt Staniſlaus, advanced very ſoon into Ukrania, in the midſt of this ſevere winter, to oppoſe the king of Sweden. He continued there with a view of weakening the enemy by ſmall engagements; for by this means he thought the Swediſh army muſt be ruined entirely at laſt, as it could not be recruited whilſt he was able to draw freſh forces continually out of his own dominions. The cold there muſt have been exceſſive indeed, ſince it obliged the two enemies to agree upon a ſuſpenſion of arms.

On the firſt of February, they began to engage again, in the midſt of ice and ſnow; after ſeveral ſmall ſkirmiſhes, and ſome diſadvantages, the king's army was reduced in April, to eighteen thouſand Swedes. Mazeppa alone, the prince of the Coſſacks, ſupplied them with the neceſſaries of life: without his aſſiſtance, the army muſt have periſhed by hunger and hardſhips. The czar, in this conjuncture offered conditions to Mazeppa, to draw him again into his ſervice. But the Coſſack continued faithful to his new ally, whether it were through fear of the terrible puniſhment of the wheels by which he had loſt his friends, or whether through a deſire of revenge.

Charles, with his eight thouſand Swedes and as many Coſſacks, had not laid aſide the deſign or hopes of penetrating as far as Moſcow. Towards the end of May he went to lay ſiege to Pultowa, upon the river Vorkſlat, on the borders of Ukrania, about thirteen long leagues eaſt of the Boriſthenes, where the czar had a magazine. If the king took it, the road to Moſcow would then be open to him; and in the abundance he ſhould then poſſeſs, he could at leaſt wait for the coming up of the ſuccours he ſtill expected from Sweden, Livonia, Pomerania, and Poland. His ſole refuge, then, being in the conqueſt of Pultowa, he carried on the ſiege with vigour. Mazeppa who had a correſpondence in the town, aſſured him, he would ſoon be maſter of it; and hope began to revive in his army. His ſoldiers looked upon the taking of Pultowa as the end of all their miſeries. The king perceived, from the beginning of the ſiege, that he had taught his enemies the art of war. Prince Menzikoff, notwithſtanding all his precautions, threw freſh troops into the town; and the garriſon by this means, amounted to almoſt ten thouſand men. The king continued the ſiege with ſtill more warmth: he carried the advanced works, gave two aſſaults to the body of the place, and took the courtine.

The ſiege was in this condition, when the king, having rode into the river, to take a nearer view of ſome works, received a ſhot from a carbine, which pierced through his boot, and ſhattered a bone of his heel. There was not the leaſt alteration obſerved in his countenance, by which it could be ſuſpected that he was wounded; he continued calmly to give orders, and remained near ſix hours on horſeback afterwards. One of his domeſtics, at laſt, perceiving that the ſole of his boot was bloody, made haſte to call the ſurgeons; and his pain then began to be ſo ſharp, that they were forced to take him off his horſe, and carry him to his tent. The ſurgeons, looking upon the wound, obſerved, that it already began to mortify, and were of opinion that the leg muſt be cut off. The army was in the utmoſt conſternation; but one of the ſurgeons, named Newman, who was better ſkilled, and more courageous than the reſt, was poſitive, that, by making deep inciſions, he could ſave the king's leg. "Fall to work, then, preſently, ſaid the king; cut boldly, fear nothing." He held the leg himſelf with both his hands, looking upon the inciſions that were made, as though the operation had been performed upon another perſon. As they were laying on the dreſſing, he gave orders for an aſſault the next morning; but the orders were ſcarce given, before word was brought him, that the czar appeared with an army of above ſeventy thouſand men: he was, therefore, obliged to take another reſolution. Charles, wounded and incapable of acting, ſaw himſelf incloſed between the Boriſthenes, and the river which runs to Pultowa, in a deſart country, without any places of ſecurity, or ammunition, and expoſed to an army, which had prevented him either from retreating, or being ſupplied with proviſions. In this extremity he aſſembled no council of war, as might have been expected; but, on the 7th of July, at night, he ſent for mareſchal Renchild into his tent, and ordered him without deliberation, and without uneaſineſs, to prepare to attack the czar the next morning. Renchild did not diſpute his maſter's will, but went out with a reſolution to obey him. At the door of the king's tent, he met count Piper, with whom he had long been at variance, as it often happens between the miniſter and the general. Piper aſked him if any thing new had happened? no, ſays the general, coldly, and paſſed on to give his orders. As ſoon as Piper was entered into the tent, "has Renchild ſaid any thing to you?" ſays the king to him. "Nothing," anſwers Piper. "Well then, replies the king, I tell you, that to-morrow we ſhall give battle." Count Piper was aſtoniſhed at ſo deſperate a reſolution; but knew well, that his maſter could not be prevailed on to change his opinion; he only expreſſed his aſtoniſhment by his ſilence, and left the king to ſleep till break of day.

On the 8th of July 1709, the deciſive battle of Pultowa, was fought between the two moſt celebrated monarchs then in the world: Charles XII. illuſtrious by a courſe of nine years victories, and Peter Alexowitz, by nine years of fatigues ſpent in training up his troops to an equality with the Swedes: the one glorious for having given away others dominions, the other for having civilized his own; Charles in love with danger, and fighting only for glory; Alexowitz not flying from danger, and making war only for intereſt: the Swediſh monarch liberal through a greatneſs of ſoul, and the Moſcovite never generous but for ſome private end: the one ſober and continent beyond example, naturally brave, and never cruel but once; the other, having not yet worn off the roughneſs of his education, or the brutality of his country, as terrible to his ſubjects, as wonderful to ſtrangers, and much addicted to exceſs of pleaſures that ſhortened his days. Charles had the title of invincible, which one unhappy moment robbed him of; but the nations around had already given Peter Alexowitz the name of Great, of which no defeat could deprive him, as no victories gave it to him.

In order to have a clear idea of this battle, and the place where it was fought, we muſt imagine Pultowa lying on the north, the camp of the king of Sweden on the ſouth, drawing a little towards the eaſt, and his baggage about a mile behind him; and the river of Pultowa on the north of the town, running from eaſt to weſt.

The czar had paſſed the river about a league from Pultowa towards the weſt, and was beginning to form his camp. At day-break, the Swedes appeared out of their trenches with four cannon, being their whole artillery; the reſt were left in the camp with about three thouſand men; and four thouſand remaining with the baggage. So that the Swediſh army, which marched againſt the enemy, conſiſted of about twenty-five thouſand men, whereof there were not above twelve thouſand regular troops.

The Swediſh generals Renchild, Field, Lewenhaupt, Slippenback, Hoorn, Sparre, Hamilton, the prince of Wirtemberg, who was related to the king, and ſome others, moſt of whom had ſeen the battle of Narva; put the ſubaltern officers in mind of that day, when eight thouſand Swedes had deſtroyed an army of an hundred thouſand Ruſſians in their intrenchments: the officers ſaid the ſame thing to the ſoldiers, and all encouraged one another as they marched. The king conducted the march, carried in a litter, at the head of his foot. A party of horſe advanced by his order to attack that of the enemy: the battle began with this engagement at half an hour after four in the morning. The enemy's horſe lay weſtward on the right of the Ruſſian camp, prince Menzikoff and count Gallowin had placed them at diſtances between redoubts fortified with cannon. General Slippenback, at the head of the Swedes, fell upon them. All who had ſerved in the Swediſh troops knew that it was almoſt impoſſible to reſiſt the fury of their firſt ſhock. The Muſcovite ſquadrons were broken and routed; the czar himſelf began to rally them, and his hat was ſhot through with a muſket ball; Menzikoff had three horſes killed under him, and the Swedes cried out victory.

Charles did not doubt but the battle was gained; he had

had diſpatched general Creuts, about midnight, with five thouſand horſe or dragoons, who were to take the enemy in flank, whilſt he attacked them in front; but his misfortune was, that Creuts loſt his way, and did not appear. The czar, who began to deſpair, by this accident had time to rally his horſe, and fell upon the king's cavalry in his turn, which not being ſupported by Creuts's detachment, was broken, and Slippenback taken priſoner in the engagement: at the ſame time ſeventy-two cannons from the camp played upon the Swediſh horſe, and the Ruſſian foot advanced to attack the Swediſh infantry. The czar, by a preſence of mind and a penetration, which in ſuch moments belongs only to men that are truly great, immediately detached prince Menzikoff to poſt himſelf between Pultowa and the Swedes. Prince Menzikoff executed his maſter's orders with dexterity and readineſs, and not only cut off all communication between the Swediſh army and the troops remaining in the camp before Pultowa, but meeting with a corps de reſerve of three thouſand, he ſurrounded and put them to the ſword.

The Muſcovite foot, in the mean time, came out of their lines, and advanced in order into the plain. On the other ſide, the Swediſh horſe rallied within a quarter of a league from the enemy's army; and the king, aſſiſted by general Renchild made a diſpoſition for a general engagement. He ranged what troops were left him in two lines; his foot were poſted in the center, and his horſe made up the two wings. The czar diſpoſed his army in the ſame manner, he had the advantage of numbers, and of ſeventy-two cannon; whilſt the Swedes had no more than four, and began to want powder. The emperor of Ruſſia was in the centre of the army, having then the title only of major-general, and ſeemed to ſerve under general Czeremetoff: but he went as emperor from rank to rank, mounted on a Turkiſh horſe, which was a preſent from the Grand Signior, exhorting the officers and ſoldiers, and promiſing every one of them rewards.

Charles did all he could to ſit his horſe, at the head of his troops; but finding the poſture too painful, he returned to his litter, holding his ſword in one hand, and a piſtol in the other. At nine in the morning, the battle was renewed: one of the firſt diſcharges of the Muſcovite cannon carried off the two horſes of the king's litter; he cauſed two others to be put to it, and a ſecond volley broke the litter in pieces, and overturned the king. The troops which fought near him, believed him killed. The Swedes in a conſternation loſt ground, and their powder failing, and the enemy's cannon continuing to play upon them, the firſt line fell upon the ſecond, and the ſecond fled. In this laſt action, the Swediſh army was routed by a ſingle line of ten thouſand men of the Muſcovite foot; ſo much were matters changed. The king carried upon pikes by four grenadiers, covered with blood, and all over bruiſed by his fall, and ſcarce able to ſpeak, cried out, Swedes, Swedes! Anger and grief renewing his ſtrength he tried to rally ſome of his regiments: but the Muſcovites cloſely purſued them with their ſwords, bayonets and pikes. The prince of Wirtemberg, general Renchild, Hamilton, and Stakelberg, were already taken priſoners, the camp before Pultowa forced, and all in confuſion, which did not admit of any remedy. Count Piper, with all the officers of the chancery, had quitted the camp, and neither knew what to do, or what was become of the king. They ran from one ſide of the plain to the other; major Bere offered to lead them to the baggage; but the clouds of duſt and ſmoke, which covered the field, and their own confuſion, carried them ſtrait to the counterſcarp of the town, where they were all taken priſoners by the garriſon. The king would not fly, and could not defend himſelf; general Poniatoſky chanced to be by him that inſtant: he was a colonel of the Swediſh guards of king Staniſlaus, and a perſon of uncommon merit, whom his attachment to the perſon of Charles had engaged to follow him into Ukrania without any poſt in the army. He was one, who in all the occurrences of his life, and in dangers, where others at moſt would have only behaved with courage, ſhewed a command of underſtanding which was ever attended with ſucceſs. He made a ſign to a young Swede, named Frederick, the king's firſt valet de chambre, and as intrepid as his maſter; they took the king under their arms, and, aſſiſted by a Drabant who came up to them, mounted him on a horſe, notwithſtanding the exceſſive pains of his wound: Frederick got up behind his maſter, and ſupported him from time to time. Poniatoſky, though he had no command in the army, being made a general on this occaſion by neceſſity, drew up five hundred horſe near the king's perſon, ſome of them Drabants, others officers, and others private troopers. This body, re-animated by the misfortune of their prince, made their way through more than ten regiments of Moſcovites, and conducted Charles through the midſt of the enemy, the ſpace of a league, to the baggage of the Swediſh army.

This ſurpriſing retreat was of great conſequence in ſuch diſtreſs; but the king was under a neceſſity of flying ſtill farther. They found amongſt the baggage Count Piper's coach, for the king never had one ſince he left Stockholm. They put him into it, and made towards the Boriſthenes with all poſſible ſpeed. The king, who, from the time he was ſet on horſeback, till he came to the baggage, had never ſpoke one ſingle word, then aſked what was become of count Piper? they told him he was taken with all the officers of the chancery: and general Renchild, and the prince of Wirtemberg? added the king. They are priſoners too, ſays Poniatoſky. Priſoners to Moſcovites! replies Charles, ſhrugging up his ſhoulders: come on then, rather let us go to the Turks! They did not obſerve, however, the leaſt alteration in his countenance, and whoever had then ſeen him, and not known his condition, would have never ſuſpected him to have been either conquered or wounded. Whilſt he was getting off, the Moſcovites ſeized upon his artillery in the camp before Pultowa, his baggage, and the money he had raiſed for carrying on the war, where they found ſix millions of ſpecie, the ſpoils of Poland and Saxony. Near nine thouſand Swedes were killed in the battle, about ſix thouſand were taken, three thouſand or four thouſand ran away, and were never heard of afterwards.

There ſtill remained near eighteen thouſand men, comprehending the Coſſacks with Swedes and Poles, who fled towards the Boriſthenes, under the direction of general Lewenhaupt; he marched on one ſide with theſe fugitive troops, while the king took another road with ſome of his horſe. The coach, in which he rode, broke down in his march, and they ſet him again on horſeback; and to finiſh his misfortune, he rambled all night in a wood: there his courage not being able to ſupply any longer his exhauſted ſpirits, and the pains of his wound becoming more inſupportable by fatigue, and his horſe falling under him through exceſſive wearineſs, he reſted himſelf ſome hours at the foot of a tree, in danger of being ſurprized every moment by the conquerors, who ſought for him on all ſides. At laſt, on the 9th of July at night, he found himſelf upon the banks of the Boriſthenes, and Lewenhaupt juſt arrived with the remains of his army. The Swedes ſaw their king again, whom they judged to have been dead, with a joy mixed with ſorrow. The enemy drew nigh, and they had no bridge to paſs the river, nor time to make one, nor powder to defend themſelves againſt the enemy, who came upon them, nor proviſions to hinder the army from periſhing with hunger, who had eat nothing for a whole day; but what gave the Swedes the greateſt uneaſineſs, was, the danger of their king. By good fortune, there was ſtill left a ſorry calaſh, which they had brought along with them, this they embarked in a little boat, and the king and general Mazeppa in another. The latter had ſaved ſeveral cheſts of money; but the current being very rapid, and a violent wind beginning to blow, the Coſſack, to lighten his boat, threw more than three parts of his treaſures into the river.

Count Poniatoſky, who was now more than ever neceſſary to the king, for his remarkable preſence of mind under difficulties, together with Mullern, the king's chancellor, croſſed over in other barks with ſome of the officers; three hundred troopers of the king's guard, and a very great number of Poles and Coſſacks, relying upon the goodneſs of their horſes, ventured to paſs the river by ſwimming; their troops, keeping cloſe together, reſiſted the current, and broke the waves; but all who attempted to croſs ſeparately, a little below, were carried away by the ſtream, and ſunk in the river. Of all the foot who tried to paſs over, not one was able to reach the oppoſite ſhore.

During this extremity to which the routed part of the army were reduced, prince Menzikoff came up with ten thouſand horſe, having each a foot ſoldier behind him. The carcaſes of the Swedes that lay dead in the way, of the wounds, fatigue, and hunger, ſufficiently pointed out to the prince the road which the body of the army had taken. The prince ſent a trumpet to the Swediſh general, to offer him a capitulation; four general officers, were preſently ſent by Lewenhaupt, to receive the law of the conqueror. Before that day, ſixteen thouſand of king Charles's ſoldiers would have attacked all the forces of the

Ruſſian-empire, and have periſhed to the laſt man, rather than have ſurrendered; but after a battle loſt, and a flight of two days, not having their eyes any longer upon their prince, who was conſtrained to fly himſelf, the ſtrength of every ſoldier being ſpent, and their courage no longer ſupported by any hope, the love of life took place of intrepidity. The whole army were made priſoners of war; ſome of the ſoldiers, rather than fall into the hands of the Muſcovites, threw themſelves into the Boriſthenes, and the reſt were made priſoners. They all filed off in the preſence of prince Menzikoff, laying their arms at his feet, as thirty thouſand Muſcovites had done nine years before, at the king of Sweden's at Narva; but whereas the king then ſent back almoſt all the Muſcovite priſoners but the general officers; the czar retained all the Swedes that were taken at Pultowa, and ſent them into Siberia. We ſhall relate, in the hiſtory of Sweden, the king's eſcape to Bender, and his conduct there, and afterwards.

No ſooner had the czar obtained the deciſive victory of Pultowa, than Auguſtus re-aſcended the throne of Poland, his rival Staniſlaus and the Swediſh forces retiring into the territories of Sweden. The czar at the ſame time reſtored the duke of Courland, whom he married to his neice, the princeſs Anne, daughter of the late czar John, his eldeſt brother, and completed the conqueſt of Livonia; he alſo made himſelf maſter of Wiburg, and the territory of Kexholm in Finland. The czar, however, ſtill quartered great part of his army in Poland, though the diet inſiſted on his withdrawing them, complaining that their country had been ravaged and plundered twelve years by foreign troops already, and deſired that they might enjoy ſome reſt after ſo many calamities: that the Swedes were now reduced ſo low, that the Poles wanted no foreign aſſiſtance, and they could not underſtand what the czar intended by quartering his troops ſtill in Poland, unleſs he had a deſign upon their liberties: but they were for a time relieved from the outrages committed by the Ruſſian forces, by a rupture between the Ruſſians and the Turks: the king of Sweden having prevailed on the grand ſeignior to declare war againſt Ruſſia, the pretence for which was, that the Ruſſians had purſued the Swedes into the Turkiſh territories, and made priſoners of many of them there.

The czar did not wait to be invaded by the Turks, but marched into Moldavia, being aſſured by a Tartarian prince, that the Moldavians and Tartars would join his army with a good body of troops on his appearance among them. He marched into Moldavia, therefore, before he had provided ſufficient magazines for the ſubſiſtence of his troops, relying on the Moldavians to furniſh him with proviſions; but whether the treaty between the czar and the Moldavians had been diſcovered by the Porte, or by what other accident it happened, the Moldavians did not join him as he expected. The Ruſſian army was deſtitute of proviſions, and being ſurrounded by the numerous forces of the Turks, was attacked three days ſucceſſively on the banks of the river Pruth, viz. on the 11th, 12th, and 13th days of July. The Ruſſians, though they defended themſelves very well, yet being deſtitute of all proviſions and neceſſaries, it was thought proper to hang out a white flag, and demand a treaty with the vizir, who commanded the Turks, which he was not averſe to, if he could procure advantageous terms; and having ſufficiently tried the reſolution of the Ruſſians, whom he looked upon as deſperate men, he conſented to parly with them.

The miniſters on both ſides, being met, the Turks inſiſted that the czar ſhould deliver up Aſoph, and all his forts on the Black Sea, and renounce all pretences to the navigation of it, which the czar conſented to; and thereby his favourite project of building a fleet of men of war at Woronets, to ſail on that ſea, and trade with the countries on the coaſt of the Euxine Sea, and perhaps diſpute the dominion of it with the grand ſeignior, proved abortive. But even upon theſe hard terms, it is preſumed the vizir, who knew the Ruſſian army to be in a ſtarving condition, would not have ſuffered them to retire to their own country, if the czarina Catharine had not borrowed of the officers all the money they could raiſe, and made a preſent of it to the covetous vizir; whereupon the Ruſſians were permitted to march off unmoleſted, and were ſupplied with proviſions even by the Turks themſelves; but their numbers were ſo diminiſhed by ſickneſs or the ſword, that of ſeventy thouſand men, which entered Moldavia, ſcarce forty thouſand remained alive.

The king of Sweden arrived juſt as the Ruſſians were marching off, reproached the vizir with betraying his maſter, and offered with twenty thouſand men to attack the Ruſſians, and carry the czar priſoner to the grand ſeignior; but the vizir refuſed to violate the treaty he had made, and the czar returned to his dominions, quartering a body of his forces in Poland again, which the Poles proteſted againſt, deſiring he would withdraw them; but either under pretence of money due to him for his protection againſt the Swedes, or ſome other demands he had on the republic, the Ruſſians continued in Poland ſeveral years, where they raiſed what contributions they ſaw fit; and the war ſtill continuing between the Swedes and Ruſſians, the czar with his ally the Dane, ſubdued the Swediſh Pomerania, in 1713. The year following, he defeated the Swediſh fleet in the gulf of Finland, afterwards made himſelf maſter of almoſt the whole province of Finland, and proceeded to invade the provinces of Sweden on the weſt ſide of the Bothnick gulf, where he demoliſhed ſome of their iron and copper works, in which the gallies he had built were of great ſervice to him; this being a ſhallow ſea, in which he met with little oppoſition, as large ſhips of war could not enter it; but the king of Sweden returning from Turky, put a ſtop to his incurſions on that ſide; and as he had now no other enemy, he applied himſelf again to the poliſhing of his ſubjects, and promoting arts and ſciences; but navigation and traffic more particularly engaged his attention.

He made another journey to Holland, in 1717, not incognito, as before, but as a ſovereign prince, and was received with all the honours due to his rank. From thence he viſited France, and made himſelf acquainted with every thing he thought worth his attention: but his principal view being to improve his own people, he engaged the artiſts in all profeſſions in his ſervice, and, by the ſalaries and rewards he offered them, prevailed with many of them to go with him to Ruſſia. Nor did he only introduce arts and ſciences among his people, but imitated the politeſt nations in their diverſions at his return.

Before his arrival at Peterſburgh, he received advice, that a conſpiracy had been formed to depoſe him, and ſet his only ſon the czarowitz upon the throne; to which that prince, it is ſaid, was privy. A great many of the conſpirators were put to death on the czar's return; and the czarowitz fled to the court of Vienna, to avoid his father's reſentment: and as his conſort was ſiſter to the then empreſs of Germany, it was given out that the court of Vienna had obtained his pardon; but, however that might be, when the czarowitz returned to Ruſſia, he was apprehended and impriſoned; and, being tried by a court of officers of his father's appointing, condemned to die: however, the ſentence was not executed; the prince dying a natural death in priſon.

The king of Sweden being now returned to his dominions, and invading the Daniſh territories; the czar, to make a diverſion in favour of his old ally the Dane, was preparing to invade Sweden again; when he heard that king Charles was killed in the trenches before Frederickſhall in Norway; and that his youngeſt ſiſter, the princeſs Ulrica Eleonora, had ſucceeded him in that throne; who, deſiring to live at peace with the czar, a treaty was ſet on foot in the iſland of Aland, in 1718, between the two nations, which being abruptly broken off, the czar invaded Sweden again the year following, and deſtroyed ſome of their moſt conſiderable copper and iron works, which obliged the Swedes, in 1721, to ſubmit to the terms he offered them; namely, that the Swedes ſhould confirm to him the provinces of Livonia, Ingria, and Carelia, and the eaſtern provinces of Finland. The czar aſſumed the title of emperor of all the Ruſſias, in the above year.

In the year 1722, the Perſians being engaged in a civil war, and having lately depoſed Sultan Hoſſein, their ſovereign; the czar aſſembled an army of thirty thouſand men at Aſtracan, and invaded the provinces on the weſt of the Caſpian ſea; having publiſhed a manifeſto, declaring, that it was not any ambitious views of enlarging his dominions, that brought him to the frontiers of Perſia; but to reſcue their king out of the hands of his rebellious ſubjects; and being arrived with his army near Derbent, a difficult paſs on the coaſt of the Caſpian ſea, and eſteemed the gate of Perſia from Ruſſia, the governor and inhabitants agreed to ſurrender that city to the czar upon the firſt ſummons; whereupon the czar having confirmed the governor in that office, and left a garriſon of two thouſand men in that citadel, returned to Aſtracan, without any farther attempt at that time.

In the year 1723, however, the Ruſſians aſſembled an army near Derbent, and the whole province of Ghilan ſubmitted to them as ſoon as they took the field; and ſoon after the Ruſſian troops marched into the province of

Shirwan, and took the port-town of Baku: prince Thomas, ſon of the late ſultan Hoſſein, having made his eſcape from the uſurpers at Iſpahan, and aſſembled ſome forces in the north of Perſia, ſent a miniſter to Peterſburgh, to deſire the czar's protection; and a treaty was concluded on the 23d of September 1723, wherein the czar promiſed his aſſiſtance to prince Thomas againſt the rebels; and the prince, on the other hand, ceded the provinces of Ghilan, Shirwan, Mazenderan, and Aſtrabad, to Ruſſia. There was ſoon after a treaty concluded between the Turks and Ruſſians, guaranteeing to each other the ſeveral provinces they had poſſeſſed themſelves of on the frontiers of Perſia: in which they declared, that if prince Thomas, ſhould refuſe his conſent to this treaty, they would keep them by force, but yield up the reſt of the kingdom to prince Thomas, or any other prince, who ſhould be deemed heir to the throne of Perſia, and afford their aſſiſtance againſt the uſurper.

The czar, in the mean time, cauſed the czarina to be proclaimed his ſucceſſor, and crowned; and the nobility and officers of ſtate took the oaths of allegiance to her: ſoon after which he fell ſick, and died on the 8th of February, 1724-5, in the fifty-third year of his age. Whereupon the ſenate proclaimed the czarina Catherine, empreſs of all the Ruſſias, and renewed their oaths of allegiance to her, who was about forty years of age, at her acceſſion to the throne.

The czarina applied herſelf immediately to perfect what the late czar had begun: encouraging all arts and ſciences, and inviting learned foreigners and artificers, by offering them large revenues, to ſettle in the Ruſſian dominions; and obliged her ſubjects to ſend their ſons and dependents abroad, to qualify themſelves in every ſcience. We had, and have ſtill, ſeveral of them in England; but wherever they travel, the court of Ruſſia takes an account of them; they are all regiſtered, and never remove from one kingdom to another for improvement, without the leave of the Ruſſian miniſter, who reſides in the kingdom to which they are deſtined, and return home whenever they are commanded.

Catherine applying herſelf to the increaſing and diſciplining her forces both by ſea and land, at the beginning of her reign, gave the king of Denmark ſome apprehenſions, that theſe preparations were intended againſt his kingdom, as he had lately ſeized upon the territories of the duke of Holſtein, her ſon-in-law, which lie in Sleſwick; whereupon that prince applied himſelf to the Britiſh court, to ſend a ſquadron of men of war to his aſſiſtance; and a fleet was accordingly, in 1726, ſent into the Baltick, under the command of Sir Charles Wager, and a letter ſent to the czarina at the ſame time, to juſtify this meaſure, wherein his late majeſty obſerves, That the warlike preparations ſhe was making both by ſea and land, had alarmed him and his allies, and that he had ſent his fleet into the Baltick, to obviate the dangers which might ariſe from ſuch an extraordinary armament, eſpecially as he was informed, that meaſures were taking at the Ruſſian court, in favour of the pretender to his crown. He had given orders, therefore, to his admiral, to prevent her imperial majeſty's fleet from coming out. The czarina, in her anſwer to this letter, declared, that ſhe had never entertained a thought of diſturbing the Britiſh nation, by eſpouſing the intereſt of the pretender; and was ſo far from having any hoſtile intentions againſt Britain, that ſhe had ordered her port-towns in Livonia to furniſh the Britiſh fleet with all manner of proviſions.

The Britiſh fleet had undoubtedly other reaſons for viſiting the Baltic, than the preventing the Ruſſian invaſion of England in favour of the pretender. If they had intended it, ſo weak a naval power, and ſo diſtant from our ſhores, as Ruſſia lies, could never have expected any ſucceſs in ſuch an enterprize: nor can it be imagined, what motives they ſhould have to attempt it, while our traffic with them was more beneficial to them, than that of any other nation: the true reaſon, therefore, of ſending the Britiſh fleet to the Baltick, is ſuppoſed to have been to protect the Danes and Swedes. The Danes had ſold Bremen and Ferden to Hanover, and Britain had guaranteed their poſſeſſion of Sleſwick, the property of the duke of Holſtein; and the Swedes, in their diſtreſs, offered to confirm Bremen and Ferden to Hanover, on condition, that the Engliſh fleet protected the reſt of the Swediſh dominions; which were ſubſtantial reaſons for ſending Sir Charles Wager into the Baltick, but not proper to be owned at that time; and, therefore, ſome other plauſible pretence for it was to be given out, and nothing could be more popular than defending the nation againſt the pretender.

The Ruſſians making great preparations by ſea for ſome expedition the next year, 1727, another Britiſh fleet was ſent into the Baltick, commanded by Sir John Norris; but the czarina falling ſick, no attempt was made either on the Daniſh or Swediſh coaſts, and our fleet returned to England. The czarina, apprehending ſhe ſhould not live long, appointed prince Peter, the ſon of the czarowitz, and grandſon of the emperor, Peter the Great, to ſucceed her, and died on the 17th of May 1727, in the forty-third year of her age. Peter II. at his acceſſion, was in the twelfth year of his age, being born on the 22d of October 1715. He was immediately proclaimed emperor on the death of the late empreſs; in which proclamation it was ſhewn, that he had a right to the Ruſſian throne by hereditary deſcent, as well as by the appointment of the late emperor and empreſs. The mother of the young emperor was the princeſs Charlotta Chriſtiana Sophia, of Bruniwick Wolfenbuttle, ſiſter to the conſort of the late emperor, Charles VI. It was by the particular direction of Peter the Great, that the late czarina appointed Peter to ſucceed her, for otherwiſe ſhe would have transferred the empire to one of the princeſſes her daughters, of whom ſhe left two, namely, Anna Petrowna, then nineteen years of age, married to Charles Frederick, duke of Holſtein Gottorp, and Elizabeth Petrowna, only thirteen years of age.

The young emperor was almoſt prevailed on to eſpouſe the eldeſt daughter of prince Menzikoff, who was prime miniſter of Ruſſia at the death of the empreſs. The nobility of Ruſſia were ſo incenſed at this, that they immediately reſolved on ruining him, and cauſed him to be brought to trial, wherein he was charged with being the cauſe of the death of the czarowitz, his imperial majeſty's father; with cauſing the firſt conſort of Peter the Great to be continued in priſon, and with embezzling the public revenues; with cauſing ſeveral great men to be deprived of their honours and eſtates, and with a boundleſs ambition, as appeared in his deſign of marrying his daughter to the emperor; for all which, his eſtate was ordered to be confiſcated, and himſelf ſentenced to be baniſhed to Siberia.

The young emperor's relations next proceeded to give the late czarina, the firſt conſort of Peter the Great, her liberty, and reverſe the ſentence of her divorce. They alſo repealed that law made by Peter the Great, which ſubverted the right of primogeniture, and the natural order of ſucceſſion in the imperial family, and the reſt of the Ruſſian families, and made void the proceſs againſt the late czarowitz, the preſent emperor's father, and reſtored the noblemen who had been baniſhed to Siberia, under the adminiſtration of prince Menzikoff: and having concluded a peace both with Sweden and Denmark, they proceeded, on the 7th of March, 1727-8, to the coronation of the czar at Moſcow.

The poſt of prime miniſter was conferred on prince Dolgoruki, who appeared to have no leſs ambition than his predeceſſor, contriving to get his eldeſt daughter eſpouſed to the preſent emperor, and was congratulated thereupon, and their nuptials appointed to be celebrated; but the czar died of the ſmall-pox, on the 29th of January 1729-30, three days before the marriage was to have been ſolemnized; whereupon the ſenate and great officers of the crown cauſed the princeſs Anne, ducheſs dowager of Courland, to be proclaimed empreſs. She was the ſecond daughter of the late czar John, eldeſt brother of Peter the Great; Charles, duke of Mecklenburg, having married Catharine her eldeſt ſiſter.

As the court reſided at Moſcow on the death of the czar, prince Dolgoruki and three others, were therefore appointed to attend the empreſs Anne, and convoy her to Moſcow. Theſe gentlemen arriving at Mittau, the capital of Courland, congratulated her ſucceſſion; but inſiſted on limiting the prerogatives of the crown, and veſting part of the legiſlative authority in the ſtates, which ſhe conſented to, and ſigned the capitulation they had provided for her, the principal articles whereof were, that ſhe ſhould not make peace or war, or raiſe taxes, without the concurrence of the ſtates; that ſhe ſhould not marry, appoint a ſucceſſor, or diſpoſe of any conſiderable office without a like aſſent. But the czarina appeared to have ſo many friends on her arrival at Moſcow, that the nobility and great officers attended her with an addreſs, declaring, that monarchical government was moſt agreeable to the Ruſſians, deſiring that her imperial majeſty would accept of the ſovereignty entire, and with the ſame authority it was enjoyed by her predeceſſors; and the articles ſhe had ſigned at Mittau were thereupon cancelled, and both the clergy and laity took the oaths to her majeſty in as abſolute terms as they had done to

Peter the Great, without any reſerves or limitations whatever.

The prince Dolgoruki, his ſon, and ſeveral of their relations and friends, were ſoon after baniſhed, and their eſtates confiſcated, being principally concerned, it is ſuppoſed, in putting limitations on the prerogative, as mentioned above; but the declaration publiſhed on this occaſion charged Dolgoruki and his ſon with behaving inſolently to the late czar Peter II. and endeavouring to marry him to Dolgoruki's daughter, and with embezzling the public treaſure.

The death of Auguſtus II. king of Poland, happening in February 1733, N. S. the empreſs of Ruſſia, and the emperor of Germany, by their joint intereſt, cauſed the elector of Saxony, his ſon, to be advanced to the throne of Poland, though Staniſlaus, father-in-law to the French king, became a candidate for that crown, and was ſupported by all the power of France; at which Lewis was ſo incenſed, that entering into a confederacy with Spain and Sardinia, he invaded the German emperor's dominions both in Italy and Germany, expelled the Auſtrians from all their Italian dominions, and took Philipſburg upon the Rhine, though the czarina ſent thirty thouſand of her troops as far as the Rhine, in 1735, to the aſſiſtance of the Germans; but a peace being concluded, the dominions of the Auſtrians were reſtored, both in Germany and Italy, except Naples and Sicily, which were yielded to Don Carlos, the king of Spain's eldeſt ſon by the princeſs of Parma.

This war with France and Spain was no ſooner ended, but a rupture happened with the Turks in 1736, in which the Ruſſians and Auſtrians were confederates, and the Ruſſians were very ſucceſsful the two firſt campaigns on their ſide, over-running both Crim and Little Tartary; but the Auſtrian army being almoſt deſtroyed by a peſtilential fever, the emperor made a ſeparate peace, and the Ruſſians were obliged to relinquiſh all the places they had taken in this war.

Nadir Shah, or Kouli Khan, as he is uſually called, becoming very powerful, and recovering all the places the Turks had taken on the frontiers of Perſia, the czarina, without waiting to be attaked, in the year 1738, reſigned all the provinces Peter the Great had poſſeſſed himſelf of in Perſia, on the weſt of the Caſpian ſea.

On the twenty-eighth of October, 1740, the empreſs Anne died, having nominated for her ſucceſſor prince John, an infant, ſix months old, ſon of Anthony Ulrick, duke of Brunſwick Wolfenbuttle, and of Anne his wife, daughter of Charles duke of Mecklenburg, and of the princeſs Catherine, eldeſt daughter of the late czar John: and during the minority of the infant emperor, ſhe appointed her favourite, count Biron, duke of Courland, to be regent. The mother of the young emperor, the princeſs Anne of Mecklenburg, looking upon herſelf much better entitled to the regency, and even to the throne itſelf, as her ſon could not have the leaſt title to the Ruſſian throne but by her, ſhe ordered count Munich to take the duke of Courland priſoner, and, cauſing him to be tried for high treaſon, he was condemned to die; but his ſentence was afterwards changed to a Siberian baniſhment, and ſhe aſſumed the regency herſelf; in which change at court the general count Munich, being moſt inſtrumental, was mightily careſſed by the princeſs at firſt; but ſhe ſoon removed him from all his poſts, for what reaſon does not appear, though it is probable the regent might imagine he aſſumed too great a ſhare in the adminiſtration; however, the diſplacing this great man contributed, no doubt, to her own ruin.

While the ſoldiers were under the command of the count, the princeſs Anne had not much to fear from them; but he was no ſooner diſplaced, than they began to cabal in favour of the princeſs Elizabeth, the youngeſt daughter of Peter the Great, by his laſt conſort the empreſs Catherine; and on the fifth of December, 1741, all the avenues to the palace, and the chief poſts in the city, were ſeized by the guards, who, with the friends of the princeſs, aſſembling in the palace, proclaimed her empreſs of Ruſſia. The late regent and her conſort, the duke of Brunſwick, and their infant ſon were made priſoners, as were alſo count Munich, and Oſterman the chancellor. The Dolgoruki's, the duke of Courland, and other ſtate priſoners, were recalled from Siberia, and their ſentences revoked. In the mean time count Oſterman, Munich, and ſeveral more, that were thought not well-affected to the preſent government, were tried for high treaſon, and condemned to die; but when they had been brought to the ſcaffold, and prepared for their execution, it was declared, that the reigning empreſs had given orders for them to be baniſhed.

At firſt, it had been reſolved, that the late regent, the princeſs Anne, ſhould be ſent with her conſort and her ſon to Germany; but upon ſecond thoughts it was judged more politic to keep the royal family in their power, to prevent rivals attempting any change in the government; and though they were on their journey to Germany, they were ordered to be ſtopped and detained priſoners at Riga; and when the Auſtrian and Pruſſian miniſters interceded for their liberty, the czarina anſwered, that ſhe had given directions that the family of the late regent ſhould be treated agreeable to their rank, and ſhe ſhould convince the world of the regard ſhe had for them, notwithſtanding what had happened.

The czarina obſerved, that as the duke of Holſtein, who was deſcended from her eldeſt ſiſter, might be urged to inſiſt on his right to the Ruſſian throne, ſhe invited him to reſide in her court, adopted him her heir, and cauſed him to profeſs himſelf of the Greek church, without which he could not ſucceed to that empire; and thus her authority ſeemed pretty well eſtabliſhed, as ſhe had now in her power all the royal family that could make any pretenſions to the Ruſſian throne.

In the year 1742, the war with Sweden ſtill continuing, general Lacy was ſent to command the army in Finland, who, having blocked up the Swediſh forces in Helſingfort, would grant them no better terms, than that they might embark for Sweden with part of their baggage, but that their artillery and magazines ſhould be delivered up to the Ruſſians; and in the courſe of that campaign the whole province of Finland was reduced under the dominion of Ruſſia.

During theſe tranſactions, the Swedes, in hopes of obtaining better terms for the czarina, had made choice of her nephew, the duke of Holſtein, to ſucceed to that crown; but he having profeſſed himſelf of the Greek communion, had rendered himſelf incapable of it; for it is one of the fundamental laws of Sweden, that their ſovereign muſt be of the Lutheran perſuaſion, and indeed the crown of Sweden was ſcarce worth the accepting, after the poſſeſſor became obliged to acknowledge the people for his ſovereign, and was made entirely dependent on the ſtate.

The czarina having, in the mean time, adopted the duke of Holſtein her heir, cauſed him to be ſtiled grand duke of Ruſſia, and married him to the princeſs Catherina Alexowna, the daughter of Chriſtian Auguſtus, prince of Anhalt-Zerbſt, to whom he has been married ſeveral years, and has yet had no iſſue; and as the empreſs of Ruſſia herſelf is unmarried, it is very uncertain who will ſucceed to that throne, if the grand duke ſhould die before her.

In purſuance of a treaty concluded between Ruſſia and Sweden, the czarina inſiſted on retaining that part of Finland, which lies eaſt of the river Kymen, and the lakes to the northward of it; but reſtored all the reſt of Finland to the crown of Sweden, in which ſtate it remains at this day; and by a treaty between his Britiſh majeſty and the czarina, entered into the twelfth of June, 1747, her imperial majeſty agreed, that during the war between Great Britain and France, in conſideration of a ſubſidy to be paid her, ſhe would keep on the frontiers of Livonia, next to Lithuania, a body of fifty thouſand foot, and forty or fifty gallies upon the ſame coaſt, to act wherever his Britiſh majeſty ſhould require, and in ſuch places as his majeſty and his allies ſhould think proper; which treaty was ſigned, Hyndford, C. R. Beſtuchef, Woronzow; one hundred thouſand pounds whereof were paid down at the ratification of the treaty. Sir Charles Hanbury Williams, the Britiſh miniſter at Dreſden, thereupon demanding a paſſage for the Ruſſian troops through Poland, in the beginning of the year 1748, his Poliſh majeſty anſwered, that this did not depend on him; and as there was no diet ſitting, he could determine nothing in relation to this affair. However the Ruſſians began their march through Poland, in April, 1748, at which the French being alarmed, preliminary articles of peace were ſigned ſoon after, and a convention was entered into between Great Britain, France, and the States-general, with reſpect to thoſe troops, of the following tenor:

"We, the underwritten miniſters plenipotentiary of his Britannick majeſty, his moſt Chriſtian majeſty, and the lords, the States-general of the United Provinces, at the conferences at Aix-la-Chapelle, have agreed, that in order the more ſpeedily to reſtore a general pacification, and to give reciprocal proofs of the ſincere deſire their Britannick

tannick and moſt Chriſtian majeſties, and the lords the States-general have to execute the preliminaries of the thirtieth of April laſt; his Britannick majeſty, and the States-general, immediately after the ſignature of the convention, ſhall ſend orders to the auxiliary corps of thirty-ſeven thouſand Ruſſians in pay, and actually in march through Germany towards the Low-countries, to return immediately towards Ruſſia; and that the ſaid corps of Ruſſian troops ſhall return thither as ſoon as poſſibly they can, according to the conditions of the treaty concluded and ſigned at Peterſburg, the nineteenth of November laſt, between his Britannick majeſty and the States-general on the one ſide, and her Imperial majeſty of all the Ruſſias on the other; and that it ſhall not be permitted to the ſaid Ruſſian troops, upon any pretext, to march any further towards the Low-countries: and that his moſt Chriſtian majeſty, immediately after the ſignature of this convention, ſhall ſend into the interior parts of France, a like number of regular troops, now in the Low-countries, as well infantry as horſe and dragoons, of which a liſt ſhall be given at the ſame time to the miniſters plenipotentiary of his Britannick majeſty, and the States-general at Aix-la-Chapelle; which troops, or a like number, his moſt Chriſtian majeſty ſhall reform in a month after he knows, in an authentic manner, of the actual departure of the ſaid body of Ruſſian troops towards Ruſſia; and his ſaid moſt Chriſtian majeſty ſhall communicate to his Britannick majeſty and the States-general this reform within a month. His Britannick majeſty and the States-general of the United Provinces engage, moreover, that the ſaid auxiliaries ſhall not be employed in the ſervice of any other power, while they are in their pay; and that in caſe they cannot return home to their own country before the firſt year for which they are engaged, and during which, according to treaty, they are ſtill to remain in their pay and ſervice; it is expreſsly ſtipulated, that they may not be employed under any pretext whatſoever, either againſt his moſt Chriſtian majeſty or his allies, after the reform above-mentioned is made and executed to the troops paid by his ſaid moſt Chriſtian majeſty. In witneſs whereof, &c. Signed, Sandwich; St. Severin d'Arragon; W. Bentinck; F. H. Waſſenaer; G. Haſſelaer; W. Boſſelle."

The Ruſſian troops, in purſuance of this convention, were ordered to halt in Germany, and ſoon after to march back again into their own country: but it ſeems to have been a very great overſight on the part of the allies, that the Ruſſians were not permitted to join the confederate army, and remain in the Netherlands, until the French had executed their part of the treaty; as nothing but downright force could ever induce that people to execute their treaties according to the true meaning of the articles; and we had tamely ſubmitted to give hoſtages for the performance of our part, without inſiſting from them. This was certainly the moſt inglorious tranſaction that ever Britain could be upbraided with, and has no doubt placed her in a deſpicable point of view to her envious neighbours.

It may with ſome degree of probability be ſurmiſed, that many political, and ſome private reaſons determined the princeſs Elizabeth to take part with the houſe of Auſtria, againſt the king of Pruſſia, in the year 1756. Her arms alone gave a turn to the war; and her conqueſts were ſuch as portended the entire deſtruction of the Pruſſian power, which was ſaved only by her critical death, January 5, 1762, when ſhe was ſucceeded by Peter III. grand prince of Ruſſia, and duke of Holſtein Gottorp. This prince was a great admirer of the king of Pruſſia, which was diſpleaſing to his people in general; he had many diſagreeable peculiarities, and, what was worſt of all, aimed at innovation, which even Peter the Great durſt not attempt. Hence a conſpiracy was formed againſt him; ſo that he ſcarce knew an interval between the loſs of his crown and his life. He was ſucceeded by his wife, who has reigned many years by the title of Catherine II. The moſt remarkable domeſtic occurrence of her reign was, the death of prince Iwan, who loſt his life in an ill-concerted conſpiracy which had been entered into by ſome officers, in order to advance him to the throne; and the moſt public tranſactions were, the late war with the Ottoman Port, which the reader will find an account of in our hiſtory of Aſiatic Turky, p. 160, 161.

We cannot with propriety take leave of Ruſſia, without inſerting a recent and important tranſaction, which has originated from the preſent ſovereign of this great empire; namely,

"Declaration from the empreſs of Ruſſia to the courts of London, Verſailles, and Madrid;" and which is expreſſed in the following terms:

"The empreſs of all the Ruſſias has ſo fully manifeſted her ſentiments of equity and moderation, and has given ſuch evident proofs during the courſe of the war that ſhe ſupported againſt the Ottoman Porte, of the liberty of univerſal commerce, as all Europe can witneſs. This conduct, as well as the principles of impartiality that ſhe has diſplayed during the preſent war, juſtly inſpire her with the fulleſt confidence, that her ſubjects would peaceably enjoy the fruits of their induſtry, and the advantages belonging to a neutral nation. Experience has nevertheleſs proved the contrary. Neither the above-mentioned conſiderations, nor the regard to the rights of nations, have prevented the ſubjects of her imperial majeſty from being often moleſted in their navigation, and ſtopped in their operations by thoſe of the belligerent powers.

"Theſe hindrances to the liberty of trade in general, and to thoſe of Ruſſia in particular, are of a nature to excite the attention of all neutral nations. The empreſs finds herſelf obliged, therefore, to free it by all the means compatible with her dignity, and the well-being of her ſubjects; but, before ſhe puts this into execution, and with a ſincere intention to prevent any future infringements, ſhe thought it but juſt to publiſh to all Europe the principles ſhe means to follow, which are the propereſt to prevent any miſunderſtanding, or any occurrences that may occaſion it. Her imperial majeſty does it with the more confidence, as ſhe finds thoſe principles coincident with the primitive right of nations, which every people may reclaim, and which the belligerent powers cannot invalidate without violating the laws of neutrality, and without diſavowing the maxims they have adopted in the different treaties and public engagements.

"They are reducible to the following points:

"Firſt, That all neutral ſhips may freely navigate from port to port, and on the coaſts of nations at war.

"Secondly, That the effects belonging to the ſubjects of the ſaid warring powers ſhall be free in all neutral veſſels, except contraband merchandize.

"Thirdly, That the empreſs, as to the ſpecification of the above-mentioned merchandize, holds to what is mentioned in the tenth and eleventh articles of her treaty of commerce with Great Britain, extending her obligations to all the powers at war.

"Fourthly, That to determine what is meant by a blockading port, this is only to be underſtood of one which is ſo well kept in by the ſhips of the power that attacks it, and which keep their places, that it is dangerous to enter into it.

"Fifthly, That theſe principles ſerve as a rule for proceedings and judgments upon the legality of prizes.

"Her imperial majeſty, in making theſe points public, does not heſitate to declare, that to maintain them, and to protect the honour of her flag, the ſecurity of the trade and navigation of her ſubjects, ſhe has prepared the greateſt part of her maritime forces. This meaſure will not, however, influence the ſtrict neutrality ſhe does obſerve, and will obſerve, ſo long as ſhe is not provoked and forced to break the bounds of moderation and perfect impartiality. It will be only in this extremity that her fleet have orders to go wherever honour, intereſt, and need may require.

"In giving this ſolemn aſſurance with the uſual openneſs of her character, the empreſs cannot do otherwiſe than promiſe herſelf that the belligerent powers, convinced of the ſentiments of juſtice and equity which animate her, will contribute towards the accompliſhment of theſe ſalutary purpoſes, which manifeſtly tend to the good of all nations, and to the advantages even of thoſe at war. In conſequence of which her imperial majeſty will furniſh her commanding officers with inſtructions conformable to the above-mentioned principles, founded upon the primitive laws of people, and ſo often adopted in their connections."

The courts of France, Spain, Portugal, the republic of Holland, and moſt of the naval powers in Europe have acceded to this treaty, and have, in conſequence of it, eſtabliſhed an armed neutrality for the protection to their trade againſt the interruptions that may be given to it on the high ſeas, by nations at war with each other. Thus it may be juſtly remarked, is the empire of Ruſſia become the arbitreſs of the liberties of Europe in general.

SECT.

CHAP. II.

THE NEW HISTORY AND DESCRIPTION OF

NORWAY.

SECT. I.

Containing a General Account of the Country, its Name, Situation, Extent, Climate, Mountains, Roads, Bridges, Marble and other Stones; and particularly of the Aſbeſtos, precious Stones, Mines, &c.

THIS country is called by the Danes and the Norwegians themſelves Norge. It is bounded, on the north and weſt, by the north ſea; on the eaſt, by Swediſh Lapland and Sweden; and, on the north, by the ſea called Categate, extending in length from the fifty-ſeventh degree forty-ſeven minutes to the north cape in the ſeventy-firſt degree thirty minutes north latitude, and in breadth from the fourth degree thirty-five minutes to very unequal diſtances within land, it being in ſome places two hundred and eighty miles broad, about one hundred and fifty in others, and not above thirty in others.

The air is pure and ſalubrious in moſt parts of Norway, but more ſo in the middle and eaſt ſide than on the weſtern coaſt; for in the latter the air is damp, and the weather extremely variable, on which account the Norwegians are frequently afflicted with ſcorbutic diſorders.

When the horizon, in the ſummer nights, is unclouded, it is ſo clear and bright, that at midnight one may read, write, and do all kinds of work as in the day; and in the extremity of this country, towards the iſlands of Finmark, the ſun is continually in view in the midſt of ſummer, and is obſerved day and night to encircle the north pole, contracting its orbit, and then gradually enlarging it, till at length it leaves the horizon. On the other hand, in the depth of winter the ſun is for ſome weeks inviſible, all the light perceived at noon being a faint glimmering that continues about an hour and a half, which as the ſun does not then appear above the horizon, chiefly proceeds from the reflection of the rays on the higheſt mountains, whoſe ſummits are ſeen more clearly than any other objects; but the bountiful Creator has granted the inhabitants all poſſible aſſiſtance; for, beſides the moonſhine, which is rendered very bright in the vallies by reflection from the mountains, the people frequently receive as much light as is neceſſary for performing their ordinary buſineſs, from the aurora borealis, or northern lights.

The cold of winter, in the weſtern parts of this country, generally ſets in about the middle of October, and continues till the middle of April. The waters are congealed to a thick ice, and the mountains and vallies covered with ſnow: yet even this is of ſo much importance to the welfare of the country, that the peaſants, who live among the mountains, are conſiderable ſufferers in a mild winter; for without this ſevere froſt and ſnow they can neither convey to the rivers the timber they have felled, nor carry their corn, butter, furs, and other commodities, in their ſledges, to the market-towns; and, after the ſale of them, carry back the neceſſaries with which they are there ſupplied: for the largeſt rivers, with their roaring cataracts, are arreſted in their courſe by the froſt, and the very ſpittle is no ſooner out of the mouth than it is congealed, and rolls along the ground like hail. But Providence has afforded the inhabitants of this cold climate a greater variety of preſervatives againſt the weather, than moſt countries have.

Their extenſive foreſts ſupply them with plenty of timber for building and for fuel; the wool of the ſheep, and the furs and ſkins of wild beaſts furniſh them with warm lining for their cloaths, and covering for their beds; innumerable flights of wild fowl ſupply them with down and feathers; their caverns afford them ſhelter, and the mountains ſcreen them from the north and eaſt winds.

But while the winter thus rages in the eaſt of Norway the lakes and bays on the weſt ſide are kept open by the warm exhalations of the ocean, though lying in a direct line with theſe frozen eaſtern parts; and the froſts are ſeldom known to laſt above a fortnight or three weeks. Even in the centre of Germany, which is two hundred leagues nearer the line, the winters are generally more ſevere, and the froſts ſharper than in the dioceſe of Bergen; for the inhabitants here are often ſurpriſed at reading in the public papers of froſt and ſnow in Poland and Germany, when they feel no ſuch weather; and the learned Dr. Pontoppidan obſerves, that the harbours of Amſterdam, Hamburgh, Copenhagen, and Lubeck, are much oftener froze than thoſe of Norway, where this ſeldoms happens above two or three times in a whole century. Thus the winter at Bergen is ſo moderate, that the ſeas are almoſt always open to fiſhermen and mariners; and there the north ſea continues navigable during the whole winter as far as the eightieth or eighty-ſecond degree. Thus while the inhabitants of the eaſtern parts have, by means of the ice and ſnow, the convenience of bringing their commodities in ſledges to the market-towns, thoſe of the weſtern ſide on the ſea-coaſt are at the ſame time employed in their profitable fiſheries. All the eaſtern coaſt of Bergen is however ſo ſubject to frequent rains, that the men, whenever they go abroad, wear rain-hats made like umbrellas; and the women ſecure themſelves, in all weathers, by wearing over their heads a black woolen or ſilk vail.

The weather in ſummer is extremely hot. But the violent heats, which are only of ſhort duration, may be owing to the vallies being incloſed within high mountains, where the reverberation of the rays of the ſun on all ſides heat the air; and as there is very little night, the atmoſphere and the mountains have ſcarcely time to cool. There cannot be a more convincing proof of the ſummer's heat in Norway, than that ſeveral vegetables, and particularly barley, grow up and ripen within ſix weeks or two months in ſome places.

The weſtern coaſt of Norway is ſurrounded by a great number of iſlands and rocks, ſome of the former being three, ſix, or nine Norway miles in length, and pretty fertile; but moſt of them are ſmall, and inhabited by only a few fiſhermen and pilots. The rocks, which riſe ſeveral fathoms above the ſurface of the water, are a kind of rampart that defends the coaſt, and amount to ſome hundred thouſands. They form abundance of good harbours; and in many places iron rings are faſtened to them for mooring ſhips, where there is not ſea-room or good anchorage. As the water is calm and ſmooth, they are of great ſervice to coaſters, the violence of the waves being broken againſt theſe barriers, while the open places are very dangerous, and every year prove fatal to many ſmall veſſels. The ſhore of Norway is generally ſteep and perpendicular, ſo that cloſe to the rocks, the depth of the ſea is from one to four hundred fathoms. Several gulfs and creeks run from forty to ſixty miles into the land; and in ſome of them, which are but from fifty to one hundred fathoms in breadth, there runs a narrow channel four hundred fathoms deep; but the depth does not exceed one hundred fathoms on the ſides.

Norway being a very mountainous country, the arable land is but inconſiderable in compariſon of the waters and deſarts, which obliges the inhabitants to procure half their ſubſiſtence from the ſea. Hence the villages are ſmall, and the houſes ſcattered among the vallies; but in ſome places thoſe of the peaſants ſtand ſo high on the edge of ſteep precipices,

that ladders are fixed to climb up to them; so that when a clergyman is sent for, who is unused to the road, he risques his life in ascending them, especially in winter, when the ways are slippery. In such places the bodies of the dead are let down with ropes, or brought down on men's backs, before they are laid in a coffin; and at some distance from Bergen, they are obliged to draw the mail over the steepest mountains, in the winter season.

A great inconvenience experienced by travellers arises from the roads; for they cannot, without terror, pass even the king's road, which in several places extends up the sides of steep and craggy mountains on ways that are either shored up, or suspended by iron bolts fixed in the mountains; and though not above the breadth of a foot-path, have no rails on the side. If two travellers were to meet there in the night, and not see each other soon enough to stop where the road will suffer them to pass, they must stop short, without being able to pass by each other, or to find a turning for their horses, or even to alight. The only resource I can imagine in this difficulty, says the bishop of Bergen, is, that one must endeavour to cling to some cliff of this steep mountain, or, if help be at hand, be drawn up by a rope, and then throw his horse headlong down a tremendous precipice, in order to make room for the other traveller to pass. The caverns of the mountains also afford shelter to the wild beasts, which render it difficult to extirpate them; and it is not easy to describe the havock made by the lynxes, foxes, bears, and especially wolves, among the cattle, goats, hares, and other animals.

The cows, sheep, and goats belonging to the peasants often fall down the precipices, and are destroyed. Sometimes they make a false step into the projection called a mountain-hammer, where they can neither ascend nor descend: on this occasion a peasant chearfully ventures his life for a sheep or a goat; descending from the top of a mountain by a rope of some hundred fathoms in length, with his legs over a cross stick, till he sets his foot on the place where he finds his goat, when he fastens it to the rope, and it is drawn up along with himself. But the most amazing circumstance is, that he runs this risque with the help of only a single person, who holds the end of the rope, or fastens it to a rock, if there be one at hand proper for that purpose. There are instances of the assistant himself having been dragged down, sacrificing his life from his fidelity to his friend, on which both have perished. When a man or beast has thus the misfortune to fall some hundred fathoms down the precipices, it is observed, that the air presses with such force against the bodies thus falling, that they are not only deprived of life for some time before they reach the ground, but their bellies burst, and their entrails come out, which is always the case when they fall into deep water.

The multitude of springs that issue from the mountains, and the vast masses of snow accumulated on their summits, which gently dissolve in summer, form many lakes, in some of which are floating islands, and a considerable number of rivers, the largest of which is the Glommen, or Glamer; but none of them are navigable far up the country; the passage being every where interrupted by rocks, and in some places by dreadful cataracts, in which the stream precipitates itself from the height of forty, fifty, and even a hundred fathoms. The bridges over these rivers are nor walled, but formed of timber cases filled with stones, which serve for the piers on which the timbers are laid. The largest bridge of this kind has forty-three stone cases, and is a hundred paces in length. In those places where the narrowness and rapidity of the current will not admit of sinking these cases, thick masts are laid on each side of the shores, with the thickest end fastened to the rocks: one mast being thus laid in the water, another is placed upon it, reaching a fathom beyond it, and then a third or fourth in like manner to the middle of the stream, where it is joined by other connected masts from the opposite side. Thus in passing over the bridge, especially in the middle, it seems to swing, which to those who are not used to these bridges appears extremely dangerous, so that filled with terror they alight and lead over their horses.

Some advantages, however, attend the mountains of Norway; a great chain of them serves as a barrier between this country and Sweden; and besides, they exhibit the most delightful prospects; for here nature has added greater beauties to the situation of cottages and farm-houses, than in other countries can be enjoyed by royal palaces, though assisted by all the varieties of groves, terraces, canals, and cascades. A predecessor of mine, says the bishop of Bergen, is said to have given the name of the Northern Italy to the district of Wans, which lies some leagues to the eastward of Bergen; and certainly there cannot be a more enchanting prospect. The buildings in it are the church, the parsonage, and a few farm-houses scattered on different eminences.

The beauty of this place is much heightened by two uniform mountains gradually rising to a vast height, betwixt which runs a valley near half a league in breadth, and a river which sometimes precipitates itself down the rocks in foaming cataracts, and at others spreads itself into small lakes. On both sides it is bordered with the finest meadows intermingled with little thickets, and by the easy declivities of the verdant mountains covered with fruitful fields and farm-houses, standing above each other in a succession of natural terraces. Between these a stately forest presents itself to the view, and beyond that the summits of mountains covered with perpetual snow, and ten or twelve streams, issuing therefrom, form an agreeable contrast in their meanders along the blooming sides of the hills, till they lose themselves in the rivers beneath.

The bowels of some of the mountains contain several of the most beautiful kinds of marble, some white, others veined with blue, and others variegated with a variety of colours; there is likewise black marble spotted with white, green marble with greyish veins, and blue marble with white veins. They also contain such quantities of the magnet or loadstone, that some tons of them have been exported: they likewise yield the asbestos, of which incombustible linen and paper have been made, and which is thus described by Dr. Pontoppidan, bishop of Bergen: "Having heard of some wood petrified by a certain spring, I wrote, says he, for some samples, and a large parcel of it was sent me. At first I thought it resembled hazel, that had lain a long time in the water; but upon a narrow inspection, and drawing out some of the filaments, I found it to be amianthus, much finer than the Greenland stone-flax, which the reverend Mr. Egede says is used there as wick in the lamps, without being in the least wasted, while supplied with oil or fat. This amianthus, from the softness and fineness of its fibres, deserves to be called stone-silk, rather than stone-flax: I also made a wick for a lamp of it, and it was not consumed; but its light being much dimmer than that produced by cotton, I laid it aside. I have also in my possession a piece of paper of this asbestos, which when thrown into fire is not destroyed; but what was written on it totally disappears.

"The manner of preparing this stone-silk or stone-flax is this: after its being softened in water it is beaten with a moderate force, till the fibres, or long threads, separate from each other; afterwards they are carefully and repeatedly washed till clear of all terrene particles; then the flax is dried in a sieve: all that remains now is to spin these fine filaments, wherein great care is required; besides which the fingers must be softened with oil, that the thread may be the more supple and pliant."

Nothwithstanding this country abounds in stones, yet no flints have hitherto been found there, so that those for fire-arms are imported from Denmark or Germany: but though there are no flints, there are amethists, garnets, chalcedonies, crystals, agate, and jasper.

This country formerly produced gold; but the expence of working the mines, and separating the gold from the ore, being greater than the profit, they have been neglected. There are, however, silver mines, which are extremely valuable, and give employment to several thousand persons: the principal of these is at Kongsberg. Other silver mines are worked at Jarlsberg, but not to the same advantage, the ore being mixed with lead and copper. In many parts of this country copper mines have been discovered, the richest of which is at Roraas, about a hundred English miles from Drontheim, which annually yields eleven hundred ship-pounds of pure copper, each ship-pound being equal to twenty English stone. Here are likewise some lead mines, but none either of tin or quicksilver. Iron is in great plenty, many hundred thousand quintals being annually exported, chiefly in bars, and the rest cast in cannon, kettles, stoves, and the like.

SECT. II.

Treating of the Natural History of NORWAY: namely, of the Produce of the Country; also of the Beasts, Birds, Insects, and Fishes.

NOTWITHSTANDING the northern situation of this country, it produces rye, barley, white, grey, and green peas, and vetches, which last are used as provender

vender for horſes; hops, flax, and hemp; many kinds of roots and greens for the kitchen, with a conſiderable number of hardy flowers. Here are ſeveral kinds of cherries, of which the peaſants ſell great quantities dried; alſo many ſorts of wholeſome and well-taſted berries, as ſtraw-berries, raſberries, red and white currants, gooſeberries, ſun-berries, bilberries, barberries, cranberries, blackberries, &c. Several kinds of plums attain to a tolerable ripeneſs; but this is ſeldom the caſe with peaches, apricots, and grapes. However, ſeveral ſorts of apples and pears are found all over the country; but the greateſt part of theſe are ſummer fruit, which ripen early; for winter fruit ſeldom comes to perfection, except the ſummer proves hotter, and the winter ſets in later than uſual.

Though Norway is inferior, with reſpect to its fruits, to many other countries in Europe, yet this deficiency is compenſated by its immenſe foreſts, from which moſt of the provinces receive prodigious ſums from foreigners for beams, maſts, planks, and boards; beſides the great conſumption for houſes built at home, entirely of beams of wood; alſo for ſhips, bridges, and a great number of founderies, which require an immenſe quantity of charcoal in the fuſion of metals. In many places the woods are only felled to clear the ground, and are burnt for the ſake of the aſhes, to enrich the ſoil.

Their horſes are of greater uſe in riding than drawing; they have an eaſy pace, are full of ſpirit, and very ſure footed. When they mount or deſcend a ſteep rock on ſtones, like ſteps, they firſt tread gently with one foot, to try if the ſtones they touch be faſt; and in this they muſt be left to themſelves, or the beſt rider will endanger his neck; but when they are to go down a very ſteep or ſlippery place, they draw their hind legs under them in a very ſurpriſing manner, and ſlide down. They ſhew great courage in fighting with the wolves and bears, which is very uſual with them; for when a horſe perceives any of theſe ferocious animals advancing towards him, and has a mare or gelding with him, this generous animal places them behind him, and then attacks his antagoniſt by ſtriking at him with his fore-legs, with ſuch courage, that he commonly remains conqueror. Both the Norway horſes and cows are in general of a yelloviſh colour; but the latter are ſmall, and yield no great quantity of milk; however, their fleſh has a fine grain, is juicy, and well taſted.

Their ſheep are ſmall, but the fleſh is delicious, and the fleeces profitable. Goats, in many places, run wild in the fields, both in winter and ſummer, till they are ten or twelve years old; and when the peaſant, to whom they belong, is reſolved to take them, he muſt either do it by ſome ſnare, or ſhoot them: they are ſo bold, that, on the approach of a wolf, they ſtay to receive him, and, if they have dogs with them, will reſiſt a whole herd. They alſo frequently attack the ſnakes; and when they are bit by them, not only kill, but eat them, though they are ill for ſeveral days. If theſe goats are tame, the owner waſhes the wound with their own milk warmed.

Swine are not plenty in Norway; nor are there many of the common deer; but the hares, which in the cold ſeaſon change from brown or grey to a ſnow white, are taken in great numbers in winter. In ſome parts of the country there are elks, but they are not very numerous. The reindeer run wild in herds, and are ſhot by the inhabitants for food. The biſhop of Bergen obſerves, that when the reindeer ſheds his horns, and others riſe in their ſtead, they appear at firſt covered with a ſkin, and, till they are of a finger's length, are ſo ſoft, that they may be cut with a knife like a ſauſage, and are delicate eating, even when raw. The huntſmen, therefore, when far out in the country, and periſhing for want of food, eat them, and find that they ſatisfy both their hunger and thirſt. But when the horn is grown, there breeds within the ſkin a worm, which eats away the root. It is alſo remarked of this animal, that he can draw a kind of ſkin over his eyes, and can ſee through it, otherwiſe in the hard ſnows he would be obliged to ſhut his eyes entirely.

In this country are alſo found the lynx, vaſt numbers of black, red, and white foxes; and the glutton, which receives its name from its voracious appetite. Thoſe of this country, in their ſhape and ſize, have ſome reſemblance to a long-bodied dog with thick legs, ſharp claws and teeth; his colour is black, variegated with brown and yelloviſh ſtreaks: he has the boldneſs to attack every beaſt he can poſſibly conquer; and if he finds a carcaſe ſix times as big as himſelf, he will not leave it, while there is any left: when fully gorged, he ſqueezes himſelf between two trees that ſtand near together, and thus empties himſelf of what he has not time to digeſt. As his ſkin ſhines like damaſk, and is covered with ſoft hair, it is much valued: the huntſman therefore ſhoots this animal with a bow, and blunt arrows, that he may kill him without wounding the ſkin.

They likewiſe hunt the martin for the ſake of the ſkin; and the ermine and ſquirrel, both of which are ſhot with blunt arrows. The ſkin of the ermine is of a beautiful white, and the tip of the tail black. Theſe little animals run after mice like cats, and drag away what they catch, particularly eggs, which are their greateſt delicacy. Here are alſo otters, beavers, hedge-hogs, and badgers. Some of the mice are thought to be poiſonous and others are remarkable for their being white, and having red eyes.

The moſt pernicious vermin here is a little animal called the lœmus, or lemming, which is between the ſize of a rat and a mouſe; the tail is ſhort and turned up at the end, and the legs are alſo ſo ſhort, that they ſcarce keep the belly from the ground. They have very ſoft hair, and are of different colours; many of them are black, with yellow and brown in ſtreaks, and ſome in ſpots. It is ſaid of theſe creatures, that about once or twice in every twenty years, they aſſemble from their ſecret abodes in prodigious numbers, like the meſſengers of heaven, to puniſh the neighbouring inhabitants. They proceed from Kolen's rock, which divides the Nordland manor from Sweden, and is held to be their peculiar and native place, marching in vaſt multitudes through Nordland and Finland to the Weſtern ocean; and other bodies of them through Swediſh Lapmark to the Sinus Bothnicus, devouring all the graſs and vegetables in their way. They do this in a direct line, and going ſtraight forward, proceed into the rivers or the ſea: thus, if they meet with a boat in any river, they run in at one end or ſide, and out again at the other, in order to keep their courſe. They carry their young with them on their backs, or in their mouths; and if they meet with peaſants who come to oppoſe them, they will ſtand undaunted, and bark at them like dogs. This evil is, however, of ſhort duration; for, on entering the ſea, they ſwim as long as their ſtrength laſts, and then are drowned. If any are ſtopped in their courſe, and unable to reach the ſea, they are killed by the froſts of winter, and if any of theſe eſcape, moſt of them die as ſoon as they eat the new graſs.

Toads and ſnakes are only in the ſouthern parts of this country, and theſe ſnakes are leſs poiſonous than in warmer climates. Lizards are here of various colours, as brown, green, and ſtriped; thoſe that are green are found in the fields, and the others in the cracks and holes in the rocks near the ſea.

Moſt of the fowls found in the reſt of Europe are here, and ſome that appear peculiar to this country. Among the former are common poultry, turkies, tame and wild geeſe, peacocks, ducks, and pigeons; nightingales, larks, quails, partridges, ſtarlings, wrens, magpyes, bats, water-wagtails, ſtorks, herons, gulls, owls, ravens, cormorants, falcons, eagles, and many others. Of the latter, there are only two ſpecies, the rock-eagle and the fiſh-eagle.

The rock-eagle is ſomewhat leſs than the other, and ſpotted with grey; it haunts the higheſt places in the country, and frequently kills hares, ſheep, lambs, and the like animals, as well as birds. The farmers here ſay, that he will ſometimes attack a deer, in which caſe he makes uſe of the following ſtratagem: he ſoaks his wings in water, and then covering them with ſand, and flying about the deer's face, blinds him for a time, when the pain makes him run about as if mad, and he frequently falls down a rock and breaks his neck, upon which the eagle ſeizes upon him for his prey. Young children are ſaid to be ſometimes carried away by this ravenous bird.

The other, called the fiſh-eagle, is of a large ſize, and of a light brown. Though it does not diſlike a dead carcaſe on ſhore, it lives principally on fiſh, which it often takes from the otters, and frequently ſeizes fiſh on the ſurface of the water. When this bird flies out to ſea in order to ſtrike a fiſh with his talons, he ſometimes lays hold of ſuch as are too ſtrong for him, particularly the fiſh here called the queite, whoſe high and prominent back makes him appear much leſs than he really is: when the eagle ſtrikes his talons into him, he cannot eaſily diſengage them, on account of their crookedneſs and length, in which caſe the fiſh drags him down with him; while the bird, making a miſerable cry, ſtrives to keep himſelf up, and works with his wings ſpread as long as poſſible, though in vain; for at laſt he muſt yield, and fall a prey to thoſe he intended to devour. Another inſtance is mentioned in order to ſhew that this king of birds, as he

is

is called, extends his attempts beyond his power. Near Bergen, an eagle ſtanding on the bank of a river, ſaw a large ſalmon as it were juſt under him; on which he inſtantly ſtruck one of his talons into the root of an elm near it, and partly hanging over the river, ſtruck the other into the ſalmon, which being large and ſtrong, ſwam away, and ſplit the eagle to the neck.

The ſrancolin is ranked among the birds in a manner peculiar to this country, it is an excellent land-bird, which ſerves the Norwegians inſtead of a pheaſant, its fleſh being of a delicious taſte, white and firm.

Here is alſo a pretty large ſea-bird, called the great northern diver, which is bigger than a gooſe. It has a long neck, the upper part of which is black, as well as the beak and feet; but from the breaſt downwards it is white. There are alſo ſome white feathers at the extremity of the wings and tail. The wings are ſo ſhort, that they can hardly raiſe themſelves with them; and the legs ſtand ſo far backward, that they are leſs fit to walk with than to paddle along the water, on which account they are ſeldom ſeen to come aſhore. They are ſaid to lay but two eggs, and that under their wings there are two pretty deep holes big enough to put one's fiſt in. In each of theſe they hide an egg, and hatch the young ones there as perfectly, and with leſs trouble than others do on land.

The Norway parrot is a middle-ſized ſea-bird, ſomewhat larger than a pigeon. Its feathers are black and white, and its beak, which is hooked like that of a parrot, is ſtriped with yellow, red, and black, and ſo ſharp, that when he bites any of the bird-catchers, he takes away a piece of fleſh: his claws are alſo very ſharp, with which, and his beak, he defends himſelf againſt the raven, whom he holds by the throat, and will carry out to ſea, and drown him before he loſes hold. This bird builds his neſt between the cleſts of the rock, and alſo in a ſlanting hole in the ground, two or three ells deep.

The bird called the black-cap is almoſt as ſmall as the wren; the body is black and yellow, white under the belly and the top of the head black. Theſe birds keep near the houſes, and are ſuch lovers of meat, that the farmers can hardly keep them from it, and therefore catch them in a trap like mice. In ſhort, there are ſuch incredible numbers of ſea and land fowl near the rocks on the ſea ſhore, that they ſometimes obſcure the ſight of the heavens for many miles out at ſea, ſo that one would imagine that all the fowls in the univerſe were aſſembled in one flock at the ſame time.

This country is alſo as plentifully ſupplied with fiſh as any in the world. Here are whales of ſeveral kinds, porpoiſes, ſword-fiſh, and ſharks; ſturgeon, ſalmon, ſalmon-trout, turbot, cod, thornback, rock, flying-fiſh, whiting, carp, gurnet, flounders, plaiſe, mackarel, herrings, bream, anchovies, eels, and many others well known in other parts.

The fin-fiſh, which is not very common, is forty feet or more in length; their liver alone yields ſeveral caſks of train oil. On their backs they have a high round and ſharp bone, with which they tear open the bellies of other fiſh. They are covered with a kind of hair, ſomething like a horſe's mane, and are often ſeen about the boats of the fiſhermen, who are as much afraid of them as of the moſt dangerous monſters that infeſt the ſea.

One of the moſt extraordinary creatures produced in the ocean, is the ink-fiſh, called by ſome the ſea gnat: it is from nine inches to upwards of two feet in length. The head has two large eyes, and the mouth has ſome reſemblance to a bird's beak; above which there ſtand two long arms or horns, each of which is octangular, and covered with a number of ſmall round balls, ſomewhat larger than a pin's head. At the back of the head are two of theſe horns twice as long as the reſt, and broader towards the end. The body is almoſt round, it reſembles a ſmall bag, and is blunt at both ends. On each ſide of it are two ſkinny membranes, with which the animal can cover itſelf over; and it aſſumes various forms by the motion of its ſkin and arms: but what muſt appear very extraordinary, the fore part of the body is filled with a fluid, which makes the fiſh appear of a blue colour, though this fluid is of a fine black, and may ſerve for ink to write with. When theſe creatures are in danger, they diſcharge this liquid, which blackening the water all round them, they become inviſible to their purſuers, and by this means make their eſcape. Thus this otherwiſe helpleſs animal is provided by the wiſe Creator for its defence. If any of this black fluid happens to drop upon the hand, it burns like a cauſtic, and cauſes great pain.

Here are alſo a vaſt variety of ſhell-fiſh, as lobſters, crabs, craw-fiſh, prawns, ſhrimps, oyſters, muſſels, cockles, ſea-ſnails, ſtar-fiſh, hermit-fiſh, and many others: one of the moſt curious of which is the ſea-urchin, known alſo by the name of the ſea-apple, a name that repreſents the ſize and figure of the thin and tender ſhell that ſurrounds this extraordinary fiſh, which is very common on the coaſt of Norway, where they are ſeen every day. They are of various ſizes, from that of a walnut to the head of a new-born infant: ſome are of the form of a cone, and others are quite round, except the under part, which is pretty flat, and of theſe are the greateſt number. The ſhell is covered with a multitude of ſmall ſharp prickles like ſmall pins, which they probably ſhed once a year, and have new ones. When they are juſt taken out of the ſea, they have a beautiful greeniſh luſtre; but their greateſt beauty appears when they are dried, boiled, and the prickles rubbed off. This beauty conſiſts in certain regular interchangeable ſtripes of a cylindrical form, running from the top to the bottom; ſome are white, others of an orange colour, others are of a light red, and others of a deep red: and theſe ſtripes are ſtrewed over with as many little white knobs as there were originally prickles. When this fine ſhell is broken, which is eaſily done, there is found in it a quantity of ſlime and water, with a ſmall fiſh, of a black, or dark-red colour; and from this little body there runs into all parts of the ſhell a great number of fine threads, that ſeem only compoſed of a thicker ſlime, and have a communication with the external prickles; and a yellow ſpawn is diſpoſed in ſtripes between thoſe. The fiſh lies ſtretched from the bottom to the top of the ſhell, where there is an almoſt imperceptible opening through which the excrements paſs. The mouth, which is extremely curious, is formed of five bones, part convex and part concave, all running to a ſmall point, where they join together like the bill of a bird, and have ſome reſemblance to a flower. The ſea-urchin rolls himſelf about on his prickles wherever he pleaſes, and is generally found in a ſandy bottom.

Here is alſo that extraordinary production of nature, ranked among fiſhes, called the ſea-nettle, and is of two kinds; one comprehending thoſe that always remain fixed in one place like ſea plants; and the other conſiſts of thoſe that change their place. Reaumur deems them real animals, becauſe they have organized bodies, and give ſigns of feeling when they are touched; beſides which, they lay hold of ſhell-fiſh, and others, which they eat; and have alſo a progreſſive motion. Theſe nettles aſſume ſo many different ſhapes, that it is impoſſible to deſcribe them under any determinate figure; but in general their outward form approaches neareſt to a truncated cone, having its baſe fixed to ſome ſtone, to which it is found always adhering. Some are greeniſh, others whitiſh, and others again of a roſe colour; there are others likewiſe of all the degrees of brown. In ſome of theſe nettles, theſe colours appear every where on the ſurface, and in others they are mixed with ſtreaks or ſpots. Sometimes again theſe ſpots are diſtributed in a regular, and at others in an irregular manner, but always very agreeably.

The wandering ſea-nettles have nothing common with the preceding except in the name, and they have different appellations in different places, as alſo according to their ſizes.

Many Norwegians of credit have affirmed, that the northern ocean produces ſome very extraordinary animals, the exiſtence of which had been doubted by mankind in general; theſe are, the merman, mermaid, great ſea-ſnake and kraken, or korven; of which, for the ſatisfaction of the curious reader, we ſhall here give ſome account.

A learned and ingenious gentleman, writing concerning the merman and mermaid, tells us, that "they are ſea animals which bear ſome reſemblance to the human form. In the year 1719, one of the males of this ſpecies was found dead on a point of land in Norland. His colour was of a dark grey; the face reſembled that of a man, with a large mouth, and flat noſe; the arms were attached to the ſides by a thin membrane, and terminated in paws like thoſe of the ſea-calf. The body tapered into a fiſh's tail, like that of a porpoiſe, and the length extended to three fathoms. The mermaid is formed in the ſame manner, abating the difference of ſex, which is diſtinguiſhed like that of the human race. Theſe creatures have been ſeen of various magnitudes, from two feet to three fathoms, and have been found in many parts of the north ſeas.

"Three fiſhermen of Elſineur, in Denmark, being examined upon oath, before the privy counſellor, Frederick Van Gram, declared, that in the month of July 1723,

HABIT of a MOSCOVITE WOMAN.

ARMS and DRESS of a CALMOCK.

W. Grainger Sculp!

in calm weather, between Hveen and Saedland, they approached, in their boat, ſomething that juſt floated on the ſurface like a dead body; which lay without motion till they were within ſeven or eight fathoms of it; then it ſunk inſtantaneouſly, and roſe again nearly in the ſame place. There he ſtood near a quarter of an hour ſtaring at them; and was then above the water to his breaſt. They, being terrified at the ſight of this monſter, began to row away; then he blew up his cheeks, uttered a kind of muttering roar, and dived under water. He appeared like an old man, with broad ſhoulders, and a ſmall head covered with ſhort, black, curled hair; his eyes were hollow, his face meagre and weather-beaten, and his ſkin was coarſe and hairy.

"One of theſe deponents further declared, that about twenty years before he had ſeen a mermaid, with long hair and large breaſts. The marmiele, or marmate, belongs to the ſame claſs, and is perhaps the young of this family; it is formed of different ſizes, and often caught on hooks by the fiſhermen of Norway. Some are no bigger than infants half a year old, others are as large as children of three years of age.

"In the year 1746, captain Laurence de Tercy, of Bergen, ſhot a ſea-ſnake, which immediately diſappeared; and when the boat was rowed, near the place, the water appeared tinged with blood. The head of this animal, which it held at leaſt two feet above the ſurface of the water, was of a greyiſh colour, and reſembed the head of a horſe; the mouth was very large and black, the eyes were of the ſame colour, and a long white mane hung down from its neck, and floated on the ſea. Beſides the head, they ſaw ſeven or eight coils of this ſnake, about the diſtance of a fathom one from the other.

"We find in Egede's journal of the Greenland miſſion, that on the 6th of July 1734, a large and frightful ſea-monſter raiſed itſelf ſo high out of the water, that its head reached above the main-top maſt of the ſhip; that it had a long ſharp ſnout, broad paws, and ſpouted water like a whale; that the body ſeemed to be covered with ſcales; the ſkin was uneven and wrinkled, and the lower part was formed like a ſnake. It plunged itſelf back in the water, and then raiſed its tail above the ſurface, a whole ſhip's length from the head. Though the exact dimenſions of the ſea-ſnake cannot be aſcertained, we may conclude, from the concurrent teſtimony of thoſe who have ſeen it at ſea, that he is an hundred fathoms in length; and that his body is as large as a hogſhead. That his ſenſe of ſmelling is very acute, the fiſhermen conjecture from the circumſtance of his avoiding the ſcent of caſtor, a quantity of which they therefore provide themſelves with when they go out to fiſh in the ſummer; and they throw a ſmall portion of it overboard, when they meet the ſea-ſnake.

"The kraken, or korven, is the moſt ſurpriſing creature in this ſea, and perhaps in the whole world. This animal is of the polypus kind, but ſeemingly a mile and a half in circumference. The Norwegian fiſhermen ſometimes, in a ſummer-day, find no more than twenty or thirty fathoms water, where the depth uſed to be eighty or one hundred; and here they catch great plenty of cod and ling. They know the kraken is below them, and that they are fiſhing upon his back. When they perceive, by their lines, that the water grows more and more ſhallow, they judge he is riſing ſlowly to the ſurface, and row away with great expedition. At a proper diſtance they lie upon their oars, and in a few minutes part of him appears above the water like a number of ſmall iſlands and ſand-banks, covered with ſea-weeds, and abounding with a great variety of fiſh, that leap about, and roll off his ſides into the water. At length a great number of pellucid antennæ riſe upon his back, as large and as high as the maſts of moderate veſſels: by means of theſe inſtruments, or tentacula, he moves himſelf and gathers in his food, which conſiſts of ſmall fiſhes; after he has remained a little time at the ſurface, he begins to ſink again gradually, and this motion produces a dangerous ſwell and whirlpool in the water. In all probability, the back of this huge monſter has been miſtaken for the floating iſlands which have been deſcribed by ſo many voyage-writers. The whale bone or blubber whale, the ſpermaceti whale, the great ſea-ſnake, and the kraken, ſeem to have been all deſcribed, in the holy ſcriptures, under the general name of leviathan: for that word implies not a particular fiſh only, but a huge ſea-monſter, or fiſh of a prodigious ſize. For want of knowing this, thoſe beautiful paſſages in the book of Job, where leviathan is deſcribed, have been frequently miſunderſtood.

SECT. III.

Deſcribing the Inhabitants of NORWAY: their Perſons, Dreſs, Diet, Manners, Hoſpitality, their various Employments, Fiſhing, Agriculture, Fowling, and Trade, &c.

THE people of this country are in general tall, well made, and of lively diſpoſitions; yet thoſe on the coaſt are ſaid to be neither ſo tall, nor ſo robuſt as thoſe that inhabit the mountains, but are remarkable for being fatter, and having rounder faces. The hair and eyes of the Norwegians are of a lighter colour than thoſe of moſt other nations; and a dark complexion is as rare here, as a fair complexion in Italy. Indeed their eyes are generally blue, or of a light grey; and they differ in every reſpect from the Laplanders, who lie farther to the north, are of a ſmaller ſtature, have a flatter viſage, black hair, and a brown complexion. The Norwegians are in general briſk, active, and ſo ingenious, that the peaſants employ neither hatters, ſhoe-makers, weavers, taylors, tanners, carpenters, joiners, nor ſmiths; all theſe trades being exerciſed in every farm houſe; and they think, that unleſs a boy becomes maſter of all theſe arts, he can neither be a uſeful member of ſociety, nor a good man.

The dreſs of the Norwegians, who live in tents, has nothing remarkable in it; but the peaſants do not trouble themſelves about faſhions. Thoſe termed ſtrile farmers have their breeches and ſtockings of one piece. They have a wide looſe jacket made of warm woollen cloth, as are alſo their waiſtcoats; and thoſe who are fond of appearing fine, have the ſeams covered with cloth of different colour. The peaſants of one pariſh are remarkable for wearing white cloaths edged with black; the dreſs of another pariſh is black edged with red; and that of another all black; others wear black and yellow; and thus the colour of the cloaths of the inhabitants varies in almoſt every pariſh.

On their heads they wear a flapped hat, or a little brown, grey, or black cap, made quite round, and the ſeams adorned with black ribbands. They have ſhoes of a particular conſtruction without heels, conſiſting of two pieces, the upper leather ſitting cloſe to the foot, and the ſole being joined to it by many plaits and folds. In winter, and when they travel, they wear a ſort of half boots, that reach up to the calf of the leg, and are laced on one ſide; and when they go on the rocks in the ſnow, they put on ſnow-ſhoes: but as theſe are troubleſome, when they have a great way to travel, they put on ſnow-ſkaits, which are about as broad as the foot, but ſix or eight feet long, and pointed before; they are covered underneath with ſeal-ſkin, ſo that the ſmooth grain of the hair turns backwards to the heel. With theſe ſnow-ſkaits they ſlide as faſt upon the ſnow as upon the ice, and with a ſwiftneſs exceeding that of any horſe.

The lower claſs of people never wear a neckcloth, or any thing of that kind, except when they are dreſſed; for their neck and breaſt are always open, and they let the ſnow beat into their boſoms: on the contrary, they cover their veins, binding a woollen fillet round their wriſts. They wear about their body a large leather belt, adorned with convex braſs plates, to which hangs a braſs chain that holds their large knife, gimblet, and other uſeful articles.

The dreſs of the women when at church, and in general aſſemblies, conſiſts of jackets laced cloſe: they have alſo leather girdles, with ſilver ornaments about them. They alſo wear a ſilver chain three or four times round the neck, with a gilt medal hanging at the end of it. Their handkerchiefs and caps are almoſt covered with ſmall ſilver, braſs, and tin plates, buttons, and large rings, ſuch as they wear on their fingers, to which they hang again a parcel of ſmall ones, which make a jingling noiſe when they move. A maiden bride has her hair plaited, and hung as full as poſſible with ſuch kind of trinkets, as alſo her cloaths.

They generally build their houſes of fir and pine-trees, the whole trunks of which are only chopped to make them lie cloſe, and then laid one upon another, and faſtened with mortices at the corners. Theſe trunks are left round as they grow, both on the inſide and outſide of the houſes, and are frequently boarded over and painted, eſpecially in the trading towns, which make them appear very genteel.

In the country villages, the people build their houſes at a diſtance from each other, with their fields and grounds about them. The ſtore-houſe for the proviſions is generally at a diſtance from the dwelling houſe, for fear of

fire, and placed high upon poles to keep the proviſions dry, and preſerve them from mice and all kinds of vermin. The kitchen alſo ſtands ſeparate, as do the cow-houſes, barns, ſtables, &c.

A farm has generally a mill belonging to it, ſituated by ſome rivulet; beſides a ſmith's forge. Up the country, where timber for building is of little value, there are many farm-houſes as large as the ſeats of noblemen: theſe are frequently two ſtories high, and have a railed balcony in the front, and the additional buildings reſemble a village. The common farm-houſes have, however, only the ground-floor, and no other window but a ſquare hole in the wall, which in ſummer is left open; but in winter, or in wet weather, is covered with a wooden frame, over which is the inward tranſparent membrane of ſome animal that is very ſtrong. This hole, which is as high as poſſible, anſwers the purpoſe of a chimney, by letting out the ſmoke. Under the above hole there is generally placed a long thick table, with benches round it; and at the upper end is a high ſeat, which belongs ſolely to the maſter. In the towns theſe houſes are covered with tiles; but in the country the people lay over the boards the ſappy bark of birch trees, which will not decay in many years. They cover this again three or four inches thick with turf, on which there always grows graſs or moſs.

The Norwegians are extremely civil in their behaviour, and are willing to do to another any friendly act in their power. They are ſo hoſpitable, that a traveller is ſeldom permitted to pay for his lodging; for they think it their duty to treat a ſtranger as well as they can, and think he does them an honour by accepting of their civilities; yet the peaſant never gives his place at the upper end of the table to the greateſt gueſt that ever comes under his roof; for he claims a peculiar right to that place. At Chriſtmas, they keep open houſe for three weeks, during which their tables are ſpread and loaded with the beſt proviſions they can afford. At Chriſtmas-eve, their hoſpitality extends to the very birds, for whoſe uſe they hang on a pole at the barn-door an unthreſhed ſheaf of corn, which draws thither the ſparrows, and other ſmall birds, that feaſt upon the proviſion.

The diet of the inhabitants in the trading towns is much the ſame as that of the Danes; but the peaſants adhere to the manners of their forefathers: Oat cakes are their common bread; but upon particular occaſions, as at weddings, or other entertainments, they have rye-bread. However, if grain be ſcarce, which is uſually the caſe after a very ſevere winter, the peaſants have recourſe to what even they eſteem a diſagreeable method of preſerving life, by boiling and drying the bark of the fir-tree, mixing it with a little oatmeal, and making it into a ſort of bread; and that they may think this food leſs diſagreeable in times of ſcarcity, they accuſtom themſelves to eat ſome of it, when there is plenty of the better ſort.

The Norway peaſants eſteem their beſt dainties to conſiſt in milk, meats, and different ſorts of cheeſe, on which they ſpread butter, as on bread. The highland peaſants are ſo fond of angelica, which grows very plentifully in the mountains, that they chew it in a morning dried, and alſo uſe it as ſnuff.

The people furniſh themſelves with game in the mountains, and the lakes and rivers afford plenty of freſh-water fiſh. They kill cows, ſheep, and goats, for their winter ſtock, part of which they pickle and ſmoak; and ſome of it they cut in thin ſlices, ſprinkle it with ſalt, then dry it in the wind, and eat it like hung beef. They chew and ſmoak tobacco, and are fond of brandy.

The lower claſs of people are generally employed in cutting wood, felling and floating of timber, burning of charcoal, and extracting of tar. Many are alſo employed in the mines, furnaces, and ſtamping mills; alſo in navigation and fiſhing, beſides hunting and ſhooting; for every body is at liberty to purſue the game, eſpecially in the mountains, and on the heaths and commons, where every peaſant may make uſe of what arms he likes beſt.

Theſe people are inured to cold and hardſhips from their childhood: for in the latter end of November they run about bare-footed, even upon the ice. The mountaineers, who daily go in the woods have frequently their beards full of icicles, and their boſoms full of ſnow. Our author ſays, that in his travels over the higheſt mountains of Norway, which are covered with ſnow, and where horſes are of no ſervice, he has ſeen the peaſants in great numbers do the work of theſe animals, whom they ſeem almoſt to equal in ſtrength. When they have been in a profuſe ſweat, he ſaw them throw themſelves every half hour upon the ſnow, for the ſake of its refreſhing coolneſs, and even ſucked it to quench their thirſt. This they undergo without the leaſt apprehenſions of a cold, or a fever, and without murmuring, or betraying the leaſt diſcontent. On the contrary, they go on ſinging merrily, and with incredible chearfulneſs and alacrity undergo the hardeſt labour imaginable for nine hours, without intermiſſion.

No leſs remarkable are the ſtrong conſtitutions of the fiſhermen and ſea-faring people of this country. The peaſants of both ſexes aſſemble together in prodigious numbers about the middle of January, to make their winter-harveſt of the rich produce of the ocean. The people of every family at theſe times take with them five or ſix weeks proviſions, which chiefly conſiſt of dried fiſh. They keep out at ſea all day and a great part of the night, by moonſhine, in open boats; and after that crowd together by ſcores into little huts built in the iſlands near the coaſt, where they have hardly room to lay themſelves down in their wet cloaths. Here they repoſe themſelves the remainder of the night, and the next morning return to the ſame laborious employment with as much pleaſure and chearfulneſs as if they were going to an entertainment.

In this country, agriculture is leſs burthenſome to the huſbandman than in other parts; for he does not here toil in the fields of an oppreſſive lord; but the fruits of his labour, as in the Britiſh dominions, are his abſolute and certain property. But, on the other hand, it is in many places attended with great inconvenience and fatigue: for the fields conſiſt of little ſpots of ground among the rocks, many of which muſt be dug inſtead of being plowed, particularly in the dioceſe of Bergen, where the ſoil is leſs fruitful, and affords few places where the plough can be uſed. Inſtead of this, they ſometimes uſe a crooked ſtick, with an iron at the end, which yielding eaſier to the ſtones, is not ſo ſubject to break. Nor is the harveſt without its difficulties; the grain, according to the old cuſtom of the peaſants, not being mowed with a ſcythe, except about Chriſtiana, where it is lately come into uſe, but cut with a ſickle; for the corn often grows ſo thick and cloſe, and the ſtalks are ſo apt to bend with the weight of the ears, that the reapers graſp the ſtems with one hand, while they cut them with the other, and then bind them in ſheaves: that they may be thoroughly aired and dried, a great number of poles are ſet up in the fields, and ſix or eight ſheaves hung to each pole.

No waggons are uſed in harveſt work, except on the frontiers, where they have been introduced; but inſtead of them, the Norway peaſants uſe ſledges, and are prejudiced againſt any other kind of vehicle, even in places where waggons might eaſily travel, though their work would be performed with much greater eaſe and expedition. But in this and every thing elſe they are ſo ſuperſtitiouſly tenacious of the cuſtoms tranſmitted to them by their forefathers, that they will not venture to move a ſtone which their parents had placed in a particular ſpot.

Some of the inhabitants procure a very good maintenance by catching of birds; but it is impoſſible to give a juſt idea of the fatigue and danger with which the people ſearch for the birds in the high and ſteep rocks, many of which are above two hundred fathoms perpendicular. Theſe people, who are called birdmen, have two methods of catching them: they either climb up theſe perpendicular rocks, or are let down from the top by a ſtrong and thick rope. When they climb up, they have a large pole of eleven or twelve ells in length, with an iron hook at the end. They who are underneath in a boat, or ſtand on a cliff, faſten this hook to the waiſtband of the man's breeches who climbs, by which means they help him up to the higheſt projection he can reach, and fix his feet upon. They then help up another to the ſame place; and when they are both up, give each his bird-pole, and long rope, which they tie at each end round their waiſt. The one then climbs up as high as he can; and where it is difficult the other, by putting his pole under his breech, puſhes him up, till he gets to a good ſtanding-place. The uppermoſt of the two then helps the other up to him with a rope; and thus they proceed till they get to the part where the birds build, and there they ſearch for them.

As they have many dangerous places ſtill to climb, one always ſeeks a convenient ſpot where he can ſtand ſecure by being able to hold himſelf faſt, while the other is climbing about. If the latter ſhould happen to ſlip, he is held up by the other, who ſtands firm; and when he has paſſed in ſafety thoſe dangerous places, he fixes himſelf in the ſame manner, that he may enable the other to come ſafe to him; and then they clamber about after birds where they pleaſe. But ſometimes accidents happen; for if one does not ſtand firm, or is too weak to ſupport the other when

when he ſlips, they both fall and are killed; and every year ſome periſh in this manner. On their thus reaching the places that are ſeldom viſited, they find the birds ſo tame, that they may take them with their hands, they being unwilling to leave their young; but where they are wild, they throw a net over them in the rock, and entangle thoſe that are flying, with a net fixed to the end of their poles. Thus they catch a vaſt number of fowls, and the boat keeping underneath them, they throw the dead birds into it, and ſoon fill the veſſel.

If the weather continues favourable, and there be a great deal of game, the birdmen ſometimes continue eight days together on the rocks; where they find holes or caverns in which they can ſecurely take their repoſe. In this caſe they draw up proviſions with lines, and boats are kept coming and going to carry away the game they have caught. As many of the rocks are ſo ſteep and dangerous, that they cannot poſſibly climb up them, they are then let down from above; when they have a ſtrong rope, eighty or a hundred fathom long, and about three inches in thickneſs. One end of it the birdman faſtens about his waiſt, and then drawing it between his legs, ſo that he can ſit on it, he is let down with his bird-pole in his hand, by ſix men at top, who let the rope ſink by degrees, but lay a piece of timber on the edge of the rock, for it to ſlide on, to prevent its being torn to pieces by the ſharp edge of the ſtones. Another line is faſtened round the man's waiſt, which he pulls to give ſigns when he would have them pull him up, let him lower, or keep him where he is. He is in great danger of the ſtones looſening by the rope, and falling upon him; he therefore wears a thick furred cap well lined, which ſecures him from the blows he may receive from ſmall ſtones; but if large ones fall, he is in the greateſt hazard of loſing his life.

Thus do theſe poor men often expoſe themſelves to the moſt imminent danger, merely to get a ſubſiſtence for their families. There are ſome indeed who ſay there is no hazard in it, after they are accuſtomed to it; but at firſt the rope turns round with them, till their heads are giddy, and they can do nothing to ſave themſelves. They who have learnt the art, make a play of it; they put their feet againſt the rock throw themſelves ſeveral fathoms out, and puſh themſelves into what place they pleaſe. They even keep themſelves out on the line in the air, and catch with their poles numbers of birds flying out and into their holes. The greateſt art conſiſts in throwing themſelves out, ſo as to ſwing under the projection of a rock, where the birds gather together: here they fix their feet, looſen themſelves from the rope, and faſten it to a ſtone, to prevent it ſwinging out of their reach. When a man has done this, he climbs about, and catches the birds either with his hands or the pole; and when he has killed as many as he thinks proper, he ties them together, faſtens them to the ſmall line, and, by a pull, gives a ſign for thoſe above to draw them up.

The birdman works all day in this manner; and when he wants to be drawn up, he either gives a ſignal to thoſe above, or, with his belt full of birds, works himſelf up with his hands and feet. If there are not people enough to hold the rope, he fixes a poſt in the ground, faſtens his rope to it, and ſlides down without any help; after which, he goes to work as before. In ſome places there are ſteep clefts of prodigious ſize lying under the land, and yet above two hundred yards above the water, which are likewiſe very difficult to be got at. They help one another down theſe clefts in the above manner; and taking a ſtrong rope with them, faſten it here and there in the cleft where they can; and leave it all the ſummer; they will run up and down upon this, and take the birds very eaſily.

To the beholders, this bird-catching appears inconceivably dreadful and dangerous, from the vaſt height and exceſſive ſteepneſs of the rocks, many of which hang over the ſea. It ſeems impoſſible for men to enter the hole under theſe projections, or to walk a hundred fathoms high on crags of rocks, where their toes can barely fix.

They eat part of theſe birds freſh, and part is hung up to dry for the winter ſeaſon. Theſe birds afford the inhabitants a good maintenance, partly from their feathers, which are plucked and ſent to foreign parts, and partly from their fleſh and eggs, and are ſent to market, though their colours and ſizes are different.

The people of Norway carry on a conſiderable trade, both to Denmark and foreign nations. They import wine, and many other articles of luxury; but their exports are much more numerous, conſiſting of maſts, timber, deal boards, oak planks, copper wrought and unwrought, iron in bars and caſt into cannon, pots, and ſtoves; lead in ſmall quantities; marble, mill-ſtones, ſalmon, herrings, cod, ling, lobſters, cow-hides, goat-ſkins; the furs of ermines, martens, beavers, foxes, wolves, bears, &c. down feathers, butter, tallow, train oil, tar, pitch, juniper and other berries, nuts, alum, ſalt, vitriol, and pot-aſhes.

SECT. IV.

Treating of the Language, Laws, Religion, and Government of NORWAY; alſo of its Four Chief Governments, or Prefectorſhips, and the principal Places in them; particularly of the Silver Mines of KONGSBERG, the remarkable Whirlpool of MOSKOESTROM, &c.

THE Norwegian language, in moſt places, is the ſame with that of Iceland, which proves them to be of the ſame original; but the language differs but little from that of Denmark, in the civilized part of the country.

King Olave is ſaid to have been the firſt legiſlator of this country, and to have inſtituted a law for the puniſhment of robbery, fraud, and aſſaults; king Chriſtian IV. publiſhed a new body of laws for Norway, which were in force till the reign of Chriſtian V. who cauſed a new digeſt to be drawn up, and theſe are the only laws now obſerved in the kingdom. This law-book was printed in one volume in quarto at Copenhagen, in 1687; the ſubſtance of it is taken from that of Denmark, with only a few neceſſary alterations on account of the different circumſtances of the two kingdoms. Juſtice is adminiſtered here in ſeveral courts, from which appeals lie to the ſupreme court ſettled in the capital of the kingdom where the viceroy reſides, who governs this ſtate with an abſolute power.

The Chriſtian religion is ſaid to have been planted here about the middle of the tenth century; and the reformation was eſtabliſhed by the Danes; ſo that Lutheraniſm is almoſt the only religion in Norway, except in the province of Finmark, where are ſtill no inconſiderable number of pagans; but no hardſhip, expence, or labour, is ſpared for their converſion. The firſt meaſures for the reformation of religion in Norway were taken in the year 1528, and were completed in 1537. In 1607 a new hierarchy or church government was eſtabliſhed: in every ſee there is a biſhop: the biſhop of Chriſtiana is the principal, and takes place of all the reſt. Under the biſhops are the provoſts, the preachers, and the chaplains, or curates, with inferior church-officers. A pariſh uſually contains more churches than one; when the parochial incumbent has often many ſouls under his care.

Norway is divided into four dioceſes or general governments, each of which has its general governor, and under theſe are the prefects; and the office of both is the ſame as in Denmark. Next to the prefects, are the ſecretaries and the collectors, who levy the king's taxes, and pay them into the receiver's hands.

They have nine provincial courts, over which are the ſame number of judges: there are alſo inferior judges, each of whom, in conjunction with eight aſſiſtants, has the power of deciding cauſes within his diſtrict. Beſides, in the four chief cities of Norway, viz. Chriſtiana, Chriſtianſand, Bergen, and Drontheim, are preſidents appointed by the king; and under theſe, as in all other towns, are collectors. There are likewiſe collectors of the toll, comptrollers over the farmers of the duties, and commiſſaries of proviſions, in this part of the dominions of the king of Denmark.

Nature has divided the main land of this kingdom into two parts by the immenſe chain of mountains called Doſrefield and Langfield, which ſeparates the weſtern and northern parts, that lie near the ſea, from the ſouthern and eaſtern, or inland parts. Here it muſt be obſerved, that the highlands which lie to the ſouth and eaſt of theſe mountains are called Sondenfield or Southland; while that is called Nordenfield, or Northland, which lies north of Doſrefield, and weſt of Longfield towards the ſea.

This country, according to the political diviſion of it, conſiſts of four general governments, two of which, namely, Chriſtiana and Chriſtianſand, which lie on the ſouth; and Bergen and Drontheim in the north part of the kingdom. The eccleſiaſtical diviſion into four biſhoprics, is agreeable to the civil; and the biſhoprics are ſubdivided into provoſtſhips and pariſhes, as the general governments are ſubdivided into prefectures, and diſtricts or fiefs.

The king of Denmark receives annually a revenue of upwards

upwards of eight hundred thouſand rix-dollars from Norway.

I. The largeſt and richeſt government in all Norway is that of Chriſtiana, or Aggerhuus, in the ſouth part of the kingdom. Its principal city is Chriſtiana, which is ſaid to be the beſt built city in the kingdom: it is regularly built, is of a conſiderable extent, and carries on a great trade. There the governor and biſhop of Chriſtiana reſide, and here are held the general and provincial high courts of judicature. It has a work-houſe and two ſuburbs called Waterland and Peper-Vigen; through the firſt runs a river, which riſes in Maridalen. The city ſtands in fifty-nine degrees fifty-minutes north latitude, and in ten degrees fifteen minutes eaſt longitude. The land is mountainous and woody, but the valleys are tolerably fruitful, being watered by many lakes and rivulets, which paſs through the country, and fall into the Baltick. Here are ſeveral ſea-ports, particularly Heakeren, where the fiſhing-trade affords a pretty conſiderable income.

The town of Kongſberg, in this government, contains about eleven thouſand ſouls, among whom are a congregation of Danes, and another of Germans. In the year 1686, a mint was ſet up in this town, and in 1689, the mine college was erected. Kongſberg is moſt remarkable for its ſilver mines, which are the richeſt in all Norway. Theſe were diſcovered in 1623, upon which the town was immediately built, and peopled with German miners. In 1751, forty-one ſhafts and twelve veins were wrought in the four reviers of this mine, in which three thouſand five hundred officers, artificers, and labourers are uſually employed. The rich ore in this mine is found only in diſperſed ſtrata and interrupted veins. Even pure ſilver is ſometimes dug out of it; and in 1647, ſome gold was found among the ſilver, of which king Chriſtian IV. cauſed the famous Billen ducats to be coined, with this legend, Vide Mira Domini, "See the wonderful works of the Lord." In the year 1697, a vein of gold was diſcovered here, of which ducats were coined, which on one ſide had this inſcription, Chriſtian V. D. G. Rex Dan. Norw. V. G. The legend on the reverſe was from the book of Job: Von mitternacht kommt gold: that is, "Out of the north cometh gold." Kongſberg, December 1, 1697.

Moſt of theſe mines are in a mountain between Kongſberg and the river Jordal; but it has been found that the ſilver ore is not, as was at firſt imagined, limited to that mountain, but extends its veins for ſome miles throughout the adjacent diſtricts; which is proved by the new mines which are from time to time undertaken in ſeveral places, and moſt of them carried on very proſperouſly.

One of the moſt antient and rich of all the mines, named Old God's Bleſſing, has ſometimes within a week yielded ſeveral hundred pounds weight of rich ore. This mine never fails to fill the beholder with amazement at its aſtoniſhing depth, which is no leſs than an hundred and eighty perpendicular fathoms; and the circumference at the bottom forms a clear of ſome hundred of fathoms. Here the ſight of thirty or forty piles, burning on all ſides in this gloomy cavern, and continually fed, in order to mollify the ſtone in the proſecution of the mines, ſeems, according to the common idea, an image of hell; and the ſwarms of miners, covered with ſoot, and buſtling about in habits according to their ſeveral employments, may well paſs for ſo many devils, eſpecially when, at a ſignal that a mine is going to be ſprung in this or that courſe, they roar aloud, Berg-livet! Berg-livet! Take care of your lives!

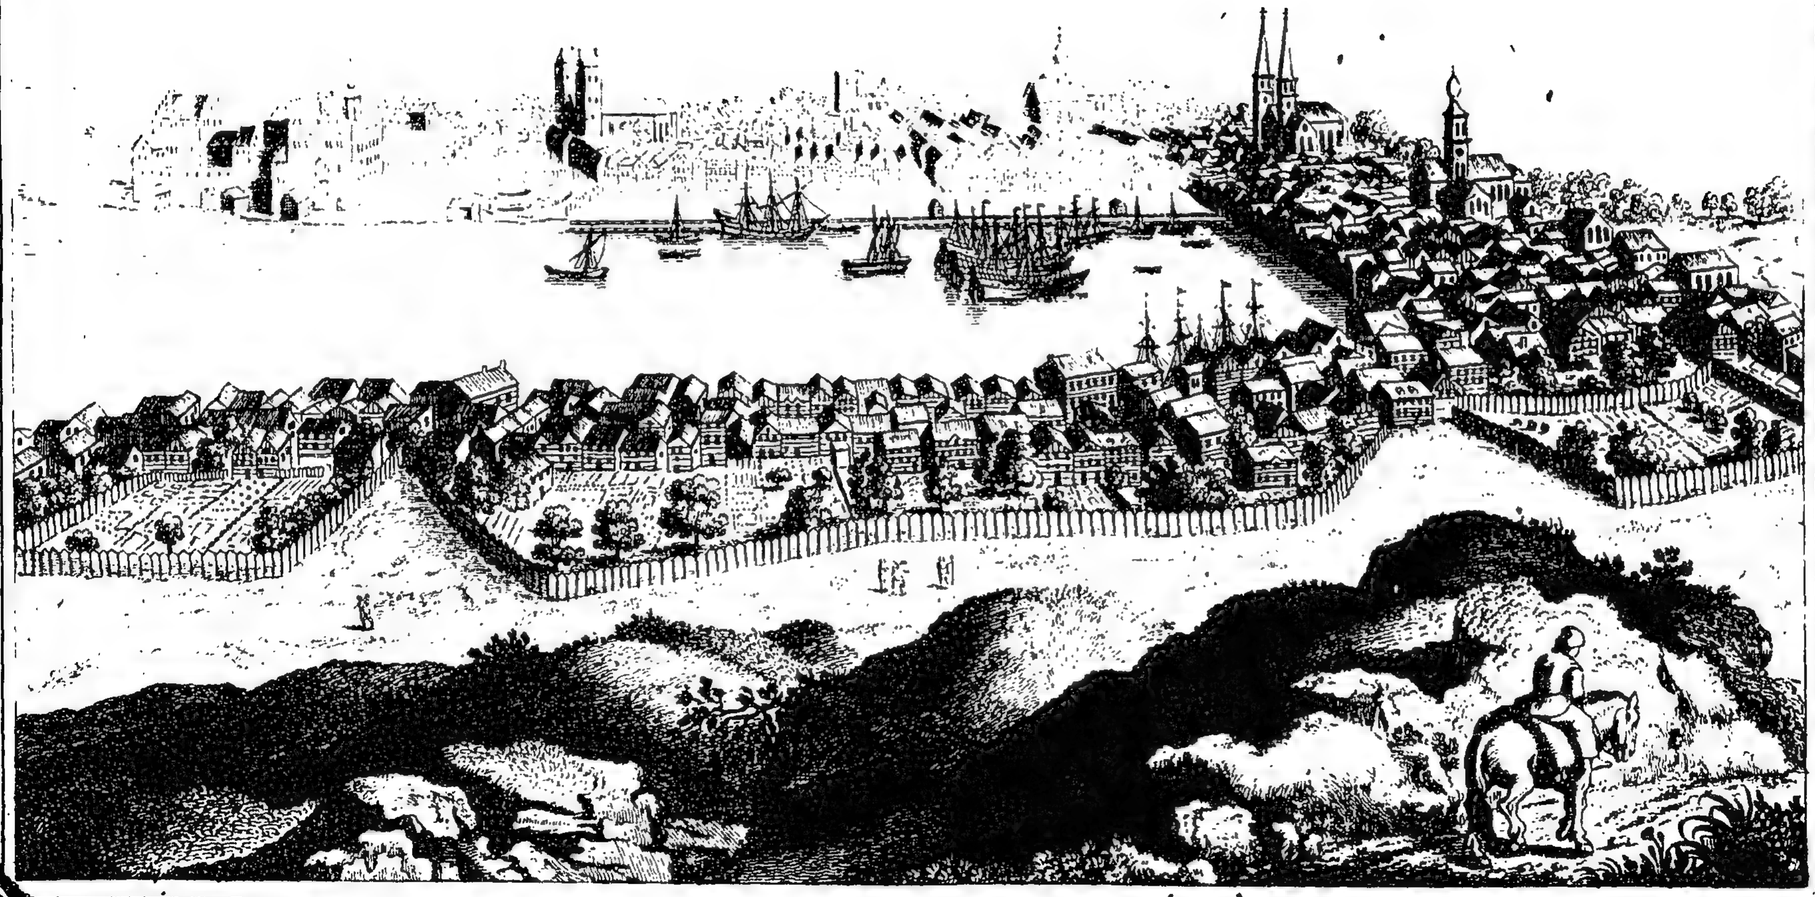
The celebrated town of Frederickſhall is near the borders of Sweden, ſituated in latitude fifty-five degrees, twenty-ſix minutes, at the north of the river Tiſtedal, where it diſcharges itſelf into the Spineſund. This town was formerly called Halden, and was a mean place, under the juriſdiction of the magiſtracy of Frederickſtadt; yet it made a very gallant defence againſt the Swedes in 1658 and in 1659, by means of a ſmall intrenchment or rampart. It was afterwards ſtrengthened with additional fortifications; and in 1660 ſuſtained a third ſiege from the Swedes; and Charles Guſtavus is by ſome thought to have received here the wound of which he died. Five years after, this town received a charter, with the privileges of a city.

In 1716 and 1718, the inhabitants again diſtinguiſhed themſelves by the vigorous defence they made againſt the attacks of the Swedes; and here, on the eleventh of December, 1718, Charles XII. of Sweden was ſhot in the trenches. King Frederick IV. ordered a pyramid twenty feet high to be erected on the ſpot where that hero fell. Its ſides were decorated with military trophies, the arms of Sweden, and the king's name; and the top was ſurmounted with a gilt crown. On four marble tables at the baſe, were one Latin and two Daniſh inſcriptions in golden letters. But king Chriſtian VI. in compliment to Sweden, ordered this pyramid to be taken down. The town itſelf is of no great ſtrength; but on a high rock oppoſite to it, ſtands the ſtrong fortreſs of Frederickſtein, and there are other ſmaller forts near it. This city has ſeveral times been deſtroyed by fire.

The town of Frederickſtadt was built in 1567 by Frederick II. who granted it a favourable charter, and removed the provincial court thither. It lies forty-four miles to the ſouth of Frederickſhall, and is governed by a town magiſtrate, and its chief trade is in timber. Frederickſtadt was regularly fortified in 1655 by Frederick III. and new works have been ſince added to it; ſo that its ſtrength by nature and art, and its convenient ſituation, render it the moſt important fortreſs in this country.

II. Chriſtianſand is ſituated in the moſt ſouthern extremity of Norway, and is bounded on the north by the government of Chriſtiana; and, on the eaſt, ſouth, and weſt, by the North ſea. This province is fertile in corn, and has ſeveral rivers, one of which is the Mandel, which in one place has a bridge laid over it from one rock to another, thirty-ſix feet above the ſurface of the water. At a ſmall diſtance from this bridge is a cataract, where a very uncommon method of fiſhing is practiſed; the fiſhermen go under the cataract, which forms an arch over their heads, to catch the ſalmon, at the extreme hazard of their lives, in a hole in the rock.

This government conſiſts of four prefectures, five diſtricts, and has two provincial courts. The principal city is Chriſtianſand, which is ſituated on the eaſtern coaſt, in the fifty-ninth degree three minutes north latitude, and is the reſidence of the biſhop and the general governor, where is a cathedral and epiſcopal ſchool. This city was built by Chriſtian IV. between the year 1641 and 1643, and is thus called from its founder, and the great ſande, or ſtrand, on which it is built. It is of a ſquare form, and the ſtreets are broad, regular, and handſome. Its ſituation is very commodious, three ſides of it being ſurrounded either with freſh or ſalt water, and on the fourth it has a communication with fine meadows and the mountains. In 1734 the church, with the greateſt part of the city, was deſtroyed by fire.



Arndal, though a ſmall town, is remarkable for its ſituation on a rock in the midſt of the river Nid. It has a good wharf, and moſt of the houſes ſtand on the acclivity of the rock, the reſt being built on piles in the water. The ſtreets are only formed of bridges of boats, by means of which the inhabitants go from houſe to houſe. The water is of ſufficient depth for the largeſt ſhips to lie along ſide of the bridges. As the church ſtands high, and almoſt on the ſummit of the rock, there is an aſcent to it from the houſes by a great number of ſteps hewn out of the rock. The inhabitants make a good uſe of the commodious ſituation of this town for trade, by employing many ſhips, and dealing largely in timber.

III. Bergen is from two hundred and forty to three hundred miles in length. This government contains only the ſingle prefecture of Bergenhuus, including ſeven diſtricts, and the ſame number of provoſtſhips. This country is very populous, and is remarkable for its having ſeven marble quarries; but produces little corn.

The city of Bergen, which is the capital of this government, has the greateſt trade in all Norway. It is ſituated in the ſixty-firſt degree eleven minutes north latitude, in the midſt of a valley, and built in a ſemicircular form, on the ſides of a bay, called by the inhabitants Waag. It is well fortified by nature on the land ſide by lofty mountains, ſeven of which are remarkably high, while the defiles or paſſes between them are quite impaſſable to an enemy, and towards the ſea the harbour is well defended by ſeveral fortifications. All the churches, public edifices, and moſt of the houſes along the ſtrand are built with ſtone. The number of inhabitants are computed at thirty thouſand. This city formerly contained thirty churches and convents; but it has at preſent only four pariſh-churches, three of which are Daniſh, and one German, with a church in the large hoſpital of St. Jurgen, and a ſmall chapel in St. James's church-yard. The caſtle of Bergen is a noble ſtructure.

The large cathedral ſchool was founded in 1554, by biſhop Petrus, who alſo endowed it, and, by the liberality of king Frederick II. and others, twelve ſcholars are maintained and educated in it. The navigation ſchool founded here, which once flouriſhed greatly, is now fallen to decay. The Seminarium Fredericianum alſo deſerves

notice,

Perspective View *of* BERGEN, *the Capital of* Norway

notice, it being a noble foundation, where moral and natural philoſophy, the mathematics, hiſtory, with the Latin and French languages, are taught. This city carries on a large trade in all kinds of fiſh, tallow, hides, and timber; and the returns are moſtly made in corn and foreign commodities.

A range of iſlands extends from the north-eaſt to the ſouth-weſt of Drontheim, and between them and the continent runs a large bay called Weſt Fiorden. Among the iſlands above-mentioned is a remarkable kind of current, or whirlpool, called the Moſkoeſtrom, in the ſixty-eighth degree of latitude, near the iſland of Moſkoe, from which this whirlpool takes its name. Its impetuous roarings are heard at a great diſtance, and have no intermiſſion, except for a quarter of an hour at the turn of high and low water, when its violence ſeems at a ſtand, and fiſhermen venture upon it with their boats: but this motion ſoon returns, and gradually increaſes till it forms a vortex, capable of abſorbing whatever comes within its influence: this is ſuppoſed to be cauſed by the colliſion of the waves riſing and falling at the flux and reflux, againſt a ridge of rocks and ſhelves, which confine the water, ſo that it precipitates like a cataract; and thus, as the higher the flood riſes, the deeper muſt be the fall, ſo a whirlpool is the natural conſequence.

At the time of flood, the ſtream runs up the country between the iſlands of Lafoden and Moſkoe, with a boiſterous rapidity; but the roar of its impetuous ebb to the ſea is ſcarce equalled by the loudeſt and moſt dreadful cataracts, the noiſe being heard at ſeveral leagues diſtance. The whirlpool is then of ſuch extent and depth, that if a ſhip comes within its attraction, it is inevitably abſorbed, and daſhed to pieces againſt the rocks at the bottom. But when the ſtream is moſt boiſterous, and its fury heightened by a ſtorm, it is dangerous to come within one Norway or ſix Engliſh miles of it; for that boats, ſhips, and yachts, have been drawn into it from a diſtance which they imagined ſecured them from its attraction. It frequently happens, that even whales coming too near the ſtream are overpowered by its violence, which they no ſooner feel, than they fill the air with dreadful howlings during their fruitleſs ſtruggles to diſengage themſelves. Even large firs and pine-trees, after being abſorbed by the current, are thrown up again with their trunks ſo broken and torn, that they ſeem as if covered with briſtles. A bear once attempting to ſwim to the iſland of Moſkoe, in order to prey upon the ſheep at paſture in the iſland, afforded the like ſpectacle as that of the whale did to the people; for the ſtream bore him down, while his hideous roarings reached the ſhore.

IV. Drontheim, Trontheim, or Dronthen, is the largeſt government of Norway. It lies along the coaſt of the North ſea, being about five hundred miles in length, from ſouth to north. It has the North ſea on the weſt, the government of Wardhus on the north, that of Bergen on the ſouth, and on the eaſt it is ſeparated from Sweden by a long ridge of mountains. It extends from the ſixty-firſt to the ſixty-ninth degree of latitude: its greateſt breadth, from eaſt to weſt, is not above one hundred and twenty miles, and in many places it is much leſs. The country is mountainous, woody, cold, and barren; ſo that, though it be large, the towns are not very conſiderable. It is divided into two parts, namely, the government of Drontheim, properly ſo called, where is the city of that name, and ſeven ſmall bailiwics; and the ſub-government of Salten, which contains ſeven other ſmaller diſtricts, or valleys, on the ſea-coaſt. This whole province was yielded to the Swedes in 1658, but the king of Denmark recovered it in 1660, by the treaty of Copenhagen. The valleys of Nomendall, Heligeland, or Halgoland, Froſten, Hinder, Hero, and ſome others, belonged formerly to this province, but were given up to the Swedes in 1645, by the treaty of Bromſbroe, together with the province of Jempland, or Jemterland. This whole country is very thinly peopled, and not cultivated but along the ſea-ſhore, till within twenty-five or thirty miles from it.

The moſt conſiderable town here is Drontheim, in Latin Drontheima, or Nidroſia; formerly the capital of Norway, is ſeated on the coaſt of the Northern ocean, on a little gulf at the mouth of the river Nider, from whence it was antiently called Nidroſia. It is about two hundred and twenty miles diſtant from Bergen to the north-eaſt. It has a harbour, pretty well frequented by ſmall veſſels, though very incommodious for large ones, the entrance being obſtructed by rocks. It was formerly the reſidence of the kings of Norway, but the town being only built with timber, was ſeveral times burnt down, and is very much decayed from its antient ſplendor. It has neither ditches nor fortifications, being only encloſed by a ſingle wall. Its caſtle is not ſtrong, and ſuſtained but a few days ſiege, when the town was taken by the Swedes, in 1658. The Danes took it again that ſame year, the 21ſt of December, after a ſiege of two months and a half, as Puffendorf obſerves, in the life of Charles Guſtavus, king of Sweden. It is the ſeat of an archbiſhop, the only one in Norway. The cathedral, which was dedicated to St. Olaus, was a ſtately building, and reckoned one of the moſt magnificent in the northern countries; but it lies now in ruins, being deſtroyed by fire in the year 1522.

This town has a pretty conſiderable trade, conſiſting in ſmall maſts, and fir-deals. They alſo ſhip off here a large quantity of copper, the mines of which are eighteen or twenty miles diſtant from this town, near the village of Steckby. At the diſtance of ſix miles from theſe mines there is a ſilver one, belonging to the king. The other merchandize exported from thence are, iron, tar, furs, aſhes, goat-ſkins, &c. and they import, in exchange, ſpices, wine, brandy, vinegar, cheeſe, tobacco, coarſe cloths, and a great many old rix-dollars. This is the ſeat of the governor of the province, who generally reſides in the caſtle. The town is almoſt intirely ſurrounded by the ſea and the river Nider, being joined to the continent only by a ſmall neck of land; and it is encompaſſed by high mountains, which command it on every ſide. The country round about is very barren; and even wood is ſo ſcarce, that, a little beyond the town, the people are obliged to uſe fiſh-bones for fuel, and for ſeveral utenſils.

To the governments above deſcribed, we may add the province of Wardhus, which is bounded, on the north and weſt, by the ocean; on the eaſt, by the Ruſſian Lapland, on the ſouth, by Swediſh Lapland; and, on the ſouth-weſt, by the government of Drontheim. It is three hundred and ten miles in length, from eaſt to weſt, and two hundred in breadth from north to ſouth.

This province is divided into two parts; namely, 1. The weſtern, or maritime part, which is called Finland; and, 2. The eaſtern part, which is called Norwegian or Daniſh Lapland. The town of Wardhus, from whence this province hath its name, is the ſeat of a governor, but conſiſts only of a ſtreet of cottages inhabited by fiſhermen, with a caſtle belonging to it.

Bahus, though yielded to the Swedes in 1658, is yet reckoned a part of Norway, being its moſt ſouthern province. It is ninety miles long, but not above twenty-five broad where wideſt, and only ten in ſome places. It hath Weſt Gothland to the ſouth, Dalia on the eaſt, the government of Aggerhuus on the north, and the Categate on the weſt.

The principal places in this province are, 1. The ſtrong caſtle of Bahus, built on a ſmall iſland made by the river Nore-Elf, which there receives the Giotha-Elf, and both together are called Trolhetta. It is one hundred and ſixteen miles diſtant from Chriſtiana; was built in 1309 by Haquin the ſecond king of Norway, and ſtands on a ſteep rock near the banks of the river. The kings of Denmark had fortified it after the modern faſhion; but ſurrendered it to the Swedes in 1658, by the treaty of Roſchiled. 2. Maeſtrand, a ſtrong town built on a rock in a kind of peninſula, about ten miles below Bahus. It is a place of great trade for fiſh, and is defended by a ſtrong caſtle.

CHAP. III.

THE NEW HISTORY AND DESCRIPTION OF

SWEDEN.

SECT. I.

Containing the Situation, Extent and Boundaries, Climate, Lakes, Soil, Animals and other Particulars relative to the Natural Hiſtory of SWEDEN.

THIS extenſive kingdom lies between Denmark, Norway, and Ruſſia, and ſtretches from fifty-five degrees forty minutes, to the ſixty-ninth degree north latitude, and from the twelfth to the thirty-ſecond degree of eaſt longitude from London; being about two hundred and thirty Swediſh, or one thouſand four hundred Engliſh miles in length; its breadth is computed at one hundred and fifty Swediſh miles, or nine hundred and twenty Engliſh, and its area at ten thouſand ſquare Swediſh miles; but when proper abatements are made for vaſt lakes, inland ſeas or gulfs, ſterile mountains, extenſive rocky tracts, barren heaths, moraſſes, &c. the inhabited or cultivated parts are very ſmall, in proportion to the whole dominion. It has Ruſſia, the Baltick, and the gulf of Finland, on the eaſt; the Baltick and the Sound, on the ſouth; the ſtupendous and impaſſable mountains of Norway, on the weſt; and Norwegian Lapland, on the north.

Though the ſeaſons of the year are regular in themſelves, they do not altogether anſwer thoſe of other climates, as a French ambaſſador obſerved, who, in raillery, ſaid, there were in Sweden only nine months winter, and all the reſt was ſummer: for as winter commonly begins very ſoon, ſo ſummer immediately ſucceeds it, and leaves little or no ſpace to be called ſpring. The productions, therefore, of the earth ought to be, as they really are, more ſpeedy in their growth than in more ſouthern countries; the reaſon of which ſeems to be, that the oil and ſulphur in the earth (as appears by the trees and minerals it produces), being bound up all the winter, are then on a ſudden actuated by the heat of the ſun, which almoſt continually ſhines, and thereby makes amends for its ſhort ſtay, and brings to maturity the fruits proper to the climate. The heat in ſummer is ſo intenſe, that it often ſets the woods on fire, which ſometimes ſpreads itſelf many leagues, and can ſcarce be ſtopt, till it comes to ſome lakes, or very large plain. In the ſummer ſeaſon the fields are cloathed with variety of flowers, and the whole country overſpread with ſtrawberries, raſberries, currants, and the like; which grow upon every rock. In their gardens melons are brought to good perfection in dry years, but apricots, peaches, and other wall-fruits, are almoſt as ſcarce as oranges. They have cherries of ſeveral ſorts, and ſome tolerably good, which cannot be ſaid of their apples, pears, and plums, which are neither common, nor well-taſted. All kinds of roots are in plenty, and contribute much to the nouriſhment of the poor people.

The ſun, at the higheſt, is above the horizon of Stockholm eighteen hours and a half, and for ſome weeks makes a continual day: in winter the days are proportionably ſhorter, the ſun being up five hours and a half; which defect is ſo well ſupplied as to lights, by the moon, the whiteneſs of the ſnow, and the clearneſs of the ſky, that travelling by night is as uſual as by day; and journies are begun in the evening, as frequently as in the morning. The want of the ſun's heat is repaired by ſtoves within-doors, and warm furs abroad; inſtead of which, the meaner ſort uſe ſheep-ſkins, and other ſuch defences; and are generally better provided with clothing, befitting their condition, and the climate they live in, than the common people in any part of Europe: though where any neglect or failure happens, it uſually proves fatal, and occaſions the loſs of noſes, or other members, and ſometimes of life; unleſs the uſual remedy to expel the froſt, when it has ſeized any part, be carefully applied, which is, to remain in the cold, and rub the part affected with ſnow, till the blood returns to its proper channel.

Their woods and vaſt foreſts overſpread much of the country, and are, for the moſt part, of pines, fir, beech, birch, alder, juniper, and ſome oak; eſpecially in the province of Bleking in South Gothland; the trees growing, in moſt places, ſo cloſe together, and lying to rot, where they fall, that the woods are ſcarce paſſable. Theſe afford a plentiful and cheap firing; and, being generally very ſtrait and tall, are eaſily convertible into timber fit for all uſes. So that the Dutch begin now to export, from hence, boards, and maſts for their ſhipping, which prove as good as thoſe of Norway. In the parts near the mines the woods are much deſtroyed, but that want is ſo well ſupplied from diſtant places, by the conveniency of rivers and winter-carriages that they have charcoal above ſix times as cheap as in England; though, indeed, it is not half ſo good.

The principal lakes in Sweden are, the Vetter, the Wener, and the Maeler. The firſt is in Oſtrogothia, or Eaſt-Gothland; and is remarkable for its foretelling of ſtorms, by a continual thundering noiſe, the day before, in that quarter whence they ariſe; as alſo, for the ſudden breaking of the ice upon it, which ſometimes ſurpriſes travellers, and in half an hour it becomes navigable. It is extremely deep, in ſome places above three hundred fathoms, though no part of the Baltick ſea exceeds fifty. It ſupplies the river Motala, which runs through Norkoping, where it has a fall of above thirty feet, and, ſome winters, is ſo choaked up with ice, that, for many hours, no water paſſes. The ſecond is in Weſtrogothia, or Weſt-Gothland, from which iſſues the river Elve, that, falling down a rock, near ſixty feet, paſſes by Gottenburgh. The third empties itſelf at Stockholm, and furniſhes one ſide of the town with freſh water, as the ſea does the other with ſalt. Theſe, and abundance of other lakes, whereof many, like ponds, have no vent, are not ill ſtored with variety of fiſh; as ſalmon, pikes, perch, tench, trout, eels, and many other ſorts, unknown elſewhere; of which the moſt plentiful is the ſtreamling, a fiſh leſs than a pilcher, taken in great quantities, ſalted in barrels, and diſtributed all over the country. Beſides, the gulf of Finland, which ſeparates Sweden from that province, abounds with ſeals, of which a conſiderable quantity of train-oil is made, and exported; and in the lakes of Finland are great quantities of pike, which they ſalt, dry, and ſell at very cheap rates. Theſe lakes are of great uſe for the conveniency of carriage, in ſummer, by boats; and, in winter, by ſleds: and among them, and on the ſea coaſt, are almoſt innumerable iſlands, of different ſizes; whereof there are, in Sweden, above ſix thouſand which are inhabited: the reſt are either bare rocks, or covered with woods.

In places capable of cultivation, the ſoil is tolerably fruitful, though ſeldom above half a foot deep; and therefore more eaſily ploughed, as it frequently is, by one maid and an ox: and it is generally beſt where there is leaſt of it, that is to ſay, in the little ſpaces between the rocks; and frequently the barren land, being enriched by the aſhes of trees, burnt on the place where they grow, and the ſeed raked among the aſhes, produces a plentiful crop, without further cultivation. This practice is ſo antient, that their writers derive the name of Sweden from a word in their language that expreſſes it; but the danger of deſtroy-

ing

ing the woods, has of late, occaſioned ſome laws to limit that cuſtom. If the inhabitants were induſtrious, above what neceſſity forces them to, they might, at leaſt, have corn ſufficient of their own; but, as things are managed, they have not, nor can they ſubſiſt without great importations of all ſorts of grain from Livonia (a country once belonging to Sweden), and other parts of Germany adjacent to the Baltick ſea: and, notwithſtanding theſe ſupplies, the pooreſt ſort, in many places remote from traffic, are obliged to grind the bark of birch-trees to mix with their corn, and make bread, of which they have not always plenty.

In this, as in other northern countries, the cattle are generally of a very ſmall ſize; neither can the breed be bettered by bringing in larger from abroad, which ſoon degenerate; becauſe, in ſummer, the graſs is much leſs nouriſhing than in the places from whence they came; and in winter they are uſually half-ſtarved for want of fodder of all kinds, which often falls ſo very ſhort, that they are forced to unthatch their houſes to keep a part of their cattle alive. Their ſheep bear a very coarſe wool, only fit to make clothing for the peaſants. Their horſes, eſpecially thoſe of Finland, are hardy, vigorous, ſtrong, ſure-footed, and nimble trotters, which is of great uſe to the people, becauſe of the length of their winter, and the fitneſs of theſe horſes for ſleds, which is their only carriage in that ſeaſon: and the ſoldiers pretend that, in war, their cavaly are not only able to reſiſt, but even to break a body of the beſt German horſe.

The farmers, in ſome parts of Sweden, when the winters are uncommonly ſevere, and the cattle almoſt ſtarved, in order to nouriſh them, and cauſe the fodder to hold out during the ſeaſon, make hay-tea; that is, they boil about a handful of hay in three gallons of water, and the drink thus made is ſo extremely nutritive, that it nouriſhes the cattle aſtoniſhingly, repleniſhes the udders of the cows with a prodigious quantity of milk, and makes one truſs of fodder go as far as ten would otherwiſe do. If this experiment were tried, on ſimilar occaſions, in England, there is no room to doubt that it would prove equally beneficial.

Some parts of Sweden are much infeſted with lynxes, bears, wolves, foxes, wild cats, otters, martens, weaſels, &c. Theſe are hunted either for their fleſh, ſkins, or furs; the Swediſh huntſmen, uſing guns, are excellent markſmen in general. Here are alſo plenty of all ſorts of deer, elks and hares; the latter of which have this remarkable property, that in winter they become as white as ſnow.

Tame and wild fowls are very numerous in Sweden, and are very good. The keder, which is as large as an ordinary turkey, is much admired; as is alſo the orras, which reſembles a partridge. In winter, the Swediſh ſportſmen amuſe themſelves in killing great numbers of blackbirds, thruſhes, and ſydenſwans; the latter is a beautiful bird of the ſize of a field-fare, whoſe feathers are tipt with ſcarlet, and are ſuppoſed to come from Lapland in the hard ſeaſon. They have but few pigeons, on account of the great number of eagles, hawks, vultures, and other large birds of prey which deſtroy them.

There are many excellent mines in Sweden, and in them their wealth chiefly conſiſts. The principal of theſe is the great ſilver mine, into which the workmen are let down in baſkets to the firſt floor, which is an hundred and five fathom under ground: the roof there is as high as a church, ſupported by vaſt arches of oak; thence the deſcent is by ladders, or baſkets, to the loweſt mine, above forty fathom. They have no records ſo antient as the firſt diſcovery either of this, or the copper mine, which muſt needs have been the work of many ages. The ore ſeldom yields above four per cent. and requires great pains to refine it; they are alſo at the charge of a water-mill to drain the mines, and have the benefit of another to draw up the ore. It yearly produces about twenty thouſand crowns-worth of fine ſilver, of which the king has the pre-emption, paying one fourth leſs than the real value. This mine is at preſent much diminiſhed in its value.

Their large copper mine is about eighty fathom deep, of great extent, but ſubject to damages by the falling-in of the roof; yet that is ſometimes recompenſed by the abundance of ore which the ruined pillars yield, though moſt commonly the loſs, in that caſe is very great. The occaſion of theſe falls is aſcribed to the throwing the earth and ſtones, brought out of the mine, upon the ground over it; by which the pillars become overcharged, and give way: and the reaſon of this is ſaid to be, that the profit ariſing, to thoſe who are concerned, is ſo little, that they are not able to work it off as they ought, and to remove the rubbiſh to a greater diſtance: and unleſs the king abates a conſiderable part of the profit ariſing to the crown from this mine, it is believed it will, in a few years, be at a ſtand, eſpecially if the deſigns of making copper, which are on foot elſewhere, do take any tolerable effect. The copper yearly made out of this mine amounts to the value of about two hundred thouſand pounds, of which the king has a fourth part, not by way of pre-emption, but in kind; beſides which, he has, upon the remainder, a cuſtom of twenty-five per cent. when it is exported unwrought. Some years ago a gentleman of Italy came into Sweden, with propoſals to make copper a ſhorter and cheaper way than had till then been practiſed, ſo as to make that in five days which before required three weeks, and with one fifth part of the charcoal, and with fewer hands. The bargain was made, and his reward to be an hundred thouſand crowns. The firſt eſſay he made ſucceeded to admiration; but when he came to work in earneſt, and had got his new-invented ovens built to his mind, the miners, as he complained, picked out the very worſt ore, and were otherwiſe ſo envious and untractable, that he failed of ſucceſs, and loſt his reward: nor was it without difficulty that he obtained leave to buy ore, and practiſe his invention at his own charge.

Here are great numbers of iron mines and forges, eſpecially towards the mountainous parts, where they have the conveniency of water-falls to turn their mills. From theſe, beſides ſupplying the country, there is yearly exported iron, to the value of near three hundred thouſand pounds. But of late years the number of theſe forges has been ſo much increaſed, that each endeavouring to under-ſell others, the price has been much lowered. And ſince the prohibition of foreign manufactures, in exchange of which iron was plentifully take off; it is grown ſo cheap, that it is found neceſſary to leſſen the number of forges. Neither has that contrivance had the effect intended; but, on the contrary, many more are likely to fall of themſelves, becauſe they cannot work but with loſs, in which caſe, many thouſands of poor people, whoſe livelihood depends upon theſe forges and mines, will be deprived of the means of ſubſiſtence.

As the account which Mr. Wraxall, a late traveller, has favoured us with, of his deſcent into the iron mines at Danmora, is both curious and intereſting, we ſhall here tranſcribe it for the ſatisfaction of our readers: "We lay, ſays this gentleman, at a pretty village called Oſtarby, and went about three miles, the next morning, to ſee the mines at Danmora. They are celebrated for producing the fineſt iron ore in Europe, the iron of which is exported into every country, and conſtitutes one of the moſt important ſources of the national wealth and royal revenue. The ore is not dug, as in the mines of tin and coal which we have in England, but is torn up by powder. This operation is performed every day at noon, and is one of the moſt tremendous and awful that can be conceived.

"We arrived at the mouth of the great mine (which is near half an Engliſh mile in circumference) in time to be preſent at it. Soon after twelve, the exploſion began: I cannot compare it to any thing ſo aptly as ſubterraneous thunder, or rather vollies of artillery diſcharged under ground. The ſtones are thrown up by the violence of the powder to a vaſt height above the ſurface of the earth; and the concuſſion is ſo great, as to ſhake the ſurrounding earth, or rock, on every ſide. I felt a pleaſure, mingled with terror, as I hung over this vaſt and giddy hollow, to the bottom of which the eye in vain attempts to penetrate. As ſoon as the exploſions were finiſhed, I determined, however, to deſcend into the mine; which there is no way of doing, but in a large deep bucket, capable of containing three perſons, and faſtened to chains by a rope.

"The inſpector, at whoſe houſe I had ſlept the preceding night, took no little pains to diſſuade me from the reſolution; and aſſured me, not only that the rope or chains ſometimes broke, but that the ſnow and ice which lodged on the ſides of the mines frequently tumbled in, and deſtroyed the workmen; nor could he warrant any abſolute ſecurity from one or both of theſe accidents. Finding, however, that I was deaf to all his remonſtrances, he provided me a clean bucket, and put two men into it, to accompany me. I wrapped myſelf, therefore, in my great coat, and ſtepped into the bucket. The two men followed, and we were let down.

"I am not aſhamed to own, that when I found myſelf thus ſuſpended between heaven and earth by a rope, and looked down into the deep and dark abyſs below me, to which I could ſee no termination, I ſhuddered with apprehenſion, and half repented my curioſity. This was however, only a momentary ſenſation; and before I had deſcended an hundred feet, I looked round on the ſcene with very tolerable compoſure. I was near nine minutes before I could

I could reach the bottom, it being eighty fathom, or four hundred and eighty feet. The view of the mine, when I set my foot to the earth, was awful in the highest degree. Whether terror or pleasure formed the predominant feeling as I looked at it, is hard to say. The light of the day was very faintly admitted into these subterraneous caverns. In many places it was absolutely lost, and flambeaux supplied its place. I saw beams of wood across some parts, from one side of the rock to the other, where the miners sat employed in boring holes for the admission of powder, with as much unconcern as I would have felt in any ordinary employment, though the least dizziness, or even a failure in preserving their equilibrium, must have made them lose their seat, and dash them to pieces against the rugged surface of the rock beneath. A confinement for life, in these horrible iron dungeons, must surely, of all punishments which human subtilty has devised, be one of the most terrible.

"I remained three quarters of an hour in these gloomy and frightful caverns, and traversed every part of them which was accessible, conducted by my guides. The weather above was very warm, but here the ice covered the whole surface of the ground, and I found myself surrounded with the cold of the most rigorous winter, amid darkness and caves of iron. In one of these, which runs a considerable way under the rock, were eight wretches warming themselves round a charcoal fire, and eating the little scanty subsistence produced from their miserable occupation. They rose with surprise at seeing so unexpected a guest among them; and I was not a little pleased to dry my feet at their fire, which were wet with treading on the melted ice.

"There are no less than one thousand three hundred of these men constantly employed in the mines, and their pay is only a common dollar, or three-pence English a day. They were first opened about 1580, under the reign of John III. but have been constantly worked only since the time of Christina.

"After having gratified my curiosity with a full view of these subterranean apartments, I made the signal for being drawn up; and can most seriously assure you, I felt so little terror while ascending, compared with that on letting down, that I am convinced in five or six times more I should have been perfectly indifferent to it, and could have solved a problem in mathematics, or composed a sonnet to my mistress, in the bucket, without any degree of fright or apprehension. So contemptible does danger or horror become, when familiarised by continual repetition, and so strong is the effect of custom on the human mind!"

Speaking of the manner in which the peasants manufacture the iron, the same person makes the following remarks: "I have visited six or seven forges on my journey, each of which constantly employs from four to fourteen hundred workmen only in iron. Wherever there is a country seat, you may be certain to see one of these fabrics; and no cyclops were ever more dextrous in working their materials. I have seen them stand close to, and hammer, in their coarse frocks of linen, a bar of ore, the heat and refulgence of which were almost insupportable to me at ten feet distance, and with the sparks of which they are covered from head to foot. I had the pleasure of viewing the whole process used to reduce the ore into iron, and must own it is very curious. They first roast it in the open air, for a considerable time: after which, it is thrown into a furnace, and, when reduced to fusion, is poured into a mould of sand about three yards in length. These pigs, as they are then denominated, are next put into a forge, heated to a prodigious degree; they break off a large piece with prickers when red-hot, and this is beat to a lesser size with hammers. It is put again into the fire and from thence intirely finished by being laid under an immense engine resembling a hammer, which is turned by water, and flattens the rude piece into a bar. Nothing can exceed the dexterity of the men who conduct this concluding part of the operation, as the eye is the sole guide, and it requires an exquisite nicety and precision.

SECT. II.

Treating of the several Grand Divisions of SWEDEN, their different Provinces, Islands, Towns, &c. particularly of SWEDEN, properly so called.

THE kingdom of Sweden has always been considered, by geographers, as divided into seven provinces: namely, Sweden Proper, Gothland, Livonia, Ingria, Finland, Swedish Lapland, and the Swedish islands in the Baltick; but, as we observed, in our description of Russia, Livonia and Ingria at present appertain to that empire, having been conquered by Peter the Great, and afterwards, by posterior treaties, ceded to the Russians.

Those provinces which at present remain in the possession of the Swedes, are divided in the following manner:

Sweden Proper contains, Uplandia, Sudermania, Westmania, Nericia, Gestricia, Helsingia, Dalecarlia, Medolpadia, Angermania, Iniptia, and West Bothnia.

Gothland, or Gothia, contains East Gothland, West Gothland, and South Gothland.

Finland contains Finland Proper, Nylandia, Carelia, Kenholm, Savolaxia, Tavastia, and Cajunia.

Swedish Lapland contains, Augermanice Lapmark, Uma Lapmark, Pitha Lapmark, Lula Lapmark: Torno Lapmark, Kima Lapmark. As Lapland is subject to Sweden, Russia, and Denmark, we shall therefore treat of it distinctly after the last-mentioned.

The Swedish islands are, Gothland, Oeland, Oesel, Dago, Aland, Hagland, and Rugen.

Sweden Proper is bounded on the north by Lapland; on the south by Gothland; on the east by the gulf of Bothnia; and the mountains part it on the west from Norway; extending seven hundred and ten miles from south to north, and about two hundred and twenty-five from east to west, though in many places it is much narrower. The country is fruitful though mountainous in some parts; abounds with rich mines of copper, and affords conveniency of water and fuel for working them. It is divided, as we have already observed, into eleven parts; which are as follow:

Upland, in Latin Uplandia, is surrounded on the north-east and east by the Baltick sea; on the south it has part of the same sea, and part of Sudermania, from which it is separated by the lake of Maeler; on the west it is bounded by Westmania, and on the north-west by Gestricia, from which the river Dala parts it. It extends about seventy-five miles from north to south, and about sixty-five from east to west. Here are many mines of iron and lead, and some of silver. The country is very fruitful, and produces, amongst others, excellent wheat. The most considerable cities and towns here, are as follow:

The city of Stockholm, the capital of the whole kingdom, and the residence of the king, had its name from its situation, and the great quantity of timber used in building it; Stock signifying timber, and Holm an island. It stands two hundred and eighty miles north-east from Copenhagen, two hundred and twenty-four from Gottenburg, three hundred and forty-two from Wyburg, three hundred and eighty-seven west from Petersburgh, four hundred and sixty-five from Warsaw, six hundred and sixty north from Vienna, eight hundred and forty from Paris, and seven hundred and ninety north-east from London. It is built upon piles, in several little islands which lie near one another. It takes up at present six of those islands, together with the southern and northern suburbs; the one in the peninsula of Toren, and the other in Athundria. It is commonly divided into four parts, which are South-Malm, and North-Malm, the two suburbs, between which the city stands in an island; the fourth part is called Garceland: these four make together one of the greatest towns in Europe, with regard to the number of houses. The isle, within which the greatest part of Stockholm is inclosed, is surrounded by two arms of a river, which run with great force out of the lake Maeler: over each of these arms there is a wooden bridge. There are some other islands separated from the city but by small canals. From the city there is a prospect, on one side over the lake, and on the other over the sea, which here forms a gulf, which running between several rocks, seems as if it were another lake. The water is so little brackish before Stockholm, that it might be drank; which is owing to the great quantity of fresh water which runs from the lake into the sea.

This place, about three hundred years ago, was only a bare island, with two or three cottages for fishers; but upon the building of a castle there, to stop the inroads of the Russians, and the translation of the court thither, it grew by degrees to surpass the other more antient cities, and is now supposed to be as populous as Bristol. The castle, which is covered with copper, is a place of no strength or beauty, but of great use; for it is a spacious building where the court lodges, and which also furnishes room for most of the great officers, the national court of justice, the colleges of war, chancery, treasury, reduction, liquidation,

View of STOCKHOLM, the Capital of Sweden.

liquidation, commerce, execution: here is alſo an armoury, chapel, library, the public records, &c. It lodges very few of the inferior officers and ſervants of the court; they, together with the foot-guards, being quartered upon the burghers, at their landlord's charge for fire, candles, and lodging.

There are nine large churches in this city, built with bricks, and covered with copper; and three or four wooden chapels. The palace of the nobility, which is the place of their aſſembly at the convention of the ſtates, and the depoſitory of their privileges, titles, and ſuch other records as concern their body, is a very ſtately pile, and one of the fineſt in the kingdom: it is, as it were, but one large pavilion, adorned on the outſide with marble figures and columns, aud within with pictures and ſculptures; eſpecially in two large halls, where the nobility meet. Next to this palace, is that of the lord high chancellor; and a little farther are two other palaces belonging to noblemen. Theſe four palaces ſtand on the banks of the lake, are built after the ſame manner of architecture, and are all covered with copper. The bank, built at the city's charge, is alſo a noble edifice, and, together with ſeveral magnificent houſes of the nobility, all covered with copper, afford a handſome proſpect.

The burghers' houſes are chiefly built with brick, except in the ſuburbs, where they are of timber, and thereby ſubject to the danger of fire, which commonly, when it gets a-head, deſtroys all before it in the quarter where it happens. To repair which misfortune, they ſometimes ſend the dimenſions of the houſe they intend to build, into Finland; where the walls, and ſeveral ſeparations, are built of pieces of timber laid one upon another, and joined at the corners; and afterwards marked, taken down and ſent by water to Stockholm, there to be ſet up and finiſhed; and, when they are kept in good repair, they will laſt thirty or forty years; and are warmer, cleanlier, and more healthful than thoſe of either brick or ſtone. To prevent the danger of fire, the city is divided into twelve wards; and in each of theſe there is a maſter, and four aſſiſtants; who, upon notice of any fire, are immediately to repair to it; as alſo all porters and labourers, who muſt range themſelves under the maſter of their reſpective ward. There is, beſides, a fire-watch by night, who walk about only for that purpoſe; and in each church-ſteeple a watch is kept, who tolls a bell upon the firſt appearance of fire.

This city is governed by the great ſtadtholder, who is alſo a privy-counſellor. He ſits once a week in the town-houſe, and preſides alſo in the college of execution, aſſiſted by an under-ſtadtholder, and a bailiff of the caſtle. Next to him are the four burgomaſters; one for juſtice, another for trade, the third for the policy of the city, and the fourth has the inſpection over all public and private buildings, and determines ſuch caſes as ariſe on that account: with them the counſellors of the city always ſit, and give their votes, the majority of which concludes. Their number is uncertain, but uſually about twenty, moſt merchants and ſhop-keepers, or ſuch as have ſerved the king in ſome inferior employments. Beſides their ſalary, they have an immunity from ſuch impoſitions as are laid on the inhabitants to ſupport the government of the city; which pays all its officers and ſervants, maintains a guard of three hundred men, and defrays the charge of all public buildings and repairs.

To ſupport the expence, beſides a duty belonging to the city, of goods imported and exported (which is about four per cent, of the cuſtoms paid to the king, and amounts to about five thouſand pounds per annum), the magiſtrates impoſe a yearly tax on the burghers; in which they are aſſiſted by a common-council of forty-eight (which chuſes its own members), and meet every ſpring, to proportion the payments for the enſuing year. On the traders they uſually impoſe forty, fifty, or ſixty pounds ſterling; and upon others of a meaner condition, as ſhoemakers, taylors, &c. five or ſix pounds, and on no houſekeeper leſs than fifteen ſhillings: beſides quartering the guards, inferior officers and ſervants of the court, with other leſſer charges; which altogether would be thought a great burden, even in richer countries: neither is it otherwiſe eſteemed by the inhabitants of this city, who can ſcarce be kept in heart by the privileges they enjoy, as well in cuſtoms as in the trade of the place; which muſt needs paſs through their hands: for the natives of other parts of the kingdom, as all foreigners, are obliged to deal only with the burghers; except thoſe of the gentry, who make iron; they having the privilege to ſell it to ſtrangers as ſoon as it is manufactured.

Stockholm is in a manner the ſtaple of Sweden; to which moſt of the goods of their own growth, as iron, copper, wire, pitch, tar, maſts, deals, &c. are brought to be exported. The greateſt part of the commodities imported from abroad come to this port, where there is a haven capable to receive one thouſand ſail of ſhips, and has a bridge or key near an Engliſh mile long, to which the greateſt veſſels may lie with their broad-ſides. The only inconvenience is, that it is ten miles from the ſea, the river very crooked, and no tides. It opens into the Baltick, but is of dangerous acceſs, by reaſon of the rocks; within, it is one of the moſt commodious in Europe; for the ſhips of the largeſt ſize lie cloſe to the key, where they are ſo ſecure from the wind, that they need neither anchors nor cables to hold them. Its entrance is defended by two forts.

The city of Upſal ſtands on the banks of the river Sal, or Sala, which falls into the lake of Ekolon, and is forty-two miles diſtant from Stockholm towards the north-weſt. It is a very ancient city, formerly the capital of the north, and the ſeat of the king. It is divided into two parts by the river, which is here pretty large, and is ſo hard frozen up in February, that a fair is yearly kept there upon the ice in that month. The town is large, but without any conſiderable fortifications. Here is to be ſeen the fineſt church in the whole kingdom; namely, the cathedral. It is all covered with copper, and adorned with ſeveral tombs, eſpecially thoſe of many kings. In the chapel behind the altar, ſtands the monument of king Guſtavus in marble, between the ſtatues of his two wives, who lie alſo buried here. In another chapel is the tomb of king John's wife, who was mother to Sigiſmund III. king of Poland: it is made of white marble. Above the city, on a ſteep hill, there is a beautiful caſtle, which is fortified. It is very large, built after the Italian manner, and has a noble proſpect over the city, which it commands.

This city was at firſt a biſhop's ſee, and was created into an archbiſhopric by pope Alexander III. at the requeſt of king Charles, ſucceſſor to St. Erick. Stephen, who died in the year 1158, was the firſt archbiſhop of this ſee; and John Magnus, who, at the reformation, refuſed to admit the Lutherian confeſſion, and removed to Rome, was the twenty-ſixth. Since his time there have been only proteſtant archbiſhops, who do not live with the ſame pomp and magnificence as the Roman catholic prelates uſed to do; for the latter never appeared in public without a retinue of four or five hundred people on horſeback to attend them.

In the univerſity of Upſal there is a chancellor, who is always a great miniſter of ſtate; a vice-chancellor, always the archbiſhop; a rector, choſen out of the profeſſors, of whom there are about twenty that have each one hundred and twenty pounds a year ſalary. The ordinary number of ſtudents is about ſeven or eight hundred, fifty of which are maintained by the king, and ſome few others were formerly by perſons of quality. The reſt, that cannot ſubſiſt of themſelves, ſpend the vacation in gathering the charities of the dioceſe they belong to, which is commonly given them in corn, butter, dried fiſh or fleſh, &c. upon which they ſubſiſt at the univerſity the reſt of the year. They do not live collegiately, but in private houſes, wear no gowns, nor obſerve any other diſcipline than what they are led to by their own neceſſity or diſpoſition.

The town of Engkoping is a place of conſiderable trade: it ſtands about twenty-five miles from Stockholm, to the weſtward, and twenty-four from Upſal to the ſouth, on the lake Maeler.

Sudermania is the next diviſion of Sweden Proper: it is ſeparated from Upland, on the north by the lake Maeler; bounded, on the ſouth, by Eaſt Gothland; on the weſt by Nericia; and by the Baltick, on the eaſt. It is a populous country, extending ſixty miles in length, and forty-five in breadth; fruitful in corn, wines, and timber, of which laſt many ſhips are built in this province. It is divided into Sudermania Proper, and the iſland of Feren, formed by the lake Maeler and Rekarne. It produces abundance of corn, and has ſeveral mines.

The capital city of this province, called Nicoping, ſtands on the Baltick, forty-eight miles to the ſouthward of Stockholm. It has a good harbour, and a caſtle, in which the dukes of Sudermania uſed to reſide, and is a place of ſome trade.

The ſmall town of Strengthneſs is ſituated on the ſouth ſide of the lake Maeler, and is the ſee of a biſhop, who is ſuffragan to the metropolitan of Upſal. Oppoſite to the town, an annual fair is held upon the ice. Some Gothic inſcriptions in the Runic character evince the antiquity of

the place. Charles IX. lies buried in the cathedral, which is an an antient Gothic edifice.

About forty miles from Stockholm is ſituated the town of Troſa, or Treſen, which has a very good harbour.

Weſtmania, Weſtermania, or Weſtmanland, is a very barren province; its greateſt length, from ſouth-eaſt, to north-weſt, is about ninety miles, and it is about three-ſcore miles in breadth from north to ſouth. The country is barren, but was formerly conſiderable by its ſilver mines.

The capital of Weſtmania is Aroſon: it is ſituated on the ſide of the lake Maeler, between Koping and Engkoping, about thirty-five miles from Stockholm. The hereditary convention was ſettled here in the year 1544, by which the ſucceſſion to the crown of Sweden was ſettled in the family of Guſtavus Vaſa. This city is a biſhop's ſee, and well defended by a ſtrong caſtle.

The town of Arbogen is ſituated on the little river Arbon, which falls into the lake Maeler; it is about ſixty miles to the weſtward of Stockholm. Koping is a ſmall town between Aroſon and Arbogen, and there are ſome tolerable mines of iron and copper in its neighbourhood. Nora is another ſmall town at the diſtance of twenty-eight miles to the weſtward of Arbogen. Lindeſzas is ſituated to the eaſtward of the Lindenberg mines: it is an inconſiderable place, and built near a rivulet, which diſembogues itſelf into the lake Maeler.

Nericia is bounded on the eaſt, by Sudermania; on the north by Weſtmania; on the ſouth by Eaſt Gothland; and on the weſt by part of Weſt Gothland, and the northern extremity of the lake Vetter, or Veter. This province contains ſeveral lakes end rivers, of which the river Troſa ſeparates the country into two parts, from weſt to eaſt. Silver mines were formerly worked in this province, but at preſent it produces only iron, ſulphur, and allum. The chief places here, and which are not very conſiderable, are Arebro, Hellſmerberg, Aſkerſcind, and Glanſhamme.

Geſtricia is ſituated between Dalecarlia, the Bothnian gulf, and the rivers Tynea and Dala. This province contains three towns, namely, Gevalia, Borna, and Corperberget: the former, being at the mouth of the river Haſunda, which forms a gulf that ſerves as a good harbour; carries on a conſiderable trade, but the two latter contain nothing very remarkable.

Helſingia is a very extenſive province, being bounded on the north by Jemptia and Medolpadia; on the weſt and ſouth-weſt by Dalecarlia; on the ſouth by Geſtricia; and on the eaſt by the Bothnian gulf. The inhabitants employ themſelves principally in fiſhing and hunting: the country is mountainous and woody. Hudwickſwald is the capital of this province, and is ſituated near the Bothnian gulf: roſin, corn, timber, and hides, are its principal commodities, in which it carries on a conſiderable traffic.

The town of Soderhamn has a good haven belonging to it, formed by the mouth of the river Luiſpa; the other towns, viz. Hien, Swegh, Korbole, Luſdal, and Alta, are of very little importance.

Delecarlia, or Dalecarlia, is bounded on the weſt and north by the mountains of Norway; on the eaſt by Helſingia and Geſtricia; and, on the weſt by Weſtermania and Weſtmanland. This province is one hundred and ſixty-five miles in length, and one hundred in breadth: it is ſubdivided into what are called three vallies; yet though it is ſo extenſive, it contains only a few very inconſiderable villages. The mountains abound with iron and copper, and ſome of the mines are extremely deep. It hath been frequently obſerved, that the greateſt number of the revolutions in Sweden have originated in this province; on which account the inhabitants have been characterized as more courageous, bold, and ferocious than any of the Swedes, as well as poſſeſſed of a more liberal ſpirit of independency.

The principal villages are, 1. Idra, on the river Elſinam, one of the ſprings of the Dala, or Dalecarlia, which runs into the Silian lake. This town is one hundred and twenty-ſix miles diſtant from Hudwickſwald to the weſt. 2. Lima is thirty-ſix miles from Idra to the ſouth; and 3. Hedemora, on the river Dala, near the borders of Weſtermania, is forty-two miles diſtant from Upſal.

Medolpadia is a very mountainous country, and full of foreſts; it has the gulf of Bothnia on the eaſt, Angermani on the north, Jempterland on the north-weſt, and Helſingia on the ſouth-weſt. It is watered by three rivers, the moſt northern of which is called Indal, and runs through the whole province lengthways. The moſt meridional one is named Niſarund. The third, which runs betwixt theſe two, is the ſmalleſt. Beſides theſe, there is a rivulet called Stamming-Back, which waters the ſouthern borders of this province. The ſea-coaſt here is about forty miles long, and full of rocks, to the ſouth of Sundſwald, the capital of this province, at the mouth of the middle river, with a pretty good harbour. Other places of ſome note are, Haſio, a ſea-port town; at the mouth of the river Indal, over-againſt which lies the iſland of Alvon. Nirunda, alſo a ſea-port town on the Niſarund. Trop and Tuna ſtand higher up on the ſame river. Tors, Indal, and Carlobec, on the river Indal. Anas, Sion, and Guarp, lie on the ſame coaſt.

Angermania, or Angermanland, is bounded on the north by Weſt Bothnia and Lapland; on the eaſt, by the gulf of Bothnia: on the ſouth by Medolpadia; and, on the weſt by Jempterland. It is above ninety miles in length, and near as many in breadth. The river Anger-man-Flodt runs through it. But it is a mountainous and rocky country, full of rocks and foreſts; ſo that there are here very few villages, and but one town of ſome note, which is Hernoſand, on the Bothnick gulf, where it has a pretty good harbour, which affords it ſome trade. It lies about ſeventy miles from Hudwickſwald to the north. Natra, in the ſame province, ſtands on a bay of the ſame gulf, forty-five miles diſtant from Hernoſand to the north.

Jemptia, Inipdia, or Jempterland, has Lapland on the north; Angermania on the eaſt; Medolpadia, Helſingia, and Dalecarlia, on the ſouth; and the high mountains of Norway on the weſt. It is watered by two pretty conſiderable rivers; namely, the Indal, which forms in the middle of this province a large lake, and runs into Medolpadia, and the Hamerdal, which runs from north-weſt to ſouth-eaſt, and enters into Angermania. Here are no cities, but only a few villages and hamlets; the moſt conſiderable of which are Reſſund, a fortreſs ſixty-ſix miles diſtant from Hernoſand towards the weſt. Lidh, or Lida, reckoned the chief place of this province, ſtands about twenty miles north of Reſſund.

Weſt Bothnia, thus called to diſtinguiſh it from Cajania, which lies on the other ſide of the gulf, and is ſometimes called Eaſt Bothnia, lies along the northern part of the gulf, thence called the Bothnick gulf, which bounds it on the eaſt: it has Angermania on the ſouth, and is ſurrounded by Swediſh Lapland on the weſt and north. That part of this province which lies along the coaſt, is pretty well peopled, and has many villages, but few towns of any note. The country is well watered by ſeveral rivers which ariſe from the lakes in Lapland. The chief of theſe rivers going from ſouth to north are, Uma, Skellefta, Pitha, Lula, Rana, Torno, and Rimi; the laſt of which, together with the gulf, divide Weſt from Eaſt Bothnia.

The chief towns here are, Uma, on the gulf, at the mouth of the river of that name, about ninety-ſix miles from Hernoſand to the north-eaſt. Pitha, at the mouth of the river of that name, about eighty miles north from Uma. Lula, alſo at the mouth of a river of that name, eighteen miles from Pitha to the north. Torno, at the mouth of the river thus called, fifty-four miles diſtant from Lula to the north-eaſt, ſtands at the bottom of the gulf of Bothnia, near the borders of Lapland. It is a place of ſome trade, and has a good harbour.

SECT. III.

Deſcribing the Second Grand Diviſion of SWEDEN called GOTHLAND.

GOTHLAND, or Gothia, is a large fruitful country, and the moſt ſouthern of all Sweden: it compriſes Eaſt Gothland, Weſt Gothland, and South Gothland.

The firſt of theſe, called Eaſt Gothland Proper, includes the country properly ſo called Smaland, and the iſland of Ocland. It is a fertile, open, flat country, producing corn, cattle, fowl, veniſon, fiſh, &c. and is bounded on the north by Sudermania; on the eaſt by the Baltick; on the weſt by the lake Vetter, or Veter; and on the ſouth by Smaland.

Norkoping is the chief town. It ſtands about ſeventy miles to the ſouthward of Stockholm, on the bank of a ſtream which runs from the lake Vetter to the gulf of Brawiken. The town is populous, large, and hath conſiderable commerce. It is likewiſe celebrated for a ſalmon fiſhery, by which many people are maintained.

The town of Sudercoping carries on ſome trade; it ſtands on a branch of the ſea, about ſixteen miles from the Baltick; is unfortified; but has been remarkable for ſome curious

curious cryſtal ſtones which have been found in the neighbouring places.

Stegeburg ſtands ten miles to the eaſtward of Sudercoping: it is a ſmall town, has ſome commerce, and a tolerable harbour.

The town of Waſtena, or Vadſtan, is ſituated on the eaſtern bank of the lake Vetter, at twenty-five miles diſtance from, and is only remarkable for the ruins of, an antient royal palace.

The town of Smaland is ſituated between Eaſt Gothland, the Baltick, Bleking, and Halland. It is ſeventy miles in length, and about ſeventy-five in breadth, and abounds in cattle, wood, iron, copper, lead, and other uſeful articles.

Calmar, which is the capital of this province, is a conſiderable city, ſituated on a ſtrait of the Baltick formed by the iſle of Oeland, which lies over-againſt it. That ſtrait is called from thence Calmar Sund. This city is one hundred and ſixty miles diſtant from Stockholm towards the ſouth. It is divided into the Old and New town: Old Calmar is famous by a deed executed there in the year 1393, by which the three northern crowns of Sweden, Norway, and Denmark, were ſettled on the head of queen Margaret. This is called in hiſtory the union of Calmar. Erick, Margaret's ſucceſſor, founded thirteen prebends here, and gave a decree, by which he put the church of Calmar among the collegiate ones. After the diviſion of the crowns, which the fatal union of Calmar had united, this city became a frontier town, with regard of the Danes, who were in poſſeſſion of Schonen. It was often taken, retaken, and plundered; and, to complete its ruin, it was burnt down to the ground in the year 1547, nothing eſcaped the fire but the church, and about threeſcore houſes. Soon after this misfortune, the new city was built at a muſquet-ſhot's diſtance from the old town, in a little iſland called Owarnholm.

This new city is large, the ſtreets are broad and ſtrait, and houſes well built; but the town is not populous. The new fortifications conſiſt only of thick walls built with large pebble ſtones taken out of the ſea, and a few ramparts, built only with ſand, and therefore ſupported by another wall, which the ſea ſurrounds almoſt on all ſides, except the gate. The ſituation of this city renders it very ſtrong, all the avenues to it being full of marſhes, or cut off by water from the ſea, which abounds here with rocks, between which there are, as it were, ſo many abyſſes, that it is impoſſible to approach the place either in boats, on horſeback, or on foot. On the ſea ſide there is a long mole, built with ſtone; along which boats and ſhips ride ſecure. This mole is defended by a fortreſs called Grimſkar, built at about fifty paces from it, on a rock ſurrounded by the ſea, and where a garriſon is conſtantly kept. Behind the old town ſtands the caſtle, which is of a very difficult acceſs, having on one ſide the ſea, which is full of rocks; and on the other good ramparts, large baſtions, and ditches full of water. This city is at preſent the reſidence a ſuperintendant for the government of the clergy, who is honoured with a place in the public conſiſtory of the kingdom.

About ſeventy miles diſtant from Calmar towards the north-weſt, ſtands Weſterwick, a ſea-port town of good trade on the Baltick.

On the banks of the lake Salen, and forty-five miles diſtant from Calmar, towards the north-weſt, is Wexio, a biſhop's ſee, where ſome of the firſt plaſters of Chriſtianity lie buried; and the ſame number of miles to the weſt, and eighteen from the lake Vetter to the eaſt, the town of Ekeſio is ſituated.

The town of Jonkioping is ſituated on a bank of the lake Vetter, about ſixty miles north-weſt of Calmar. It is without walls or ditches, but defended by a citadel, which is ſurrounded by ramparts. It is rather a briſk place, as the lake on which it ſtands affords it ſome trade. The ingenious Mr. Wraxall, a very late traveller into the northern parts of Europe, has favoured us with a very intereſting and curious account of his journey from Helſinberg (the firſt town belonging to the Swediſh dominions on the ſide of Denmark) to this place; from which we ſhall, for the ſatisfaction of our readers, tranſcribe ſome of the moſt material paſſages: his letter is dated from Jonkioping, May 18, 1774.

He thus expreſſes himſelf: "I croſſed the celebrated paſſage of the Sound, though it blew very freſh. We were over in little more than half an hour. At Helſinberg, where I entered the Swediſh dominions, I had the pleaſure of viewing the beautiful landſkip reverſed which I had ſeen the preceding evening from the iſland of Zealand. Which of the two is the moſt charming, I leave connoiſſeurs to determine. I drove twenty miles in the afternoon; and was then obliged, by the approach of night, and the want of horſes, to ſtop at a miſerable little inn, or rather cabin, where I could procure nothing beſides milk: I lay down five hours in my cloaths, and then got into the carriage at three o'clock in the morning. Had I underſtood properly the manner of travelling in this country, which is, to ſend a peaſant forward from every poſt-houſe, to procure horſes in readineſs, I ſhould have doubtleſs made a conſiderable progreſs in my way; but as I neglected this neceſſary ſtep, I was obliged to wait at every ſtage an hour or two, while the horſes were brought from the neighbouring villages. I was forced to ſpend this night in a more deſolate and dirty hovel than the firſt, where I wrapped myſelf up in my great coat, and ſlept upon a table. In the morning, when I continued my journey, the whole aſpect of nature was changed. The ſnow lay upon the ground two feet deep, and the winter ſeemed to have renewed its empire over theſe inhoſpitable plains, from whence the ſmiling month of May cannot baniſh him.

"In the hope of reaching Jonkioping at night, I ſat out, however, in defiance of the inclemency of the weather, which, from having been very warm, was become in a few hours as cold and piercing as our Decembers. The drivers ſeemed totally unaffected by this ſudden alteration, which did not produce any in their dreſs or cloathing; and the peaſants, both men and women, were all barefooted as before. The ſnow, however, conſpiring with the want of horſes, prevented me from reaching Jonkioping; and I ſtaid all night at a houſe, which for horror of ſituation I never remember paralleled. It is quite detached from any village or hamlet, and the ſpot on which it ſtands is a bare rock, deſtitute of any covering or earth, and ſurrounded on every ſide by the deepeſt woods it is poſſible to conceive, and in which I had not ſeen one human creature for two leagues before my arrival. Yet, in this ſituation, fatigue made me ſleep very ſound, and my ſervant by me, till three in the morning, when, with the return of day I entered my carriage, and left this moſt melancholy and wretched habitation.

"The next morning, about ten o'clock, I arrived at Jonkioping, and gladly enjoyed a few hours of relaxation, after ſo many pleaſing occurrences. It is difficult to give a picture of the country through which I paſſed from Helſinberg, the colours of which you will not imagine are heightened by fancy or invention. The firſt twenty miles exhibited ſome few marks of cultivation and agriculture; and though there was not one collection of huts or houſes, which could be denominated a village, yet ſcattered cottages, and a little ploughed land, amidſt an immenſe waſte, informed the paſſenger that it was not totally unoccupied or unpeopled. But as I advanced farther into the province of Scamia, and afterwards into that of Smaland, even theſe faint traces of human reſidence vaniſhed. Groves of fir or aſpin covered the country; and in the courſe of ſixty miles, I can ſafely aſſure you I ſaw not an hundred people, and not ten hamlets; but there are not any villages. I have driven from one ſtage to another, of twelve or fourteen Engliſh miles, without meeting or ſeeing a ſingle perſon, though, in hopes of diſcerning the countenances of man, I impatiently caſt my eyes around on every ſide.

"The firs on either ſide the road, in many places, formed avenues as noble as thoſe which are often planted at the entrance to palaces, or noblemens ſeats; and through the whole was ſpread a kind of rude and gloomy magnificence, which, ſuperadded to their ſilence and lonelineſs, very ſtrongly affected the mind. Even the birds ſeem to have abandoned theſe dreary foreſts; and I heard or ſaw none, except wood-peckers, and now-and-then a cuckoo. I enquired if they did not afford refuge to wolves or bears, as theſe animals are commonly found in thoſe places and countries which want population; but the peaſants aſſured me, that the former were only in ſmall numbers, and rarely ſeen; and that there are not any bears.

"With reſpect to the peaſants, they are civil and humble to obſequiouſneſs, grateful for the third part of a halfpenny, and infinitely leſs uncivilized and barbarous than one would be tempted to ſuppoſe, from the appearance of every thing around them. Had I not taken the precaution to carry wine and proviſions with me, I muſt have been almoſt ſtarved in my journey through theſe miſerable provinces, where the peaſants are ſtrangers to every kind of aliment, except bread, and ſalt pork or fiſh. It is indeed a queſtion whether the former of theſe deſerves the name of bread, as it is a compound of rye and oats; among which

which they mingle, in times of dearth and famine, a kind of flour made of the internal bark of trees raſped: it is of a colour approaching to black, and of a very diſagreeable taſte.

"The ſervant that attended me, who is a German, and has wandered over half Europe in various ſervices, was quite tired with four days of ſuch miſerable accommodation, and exclaimed, in a rapture, at the ſight of this place, that it was, "le paradis terreſtre." It is indeed, of itſelf, a very neat country town, and moſt delightfully ſituated on the lake Vetter. I am juſt returned from looking down from the top of the church on it, and the ſurrounding meadows, which are all cultivated, and after the deſarts I have paſſed, are peculiarly grateful to the eye. The lake itſelf, which is near an hundred Engliſh miles in length, rather reſembles the ſea, than a piece of inland water, and extends, far beyond the view, to the north."

We ſhall give an account of Ocland, being an iſland, when we come to treat of the iſles belonging to Sweden.

The province of Weſt-Gothland is very extenſive, having Smaland on the ſouth-eaſt, Halland on the ſouth-weſt; the river Gothelba on the north-weſt, by which it is parted from the government of Bahus, and the province of Dalia; on the north, it has the lake Wenner, and part of Vermeland; and on the eaſt, it has part of Nericia, and the lake Vetter, which divides it from Eaſt-Gothland Proper. It is watered by a great many lakes and rivers, and abounds with excellent paſtures, where great numbers of cattle are bred, and by the ſale of which the country is enriched.

In this province are ſeveral conſiderable towns, the principal of which is Gottenburg, which ſtands on the Schager Rack, or Categate, on the ſouthern branch of the river Gothelba, which there falls into the ſea, and forms the harbour of this city. It is one hundred and ſeventy miles diſtant from Calmar towards the weſt, and two hundred and twenty-five from Stockholm to the ſouth-weſt. It is no antient town, being built in the year 1607, under the reign of king Charles IX. His ſucceſſors have granted it great privileges, by which it is become a conſiderable mart-town. The Dutch drive a large trade here. In the war of 1644, the Danes exerted their utmoſt efforts to ruin this city, but to no purpoſe; and it has been ſo well fortified ſince, that it is now one of the ſtrongeſt maritime towns in the kindom.

The Swedes have of late years eſtabliſhed an Eaſt-India company at Gottenburg, whence they ſend ſome ſhips annually to China, and to the coaſts of Coromandel and Malabar. They have no kind of merchandize to ſend from Sweden to India, except ſome iron and copper, and theſe articles they cannot find a market for in any conſiderable quantity; ſo that the greateſt part of their cargo muſt be paid for in ſpecie. How far this part of trade is beneficial for Sweden, where there is ſo little ſpecie, and where the merchants are obliged to procure ſilver at a conſiderable premium, muſt be left to the judgment of the reader. If the cargoes of the Eaſt-India ſhips, which are landed in Sweden, were for the conſumption of that kingdom, this branch of commerce would ſoon bring the inhabitants to deſtruction. But we find, by the cuſtom-houſe books of Gottenburg, that they export Eaſt-India goods to the amount of two hundred and fifty thouſand pounds ſterling yearly; which are ſmuggled into Scotland and Ireland, and entered regularly into ſeveral ports of the Baltick, to Hamburg and to Bremen, which is rather more than the prime coſt and freight of all the goods they bring from India, and, conſequently, Sweden has her own conſumption free of all charges; and as long as the merchants of this kingdom can find a market for the ſurplus of their Eaſt-India goods, this trade cannot be detrimental to them, but the contrary. The uniting the Iſle of Man to the crown of Great Britain was a terrible blow to the Swediſh and Daniſh companies, as the merchants of Gottenburg, and thoſe of Copenhagen had in that iſland conſiderable magazines of Eaſt-India goods.

Skara, Skaren, or Skar, is a biſhop's ſee, about twelve miles diſtant from the lake Wenner to the ſouth, and eighty-four from Gottenburg to the north-weſt, was the ſeat of the antient kings of Sweden, and had a palace, one of the ſtatelieſt not only in the north, but in all Europe, as may ſtill be judged by its ſituation, walls, and ſtructure. It is now a fenceleſs town, though formerly the metropolis of Weſt-Gothland. Near the lake Wenner, and the antient palace we have been mentioning, ſtands the mountain called Kindakulle, which is very high, and produces all kinds of herbs and plants, except vines. Every thing grows there naturally; and this mountain, which may be reckoned one of the moſt fruitful in the north, is alſo one of the moſt delightful, by the ſweet warbling of an infinite number of birds that frequent it.

The town of Linkoping, which implies the mart of Lida, ſtands on the lake Wenner, at the mouth of the river Lida, which there falls into the lake. It is fifteen miles diſtant from Skara.

The town of Falcoping ſtands on the ſouth bank of a little lake which empties itſelf into the river Lida; it is twenty miles north from Skara.

On the eaſtern bank of the lake Wenner ſtands Mariaſtadt, being thirty miles diſtant from Linkoping, to the north-eaſt. This town had its name from Mary-Anne, conſort to king Charles IX. who built it.

Theſe three laſt cities are not very conſiderable at preſent.

The province of Vermeland, or Wermeland, has Dalecarlia on the north; Weſtermania and Nericia, on the eaſt; the lake Wenner, on the ſouth; and Norway, with part of Dalia, on the weſt. Its greateſt extent, from eaſt to weſt, is about ninety-ſeven miles; and from north to ſouth, about one hundred and forty-four. It has a great many lakes and marſhes, is but indifferently cultivated, and thinly peopled. Here are one copper, and ſeveral iron mines.

The chief towns are, 1. Carloſtad or Carlſtad, which ſtands on the northern bank of the lake Wenner, one hundred and twenty miles weſt from Stockholm. It was built by Charles IX. king of Sweden, in the place of the antient city of Tingwalla. 2. Philipſtad, about twenty-five miles from Carloſtad, to the north-eaſt. This is a place of difficult acceſs, being ſeated amongſt brooks and marſhes. 3. Ruſcoy is about the ſame diſtance from Philipſtad, ſouthward.

The province of Dalia, which the Swedes ſpell Daal, is one of the ſmalleſt in the kingdom; has the lake Wenner on the eaſt, Weſt-Gothland Proper, on the ſouth-eaſt; the government of Bahus, and port or Aggerhuus, on the weſt and north-weſt; and Vermeland, on the north-eaſt. Its extent, from north to ſouth, is about eighty-four miles, and from eaſt to weſt, not above twenty-four. It is full of mountains; and has ſeveral lakes and rivers, which fall into the lake Wenner. The country is in general barren; though in ſome places there are pretty good paſtures for cattle, which are of a larger ſize than ordinary.

The places of moſt note in this province, are, 1. Daleburg, which is the chief place in this province, and ſtands on the weſtern bank of the lake Wenner, ſixty miles from Gottenburg, towards the north-eaſt. 2. Tweta, on the ſame lake, twenty miles more to the northward.

South Gothland is divided into three provinces; namely, Halland, Schonen, and Bleking. It hath Eaſt and Weſt Gothland, on the north, and is ſurrounded every-where elſe by the ſea.

The province of Halland has the ſea of Denmark, or Categate, to the ſouth-weſt; Schonen, on the ſouth; and part of Eaſt Gothland and Weſt Gothland, on the north-eaſt and north. Its extent, along the ſea coaſt, is about ſeventy-five miles; but its greateſt breadth is not above twenty-two miles. This is a pleaſant and fruitful country, which belonged formerly to Denmark, but was, in 1645, engaged to the Swedes, as a ſecurity for a free paſſage of the Sound: and was afterwards, by the treaty of Roſchild, ceded to them for ever.

The principal towns are, 1. Halmſtad, the capital of this province, which ſtands on the Categate, one hundred and forty miles from Calmar, to the weſt; and forty-ſix from Gottenburg to the ſouth. It has a good harbour, and is a place of trade. It was fortified by Chriſtian IV. king of Denmark, but given up to Sweden by the treaty of Bromſbro, in 1645. 2. Laholm, a ſmall town on the Categate, at the mouth of the river Laga, eighteen miles diſtant from Halmſtad, to the ſouth-eaſt. It has a citadel, and a good harbour. 3. Falkenberg, on the ſame ſea, at the mouth of a large river of the ſame name, is eighteen miles diſtant from Halmſtad, to the north-weſt. It is a ſea-port, defended by a caſtle. 4. Warberg, a ſmall town with a ſtrong caſtle and a large harbour, is twenty-ſeven miles diſtant from Halmſtad, towards the north; and twenty ſouthward of Gottenburg.

The province of Schonen, which is a peninſula, is ſeparated from Zealand by the Sound, which waſhes its coaſt, on the weſt; it is bounded, on the north, partly by Halland, and partly by Smaland; on the eaſt, by part of Bleking, and the Baltick ſea, which waters it alſo on the ſouth. It is about eighty miles from north to ſouth,

ſouth, and about ſixty from eaſt to weſt. As it is the moſt ſouthern, it is alſo the moſt fruitful province, abounding with corn, cattle, fowl, and all the conveniences of life. It has alſo mines of ſilver, lead, and iron.

This province is liable to be the theatre of war, whenever a rupture happens between Sweden and Denmark, becauſe of the vicinity of theſe two kingdoms. It belonged formerly to the Danes, but was yielded to the Swedes, in 1660. The Danes ſeized again the greateſt part of it, in 1676 and 1677, but were obliged to reſtore it the Swedes by the treaty concluded at Fontainbleau, in France, September 16, 1679.

The city of Lunden, the capital of this province, is but a few miles diſtant from the ſea-ſhore, and ſtands over-againſt Copenhagen, from which it is about twenty-four miles diſtant, to the eaſt; one hundred and twenty from Gottenburg, to the ſouth; and about two hundred and ſeventy-three from Stockholm, to the ſouth-weſt. It was formerly the ſee of an archbiſhop; but in 1658, when the Swedes took the city, that dignity was removed to Copenhagen; and it is now only an epiſcopal ſee. It was adorned with an univerſity erected by Charles IX. in 1668, and which has produced eminent men; and, particularly, the celebrated Samuel Puffendorf: but this univerſity has been ſuppreſſed, as we have obſerved above. This was formerly a very conſiderable city, in which were twenty-two churches, whereof the cathedral of St. Laurence is a magnificent ſtructure, having a very high ſpire, which is a landmark for ſailors; and a clock, of the moſt ingenious contrivance, ſaid to be the work of Caſpar Bartholinus. It not only ſhews the hour, day, month, and year, together with all the feſtivals, but the movements are ſo artificially contrived, that, at the hour, two horſemen come forth, and encounter each other, giving ſo many blows as the hammer is to ſtrike upon the bell: then a door opens, diſcovering the Virgin Mary ſitting on a throne, with Chriſt in her arms, and the magi, or wiſe men, paying their homage, while two trumpeters ſound a note of triumph. Near the city is a hill, on which the kings of Sweden uſed to be elected in antient times.

The town of Malmoe is populous, though ſmall: it is ſituated on the Sound, and enjoys a conſiderable ſhare of commerce. Landſkroon is likewiſe ſituated upon the Sound; has a good harbour, much commerce, is ſtrong, and well fortified. Elſinburg, alſo ſituated on the Sound, is a place of conſiderable trade; but the fortifications are gone to ruin at preſent.

Bleking is ſituated between Smaland, Schonen, and the Baltick. This province ſtretches above eighty miles in length from eaſt to weſt; and is about fifty from north to ſouth, at the broadeſt part. The coaſts are rocky, and the interior parts mountainous, woody and barren.

The chief towns in this province are, 1. Chriſtianſtadt, which is eight miles from the ſea, and ſituated in the midſt of moraſſes: it has been ſeveral times taken and retaken in the courſe of the wars with Denmark. 2. Chriſtianople, once the capital of this province: it had formerly a good harbour, which Charles XI. took a great deal of pains to ruin, and render uſeleſs. 3. Ahuys, ſituated on the Baltick, at the mouth of the river Hellean: it has a ſafe, capacious, and much-frequented harbour. 4. Carlſcroon, ſituated on a ſmall iſland, which it entirely covers; it is joined to the continent by a long bridge. It is near forty-ſix miles to the eaſt of Ahuys, has an excellent harbour, and is well fortified. There is another ſmall ſea port, called Carſholm, between this place and Ahuys.

The next grand diviſion of Sweden is Finland, which is about three hundred and eighty-ſix miles in length, from north to ſouth, and two hundred and fifteen from eaſt to weſt: it is bounded by the Bothnian gulf, part of Ruſſia, and part of Lapland. It abounds in grain, cattle, fiſh, &c. of which exports are made to other parts of the kingdom; it likewiſe furniſhes other provinces with butter, cheeſe, &c. The inhabitants ſpeak a very peculiar dialect, ſo as to be ſcarcely intelligible to the Swedes of other provinces; and their religion is, for the moſt part, the Lutheran.

Till about the middl eof the thirteenth century, the Finlanders had kings of their own: but they were at that time ſubdued by Erick IX. king of Sweden; however, part of the province of Savolax, all that of Kexholm, a portion of Carlia, and the fortreſs of Nyſlot, were ceded for ever to Ruſſia, by the treaty of Abo, in 1743.

This country is divided into ſeven provinces, viz. Finland Proper, Nylandia, Carelia, Kexholm, Savolax, Tavaſtia, and Cajania.

The town of Abo, which is the capital of the whole duchy, and of Finland Proper in particular, is ſituated on the Bothnic gulf, at the mouth of the river Aurojoki, oppoſite to the iſle of Aland. The town is the ſee of a biſhop; and here is a univerſity; which was founded and endowed by the celebrated queen Chriſtina.

A very late traveller, in a letter to a friend, thus remarks, concerning this town, "There is not any thing in Abo which has entertained me in the ſurvey, or can amuſe you by the deſcription. It is a wretched capital of a barbarous province. The houſes are almoſt all of wood, and the archiepiſcopal place is compoſed of no better materials, except that it is painted red. I inquired if there was not any thing in the univerſity to merit attention; but they aſſured me it would be regarded as a piece of ridicule to viſit it on ſuch an errand, there being nothing within its walls except a very ſmall library, and a few philoſophical inſtruments." The town, however, derives ſome trade from its harbour, in the neighbourhood of which is a rock ſurrounded by the water. It is ſingular, that when any ſhip paſſes this rock, the needle no longer points towards the north; from whence a vulgar conjecture hath ariſen, that the rock contains a loadſtone mine.

The other towns of Finland Proper, namely, Biorno, Hangant, Bioneburg, and Nyſtadt, are exceedingly inconſiderable.

Nylandia hath South Finland Proper, on the weſt, Tavaſtia on the north, the river Kimen on the eaſt, and the gulf of Finland on the ſouth. This province contains the following towns: 1. Helſingfors, the capital of this province: it is a ſmall town, ſituated on a gulf of the ſame name, at the mouth of the river Winda, which falls here into the gulf of Finland. It lies over-againſt the city of Revel, and is about ninety miles diſtant from Abo towards the eaſt. It has a pretty good harbour, and a very large fortreſs, lately built, which is garriſoned by about eight thouſand men. 2. Burgo; which is a ſmall and not very populous, but antient town on the coaſt of the Finnic gulf, on the eaſtern bank of a little river: it ſtands over-againſt the iſle of Paling, and is twenty-one miles diſtant from Helſingfors to the north-eaſt; and has a ſmall harbour. 3. Raſeburg, a little town, the capital of an earldom of the ſame name, ſtands on the gulf of Finland, thirty-eight miles from Helſingfors to the weſt, and forty-eight from Abo to the ſouth-eaſt. 4. Ekenes, that is to ſay, the peninſula of oaks, ſtands on the ſame gulf, about ſix miles from Raſeburg to the ſouth-weſt. This town is very dangerous of acceſs, on account of the many rocks and ſhelves that are before it.

Carelia is a very fruitful province, and extends, from eaſt to weſt, about one hundred and fifty miles. The principal towns are, 1. Wyburg, which is ſituated at the bottom of the gulf of Finland, is a biſhop's ſee, has conſiderable trade, is well fortified, commanded by a caſtle, and greatly benefited by having a good harbour. 2. Mala, which ſtands on a ſmall bay, that communicates with the lake Ladoga. 3. Wekelao is a very ſmall poor place, and, 5. Wilmanſtradt, which belongs to the Ruſſian dominions.

Kexholm is a very extenſive, but unfertile province, containing many large lakes and barren mountains. It is bounded, on the north, by part of Lapland; on the eaſt, by part of Ruſſia and the Onega lake; on the weſt, by Savolax; and on the ſouth, by the lake Ladoga.

In this province are only the two following towns of any note; namely, Kexholm, from which the province has its name, is called by the Ruſſians, Carelogorod, and in Latin, Kexholmia, or Carelogroda. It is a ſmall city, ſituated among marſhes, on the weſtern bank of the Ladoga lake, ſixty miles from Wyburg to the north-eaſt. It is defended by a very ſtrong citadel, and was formerly, with the whole province, ſubject to the Ruſſians, till about the beginning of the laſt century, when the czar promiſed Charles IX. king of Sweden, to ſurrender the town and province to him, if he would aſſiſt him againſt the Poles, by whom he was then cloſely beſet; but being freed from the danger, he refuſed to perform his promiſe; which made the Swedes invade his dominions, and obliged him to yield up by treaty, in the year 1616, not only this town and country, but alſo the moſt conſiderable places in Ingria. But in the late wars the Ruſſians have taken all again, as we obſerved above.

The town of Lexa, in the north part of this province, ſtands on the banks of a lake, one hundred and twenty miles diſtant from Kexholm to the north.

Savolax, an inland province, has Cajania on the north, the province of Kexholm on the eaſt, Carelia on the ſouth, and Tavaſtia on the weſt. It is a barren and deſert country, covered with foreſts, and abounding with lakes, which

afford its few inhabitants plenty of fish. It is divided into the greater and leſſer Savolax: the former, which lies towards the ſouth, contains five diſtricts. The eaſtern part of this province was yielded to the Ruſſians, by the late treaty of Abo.

The moſt conſiderable towns here are as follow: 1. Koſkimpe, or Koſnipe, the chief town of this province, ſtands on a lake, about ſeventy-five miles from Wyburg to the north. 2. Nyſlot, a ſtrong fort, is alſo ſeated on a lake, fifty miles from Koſkimpe to the eaſt. It was built in the year 1475, by Erick Axelſon, governor of Abo, and was of uſe againſt the invaſions of the Ruſſians, but belongs now to them. 3. Runal is named by Luytz as one of the chief towns of this province; but, by the maps, Saminge, which ſtands on the banks of the ſame lake, a few miles diſtant from Nyſlot to the ſouth, as Runal does about thirty more to the weſt, ſeems rather to deſerve that character.

Tavaſtia, or Tavaſtland, has Cajania on the north, and partly on the weſt, where it is alſo bounded by Finland, properly ſo called. It has Nyland on the ſouth, and Savolax on the eaſt. It is a marſhy country, and is divided, according to d'Audiffred, into four territories, called Sermaki by the inhabitants; namely, the diſtricts of Hattula, Hauho, Offre-Haredt, and Nedra-Haredt. Here are reckoned eight lakes, the moſt conſiderable of which is the Peinde. This country is not much cultivated nor populous: there are however iron mines, which afford a pretty conſiderable profit.

The moſt noted places are as follow: 1. Tavaſtus, the capital of the province, which borrows its name from it, otherwiſe called Croneburg, in Latin, Tavaſtia, or Croneburgum, is ſeated in the ſouthern part of the province, on a ſmall river, which a little lower falls into the lake Wana, about an hundred miles from Abo to the north-eaſt, and an hundred and twenty-ſix from Wyburg to the north-weſt. It is ſtrong, by its ſituation in a marſhy ground, which renders it of a very difficult acceſs. Martin Zeiller aſſerts, that Birger Jarl, a Swediſh general, fortified this city in 1250, in order to keep the inhabitants in awe, whom he had obliged to embrace the Chriſtian religion. 2. Sermaki, the moſt northern town of this province, near the borders of Cajania, is an hundred and ſixty-five miles diſtant from Tavaſtus to the north. 3. Hattula, forty-eight miles from Sarmaki to the ſouth. 4. Mahatan, fifteen miles from Hattula towards the ſouth-eaſt. 5. Rautalanby, on a branch of the lake Peinde, twelve miles from Hattula to the ſouth. 6. Jemſe, on the weſtern bank of the lake Peinde, thirty-ſix miles from Rautalanby to the ſouth-weſt. 7. Siſme, on the eaſtern bank of the ſame lake, forty miles from Jemſe to the ſouth-eaſt: and, 8. Padasjoki, over-againſt Siſme, on the ſame lake, forty miles from Tavaſtus to the north-eaſt; are ſmall towns of very little note.

The lake called Peinde, or Pe Jende, is about eighty miles long from north to ſouth, and communicates with ſeveral other lakes, particularly with that called Rotzlain, by means of which its waters run into the river Kymen, and ſo into the gulf of Finland.

Cajania, called by ſome Eaſt Bothnia, lies along the Bothnic gulf, which bounds it on the weſt; it has that part of Lapland called Kimi-Lapmark on the north; part of Muſcovite Lapland and Tavaſtia on the eaſt, and Finland Proper on the ſouth. It abounds with rivers, which empty themſelves into the gulf of Bothnia, and has ſeveral lakes; amongſt which there is a pretty large one, called Ula-Treſk, which receives the waters of ſeveral other lakes, and runs into the ſea, by means of the river Ula. This lake is about forty-five miles in length, and twenty-four in breadth. In the midſt of it ſtands a little iſland, called Ula, about fifteen miles long, and nine miles broad. The northern and eaſtern parts of this province are covered with mountains, the reſt of the country is reaſonably fruitful.

The chief towns here are as follow: 1. Cajaneburg, the chief place of this province, from which it borrows its name, is ſituated on the north-eaſt ſide of the lake Ula-Treſk, about two hundred and ſeven miles from Tavaſtia towards the north, ninety-ſix from the coaſt of the Bothnic gulf to the eaſt, and about thirty from the neareſt borders of Lapland towards the ſouth-weſt. It is defended by a good citadel. 2. Ula, a little town at the mouth of the river to which it gives its name, ſtands on the Bothnic gulf, eighty-eight miles from Cajaneburg to the weſt. 3. Ulaburg, a fortified town, lies in a little iſland over-againſt the mouth of the river Ula. 4. 5. Carelby; there are two towns of that name, the one called Old Carelby, and the other New or Ny Carelby; they are both on the coaſt of the Bothnic gulf, the former about ſeventy, and the latter eighty-four miles from Ula to the ſouth. Between theſe two towns ſtands, 6. Jacobſtadt, ſix miles from Old Carelby to the ſouth, and eight from Ny Carelby to the north. 7. The ſmall town of Lockto is ſituated on the ſame coaſt, eight miles from Old Carelby to the north, near the mouth of the river Locktoa, which ſprings from a ridge of mountains that divide Cajania from Tavaſtia, and, being ſwelled by the waters of a lake, called Leſtjervi, runs to the north-weſt, and falls into the Bothnian gulf, between Locktoa and the rock called Kala. 8. Waſa, or, as the inhabitants of this country call it, Muſtaſar, is alſo a ſea-port town on the ſame gulf, ſixty miles from Old Carelby to the ſouth. It is the native place of the famous Guſtavus Vaſa, who reigned in Sweden with ſo much glory. 9. Chriſtianſtadt alſo ſtands on the gulf of Bothnia, is fifty miles from Biorneburg to the north, and fifteen miles diſtant from Waſa towards the ſouth.

SECT. IV.

Containing a Deſcription of thoſe Iſlands which form a Part of SWEDEN.

THE moſt conſiderable iſlands belonging to the king of Sweden are, 1. Gothland. 2. Oeland. 3. Oeſel. 4. Dago. 5. Hagland. 6. Aland. 7. Rugen.

Gothland or Gothia Inſula, is ſituated in the Baltick ſea, over-againſt the coaſt of Eaſt-Gothland in Sweden, from which it is about fifty-two miles diſtant, to the eaſt. It lies between fifty-ſeven and fifty-eight degrees of north latitude, and between eighteen degrees, thirty minutes, and twenty degrees of longitude eaſt of London. Its greateſt length, from the ſouth-weſt to the north-eaſt, is about fifty-ſix miles; but its breadth is not above eighteen miles, from eaſt to weſt. Olaus Magnus ſays, it was called Gothland, that is to ſay, Good Land, becauſe it is fruitful, abounding with all neceſſaries of life, and ſo well provided with all the bleſſings of nature, that it may be reckoned among the beſt iſlands in the north. It is, ſays he in another place, a good land, in ſeveral reſpects; the inhabitants are a good ſort of people; there are good harbours all round the coaſts; the ſoil is good, it abounds in paſtures, cattle, wild-fowl, fiſh, good water, woods, and beautiful marble. This iſland belonged formerly to the Pruſſian knights, who quitted it to the Danes in 1408, for nine thouſand crowns. The Swedes got it in 1645, but it was retaken by the Danes in 1677, and reſtored to the Swedes by the treaty of Fontainbleau in 1679. There is here but one conſiderable city, namely,

Wiſby, Wiſbuy, or Wiſburg, the chief place of this iſland, on the weſtern coaſt of it. It is built on the declivity of a rock near the ſea-ſhore, is ſurrounded with a ſtrong wall, and defended by a pretty ſtrong caſtle, built near the harbour, where the governor of the iſland uſually reſides. Olearius relates, that the ruins of fourteen churches, and of ſeveral houſes, gates, and walls, of free-ſtone and marble, which he ſaw there in 1635, made him judge that this was formerly a very large city; but it is now very much decayed. It began to be conſiderable towards the end of the eighth century; ſince which time it became ſo populous, that it contained ten thouſand inhabitants, moſt of them merchants, without reckoning the Danes, Swedes, Vandals, Saxons, Muſcovites, Jews, Greeks, Pruſſians, Polanders and Livonians, who traded there. Theſe foreigners were ſo numerous, that they could make head againſt the inhabitants; and in the year 1288, there aroſe a quarrel amongſt them, and a battle was fought, in which a great many men were killed on both ſides. However, the inhabitants gained the victory, and Magnus, king of Sweden, reconciled them with the foreigners.

The inhabitants of Wiſby are ſaid to be the firſt who made hydrographical tables and ſea charts: they alſo pretend to the glory of being the firſt that made laws for regulating trade and navigation. But Monſieur La Martinier obſerves, that they have rather admitted than invented them. He ſays, that being grown rich by navigation, they introduced among themſelves the famous laws of Oleron, an iſland of France, in order to decide by them the diſputes that might ariſe amongſt merchants. They tranſlated thoſe laws into their own language, and made ſome additions to them; by which means, they were not only looked upon as the authors of them, but acquired alſo the reputation of being the moſt famous traders in Europe.

In

In 1597, the Hans-Towns ſent deputies to Lubeck, in order to draw up laws relative to navigation, which laws are ſtill obſerved throughout the whole Baltick; but they are, properly ſpeaking, the very laws of Wiſby, with ſome additions and improvements: and what ſhews that theſe laws are more modern than thoſe of Oleron, is, that thoſe of Lubeck are fuller than thoſe of Wiſby, as the latter are more complete than thoſe of Oleron.

Oeland is a narrow ſlip of land over-againſt the continent of South Gothland, from which it is ſeparated by a ſtrait, which is not above nine or ten miles broad, and is called Calmarſan, or the ſtrait of Calmar. This iſland, whoſe name ſignifies the land of hay, is about ſeventy miles long from ſouth to north; but its greateſt breadth is not above twelve miles. The ſoil affords good paſture, and many herds of oxen, horſes, and fallow deer.

On the weſtern coaſt are only two villages, and theſe not populous, named Alebeck and Smedeby, with the city of Borkholm, in Latin Borcholmia, the capital of this iſland. It lies under fifty-ſix degrees, fifty-ſeven minutes, north latitude, and eighteen degrees, ten minutes, of longitude, eaſt of London. It is about fifteen miles diſtant from Calmar towards the north-eaſt, and is defended by a caſtle.

The eaſtern coaſt is very well peopled, and contains, going from north to ſouth, the towns of Boda, Koningſgard, Hogaby, Kilda, Stapeling, Genſtala, Remaſten, Mokelby, Stenaſa, with the villages of Hulderſtad and Ottenby. There are many forts and caſtles to defend this iſland, that have been often attacked. In 1530, It was taken by the Danes, ſoon after which the Swedes recovered it; but, being loſt again, Guſtavus Adolphus finally retook it in 1613, ſince which the crown of Sweden has poſſeſſed it without moleſtation.

The iſland of Oeſel is about fifty miles in length, but the breadth varies in different parts. It is oppoſite to the coaſt of Livonia, and has no town of conſideration but Arenſberg, which is ſituated on the ſouthern coaſt of the iſland, and defended by a caſtle. There is alſo a fortreſs called Someburg, on the northern coaſt. The whole is now in the poſſeſſion of the Ruſſians, who took it from the Swedes ſome years ſince.

To the northward of Oeſel is ſituated the iſland of Dago: they are ſeparated by the narrow ſtrait of Honſwick: it is of a triangular form, the ſides being from twenty to twenty-five miles in length. On the weſtern cape there is a high tower, which was built by the ſenate of Revel, as a light-houſe and land-mark. Between this iſland and the continent of Eſtonia are ſome ſand-banks, ſmall iſlands, rocks, &c. The northern and north-eaſt parts are mountainous.

The iſland of Hogland is about nine miles in length, and is ſituated in the gulf of Finland. It conſiſts only of a cluſter of rocks interſperſed or covered with fir-trees, brambles, &c. and has on it a few hares that in the winter grow white.

The iſland of Aland, in the Baltick, is ſituated between forty and fifty miles from the ſouth-weſt part of Finland; the circumference is near an hundred and eighty miles, and the inhabitants near ſix thouſand in number. They live in ſmall hamlets, as there is no regular town in the iſland; for indeed the peaſants have almoſt remonſtrated againſt the building any, which the Swediſh government have been deſirous of effecting. The unhappy king, Erick XIV. was confined in a caſtle in this iſland, which goes under the name of Caſtleholm. The apartment where the king was impriſoned is compoſed of ſtone, and vaulted over head, and is entered into through a trap-door: it is about twenty-three feet long, and twelve broad. Any perſon muſt be ſtruck with compaſſion and horror on reflecting that a ſovereign had been the tenant of ſuch a dungeon, which is too miſerable for the worſt malefactor. The light is admitted by a narrow window, through a wall five feet in thickneſs.

There are abundance of cattle on this iſland, ſome wild beaſts, and plenty of fiſh in the circumjacent ſeas. It is ſurrounded by many ſand-banks, rocks, and ſmall iſlands, ſome of the latter being inhabited and others not. To the ſouth of Aland there are ſeveral other iſles, the chief of which are Flys, Landſweden, Rodan and Nyan. The iſle of Ekero, in the weſt of Aland, extends from north to ſouth about ſix miles; and is ſeparated from Aland by a narrow channel, about three miles broad.

The laſt iſland we ſhall take notice of is Rugen, which is ſituated in the Baltick, oppoſite to Straſlund; is twenty-three miles in length and fifteen in breadth, with the title of a principality. It is ſtrong by nature, and well fortified by art. It abounds with corn and cattle, and contains a town, called Bergen.

An ingenious gentleman, among other particulars relating to theſe iſlands, has favoured us with the following: "About nine o'clock, ſays he, I went on ſhore on an iſland called Lappo. I walked to a little hamlet at a mile diſtance from the ſhore: the poor peaſants very chearfully brought me ſome cream, and aſſiſted in boiling my coffee. Nothing could exceed their poverty: a little black bread, fiſh, pork, and a ſort of mixture they called beer, conſtituted all their ſuſtenance. After having made a very comfortable breakfaſt on this unknown and ſequeſtered iſland, I returned again to the boat. During the whole day we purſued our voyage through a labyrinth of ſmall rocks and iſles; many of them covered with firs and aſpins; ſome few green and beautiful, but the far greater part brown and rugged. I could have fancied myſelf among the Cyclades, ſo famous in antient ſtory; but here were no temples ſacred to Apollo or Juno, nor had genius and poetry conſpired to render every cliff and promontory immortal. Many of the proſpects were, however, wonderfully picturesque and romantic, and I frequently ſtopt the boatmen for a minute, to gaze upon the extraordinary ſcenes around me. Sometimes we went through channels of only twenty or thirty feet in breadth; ſometimes the water opened into a conſiderable expanſe, and often there appeared to be no avenue on any ſide. I was aſtoniſhed how they ſo exactly knew their track in this intricate and perplexing maze, through which nothing could have conducted them but long experience and practice.

SECT. V.

Deſcribing the Inhabitants of SWEDEN, their Perſons, Dreſs, Manners, Cuſtoms, Employments, Soil, Cloathing, Language, Learning, Religion, Arts, Manufactures, Trade, Coins, &c.

IN general, the Swedes are a very ſtrong and robuſt people; and the climate affording a healthy and dry air, they have excellent conſtitutions, and are capable of enduring hardſhips and fatigues. Where they are not too much expoſed to the weather, they have good complexions, and their hair, like that of other northern nations, is inclined to yellow. The women are of a juſt proportion; they have alſo good features, and thoſe who are employed at home are generally fair; but the peaſants are accuſtomed to make their females undergo an equal ſhare in all laborious employments: they go to the plow, threſh their corn, row upon the water, and carry burdens in common with the men. The inhabitants are, however, far from being ſufficient to people the country; a remarkable inſtance of this in one place, though not the moſt northerly, is, that in the compaſs of one thouſand, two hundred, and ſeventy ſquare miles, there are hardly four thouſand ſeven hundred people to be found.

Some learned Swedes have computed the number of inhabitants of Sweden and Finland at about three millions, reckoning eighty thouſand farms, on which are one million, ſix hundred thouſand ſouls, including the women, children and ſervants; and it ſaid that theſe farms make up above half the number of inhabitants in the whole kingdom. Indeed, ſome pariſhes are at preſent ſo extenſive, and at the ſame time ſo thinly inhabited, that a peaſant muſt travel ſeveral Swediſh miles to viſit his next neighbour; others contain not more than ſeventy farms, and yet take up a track of land equal to the whole province of Holland, though perhaps that flouriſhing country contains more towns than there are cottages in ſuch a pariſh.

In Sweden, the common people ſubſiſt by agriculture, working in the mines, grazing, hunting, fiſhing, and commerce, both domeſtic and foreign. The inhabitants of the northern parts are ſtrangers to delicacies, and live very hardy. They eat a ſort of bread made of the bark of birch and pine-trees, ſtraw and roots. The hocky or ſtampe, is alſo a kind of bread very common in the north; and in times of ſcarcity is ſometimes uſed in the ſouthern parts. This is made of the ears of corn cut from the ſtems and chopped ſmall; after which it is dried and ground: on this kind of meal they pour boiling water, and mix it with leaven and corn-meal, where it is to be had. In ſpring they alſo take the bark of firs, which at that time comes the eaſieſt off the trees; but not the thick bark next the wood. Having pared off the outward coarſe knots, it is dried in an oven, or placed over a wood fire, till both ſides become brown, ſwell, and undergo a kind of fermentation,

tion, by which the reſin is conſumed. They make bread of the meal which proceeds from theſe pieces of bark, after being thus dried and ground.

Theſe poor people are alſo taught by neceſſity to make bread of a plant called miſſe, and by the ſins, wekka (called, in Latin, calla foliis cordatis), which is gathered during the ſpring in the moraſſes. After it is dried in the ſun, it is baked in an oven, or half dried in a warm room, where it is ſprinkled with water. It is then put into the oven a ſecond time, and dried till the leaves fall off, and the outward tegument detaches itſelf at the knot from the ſtem; then the ſtems are chopped ſmall in a trough, and, being afterwards ground, the meal is ſifted, and dough made of it, by pouring hot water on the meal; it is uſual alſo to pour ſome brandy lees amongſt it, to give the bread a more agreeable flavour. The dough is afterwards kneaded with great labour; after which, they mix a third part of corn-meal with it. Their other food conſiſts of fiſh and dried fleſh.

Perſons in affluent circumſtances here, as in other countries, keep a good table; and the rich, and ſuch as live in great towns, are not unacquainted with delicious fare.

In the winter ſeaſon, their cloathing is ſuitable to the climate: the rich wear cloaths lined with warm furs; inſtead of which, thoſe who cannot afford them, make their cloaths of ſheep-ſkins with the wool on; and thus, as a modern writer obſerves, are better provided with cloathing adapted to the ſeaſon, and to their own condition, than people of moſt other countries are found to be.

With reſpect to their dreſs, the faſhion of it reſembles that of the Germans and other European nations; they wear, in ſummer, ſuch cloaths and ſtuffs as their wealth enables them to procure, the great adorning themſelves with lace and embroidery; and imitate, as much as poſſible, the faſhions and manners of the French.

There is ſuch an affinity between the Swediſh and the Daniſh and Norwegian tongues, that the inhabitants of the three kingdoms readily underſtand one another; but Finland and Lapland have their reſpective dialects. It appears, from the Runic ſtones, ſtill to be ſeen in moſt of the provinces near the ſepulchres of the dead, that the Swedes, in the time of paganiſm, made uſe of a particular alphabet, termed Runic characters.

Of late years, the Swedes are greatly improved in arts and ſciences; but the branches of literature which they chiefly ſtudy are œconomics, natural philoſophy, with the antiquities, hiſtory and geography, of their own and other countries. The moſt curious piece of learning amongſt them is a tranſlation of the evangeliſts into the Gothic tongue, done above one thouſand three hundred years ago, by Upſala, a biſhop of the Goths in Thracia, of which they have the ſole antient manuſcript copy that is known to be in the world.

The univerſity of Upſal is the moſt ancient and conſiderable one in Sweden; there is alſo one at Lund in Schonen, and another at Abo, in Finland. There is likewiſe, a royal academy of ſciences at Stockholm: in the ſame city is a royal academy of painting and ſculpture, and another for that part of the mathematics which relates to the military art. An academy for the polite arts has alſo been lately inſtituted at Dromingholm.

There are ſeminaries for the education of youth inſtituted in ten towns of Sweden; epiſcopal ſchools are founded at Upſal and Abo, and inferior ſchools in ſeveral other places. In ſhort, an ordinance for the improvement and regulation of the art of printing was publiſhed by his Swediſh majeſty in 1752, by which a new ſociety was inſtituted for the encouragement of it.

Sweden was formerly involved in the groſſeſt darkneſs and idolatry with reſpect to religion. The city of Upſal was the ſeat of their ſuperſtitious worſhip. The emperor, Charles the Great, ſent hither an eminent eccleſiaſtic, named Herbert, who preached the goſpel in Eaſt Gothland; and for the ſame purpoſe, the emperor Lewis ſent into Sweden the famous Anſcharius, who was ſucceeded by ſeveral others. In the middle ages the clergy had obtained the poſſeſſion of ſeveral eſtates, and the pope aſſumed a great power over the temporal concerns of the kingdom.

Theſe abuſes procured Olaus Petri, a diſciple of Luther, a favourable reception in Sweden, where he promulgated the pure doctrines of the goſpel: and that great king, Guſtavus Vaſa, happily introduced the reformation in Sweden, in ſpite of all the numerous difficulties he had to encounter. Indeed, it afterwards met with great oppoſition, and underwent many trials in the reigns of John and Sigiſmund; yet it was at laſt eſtabliſhed by the diet and ſynod held at Upſal in 1593, when the ſtates of the kingdom ſolemnly engaged to adhere to the doctrines of Luther; and this religion, ſince the decree of uniformity paſſed in 1613, is to be eſteemed both by the ſovereign and his ſubjects the only eſtabliſhed church in the kingdom. Indeed, in 1741, his majeſty was pleaſed to permit, by a royal edict, that the Calviniſts and members of the church of England ſhould, in all the ſea-ports, except that of Carlſcroon, enjoy the free exerciſe of their religion.

In Sweden, the hierarchy is compoſed of the archbiſhop of Upſal, who performs the coronation ceremony, and ten biſhops, with three ſuperintendants, one of whom reſides at Carlſtadt, another at Hernoſand, and the third in Gothland. The other eccleſiaſtics, who are ſubordinate to theſe, are the provoſts, deacons, chaplains, or curates, and the miniſters or incumbents in villages.

In a diſſertation delivered in the year 1749, Mr. A. Birch obſerves, that in this kingdom, excluſive of the German provinces, there are in all three thouſand eccleſiaſtical benefices, one thouſand three hundred civil poſts, filled by perſons learned in the laws; one thouſand three hundred military poſts, occupied by men of literature; ſix hundred officers, relating to the ſeveral departments belonging to the government, and two thouſand ſix hundred phyſicians and ſurgeons.

Within a century or two arts and manufactures have made great progreſs. Formerly no manufactures were eſtabliſhed in this kingdom; the Hanſe-towns not only exported unwrought iron and copper, but the ore of thoſe metals, and when they were wrought into various tools and utenſils, ſold them again to the Swedes. The inhabitants of the coaſts were all fiſhermen, and the towns had no artificers. The Swedes firſt began to work their metals, and even their wood, in the reign of the great Guſtavus Vaſa, anno 1530; and towards the middle of the ſeventeenth century began to ſet up all kinds of manufactures, but chiefly employed foreigners, particularly the Dutch and Flemings. In the year 1641, a glaſs-houſe was firſt erected in Sweden; in 1643, the Swedes began to make ſtarch; in 1646, they erected tin-works. They had no bookſellers ſhops till the year 1647, nor needle and ſilk manufactures till 1649. Leather-dreſſing and ſoap-boiling were introduced into this country in 1651; ſawing-mills were erected in 1653; iron and ſteel manufactures in 1654; ſugar-baking in 1661; but the woollen and ſilk manufactures flouriſhed more than all the reſt, till the wars of Charles XII. put a ſtop to trade, and conſequently to the progreſs of the arts. But in the reign of Frederick I. trade and manufactures revived; the breeding of ſheep was encouraged, tobacco planted, and foreign artiſts and manufacturers allowed the free exerciſe of their religion without moleſtation.

There are at preſent in Sweden manufactures of ſilk, cloth, cotton, fuſtian, and other ſtuffs; linen, ſail-cloth, Morocco leather, dying, and printing of cottons; they have houſes for boiling or refining of allum, ſugar, ſoap, and ſalt; for making glaſs, porcelain, and paper; they have alſo gunpowder mills, ſtamping mills, boring mills, wire and ſlatting mills; vaſt quantities of copper, braſs, iron, and ſteel, are wrought in Sweden, which has founderies for great guns, pots, and the like, and forges for fire-arms, and anchors: great numbers of ſhips are alſo built, and wooden veſſels and utenſils made here.

This kingdom is conveniently ſituated for commerce, as it lies between the Baltick and the North ſea. The towns which are allowed to import and export goods in their own ſhips, and to trade both with natives and foreigners, are called ſtaple-towns; there are thirty-four in number: but thoſe that lie near the ſea, and yet have no foreign commerce, and are only permitted to carry on a domeſtic trade, to have ſhares in the freight of goods, and to purchaſe by wholeſale the goods imported by the ſtaple-towns, are called land-towns: ſome of theſe are within land, and others ſea-port towns; others again are mine-towns.

The chief ſtaple-towns in Sweden are Stockholm and Gottenburg. At the former are held the college of commerce, an aſſurance-office, and the national bank, which has frequently advanced conſiderable ſums of money for the ſervice of the government, and has a fund of about ſix millions of ſilver dollars, each equal to one ſhilling and ſix-pence two-thirds ſterling, beſides current bills to the amount of ſeventy millions. At Gottenburg is the Eaſt-India company, erected in 1731, which pays for every ſhip that returns from India fifty thouſand ſilver dollars to the government. They have alſo a Levant company, which trade to Smyrna, &c.

The Swedes export iron wrought and in bars, wrought metals, timber, gunpowder, pitch, tar, ſalt-petre, potaſh, cordage, cobalt, furs, Morocco leather, as it is called, and

and dried fiſh. The imports are grain, fleſh, bacon, cheeſe, butter, tallow, wine, brandy, drugs, hides, hemp, flax, ſilk, &c.

Their coins are, the gold ducat, worth about nine ſhillings and four-pence ſterling. The ſilver coins are the oer, one of which is equal to four pfennings, twenty of them to a caroline, which is about one ſhilling and two-pence ſterling, and thirty-two to a ſilver dollar, equal to one ſhilling and ſix-pence three farthings Engliſh money. There are double and half carolines; and double, ſingle, and half-ſingle oers, are current here.

Among their copper pieces are the copper oer, which, like the rundſtuc, is equal to two pfennings, and is no more than the eighth part of a penny Engliſh. An half, a quarter, and a ſixth part of a copper oer. A copper dollar, which is about four groſchen, and is nearly equal to ſix-pence farthing. Theſe are very large, and the merchant is often obliged to carry them away in a cart or wheel-barrow, when payment is made in them.

We ſhall now proceed to deſcribe the political, civil, and military eſtabliſhments in Sweden, alſo their courts of juſtice, laws, puniſhments, &c.

It appears to be the falſe policy of the Swediſh government to diſcourage agriculture, and to encourage manufactures, in order to ſupport the arbitrary power of the nobility, and oppreſs the commonalty. Thus many of thoſe who are fond of naval or military employments are driven into the ſervice of other ſtates, and the poor obliged to reſort for protection, ſhelter, and ſubſiſtence, to other countries.

About one half of the bar iron which is made in this country is exported either to Great Britain or Ireland; and when the ſeaſon happens to be unfavourable, or accidents attend the miners or forges, the merchants are ſo poor that they are obliged to draw upon the Engliſh merchants for the price of the exports, before they are able to ſhip them off. Yet, notwithſtanding theſe indulgences, and that the balance of trade is greatly in their favour, the Swediſh government gives the greateſt diſcouragement to the Britiſh trade, which is ſo capital a ſource of their wealth; and ſuffers the nation to be annually drained of a great deal of their ſpecie, by encouraging as much as poſſible, the French trade.

Moſt kinds of goods here cannot be made ſo cheap by an hundred per cent. as they are ſmuggled from the more ſouthern parts of Europe. The government indeed is not only totally ſupine with reſpect to ſmuggling, but moſt of the principal people prefer ſmuggled goods to any manufactured in their own country. To theſe impediments to the increaſe of trade and commerce we may add, with an accurate judge of theſe matters, that the beſt eſtabliſhed commerce in the world might be ruined by the exchange alone, as it is conducted in this country.

The trade to France is very prejudicial to this kingdom, as it takes off but few of their commodities, except iron and a little braſs wire, yet runs away with a great deal of their ſpecie, and returns them hardly any thing but luxuries. But the trade to Portugal and Spain, for ſalt, fruits and wines, is not againſt the Swedes, as they barter for thoſe commodities their iron, fiſh, and copper.

With reſpect to the eſtabliſhed revenues of Sweden, they principally ariſe from, 1. a capitation tax: 2. crown lands; 3. exciſes; 4. cuſtoms; 5. certain tythes; 6. ſilver and copper mines; 7. law proceedings. Theſe taxes annually amount to ten million, one hundred and four thouſand, four hundred and ſix dollars, ſilver mint, which, in the year 1769, according to the then value, was equal, in pounds ſterling, to five hundred and ninety-four thouſand, one hundred and eighty pounds. But we hear that the Swediſh government has lately taken great pains to augment the yearly revenue, aboliſh paper currency, and make other uſeful regulations. A third part of the revenues are appropriated to the uſe of the royal family, and the reſt to ſupport the civil and military eſtabliſhments.

It is neceſſary to obſerve here, that the crown of Sweden has, for above a century paſt, received a ſubſidy from France, for which the former hath uſually ſacrificed its deareſt intereſt to the latter; and for the ſake of retaining this paltry annual preſent, Sweden, in the late war with the king of Pruſſia, was forced to contract a debt of three million, five hundred thouſand pounds, which has ſince been conſiderably augmented to ſuch a degree that it will be always a dreadful national weight upon them.

An eſtabliſhed national militia compoſe the chief part of the Swediſh forces; the regulations reſpecting it were either formed or improved by Charles XI. and have ſince continued to be the baſis of the preſent eſtabliſhment.

The nobility and gentry were obliged to furniſh the cavalry; and a nobleman, after having furniſhed a man, could not put either him or his horſe to any other employment. The infantry are raiſed from among the farms, and the king's commiſſion diſtributes them through the various provinces, in proportion to the number of farms, each of which, the value of above ſixty pounds per annum, not being occupied by the officers, or appropriated to their peculiar ſervices, are charged with one foot ſoldier, who receives from the farmer lodging, diet, cloaths, and a trifling allowance of money; or otherwiſe a wooden houſe is built for him at the farmer's charge, who muſt alſo furniſh him with as much hay as will keep a cow in winter, and with paſturage in ſummer, and plow and ſow for him ſuch a parcel of ground as will afford him bread. Thoſe that are married (as many of them are) generally accept this latter condition: the unmarried ſoldiers uſually dwell with the farmer, but are not obliged to do him any ſervice without wages. When they have once taken the peaſant's money, and are enliſted into the king's ſervice, they can never quit it as long as they are able to ſerve: and if they deſert, they are puniſhed with death. The firſt inſtitution of this method proved very burthenſome to the peaſants, who were at great charge to hire their men, who coſt them ten pounds, and ſometimes twenty pounds apiece, and they muſt do the ſame, whenever their ſoldier dies. This is not ſo chargeable in peaceable times, as in war, when men are unwilling to ſerve, and there is a greater demand for recruits.

As the country is thus liable to provide all the common ſoldiers, ſo all officers, both horſe and foot, are maintained by the king, who has appropriated for that purpoſe ſome of the lands re-united, or formerly belonging to the crown: ſo that every officer has a convenient houſe, and a competent portion of land to live upon, ſituated in that part of the country where the regiment he belongs to is quartered; as alſo the rent of as many other farms as make up his pay; which, though it be ſomewhat leſs than formerly, yet being punctually paid, either in money, corn, or other commodities, they find it more profitable than when they were to ſolicit for it at the treaſury. A colonel of foot has of theſe lands the yearly rent of about three hundred pounds, and the reſt proportionably; which amounts to about two thouſand five hundred pounds a year, for all the officers, both upper and under, of one foot regiment; and there being in Sweden, Finland, and Livonia, twenty-eight regiments of foot under this eſtabliſhment, the maintenance of all the officers belonging to them coſts the king about ſeventy thouſand pounds a year: what charge the cloathing of the common ſoldiers once in two or three years, their arms, and ſuch other neceſſaries, may amount to, cannot ſo eaſily be computed. The officers of horſe are provided for after the ſame manner, with ſuch large allowance as is requiſite. There are fifteen regiments of horſe thus eſtabliſhed, and the maintenance of their officers is computed to be about eighty thouſand pounds a year: all which ariſes from the rents of crown lands, as do alſo the wages of civil officers in the country, who have farms annexed to their employments, as the militia have.

The king has made ſome very exact laws for maintaining this conſtitution; and provides, with great caution, that neither the peaſants ſhall be oppreſſed, nor the lands or houſes ruined: to which end all ſuch lands are yearly viſited, and the poſſeſſor compelled to make ſuch repairs as are found needful: and as every officer, upon his firſt coming to ſuch an eſtate, ſubſcribes an inventory of it, ſo upon advancement he cannot take poſſeſſion of another charge, till he has put that eſtate into as good a condition as he found it; and till that is done, his heir cannot inherit.

All treſpaſſes and crimes, committed by the ſoldiers, fall ordinarily under the cognizance of a civil magiſtrate, who has the ſame authority over them as over the reſt of the king's ſubjects; except when they are encamped, or in garriſon, or any ways under flying colours; in all which caſes, as alſo in matters that relate ſolely to their profeſſion, their officers have juriſdiction over them; without whoſe leave a private ſoldier is not permitted to lodge out of his quarters, nor be abſent a day from the pariſh he belongs to. The inferior officers cannot be abſent from their charge, but by their colonel's permiſſion; nor captains, and thoſe above them, without the king's leave. The forces kept up in Sweden, amounted, ſome years ago, to fifty-four thouſand. Above the ordinary eſtabliſhment the king annexed to each regiment twenty ſupernumerary farms, to anſwer any extraordinary accident of fire, &c. and to furniſh

a ſubſiſtence

a ſubſiſtence for ſuch officers as are paſt ſervice: and for common ſoldiers, whom age and wounds have rendered unfit for war, there is one general hoſpital, which has a good revenue; and beſides that, every officer who is advanced, pays to it a ſum of money proportionable to the degree he is raiſed to: a colonel pays an hundred crowns; and others in proportion.

They have now in Sweden about forty thouſand land-forces; but we are informed, that the preſent king is employing his utmoſt endeavours to augment them. An ingenious traveller, who lately viſited this kingdom, ſays, "The naval forces, which heretofore made a reſpectable figure againſt their enemies, are now in a very poor and debilitated ſtate. When I was at Carlſcroon, in the year 1770, the place where their fleet is ſtationed, and where are the dock-yards, ſtorehouſes, and all the materials they have for the uſe of their marine, I was amazed to ſee the maritime force of this country in ſuch a ſituation: about twenty old ſhips of the line, the one half of which were rotten and unfit for ſea, and ten or eleven frigates and ſloops of war, almoſt in the ſame condition, compoſed their whole navy. Their ſtorehouſes were almoſt empty, and all the officers and men of their dock-yard complaining of their pay being greatly in arrear. It is true, they keep up the form of a marine eſtabliſhment, the officers of which are ſupported much in the ſame manner as thoſe in the militia are, and the men are raiſed among the farmers to recruit the body of ſeamen. The port of Carlſcroon is defended by ſeveral batteries of cannon, and is ſuppoſed, in this country, to be a very ſtrong place; but four Engliſh ſeventy or eighty gun ſhips would ſoon ſilence all theſe batteries if they were to be attacked by them, in ſpite of any reſiſtance the place could make."

In Sweden, as in Denmark, the ſeamen are of two claſſes; namely, one order, which is always actually ready either to man the fleet, or work in the dock-yards; and another, which is but nominally ready, as the individuals are only regiſtered, and muſt appear as recruits, upon occaſion.

There are five great officers of the crown, who preſide each in a tribunal compoſed of ſome ſenators; and when any of their places become vacant, the king gives it generally to the moſt antient ſenator of the tribunal where the vacancy happens; though he may beſtow it in whoſe favour he pleaſes: theſe officers are: 1. the drotſer, or chief juſtice; he is the firſt officer in the nation, and was formerly a kind of viceroy; he has the honour of putting the crown on the king's head at the coronation: he preſides in the ſupreme court of juſtice, to which there is an appeal from all other courts. 2. The conſtable; he preſides in the council of war; has the inſpection of the diſcipline, and all that relates to war; and enjoys many great and honourable privileges. 3. The admiral; his power is alſo very great; he has the command of the fleet, and appoints all the officers who ſerves by ſea, and gives them their commiſſions: juſtice, in all that relates to the admiralty, is adminiſtered in his name: he has alſo many other privileges. 4. The chancellor; he is the chief of the police, rectifies abuſes, and gives the neceſſary orders for the good of the public: he is the keeper of the ſeals of the crown, diſpatches all ſtate affairs, and lays the king's orders and demands before the ſtates-general. 5. The lord high treaſurer; he has the adminiſtration of the treaſury, and of all the king's revenue; audits the accounts of all the ſeveral receivers; ſigns all the orders for payments; manages the public funds, and pays all the officers of the kingdom: he alſo preſides in the chamber of accompts, where the impoſts on the people are aſſeſſed, and which is the place of reſort for all the exchequer officers.

The king of Sweden's revenues were antiently ſo ſmall, that they could hardly maintain him; they aroſe only from ſome duties on merchandizes imported or exported, either by ſea or land. It was conſiderably increaſed by the diſcovery of the mines, but chiefly by the introduction of the reformation; for Guſtavus I. having propoſed to the nobility to ſhare with him the church lands, which made up above one third of the kingdom, ſeized the greateſt part of them, and united alſo with the crown the right of forfeitures, which belonged to the biſhop almoſt throughout all Sweden; and the reſumption of lands granted away from the crown by preceding kings, to the nobility and gentry, have raiſed the king's revenue to a very high degree. This was done by king Charles XI. in the year 1680, and though it was much oppoſed by the aſſembly of the ſtates, eſpecially by the nobility, yet the lower order conſenting, nobility were forced to comply. Beſides theſe branches, the king has a third part of all fines, when they do not exceed forty marks of ſilver; and, when they do, he takes it all: he has alſo all forfeitures upon the account of high treaſon, and the eſtates of ſtrangers, if their heirs do not appear within a year after the death of the laſt poſſeſſor.

Antiently the laws of Sweden were as various as the provinces were numerous, each of which had ſtatutes and cuſtoms peculiar to itſelf, enacted, as occaſion required, by the laghman, or governor of the province, who was choſen by the people, and inveſted with great authority, eſpecially when the kingdom was elective, his ſuffrage concluding the province he governed. This variety was neceſſarily attended with great confuſion, for remedy whereof, about one hundred and fifty years ago, a body of laws were compiled for the direction of the whole kingdom: yet this collection is but an imperfect piece, and the laws ſo few, and conceived in ſuch general terms, that in moſt caſes they need the aſſiſtance of the civil law; and after all, the final determination depends much upon the inclination of the bench, which in a poor country, where ſalaries are ſmall, is often filled with ſuch men as are of weak parts, and ſubject to corruption upon very ſlight temptations. The effects of this would be more viſible, if each ſuperior court did not keep a check upon the lower, and the king's court of reviſion overawe them all, to which all civil cauſes importing the ſum of ſeventy pounds are appealable; and very few end before they have been brought thither. In this ſupreme court the king frequently ſits in perſon, and determines cauſes himſelf. In this court the preſident of the chancery, and two or three privy counſellors, do alſo ſit: ſo does the chancellor of the court, (an officer next in degree to a privy counſellor) who is preſident of the under-reviſion, where he and two ſecretaries do put buſineſs into a method fit to be brought before the king.

There are three degree of courts of juſtice, inferior to this; of the loweſt degree, or firſt inſtance, there is one in each corporation (beſides Stockholm, where there are three) as alſo in each diſtrict or territory, whereof every province contains ſeveral, ſome above twenty: in the former, namely, in cities, an alderman or counſellor preſides, and has ſome of his brethren for aſſiſtants: in the latter the governor of the territory preſides, with a ſtanding jury under him; his court is ambulatory, and uſually kept near or upon the place, where the fact or treſpaſs was committed. In theſe courts examinations are taken, and matters not exceeding forty ſhillings are determined: the reſt are tranſmitted to the next ſuperior court, of which in every corporation there is one, where the burgomaſter is preſident, and the aldermen aſſiſtants: and ſo in every province there is one or more of theſe courts, the preſident whereof retains the name of laghman, without any other authority than that of a judge.

From theſe courts, all cauſes of blood muſt be tranſmitted to the reſpective national courts, where they are determined without farther appeal; and thither alſo all civil actions, not exceeding twenty pounds, may be appealed. Of theſe national courts there are three; one for the kingdom of Sweden, held at Stockholm; another for the kingdom of Gothia, or Gothland, kept at Jenekoping; and a third for the dukedom of Finland, at Abo. In each of theſe a privy-counſellor is preſident, and above half the aſſeſſors muſt be gentlemen. All theſe courts ſit continually, or at moſt have but ſhort vacations; and, not being peſtered with too much formality, give cauſes a ſpeedy diſpatch, unleſs they be retarded by vexatious litigations.

Thoſe actions which relate to the ſea are to be tried in the ordinary courts, according to their ſea laws, founded upon thoſe antient ones of Wiſby in the iſle of Gothland, which have formerly been as famous in the Baltick ſea, as the laws of Rhodes and Oleron in other places. The court of admiralty has not any peculiar juriſdiction in the adminiſtration of theſe laws, but only in ſuch matters as directly concern the king's fleet, and in ſome places that belong immediately to the admiralty.

There is a conſiſtory in each dioceſe for eccleſiaſtical cauſes, of which the reſpective biſhop is preſident, where cauſes of baſtardy, contracts of marriage, and other matters of that nature are tried, and church cenſures of penance, divorce, &c. inflicted. Theſe courts have no power to adminiſter an oath, nor to inflict any corporal puniſhment. From them there lies an appeal to the reſpective national courts, and in ſome caſes to the king, as in all others matters of a doubtful nature.

With reſpect to diſputes relating to the mines, beſides inferior courts and officers ſettled in the reſpective parts of the country, a general court, called the college of the mines, ſits

fits at Stockholm, of which moſt commonly the preſident of the treaſury is the chief, with a vice-preſident, and other aſſeſſors. The laws in this regard are more exact and particular than in other matters; and for the moſt part juſtice is very carefully adminiſtered in this court.

The executing of all judicial ſentences is lodged in the governors of the provinces, the ſtadtholders of Stockholm, and other places; and from them derived to inferior officers, who are accountable to the national courts, whither they may be ſummoned, and puniſhed, upon plain proof of default: but the proof being difficult, and miniſters of juſtice apt to favour each other, they take great liberty to delay execution, or to arbitrate and put their own ſenſe upon ſentences; ſo that this part of juſtice is adminiſtered the worſt of all others, and has an influence not only at home, but leſſens the credit of the Swediſh ſubjects abroad; againſt whom juſtice cannot, without great difficulty, be obtained.

Law-ſuits are no where more moderately defrayed than in Sweden, the greateſt burden ariſing from a late conſtitution, that all declarations, acts, and ſentences, muſt be written upon ſealed paper of different prices, from twopence to ſeven ſhillings a ſheet, according to the quality of the cauſe; the benefit of which accrues to the king, and is computed to bring about three thouſand pounds a year. Other charges are very few, every man being permitted, and in criminal actions compelled, to plead his own cauſe. Accordingly, the practice of the law is below a gentleman, and rather the refuge than the choice of meaner perſons, who are not only for the moſt part very poor, but alſo few in number.

In Sweden, the cuſtom of a jury of twelve men is ſo antient, that their writers pretend it had its original among them, and was thence tranſmitted to other nations; but at preſent it is every where diſuſed, except only in the lower courts in the country; and there the jurymen are for life, and have ſalaries. They have this peculiar to themſelves, that there muſt be among them an unanimous conſent to determine a cauſe, which is done by a majority of voices in other countries.

Eſtates are rendered more ſecure to the poſſeſſors, and leſs ſubject to conteſts, by the regiſters that are kept of all ſales and alienations, as well as of other engagements concerning them; for if the purchaſer omits the recording his tranſaction in the proper court, he runs the hazard of having an after bargain ſupercede his.

With reſpect to criminal matters, where the fact is not very evident, or where the judges are very favourable, the defendant is permitted to purge himſelf by oath; to which are alſo added the oaths of ſix or twelve other men, who are all vouchers of his innocence. Treaſon, murder, double adultery, burning of houſes, witchcraft, and the like heinous crimes, are puniſhed with death, which is executed by hanging of men, and beheading of women; to which burning alive or dead, quartering, and hanging in chains, are ſometimes added, according to the nature of the crime. Criminals of the gentry or nobility are uſually ſhot to death. The puniſhment of ſtealing has for ſeveral years paſt, inſtead of death, been changed into a kind of perpetual ſlavery; the guilty party being condemned to work all his life-time for the king, in making fortifications, or other drudgery; he likewiſe always wears an iron collar about his neck, with a bow coming over his head, to which a tinkling bell is faſtened.

In caſe of duels between gentlemen, if one of the parties be killed, the ſurvivor is puniſhed with death, and the memory of both branded with a note of infamy. If neither be killed, they are both condemned to a priſon, with bread and water, for two years: to which is added, a fine of a thouſand crowns, or one year's impriſonment, and two thouſand crowns. Reparation of honour, in caſe of affront, is referred to the reſpective national court, where they uſually adjudge recantation, and begging of pardon.

All kinds of eſtates, as well acquired as inherited, deſcend to the children in equal portions, of which a ſon has two, and a daughter one; nor is it in the power of the parent to alter this proportion, without the intervention of a judicial ſentence, in caſe of their childrens' diſobedience: only they may bequeath a tenth of their acquired poſſeſſions to ſuch child or other as they will favour. Where an eſtate deſcends incumbered with debts, the heir uſually takes two or three months time, as the law allows, to ſearch into the condition of the deceaſed's eſtate; and then either accepts the inheritance, or leaves it to the law, which adminiſters, in that caſe.

There are three orders of knighthood in Sweden, namely, the order of the polar-ſtar; the order of the ſword, created ſo lately as in the year 1772; and the order of Vaſa, of more antient date.

SECT. VI.

Containing a comprehenſive View of the Hiſtory of SWEDEN, the Wars its Monarchs have been engaged in, and the memorable Revolution in its form of Government, effected in 1772, by the reigning Sovereign.

THE moſt material event in the Swediſh hiſtory, that we can depend upon, took place in the year 829, when Anſgarius, biſhop of Bremen, was ſent by the emperor Lewis the pious, to convert the Swediſh idolaters; and in the reign of Stenchild, about the year 900, the great idol at Upſal was demoliſhed, and the worſhip of that image ſuppreſſed; which ſo enraged his heatheniſh ſubjects, that they aſſaſſinated him; however his brother and ſucceſſor, Slaus, ſent to Ethelred king of England, for more Chriſtian prieſts, who perſuaded him to pay the pope an annual ſum to maintain a war againſt the Saracens, which afterwards obtained the name of Romeſcot. Afterwards, Margaret, queen of Denmark and Norway, reduced Sweden alſo under her power, and reigned ſole monarch of Scandinavia, in 1396; but Guſtavus Ericſon, about the year 1520, delivered Sweden from the Daniſh yoke.

This monarch was deſcended from the antient kings of Sweden, but reduced at this time ſo low, as to be obliged to work in the copper-mines of Dalecarlia for his ſubſiſtence, and to conceal himſelf from that tyrannical prince, who then poſſeſſed the throne of Denmark; and repreſenting the miſerable eſtate of their country to the miners and the neighbouring peaſants, he prevailed on them to join him in an attempt to ſhake off the Daniſh yoke; to which end, having aſſembled a body of theſe brave ruſtics, he boldly iſſued out of thoſe ſubterraneous territories, and ſurprizing the ſeveral poſts the Danes poſſeſſed, drove them entirely out of the kingdom; for which ſervice the Swedes elected him their king.

As the biſhops and clergy had ſhewn themſelves to be the greateſt enemies to Guſtavus, he therefore introduced the Lutheran doctrines, and ſeized the revenues of the church, moſt of which he appropriated to the ſervice of the ſtate, and was thereby enabled to eaſe the people of their taxes, which rendered him exceedingly popular. He was crowned at Upſal in the year 1528, but his reign was frequently diſturbed by conſpiracies and inſurrections, excited by the clergy; and when theſe were quelled, the Danes invaded the kingdom, endeavouring to recover the dominion of Sweden; but Guſtavus proved ſucceſsful both againſt foreign and domeſtic enemies; and his eldeſt ſon, Erick Auguſtus, by Catherine daughter of Magnus duke of Saxe Laurenburg, was declared his ſucceſſor, and the crown made hereditary by the ſtates in 1544; and at the ſame time the catholic religion was aboliſhed, and the Lutheran religion eſtabliſhed, for the maintaining whereof future ſovereigns were always ſworn. After this, Guſtavus reigned in peace, except that the Ruſſians made an incurſion into Finland, and were repulſed.

Though the king and ſtates had ſettled the ſucceſſion upon Erick, he gave ſome part of his territories as an appendage to his younger ſons John, Magnus, and Charles; and died in the year 1559, when his eldeſt ſon was preparing to embark for England, in order to court queen Elizabeth; but having ſome apprehenſion that the government would be diſturbed, in his abſence, by his ambitious brothers, he did not think fit to undertake the voyage at this time. He made another attempt afterwards to pay his addreſſes to the queen of England; but the wind being contrary, he was driven back again to the coaſt of Sweden, which he looked upon as ominous, and never made a third attempt to viſit her majeſty. In the mean time the Livonians being divided about the choice of a ſovereign, one party called in the Poles, another choſe to ſubmit to the Ruſſians, and a third adhered to the Swedes; and theſe rivals at length ſeized each of them a part of the country, Revel and its diſtrict being poſſeſſed by the Swedes.

Erick ſtill propoſing a great deal of happineſs in the married ſtate, courted Mary queen of Scots, alſo a princeſs of the houſe of Lorrain, and the princeſs Catherine of the houſe of Heſſe, but did not ſucceed in any; and his brother John marrying the lady Catherine, a Poliſh princeſs, the king appears to have been ſo much incenſed at the repulſes he had met with himſelf, or at the ſucceſs of his brother, that he thought it a ſufficient reaſon to declare war againſt him, and laying ſiege to his caſtle of Abo, made

him priſoner, and cauſed him to be condemned to death, though he changed his ſentence into perpetual impriſonment. The Poles thereupon entered into an alliance with the Danes and Rubeckers, in behalf of prince John, and his own ſubjects were ſo diſguſted with the king's conduct, that they appeared ripe for an inſurrection. Erick, however, defended himſelf againſt all his enemies, but abandoning himſelf to his pleaſures, and leaving the kingdom to be governed by a favourite, who maſſacred the family of the Sture's, that were of the royal blood, under pretence they were in a conſpiracy againſt the crown, the people broke out into a rebellion, and he was compelled to releaſe his brother John out of priſon to appeaſe them; however, inſiſting afterwards that his brothers ſhould deliver up the countries their father had ſettled upon them, the people took up arms again in behalf of thoſe princes, made Erick a priſoner, and he died in priſon, ſuppoſed to have been poiſoned.

This was the end of that mad ſon of Guſtavus Ericſon, who delivered Sweden from the tyranny of the Danes. He was ſucceeded by his brother John, who, endeavouring to reſtore the Roman Catholic religion, met with great oppoſition; but dying in the year 1592, he was ſucceeded by his ſon Sigiſmund, then upon the throne of Poland; but the ſtates inſiſting on the reſtoration of the Proteſtant religion before he was crowned, he affirmed, that the kingdom was hereditary and that none had a right to put terms or conditions upon him, and commanded that one church in every town ſhould be reſerved for the uſe of the Roman Catholics: he declared alſo, that he would be crowned by the pope's nuncio, who attended him from Poland.

Hereupon the ſtates raiſed forces, and being joined by prince Charles, the king's uncle, compelled him to ſubmit to the terms they propoſed, and he was thereupon crowned by the proteſtant biſhop of Strengthneſs. Determining, however, to break through the engagement he had entered into for the eſtabliſhment of the Proteſtant religion, he ſent for forces out of Poland, and when he found the Swedes were not to be frightened by his threats of introducing foreign troops, he returned to Poland, and the ſtates thereupon declared his uncle, prince Charles, regent of Sweden, and a war commenced between Charles and Sigiſmund, in which ſeveral battles were fought. The ſtates at length excluded Sigiſmund and his poſterity from the crown of Sweden, and advanced his uncle Charles to that throne, ſettling the ſucceſſion in his family, in 1604.

This prince, ſoon after his acceſſion, embarked a body of troops, and making a deſcent in Livonia, engaged the Poles, in which war he proved unſucceſsful; and while he was at war with the Poles, the Danes invaded his territories in Sweden, and greatly diſtreſſed him, as the Ruſſians did on the ſide of Livonia; when prince Guſtavus his ſon, then but ſeventeen years of age, afterwards the celebrated king Guſtavus Adolphus, defeated the Danes, and gave a ſurpriſing turn to the Swediſh affairs; and his father, king Charles, dying the next year, 1611, was ſucceeded by his ſon Guſtavus Adolphus, then eighteen years of age; when, by the conſent of the ſtates, he took upon him the adminiſtration of the government, though his father had appointed queen Chriſtina his mother to be regent till he came of age.

Guſtavus finding his kingdom involved in an unfortunate war with the Danes and Ruſſians, purchaſed a peace with the Danes, in 1613, at the price of a million of crowns; and carried on the war againſt the Ruſſians, over whom he was victorious in ſeveral battles; and at the peace that enſued, they yielded up Kexholm and Ingermania to the Swedes. The truce which had been made with Poland, being expired, he invaded their dominions in Livonia, took the important town of Riga, and made himſelf maſter of that whole province: he afterwards invaded Pruſſia, took Elbing, Marienburg, and ſeveral other towns, which were confirmed to Sweden by a treaty concluded not long after. In this war, the Poles were aſſiſted by the Germans, which probably induced Guſtavus to carry the war into Germany, added to the invitation the Proteſtants gave him to come over to their aſſiſtance.

In the year 1630, he embarked his army, with which he invaded Pomerania; and advancing to the capital city of Stetin, the duke of Pomerania admitted his troops into that city, and entered into alliance with him, as did alſo the archbiſhop of Bremen, the duke of Lunenburg, the Landgrave of Heſſe, and moſt of the Proteſtant princes of Germany, in hopes of his protection againſt their Catholic perſecutors. The French alſo entered into an alliance with the Swedes, and agreed to pay them an annual ſubſidy of four hundred thouſand crowns.

The Swedes, in 1631, made themſelves maſters of ſeveral other towns in Germany: and the great city of Magdeburg declared for them, which being beſieged by Tilly, the Auſtrian general, Guſtavus advanced towards it in order to attempt the relief of the place, expecting to be joined by the elector of Saxony; but that cautious prince not thinking fit to break with the Auſtrians, the opportunity was loſt; Magdeburg was taken by ſtorm, the imperial general maſſacred forty thouſand of the inhabitants, and burnt the town down to the ground, nothing being left ſtanding but the cathedral church. The ſame year Charles I. king of England, ſent ſix thouſand men, under the command of the marquis of Hamilton; but the greateſt part of theſe, landing in Pomerania, were carried off by a kind of peſtilence.

The Auſtrian general then marched into the electorate of Saxony, and made himſelf maſter of the city of Leipſic; whereupon the elector intreated king Guſtavus to come to his aſſiſtance, which he at length complied with, though he ſeemed to reſent the elector's not joining him during the ſiege of Magdeburg. Their forces were no ſooner joined, but the king gave battle to the Auſtrians, killed about eight thouſand of them, took five thouſand priſoners, with upwards of a hundred colours and ſtandards. The king afterwards marched into Franconia, where he took ſeveral ſtrong towns; from thence he advance to the palatinate, where he defeated a body of Spaniards that were come thither to the aſſiſtance of the Imperialiſts, and the towns of Openheim, Landau, Spire, and Germenſheim ſubmitted to him. The Saxon troops, in the mean time, made themſelves maſters of Prague, and other places in Bohemia; but pretending that king Guſtavus had an eye upon the imperial throne, they refuſed to advance into Auſtria: at the ſame time the Auſtrians were entirely diſpoſſeſſed of all the towns bordering on the Baltick.

Guſtavus, in the beginning of the year 1632, obtained another victory over the Spaniards in the palatinate, after which he marched into Suabia, in ſearch of count Tilly, who fled before him, leaving him almoſt entire maſter of that country. Tilly at length entrenched himſelf on the river Lech, where being attacked by the Swedes, that general was mortally wounded by a cannon-ball, of which wound he died ſome few days after. The king then laid the duchy of Bavaria under contributions, and coming before Munich, that capital was ſurrendered to him.

In the mean time the Imperialiſts having driven the Saxons out of Bohemia, and entered Saxony, the elector entreated the king to come to his aſſiſtance; he left Bavaria, therefore, and joined the Saxons; ſoon after which, a general battle was fought in the plains of Lutzen, near Leipſic; and the Swedes made themſelves maſters of the cannon of the Imperialiſts; but their horſe being ſtopped by a ſmall river, Guſtavus, to encourage his men to attempt the paſſing it, advancing at the head of the cavalry, was ſoon after found dead on the other ſide of the river, having been ſhot through the back, which was generally thought to have been done by ſome pretended friend: but notwithſtanding the loſs of their great leader, the Swediſh generals behaved ſo well, that they obtained a complete victory, and the war continued many years afterwards, in which the Swedes were generally victorious, notwithſtanding the Saxons and ſome other German princes changed ſides, and adhered to the Auſtrians: but the aſſiſtance the Swedes received from the French was more than an æquivalent for the deſertion of the German princes.

Guſtavus Adolphus left only one daughter, namely the princeſs Chriſtina, who was proclaimed queen of Sweden on the death of her father, being then but ſix years of age; whereupon the diet of Sweden determined, that the regency ſhould be committed to the great officers, who behaved with that conduct and fidelity, that the kingdom appeared in a flouriſhing condition during her minority, notwithſtanding they were engaged in a war with ſuch potent enemies; and, at length, concluded a peace upon honourable terms, in 1648, uſually called, The Treaty of Weſtphalia. By which treaty, the duchies of Bremen and Verden, the beſt part of Pomerania, and the iſle of Rugen, the city of Wiſmar, and the duchy of Deuxponts in the palatinate, were allotted to Sweden and five million of crowns were given them towards the expences they had been at in theſe wars. Queen Chriſtina, one of the greateſt geniuſſes of the age, and one of the moſt learned of her ſex, courted by all the princes of Europe, and in the higheſt reputation for her equitable adminiſtration, having reigned till the year 1654, reſigned the crown in favour of her nephew Charles Guſtavus, reſerving only a

penſion for the ſupport of her dignity. After which ſhe profeſſed herſelf a Roman-Catholic, and retired to a convent in Rome, where ſhe acquired univerſal eſteem by her works of piety and benevolence.

As the war ſtill continued between Sweden and Poland, Charles Guſtavus (Charles X.) marched in perſon into Poland, and was ſo ſucceſsful, that he obliged John Caſimir, their king, to quit the kingdom, and take refuge in Sileſia; and the Poles took an oath of allegiance to Charles; but he marching into Sileſia, the Poles revolted and obtained ſome advantages over the Swediſh forces: the elector of Brandenburgh joining Charles about this time, they obtained a complete victory over the Poles near Warſaw, and were in a fair way of making an intire conqueſt of that kingdom, when the Danes declared war againſt him, and he was obliged to march that way with the greateſt part of the army. The Baltick Sea being frozen over at that time, he marched over the ice into Holſtein, and cauſed his artillery to be drawn after him the ſame way: a thing that never was attempted before by any of the northern princes. The Danes were ſo amazed at this march, that they immediately deſired to treat, and were content to yield up to the Swedes the provinces of Schonen, Halland, and Bleking, with the iſland of Bornholm. This was called the peace of Roſchild, at which place, the plenipotentiaries met, in 1658, and the Danes have ever ſince been expelled from the continent of Sweden. But we muſt not omit to obſerve, that the Danes having given king Charles ſome reaſon to ſuſpect that they did not intend to perform thoſe articles, he invaded the iſland of Zealand, and laid ſiege to the capital city of Copenhagen; but the Dutch coming to the aſſiſtance of the Danes, obtained a victory over the Swediſh fleet, and compelled Charles to raiſe the ſiege. The Imperialiſts, Brandenburghers, and Poles, alſo entered into a confederacy againſt Sweden, and obtained a victory over their army at Nyburg; and while king Charles was levying another to oppoſe them, he was taken ill of a fever and died, on the 23d of February 1660, leaving only one ſon, named Charles, then about five years of age.

During the minority of Charles, the adminiſtration of affairs was committed to his mother, the queen dowager, and five great officers of the crown, who finding it neceſſary to be at peace with their neighbours, concluded a treaty, in May 1660, with the Poles, at the abbey of Oliva near Dantzick, whereby the Poles relinquiſhed their claim to Livonia, and left the Swedes in the entire poſſeſſion of that province; and in the ſame month they concluded a peace with Denmark, on the ſame conditions they had agreed on at Roſchild; only the Swedes ceded the iſland of Bornholm, and the city and territory of Drontheim in Norway, to the Danes.

After theſe tranſactions the Swedes entered into a treaty with England and Holland againſt France, called the triple alliance. On the commencement of the war, in 1674, they entered into an alliance with France, and invaded Brandenburgh; but their forces were defeated by that elector, who made himſelf maſter of moſt of their territories in Pomerania, while the duke of Zell reduced Bremen and Verden, and the Danes recovered ſeveral towns in Schonen; but the latter being afterwards defeated in ſeveral battles, they were compelled to make a ſeparate peace with Sweden at St. Germain's, which was ſucceeded by the treaty of Nimeguen, in 1678, whereby all the territories the Swedes had loſt in this war were reſtored to them; and king Charles married Ulrica Eleonora, ſiſter to the king of Denmark.

The young king had been declared of age, in the year 1672; and the ſtates ſoon after made him as abſolute as any prince in Europe, declaring, that the king received his crown from God, and was accountable to none but God for his actions, reſigning their ſhare in the government entirely in his hands. He ſoon made uſe of the powers they had inveſted him with, to reſume all the grants his predeceſſors had made of the crown lands, and erected a court for enquiring into ſuch miſdemeanours as had been committed by the great lords, or any other of his wealthy ſubjects, and repleniſhed his treaſury by the fines they were condemned in, whereby many of the ſenators and great officers, civil and military, were reduced to great diſtreſs. He alſo lowered the coin, and obliged the creditors of the government to be content with half the money that was due to them, by ſetting a double value upon every piece, paying only the value of half a crown, where a crown was due. He ſeems to have made peace with all his neighbours, in order to make war upon the liberties and property of his ſubjects. The laſt conſiderable tranſaction he was concerned in, was his mediation between the confederates and France, and he had the honour of ſeeing a treaty of peace nearly concluded between thoſe powers, before his death, which happened in the month of April 1697, leaving one ſon, named Charles, born the 17th of June 1682, and two daughters, viz. Hedwick Sophia, born in 1681, and afterwards married to the duke of Holſtein; and Ulrica Eleonora, born in 1688, and married to Frederick, hereditary prince of Heſſe (afterwards elected king of Sweden) who died in 1741, without iſſue.

As the young prince, Charles XII. was but ſixteen years of age at the death of his father, his grandmother, the queen dowager, was appointed regent by the late king, till his ſon ſhould be completely eighteen; but he was, however, declared major by the ſenate, in November 1697, though he was not then ſixteen, and the ſame year ſaw the peace of Ryſwick concluded under his mediation.

In the mean time the king of Denmark continued to encroach on the territories of the duke of Holſtein, who had married Charles's eldeſt ſiſter, the princeſs Hedwick Sophia; Charles, therefore, interpoſed in the duke's behalf, and a treaty was entered upon to adjuſt this affair, which laſted near two years; but the Dane not being diſpoſed to do the duke juſtice, and knowing that the Swedes were too powerful for him, if he ſhould enter into a war ſingly, he ſecretly confederated with Auguſtus king of Poland, and the czar of Muſcovy, and ventured to invade Holſtein again, while the king of Poland invaded Livonia on the ſouth, as the czar did on the weſt. The maritime powers obſerving this flame kindling in the north, and concluding they muſt expect no aſſiſtance from any of theſe princes, in caſe of a rupture with France, which was expected every day, they ſent a fleet into the Baltick, to propoſe pacific meaſures to his Daniſh majeſty, which that prince refuſing to liſten to, the confederate fleet blocked up Copenhagen by ſea, while Charles tranſported his army into the iſland of Zeland, laid ſiege to Copenhagen by land, and compelled the Danes, in Auguſt 1700, to conclude a peace with him at Travendal.

While the ſiege of Copenhagen was carrying on, Peter, czar of Muſcovy, invaded the province of Ingria, and in October following, laid ſiege to Narva; of which king Charles receiving advice, embarked his army as ſoon as he had concluded the peace with Denmark, and landing at Pernau in Livonia with eighteen thouſand men, he marched with all his horſe and four thouſand foot to Revel, leaving the reſt of his army to follow him with the artillery and baggage: but before they joined him, he fell upon the advanced poſts of the Ruſſians, and drove them before him into the Ruſſian camp: their generals imagining the whole Swediſh army had been with him, drew up their men in order of battle, and defended themſelves for ſome time: but the king entering the Ruſſian entrenchments in that part of the camp, where he expected to have met the czar, they all fled before they knew what forces the king had with him. And, indeed, the czar was not in the camp, but gone to aſſemble another army, in order to ſurround the Swedes, not doubting, but he ſhould have made them all priſoners. But, ſurely, ſuch a panic never poſſeſſed an army; ſome thouſands of the Ruſſians loſt their lives, without attempting to defend themſelves, and thirty thouſand of them, with the generals at their head, came and implored the king's mercy, laying down their arms at his feet, the Swedes not loſing above one thouſand five hundred men in all the engagement. It is ſaid, indeed, that the Ruſſian army amounted to one hundred thouſand men, and there is no doubt but they vaſtly out-numbered the Swedes: but relations, concerning the events of war, are uſually much magnified.

The king of Poland, who lay before Riga, raiſed the ſiege of that place, when he underſtood Charles was marching that way, leaving his army encamped on the ſouth ſhore of the river Dwina, to defend the frontiers of Poland againſt the Swedes. This army being commanded by the duke of Courland, a moſt accompliſhed general, king Charles met with much greater oppoſition than he had done at Narva, though the enemy's forces were not more numerous than his own. The Saxon troops fought very bravely and contended long for victory; but king Charles proved victorious, and marched into Courland, of which the duke was ſovereign, where he laid that province under contribution. From thence he marched into Lituania, where leaving a part of his forces to aſſiſt Saphiea againſt prince Ogintki (theſe great men having drawn the whole province into a kind of civil war) he marched with the reſt to the capital city of Warſaw, which opened her gates to him;

king Auguſtus and his friends being fled towards Cracow. Here he declared to the cardinal primate, who came to attend him, that he would never give peace to Poland till they had elected another king, and began his march towards Cracow; which Auguſtus being acquainted with, aſſembled his Saxon forces, and the Poles in his intereſt, determined to give the Swedes battle.

The two armies met in the plains of Cliſſaw, almoſt in the midway between Warſaw and Cracow, on the 19th of July 1702. The king of Poland's army conſiſted of twenty-four thouſand men, Poles and Saxons; and that of the Swedes is ſaid not to have been more than twelve thouſand. The young duke of Holſtein, a prince of great merit, who commanded the Swediſh horſe, was killed by a cannon ball, on the firſt diſcharge of the Saxon artillery. The king being told he was dead, ſhed ſome tears, and then covering his face a ſhort time, ſpurred his horſe, and charged the enemy at the head of his guards. The king of Poland, on the other hand, thrice led on his troops to the charge, and fought like a prince whoſe crown was at ſtake; but was at length forced to ſubmit to the ſuperior fortune of Charles, who gained a complete victory, made himſelf maſter of the Saxon camp, colours, artillery, baggage, and military cheſt, and, without reſting, purſued Auguſtus as he fled towards Cracow, who, not thinking himſelf ſecure, left that city before king Charles arrived there. The citizens ſhutting their gates againſt the conqueror, he forced his way into the town, and took the caſtle by ſtorm, obliging the townſmen to pay him large contributions; but he made his ſoldiers obſerve ſuch exact diſcipline, that they were not ſuffered to plunder any of the inhabitants.

Soon after this, Charles left Cracow, and purſued Auguſtus very cloſely; but had not advanced far from the city, before his horſe threw him, and broke his thigh; whereupon he was carried back to Cracow, and confined to his bed ſix weeks, the party of Auguſtus giving out that he was dead; and a diet being aſſembled at Lublin, moſt of the grandees of Poland came in and took the oaths of allegiance to king Auguſtus. In this oath, they declared, that they never had, nor ever would, attempt any thing againſt this prince; and the primate coming in among the reſt, Auguſtus excuſed his taking the firſt part of the oath, at which the cardinal bluſhed, but took the latter part of it. The reſult of the diet was, that they would maintain an army of fifty thouſand men in defence of Auguſtus, and allow Charles but ſix weeks time to conſider whether he intended peace or war; but that prince having received a reinforcement of ſix thouſand horſe and eight thouſand foot from Sweden, overturned all their ſchemes, and fell upon a body of Saxons, commanded by general Stenau, who were encamped on the oppoſite ſide of the river Bug, ſwimming his horſe over that river; which ſo terrified the Saxons, that moſt of them fled without waiting the attack. The city of Thorn, ſtill holding out againſt the Swedes, the king laid ſiege to it, and, as he wore a plain dreſs, was never ſingled out by the enemy's gunners; but general Lieven, in a laced coat, walking with him, the king perceived the ſhot fly very thick, and directed the general to walk behind him; which the general refuſing, becauſe the king would then be moſt expoſed to the ſhot, his majeſty took the general by the arm, and compelled him to walk behind him; which he had no ſooner done, but a cannon-ball, which came in flank, ſtruck the general. This very much confirmed the king in the notion he entertained of predeſtination; for his majeſty would have been in the very place where the general ſtood, if he had not removed him in that inſtant, with a deſign to preſerve him.

Rovel, the governor of Thorn, made a brave defence againſt the victorious Swedes for a month; but was then obliged to ſurrender at diſcretion. The king was ſo well pleaſed with the conduct and courage that governor had expreſſed in defence of this town, that he gave him his own ſword, when he was brought priſoner before him, and preſented him with a ſum of money. He never failed to reward valour, even in thoſe who were enemies to him.

After this, the king next marched to Elbing, which city not opening their gates to him ſo ſoon as he expected, he obliged them to raiſe him two hundred and ſixty thouſand crowns; and thus he made the conquered towns contribute ſo largely to the charges of the war that his own kingdom was very little burthened with taxes; whereas other generals frequently beggar their own country while they enlarge their conqueſts.

During theſe tranſactions, the cardinal primate, who had a little before renewed his oaths of allegiance to king Auguſtus, aſſembled the ſtates of the kingdom at Warſaw, the 14th of February, 1704, and declared, that this ſame Auguſtus, elector of Saxony, had rendered himſelf incapable of wearing the crown of Poland; and the ſtates immediately declared, that the throne was vacant, at leaſt ſuch of them as were aſſembled on this occaſion; for Auguſtus had ſtill many friends who refuſed to appear.

The aſſembly at Warſaw, before they ſeparated, received a letter from the king of Sweden, deſiring they would make choice of prince James Sobieſki for their king, who was the ſon of John Sobieſki, their late king, who relieved Vienna. This prince was then at Breſlau in Sileſia, and received the compliments of ſome of the Poles on this occaſion; but as he was one day hunting within a little way of that city with his brother prince Conſtantine, they were both ſurprized by thirty Saxon troopers, that king Auguſtus had ſent to lie in ambuſcade, and carried off to Leipſick in Saxony. About the ſame time, Renchild the Swediſh general was very near ſurprizing king Auguſtus, whom he hunted from place to place, as he would have done a wild beaſt; but the king had the good fortune to eſcape him, and retired into Saxony. Charles hereupon offered the crown of Poland to prince Alexander, the brother of Sobieſki; but he refuſed it, looking upon that crown to be his eldeſt brother's right. Charles was then adviſed by count Piper his prime miniſter, by Staniſlaus, and all the poles of his party, to accept the crown of Poland himſelf; but his Swediſh majeſty had ſo little ambition, that he would not comply with the importunity of his friends, though the kingdom was at that time entirely in his power.

Staniſlaus, whom Charles recommended to the choice of the Poles, ſeems to have been a prince of great virtue and merit, which were the principal motives Charles had to advance him to the throne. He is alſo ſaid to have been endued with great courage, abſtemious like himſelf, extremely temperate, hoſpitable, and generous to his vaſſals and dependants, inſomuch that he was almoſt adored, and eſteemed in every reſpect the propereſt perſon to ſucceed to that throne. He was elected by the diet at Warſaw, on the 12th of July 1704, in the abſence of the cardinal primate, who ſtill pretended to be neuter; whereupon Staniſlaus was crowned by the biſhop of Poſnania, and the primate, as well as the reſt of the great officers, were obliged to come and take the oaths of allegiance to him; which was no ſooner effected, than the king of Sweden marched into the ſouth of Poland, and took the town of Lemburgh, or Leopold, capital of that part of the kingdom, where Auguſtus had lodged moſt of his treaſures, and Charles met with no leſs than four hundred cheſts full of gold and ſilver in this place.

While Charles was engaged in this fortunate expedition, Staniſlaus remained at Warſaw with a garriſon of ſix thouſand Polanders and one thouſand five hundred Swedes; but having received advice that Auguſtus was marching towards that city at the head of twenty thouſand men, and being ſenſible he could not defend himſelf at Warſaw, which was in a manner an open town, he ſent away his family into his own palatinate of Poſnania. The cardinal primate flew into Pruſſia, and moſt of them that were of the party of Staniſlaus abandoned the place. The new king fled from his capital within ſix weeks after he had been proclaimed, and joined Charles near Lemburgh; only the biſhop of Poſnania, who crowned him, was left behind, being fallen ſick, and not able to travel. The Swediſh garriſon retired into the caſtle, ſoon after which Auguſtus entered the city as a conqueror, and not only demanded a contribution from all the inhabitants in general, but ſuffered his ſoldiers to plunder the primate's palace, and the houſes of all the great men who adhered to Staniſlaus: the biſhop of Poſnania, after ſeeing his palace plundered, was carried away into Saxony, where he died, and the Swedes in the caſtle were obliged to ſurrender themſelves priſoners of war; which Charles was no ſooner acquainted with, than he prepared to engage the Saxons, who fled before him, and at length overtaking general Sculemberg, who commanded the greateſt body of Saxon troops, it was with difficulty that general made his eſcape from him into Sileſia, loſing the greateſt part of his army in the retreat, in which, however, he diſplayed a great deal of generalſhip. Auguſtus, having now no forces capable of making head againſt Charles, abandoned Poland a ſecond time, and ſhut himſelf up in Dreſden, the capital of his German dominions, which gave an opportunity to Staniſlaus to reſort to Warſaw again, where he was ſolemnly crowned on the 4th of October, 1705, by the archbiſhop of Lemburgh, aſſiſted by ſeveral other prelates, the cardinal prelate dying at Dantzick about this time,

time, having written a letter firſt to king Auguſtus, to beg his pardon for his treacherous conduct towards that prince.

In the mean time the czar having ſent a great reinforcement of troops into Poland, to the aſſiſtance of his friend and ally king Auguſtus, and Schulemburg, the Saxon general, having raiſed another army in Saxony, with which he joined the Ruſſians, a battle was fought at Frauenſted, on the 12th of February, 1706, wherein the Saxons and Ruſſians were again defeated by the Swedes; the Ruſſians threw down their arms and begged for mercy, but the Swediſh general, Renchild, ordered them all to be put to death in cold blood, to revenge the barbarities the czar had committed in Livonia; for the czar taking advantage of the king of Sweden's abſence from that province, had reduced moſt part of it, taken the chief towns, maſſacred great numbers of the inhabitants, and ſent the reſt in chains to the remoteſt part of his dominions.

The king of Sweden having driven both the Ruſſians and Saxons out of Poland, bent his march towards the river Oder, in order to enter Saxony, which induced the diet of the empire to declare him their enemy, in caſe he paſſed the Oder; the king, however, continued his march, and entering the frontiers of Saxony, the inhabitants immediately fled from their houſes, till his Swediſh majeſty publiſhed a proclamation to inform them, that all who returned to their houſes, and paid the contributions he required, ſhould be treated as his ſubjects, but to the reſt he ſhould give no quarter; and the people thereupon returned to their houſes.

The army being encamped at Alranſted, near Leipſic, Charles ſummoned the ſtates of Saxony to meet him there, and bring with them an account of the revenues of the electorate, which having peruſed, he impoſed on them a tax or contribution of ſix hundred and twenty-five thouſand rix dollars (crowns) a month, beſides which he obliged them to ſupply every one of the ſoldiers with two pounds of meat, two pounds of bread, two pots of beer, and four pence a day, with forage for their horſes; then he ordered every houſe, in which any of his ſoldiers were quartered, to ſend him certificates of the ſoldiers behaviour every month, without which the ſoldier was not to receive his pay. He aſſigned inſpectors alſo to viſit every houſe, and enquire if his ſoldiers had committed any irregularities, and puniſh them as they deſerved; and under ſuch an exact diſcipline were his ſoldiers, that when a town was taken by ſtorm, they durſt not ſeize upon the plunder without leave: and ſo well ſatisfied were the people with their ſecurity, while the Swediſh forces remained in Saxony, that the great annual fairs were held at Leipſic, without interruption, as before.

Auguſtus having ſent to the conqueror to beg a peace on his own terms, he immediately tranſmitted to him the following articles; viz. I. That Auguſtus ſhould for ever renounce the crown of Poland, and acknowledge Staniſlaus lawful king, and promiſe never to remount the throne, even after the death of Staniſlaus. II. That he renounce all other alliances, eſpecially that of Ruſſia. III. That he releaſe the prince Sobieſki, and all his priſoners. IV. That he deliver up all deſerters, particularly John Patkul; and that all who have deſerted his ſervice and been entertained in the Swediſh ſervice ſhall not be liable to a proſecution.

While this treaty was in agitation, Menzikof, general of the Ruſſians, entered Poland at the head of thirty thouſand men and joined Auguſtus, who had ſtill a body of ſix thouſand Saxons with him; they attacked the Swediſh general Maderfield, who commanded ten thouſand men near Caliſh, and obtained a complete victory, for which Auguſtus ſung Te Deum at Warſaw; but in the midſt of theſe rejoicings, Auguſtus received advice that his plenipotentiaries in Saxony had agreed to the terms abovementioned, which he found himſelf obliged to ratify, or ſee his German dominions ruined as well as Poland: Auguſtus had ſeveral conferences afterwards with Charles, and endeavoured to procure better terms; but Charles was ſo incenſed at the defeat of his forces under Maderfield, that he made them ſtill worſe, and obliged Auguſtus to ſend Staniſlaus the following letter; viz. "Sir and brother, as I ought to regard the directions of the king of Sweden, I cannot avoid congratulating your majeſty upon your acceſſion to the crown, though perhaps the advantageous treaty the king of Sweden has lately concluded for your majeſty might have excuſed me from this correſpondence; however, I congratulate your majeſty, beſeeching God that your ſubjects may be more faithful to you than they have been to me. Auguſtus, king. Leipſic, April 8, 1707." Auguſtus was alſo obliged to order his Saxon ſubjects not to addreſs him as a king for the future, and cauſe his title to be omitted in the prayers uſed in the churches.

Auguſtus would fain have procured the eſcape of Patkul; but in ſpite of all his endeavours, he was at length delivered up by the governor of Koniſſing caſtle in Saxony, to four Swediſh officers, who carried him to the king of Sweden's quarters at Alranſted, where he remained three months in chains, till he was tried by a council of war, and condemned to be broke alive upon the wheel, the uſual puniſhment for traitors in Sweden; for Patkul was a native of Livonia, and conſequently a ſubject of Sweden, and was one of the five deputies ſent with a memorial to Charles XI. king of Sweden, to repreſent to that prince the hardſhips the Livonians lay under, by the invaſion of their liberties, and to ſolicit redreſs; which was ſo reſented by the then adminiſtration, that Patkul was condemned to have his right hand cut off, and afterwards to be beheaded, and his eſtate confiſcated; to avoid which ſentence, he fled into Ruſſia, where he was advanced to the higheſt employments by the czar and Auguſtus: but Charles XII. was moſt incenſed againſt him, for being the principal occaſion of the invaſion of Livonia by the Poles and Ruſſians: it cannot therefore deſerve cenſure, that this prince did not ſpare him, when he was condemned as a traitor for ſuch atrocious crimes, ſo many years perſiſted in.

During the king of Sweden's ſtay in Saxony, he was attended by ambaſſadors and miniſters from all the powers in Europe; the allies were terribly afraid he would join the French againſt the confederates. The duke of Marlborough was therefore ſent by the Britiſh court to ſound his intentions, by offering him the mediation between the allies and France; but when he found he had only a deſign to mortify the emperor for ſome affronts he had received, and that his preſent view was the conqueſt of Ruſſia, and the depoſing of the czar, the duke returned well ſatisfied that the allies would meet with no interruption from the Swedes in carrying on the war againſt France.

About this time count Zobor, lord chamberlain to the emperor, having ſpoken very diſreſpectfully of the king of Sweden, the king demanded that he ſhould be delivered up to be puniſhed as he deſerved, which the imperial court found themſelves under a neceſſity of complying with; but the king having kept that miniſter with him a little while, ſent him back to Vienna unhurt. His next demand was, that the houſe of Auſtria ſhould grant their proteſtant ſubjects in Sileſia the liberties and privileges they were entitled to by the treaty of Weſtphalia; and the Lutherans had thereupon upwards of an hundred churches reſigned to them, which the Roman Catholics had taken from them, and were allowed to profeſs their religion publickly; (but that king was no ſooner incapable of affording the Sileſians his protection, than the Auſtrians revived the perſecution of the Proteſtants again.) And now Charles having obtained for the Proteſtants the reſtoration of their rights, he began his march towards Poland, and as he paſſed by Dreſden made Auguſtus a ſhort viſit, attended only by two or three gentlemen of his court, and having breakfaſted with that prince, and viewed the fortifications of the city, returned to his army, who were in great pain for him, when they knew he had put himſelf into the power of his mortal enemy, and were overjoyed when they ſaw him return in ſafety.

Charles marched out of Saxony into Poland in September, 1707, at the head of forty-three thouſand men, and he had another army of twenty thouſand men in Poland, commanded by count Lewenhaupt. The czar was then with his army in Lithuania, but retired to the confines of Ruſſia as Charles advanced; the grand ſeignior about this time ſent the king of Sweden a ſolemn embaſſy, and preſented him with an hundred Swediſh ſoldiers the Tartars had taken. He deſired the alliance of the Swedes and Poles, that they might make a diverſion in his favour whenever he ſhould be engaged in war with the emperors of Germany or Ruſſia: the king of Sweden found Poland ſo deſtroyed by the Ruſſians, that he was forced to remain there a year before he could furniſh himſelf with ſupplies to enter upon his grand deſign of invading Ruſſia, and then he followed the czar towards the Ukrain, who had aſſembled moſt of his forces on that ſide to reduce the Coſſacks, commanded by their general Mazeppa, who had promiſed the king of Sweden to join him whenever he ſhould march that way.

Charles, apprehending the Coſſacks might be ſuppreſſed by the Ruſſians before he arrived, marched with great expedition towards Kiof on the Boriſthenes, leaving general Lewenhaupt to follow him with a body of ſixteen

thouſand men, and convoy a train of artillery, and ſeveral thouſand waggons loaden with ammunition and proviſions; but Lewenhaupt being ſurrounded in his march by a numerous army of Ruſſians, commanded by the czar in perſon, after he had defended himſelf three days, was at laſt compelled to retire, having loſt the greateſt part of his army, and all his artillery, ammunition and proviſions, and with great difficulty joined the king with the remainder of his troops, which did not amount to more than four or five thouſand.

Mazeppa alſo having been defeated by the czar's forces, joined the king with very few troops; and now the communication being cut of between Poland and Ruſſia, Charles could receive neither recruits nor proviſions, and great part of his army periſhed by hard marches, and the rigour of the ſeaſon. In the winter of 1709, he loſt, as is reported, two thouſand men in one day, and in April following his army did not amount to eighteen thouſand men, beſides Coſſacks or Tartars of the Ukrain. In this condition, about the latter end of May, he laid ſiege to Pultowa, which lies in the latitude of fifty, about forty miles eaſt of the Boriſthenes, in which the czar had a great magazine, by the taking whereof Charles hoped to furniſh himſelf with proviſions, and open a way to Muſcovy; but he was defeated at Pultowa, and his whole army entirely cut off or made priſoners, except three or four hundred horſe, with which he eſcaped to Bender in Turkey. He there gave ſignal proofs of a deſperate intrepidity, as incapable of fear as void of diſcretion, having with a handful of men performed prodigies of perſonal valour againſt the whole force of Ruſſia: he was at length made priſoner, and peace being ratified, returned to Sweden. His paſſion for war hurrying him into freſh broils, he met his death by a cannon-ball at the ſiege of Frederickſhall, anno 1718, very fortunately for the peace of Europe.

The peculiarity of character which diſtinguiſhed this prince is ſtrongly depicted by M. de Voltaire. No dangers, however ſudden or imminent, ſays this writer, ever occaſioned in him the leaſt diſmay, even when they have ſhaken the conſtancy of the firmeſt among his followers: he ſeems, in ſhort, to have been a man diveſted of the ſmalleſt particle of fear; and the manner in which he is related to have endured cold and hunger ſhew him to be a prodigy of ſtrength as well as courage. His rapid ſucceſſes againſt the combined force of Denmark, Poland, and Ruſſia, prove him to be no ordinary man; but although they aſtoniſhed all Europe, yet in their conſequences they were fatal to the kingdom which he governed. A ſtrong reſentment againſt the unprovoked attacks made upon him, led him to meditate enterprizes againſt his enemies, extravagant and impracticable in their nature, and the cool and undiſmayed perſeverance of his great adverſary, the czar Peter, at length prevailed over his ill-directed ardour.

On Charles's death, his ſiſter Ulrica Eleanora aſcended the throne, by the free election of the ſtates; but firſt gave up all pretenſions to arbitrary power; and in 1720, by conſent of the diet, transferred the government to her huſband Frederic, hereditary prince of Heſſe Caſſel. King Frederic having no iſſue, the ſtates, in 1743, nominated Adolphus Frederic, duke of Holſtein, and biſhop of Eutin, his ſucceſſor, who accordingly, on the deceaſe of Frederic, aſſumed the reins of government on the 5th of April, 1751.

The ſenate had been gradually advancing in power for ſeveral years; the encroachments made by that body on the royal power were ſo conſiderable, that the condition of the king of Sweden became extremely diſagreeable; he found his authority diſputed, and his perſon treated with diſreſpect by an arbitrary ſupercilious ſenate. Frederic having applied to this body to convoke an extraordinary diet, in order to examine into the cauſes of the many heavy grievances which oppreſſed the kingdom, found the power of the latter too predominant to accompliſh his purpoſe, and had the further mortification to ſee it proceed to ſome unconſtitutional acts which directly encroached on his prerogative. Fully determined to wreſt from the ſenate their aſſumed power, and to recover that participation of authority which the conſtitution had aſſigned to the crown, he proceeded to a meaſure both bold and deciſive. On the thirteen of December, 1768, he ſigned a declaration, by which he formally abdicated the crown of Sweden; and by giving public notice throughout his dominions of this ſtep, at once ſuſpended all the functions of government. The ſenate felt their authority inſufficient to counteract ſuch a meaſure, for their orders were diſputed by all the colleges of ſtate, who had ceaſed to tranſact the buſineſs of their ſeveral departments. The magiſtrates of Stockholm, agreeable to the form of government, were proceeding to convoke the order of burghers, which compelled the ſenate to conſent to the deſired aſſembly of the diet, and the king's concurrence was requeſted to confirm the proclamation for that purpoſe, which being given, he reſumed the reins of government. At the meeting of the diet, which followed on April 19, 1769, though it coincided in ſome particulars with the king's views, yet it was far from effecting every thing which he wiſhed.

On February 12, 1771, the king of Sweden died, and was ſucceeded by Guſtavus the prince royal, then twenty-five years of age. The acceſſion of this young prince to the throne, with the prepoſſeſſions of the people ſtrongly in his favour, was a favourable period for extending the power of the crown by the reduction of that of the ſenate. An ariſtocracy naturally and rapidly degenerates into deſpotiſm; the yoke of which is rendered more intolerable to a people in proportion as the oppreſſions of a number of tyrants are more grievous than thoſe of a ſingle one. The new king found his people divided into two great political parties, diſtinguiſhed by the names of hats and caps; the former eſpouſed the intereſt of the court, the latter the country or patriotic party.

The moſt maſterly ſtrokes of policy, as well as the moſt profound diſſimulation were uſed by this monarch to circumvent and deſtroy the influence of the ſenate. The people were grievouſly oppreſſed; for beſides the rigorous exactions made on the common people by their rulers, they ſuffered every calamity which a year of great ſcarcity naturally occaſions. The army was devoted to his intereſt, and his two brothers, prince Charles and prince Frederic Auguſtus, each commanded a body of troops.

In 1772, whilſt the king was amuſing the ſenate at Stockholm with the moſt warm and ſpecious profeſſions of diſintereſtedneſs, and of his wiſhes to be thought only the firſt citizen of a free country, an inſurrection of the military happened at Chriſtianſtadt in the province of Scano; this was ſet on foot by one Hellichins, who commanded there. The plea made uſe of to juſtify it was, the tyranny and oppreſſion of the governing powers. Prince Charles, who was purpoſely in thoſe parts, made this a pretence to aſſemble the troops under his command, whilſt his brother, who was at Oſtrogothia, put himſelf at the ſame time at the head of the troops in thoſe parts.

The ſenate were much alarmed at theſe proceedings, whilſt the king, with the moſt conſummate diſſimulation, expreſſed his reſentment againſt the inſurgents, and his zeal to repreſs them, at the ſame time, by ſtationing the military force in Stockholm ſo as to ſurround the ſenate-houſe, he effectually controuled the deliberations carried on there. In this exigency the ſenate found themſelves totally abandoned by the ſoldiery, who one and all took oaths of allegiance to the king, who being thus ſupported, was enabled to accompliſh a great and almoſt unparalleled revolution; and to deprive an extenſive nation of its liberties in a ſingle morning, without bloodſhed, without noiſe, without tumult, and without oppoſition; while the people flocked together with as much indifference and tranquillity as if it had only been to partake of ſome diverſion.

After this, the king repaired to the caſtle, and, having ſent for the foreign miniſters, who had retreated there during the commotion, informed them, that it was with tears in his eyes he had agreed to the meaſure of which they were witneſſes, and which he was forced to take for the ſecurity of his perſon, as well as of the ſtate, which were both equally in danger. He entreated them to aſſure their reſpective courts, that his motives, when made known, would juſtify him in the eyes of all Europe; that this affair ſhould not be productive of any alteration in his conduct with reſpect to other powers; and to be aſſured, that what he had done was for the welfare of his people, and the maintenance of true liberty among them.

Next morning the king received the oath of the magiſtrates, the burghers, and the college of Stockholm, by whom they were bound to obey him only, and not the ſenate, or their deputies; and a book was opened in one of the apartments of the palace, wherein all thoſe in general were to ſubſcribe their names, who were willing to take the oath of fidelity. The ſenators, and great officers, who refuſed to take the oaths, were all ſtrictly confined. among whom were baron Rudbeck, count Heſſenſtein, the chief magiſtrate Soenderbald, the fiſcal Engerſtroem, the king's ſecretary Helſingius, the ſecretaries of the nobles, baron Cederſtroem, count Kalling, and general Struſenfeldt, the three ſecretaries of the clergy, the two of the burghers, and the two ſecretaries belonging to the order of peaſants. Theſe were ſoon after ſoun acquainted by the

king, that they must take their final resolution, either to swear to the new form of government, or to quit the kingdom for ever, and to give a categorical answer within a month; and the following day (August 21) being appointed for abolishing the old form of government, and the establishing of the new, the king assembled all the states in a plenum plenorum for that purpose.

Such decisive measures were taken for the completion of this great act, as committed nothing to chance, or to the caprice of fortune. A large detachment of the guards took possession in the morning of the square where the house of nobles stands; the palace was invested on every side with troops; all the garrison was under arms; and every thing carried on not only the appearance of war, but of the immediate attack of an enemy; while cannon were brought in and planted in the great court of the hall where the states were assembled. Being thus conveniently secured in this place of terrors, it was not a matter of much consideration, whether they should accede to the propositions that were to be made to them.

The king opened the scene, by entering the hall in all his regalia; soon after which, having the silver hammer of Gustavus Adolphus in his hand, he made himself the signal for silence, an office which was usually executed by a senator; but none of that body were in the present assembly. The king then made a long speech to the states, in which he represented the deplorable state to which the nation was reduced by the two great factions that divided the people; that by this means they were severed as it were into two separate nations, who united only in the mangling their country; that the rancour, revenge, and persecution that proceeded from this state of discord, was productive of new revolutions, that grew at length into a periodical disease, which disfigured the whole commonwealth; that commotions, which shook the realm, sprung from the ambition of a few; that streams of blood had been poured, sometimes by one party, and sometimes by another; and that the people were always the sacrifices to quarrels, in the event of which they had but little concern.

He further observed, that the only end of their rulers had been to fortify their own power; and that every thing had of necessity been adapted to that purpose; that where the law was clear, the letter of it had been perverted; and where it had been palpably repugnant, it had been broken through. That nothing had been sacred to a people inflamed with hatred and revenge; and that the seeds of confusion had in the end extended so far, that it became a declared opinion, that a majority was above the law; and owned no restraint but its own pleasure. That thus liberty, the noblest of the rights of men, had been transformed into an unsupportable aristocratical tyranny, in the hands of the ruling party; which was itself enslaved, and led at pleasure by a very small number of its body. That the notice of a new assembly of the states made every one tremble; that, far from considering how the affairs of the nation might be best transacted, they were only busied in getting together a majority for their party, that they might be screened from the insolence and lawless violence of the other.

The king then laid, or insinuated, a charge of the blackest dye. He said, if the interior situation of the realm stood thus endangered, how hideous was its external aspect! "I blush (says he) to speak about it: born a Swede, and now a king of Sweden, it should be an impossibility for me to believe that foreign schemes should govern Swedish men; and that the basest means should have been employed for that purpose. You know what it is I mean: my blushes ought to make you deeply sensible into what contempt the kingdom has been thrown by your quarrels."

Then the king made a solemn renunciation upon oath of all absolute sovereignty and power, and that he did not even desire or wish for it; after which he ordered the new form of government to be read to the states by the secretary of revision. This piece, which is of a great length, consists of fifty-seven articles: the most essential of which are: That the king is to choose the senate himself: That he is to call the states together when he pleases, and to separate them also when he pleases, after they have at any time continued sitting for three months: That the contributions are to be given by the states: but if not granted within three months, the old ones are to remain: in case of invasion, or pressing necessity the king may impose some taxes for raising money till the states can be assembled: When the states are assembled, they are not to deliberate upon any thing but what the king pleases to lay before them: That the king is to have the sole disposition of the army, navy, and finances, and of all the employments in the state.

The king proceeded, in the next place, to dismiss all the old senators, and to confer the dignity on fifteen noblemen who were well attached to his interest. To shew his attention to the distresses of the people, and to increase the odium thrown on the states, by making them the cause of the famine which prevailed, he directed ten thousand measures of meal of twenty pounds each to be distributed among the common people. A grand deputation from the four orders, consisting of an hundred and twenty persons, waited on the king, to return him thanks for his paternal care, by which the nation had been restored to its true liberty; and to desire that a medal might be struck to commemorate the happy event that had taken place.

The meetings of the diet were, from this time, productive of nothing but compliances in the fullest terms with the king's requisitions: they enabled him to raise extraordinary supplies upon particular occasions, by the help of a secret committee, and constituted him both judge of the exigence and establisher of the means of supply; while the directors of the bank were to compose a secret committee to be consulted on such matters as the king thought proper to lay before them. By these measures, the king has become virtually possessed of all the powers of government, and the states seem thereby to have irrevocably sealed their own doom; for the crown appears to have no motive for convoking a diet any more, unless some very extraordinary change of circumstances takes place, to render it necessary.

That the Swedes should thus tamely endure the overthrow of their constitution, and the loss of their liberties, will ever continue a subject of admiration. The time is not yet beyond the memory of man, when they were emancipated from the most deplorable state of despotism that any nation could groan under. In the reign of Charles XII. they had scarcely a merchant ship upon the ocean; yet such were the happy effects of the subsequent change of government, that notwithstanding the losses they had sustained by his wars, six hundred Swedish ships passed through the sound annually, within twenty years after his death; besides the great trade of the port of Gottenburgh, which lies without the sound, and the internal commerce of the Baltick. They have now surrendered every thing that is most dear to mankind, without the smallest contest. It is more than probable, that within another age, they will afford a fresh conviction to the world, that commerce cannot flourish under an arbitrary government.

This revolution however presents a mirror, which if properly attended to, will exhibit objects of the greatest import to those few states which still retain any vestiges of civil liberty. The prince who has had the resolution to undertake, and the address to effect so arduous an enterprize as the late revolution in Sweden, cannot be supposed to remain long an inconsiderable party in the system of Europe. By his penetration and sagacity, he has in a few months accomplished his designs upon his own kingdom; at twenty-five years of age he has out-plotted the most experienced politicians; he has out-talked the most rigid republicans in his discourses upon liberty, and out-canted the most zealous enthusiasts in his appeals to Heaven. Such a prince, in whom the whole powers of the state center, will probably use strenuous endeavours to recover some share of that rank and consequence to his kingdom which were supported with so much lustre by his predecessors in the last century, and the beginning of the present.

CHAP. IV.

THE NEW HISTORY AND DESCRIPTION OF

DENMARK.

SECT. I.

Comprising a General Account of this Kingdom, its Situation and Boundaries, Soil, Climate, Produce, &c. alſo the Diviſion, Cities, Towns, &c. contained in it; particularly of JUTLAND, properly ſo called.

THIS kingdom, called in Latin Dania, is one of the moſt antient in Europe; being compoſed of ſeveral parts, viz. Jutland, including the duchies of Sleſwick, which is the continental part; and the iſlands of the Baltick, which ſome deem the moſt conſiderable portion. The name of Denmark is now given to the whole country.

The continental part of Denmark, namely, Jutland, lies between the fifty-fourth and fifty-ninth degrees of north latitude, and from the eighth to the forty-fifth degree of eaſt longitude, extending from north to ſouth near two hundred and forty miles; the breadth, in ſome parts, not being above twenty-four miles, and in others near an hundred and eighty. On the ſouth, it is divided from the duchies of Lunenburg and Bremen by the river Elbe; on the eaſt, it is bounded by the Categate and Middle Fort Sound, or Leſſer Belt; and the German ocean waſhes it on the northern or weſtern parts.

On the continent, and in the iſlands which form part of this kingdom, the ſoil varies greatly. In the former, there are good paſtures, but the latter are too ſandy to be fruitful.

In North Jutland the air is ſharp and piercing; but on the eaſt ſide of South Jutland, and in the iſlands of Funen and Zealand, it is milder and more temperate: in the low and marſhy part, in the iſland of Laaland, the air is thick, moiſt, and unhealthy. The ſudden changes of the winds, indeed, render the weather ſomewhat variable, but at the ſame time purge the air of fogs and vapours. The weſt wind, which frequently blows in theſe parts, is the moſt violent.

Denmark is chiefly of a low and level ſurface, and, except the tract of land about the middle of Jutland, is very fertile; ſo that the country produces plenty for its inhabitants, and yields every neceſſary for the ſupport of human life: they breed horned cattle and horſes for exportation, and grow a ſufficiency of corn for their own ſupport. The ſea-coaſts, lakes, ponds, rivers, and brooks of this country yield abundance of fiſh. Denmark produces no wine, no metals, and very little ſalt. Moſt of the provinces have wood ſufficient for their neceſſary occaſions; but others, having a more ſcanty ſupply, are obliged to burn turf. Beech wood, which is the kind moſt common here, and which is burnt in their ſtoves, rarifies and cleanſes the air, and in the opinion of Mr. Moleſworth, prevents the numerous diſorders which prey upon the lungs from being much felt in theſe parts.

We ſhall give a more particular account of the produce of this kingdom when we come to deſcribe its ſeveral provinces and iſlands.

There are four grand diviſions of Denmark; namely, 1. Jutland, properly ſo called, or North Jutland. 2. The duchy of Sleſwick, or South Jutland. 3. The duchy of Holſtein. 4. The Daniſh Iſlands.

North Jutland is bounded on the ſouth by the duchy of Sleſwick, towards the eaſt by the Baltick, the Categate, and the Leſſer Belt; and on the north and weſt, by the German ocean; and is divided into four dioceſes, viz. Ripen to the ſouth, Arhuſen to the eaſt, Wiburg to the weſt, and Aalburg to the north.

1. The dioceſe of Ripen is bounded on the north by thoſe of Arhuſen and Wiburg, on the ſouth by the duchy of Sleſwick, and it extends eaſt and weſt from the Baltick to the German Ocean. It contains thirty prefectorſhips, or bailiwicks, two hundred and eighty-two pariſhes, ten royal palaces, an hundred noblemens ſeats, and ſeven cities; which are as follow:

Ripen or Rypen, is ſeated on the river Nipſaw, which, before it comes to this city, divides itſelf into three branches, the largeſt of which runs on the north ſide of the town; the middle branch, which is the ſmalleſt, runs on the ſouth of it; the third, alſo, on the ſouth, but at ſome diſtance; they join again a little lower, and fall into the German ocean, three miles below Ripen, making a commodious harbour. This city is twenty-ſix miles diſtant from Tunderen towards the north, and twenty-four from Colding to the north-weſt. It is a place of conſiderable trade; the neighbouring paſtures and fields produce abundance of cattle and corn. Hither are drove almoſt all the black cattle from many parts of Jutland, which are here ſhipped off for foreign countries, and eſpecially for Holland: their corn they export into the neighbouring countries, which have occaſion for it, all which afford them very great profit.

The city is often expoſed to imminent dangers from the tides flowing in with a prodigious violence from the ſea, ſo that the water ſometimes comes into the very church-yard of the cathedral, which ſtands on a hill; and even during the terrible inundation with which Jutland was afflicted in the year 1634, the water roſe an ell high in the very cathedral. This place is ſtrong by nature only, without much aſſiſtance from art. Towards the weſt there is a caſtle, flanked with four bulwarks, after the old faſhion, ſaid to have been built in the year 1150. The citizens houſes are pretty well built, and the inhabitants were formerly in better circumſtances than they are now; but they ſuffered very much during the wars with Sweden, the city being taken by the Swedes in 1645, but ſoon after recovered by the Danes. Before the reformation, this was a biſhop's ſee, as it is now of a ſuperintendant or Lutheran biſhop. The cathedral is a noble pile, built with free-ſtone, as well as its ſteeple, which is ſquare, very high, and covered with lead. It is adorned within with ſeveral marble columns, and with the tombs of ſome kings. There is another church dedicated to St. Catherine; here are alſo two public ſchools, for the education of youth in polite literature; and a college for divinity, in the court of the biſhop's palace, where there is alſo a public library.

The city is governed by two burgomaſters or conſuls, and by a ſenate, who formerly adminiſtered juſtice with ſo much ſeverity, that 'the juſtice of Ripen' was become a proverbial ſaying, to expreſs a rigorous execution of the laws. The Daniſh is the common language of the citizens, though there are a great many of them, eſpecially among the merchants, who ſpeak the German tongue.

Colding or Kolding, is an old city mentioned by Ptolemy, and ſtands on the banks of a little river called Coldinger Aa, which parts North Jutland from the duchy of Sleſwick, and falls into a little gulf, thence named the gulf of Colding. De Ville, author of the Travels of Denmark, obſerves, that this gulf is wrong ſet down in De Wit's map, which makes it too round at the bottom. Colding is about eleven miles diſtant from Haderleben to the north. It was burnt down during the civil wars in 1247. In 1268, king Erick VI. redeemed it out of the hands of Erick, duke of Sleſwick, and ſon to king Abel. He built a citadel there, to be, as it were, a bulwark to Denmark, and fortified the town, eſpecially towards the ſouth.

Chriſtian

Chriſtian III. who liked the city very much, on account of its agreeable ſituation, and wholeſome air, built the caſtle of Arnſburg, above the city, removed thither with his court, and died there January the 1ſt, 1559. The hoſpital was built by Frederick II. whoſe ſon endowed it conſiderably. In May 1644, the Danes gained a conſiderable victory over the Swedes near Colding. This place is but ſmall, ſince it does not contain above one hundred or one hundred and twenty houſes: but what makes it chiefly conſiderable is its bridge over the river Aa, which is called Boherrit, and gives name to the whole country about it. All the black cattle and horſes, that come from Jutland, and go into Sleſwick, muſt paſs over this bridge, and pay each a crown for toll, whence ariſes a conſiderable part of the king of Denmark's revenue. Though this town lies commodious for trade on the Leſſer Belt, over-againſt Middlefort in Funen, yet they have hardly any trade but in cattle. They have good fiſh, and the river Aa produces excellent eels.

Fredericks Ode ſtands on the banks of the Leſſer Belt, ten miles from Colding to the north-eaſt, and about twenty-ſeven from Ripen towards the eaſt. It was built by king Frederick III. of Denmark, and is well ſeated on a point of land, with an eaſy deſcent to the ſea-ward: it has been well fortified, being a paſs over the Leſſer Belt, or Middlefort-ſound. The works are very high on the land-ſide; and on the other ſide of the point there are eight baſtions: it has four gates, and before each a ravelin, but ruinous. Towards the ſea the fortifications are lower, and of a greater extent; where there are baſtions, platforms, and ſome batteries on the ſhore. Thoſe fortifications incloſe a great deal of ground, but the fifth part of it is not inhabited, for there are many corn fields and orchards within the walls. All the fortifications are now falling to decay.

This place was formerly a refuge for bankrupts, Jews, and ſuch people; but king Frederick IV. has recalled thoſe privileges. Here are two churches, one Daniſh, and another German, but they have no ſteeples. In 1658, this town was taken by Charles Guſtavus's troops commanded by Wrangel; the garriſon conſiſting of two thouſand men, were all killed or taken. This opened a way to the king of Sweden to undertake his expedition over the ice from this place to Funen; where the paſſage over the Belt is above three Engliſh miles. The Swedes burnt and demoliſhed this town in the year 1659.

Weille, or Weele, is ſix miles diſtant from Fredericks Ode to the north-weſt, and about twelve from Colding to the north. It ſtands on a little river, which falls into a great bay that communicates with the Leſſer Belt, and makes a good harbour. The city is neat and well-built, but not large.

Warde is twenty-two miles to the north-weſt of Weille; Ringcoping is forty-five miles from Ripen, and twenty-four from Warde to the north. Lemwick is fifty-ſix from Ripen, and eighteen from Ringcoping to the north. Hoſtlebro ſtands about eleven miles from Lemwick to the ſouth-eaſt, and twelve from Ringcoping to the north-eaſt. It lies on a river which communicates with the German ocean by a lake into which the river falls: it is an inland town.

II. The dioceſe of Arhuſen is the eaſtern part of Jutland, having, on the ſouth, the dioceſes of Wiburg and Aalburg; on the weſt and ſouth, that of Ripen; and, on the eaſt, the Categate and Leſſer Belt. It extends about ſixty miles along the coaſt of the Baltick, but is not much above thirty miles in breadth at the wideſt part. It contains thirty-one prefectorſhips or bailiwicks, three hundred and four pariſhes, five caſtles, or forts, and eight cities, or walled towns; namely, 1. Arhuſen, the capital of the dioceſe: this city ſtands at the mouth of the river Gudi, which runs through it, and a little lower falls into the Categate. It is eighty-ſix miles to the northward of Sleſwick, and forty-two north-eaſt of Ripen. The ſituation is pleaſant, being ſurrounded with foreſts full of game, paſtures that are exceeding rich for the country, and fields which produce a conſiderable quantity of grain. The town itſelf is neat and agreeable, well furniſhed with proviſions, and domeſtic neceſſaries, from the neighbouring country; and with other commodities and luxuries from various places by means of ſhipping. The harbour is tolerable, and the cathedral church erected after a curious ſtyle of architecture, beautified and embelliſhed with various monuments of noblemen, prelates, &c. The biſhop's palace was once a magnificent ſtructure, but is now fallen to decay. This city is now the ſee of a ſuperintendant: it was made an epiſcopal ſee in the year 1014. 2. Scanderberg is a good fortreſs, ſix miles from Arhuſen to the ſouth-weſt. 3. The ſmall town of Horſens is twelve miles from Arhuſen, ſouth-weſt. 4. Randers is a very antient city on the river Gude, and a place of great trade; and abounds with excellent ſalmon and corn. 5. Ebelſtot is about eighteen miles north-weſt from Arhuſen. 6. Grinaa is ſeven miles diſtant from Ebelſtot, to the north; and, 7. Mariager is ſixteen miles from Arhuſen, to the north. 8. The ſmall town of Hobro is ſix miles above Mariager, to the weſtward: it is ſituated on the bay of the Categate.

III. Wiburg has the dioceſe of Aalburg on the north, from which it is partly ſeparated from the gulf of Limford, having Arhuſen on the eaſt, and Ripen on the ſouth and weſt. This dioceſe is not above twenty-four miles from ſouth to north, and twenty-ſix from eaſt to weſt, being almoſt of a round figure. Though this is an inland country, it is not without the convenience of navigation; for here are large lakes, that branch out into ſeveral parts of this land, and from whence, by means of the Limford into which they run, and which communicates with the Baltick ſea, they receive veſſels of great burthen. Among theſe lakes there is one named Otheſunde, from the emperor, Otho, ſurnamed the Great, who, about the year 948, made an inroad this way, and penetrated even as far as this country, and, caſting his javelin into the water, gave it the name it ſtill retains. The beſt horſes in Denmark are bred in that part of the dioceſe called Salling. In this territory are comprehended ſixteen prefectorſhips or bailiwicks, two hundred and eighteen pariſhes, and three garriſons.

The moſt conſiderable towns are, 1. Wiburg, which ſtands in the middle of north Jutland, of which it is the capital city. This is a place of great reſort, being the ſeat of a high court of judicature, which receives the appeals from inferior courts, but none can be made from it, ſave to the king. It has been the ſee of a biſhop for above ſix hundred years. The biſhop and chapter ſtill ſubſiſt, though they are now of the Augſburg confeſſion. It ſtands near a branch of the gulf of Limford, called Virkſund, and was antiently called Cimmeriburg, as being the chief city of the Cimbri. 2. Sokeve, which ſtands on the ſame gulf, twelve miles to the north-weſt of Wiburg, and is famous for its breed of horſes. 3. Nybe, on the ſame gulf is eighteen miles from Wiburg, to the north-eaſt, is alſo noted for good horſes. The peninſula of Salling is ſurrounded on all ſides by the ſame gulf, except towards the ſouth, and is the moſt noted place in Denmark for fine horſes, of which foreigners export great numbers.

IV. Aalburg is the moſt northern dioceſe of Jutland, and ſurrounded by the ſea on all parts, except on the ſouth, where it is divided from Wiburg and Ripen by the gulf called Limford, which runs from the Baltick ſea, above fifty miles acroſs the country, and is ſhut out of the German ocean by a narrow iſthmus, or neck of land, made by the ſand-hills on the weſt ſhore of Jutland, over-againſt a great ſhoal called Jutche-Rift. Aalburg is about ſeventy miles long, from the ſouth-weſt to the uttermoſt point of Schager-Rift, in the north-eaſt; but as it is of a triangular form, its breadth is not equal every where, it being but about forty miles in the broadeſt part. The north part of this dioceſe, which is cut off by the gulf (for the city of Aalburg lies on the ſouth ſide of it) is called Wanſuſzel, and by Latin authors Vandalia. The inhabitants are extremely hardy. The country is fruitful, and pretty well enriched by trade.

This dioceſe is divided into thirteen bailiwicks, which contain one hundred and ſeventy-ſeven pariſhes, one hundred caſtles, and the following cities and towns, viz. 1. Aalburg, ſo called from the great quantity of eels taken in the gulf of Limford, on the ſouth ſhore of which it ſtands, about ſix miles from the Categate to the weſt. It is the ſee of a biſhop, founded about the year 1060; but the biſhops reſided antiently at Burglaw. 2. Wenſuſzel, or Burglaw, on the river Ryaa, which falls fourteen miles lower into the gulf of Limford, from which this city is as many miles diſtant, to the north: it was formerly a biſhop's ſee. 3. Schagen, or Skau, is ſeated on the cape which it gives name to: it is the moſt northern land of Jutland, between the Norwegian ſea and the Categate, or Schager-Rack. This town is more frequented by merchants from all parts of Europe than any other town in Jutland, becauſe they touch here in their way to the Sound. 4. Nikioping is a conſiderable town: it is ſituated in the iſle of Mors, made by the gulf of Limford. 5. Tyſted is the moſt fruitful place of this diſtrict: it ſtands on the ſouth-weſt part of the dioceſe, near thirty miles from Aalburg, to the weſt. It is noted for a kind of univerſity, which was firſt a free-ſchool only, founded by Chriſtian III. 6. Seeby, fifteen miles diſtant from Schagen, to the ſouth-weſt, is a ſmall ſea-port town on the eaſtern ſhore.

SECT.

SECT. II.

Treating of the Duchy of SLESWICK, or SOUTH JUTLAND; and the Duchy of HOLSTEIN; their Situation, Extent, Rivers, Produce, Inhabitants, &c.

SLESWICK derives its name from the capital of the duchy, but is frequently termed in hiſtory South Jutland, particularly by antient writers. Some have erroneouſly annexed it to Holſtein, and deſcribe it as a part of Germany; but Sleſwick is in reality a part of Denmark, and is divided from the duchy of Holſtein, which bounds it on the ſouth, and conſequently from the German empire, by the Eider and the Lewen; on the eaſt, it is bounded by the Baltick and the rivers Kalding and Skotburg, which ſeparate it from north Jutland; while to weſt it is waſhed by the north ſea. It is about eighty-five miles in length, and extends about eighty-ſix miles in the broadeſt part. A very few years ago a project was formed (but ſince laid aſide) to join the Baltick with the German ocean, or north ſea, by a cut carried acroſs the peninſula, which is compoſed of the duchies of Holſtein and Sleſwick.

This duchy is divided into four circles, viz. Gottorp, Tonderon, Flexburg, and Haderlaben. The chief towns of it are as follow:

1. Sleſwick, or Sleyzwick, the capital, is ſeated on a ſmall arm of the ſea, callep the Sley, at the diſtance of about twenty-two miles from Kiel towards the north-weſt, thirty-eight from Gluckſtadt to the north-eaſt, and twenty-eight from Lunden to the eaſt. Chriſtianity was eſtabliſhed here in the ninth century; and the great church was founded by Erick Barn, aſſiſted by St. Anſchar, biſhop of Hamburgh; and in the year 930, king Harold Blatand erected an epiſcopal ſee here. Afterwards the Sclavonians invaded theſe parts in the year 1064, ruined the church, and reſtored the Pagan ſuperſtitions: but, ſoon after, theſe foreigners were again expelled, Chriſtianity was reſtored, and the cathedral rebuilt. In the next century it was a place of very great trade, and much frequented by merchants, from Great Britain, France, Spain, Flanders, &c.

The ſoil, eſpecially towards the ſouth and eaſt, is not very fruitful; but the town is ſufficiently ſupplied with all neceſſaries of life from the neighbouring country; and the Sley affords abundance of fiſh. They brew beer here, which is not very palatable; but they import ſome from abroad, as well as wine, which is here pretty cheap. The buildings are very indifferent, though ſome of the moſt eminent citizens have pretty fine houſes. The town has no fortifications, and is only ſurrounded with a wall, which parts it from the ſuburbs. The cathedral is the only church within the town. It is a large and beautiful pile, in which are to be ſeen the tombs of the antient dukes of Sleſwick, and of ſeveral biſhops. In the ſuburbs there is a church dedicated to St. Michael. Sleſwick was formerly the ſee of a Roman Catholic biſhop, and is now that of a Proteſtant ſuperintendant, who affects to be ſtyled a biſhop.

At a few miles diſtant from Sleſwick, to the ſouth, are yet to be ſeen, in many places, the ruins of the famous wall and trench, which was built in antient times by the Daniſh kings againſt the incurſions of the Saxons. It is thought to have been begun by Gotherick, or Gothofred, king of Denmark, to keep out the armies of the emperor Charles the Great, about the year 808, and afterwards improved by queen Thyra, and other Daniſh monarchs, and made ſo ſtrong, as to be eſteemed impregnable by the counſellors of Henry, ſurnamed the Lion, duke of Saxony, who diſſuaded that victorious prince from attempting to hazardous an undertaking. This rampart was called Danewark, and, like Adrian's wall in England, is reported to have reached from ſea to ſea, quite acroſs this neck of land.

2. Gottorp, or Gottorff, was the antient ſeat and patrimony of the dukes of Holſtein, the chief branch of which family, after the royal one, took from thence the title or ſurname of Gottorp. It is about ſix miles diſtant from Sleſwick to the ſouth-weſt, and ſtands on the the Sley, which almoſt ſurrounds it, and carries veſſels of ſmall burthen to and from the Baltick. This place is, at the ſame time, a fortreſs, and a noble palace, being reckoned one of the fineſt ſeats in all theſe northern parts.

The caſtle ſtands to the weſt of the Sley, in the middle of a little lake, and is built in the form of an oblong ſquare, fortified with four baſtions of earth: the bottom is paved with free-ſtone, the curtains are long, and the ſides ſtand north and ſouth. You approach the caſtle by a bridge, which joins it to the ſouth ſhore. It is commanded by a mountain that ſtands north-eaſt of it; from whence the Danes annoyed the caſtle in the year 1675, when the duke was treacherouſly ſurpriſed by the king of Denmark at Rentſburg. The duke, before his death had deſigned to rebuild the caſtle, but the front only is finiſhed; and, if the whole had been completed, it had been one of the fineſt palaces in Europe. A rampart encompaſſes the firſt court, and the gate of the caſtle is of a fine blue ſtone, as hard as marble, with a lantern over it, that has twenty-ſeven lights.

On the north ſide of the caſtle there is a bridge of two hundred paces, over the lake; and at the end of the bridge there is a walk, between rows of trees, that lead to the garden, which is adorned with many fine water-works and caſcades. On the left there is a baſon, or fiſh-pond, two hundred paces ſquare, with rows of trees on all ſides, except on the north; there are alſo fine arbours on the ſides of the pond, and in the middle an Hercules, of monſtrous ſize, repreſented with his club, going to kill the Lernæan hydra, out of every part of which the water plays. In every corner of the pond there are ſtatues, which form caſcades. On the north there is a parterre, in the form of a creſcent, divided into ſeveral compartments, with niches round, containing the buſts of many kings and modern princes. There are alſo the repreſentations of many fabulous animals, that throw water.

At the end of the walk there is a ſmall room, in which is to be ſeen a globe, made by the famous Tycho Brahe, ſo contrived, that, by mechaniſm, it repreſents his ſyſtem of the world. There is another admirable globe of copper, ten feet and a half in diameter, with a ſphere, wherein the ſun moves in the ecliptic, and all the heavenly bodies are carried round in exact order, by means of certain wheels, which are turned about by water, conveyed from the adjacent mountain.

Before this houſe there is a level ground, fifty paces broad, and three times as long, divided into three parts: thoſe on the two ſides have fine parterres, and that in the middle has a great baſon in the centre, with water-works: the next terrace is higher, and the whole is incloſed with green pales, as high as each terrace, with buſts all round. From the higheſt terrace there is the fineſt proſpect in the world; viz. the caſtle in the front, in the middle of a lake, ſurrounded with a charming country, and a fine plain before it. On the left there is a great orangery, or greenhouſe, where they keep, alſo, Indian trees, myrtles, pomegranates, and other trees, in boxes. The park is very noble, about four Engliſh miles in circumference, and full of fallow deer, and ſtags. Here is a toll-booth, or cuſtom-houſe, where toll is paid for great numbers of black cattle, that paſs from Jutland into Germany; this produces a conſiderable ſum to the king of Denmark, for in ſome years there is toll paid for above fifty thouſand head of cattle.

3. Eckrenford, or Ekelenford, ſtands on a little gulf of the Baltick, which makes a very commodious haven, and affords it a pretty conſiderable trade, it being one of the ſafeſt ports on that ſhore. It is about twenty-two miles diſtant from Gottorp to the eaſt, and ſix from Kiel towards the north. It is ſaid to have its name from the abundance of ſquirrels found in the neighbouring woods; though it is more probable it was called ſo from an old caſtle, out of the ruins of which it roſe.

4. Chriſtianpreis, is the capital of a bailiwic of that name, which borders on the duchy of Holſtein: this town is ſituated on a gulf of the Baltick, at the entrance of the haven of Kiel, and is commanded by a caſtle that was built in 1637, by Chriſtian IV. king of Denmark. It is about five miles diſtant from Kiel to the north, and four from Eckrenford to the eaſt. It has about five hundred houſes, and two gates, defended with ſtrong works. The Eyder ſerves for a ditch, and makes it inacceſſible; and where the river grows narrower, they have built a fine half-moon in the water, with port-holes for ſixteen pieces of cannon: but ſome maps make the Eyder two miles diſtant from it; ſo that, according to them, it muſt ſtand on ſome rivulet that falls into the Eyder.

5. Frederickſtadt, was thus called from its founder, Frederick duke of Holſtein and Sleſwick, who built it in the year 1621, peopled it with Hollanders, and granted them great privileges. He endeavoured, alſo, to ſettle a ſilk trade there, and, for that purpoſe, ſent a famous embaſſy to Muſcovy and Perſia, which gave occaſion to Adam Olearius

Olearius, secretary of it, to publish an account thereof, in an excellent book of travels.

This town stands on the banks of the river Eyder, and is twenty-four miles distant from Slefwick towards the west, and forty-two from Gluckstadt to the north. It is built after the Dutch way, and all sorts of religions are tolerated there. The town is square, surrounded with a large canal, planted with rows of trees. It is divided into two parts by another canal, also with trees on the sides. The Lutheran church is built with bricks, and very neat.

6. Tonningen is also situated on the river Eyder, ten miles below Frederickstadt, and about fourteen from the German ocean. It is not an antient town, but it has a pretty good trade, which increases daily, by means of its commodious harbour, formed by the Eyder. It was formerly well fortified, but the fortifications were demolished in 1714, by the Danes, who, after a long blockade, forced the town to surrender upon terms. This is the capital of the bailiwick of Eyderstadt, and much frequented by the Dutch, who buy black cattle at this place.

The other towns of less note are, 1. Flensburgh, the capital of a district so called, and also of Angelen, or Engeland, the county of the Angles who invaded south Britain, which they named England: it is eight miles to the northward of Slefwick. 2. Husum, ten miles from Tenderon. 3. Lohn Cloister, about the same distance from the German ocean. 4. Haderfleben, a sea-port town, whose inhabitants carry on a considerable trade in fish. 5. Trinder, twelve miles to the westward of Haderfleben: it is a remarkably neat town. 6. Apenrade, twenty-five miles north of Slefwick: this is a pretty flourishing town, continually improving in beauty and extent, and has a tolerable citadel and good harbour: it has suffered much by fire and war. 7. Luxburg, or Glucksburg, four miles eastward of Flensburg: it is a small town, yet has a castle belonging to it.

There are no high mountains in Slefwick, but only some eminences. The highest hills are near the towns of Slefwick and Apenrade. The chief rivers in this duchy, most of which flow from east to west, are the Eyder already mentioned, as dividing Denmark from Germany; the Treen, which falls into the Eyder near Frederickstadt; and the Nips-Aa, which runs close by Ripen, with several smaller streams.

This country is plentifully supplied with corn, cattle, and fish; and some parts of the west-side of Slefwick, lying between the continent and the islands, which are overflowed by the tides, afford a great many oysters.

The inhabitants are a mixture of Danes or Juts, Lower Saxons, and Friesians; besides which there are Hollanders settled in Frederickstadt, and Flemings in Nordstrand: whence in some places the Friesian is the common language, in others the Danish, and in others the German.

Lutheranism is the prevailing religion in this duchy, except at Frederickstadt, where Papists and Jews, besides several sects, are tolerated; and on the island of Nordstrand, the Romans have a popish church and a chapel: the Calvinists are also indulged in the exercise of their religion in this duchy, by an edict issued in 1734; but they are not very numerous.

The nobility of Slefwick are rich, and have the same privileges with those of Holstein, but are not subject to the same governor; for they acknowledge the king only for their sovereign, and are under the jurisdiction of the royal provincial court at Gottorp.

The duchy of Holstein is bounded, on the west, by the German ocean; on the east, by the Baltick; on the south-east, by Mecklenburg; on the south-west, by the river Elbe; and, on the south, by the territory of Hamburgh, and by Lewenburg. It is divided into four principal parts, or provinces, viz. Holstein Proper, Wagria, Stormar, and Ditmarsh: is eighty miles in length, and sixty in the broadest part.

This country is remarkably fertile, and contains many rich marsh, pasture, and meadow lands. Dykes have been cut at a vast expence through the marsh lands, not only to drain off the waters which naturally accumulate there, but to drain off such as are occasioned by the inundations of the sea and rivers, which are frequent; these, however, give such a richness to the soil of the marshes, that cattle are bred in great numbers, and fattened in them; and vast quantities of excellent butter and cheese are made of the milk. In some parts of them they sow wheat, barley, peas, beans, rape-seed, &c. which thrive exceedingly. Sheep are bred in more sandy, heathy, and barren districts; and woods and orchards abound in other parts. The beef, veal, mutton, lamb, and pork, are all fat and palatable; and the best sea and river-fish are caught in great plenty. The Holstein horse are exceedingly beautiful, and, on that account, highly prized in Denmark and Germany. The country is in general plain and level, and watered by the rivers Eyder, Stor, and Trave, with many rivulets, dykes, &c.

The principal people usually farm out their cattle to a kind of bailiff, who runs all hazards, receives all profits, and allows the proprietors so much for the whole; thus the gentry receive a certain income, without having any trouble, and the bailiff is sufficiently rewarded for his pains, as he usually makes a fortune by the extra-profits. An odd custom prevails here, which is, to drain the lakes and ponds, at certain times, and sell the carp, lampreys, pike, perch, &c. which are found in them; and then, for some years after, to sow them with oats, or use them for pasture; and after that, to lay them under water, and breed fish in them again.

The duchy contains about thirty cities and towns, great and small, and six hundred parishes. The houses and churches are very neat; for the people here, with respect to cleanliness, resemble the Hollanders. The clergy are annually chosen, and removeable at pleasure: the people are rigid Lutherans, so that they give but very little countenance to Calvinists, and are strongly prejudiced against the Roman catholics. With regard to their description in other respects, they are in general well-made, finely featured, fair, strong, courageous; and so celebrated for their integrity, that the expression Holstein glaube, or honest Holsteiner, is proverbial throughout all Germany, Denmark, &c.

The principal cities, towns, &c. in Holstein, &c. are as follow; of which the most considerable is Lubeck the chief of the Hanse-towns. This city is seated at the confluence of several rivers, the largest of which is the Trave, upon which it has a harbour. It stands fifteen miles to the south-west of the Baltick, and thirty-eight from Hamburgh, in the fifty-fourth degree thirty-one minutes north latitude, and in the tenth degree forty-two minutes east longitude.

This is a large, rich, populous, free, and imperial city, about two miles in length, and upwards of a mile in breadth. The city stands on two sides of a long hill of moderate height, the eastern part extending down the declivity towards the river Wackenitz, as the western does towards the Trave. It is environed with walls, towers, false brays, wide moats, and strong ramparts, which being planted with trees, form a very delightful walk. The houses are all of stone, but old fashioned, and the streets, which are pretty strait and lofty, are for the most part steep; but others at the bottom of the hill have a canal running through the middle, with rows of limes on the sides. The churches are magnificent, and amount to about twenty, besides the cathedral. It has several large market places, and handsome public buildings, particularly the senate-house, which is a superb structure, and has several towers. On the ground-floor is the hall of audience, which is well furnished, where the senate assembles; and in this structure are the archives of the Hanse-towns. Here is also a fine exchange.

The collegiate church of St. Mary is a noble pile, richly adorned with images and pictures; among the last is one called the dance of death. This structure is supported by tall pillars, each of one stone, and has a very lofty spire covered with gilt lead. The nunnery of St. John has a domina or abbess, a prioress, and twenty-two conventualists, and has its own church and chaplain. The convent of St. Mary Magdalen was, at the time of the reformation, converted into a poor-house, which has also its particular church and chaplain. In the suppressed convent of St. Catherine has been founded a grammar-school of seven classes, and in that building is a public library. The convent of St. Anne has been converted into an alms-house, and house of correction, both of which are handsome buildings under excellent regulations. Here is also an hospital dedicated to the Holy Ghost, an orphan-house, a small-pox hospital, and other charitable foundations. The corporation consists of four burgomasters and sixteen counsellors, who may be either men of letters, patricians, or tradesmen. The burghers consist of twelve companies, each of which has a vote in the public deliberations. An alliance still subsists between Lubeck, Hamburg and Bremen, and under the title of Hanse-towns they negociate treaties of commerce with foreign powers.

The bishopric of Lubeck is a small territory, that has been enjoyed by the protestant princes ever since the year 1561, when Lutheranism was established in this bishopric, and it

has devolved as an inheritance to a younger ſon of the duke of Holſtein-Gottorp, ſtiled duke of Holſtein-Eutin, from his uſual place of reſidence about five miles from the city; but he has ſince been raiſed to the throne of Sweden. This territory extends about ſixty miles in compaſs, containing ſeveral ſmall towns, and one hundred and three villages.

The river Trave brings ſhips into the heart of the city, which is near ten miles from the ſea; the largeſt veſſels, however, unload at Travermund, a fort on the bay of Lubeck. The principal trade is to Riga, Revel, Narva, and Peterſburg; and the magazines and warehouſes are likewiſe well ſtocked in the productions of England, France, Spain, Holland, the Eaſt and Weſt Indies, &c. The next ſtaple commodity to corn is beer, which is in high eſtimation, not only as pleaſant liquor, but as a medicine, when externally applied to bruiſes, wounds, &c. They export great quantities of this laſt article to foreign parts.

The little town of Travermund, near the mouth of the river Trave, is dependent on Lubeck, from whence it is but nine miles to the north eaſt, and thirty-two weſt of Wiſmar. One of the counts of Holſtein ſold it, in 1320, for four thouſand marks, to the Lubeckers, who fortified it with four good baſtions, erected a light houſe to guide the ſhips at night, and commonly keep here a garriſon of three or four hundred men, commanded by a burgher of Lubeck, who receives his orders from the burgo-maſters, and admits of no perſons into the place without a paſs-port. It was ſeized by the czar in 1617, in order to ſecure tranſports for his troops, but he was perſuaded to quit it. There is a peninſula over-againſt it, about a quarter of a league in circumference, which belongs to the duchy of Mecklenburg.

The river Trave riſes out of a great lake, in the juriſdiction of Segeberg; and, after a ſerpentine courſe from north to ſouth, by Segeberd and Oldeſlo, turns ſhort to the eaſt, waters Lubeck city, of which this town is the port, and then falls into the Baltick at this place.

The towns of leſs note are the following, viz. Oldeſlo, on the river Trave, ſeven miles ſouth of Segeberg, eighteen weſt of Lubeck, and thirty-one north-eaſt of Hamburg. Travendal, on the ſame river, within a mile of Segeberg. Eutin, or Utin, is about ſixteen miles from Lubeck. The town of Pleen is almoſt ſurrounded by lakes; it is the capital of what is deemed a principality of the ſame name. It hath a lofty palace, which commands a beautiful proſpect, and is adorned with pleaſant gardens and a park. The neighbouring lakes and woods furniſh great quantities of fiſh and timber, upon the ſale of which the inhabitants principally ſubſiſt. The town of Oldenburgh, now fallen to decay, is ſituated near the Baltick, twenty-ſeven miles north of Lubeck. Lemden is a market town on the confines of Sleſwick, not far from the Eyder: it is celebrated for its beer. Meldorp, or Meldorf, is a large town of ſome trade ſtanding on the Meele: here are three market places, and a public ſchool for the ſtudy of the claſſics and rhetoric. Heyde is a large but poor town, ten miles to the north of Meldorp. Krempi is a ſmall open town, on a little river of the ſame name.

The town of Gluckſtadt is ſituated on the north ſide of the Elbe, twenty-ſix miles ſouth-weſt of Hamburg: it is neat, well-built, and deemed impregnable. The Danes have two thouſand men in garriſon here, and ſome men of war in the harbour, which is very ſafe and ſpacious. Here the Calviniſts have a church, the Roman catholics a chapel, and the Jews a ſynagogue. This town was founded in 1620, when Chriſtian IV. king of Denmark, ordered it to be called Gluckſtadt, which implies Fortunate-Town. There being no ſprings about the town, the inhabitants uſe rain or river-water. Perſons convicted of theft here are ſentenced to draw, during life, the duſt-carts belonging to the town, to which they are chained like galley-ſlaves. Bredenberg is a village on the Stor, defended by a caſtle. Primeburg is a market town on the Pinall, thirteen miles from Hamburg, and fourteen from Gluckſtadt.

Altena is a conſiderable town ſeated in a moſt delightful country on a high ſhore of the Elbe, not above a cannon-ſhot to the weſt of Hamburg. The ſtreets are regularly laid out, ſpacious and well paved. The town contains about three thouſand houſes, and upwards of thirty thouſand inhabitants, with two Lutheran churches, and the ſame number for the German and Daniſh Calviniſts, with a fifth for the French Calviniſts, a ſixth for the papiſts, and two Menonite churches, beſides thoſe belonging to other ſects, who are allowed the free exerciſe of their religion: the Jews are alſo very numerous, and have a large ſynagogue, but pay two thouſand ducats a year as protection money. Here is a royal ſeminary, to which the town ſchool is united, an orphan and poor-houſe, an anatomical theatre, and three docks for building of ſhips. Among its ornaments is the mall, which, being planted with four rows of trees, forms an agreeable walk.

This town has a variety of manufactures, and its trade is far from being inconſiderable, the Elbe bringing ſhips of burden to the merchants doors. The origin of its name is thus accounted for: deputies from Hamburg, in a remonſtrance to the king of Denmark againſt building it too near their city, frequently made uſe of the words Dat is all te nae, or That is too near; the king taking particular notice of the three laſt monoſyllables, ſaid bantering to the deputies, he could not excuſe himſelf from going on building it, but that to oblige them he would call it by the name they had given it. This town is famous for the calamities it ſuffered in 1712, when count Steinbock, the Swediſh general, after defeating the king of Denmark and his army at Gadebuſch, came and burnt it to the ground. As ſoon as he appeared before Altena, he ſent in a meſſage to adviſe the inhabitants to retire with what they could carry off, for that he was going to deſtroy their town. The magiſtrates came out in a body, and, falling at his feet, offered him fifty thouſand rix dollars to ſave the town; but Steinbock inſiſted on two hundred thouſand, which they were ready to comply with, and only deſired time to go to Hamburg for the money; but the general would admit of no delay; ſo that the poor inhabitants were obliged to turn out; the mothers, with their infants at their breaſt; the ſons, with their aged and infirm parents on their backs; others groaning under loads of houſhold-ſtuff, and all lamenting their fate with the moſt pitiable cries. The Swedes ſtood at the barriers with flaming torches in their hands while they paſſed, and before they were all gone out, entered the town, and ſet fire to all the parts of it, which burnt two thouſand houſes, with ſeveral fine magazines, and the popiſh church; and ſome old men and women, beſides infants, periſhed in the flames; but they ſpared the Lutheran and Calviniſt churches, with about eighty houſes that lay neareſt to Hamburg. Never was a greater deſolation known in any town. The Swedes, in juſtification of this barbarous proceeding, pretended that magazines of proviſions and ſtores were preparing here for the Ruſſians and Saxons, and that it was done by way of repriſal for the burning of Stade, and other cruelties committed by the Danes and Ruſſians in Bremen and Pomerania. But it ought to be remembered, that the Danes had beſieged Stade in form, and that its deſtruction proceeded from their bombs; while Steinbock acted the part of a cruel incendiary againſt naked walls, and a poor defenceleſs people. What completed the ruin of Altena was the raging of the plague at the ſame time in Holſtein; ſo that the Hamburgers were forced, for their own preſervation, to ſhut the gates of the city againſt their diſtreſſed neighbours, many of whom periſhed through cold and want. The king of Denmark, however, relieved them as far as poſſible, and ſupplied them with materials for rebuilding their town, which, by the help of charities, has been done in a bountiful manner, and is at preſent a finer and more pleaſant town than ever, it being the market for the ſale of goods brought by the Daniſh Eaſt-India company from the Indies.

Kiel, the capital of all Holſtein, is a town of great trade, at the mouth of the river Swentin, on a bay of the Baltick; ſeventeen miles eaſt of Renſburg, and twenty-four of Gottorp; thirty-ſix miles north-weſt of Lubeck, and forty-eight north of Hamburg. It ſtands between hills on an arm of the ſea, where it forms a lake. Here is a good harbour, well frequented by ſhips from Germany, Sweden, &c. and is populous and wealthy. Both the town and harbour are defended by a caſtle on a neighbouring hill. On the right or eaſt ſide of the caſtle, the ſea waſhes its walls; and on the other ſide of the bay there is a delightful country, though woody: on the left, there is a ſmall arm of the ſea, and another delicate country adjoining to it. There is a garden facing this caſtle, which is the only place whereby Kiel has communication with the main land; only to the left of the caſtle there is a row of houſes annexed to a village called Brunſwick. This garden, which ſtands along the ſea ſide, is above two hundred paces broad, and conſiſts of a terrace walk level with the foundation of the caſtle, from whence there is a deſcent to parterres, full of all ſorts of flowers, and adorned with a fountain, and a wilderneſs; and this laid to other parterres, from whence there is a ſmall aſcent to another terrace. It ſuffered much during the war between Sweden and

and Denmark. An univerſity was eſtabliſhed here by the duke in 1665, which has had many learned profeſſors. It is divided into the new and old towns, of which the former is the longeſt and pleaſanteſt, the ſtreets being planted with rows of trees. The old town, which is a ſort of peninſula, is fortified by deep ditches: it is ſeparated from the new one by a bridge, at the end whereof is a drawbridge, and a gate with a guard; and there are fine walks of trees on the harbour. There is a palace facing the town, on the north ſide, but it is in very bad repair, and quite unfurniſhed. Here are ſeveral fine buildings, particularly a fine church and an hoſpital, which before the Reformation was a Franciſcan monaſtery.

This town is much enriched by its yearly fair, which is kept for three weeks after Twelfth-day, and frequented by multitudes of all ranks, eſpecially by the nobility and gentry of the duchies of Sleſwick and Holſtein. Vaſt ſums of money are here negociated, and payments made of ſums contracted beforehand, as punctually as by an Amſterdam banker upon the exchange; inſomuch that the man who does not preſerve his credit at this fair, is looked upon as a bankrupt, and ſubjected to puniſhment, beſides the ſcandal.

SECT. III.

Giving a Deſcription of thoſe Iſlands which compoſe the moſt important Part of the Kingdom of DENMARK.

BEFORE we proceed now to the deſcription of the principal iſlands of Denmark, we ſhall give ſome account of the ſea in which they lie, which is called the Baltick, and, by the Danes, Swedes, and Germans, the Eaſt-ſea, becauſe it is to the eaſt of Denmark and Sweden. It is a large gulf, which has Germany and Poland on the ſouth, Denmark and Sweden on the weſt, Lapland on the north, and Bothnia, Finland, Livonia, Courland, part of Poland, and of the kingdom of Pruſſia, on the eaſt. It has a communication with the Categate, 1. By the Leſſer Belt, a very narrow ſtreight between Jutland and the iſland of Funen. 2. By the Greater Belt, between Funen and Zeeland. 3. By the Sound, between Zeeland and that province of Sweden called Schonen. To the eaſt of Upland this ſea branches out into two arms, one of which runs to the eaſt, and is called the gulf of Finland; the other, which is the gulf of Bothnia, runs to the north. There are in this ſea four other gulfs, which deſerve to be taken notice of, viz. 1. The gulf of Livonia, at the mouth of the Dwina, where lies Riga. 2. Gulf of Courland, at the mouth of the Niemen, where is Memel. 3. The gulf of Dantzick, at the mouth of the Viſtula. And, 4. The gulf of Lubeck, at the mouth of the Trave.

This ſea is very dangerous in bad weather, all the coaſt, eſpecially that of Sweden and Finland, being full of ſhelves and ſands; but then there are here ſeveral ſafe harbours. This ſea neither ebbs nor flows, and during three or four months in the year it is generally frozen over.

Zeeland, in the Daniſh language called Saland, or Sialland, is ſeated at the entrance of the Baltick, and is encompaſſed by the Categate on the north; the ſtreight called the Sound on the eaſt; the Baltick ſea on the ſouth, and the ſtreight called the Great Belt on the weſt. This is the largeſt iſland in the Baltick, it being about ſeventy miles in length, and ſixty-five in its greateſt breadth.

This iſland is deſcribed as preſenting in the winter a moſt dreary and comfortleſs proſpect, being then covered with ſnow; but during the ſhort ſummer with which it is viſited, it exhibits a moſt agreeable ſcene, being every where flat, and covered with corn or wood, for the whole country is cultivated with great induſtry.

This iſland has a tolerably fertile ſoil, and produces fine barley, of which malt is made, and a great quantity of it exported; it likewiſe yields plentiful crops of fine oats, but the rye produced here is not more than ſufficient for home conſumption. It has fertile meadows of a beautiful verdure, and ſome woods of oaks and beech, which abound with game; but in the country lying near Copenhagen, and ſome other parts, no woods are to be ſeen, and the inhabitants are obliged to uſe chiefly turf for their fuel. There are ſeveral lakes in this iſland, ſome of which are large, and both theſe and the rivers abound with fiſh. The moſt convenient harbour in the iſland is that of Copenhagen, and next to that the port of Kallundborg. Within the prefecture of Copenhagen is the city of that name, of which we ſhall now give a particular deſcription.

Copenhagen, called alſo Keobenhaven, or Merchant's Haven, the capital of the kingdom of Denmark, and the place where the court reſides, is ſituated on the Baltick, in the forty-fifth degree forty minutes north latitude, and in twelve degrees fifty minutes eaſt longitude, about thirty miles from the Sound, and has a beautiful and commodious harbour, the entrance to which is ſo narrow as to admit only one ſhip at a time; and every night this paſſage is ſecured with a ſtrong boom; the mouth of it is commanded on one ſide by the citadel, and on the other by a blockhouſe well furniſhed with artillery. In the harbour five hundred ſail of ſhips may ride at eaſe, and round the whole encloſure a wooden gallery projects over the water. The city is in a low and marſhy ſituation; but on the land ſide are ſeveral fine lakes, which furniſh the inhabitants with plenty of freſh water. The adjacent country is very pleaſant, and oppoſite the city lies the fertile iſland of Amac; which forms the harbour, and which we ſhall deſcribe in its proper place.

The city at a diſtance makes a magnificent appearance, and from the Weſt-gate to the Norway-gate in the citadel, extends four thouſand one hundred and forty Zealand ells in length, and from the North-gate to the Amac-gate it is three thouſand one hundred and twenty ells in breadth; ſo that its circuit muſt be twelve thouſand ſix hundred ells, or ſix miles ſix hundred ells. The Gother-ſtreet, which runs in a ſtrait line croſs the whole city, dividing the Old from the New Town, is above four thouſand two hundred feet in length. This metropolis contains four royal caſtles, ten pariſh and nine other churches, a conſiderable number of public and private palaces, about four thouſand burghers houſes, ſeveral of which are inhabited by ten or more families, eleven market and public ſquares, a hundred and eighty-ſix ſtreets, and a hundred thouſand inhabitants.

This city is divided into three principal parts, Old Copenhagen, New Copenhagen, and Chriſtians-hafen. As the two laſt are more modern than the firſt, they are laid out in broad ſtreets that run in a ſtrait line. Moſt of the ſtreets in Old Copenhagen ſince the laſt great fire, have been made of a ſufficient breadth; but the old windings could not be entirely avoided. The houſes in the principal ſtreets and ſquares are almoſt entirely built with brick; but in the lanes moſt of the buildings are of timber. However, in general, they make a handſome appearance. This city is at the annual expence of ten or twelve thouſand rix-dollars in keeping the ſtreets clean, and in the night they are lighted by lantherns. In ſome parts of the city are deep canals, into which large ſhips may enter, and, to the great convenience of the merchants, they may lade and unlade cloſe to the warehouſes.

The city is alſo divided into twelve quarters, and the burghers into as many companies, which have all their particular colours.

In the old town are the following quarters, viz. firſt, the north quarter, which has the following places of note: the German church, dedicated to St. Peter, which was the principal pariſh church at the time of the reformation; it was afterwards converted into a foundery, but in 1585 was given to the Germans, and in 1618 was again made a pariſh church. The Walkendorf college, in St. Peter's-ſtreet, was formerly a Carmelite monaſtery; but the lord ſteward, Chriſtopher Walkendorf, converted it into a college for ſixteen ſtudents, each of whom has a yearly penſion of thirty rix-dollars.

In the ſecond or eaſt quarter is the great Wartow hoſpital, which is an antient foundation; but the edifice is new and ſpacious, and the endowment ſo conſiderable, that it contains at preſent above three hundred beds for the ſick and poor, each of whom has his lodging gratis, and a weekly allowance of half a rix-dollar. The orphan-houſe, which takes up one entire ſide of the new market, and is a conſiderable ornament to that ſquare. It has a diſpenſary, a printing-houſe, and a library belonging to the foundation. The council-houſe is a new ſtructure, and being detached from the other buildings, ſeparates the Old from the New Market. In the Old Market is a fine fountain, and in the New is a place walled in for the execution of malefactors. The other places in the weſt quarter worthy of notice are the weſt gate, and the royal palace, ſituated near the citadel of Chriſtianſburg, which in 1743 and 1744 was new fronted in an elegant manner.

The clothiers quarter is the third, in which are the following places worthy of notice. The collegiate church of St. Mary, in which the biſhop of Denmark and Norway are uſually conſecrated. The tower, which is eſteemed the nobleſt in Copenhagen, ſtands on the higheſt ſpot in the whole city: it is three hundred and eighty feet in length, and has a fine ring of bells. The univerſity, which includes the royal community, or the cloyſter, in which

which a hundred poor ſtudents had formerly two meals a day; but at preſent they receive a penſion inſtead of proviſions, and in this edifice they hold their daily diſputations. It likewiſe contains the conſiſtory, the auditories or halls, the rector's houſe, and other buildings. To the univerſity alſo belong four ſpacious colleges, well endowed, for the maintenance of the young ſtudents gratis. The Walkendorf college has been already mentioned. The other three are the royal college, founded by Chriſtian IV. for one hundred and twenty ſtudents, though no more than an hundred now reſide in it. The Collegium Elerſianum, founded by George Elers, for ſixteen ſtudents, and the Borrichian college.

The moſt elegant and beſt endowed of all the private foundations is the Borrichian college, or Collegium Mediceum. It was erected by the learned Olaus Borrichius, in 1682, for ſixteen Daniſh and Norwegian ſtudents. Every ſtudent has apartments gratis for five years, with an annual penſion of ſixty rix-dollars. The library and cabinet of curioſities, which joined to this college, were burnt down in 1728, but have been reſtored in ſome meaſure ſince that time.

The north gate in this quarter, which was erected in 1671, is the moſt elegant ſtructure of the kind belonging to the city.

The Freeman's quarter is the fourth diviſion. Here are two churches, and the church of the Holy Ghoſt, or rather of the Holy Gueſts, the name being derived from a large hoſpital or gueſt-houſe that formerly ſtood near it, and was converted by Chriſtian IV. into a houſe of correction. After the fire which happened in 1728, this church was rebuilt.

Snarron's quarter is the fifth diviſion; in which there is nothing particularly remarkable.

Strand quarter is the ſixth diviſion; and contains the following places worthy of notice; namely, the magnificent royal palace of Chriſtianſburg, which was enlarged and embelliſhed by Chriſtian III. Chriſtian IV. and Frederick IV. but being very irregularly built, Chriſtian IV. the preſent king's grandfather, cauſed the whole building, with the adjoining houſes, which had been purchaſed of the burghers, to be pulled down, in 1731, and the following year laid the foundation of the preſent ſpacious and magnificent ſtructure, which was finiſhed in 1740. Though this edifice coſt ſix millions of dollars, or about one million two hundred and eighty thouſand pounds ſterling, yet the inſcription over the ground portal declares, that the ſovereign erected it from the ordinary revenues of the crown, without laying any additional burthens on his ſubjects. It is of a prodigious ſize. In one of the apartments are hung paintings of all the preſent reigning monarchs in Europe, which have been preſented by the reſpective ſovereigns. In this quarter is alſo an edifice, in the firſt ſtory of which is the arſenal; and in the ſecond the king's library, which is about two hundred feet long, and contains about ſixty or ſeventy thouſand volumes. The royal cabinet of curioſities, the picture gallery, and the cabinet of medals, are in the third ſtory; and the cabinet of models in the fourth.

An ingenious traveller ſays, that this muſeum is a very large collection, and extends through all the vegetable, mineral, and metallic kingdoms, as well as the fine arts, and is more indebted to Frederick IV. than to any other ſovereign. In this royal cabinet of curioſities are ſeveral large pieces of ſilver ore dug out of the mines of Norway in 1666, one of which weighs five hundred and ſixty pounds, and is valued at five thouſand crowns; and another piece is valued at above three thouſand, both being ſuppoſed to contain at leaſt three parts ſilver. What are moſt admired in them are the threads and branches of ſilver, which ſhoot out an inch or two beyond the ſtone, in form of ſmall ſhrubs or buſhes. Here are likewiſe ſeveral large pieces of amber, ſome weighing forty or fifty ounces. Upon opening ditches about Copenhagen, theſe were found ſticking, like the gum on the plumb-trees in our gardens, to the ſides of the old trees that were buried there.

Among the artificial curioſities is a piece of ivory, on which the hiſtory of our Saviour's paſſion is beautifully expreſſed in relievo. There is likewiſe a ſmall man of war in ivory, with ſilver guns, which is much admired; as is alſo a watch made of ivory, and a ſkeleton made of the ſame ſubſtance two feet ſix inches high, and ſo nicely formed, that it is ſcarcely to be diſtinguiſhed from a natural one. There are beſides many other curioſities in ivory, ebony, box, amber, and other materials, kept for the ſake of the elegance or minuteneſs of the workmanſhip; and it is ſaid that there is a common cherry-ſtone, on the face of which are engraven two hundred and twenty heads; but their ſmallneſs makes them appear imperfect and confuſed. Among the greateſt and moſt valuable curioſities, is kept the chair in which Tycho Brahe uſed to ſit when he made his aſtronomical obſervations at Uraniburg. The wood which compoſes it is held in reverence, and preſerved with the greateſt care, as having belonged to ſo great a man; although, by the prevalence of faction and malevolence, the unhappy aſtronomer, when alive, was baniſhed his country.

Here is a very large collection of paintings, which, though chiefly conſiſting of Flemiſh and German pieces, yet there are ſome few beautiful originals of Guido, Titian, Angelo, and even of Raphael: Charles I. of England, by Vandyke, and his ſon, Charles II. by Kneller, hold a diſtinguiſhed place among them. Daniſh ſculptors or painters ſcarce appear in this numerous aſſemblage. Some hiſtorical paintings, by Charles Dremander, a Dane, are however, there, and are not ill executed; the principal of theſe is the portrait of the famous Margaret de Waldemar, who, in 1397, united in her perſon the three kingdoms of Denmark, Norway, and Sweden, by the union of Calmar: ſhe is repreſented, in this picture, as receiving the homage of this latter kingdom from the ſovereign of it.

There is likewiſe, in this quarter, the magazine for proviſions, the poſt-office, and the exchange, which is a grand ſtructure in the Gothic ſtyle, four hundred and ſix feet in length, and ſixty-ſix in breadth; the greateſt part of which was built in 1624, by Chriſtian IV. The loweſt ſtory is laid out in warehouſes, which are very commodious for the merchants: for on both ſides this ſtructure are canals, where the ſhips may lie cloſe to the warehouſes, and goods be conveniently landed or ſhipped from them. In the ſecond ſtory, on the north ſide, is the place where the merchants uſually meet. In the middle, and down the whole length on both ſides, is a range of ſhops; in one wing of the ſouth ſide is the royal magazine, where moſt of the cloths, ſilks, and ſtuffs made in the city are depoſited, and from thence ſold to the merchants and dealers.

In the Roſenburg quarter, which is the ſeventh, is a Calviniſt church, a ſmall neat edifice, where the miniſters preach in French and High Dutch: here is alſo the Trinity church, generally called the Round church, from its round tower: the arched roof of this church, which is pretty high, is ſupported by two rows of very ſlender octangular pillars, which give it the appearance of a very ſlight building. In the great fire, in 1728, this edifice ſuffered leſs than the other churches, and was ſoon repaired. The greateſt loſs was the noble collection of books belonging to the univerſity, kept in a large room over the arched roof of the church. A new library has, however, been ſince collected, in which are ſeveral valuable manuſcripts relating to the northern hiſtory.

The tower of Trinity church is eſteemed a maſter-piece of its kind, and was deſigned by Chriſtian Langomontanus the aſtronomer. It is round, and an hundred and fifteen feet high, and fifty-four feet thick; flat on the top, and ſurrounded by an iron baluſtrade. The aſcent is ſpiral, and ſo ſpacious and eaſy, that a coach and horſes may go up and down with eaſe; which experiment was tried by Peter the Great, in 1716. This tower was deſigned for an obſervatory; but the curious aſtronomical and mathematical inſtruments invented by Tycho Brahe, Olaus Romer, and others, which were kept here, being all conſumed by the great fire in 1728, Chriſtian VI. to ſupply their place, afterwards furniſhed it with the moſt curious and valuable mathematical and aſtronomical inſtruments that could be procured.

The manufacturers quarter is the eighth.

The eaſt quarter is the ninth, and in this are the following places of note; namely, 1. The church of St. Nicholas, which, next to St. Mary's, is the largeſt in the city, and the beſt ornamented both within and without; it has ſeveral curious monumental inſcriptions, and the roof is covered with copper. 2. The Bremer Holms church, alſo called the Admiralty church; it being firſt allotted for the uſe of perſons belonging to the navy; but afterwards a large congregation of burghers were added. 3. The General Commiſſion-Office: this is a large ſtructure, erected by Frederick IV. in the year 1704. Here the united colleges of the Admiralty and General Commiſſion meet. Beſides this ſtructure, the following edifices belong to the naval department, viz. the Old or Bremer Holm, and the New Holm, where the naval ſtores are diſtributed; Chriſtianſholm, where is the naval arſenal, which far exceeds

that of Venice, and where the royal fleet uſually lies at anchor.

There are two quarters in the new town: the firſt is St. Anne's eaſt quarter, in which are Charlottenburg, a pretty large and regular ſtructure, begun in 1672, and completed in the ſucceeding years. It derives its name from queen Charlotte Amelia, conſort of Chriſtian V. The ſituation of this caſtle or palace is very agreeable, its principal front facing the ſquare called the King's New Market, which is embelliſhed with an equeſtrian ſtatue of Chriſtian V. of lead gilt, placed on an elegant pedeſtal. The great guard-houſe, the foundery, and the Daniſh play-houſe, are alſo on the ſides of this fine ſquare.

In this quarter are alſo the naval hoſpital; the church belonging to the garriſon; the Fredericſtadt, which is now adorned with ſeveral elegant new palaces; Frederic's church, built in imitation of St. Peter's at Rome; the general hoſpital; the tolbooth or cuſtom-houſe; and the grand academy of the royal cadets. This laſt ſtructure was built by Frederic IV. for an opera-houſe; but in 1720, he aſſigned it for the land cadets; and, five or ſix years after, removed the company of ſea cadets to this edifice. Each company has its ſeparate apartments and exerciſing-rooms, and is under the inſpection of its proper officer, who likewiſe lives in the academy. Theſe young men are not only ſupplied with lodging, cloathing, fire and candles, and a monthly penſion ſufficient to find them in diet; but are alſo inſtructed at the king's expence in all the ſciences, by able maſters, appointed for that purpoſe. Theſe two companies furniſh the ſtate with many able ſoldiers and ſeamen.

In the weſt quarter of St. Anne, is the royal palace called Roſenburg, a ſmall edifice built by Chriſtian IV. in 1604, in the ſemi-gothic taſte; but is a grand ſtructure, adorned with one large, and two ſmall towers. It is ſurrounded with a ditch and a kind of fortification, and has its own commanding officer; but the guard is daily relieved from the garriſon at Copenhagen. The adjoining gardens are very extenſive, and embelliſhed with a great number of ornaments. Theſe, in ſummer, ſerve the inhabitants for a public walk, and the royal family ſometimes reſide a few days in this palace. The third ſtory of the palace is ſaid to be the moſt remarkable, from its containing a treaſure of ineſtimable value. In the great hall, which is in this ſtory, and takes up the whole extent of the building, are five pieces of painting by the Daniſh artiſt Krogk; twelve valuable pieces of tapeſtry, repreſenting the atchievements of Chriſtian V. and three ſilver lions as large as the life, which at the king's inauguration are placed round the throne. In two cabinets adjoining to the hall are kept the old and new regalia, with other valuable jewels, and a whole ſervice of gold. Another cabinet has a collection of curious and valuable drinking-glaſſes, and other glaſs veſſels. The royal throne uſed at the inauguration ſtands in another apartment.

The village of Chriſtianſhafen conſiſts only of one quarter. It is ſituated on the iſland of Almac, and had formerly its own magiſtrates; but is at preſent under the juriſdiction of thoſe of Copenhagen. The moſt remarkable places in this ſuburb are St. Saviour's church, which is eſteemed the moſt magnificent and elegant church at Copenhagen, and has a beautiful ſteeple, that has a ſpiral aſcent on the outſide, by which one may go up to the top. The German, or Frederick's church; the orphan-houſe for the education of two hundred poor boys; the Eaſt-India company's houſe; the fine dock-yard, where ſhips of war are refitted; and the gate of Chriſtianſhafen.

Between this place and Copenhagen is a high pillar erected in the midſt of the water, on which is a ſtatue of a naked woman, with a ſwan on her left ſide, that extends its long neck behind her back, and bringing its head over her right ſhoulder, puts its bill into her mouth. This pillar and ſtatue are conſidered as a ſymbolical repreſentation of the city of Copenhagen; they were, however, found near Calmar, in Sweden, during the war in 1611, and conveyed to Copenhagen from thence.

The Calviniſts have a church in this city to themſelves; thoſe of the Romiſh religion frequent the chapels of foreign miniſters of that profeſſion, and the Jews have their ſynagogues. The magiſtracy of this city is appointed by the king, and conſiſts of a preſident, three burgomaſters, with vice-burgomaſters, and common council men.

The plague has frequently viſited this city, and ſwept away great numbers of the inhabitants. It has often been beſieged, and in 1658, and 1659, held out againſt the Swedes almoſt two years; and in 1700 was bombarded by the combined fleets of Sweden, England, and Holland. On the 20th of October, 1728, a fire broke out in the evening, in a mean houſe near the weſt gate, which ſpread with ſuch fury, that in forty-eight hours the moſt elegant and greateſt part of the city was reduced to aſhes. Twenty-four ſtreets and ſquares, one thouſand, ſix hundred and fifty dwelling-houſes, five churches, the univerſity, with the four colleges belonging to it, the council-houſe, and ſeveral other public buildings, were burnt to the ground. The anniverſary of this dreadful accident is obſerved in a religious manner on the twenty-third of October. The city has, however, been ſince rebuilt with greater elegance and beauty.

The ſuburb of Chriſtianſhafen being ſeated on the iſland of Almac, we ſhall therefore take ſome notice of that iſland, which is joined to the city, and conſequently to Zeeland, by two bridges. It is about nine miles in length, and three in breadth; entirely level, and has no woods, except a few thickets. The ſoil is uncommonly rich and fertile, and is therefore called the garden at Copenhagen. A part of it was given in 1516 to ſeveral families, who were invited thither from North Holland by Chriſtian II. at the deſire of Elizabeth his queen, who was a native of the Netherlands, to make butter and cheeſe for the court; and their deſcendants ſtill retain the habit, language, and cuſtoms of their predeceſſors, together with their cleanlineſs and induſtry; for they will not mix with the Danes, but intermarry with each other. This iſland, through the induſtry of theſe laborious people, plentifully ſupplies the markets of Copenhagen with all ſorts of roots and herbs, beſides butter, milk, great quantities of corn, and ſome hay. The whole iſland is divided into two pariſhes, and is peopled by about eight hundred families, many of whom are Danes. But to return to the iſland of Zeeland.

In the neighbourhood of Copenhagen is a magnificent royal palace, ſituated on a hill. It derives its name from Frederick IV. who was its founder, and has been ſince greatly enlarged by Chriſtian VI. This edifice is very ſpacious; on every ſide it makes a moſt magnificent appearance, and has a fine proſpect. The garden, which lies below the hill, is very extenſive, and contains a great number of pleaſant walks, ſeveral groves, a labyrinth, a theatre, many ſtatues, fountains, and ſummer-houſes; and, in particular, a very fine caſcade juſt fronts the palace. From this edifice, is a deſcent into the garden by two flights of broad ſtone ſteps. The menagery in the garden is ſtocked with lions, tigers, and other wild beaſts. From this palace a pleaſant avenue, planted with a double row of trees, extends above half way to Copenhagen.

Here is a royal hunting-ſeat, called Taggerſburg: it was rebuilt by the late king; the officers of the chace reſide in it. From hence a ſtrait avenue leads to the noble park of Charlottenlund, ſo called from the king's pleaſure-houſe, which ſtands in it. At about the diſtance of a mile from the park, lies that of Jagerſburg, which affords plenty of game. Near the middle of it ſtands a new edifice, called the Hermitage, which is thirty ells in length, twenty in breadth, and elegantly adorned both within and without. In the loweſt ſtory is a curious machine, by means of which the victuals, &c. are conveyed to and from the king's table in the ſecond ſtory.

About five miles from the park is the caſtle of Hirſcholm, a royal palace, which was antiently a place of conſiderable ſtrength: but nothing now remains of the old caſtle, beſides the name; for it is not only demoliſhed, but the very ſituation of the place has been entirely altered by art. Chriſtian VI. who took poſſeſſion of it as prince royal, cauſed the foundation of a new edifice to be laid on the ſpot where the old caſtle ſtood; and his queen, after his acceſſion to the throne, continued the building, the king having made her a preſent of it. In 1739 it was thought to be finiſhed; though every year ſince new improvements and embelliſhments have been continually added. The outſide has a very magnificent appearance, nor is it leſs elegant within. The great hall takes up the height of two ſtories, and has a noble fountain that throws up a column of water above twenty feet high, which falls down again into a copper baſon. Directly oppoſite to the palace is a noble ſummer-houſe; and on one ſide of the garden is an eminence covered with trees, on which ſtands the Norway-Houſe, which is ſo called from its being built in the Norwegian taſte. The chapel is elegant and well adorned, and the garden very beautiful.

The famous caſtle of Frederickſburg is about twenty miles from Copenhagen: this is eſteemed the moſt beautiful palace of any belonging to the king, and is frequently called the Verſailles of Denmark. Chriſtian IV. cauſed the old building to be demoliſhed, and the preſent magnificent

nificent ſtructure to be built by the ableſt and moſt celebrated architects in Europe. It partakes of the Greek and Gothic ſtyles of architecture, and ſtands in the midſt of a lake of freſh water, and conſiſts of three principal parts, each ſurrounded with water, but joined together by bridges. The diviſion, at which you arrive by paſſing over a bridge, reſembles a horn work, the front of which is quite round, and faced with ſtone. On both ſides are ſeveral buildings, which ſerve either as dwelling-houſes for the officers of the caſtle, or ſtables for horſes. From hence you paſs over a ſtone bridge to a noble high tower, which ſtands over the gate that leads into the ſecond court. On each ſide of this court, to the right and left, ſtands a magnificent building, in one of which are the governor's houſe, ſeveral apartments for the noblemen belonging to the court, and the king's kitchen; and on the other ſide, the chief magiſtrate of the prefecture of Serve reſides. From this ſecond court a fine ſtone bridge, built over a deep canal, leads to the grand portico of the chief entrance of the caſtle, which is built with free-ſtone, and adorned with ſculpture and gilding. The principal building conſiſts of a corps-de-logis, and two wings, four ſtories high, all covered with copper, and adorned with ſeveral towers, of which the church tower is the higheſt. Both the wings are joined to the front by a low building of one ſtory. Theſe conſiſt of ſeven arches below, and as many above, built with free-ſtone, and adorned with ſtatues that ſtand either in niches or detached from the wall, with many other ornaments; in ſhort, which way ſoever you turn your eyes, curious ſculpture, and a variety of other embelliſhments, preſent themſelves to view; and there is a beautiful fountain near one of the wings.

There is a fine collection of paintings in the gallery that leads to the hall of audience, moſt of which were brought from Italy; and the hall is hung with the portraits of ſeveral of the Daniſh kings, and the preſent royal family, as large as the life. The exploits of ſome of theſe monarchs are alſo beautifully painted in diff rent parts of the palace, and the greateſt actions of Chriſtian IV. are repreſented in rich tapeſtry.

In the church belonging to the caſtle, the eye is in a manner dazzled by the glittering of the gold, ſilver, and curious marble, with which it is enriched. The altar is of black marble, the front of the table is of ſilver and ebony, and the pulpit is of the ſame materials. From the gallery there is a view of the large pictures with which the pilaſters between the windows are decorated. In the windows, and on the walls of this church, are the eſcutcheons of the knights of the Danebrog order. The gallery leads to a ſpacious place behind the altar, where the royal throne is erected; and on the walls, which are hung with crimſon velvet, are ſeen the arms of all the knights of the order of the elephant. The grand order in this apartment is curiouſly embelliſhed with ſculpture and gilding; formerly a fine organ of ſilver and ebony likewiſe ſtood here. In the tower is a fine ring of bells. In ſhort, all the apartments of the caſtle are very magnificent, eſpecially the knights ball-room, which is over the church, in the third ſtory, and has alſo a noble organ. There is a fine garden behind the palace, and the neighbouring park interſperſed with canals and fiſh ponds, and agreeably diverſified with a mixture of graſs-plats, and little hills and vallies, well ſtocked with fallow deer from England. In former reigns, the ceremony of the coronation was always performed here, but of late years it has been removed from hence to Copenhagen; and notwithſtanding the magnificence of this palace, we are told that it is ſeldom viſited by the preſent ſovereign.

The town of Elſinore or Elſineur, is about eighteen miles from Copenhagen: it is ſituated on the Sound, directly oppoſite to Elſingburg in Sweden, in fifty-ſix degrees, eight minutes, north latitude, and thirteen degrees, twenty-three minutes, eaſt longitude. Next to Copenhagen, this is the richeſt and moſt elegant town in Zeeland. It has two churches, in one of which, named St. Peter's, the miniſters preach in the German language. Here is alſo a grammar-ſchool, in which thirty-three poor ſcholars are educated and maintained gratis, a good hoſpital, and the king's cuſtom-houſe, which is a fine edifice, newly built.

Elſinore has a conſiderable trade, and is famous both on account of its being the place by which the Swedes and Norwegians uſually paſs into Denmark, and for the toll paid here by every ſhip that ſails through the Sound. On the north ſide of the city ſtands the celebrated and important fortreſs of Cronenburg, which is built, in the moſt durable manner, with large blocks of hewn ſtone, is excellently well fortified, and adorned with ſeveral turrets and a variety of ſculpture.

About nine miles from Cronenburg, in latitude fifty-five degrees, thirty-ſix minutes, ſtands the royal palace of Friedenſburg, in a delightful ſituation; which circumſtance induced Frederic IV. to build this palace here, and as the edifice was completed in 1720, when the treaty of peace was concluded with Sweden, the king gave it this name, the word 'frieden' ſignifying peace. That prince, being extremely fond of this place, often reſided here, and therefore, to render it as agreeable as poſſible, endeavoured to ſupply by art the deficiencies of nature. The inner court is a regular octagon, formed by ſeven wings, one ſtory high, and the main building, which is oppoſite to the principal entrance. In the midſt of the court is a fountain adorned with a marble ſtatue of peace, made at Florence. The main building is in the form of a parallelogram, and covered with copper; and in the middle there is a ſpacious light and elegant ſquare hall. The other apartments, in both ſtories, are nobly furniſhed. The garden is not very extenſive, but well laid out, and embelliſhed with ſtatues, vaſes, and other ornaments. It is ſurrounded with a large wood, that affords plenty of game, and in which ſeveral viſtas are cut. There is a delightful proſpect from the palace; the eye commanding almoſt all the viſtas at once, and at the end of them is an extenſive lake, in which is a beautiful yacht. A fine orangery and an elegant church are near the palace. Here is a menagery, ſtocked with a variety of beautiful tame and wild fowl, in the wood adjoining to the garden.

Four Daniſh, or ſixteen Engliſh miles from Copenhagen, is the ancient city of Roſchild, or Roſkild; it is ſituated about a mile from the extremity of a bay called Iſefiord, and derives its name from Roe, the eleventh king of Denmark, who was its founder, and the word 'kilde,' which ſignifies a ſpring, there being ſeveral excellent ſprings on the ſpot where it ſtands. This city ſtands in fifty-five degrees, thirty minutes, north latitude, and in twelve degrees, fifteen minutes eaſt longitude. It was a conſiderable city many centuries before Copenhagen was built, and once contained twenty-ſeven large churches and convents within its walls, and its ſtreets extended to the ſea-ſhore. Monuments of many kings of Denmark are in the great church here, this being their burying-place. Here is one of Harold VI. king of Denmark, England, and Norway, who was the founder of this church; here is alſo one of black marble, of the famous queen Margaret. The only veſtige that it now retains of having been at any time the royal reſidence is, that from the moſt remote antiquity the kings of Denmark have been buried in this cathedral. In one of the chapels are two of the moſt magnificent monuments in Europe. They were made in Italy, by order of Chriſtian IV. and are erected to the memory of his father and grandfather, Chriſtian III. and Frederic II. the beginning of the laſt century. Four other monuments, of two late Daniſh kings, have not long ſince been placed here: they were executed by Windwelf, a celebrated Daniſh ſtatuary now living.

A large whetſtone is likewiſe ſhewn here, which they ſay was ſent to queen Margaret by Albert, king of Sweden, in deriſion: intimating thereby, that women ſhould ſharpen their needles inſtead of aiming at war: but the wit, which is very poor, was well retorted by the queen; ſhe returned him for anſwer, that ſhe ſhould apply it to the edges of her ſoldiers ſwords; and ſhe was as good as her word, for ſhe overthrew him in a pitched battle, and made him priſoner; and after keeping him in confinement ſeven years, he was compelled to yield to very hard terms to obtain his releaſe. A ſmall royal palace was built in this town, in the year 1733, that has a communication with the church, by means of a covered paſſage. In 1699, a convent was founded here for twenty-one ladies of quality, and a prioreſs. Each of theſe ladies has an annual penſion of eighty rix-dollars, beſides lodging and board. Chriſtian V. alſo endowed this Proteſtant convent with five hundred rix-dollars per annum.

There is a foundery for cannon about twenty miles from Roſchild: it was begun by the late king Frederic V. and named Frederic's work, which the natives conſider as the moſt conſiderable and aſtoniſhing in Europe; but, ſays Mr. Wraxall, it does not impreſs a foreigner with ſuch ideas of its conſequence.

Calinburg, or Kallundborg, in the prefecture of the ſame name, is one of the moſt flouriſhing towns in Zeeland, and has the beſt harbour in the iſland, except Copenhagen. St. Mary's church, which has four lofty ſpires, makes a good appearance. The inhabitants carry on

on a conſiderable trade, and a great quantity of malt is annually exported from hence. The paſſage to Barhuus in Jutland is uſually performed in twelve hours; and a certain number of ſmacks ſail twice a week to and from both towns.

The little noted town of Sora is ſituated in a pleaſant country, in the prefecture of the ſame name. It is ſituated ten miles to the ſouth of Roſchild, where it is ſurrounded by three lakes of freſh water, and theſe are again almoſt encompaſſed with fine woods. This town is remarkable for the royal academy ſituated at the ſouth end of it, to which belong a grand maſter, an inſpector, profeſſors in all the ſciences that relate to civil or political employments, a French maſter, a riding-maſter, with proper maſters for fencing, dancing, and drawing. There is alſo a printing preſs ſet up in this academy. The ſtudents have their apartments in a large and commodious ſtone building.

We ſhall now take a view of the ſmall iſlands in the government of Zeeland.

Samſo lies about thirty-eight miles to the north-weſt of Kalinburg, and nineteen from Abruſe in Jutland, in the fifty-ſixth degree north latitude. It is about fourteen miles long and five broad. It has ſeveral hills and eminences, and the ſoil is for the moſt part fertile, and particularly yields plenty of peas; whence moſt of the inhabitants are in good circumſtances, and carry on a conſiderable trade with their ſmall craft. It conſiſts of five pariſhes, and is ſurrounded with ſeveral ſmall iſlands and ſandy ſhoals, dangerous to ſhipping.

Mona, Moen, or Moon, as it is uſually called in our maps, lies near the coaſt of the ſouth point of Zeeland, in the ſtraits called the Wolfſund; it is ſituated in fifty-five degrees, twenty-one minutes, north latitude, and is nineteen miles in length from eaſt to weſt, and about nine in breadth. The high chalky cliffs towards the Baltick may be ſeen at a great diſtance at ſea, one of which has a great reſemblance to a throne, and is therefore commonly called the king's chair. Stones of an uncommon figure are in great plenty on this coaſt. The ſoil of the whole iſland is fertile, and yields great plenty of peas. It conſiſts of one prefecture, and contains ſeven rural pariſhes; and in the middle of the iſland is the little town of Stege.

Bornholm is ſituated in the Baltick, in the fifty-fifth degree, fifteen minutes north latitude, and in the fifteenth degree, ten minutes eaſt longitude, about ſeventy-ſix miles from the extreme point of Zeeland, and extends about thirty-three miles in length from the north-weſt to ſouth-eaſt, and is nineteen in breadth. The ſoil is fertile, and produces all kinds of grain, particularly oats. Here is alſo good paſturage, and a great quantity of butter is exported from hence; it has alſo quarries of marble and lime-ſtone, and abounds with pit-coal. The coaſt, from its dangerous rocks and ſhoals, is inacceſſible almoſt on every ſide: and great guns are planted where there might be any danger of an enemy's landing. At the peace of Roſchild, in 1658, it was ceded to the Swedes; but the inhabitants, being treated with great ſeverity by their new maſters, took up arms the ſame year, and, under the conduct of Jens Koefod, recovered their liberty; after which they delivered up the iſland to the king of Denmark, who, pleaſed with this proceeding, ſent them a letter of thanks, and in a ſecond letter promiſed to take them under his immediate protection; an engagement which the ſucceeding kings have confirmed from time to time. Bornholm has been ever ſince an hereditary country, belonging to the kings of Denmark. In 1678, five thouſand Swediſh troops were ſtranded on this iſland, in their paſſage from Pomerania to Sweden; when, notwithſtanding their being provided with Daniſh paſſes, thoſe that eſcaped the fury of the waves were made priſoners of war. The inhabitants defend the iſland with their own militia, without any expence to his Daniſh majeſty, and have a governor, deputy-governor, prefect, and other officers. The iſland conſiſts of one prefecture, which contains about a hundred villages, and ſixteen rural churches.

The government of Funen includes Funen, Langeland, Falſter, Laaland, and other ſmall iſlands. It has two governors, under one of whom are Funen and Langeland, and under the other are Falſter and Laaland.

Funen, called by the Danes Feyin, lies between the Great and Little Belt. This iſland is about fifty miles in length, and forty-five in breadth. It receives its name from its being a fine country, the whole iſland being fertile, and agreeably diverſified with ſmall verdant hills, ſome of which are covered with woods; whence moſt of the noble families of the kingdom reſide there. Indeed, it is not eaſy to find, in any other place of ſuch ſmall extent, ſo many noblemens ſeats as there are in this iſland. The ſoil yields ſuch plentiful crops of grain, that the inhabitants may annually export above a hundred thouſand barrels of rye, barley, oats, and peas, to Norway and Sweden, excluſive of their home conſumption. It alſo produces a vaſt quantity of buck wheat, which is chiefly cultivated by the inhabitants. They employ a great deal of care in breeding bees, and make a conſiderable quantity of fine mead, which is exported to all parts of the kingdom. The apples that grow in this iſland are alſo much admired, and it likewiſe produces plenty of hops and eſculent herbs; but the ſcarcity of wood obliges the inhabitants chiefly to uſe turf for fuel. There are here alſo great herds of black cattle, a good breed of horſes, and abundance of hogs.

This iſland is divided into five prefectures, the principal places in which are the following; namely,

Nyborg, or Niburg, a ſtrong town on the Great Belt, and though not very large, has a commodious ſituation. Here is a good port, and ſome trade. It was once very ſtrong, but now has nothing remaining but the ruins of its old fortifications and caſtle. The ſhips that paſs through the Great Belt are obliged to pay toll here, for which purpoſe a man of war is always ſtationed in the Belt. This city was firſt built in 1175. All that remains of the antient royal palace, where Chriſtian II. was born in 1481 (to the top of which an infant was carried up by a monkey, and brought down again without receiving any hurt) is only a large wing, with a flat tower, a little higher than the roof, and at preſent ſerves for a magazine and an arſenal.

Odenſee, is a city of great antiquity, and the capital of the general government; it is pretty large and populous, but the greateſt part of the city is old and decayed; ſome of it is, however, new and well built. It is ſaid to have been erected before the Chriſtian æra, and to derive its name from the idol Odin, and not as ſome have imagined from the emperor Otho I. who was never there. It is ſituated in a fine plain, in the fifty-fifth degree twenty-five minutes north latitude, and in the tenth degree thirty minutes eaſt longitude, on a river that yields a variety of fiſh, and about a mile below the town runs into the gulf of Stegeſtrand. The city is about a mile and a half long, and half as broad. It has four churches, among which the cathedral is the moſt remarkable. In the Grey Friars or Franciſcan church, are interred king John, and Chriſtiana his queen, with their ſon Francis, and king Chriſtian II. Near this church is a handſome hoſpital, built in the year 1540. The king's palace is neither large, commodious, nor elegant; it being only erected as a lodging for Frederick IV. in his occaſional progreſs through Funen: but there that excellent prince died in 1730. In this city is a college erected and liberally endowed by Chriſtian IV. and alſo a large cathedral ſchool. The provincial court is held every month in the great hall of this city. The bay lies a little above a mile from the town; the inhabitants carry on ſo conſiderable a trade, as to employ thirty-four large ſhips, beſides above a hundred ſmaller veſſels.

Langeland, which is ſituated in the fifty-fifth degree twenty minutes north latitude, and in the tenth degree fifty-four minutes eaſt longitude, is thirty-three miles in length, but ſcarce five in breadth. This iſland is very fertile, and abounds with wheat, barley, and rye, of which the natives export great quantities. It is under the ſame general governor at Funen: and contains only the royal prefecture of Traneklar, which includes the north and ſouth diſtricts, each conſiſting of ſeven churches or pariſhes.

Falſter lies at the diſtance of two leagues from Zeeland, in fifty-five degrees north latitude, and is about twenty-eight miles in length; but its breadth towards the north end does not exceed fourteen, and towards the ſouthern extremity is but about four miles. It is very fertile, and may be called the orchard of Denmark, from its yielding abundance of fruit: all ſorts of game are likewiſe here in great plenty. This iſland is commonly the dowry of the queens of Denmark, and conſiſts of one ſingle prefecture, which contains two diſtricts, in one of which are thirteen rural churches, and in the other fifteen.

The chief town in this iſland is Nicopping, in Latin Nicopia, or Neapolis Danica, ſituated on the ſtraits called Guldborgſund, in the forty-ninth degree fifty-ſix minutes north latitude, and is a pretty large well-built town, one of the moſt antient in the kingdom; but is not in ſo flouriſhing a condition as formerly, when the queen dowager, and other royal perſonages, conſtantly reſided here. On the land ſide it is fortified by a wall and ditch. This town carries on a conſiderable trade.

Laland,

Laland, or Lolland, called by the Danes Laaland, is separated from Falſter on the eaſt, by the ſtreights called Guldborgſund, or Groneſond, and on every other ſide is encompaſſed by the Great Belt and the Baltick. This iſland is nineteen miles diſtant from the iſland of Femeren; is thirty-three miles in length, and about fourteen in breadth, and the moſt fertile ſpot in the Daniſh dominions. It produces plenty of grain, particularly very fine wheat, and excellent peas: it is likewiſe famous for a kind of red fruit called manna, which in its taſte reſembles ſweet almonds, and grows on a ſlender ſtem; it alſo abounds with apples. It has ſome woods, but theſe are more frequent on the eaſt than on the weſt-ſide.

The capital of the iſland is Naſkow which was anciently well fortified, but is now only encompaſſed with a wall. It is of a middle ſize, and handſomely built. The inhabitants are wealthy, and trade in the produce of their country, it having a pretty good harbour. The Jews are allowed the public exerciſe of their religion, and have a ſynagogue here: the town has alſo a grammar-ſchool, and an hoſpital.

SECT. IV.

Containing an Account of the Civil, Eccleſiaſtical, and Political State of DENMARK: alſo of the Language, Religion, Learning, Conſtitution, Government, and Laws of the DANES.

THIS kingdom is divided into ſeven capital governments, each being under the direction of a governor appointed by the king, who is called ſtifts-ampts-man; and this ſtifts-ampts-man, or governor, is uſually a court-favourite. Each of theſe ſeven capital governments is again ſubdivided into three ſmaller juriſdictions, called ampts; and the governors of theſe ampts are called amptſmen. But ſtifts-ampts-men are equally unanimous in oppreſſing the poor, and obliging the court.

The Lutheran religion is eſtabliſhed in Denmark; and the kingdom is conſidered as divided into ſix dioceſes, viz. one in Zeeland, one in Funen, and four in Jutland; but theſe are in fact no other than ſuperintendencies, for they are without cathedrals, eccleſiaſtical courts, or temporalities. The principal buſineſs of theſe biſhops, or ſuperintendants, is to inſpect the doctrines and morals of the inferior clergy. The ſuperintendants are not diſtinguiſhed from other miniſters by their habit. The clerical dreſs conſiſts of a black gown with ſhort ſleeves, a round cap with flat edges, and a large ruff about the neck. The revenue of the biſhop or ſuperintendant of Copenhagen, which is the *richeſt benefice in the whole kingdom*, amounts to no more than two thouſand rix dollars, or about five hundred and ten pounds ſterling.

The clergy, in general, preach without notes, and ſome of them lead very exemplary lives. They are wholly dependant on the government, and are obliged to act with the utmoſt ſubmiſſion and ſervility to the court. But to make amends for being obliged to be obſequious to one claſs of people, they take care to ſhew their authority, and domineer over the lower claſs of people. Their churches are kept cleaner, and are more embelliſhed with ornaments, than thoſe in England, but the decorations are uſually inelegant, and often abſurd, particularly reſpecting their ſtatues. They are extremely fond of ſonorous muſic; hence their organiſts entertain the people for a conſiderable time, both before and after ſervice.

In Denmark the antient form of government was the ſame as that which the Goths and Vandals eſtabliſhed in moſt, if not all parts of Europe whither they carried their conqueſts, and which in England is retained till this day, for the moſt part. Denmark therefore was, till within theſe eighty-five years, governed by a king, choſen by the people of all ſorts: even the boors had their voices; which king Waldemar III. who reigned in 1394, acknowledged in that memorable anſwer of his to the pope's nuncio, who pretended to a great power over him: *Naturam habemus a Deo, regnum a ſubditis, divitias a parentibus, religionem a Romana eccleſia, quam ſi nobis invides, renunciamus per præſentes;* i. e. "Our being we have from God; our kingdom from our ſubjects, our riches from our parents, and our religion from the church of Rome; and, if you grudge it us, we renounce it by theſe preſents."

The eſtates of the realm, being convened, were to elect for their prince ſuch a perſon as to them appeared handſome, valiant, juſt, merciful, affable, a maintainer of the laws, a lover of the people, prudent, and adorned with all other virtues fit for government, and requiſite for the great truſt repoſed in him; yet with a due regard to the family of the preceding king. If within that line they found a perſon thus qualified, or eſteemed to be ſo, they thought it but a piece of juſt gratitude to prefer him before any other to this high dignity, and were pleaſed when they had reaſons to chuſe the eldeſt ſon of their former king rather than any of the younger, as well becauſe they had regard to priority of birth, when all other virtues were equal, as becauſe the greatneſs of his perſonal eſtate might put him above the reach of temptations to be covetous or diſhoneſt, and enable him, in ſome degree, to ſupport the dignity of the office.

If, after ſuch a choice, they found themſelves miſtaken, and that they had advanced a cruel, vicious, tyrannical, covetous, or waſteful perſon, they frequently depoſed him, oftentimes baniſhed, ſometimes deſtroyed him; and this either formally, by making him anſwer before the repreſentative body of the people; or if, by ill practices, ſuch as making of parties, levying of ſoldiers, contracting of alliances to ſupport himſelf in oppoſition to the people's rights, he was grown too powerful to be legally contended with, they diſpatched him, without more ceremony, the beſt way they could, and elected preſently a better man in his ſtead; ſometimes the next of kin to him; ſometimes the valiant man that had expoſed himſelf ſo far as to undertake the expedition, or the killing of the tyrant; at other times, a private perſon of good reputation, who poſſibly leaſt dreamt of ſuch an advancement, became the object of their choice.

The frequent meeting of the ſtates was a fundamental part of the conſtitution. In thoſe meetings all matters relating to good government were tranſacted, good laws were enacted, all affairs belonging to peace or war, alliances, diſpoſal of great offices, contracts of marriages for royal families, &c. were debated. The impoſing of taxes, or demanding of benevolences, was purely accidental, no conſtant tribute being ever paid, nor any money levied on the people, unleſs either to maintain a neceſſary war, with the advice and conſent of the nation, or now and then by way of free gift, to help to raiſe a daughter's portion; the king's revenue, at that time, conſiſting only in the rents of his lands and demeſnes, in his herd of cattle, foreſts, ſervices of tenants in manuring and cultivating his grounds, &c. (cuſtoms upon merchandizes being an impoſition of late crept into this part of the world). So that he lived, like one of our modern noblemen, upon the revenues of his own eſtate, and ate not through the ſweat of his ſubjects brows, as the modern practice is.

The king's buſineſs was, to ſee a due and impartial adminiſtration of juſtice executed according to the laws; nay, often to ſit and do it himſelf; to be watchful and vigilant for the welfare of his ſubjects; to command in perſon their armies in time of war; to encourage religion, arts, and learning: and it was his intereſt, as well as his duty, to keep fair with the nobility and gentry, and to be careful of the plenty and proſperity of his people.

Such was the antient form of government in this kingdom; which continued, with little variation, excepting that the power of the nobles increaſed too much, till the year 1660, when at one inſtant the whole face of affairs was changed, the crown was made hereditary, and the king abſolute.

This remarkable revolution was accompliſhed in the following manner: The whole nation, after the peace of Sweden, was in a moſt calamitous ſituation, for the treaſury was ſo much exhauſted, that when the army was to have been diſbanded, there was no money to pay off the troops; hence the ſoldiery became inſolent and licentious. At the ſame time the nobles were proud and tyrannical; the clergy diſcontented, from their want of importance, and the diſreſpect with which they were treated; and the commonalty grew quite deſperate, by reaſon of the heavy taxes with which, on account of the late war, they had been oppreſſed.

The ſtates, at this critical juncture, aſſembled to deliberate on the grievances of the nation, when it was propoſed to the commons, that an equal tax ſhould be laid upon all perſons indiſcriminately, and without diſtinction, in an exact proportion to their reſpective circumſtances. The nobles, however, ſtrenuouſly pleaded their privileges, which, they aſſerted, exempted them from paying any kind of taxes; and the commons as ſtrenuouſly contended, that as the nobles *ingroſſed* and enjoyed the greateſt part of the lands, wealth, honours, &c. in the kingdom, it was more particularly incumbent on them, to bear their ſhare of the common burden, and contribute to the general defence.

The

The debates hereupon grew warm, and the altercation became violent: each party conceived an implacable animoſity againſt the other, and the paſſions of all were equally overheated. In the height of this ferment, a nobleman called Otto Craeg ſtood up, and in a tranſport of rage told the commons, that they neither underſtood the privileges of the nobility, who were always exempted from ſuch impoſition, nor the condition of themſelves, who were no other than their ſlaves. Theſe degrading expreſſions irritating the commons beyond all degree of forbearance, Nanſon, their ſpeaker, ſtarted up, and, fired with indignation, ſwore that the nobility ſhould repent their having conſidered the commons as vaſſals and ſlaves. The commons, or clergy and burghers, immediately broke up the aſſembly, and marched under the auſpices of their leaders to the brewer's-hall; and in a few hours reſolved to make the king a preſent of an abſolute power, and to render the crown hereditary in his family, ſo as that it might deſcend even to females, in default of male heirs; which reſolution they accordingly put in execution the next day: and though the nobility heſitated at firſt on the matter, yet they were alſo obliged to comply; and in three days time the alteration was completed: ſo that the kings have been ever ſince deſpotic and arbitrary; not the leaſt ſhadow of liberty remaining to the ſubject.

Since this event took place, all meetings of the eſtates in parliament are entirely aboliſhed; nay, the very name of eſtates and liberty is quite forgotten, as if there had never been any ſuch thing; the very firſt and principal article in the Daniſh law being, "That the king has the privilege reſerved to himſelf to explain the law; nay, to alter and change it as he ſhall think proper." Any conſiderate perſon may eaſily gueſs the conſequences of this, which are, frequent and arbitrary taxes, and commonly very exceſſive ones; even in times of peace, little regard being had to the occaſions of them; ſo that the value of eſtates, in moſt parts of the kingdom, is fallen three-fourths: and it is worſe near the capital city, under the eye and hand of the government, than in the remote provinces; hence enſues poverty in the gentry, which neceſſarily cauſes extremity of miſery in the peaſants, partiality in the diſtribution of juſtice, when favourites are concerned; with many other miſchiefs, being the conſtant effects of arbitrary rule, in this, and in all other countries wherein it has prevailed. Thus the people, with a raſh and deſperate hand, from motives of revenge, fomented by an artful miniſtry and ambitious clergy, reſigned their liberty and independence, and inveſted their ſovereign with a deſpotic power over their lives and properties.

The kings of Denmark from this memorable period have united in their perſons, all the rights of the ſovereign power; but they are obliged to delegate ſome part of the executive power to their confidential ſubjects, as they are not able to exerciſe the whole themſelves.

Their language, like that of Norway, is a corruption of the Teutonic, or rather, both the former are corrupted dialects of the latter; the pronunciation, is, however, harſh, and the tone drawling and diſagreeable. Beſides, many Dutch, German, and French words, have been introduced; and the better ſort of people are fond of ſpeaking the latter fluently and accurately.

Learning is at a very low ebb in Denmark, not having yet triumphed over barbariſm; ſo that taſte and polite literature are ſcarcely known. This country, it is true, hath produced ſome few perſons admirably eminent in the mathematical ſciences, and the art of medicine, ſuch as Tycho Brahe, Borrichius, Bartholines, &c. but the merit of theſe is to be conſidered as the effulgence of a comet, challenging the greater admiration, becauſe ſo ſeldom ſeen. The ſmall progreſs of the Danes in the ſciences, however, appears rather to reſult from a defective conſtitution, and an oppreſſive government, than from any want of natural abilities in the people. A learned traveller, who lately viſited Denmark, obſerves, that the clergy and lawyers, as they are entirely dependant upon the court, and the great lords of the kingdom, are the moſt ſubſervient creatures imaginable: they fill up their reſpective places in the ſcale of ſlavery; but they fill them as ſo many cyphers, or rather as ſo many machines that are moved at the will of others. The ſituation of ſeveral very ſenſible and learned men among the clergy and lawyers of this kingdom is truly pitiable; for certainly a man who knows his duty well, and is prevented from doing it, has a very diſagreeable taſk to go through; and it is very difficult to define the characters of thoſe men who have no will of their own.

For Denmark and Norway, the ſupreme court of judicature is holden in the royal palace of Copenhagen, the king being preſident. The tribunal of Holſtein is held at Gluckſtadt; and that for the duchy of Sleſwick in the town of that name. The nod of the ſovereign is deciſive in the council; the members whereof, as they are removeable at his pleaſure, being obliged implicitly to obey his will.

The proceedings in the courts are ſo ſummary, that a ſuit may be carried through all of them, and finally decided, in thirteen months; and every man, if he chuſes it, may plead his own cauſe.

Here are three other courts, ſubordinate to the ſupreme court of judicature, at which the king preſides; theſe are, the land-ſtag, or provincial court; the herredsfougds, or diſtrict court; and the byſoglids, or town court. Appeals lie from each of theſe courts to the other, according to ſuperiority; and the final appeal is to the ſupreme court, when the king, as the ultimate legiſlator, gives the ultimate deciſion.

The king appoints the judges, which are removeable at pleaſure; they are puniſhable for miſdemeanors, that is, if the monarch thinks proper to deem their actions ſuch; and thus being royally condemned, are obliged to make reparation to the injured party. Their ſalaries are inconſiderable, being paid from the king's treaſury, from fines, and from gratuities where ſentence is paſſed. There is likewiſe an exchequer court in Copenhagen, to try cauſes relative to the revenue; and a commercial, to try all differences reſpecting trade. The chancellory executes all manner of buſineſs reſpecting treaties, alliances, &c. and the admiralty court manages all marine diſputes.

In Denmark, the police is very ſtrict: hence highway robberies, burglaries, coining, clipping, &c. are crimes ſcarcely ever heard of; and to ſpeak againſt the government ſo ſtrongly prohibited, that none dare wag their tongues licentiouſly in political matters. Murder and manſlaughter are, however, common; and the puniſhment of the criminal is beheading, which is performed, with great dexterity, by the public executioner, who, though univerſally deſpiſed, is uſually rich, as he is not only well paid to deprive a culprit of his life, but is the general contractor to empty all the jakes, and remove from houſes, ſtables, ſtreets, &c. all kinds of filth, and, in particular, dead cats, dogs, &c. which no other Dane will touch upon any account whatever. There is a maſter of the police in Copenhagen, who ſuperintends the council and civil affairs of the city; and ſuch diligence and circumſpection is uſed, that a perſon may walk through the whole city at midnight, in perfect ſafety. To prevent fires, the chimney-ſweepers are bound to keep a regiſter of all the chimnies they ſweep, that the perſon may be puniſhed for his avarice, or neglect, on conviction, who is the occaſion of an accident from a foul vent, &c.

In this kingdom the apothecaries are under excellent regulations; only two are allowed in Copenhagen, and one in all other towns of importance. They are licenſed by the college of phyſicians, and confirmed by the king; and are obliged to keep an exact regiſter of the drugs they ſell, to whom they are ſold, and by whom preſcribed.

The Daniſh laws are contained in ſo perſpicuous and ſhort a code, as to conſiſt only of one quarto volume, which is written in the language of the country, and divided into ſix books, the contents of which are as follow: 1. On the procedure of the courts of juſtice. 2. Eccleſiaſtical law. 3. Office and honorary law. 4. Maritime law. 5. Property law. 6. Criminal law.

SECT. V.

Treating of the Trade, Revenue, Naval and Land Forces, &c. of DENMARK; alſo of the Perſons, Habits, Characters, Cuſtoms, Manners, &c. of the DANES.

THIS kingdom, being extremely well ſituated for commerce, might be eaſily rendered rich and flouriſhing; but, by reaſon of the many exactions and duties it is ſubject to, is at preſent one of the moſt indigent and diſtreſſed ſtates of Europe: for where agriculture and internal trade are cramped, foreign commerce can never flouriſh. When a farmer, in Denmark or Holſtein, happens to be an induſtrious man, and is ſituated upon a poor farm, which he is, by his great diligence and induſtry, endeavouring to cultivate and improve; as ſoon as he has performed the laborious taſk, and expects to reap the profits of his toil, his lord, under pretence of taking it into his own hands, removes him from that to another of his

poor farms; and expects that he should perform the same laborious task there, without other emolument than what he shall think proper to give him.

In this country, the commercial commodities consist chiefly of fish, timber, tallow, pitch, tar, planks, skins, live cattle, horses, and grain from some provinces. Their money is reckoned in rix-dollars and stivers, the first being four shillings and six-pence each; the latter rather more than an English penny.

An East India company was established in Denmark in the year 1612, and a settlement made at Tranquebar, on the Coromandel coast; but this East India trade, though of some advantage to individuals, is detrimental to the nation in general; as the Danes pay in specie for all their tea, porcelain, bale-goods, &c. not having natural productions, or manufactured goods proper for these markets; and were it not for the small quantities of these goods which they send into Germany, Prussia, Courland, &c. and the teas which their merchants smuggle upon the coasts of Great Britain and Ireland, the company would soon prove extremely prejudicial to the whole country.

It must, however, be confessed, that Christian VI. did the utmost in his power to benefit his country. He abolished the monopolies of wine, brandy, salt, and tobacco. He terminated the disputes which had long subsisted between the crown of Denmark and the city of Hamburg; instituted a council of trade; invited artists, workmen, and manufacturers of foreign countries to settle in Denmark; established a bank; maintained a respectable fleet and army, &c. And his son Frederick V. very laudably trod in his footsteps; but these prospects have been obscured by oppression, imprudence, faction, and party, in the present reign.

The king's revenue arises from crown lands, taxes and duties, and these are extremely heavy. The landholders pay dearly to the sovereign, who is absolute, for the privilege of holding their lands, for the implements and liberty of cultivating them, and for every necessary article of life. All persons, not servants (the clergy excepted) pay eight shillings annually, as a capitation tax for themselves, the same for their wives, and the same for all their children who exceed twelve years of age. The clergy only are exempted, in consideration of the trouble they take in making out lists every year of all taxable persons within their respective parishes. Here is likewise a tax of four shillings upon every stable where horses are kept.

There are some few exemptions from the general mode of taxation; but the person so exempted pays a particular tax, levied in a peculiar manner. Those domestics, who serve the nobility, are thus taxed, annually: stewards and housekeepers, four shillings; footmen, two shillings; and maid-servants, one shilling. Labourers pay yearly four shillings, and their wives two, if not hired servants. But one of the most considerable articles in the revenue of Denmark, is the money raised by a duty or toll paid by all ships which pass through the Sound into the Baltick. The Sound is a narrow strait between Schonen and the island of Zeeland. On the Danish side stands the town of Elsineur and the castle of Cronenburg: and on the Swedish side the town of Helsingburg. Between those pass all the ships that trade to the Baltick. But though the Danes by the treaty of peace, have expressly retained their title to it, and receive toll from all ships that pass, except those of the Swedes, yet they do not esteem the security of that title so firm as they could wish; for as they are not masters of the land on both sides, they may have the right, but not the power, to assert it upon occasion; and seem only to enjoy it according to their good behaviour; their stronger neighbours, the Swedes, being able to make use of the first opportunity given them to their prejudice.

As this toll is very considerable, and has occasioned many disputes, we thought it might not be amiss to set down in this place an accurate account of the original and nature of it. It was at first laid by the consent of the traders into the Baltick, who were willing to allow a small matter for each ship that passed, towards the maintaining of lights on certain places of that coast, for the better direction of sailors in dark nights: hereupon this passage of the Sound became the most practised; that other of the Great Belt being in a little time quite neglected, as well because of the great conveniency of those lights to the shipping that passed in and out of the East sea, as because of an agreement made, that no ship should pass the other way, to the end that all might pay their shares; it being unreasonable that such ships should have the advantage of those lights in dark or stormy winter nights, who avoided paying towards the maintaining of those fires, by passing another way in good weather. Besides, if this manner of avoiding the payment had been allowed, the revenue would have been so insignificant, considering the small sum which each ship was to pay, that the lights could not have been maintained by it; and the Danes were not willing to be at the charge, solely for the use and benefit of their own trading ships; because they were masters of so few, as made it not worth their while; the Lubeckers, Dantzickers, and merchants of other hanse-towns, being the greatest traders at that time in the northern parts of Europe; by which they arrived to a great height of power and riches.

There being no fixed rule, or treaty, whereby to be governed with regard to the different bulk of the ships belonging to so many different nations, the Danes began in process of time to grow arbitrary, and exacted smaller or greater sums, according to the strength or weakness of those they had to deal with, or according to their friendship or discontent with those princes or states to whom the several ships belonged. Therefore the emperor Charles V. to ascertain this toll, concluded a treaty with the king of Denmark, which was signed at Spire on the Rhine, and was in behalf of his subjects of the Netherlands, who had a great traffic in the Baltick, and agreed, that as a toll-custom in the Sound every ship of two hundred tons and under, should pay two rose-nobles at its entrance into, or return from the Baltick; and every ship above two hundred tons, three rose-nobles. A rose-noble is worth about eighteen shillings sterling. This agreement remained in force till such time as the United Provinces shook off the Spanish yoke; and then the Danes, taking an advantage of those wars, raised their toll to an extravagant height, the troublesome times not affording the Dutch leisure to mind the redressing of such a mischief. However, the toll is at present greatly reduced, and much more reasonable; and if the principal maritime powers thought fit to dispute the matter, they certainly would have no occasion to pay it at all. About the year 1640, this toll produced two hundred and forty thousand rix-dollars per annum; but since 1645, it has not yielded above one hundred and ninety thousand; some years not above eighty thousand; in 1691, it did not extend to full seventy thousand; and to much less since that time.

Of all the Danish taxes, that upon marriage is the most impolitic, and more particularly as the country greatly wants population. All people of rank, who have public employments, pay a sum equivalent to ten pounds sterling for the privilege of being married; people of rank, who have no public employment, pay at the rate of four pounds sterling; clergymen, citizens, free farmers, and the stewards of the nobility, pay sixteen shillings; mechanics eight shillings: and servants and labourers, four shillings; seamen, soldiers and husbandmen, are exempted from this tax, and for a very good reason, which is, that they are totally unable to pay it.

Another very heavy tax is, an exemption subsidy, which, though exorbitant and oppressive, is chearfully paid by all housekeepers who can raise the money, because by the payment they are exempted from having soldiers quartered on them. This tax is rated by the civil magistrates, according to the size, situation, rent, &c. of the house. Besides the taxes to government, two more are paid by all citizens and burghers, for the support of their respective cities and towns, viz. a capitation-tax, and a ground-rent tax; and independent of these, here is a heavy stamp-duty, and taxes upon patents, commissions, a titulary tax paid by the nominal nobility, &c.

From these various taxes, duties, imposts, and subsidies, the whole revenue of Denmark at present amounts to the annual income of one million, two hundred thousand pounds, and this is the utmost that government can possibly draw from the people, without draining the kingdom of the little money that remains in circulation; for the Danes are, perhaps, the most heavily taxed of any people in Europe, though they are the least capable of paying such oppressive levies.

Most of the regular troops in Denmark are foreigners, and more particularly, Germans. The cavalry and dragoons are well-mounted, and consist of eleven regiments; and each regiment of four squadrons, including the body guards. These regiments are thus quartered, viz. three in Zeeland, one in Funen, three in Jutland, and one in Holstein. The infantry is composed of sixteen regiments, of which two do duty as the king's guards. When the regiments are complete, each consists of two battalions, and each battalion consists of six companies of

one hundred each. The artillery conſiſts of three regiments, one of which is ſtationed in Denmark, another in Norway, and a third in Holſtein. The corps of engineers is divided into three parts, each of which compriſes twenty officers of various ranks.

Since the late reduction of the Daniſh forces, their numbers are as follow: ten thouſand cavalry and dragoons, and thirty thouſand infantry and artillery; ſo that the regular troops in Denmark amount to forty thouſand. And with reſpect to the militia, every perſon who cultivates or poſſeſſes three hundred and ſixty acres of land, is obliged to furniſh one man, and pay half the expence of a man towards a corps-de-reſerve, to be embodied and called out only upon extraordinary occaſions.

The navy belonging to the Danes conſiſts of thirty ſhips of the line, and about ſixteen frigates; but theſe are generally kept in ſuch bad repair, that it would be found difficult, upon an emergency, to fit out twenty ſhips capable of putting to ſea. To man this fleet, there are two orders of ſeamen, namely, thirty thouſand who are conſtantly inrolled and retained, in times of peace, by a trifling annual ſtipend, and being exempted from the payment of certain taxes. A ſecond claſs is compoſed of four diviſions, each having a chief and ten companies of one hundred and eighteen men each. Theſe are commanded by a captain, who has two ſubaltern officers under him; and in this claſs are a certain number of gunners, who have a kind of naval academy, and inſtruct the ſeamen. This ſecond claſs contains four thouſand ſeven hundred and twenty men, who are always ready for immediate ſervice, and conſtantly kept in full pay. They are occaſionally recruited from the inrolled ſeamen, and wear a blue uniform faced with different colours, according to the reſpective ſquadrons and diviſions to which they belong.

Their men of war carry the ſame complement of men in proportion to their guns, as the French ſhips of war do; but they are much inferior, in point of conſtruction, both to Engliſh and French, and are far from being equal to the Swediſh ſhips of war.

Frederick IV. inſtituted a marine academy for the inſtruction of young cadets. Appointments were made for fifty cadets to be trained up to a thorough knowledge of naval affairs, and perfectly taught navigation, gunnery, drawing, fencing, hiſtory, geography, geometry, and ſeveral other branches of the mathematics, &c. In order to join practice to theory, they were annually to make a voyage in a frigate, and ſucceſſively to perform the ſervices of common ſeamen, pilots, and officers. But this noble inſtitution is now totally neglected, and the money appointed to ſupport it is ſunk into venal pockets; ſo that the Danes, in caſe of a rupture with any naval power, would have a great difficulty to find proper perſons to command their ſhips of war, except from the few officers among them, bred in the Engliſh and French ſervices.

There are computed to be about two million, one hundred thouſand ſubjects in the various parts of the Daniſh dominions, the inhabitants of which may be diſtinguiſhed into five claſſes, viz. 1. The nobility, who have privileged fiefs in the kingdom. 2. The titular nobility. 3. Clergy, lawyers, and ſtudents. 4. Merchants and citizens. 5. Seamen, farmers, and labourers.

There are very few families of the firſt claſs, or antient nobility, now exiſting; ſo that moſt of the families, who are now in poſſeſſion of the privileged fiefs, have been ennobled ſince the revolution in 1660, and moſt of them very lately. They value themſelves very much upon their titles and privileges, and are uncommonly fond of pageantry, pomp, and ſhow. They are proud of French fopperies, and imitate all the blemiſhes, but none of the good qualities of that nation. The ladies in general are finiſhed coquettes, and in the practice of that art ſeem to vie with the moſt ſkilful females of London and Paris.

A great number of the ſecond claſs, or titular nobility, are foreigners, and in particular Germans, who generally come hither very poor, but uſually acquire wealth by ſervilely attending the court, and falling into all the ſchemes of the favourite or miniſter.

The third claſs, being dependant on, are obliged to be ſubſervient to the court, and ſubmiſſive to the miniſter, &c.

The fourth claſs are conceited and haughty, but at the ſame time timid, and ſervile to ſuperiors.

The fifth claſs, who are the ſeamen, would be much more alert in their buſineſs, if they were better uſed; and would act with greater ſpirit and courage, if they were not familiarized to fear, and trained from their births to the moſt abject ſlavery. The farmers, as we hinted above, are perfect vaſſals, and by not being permitted to have any will of their own, become timid, careleſs, and indolent. If any of theſe happen to get a little money, they become perfect ſots, and uſually deſtroy themſelves by intoxication. Indeed this vice of drinking to exceſs is almoſt general among the Danes; though many, forely againſt their wills, are obliged to keep ſober through poverty.

The labouring people are ſome of the moſt oppreſſed and miſerable wretches in Europe, and may thank Providence for a kind of inſenſibility and ſtupidity which prevents them from feeling all the horrors of that tyranny to which they are obliged to ſubmit. It has been, however, obſerved, that theſe people ſeldom quarrel with each other, though they are very fond of drinking and of ſmoaking tobacco, which are of general uſe here, and which may contribute much to their health, and to the little activity they poſſeſs in the cold and wet atmoſphere they live in.

The Danes were formerly celebrated for their warlike genius; but this being now totally loſt, they are become timid, ſuſpicious, deceitful, dull, and in general ſtupid. The king, on the ſale of an eſtate, has a right to one third of the purchaſe-money; and their lands in general are ſo burdened with impoſitions, the gentlemen are at little or no pains to improve their eſtates, and they look upon trade as beneath their dignity. They therefore rack their tenants with the utmoſt oppreſſion, in order to procure the immediate means of gratifying their vanity, gluttony, and extravagance. Thoſe courtiers, who derive money from their employments, inſtead of purchaſing land in Denmark, remit their caſh to the banks of Hamburgh and Amſterdam. The merchants and burghers tread in the ſteps of their ſuperiors; they ſpend all their gain in luxury and pleaſure with an impatient avidity, as if they were afraid of incurring the ſuſpicion of affluence; and of being ſtripped by taxation. The peaſant or boor follows the ſame example: no ſooner has he earned a rix-dollar, than he makes haſte to expend it in brandy, leſt it ſhould fall into the hands of his oppreſſive landlord. This lower claſs of people, ſays an accurate writer, are as abſolute ſlaves as the negroes in the Weſt Indies; and ſubſiſt upon much harder fare. The value of eſtates is not computed by the number or quality of the acres of land, but by the ſtock of boors; who are reckoned a parcel of the freehold, in the ſame manner as the timber upon it.

The Danes are well-ſhaped and ſtrong built, exceeding fair, both men and women, but have Dutch ſhapes and a very bad mien; their hair uſually yellow, as is obſerved of moſt northern nations, while the hair of the ſouthern people is generally black. The ladies that are not expoſed to the weather, have excellent complexions, and make a very agreeable figure in a ſitting poſture; but they ceaſe to charm when they put themſelves in motion, and indeed it is difficult to know whether they move at all for ſome time, if they are at a little diſtance from us. They are as corpulent and ill-ſhaped as the Dutch, and want a little of the activity of the French. Both ſexes take great care to dreſs and curl their fair locks, and imitate the ſouthern nations in their habits, except the lower claſs of people, and the Laplanders, who wrap themſelves in furs or wool in winter from head to foot. Their heavy bodies ſeem to affect their minds, to both which their exceſs in eating and drinking may contribute; and they are ſeldom much improved by learning. On the other hand, they appear to be good-humoured, hoſpitable people, and their courage is ſeldom called in queſtion.

At funerals, as well as marriages, they feaſt and make merry. The nobility pique themſelves upon having pompous burials and monuments for their dead. Moſt gentlemen keep very plentiful tables, and drink chiefly Rheniſh wine or brandy. Upon an invitation, the gueſts have each a glaſs of brandy offered, or rather forced upon them, as ſoon as they come in; and at dinner-time, whenever the maſter of the houſe drinks a glaſs of wine, every one at the table does the like. The ladies, as well as gentlemen take off their glaſſes at every health drank at dinner; but then their glaſſes are ſmaller, and they retire before the men begin their indelicate toaſts.

The principal diverſions of theſe people are, being drawn in ſledges upon the ice, during winter, and running at the gooſe on Shrove-Tueſday. The king annually partakes of the paſtime of ſtag-hunting, during which diverſion he lays aſide the trappings of royalty, and mingles, as an equal, with his nobles and attendants; even the common people are indulged with very extraordinary freedoms at this time. When the hunting is over, about ſix in the evening the hunting aſſizes are held in the great court before the palace. There the ſtag is cut up with great ceremony by the huntſmen, who are cloathed in red, and have

hunting

hunting horns about their necks, while the hounds attend with the moſt clamorous impatience. Proclamation is alſo made, that if any perſon has, that day, tranſgreſſed the laws of hunting, he ſhould be immediately accuſed. Some individual is always ſelected for this purpoſe, tried, and found guilty. Then he is led by two gentlemen, towards the ſtag, where he firſt kneels down between the horns; he is afterwards obliged to raiſe up his poſteriors, on which the king himſelf, with a large wand, inflicts a certain number of ſtripes, to the infinite diverſion of the queen, ladies, and other ſpectators; during which the hounds open, and the huntſmen blow their horns, as if in concert, to proclaim the king's juſtice. The criminal having undergone this ludicrous chaſtiſement, riſes up, and makes a profound obeiſance, and then the hounds are permitted to regale upon the ſtag.

Another royal diverſion is ſwan-hunting, which the court enjoys in a ſmall iſland near Copenhagen, where thoſe birds breed in great numbers. Before the young ones are ſufficiently fledged to take their flight, the king, queen, courtiers, &c. ſet out for this iſland in a number of pinnaces, incloſe the haunt of the ſwans, and with fowling-pieces deſtroy them by thouſands: the feathers and down belong to the king, but the fleſh is never eaten.

Their uſual way of travelling by land is either in waggons or on horſeback, and the ſledges are more uſed than either in winter, for their diverſion, as well as on journeys. If a gentleman obtains a warrant from court for horſes or carriages, the farmers of every province are obliged to furniſh him with them, as they are for the retinue of the court when the king removes. They have inns upon the roads; but there, as in Holland, they make little cabins, like thoſe in ſhips, all round the room, where all ſorts of people ſleep together. He muſt be a man of great diſtinction who is favoured with a room to himſelf; but their beds are very good, and their linen clean as in Holland. Indeed, the cities and towns in general afford but bad accommodations to ſtrangers, the taverns being poorly ſupplied with refreſhments; ſo that a traveller, to be in any-wiſe contented in this country, muſt have a traveller's appetite, and take a good ſtock of patience along with him.

The modern Danes are not thoſe viſionary and ferocious people their anceſtors were, who were aſhamed of dying in their beds, and whoſe greateſt felicity conſiſted in drinking hydromel out of the ſculls of their enemies. While the peaſants are employed without doors, at their labour, the women are occupied at home in ſpinning yarn for linen, which is here made to a great degree of fineneſs and goodneſs. Many of the people are ſubject to apoplexies and epilepſies, which are owing to hard drinking, and low living. It has been juſtly remarked, reſpecting the generality of the people, that there is no part of Europe where extravagancies of all kinds are carried to ſuch lengths, as in Denmark, in proportion to the little they have to ſpend; and perhaps appears in no inſtances more conſpicuous than their weddings and burials.

The Danes are exceſſively fond of titles and diſtinctions; which are partly annexed to military, civil, and eccleſiaſtical employments, and partly nominal. The various employments give a kind of dignity, during life, to thoſe who hold them; and the nature of the employ fixes the rank between thoſe who are in the ſame train, but it cannot decide the precedency between an officer, a magiſtrate, and an eccleſiaſtic; and therefore this is regulated by an ordinance for the etiquette of rank. Thoſe who have a certain rank by their employments, often obtain, after ſome time, titles ſuperior to their reſpective functions. Theſe titles are ſometimes likewiſe imaginary; as thus: when a perſon has the title of counſellor of ſtate, of juſtice, or of finances, it is not to be concluded from thence, that he has neceſſarily any part of the government of the ſtate of juſtice, or of the public revenue, except the word "atual" is added to his character.

The king of Denmark has ſome hundred lords of the bed-chamber, who pay about ten pounds ſterling yearly for wearing a golden key, which gives them a conſiderable rank; and yet there are not ten paid for their attendance at court.

To the court belong two ancient orders of knighthood, viz. that of the Elephant, and that of Daneburg. The badge of the former, which is the moſt honourable, is an elephant ſurmounted with a caſtle ſet with diamonds, and ſuſpended to a ſky-coloured ribbon, like the George in England. This order was inſtituted by Chriſtian I. at his ſon's wedding. It is conferred only on perſons of the higheſt quality; and the number of companions amount to thirty, beſides the ſovereign. The order of Daneburg, though leſs honourable, is much more antient; ſo that the origin of it is loſt in fable: it is beſtowed, as an honorary reward, upon the nobleſſe of inferior rank, its inſignia being a white ribbon with red edges, worn over the left ſhoulder, from which is ſuſpended a ſmall diamond croſs, and an embroidered ſtar on the breaſt of the coat, ſurrounded with the motto, "pietate & juſtitia," by piety and juſtice. Here is likewiſe a modern order of knighthood, called the order of St. Matilda, and inſtituted in honour of the late unfortunate queen; but which, being now little regarded, is conſequently not aſpired to or ſolicited.

SECT. VI.

Compriſing the Antient and Modern Hiſtory of DENMARK, and the Kingdoms annexed to it.

THE inhabitants of theſe kingdoms appear to have been coloniſts of the ancient Scythians, who overrun all the northern and weſtern parts of Europe. They were firſt known from their celebrated expedition into Italy during the conſulſhip of Cecilius Metullus and Papirus Corbo. At this time the liberties of Rome were threatened by inteſtine diviſions, till private feuds gave way to public conſternation, on the Romans being informed that three thouſand northern barbarians had made an irruption into the Roman territories. Theſe ravagers had deſigned to quit the inclement and unfertile regions in which they were born, for a ſerener climate, and more fruitful country.

They firſt conquered all the little nations in their own vicinity, then ſubdued the Gauls, and at length prepared to attack Italy itſelf. Upon this emergency, the ſenate diſpatched Papirus Corbo to defend the paſſage of the Alps. This general, after entering into a negociation with the northern invaders, ſhamefully broke the truce, without any manner of provocation, and unexpectedly attacked them in the night; but was ſo warmly received, that he met with a repulſe. This affair was greatly prejudicial to the Romans, ſince it gave ſpirits to the Cimbri, as theſe northern people were called, and engaged many to join them, who would otherwiſe have been neutral.

Having now entirely over-run Gaul, the Cimbri deſigned to paſs the Pyrenees, and eſtabliſh themſelves in Spain; but being repulſed by the people of that country, they ſent an embaſſy to Rome, to offer their military ſervice to the Romans, on a proviſo that they ſhould have a ſufficient territory aſſigned them, from which they might procure their ſubſiſtence. Theſe propoſals were rejected; which ſo greatly enraged the Cimbri, that they attacked the conſul Silanus, and cut his whole army in pieces. This misfortune was followed by ſeveral others; for the Germans, entering into an alliance with the Cimbri, the Romans were defeated in three other battles, in one of which the Roman general, Scaurus, with his two ſons, were taken priſoners, and above eighty thouſand Romans ſlain.

While affairs were in this calamitous ſituation, the celebrated Marius was appointed to the command of the Roman army, when acting with more prudence and ſkill than any of his predeceſſors, he at length defeated the enemy in one of the moſt bloody battles that ever was fought, when above a hundred thouſand of the northern barbarians were ſlain. Similar ſucceſſes followed this, till the whole of theſe ferocious people were either deſtroyed, taken captives, or obliged to retreat.

After this, we find little mention of theſe people, till a great perſon, named Woden, or Oden, is ſaid to have made himſelf ſovereign of all the northern nations; and his abilities being equal to his courage, he not only ſubdued all around him as a general, and ruled the people as a king, but formed a new religion for them as prieſt, and preſcribed a code of laws as a legiſlator. Hengiſt and Horſa, who firſt brought over the Saxons into England, derived their lineage from him; and moſt of the royal and noble families of the northern parts of Europe, to this very day, pretend to trace their deſcent from him. Yet hiſtorians do not take upon them to aſcertain from whence this celebrated perſon came, or when he died; they indeed ſay, that he lived about ſixty years before the birth of Chriſt; and that he was the firſt to whom the title of king of Denmark was given.

The deſcendants of Woden reigned after him in the ſeveral northern nations, and at length revenged the misfortunes and miſcarriages of their anceſtors upon the Romans, by gradually weakening their empire, and at length overturned it.

The

The Daniſh chronicles mention eighteen kings, from Woden to Regner, ſurnamed Logbrog, who began his reign Anno Domini 750, but they furniſh us with little more than their names, or at leaſt with only ſuch fables as, in this enlightened age, are too ridiculous and abſurd for commemoration or recital.

This kingdom was greatly weakened, in the fifth century, by a prodigious number of people quitting it at that time, to join the armies which effected the conqueſt of the weſtern empire; but it recovered about the eighth century, when we find the Danes riſe into importance, as a maritime people, and harraſs the coaſt of Courland, Livonia, Pomerania, Ireland, Scotland, France, and England. They even attacked the emperor Charlemagne, burnt his palace at Aix-la-Chapelle, over-run Lower Saxony, Friſeland, Holland, and Flanders; conquered the greateſt part of the kingdom of France, obliging her kings to pay an immenſe tribute, ravaged Spain and Italy, and committed many other depredations.

In the year 832, the Danes landed in Kent, and defeating king Egbert, remained there two years, plundering and ravaging the country; but in a ſecond battle king Egbert was victorious, and drove them out of the iſland.

The Danes landed in England again in the reign of king Ethelwolf; and in the reign of Ethelred his ſon, they landed in Suffolk, and murdered Edmund, king of the Eaſt Angles in his capital, now called St. Edmundsbury, that king being afterwards canonized for a martyr, becauſe he was killed in the defence of his Chriſtian ſubjects, by the heatheniſh Danes.

Guthram, or Godrum, king of Denmark, who began his reign about the year 872, invaded England, and fixed colonies in ſeveral parts of it; Alfred, king of England, fought ſeveral battles with him, and at length coming to a treaty, Guthram agreed to leave the kingdom, and before he embarked embraced Chriſtianity; what other articles there were in this treaty hiſtory does not inform us; but as ſoon as the Danes were gone, Alfred put his ſubjects on building a fleet of ſhips to defend their coaſts, which they ſoon had occaſion for, the Danes preparing for another invaſion. Alfred died in the year 900, having fought upwards of fifty battles with the Danes, by ſea and land.

The greateſt part of the people were, at the abovementioned time, bred up to the ſea from their childhood, and had no ideas of the dangers to which that element expoſed them. When a prince had attained the age of eighteen or twenty years, he generally requeſted his father to have ſome ſhips equipped, by which he might attempt ſome great exploit, with his followers: this the father regarded as a mark of his riſing courage, and of a great mind. A fleet was armed immediately, of which the admiral, and all his officers and men, made reciprocal promiſes never to return, except loaded with ſpoils and laurels. If they had received any injury from a neighbouring nation, that nation was choſen for the firſt victim. Thoſe whom they vanquiſhed were generally put to death; ſometimes indeed they contented themſelves with making ſlaves of them; and often, likewiſe, by a ſingular kind of generoſity, or rather by a deſire of ſignalizing themſelves, if they found themſelves ſuperior to the enemy which preſented itſelf againſt them, they ordered off a part of their fleet, that they might fight the enemy with equal force, deſpiſing the gaining an advantage with ſuperior numbers, and regarding it as an infamous practice to ſurpriſe an enemy in the night. Their veſſels were always well provided with arms; and their men were all taught to ſwim, ſo that as they generally fought near the ſhore, they were often in a ſituation of ſecuring themſelves, although their veſſels were deſtroyed.

The manner in which their lands were divided in Denmark and in Norway, ſhews us, that the chief end of their government was, to have a great maritime force; every diviſion, whether it was greater or leſs, took its name from the number of veſſels that it could equip, and in ſome places their names are ſtill in uſe. In the beginning of their maritime expeditions, their fleets were not very conſiderable; but when their princes had enriched themſelves by plundering their neighbours, they came to have two or three hundred ſail of ſhips of war, each ſhip carrying from one hundred to one hundred and twenty men.

To a nation that is wholly addicted to plunder and rapine, civil laws and a police are of very little uſe. This was ſtrictly the caſe with Denmark, when their king, called Gorman, came to the throne in the year 840. The few uſeful regulations which had been left them by Woden and others were now laid aſide; and the kingdom was divided among two or three princes, who governed with a very limited power; and that confuſion which we find in the hiſtory of Denmark to this time was occaſioned by one hiſtorian writing the hiſtory of one prince, who reigned in this country; and another, the hiſtory of another prince who reigned at the ſame time. But Gorman, by uniting to his crown, all the provinces of Denmark, of which his anceſtors had been diſpoſſeſſed, and being forced by the emperor to receive the Chriſtian religion into his dominions, gave this government again ſome form; and from hence we may date the origin of the civil government which for many years afterwards exiſted in this ſtate.

It is related, that in the year 999 there was a general maſſacre of the Danes ſettled in England, which is ſtill commemorated annually at Hocktide. Be this as it may, certain it is that Swein and his ſon Canute, or Knute, conquered this kingdom about the year 1014, though ſeveral battles were fought with the Saxon kings Ethelred and his ſon Edmund Ironſide, before the Danes could eſtabliſh themſelves here. Upon the death of Edmund Ironſide, anno 1017, all the great men acknowledged Canute their king, ſwore allegiance to him, and renounced the two ſons of Edmund, Edward and Edmund, who were baniſhed into Sweden, from whence they went into Hungary, where they reſided many years. King Canute, in the mean time, obliged the Engliſh to raiſe him one hundred thouſand pounds every year, with which he paid his forces, and maintained his court; and in the year 1019, he conquered the kingdom of Norway. In the fifteenth year of his reign, anno 1031, he viſited Rome, where he gave great part of the ſpoils he had taken to that ſee; and, returning to England, died at Shaftſbury on the 12th of November 1036, having divided his dominions between his three ſons: to Harold he gave England; to Swein, Norway; and to Canute, Denmark. Harold died in 1040, leaving neither wife nor iſſue, and was ſucceeded by his brother Hardicanute, the third ſon of Canute, who died in 1042. This was the laſt of the Daniſh race in England.

In 1182, Canute VI. ſubdued Vandalia (the preſent Pomerania and Mecklenburg) and took upon him the ſtyle of king of the Vandals, which country continued ſubject to the Danes twenty-ſeven years. Livonia was alſo conquered by this prince.

In 1202, Waldemar II. extended his dominions in Germany, and lived in great reputation in the beginning of his reign; but count Swerin committing the care of his territories, as well as his wife, during his abſence in the Holy Land, to his majeſty's protection, he debauched the count's wife; of which her huſband being informed at his arrival, took the king priſoner by a ſtratagem, and made him pay forty-five thouſand marks to obtain his liberty, after having confined him three years. While the king was priſoner, Pomerania, Mecklenburg, Lubeck, and Dantzick revolted, the Teutonick knights took Livonia from him, and Holſtein and Stormaria were ſubdued by Adolph count of Scawenburg.

Olaus dying without iſſue, anno 1387, queen Margaret his mother was elected queen of Denmark and Norway, who, having aſſociated her nephew Eric with her in the government, ſubdued the kingdom of Sweden; and it was enacted by the ſtates, that theſe three kingdoms ſhould be united for the future under one prince; and upon the death of queen Margaret, Eric became ſole ſovereign of the whole; but being depoſed on pretence of mal-adminiſtration, he retired into Pomerania, where he lived a private life the remainder of his days.

In the year 1439 was elected Chriſtian earl of Oldenburgh, from whom the preſent royal family of Denmark is deſcended. He ſubdued the kingdom of Sweden, which had revolted, and the emperor Frederick gave him the county of Holſtein. This prince married his daughter Margaret to James III. king of Scotland, and gave him with her the iſland of Orkney and Shetland, the laſt being a very valuable acquiſition, as it affords the beſt herrings in theſe ſeas. The Dutch begin that fiſhery here every year at Midſummer, without aſking leave of the Britiſh court, though they paid in the reign of Charles I. thirty thouſand pounds annually for this privilege. Chriſtian was ſucceeded by his ſon John, who divided the duchy of Holſtein with his brother Frederick.

Chriſtian III. eſtabliſhed the Lutheran religion in Denmark: he was ſucceeded by his ſon Frederick II. in 1538. Chriſtian IV. his ſon being engaged in a war with Sweden, in order to obtain peace, was compelled to yield up the province of Halland to the Swedes.

In the year 1660, Frederick III. his ſon, was beſieged in his capital city of Copenhagen by Charles Guſtavus king of Sweden, who drew his artillery over the ice into the province of Zeeland; and if the Dutch had not come to Frederick's aſſiſtance, Guſtavus would probably have made a conqueſt of that iſland: but though Frederick was unfortunate in his wars with foreigners, he raiſed his prerogative to that height, that he perfectly ſubdued his ſubjects, and from a limited elective monarchy, made himſelf an abſolute prince, and eſtabliſhed the ſucceſſion of the crown in his family. In the ſame year, the peaſants and lower claſs of people complained, they were not able to diſcharge the debts the public had contracted during the war, and therefore, entreated the nobility and gentry, that as the profits of the lands were theirs, they would condeſcend to bear part of the burthen, the nobility and gentry, before this time, paying no taxes for their lands. To which they anſwered the commons with great inſolence, told them that they were born in a ſtate of ſervitude, their ſlaves and vaſſals, and did not underſtand their duty: to which the commons made no reply, but retired from the aſſembly with the clergy, who adhered to them, and going immediately to court, acquainted his majeſty, that they were come to a reſolution to make him an abſolute monarch, and his throne hereditary. His majeſty being before apprized of the deſign, had introduced an army into the town, in order to compel the upper houſe to concur in this reſolution of the commons, if they refuſed their conſent. The lords being acquainted with the ſubſtance of the addreſs which the commons had made to the throne, and ſenſible that they were in no condition to diſpute with the court and the commons, ſupported by the army, offered to make the crown hereditary, and entreated the conſtitution in other reſpects might not be altered; but they were given to underſtand, that the king would be ſatisfied with nothing leſs than their unanimous concurrence with the reſolution taken by the clergy and commons, which they found themſelves obliged to ſubmit to, and took the oaths to his majeſty, acknowledging him the ſupreme and only legiſlator. Thus was the conſtitution changed from a republic, with a nominal king at the head of it, into an abſolute hereditary monarchy; not one of the nobility daring to oppoſe it; only Gerdorf, a popular member, ſaid, he was confident, his majeſty deſigned the happineſs of his people, and not to govern them according to Turkiſh politics, wiſhed his ſucceſſors might follow his example, and make uſe of this unlimited power only for the good of their ſubjects.

In 1670, Chriſtian V. ſucceeded his father Frederick III. and being joint ſovereign of Holſtein and Sleſwick with the duke of Holſtein, in order to exclude the duke from his ſhare in thoſe provinces, or at leaſt to oblige him to acknowledge his dependence on the crown of Denmark, treacherouſly invited him to an entertainment, where he made him priſoner, and ſent detachments of his army, to take poſſeſſion of ſuch towns as belonged to the duke; with which the duke reproaching him, the king anſwered, he was always in the intereſt of Sweden, and never to be truſted; and unleſs he would renounce his right to certain places, he would take poſſeſſion of the whole country. He particularly demanded of him an order to the commander of Tonningen, the ſtrongeſt fortreſs belonging to the duke, to ſurrender it to his majeſty's troops; which the duke conſented to, apprehending the king would have taken his life if he had refuſed, and Tonningen was thereupon delivered up to the Danes: ſeveral other articles he was obliged to ſign, that were very prejudicial to him: but the duke making his eſcape to Hamburgh, proteſted againſt the validity of all the acts he had been obliged to ſign.

Hereupon the king gave orders for demoliſhing Tonningen, and ſequeſtered the duchy of Sleſwick, cauſing both magiſtrates and people to ſwear allegiance to him, declaring them abſolved from their allegiance to the duke. He alſo cauſed all the duke's revenues to be brought into his own treaſury, continued garriſons in his towns, and even in his palace of Gottorp, and not knowing how ſoon he might be compelled, by the duke's allies, to deliver up what he had ſo unjuſtly ſeized, he exacted contributions from the poor ſubjects, to the value of many millions; whereby he filled his own treaſury, and diſabled the duke's ſubjects from giving him any aſſiſtance.

The duke remained ſtill at Hamburgh, from whence he ſent his ſon to the German princes, to implore their aſſiſtance. He applied alſo to the court of England (which was guarantee of the peace of the north) but to very little purpoſe, till Charles XI. king of Sweden, undertook his cauſe in the year 1689, and was about to tranſport his army into Germany, for the reſtoration of the duke. But the German princes, together with the Engliſh and Dutch, who were now entered into a confederacy againſt France, being apprehenſive that this might diſturb the peace of the empire, and divert the troops from the French war, at length obliged the king of Denmark to reſtore to the duke of Holſtein his dominions, after he had been in poſſeſſion of them thirteen years; but no ſatisfaction was made him for the devaſtation of his territories.

Things remained in tolerable peace from the concluſion of the differences by the mediation of the confederates in 1689, to the year 1696; but Chriſtian Albert, the late duke of Holſtein, dying about that time, and the king of Denmark having ſent a deputation to his ſon and ſucceſſor duke Frederick, to renew the union between them, and to let him have a ſight of the late duke's will, that he might ſee if there was any thing in it in favour of the eldeſt prince, in relation to the ducal part of the duchy of Sleſwick; the duke refuſed both the one and the other: alledging, that the treaty of Altena had not been obſerved, or juſtice done to the ducal houſe, particularly in reſtoring the ſeigniority of Gottes-Gabre, in the iſland of Aroa. In the mean time, the guarantees of the treaty of Altena, ſeeing both ſides inclined to a rupture, interpoſed their good offices, and engaged them to hold conferences for compoſing their differences, which were accordingly held at Penemburg: but the duke continuing to introduce Swediſh forces into Holſtein, and build and enlarge his fortifications during the time of the treaty, the king of Denmark marched an army into the country, in the year 1697, and cauſed the new fortifications to be demoliſhed, which the duke at that time, not finding himſelf in a condition to oppoſe, thought fit to acquieſce in, till the death of the then king, which happened the 4th of September 1699, when he was ſucceeded by his ſon Frederick IV.

The duke looked upon this as a favourable opportunity to rebuild the fortifications which had been deſtroyed, eſpecially having married the king of Sweden's ſiſter, and being aſſured of ſupport from that crown: he began therefore to repair the demoliſhed fortifications, as he inſiſted he had a right to do by the treaty of Altena, and introduced into this country a conſiderable number of Swediſh troops, to prevent their being demoliſhed again. The mediators and guarantees of the treaty of Altena, employed their good offices to prevent a rupture, and propoſed that both the Swedes and the Danes ſhould withdraw their troops out of Holſtein, and that the fortifications ſhould not be proceeded in till the matter was ſettled by a treaty. But the Dane being determined on a war both with Sweden and Holſtein, and having entered into a confederacy both with Ruſſia and Poland for that end, would not hearken to any pacific meaſures, but, on the contrary, ordered his general, the duke of Wirtemburg, to demoliſh Huſum, Frederickſtadt, and other places belonging to the duke of Holſtein, which he ſoon after effected; and not content with razing ſuch new fortifications as had been erected, inveſted Tonningen, in which General Bannier commanded with a garriſon of five thouſand men.

The princes guarantees hereupon gave the king of Denmark to underſtand, that ſince he had rejected all their friendly propoſals, they ſhould no longer ſee the treaty of Altena broken, or ſuffer the duke of Holſtein to be diſpoſſeſſed of his country again, under the pretence of oppoſing the building of forts which were already demoliſhed. The duke of Holſtein alſo publiſhed a manifeſto, ſhewing the right he had, by the treaty of Altena, to build fortifications in his dominions, and the injuſtice of the Daniſh invaſion. And not only the German princes, but the Dutch joined their forces with the Swedes, in order to bring the Danes to reaſon; and, marching towards Tonningen, the Daniſh general thought fit to raiſe the ſiege, without coming to a battle. The Engliſh and Dutch alſo ſent each of them a ſquadron into the Baltick, and joining the Swediſh fleet, compelled the Danes to retire into the harbour of Copenhagen. In the mean time, the young king of Sweden landed with fifteen thouſand horſe and foot upon the iſland of Zeeland, about three miles to the ſouthward of Elſinore, and was preparing to inveſt Copenhagen; when the Dane finding himſelf overpowered, was glad to accept of ſuch terms as the princes guarantees, who, at this time held their conferences at Travendale, were pleaſed to preſcribe to him.

It was agreed by this treaty, which was concluded the 18th of Auguſt, 1700, that the houſe of Holſtein ſhould continue independent ſovereigns in Holſtein and Sleſwick; and that the crown of Denmark ſhould pay the duke of Holſtein two hundred and ſixty thouſand crowns for the damages

damages they had done him. A misunderstanding, however, happened between the two courts the year following; one part of the Chapter of Lubeck chusing the brother of the duke of Holstein coadjutor and successor to their bishop, and the other chusing the king of Denmark's son.

The bishop dying, in 1705, the king of Denmark determined to make good his son's election to that bishopric by force, and took several places belonging to Lubeck; but the court of Great Britain interposing, the duke of Holstein's brother was afterwards confirmed in the possession of the bishopric of Lubeck, in consideration of a subsidy granted by Great Britain to Denmark, for a body of Danish troops that were to join the allies against France, which they could not have had, if the war had been revived at that time in the north: one article in this treaty being, that the duke of Holstein should permit that body of Danes to pass through his territories, and join the confederates.

The duke of Holstein having been killed at the battle of Lissau in Poland, in 1702, and succeeded by his son Charles Frederick (the late duke) then an infant of two years old, the duke of Holstein Eutin, brother to the late duke of Holstein Gottorp, and afterwards bishop of Lubeck, was constituted regent of Holstein, during the minority of his nephew.

In the year 1709, Charles XII. being defeated by the Russians at Pultowa, Frederick king of Denmark immediately joined his former allies, the Czar and Augustus king of Poland, recalled the Danish troops which were in the emperor's service in Hungary, and quartered them in Holstein: he transported ten thousand men from Norway to Denmark, levied new troops at Hamburgh, and fitted out a strong squadron of men of war; and having assembled an army of eighteen or twenty thousand men, proclaimed a fast to implore a blessing upon his designs. The king of Denmark, also, on the 28th of November 1709, published a manifesto, to justify his intended enterprize, setting forth, that the ambitious designs of the king of Sweden had, for several years past, occasioned great devastations in the kingdoms of the north; and that he had received repeated instances of the animosity that prince entertained against him and his subjects, as well by the opposition made to his interest by the Swedish ministers in foreign courts, as by several expressions in his own letters, and therefore thought himself obliged to prevent the impending danger, and not imprudently wait till the designs of the Swedes were ripe for execution. He complained also of the dedication of a book, wherein the king of Sweden is styled emperor of Scandinavia, of which Denmark and Norway are parts, and of the Swedes granting passes to foreign vessels on the Sound, whereby the revenue of Denmark was impaired.

These reasons induced the king to declare war against all the territories of Sweden, except those in Germany; and embarking six thousand horse and dragoons, and twelve thousand foot, he made a descent upon Schonen, landing at Helsingburg the 12th of November 1709; but it being winter-time, he only took up his quarters in the country towns at first, and invited the people of Sweden to join him, waiting for a proper season to enter upon action, which gave the Swedes time to put themselves in a posture of defence. About the middle of January, by the favour of a hard frost, the Danes advanced towards Christianstadt, where a battalion of Saxons, being in garrison, laid down their arms, and joined the Danes, whereby that town fell into their hands. They afterwards made themselves masters of Carelshaven, in the province of Bleking, and threatened Carelscroon, where the Swedish fleet and magazines were laid up. At the same time a strong detachment extended themselves towards Holland on the western side of Schonen; and their forces receiving frequent supplies, the Danish army was considerably increased, and became very formidable; but the Swedish general, count Steinbock, having assembled eighteen or twenty thousand men, and marching towards Helsingburg, as if he intended to cut off the communication of the Danes with that place, they immediately abandoned all their conquests, quitting Carelshaven and Christianstadt, and retreated to Helsingburg, near which place the armies came to an engagement, and the Danes were entirely defeated; a day or two after they quitted Helsinburg, transporting the remainder of their troops to Denmark in the night, which, after their ill success, did not amount to above six thousand or seven thousand men. And thus ingloriously ended the king of Denmark's expedition against Schonen, which the Swedes considered as a just punishment for his perfidious breach of treaties.

The Danes having been disappointed in their enterprize upon Schonen, the next year joined the troops of king Augustus and the Czar, and fell upon Swedish Pomerania, destroying the whole country in a most barbarous manner; and the Swedish forces, not being strong enough to oppose these united powers, retired into Stralsund, the isle of Rugen, and other places of security. The king of Denmark, while the Muscovites and the Saxons blocked up Stralsund, passed the Elbe, and entered the duchy of Bremen, where the Swedish general not having a sufficient body of troops to oppose him, the Dane took the town of Staden, and made himself master of the whole country. In their return, the Danes insulted the city of Hamburgh, threatening them with a bombardment, to avoid which, the burghers were compelled to raise them two hundred and thirty thousand rix dollars. Count Steinbock, the Swedish general, found means afterwards, on the 22d of December, 1712, to engage the Danes singly, when they were separated from their allies near Wismar; and having given them a great defeat, pursued them into Holstein, seized the magazines the Danes had laid up there, and put the Danish Holstein under contribution; from hence he marched to Pinenburgh, near Hamburgh, where he determined to burn the Danish city of Altena, not so much by way of retaliation, or revenge for the many Swedish cities destroyed by the Danes, and their allies the Muscovites and Saxons, as he declared in a memorial, published on this occasion, as to deter them for the future from committing the like barbarities.

The Danish, Saxon and Muscovite forces being now joined, to the number of fifty thousand men, and marching towards count Steinbock, whose army did not consist of above fourteen or fifteen thousand, that general found himself under the necessity of retiring into the ducal Holstein, whither the allies followed him, and pressing him with all imaginable eagerness, he threw himself into Tonningen, and by that means avoided them for that time, which the Dane afterwards made a pretence for seizing the duke of Holstein's dominions, alledging, that the governor of Tonningen admitted general Steinbock into the place, by the direction of his master the duke of Holstein (who was not at that time above twelve years of age) this occurrence happening in February, 1712-13; but however that be, the confederates blocked up the city of Tonningen till May following, and the Swedes not being in a condition to send general Steinbock any reinforcements or supplies, he was obliged to surrender himself, and his little army, consisting of nine thousand men, prisoners of war, on condition of keeping their cloaths and baggage, and being exchanged or ransomed the first opportunity; and thus, for a little time, the war seemed to be at an end in Germany.

The next year the Muscovite invested Stetin; when the king of Prussia so managed the matter, that by the agreement of the Czar and the Swedish governor, the town was sequestered into the hands of his Prussian majesty, and agreed to be garrisoned by an equal number of Prussians and Holsteiners, but was to be restored to the king of Sweden at the end of the war. In the latter end of November, 1714, the king of Sweden returning out of Turky, arrived at the city of Stralsund, and found a league was formed against him, to which the kings of Denmark, Prussia and Poland, and the king of Great Britain, as elector of Hanover, were parties, the avowed design whereof was, to preserve the peace of Germany, which was proposed to be done by securing the sequestration of Stetin to the king of Prussia, and the possession of Bremen and Ferden, and whatever else the Dane had seized of the dominions of Sweden in Germany, to the Dane, and those to whom he should, or had assigned his interest in those conquests. This the king of Sweden thought highly unreasonable, viz. That he should not be permitted to recover those territories again, which had been surprized in his absence.

The kings of Prussia and England insisted, that the restoring the king of Sweden these territories, would embroil the north of Germany in a war, and joined in a confederacy against the distressed king of Sweden, who had before the Moscovite, the king of Poland, and the king of Denmark to contend with; and the king of Prussia, on the 28th of April, 1715, proclaimed war against Sweden, disarmed the regiment of Holstein, which was in Stetin, entering upon that city as a conquest from Sweden, and holding it no longer in sequestration. The Danes and Prussians soon after assembled their forces to the number of sixty thousand men, and appeared before Stralsund, under the walls of which city the king of Sweden found himself obliged to retire, his army not consisting of more than

than a fourth part of the enemy's number. In the month of July a treaty was ſet on foot between the king of Denmark and the court of Hanover, by which the king of Denmark ſtipulated to deliver up Bremen and Verden, which he had taken from the king of Sweden, to the elector of Hanover, in conſideration of the elector's entering into the war againſt Sweden, and advancing a ſum of money to his Daniſh majeſty.

The confederates before Stralſund being joined by twenty-four thouſand Ruſſians, and a body of Saxons, carried on the ſiege of that town with great vigour; but finding that the place continually received freſh ſupplies and reinforcements from the iſland of Rugen, which lies over-againſt it, they landed a great body of troops on the iſland, and, after a ſharp diſpute, in which the king of Sweden was preſent in perſon, made themſelves maſters of it, on the ſeventeenth of November. But the king of Sweden determined to defend the town to the laſt extremity; and it was a terrible winter's ſiege, the centinels being frequently frozen to death at their poſts; and the attacks were deſperate, in one of which the confederates loſt near a thouſand men; however, they at lenth prevailed by their numbers, and the king of Sweden, finding the town not tenable, retired in a light frigate, and arrived ſafely in Sweden, giving the governor orders to capitulate, which he did the latter end of December, on very honourable terms; and both the town and the iſland of Rugen were put into the poſſeſſion of the king of Denmark, and all the inhabitants of the Swediſh Pomerania were obliged to take an oath of allegiance to him, except thoſe of the city and diſtrict of Stetin, the iſlands of Uſedom and Wollin, and the lands between the Oder and the river Pene, which were left in the hands of his Pruſſian majeſty. The city of Wiſmar, in the duchy of Mecklenburgh, the only town which the Swedes had left in Germany, was inveſted by the Danes, Pruſſians, Hanoverians, and Ruſſians, the next ſpring, and obliged to ſurrender; after which, the king of Denmark was left in poſſeſſion of it; and thus ended the war in Germany.

The Danes and Ruſſians then made great preparations for invading the king of Sweden's dominions in Schonen. The Czar of Moſcovy went in perſon for that purpoſe to Copenhagen, whither his generals led an army of thirty thouſand horſe and foot. The Danes alſo aſſembled between twenty and thirty thouſand of their troops for this expedition, and had prepared near eight hundred veſſels to tranſport them. But great part of the Daniſh fleet being employed in Norway during the ſummer, to oppoſe an enterprize of the Swedes on that ſide, all theſe preparations came to nothing. The Czar of Muſcovy upbraided the king of Denmark, that his fleet was not ready in time; and the Dane pretended to be very angry with the Ruſſian monarch, that he would not make the deſcent in the latter end of the year; which the Czar obſerved was impracticable, there being no forage to be found, and the king of Sweden being ready to receive them at the head of forty thouſand veteran troops; and upon this the Danes and Muſcovites, who had been ſo long in a confederacy againſt Sweden, began to look very cool upon each other. The Dane drew up his forces under the cannon of Copenhagen, as if he had ſome jealouſy of his old ally, and the Czar ſoon after returned with his troops to Germany; and it ſeems not only the Dane, but other German princes, began to be apprehenſive that if this enterprize had ſucceeded, the Czar would have made himſelf maſter of Sweden, and have been a very formidable neighbour to many of them; which the Dane did not ſufficiently conſider when the ſcheme was firſt laid for the deſcent on Schonen; but being now pretty well convinced of his error, he choſe rather to ſit down with the vaſt expence he had been at for the invaſion of Sweden, and let the affair entirely drop, then contribute any farther to the aggrandizing the Ruſſian emperor, who was become too powerful already. The king of Denmark being now left almoſt alone to defend himſelf againſt Sweden, was threatened in his turn with an invaſion of Zeeland by his Swediſh majeſty, which had certainly been put in execution, had it not been that king George I. being under ſome apprehenſions that thoſe preparations were intended againſt his Britiſh dominions, or rather for the recovery of Bremen and Ferden, had thereupon ſent a ſquadron of men of war to the aſſiſtance of his Daniſh majeſty, which put an end to the king of Sweden's intended enterprize againſt Zeeland. The following year, 1718, the Swedes marched two armies into Norway, one to the northward, as high as Drontheim, and the other, led by the king in perſon, towards Chriſtiana, laying the whole country under contribution, there being no army in Norway ſtrong enough to oppoſe them; but the king of Sweden, laying ſiege to Frederickſhal, was unfortunately ſhot in the trenches, and the Danes and Hanoverians thereby delivered from their fears: for had the Swedes made themſelves maſters of Frederickſhal, as it was computed they might have done in a fortnight more, all Norway had been irrecoverably loſt, and the Daniſh dominions reduced to a very narrow compaſs.

By the death of the king of Sweden, the war between Denmark and that crown was in a manner brought to a concluſion, though the peace was not formally ſigned till the year 1720, when the Swedes being invaded and diſtreſſed by the Ruſſians, were obliged to accept of ſuch conditions as the mediators and guarantees of it, the kings of Great Britain and France, were pleaſed to preſcribe. By the fifth article of this treaty, the king of Denmark obliged himſelf not to aſſiſt his czariſh majeſty againſt Sweden, or permit the Ruſſian men of war to enter his ports. And by the ſixth article, the Swedes obliged themſelves not to oppoſe ſuch meaſures as ſhould be taken by the ſaid mediators in behalf of the king of Denmark, in relation to the dominions of the duke of Holſtein. By the ſeventh article, the king of Denmark promiſes to deliver up to Sweden the city of Stralſund, and part of Pomerania, as far as the river Pene; to evacuate the fortreſs of Marſtrand, the iſle of Rugen, and all other iſlands taken by the Danes in the late war; as alſo the town of Wiſmar in Mecklenburg: in conſideration whereof the Swedes, by the ninth article, renounce the privilege of paſſing the Sound without paying toll, and agreed to pay the ſame tolls as the Engliſh and Dutch. And by the tenth article, the crown of Sweden engages to pay the king of Denmark ſix hundred thouſand crowns before the aboveſaid places be delivered to the Swedes. And by a ſeparate article, it was agreed that Wiſmar, the fortifications whereof were demoliſhed, ſhould never be fortified again. As to Bremen and Ferden, theſe provinces had been confirmed to king George by another treaty.

By the aboveſaid treaty, his Daniſh majeſty obtained the guarantee of the French king, for the poſſeſſion of the dutchy of Sleſwick; and the king of Great Britain renewed his guarantee of that duchy, which he had given by a former treaty. The king of Denmark now reigning in peace, applied himſelf to the promoting the trade of his kingdom, but had the misfortune to ſee his capital city of Copenhagen almoſt deſtroyed by fire, which happened in the year 1728. His firſt queen was the princeſs Louiſa, daughter of Guſtavus Adolphus, duke of Mecklenburg, by whom he had iſſue prince Chriſtian, born December 10, 1699, and Charlotte Amelia, born October 6, 1706, and ſome other children who died in their infancy. His ſecond wife, the daughter of count Raventlau, his chancellor, he married within four days after the deceaſe of his firſt queen, and died the thirteenth of October, 1730, in the ſixty-firſt year of his age.

Chriſtian VI. his ſon, born in December, 1699, married Sophia Magdalena of Brandenburg-Culembach, by whom he had iſſue his preſent majeſty Frederic V. born March 31, 1723, and the princeſs Louiſa, born October 19, 1726, and married October 1, 1749, to the duke of Saxe-Hilburghauſen. He began his reign with ſome popular acts, particularly in aboliſhing the monopolies for the ſole vending of wine, brandy, ſalt and tobacco, which were very grievous to the ſubject. In the year 1732, he acceded to the treaty between the courts of Vienna and Peterſburgh, whereby he obtained them guarantees for his own dominions, and guaranteed the dominions of thoſe powers, and the pragmatic ſanction; and by a ſeparate article in this treaty, king Chriſtian agreed to pay the duke of Holſtein one million of rix-dollars, on his recovering his right to the duchy of Sleſwick; and in purſuance of this treaty, in 1734, he ſent ſix thouſand men to the aſſiſtance of the emperor againſt the French; and in 1736, on the inhabitants paying him five hundred thouſand marks of ſilver, he relinquiſhed his pretenſions to the city of Hamburgh.

About the year 1739, the Danes ſeizing the lordſhip of Steinhurſt, which his Britannick majeſty imagined himſelf entitled to, as duke of Lunenburg, a ſkirmiſh happened between the troops of Hanover and thoſe of Denmark, wherein ſeveral were killed on both ſides. The Hanoverians recovered the territory in diſpute; however, as the Danes ſeemed determined not to relinquiſh their claim, a treaty was ſet on foot between thoſe powers, and Britain was then obliged to pay a ſubſidy to the Danes for ſix thouſand men, (which never did them any ſervice) for permitting the Hanoverians to enter Steinhurſt. A quarrel

alſo broke out between the Danes and the Dutch, concerning the fiſhery on the coaſt of Iceland: the Daniſh guardſhips ſeized on ſome of the Dutch fiſhing-veſſels, and carried them to Copenhagen; but the Hollanders threatening to make repriſals, thoſe veſſels were releaſed; however, the Danes are ſaid to have carried their point in this diſpute alſo.

On July 26, Frederic V. ſucceeded his father, Chriſtian VI. who reigned ſixteen years with great reputation. This prince trod in his father's foot-ſteps, encouraged the manufactories, extended the commerce, and improved the trade of his country. He was firſt married to the princeſs Louiſa, daughter to his Britannic majeſty; but upon the death of his queen who was the mother of his preſent Daniſh majeſty, he again married a daughter of the duke of Brunſwick Wolfenbuttel, and died in 1766, being ſucceeded by his ſon, Chriſtian VII. his preſent majeſty, who muſt be owned, does not ſeem likely to advance the honour and conſequence of the Danes, by purſuing the ſalutary ſteps marked out for him by his honoured progenitors. His reſolution of viſiting the principal kingdoms and ſtates of Europe, which he executed in the year 1768, ſeemed indeed to indicate a mind intent upon availing itſelf of foreign polity, to the advancement of his own dominions; but the manner in which he conducted himſelf in that extenſive progreſs, by no means realized thoſe hopes; and ſince his return home, he is ſaid to have fallen into a ſtate of bodily and mental imbecility. He married the princeſs Caroline Matilda, ſiſter to our preſent moſt gracious ſovereign, George III. by whom he has iſſue one ſon, Frederic, born January 27, 1768, and a daughter, born July 7, 1771.

It has been juſtly remarked that a weak prince is generally the dupe of ſome inſinuating and plauſible favourite; this monarch entruſted the whole adminiſtration of the kingdom to a German adventurer, named Struenſee, whom he created an earl, and to whom the moſt conſiderable of the nobility paid ſervile homage; the queen is ſaid to have had an unhappy attachment to this prime miniſter.

The queen dowager, Julia Maria, ſiſter to the duke of Brunſwick Wolfenbuttle, and mother to the king's half brother, prince Frederic, formed a plan to ruin this favourite with his maſter, and the queen conſort with her huſband; this ſhe ſuddenly and completely effected in January, 1772, ſince which the Britiſh court has been very careful, and as ſucceſsful, in concealing the cauſes which led to this unhappy event; nothing has been announced by authority reſpecting them. All that is certainly known is that ſome of the principal nobility were ſuddenly ſeized, and commited to cloſe confinement. Count Struenſee and his co-adjutor count Brandt, were brought to trial, ſentenced to ſuffer death, and were accordingly executed. The life of the queen conſort ſeems to have been preſerved by the reſolute application of our miniſter at that court; whether from the rage of the prevailing faction, or the reſentment of an incenſed kingdom, is not eaſy abſolutely to fix; ſhe, however, quitted Denmark, and reſided at Zell until her death, which happened about three years after, by a putrid fever.

Prince Frederic, the king's half brother, was married October 21, 1773, to the princeſs Sophia Frederica, niece to the reigning duke of Mecklenburg Schwerin.

CHAP. V.

THE NEW HISTORY AND DESCRIPTION OF

LAPLAND.

SECT. I.

Containing an Account of the Diviſion of the Country, its Boundaries and Extent, Climate, Soil, Produce, Animals, Rivers, Lakes, Mines, &c. alſo of the inhabitants of LAPLAND, their Perſons, Diſpoſitions, Dreſs, Manner of Living, Diverſions, Employments, Method of Travelling, Hunting and Fiſhing, &c.

AS Lapland differs, with reſpect to the manners and cuſtoms of the inhabitants, &c. from the other parts of Europe, we ſhall therefore give the reader a particular account of this country, which is divided into three parts, which are ſeverally ſubject to Denmark, Sweden and Ruſſia. There being a great ſimilarity between theſe diviſions, it will, on that account, be ſufficient to deſcribe only Swediſh Lapland, which is by far the moſt conſiderable and beſt peopled; we muſt however obſerve, that all the country in general is called Lapland, which lies above the gulf of Bothnia, along the coaſt of the north ſea, even to the white ſea.

The antients called the people of this country Scritofinni, the name of Lapland or Lappia, being unknown to them: they at firſt inhabited Finland, from whence they were driven more northwards; after which they were called Lappes, which, in the Finic tongue, ſignifies perſons baniſhed from their country and driven to the moſt remote places. But the inhabitants call themſelves Sabmienladfi, conſidering the other name as reproachful.

This country, namely, Swediſh Lapland, is bounded on the eaſt by Ruſſian Lapland, on the weſt by a ridge of mountains that ſeparate it from Norway; on the north by Daniſh Lapland; and on the ſouth by Bothnia Angermania, and Sempterland. Its greateſt extent from eaſt to weſt is about three hundred and ſixty miles; and in breadth, it extends from ſixty-five degrees, thirty minutes, to ſixty-nine degrees of north latitude. It is divided into ſix provinces, or diſtricts, the names of which are, 1. Angermanland-Lapmark, 2. Uma-Lapmark, 3. Pitha-Lapmark, 4. Lula-Lapmark, 5. Torno-Lapmark, and 6. Kimi-Lapmark.

The firſt of theſe provinces is the moſt ſouthern, and contains only one town of any conſequence, which is called Aoſalko, and is ſituated about three hundred miles diſtant from Stockholm.

The ſecond province, which adjoins to the former, contains two little villages, viz. Semiſgorfic and Loiſby.

The third province is ſituated between the Norwegian mountains, and contains four unimportant villages; namely, Sitonia, Arieplogs, Locktari, and Arivitzerfs.

The fourth province, which adjoins to the latter, contains three villages, viz. Jackmoth, Sirkelucht, and Torpajour.

The fifth province, which is the moſt northern of Swediſh-Lapland, is well watered; it contains the great lake Enure, and the towns of Somby, Kelajorſui, Kitijerſuilye, Kimibi, Solden-Kyle, and Kimi.

The ſixth province, which is contiguous to Ruſſian and Daniſh-Lapland, is likewiſe well watered by many rivers, has ſeveral lakes, and contains four towns, viz. Tingavara, Sandewara, Ronnala, and Titiſara.

The above-mentioned provinces receive their name from the reſpective rivers which water them; and are again ſubdivided into ſmaller diſtricts, called Biara, and theſe contain a certain number of families, called by the Swedes rekars, each rekar, or family, is allowed a conſiderable quantity of land, with foreſts, lakes and brooks, for the maintenance of their families and cattle; but their lands not being incloſed, there is frequently a change of property among them.

This country is ſituated ſo near the pole, that the ſun neither ſets in ſummer, nor riſes in winter. In the latter ſeaſon, the cold is ſo intenſe, that none but the natives are able to bear it. The moſt rapid rivers are then frozen up, and the ice is two or three, and ſometimes four or five feet thick. In ſummer, the weather is as ſultry as it is

cold in winter; for ſpring and autumn are unknown in this climate. The exceſſive heat, however, is qualified by the vapours that riſe from the ſea, and by the ſnow that continues all the ſummer on the tops of the mountains, and in ditches that are ſheltered from the ſun. In winter, the whole country is covered with ſnow, and it ſeldom rains in the ſummer.

Monſieur Maupertius, in his deſcription of the climate of this country, ſays, that in December, the ſnow continually falling, or ready to fall, for the moſt part hid the ſun the few moments he might have appeared at mid-day. In the month of January, the cold was increaſed to that extremity, that Mr. Reaumur's mercurial thermometer, which at Paris, in the great froſt of 1709, it was thought ſtrange to ſee fall fourteen degrees below the freezing point, was now got down to thirty-ſeven: the ſpirits of wine in the others were frozen. If we opened the door of a warm room, the external air inſtantly converted all the vapour into ſnow, whiſtling round in white vertices. If we went abroad, we felt as if the air was tearing our breaſts in pieces; and the cracking of the wood, of which the houſes are built, as if ſplit by the violence of the froſt, continually alarmed us with an increaſe of cold; and in this country you may often ſee people who have loſt an arm or leg by the froſt. The cold, which is always very great, ſometimes increaſes by ſuch violent and ſudden fits, as are almoſt infallibly fatal to thoſe who are ſo unhappy as to be expoſed to it: and ſometimes there ariſe ſudden tempeſts of ſnow that are ſtill more dangerous.

"The winds ſeem to blow from all quarters at once, and drive about the ſnow with ſuch fury, that all the roads are in a moment rendered inviſible. Dreadful is the ſituation of a perſon ſurprized in the fields by ſuch a ſtorm: his knowledge of the country, and even the mark he may have taken by the trees, cannot avail him: he is blinded by the ſnow; and is generally loſt in attempting to find his way home. In ſhort, during the whole winter, the cold was ſo exceſſive, that on the ſeventh of April, at five in the morning, the thermometer was fallen to twenty diviſions below the point of freezing, though every afternoon it roſe two or three diviſions above it: a difference in the height not much leſs than that which the greateſt heat and cold felt at Paris uſually produces in that inſtrument. Thus in twenty-four hours we had all the variety felt in the temperate zones during a whole twelve-month."

In moſt places, the ſoil is exceedingly bad, and ſo intermixed with ſtones, that hardly any thing will grow in it; and in other parts it is ſo moiſt, from the marſhes and brooks it abounds with, that very little of it can be tilled.

There are many rocks and mountains all over the country; thoſe called the Dofrinc Mountains, which ſeparate Lapland from Norway, are of a prodigious height; and the high winds that blow there prevent all trees from taking root. Beneath theſe mountains are large marſhes and extenſive foreſts, where there are many trees, though they ſtand at a great diſtance from each other. At the bottom of the hills are very pleaſant vallies, which, being watered by a great number of ſprings and brooks, are the moſt fertile parts of the country.

Their chief rivers are the Uma, Lula, Rima, and Torna. The Uma is greatly encreaſed by the waters that flow into it from the rivers Vendilor and Skialfre. The Lula and Rima are both very conſiderable, and are ſwelled, in their courſe, by great numbers of leſſer ones. The Torna receives twenty-nine rivers, one of which is a Swediſh mile in breadth. When the ſnow melts, all theſe rivers overflow their banks; and the chief part of them have many ſtupendous and frightful cataracts. Moſt of the rivers riſe from the mountains of Norway, and fall into the Bothnian gulf. Here are alſo many lakes, which, as well as the rivers, abound with various kinds of fiſh.

A great number of trees grow in the foreſts of Lapland, among which are the birch, pine, and fir. Some parts of it alſo produce the ſervice-tree, willow, poplar, alder, and corneil. They have ſeveral ſorts of plants, but the moſt uſeful are the angelica and ſorrel, which are greatly eſteemed by the natives, who uſe them in their food. They have likewiſe different kinds of graſs, heath, and fern; but the moſt plentiful, as well as moſt uſeful vegetable, is the moſchus or moſs; of which there are ſeveral ſpecies, either adhering to trees or growing on the ſurface of the earth. The rein-deer is almoſt wholly ſuſtained by this vegetable, which indeed he prefers to all others, and without which he cannot ſubſiſt. The natives alſo uſe it as forage for their cattle, but boil it in broth as a cordial and reſtorative. There are alſo plenty of berries, ſuch as black currants, the Norwegian mulberry, which grows upon a creeping plant, and is much eſteemed as an antiſcorbutic; juniper-berries are very plentiful, and ſome of the trees grow to a conſiderable height; here are likewiſe great quantities of raſberries, cranberries, and bilberries.

They have a great variety of animals in this country, as ſtags, bears, wolves, foxes of ſeveral colours, ſquirrels, ermines, martens, hares, glittens, beavers, otters, elks, and rein-deer; the laſt of which is extremely uſeful to the wretched natives, who, without them, could not poſſibly preſerve their exiſtence; for theſe creatures not only afford them food and cloathing, but alſo ſupply the place of horſes, which would not be able to travel where theſe animals do. The rein-deer is leſs than a ſtag; his colour inclines to an aſh, but his haunches, and the parts under his belly and ſhoulders are white; they have long and rough hair under their necks; their feet are thick, ſhort and cleft reſembling thoſe of bulls. When they walk, their joints make a noiſe like the claſhing of flints: they have two horns, with two branches each; the larger branch bends backwards, and the leſſer forward; they feed on moſs. There is both a tame and wild kind of them; thoſe betwixt a tame doe and wild buck are the ſtrongeſt and largeſt. Their milk is nouriſhing and fat, and makes good cheeſe. The traces that tie the rein-deer to the ſledge are faſtened about their necks, go down by their breaſts between their fore and hind legs, and are faſtened to the prow of the ſledge. The reins are tied to their horns, and held by the traveller, who is tied to the ſledge, and has a ſtick in his hand, to remove any ſtone or wood in his way. He muſt balance the ſledge with his body: for the bottom being round, it is in danger of being overſet. They hang bells to the trappings of the rein-deer, with which thoſe animals are very well pleaſed.

Their dogs are of a red colour, and are very ſerviceable in hunting; but they are very ſmall, not being above a foot in height: they turn up their tails, which are ſhort; and their ears ſtand erect, like thoſe of wolves.

The rocks and mountains of Lapland are frequented by eagles, hawks, falcons, kites, and other birds of prey. Here are alſo ſwans, geeſe, ducks, lapwings, ſnipes, moſt ſorts of water-fowl, heath-cocks, ſtock-doves, and partridges. Beſides theſe, they have two kinds of fowl peculiar only to this country: the firſt is called the kniper, and is a kind of ſnipe, black on the head, back, and wings, but the breaſt and belly are white.

Among their inſects are a ſpecies of flies, which, in the ſummer, are hatched in the moraſſes and woods, and are frequently ſo numerous as to obſcure the light of the day. They are venomous, and exceedingly troubleſome, inſomuch that the rein-deer fly to the tops of the mountains for ſhelter; and the inhabitants move to the ſea-ſide, thoſe parts being the leaſt infeſted by theſe peſtilent vermin: ſome of theſe flies are very large, have green heads, and draw blood from the ſkin wherever they ſtrike. While Monſieur Maupertius was here, he informs us, that the flies were ſo troubleſome, that even the Finland ſoldiers, who are counted the moſt hardy troops in the ſervice of Sweden, were obliged to cover their faces with the ſkirts of their coats from the attacks of theſe inſects; which ſwarmed to ſuch a degree, that the moment a piece of fleſh appeared, it was blackened all over by them.

Delicious ſalmon are found in the rivers and lakes; theſe come from the gulf of Bothnia: here are alſo trout, bream and proch, all of which are very large, and of exquiſite flavour.

There are mines of ſilver, lead and copper, in ſome of the diſtricts, together with excellent veins of iron; but they are not at preſent worked to any conſiderable advantage, they being difficult of acceſs. In the diſtrict of Torno, there is a vein of gold and ſilver mixed; another of lead and ſilver, and a third of copper; and here they have both copper-works and a foundry. They have alſo furnaces in the provinces of Lula, where they melt the ſilver which they dig in that part of the country. Theſe mines, however, are only worked for a ſhort time in the ſummer; the climate being ſo ſevere, for the principal part of the year, as to render it impoſſible to work the engines.

Here are a great variety of curious ſtones, ſome of which bear the reſemblance of animals, trees, &c. When the natives find theſe, they put them in ſome conſpicuous place, and worſhip them as deities. In the rivers and lakes are found beautiful cryſtals of a prodigious ſize, and ſo hard and fine, that, when poliſhed, they appear like real diamonds.

We ſhall now proceed to give a deſcription of the perſons, dreſs, manner of life, &c. of the Laplanders.

Theſe

RAIN-DEER-SLEDGES *used in* LAPLAND.

London Published by Alex.r Hogg , No.r Paternoster Row .

These people are of a brown and swarthy complexion, which is the case with the inhabitants both of very cold and very hot countries; their hair is black, and their faces broad, with peaked chins and hollow cheeks. They are generally of a middling stature.

The all-wise Creator has made a provision for them against the severity of winter, by placing there a multitude of animals, whose soft and warm furs and skins defend them from the most piercing cold. The upper garment both of the men and women is made of skins with the hair on, formed like the ploughman's frock, girt about them with a broad belt; they wear breeches which reach down to their ancles, and their cap, which is made of the skin of a young rein-deer, sits as close to their heads as a scull-cap, covering all the neck and shoulders. Their shoes are peaked, and turned up at the toes.

The finery of the women consists in a kind of pewter wire, with which they work the bosoms of their coats, their girdles, and the edges of their caps. Neither sex know what it is to wear linen; but in the cold season wear next the body a fawn's skin waistcoat. Almost the only difference between the dress of the men and that of the women is, that the latter is somewhat longer. A purse hangs at their girdles, with their money, rings, and toys; a leathern bag and a knife.

The Laplanders afford an instance of a whole European nation subsisting contentedly without ploughing, sowing, or planting; without spinning or weaving, brewing or baking. As their lot is cast in a country where winter takes up the greatest part of the year, and consequently renders it impossible for them to provide a sufficient quantity of hay and fodder for great herds of cattle, the bountiful Creator has bestowed on them a species of animals that are provided for with little trouble: this is the rein-deer, which of all tame animals requires the least attendance and support, while it procures the greatest advantage to its owners. These creatures provide for themselves, feeding in summer on leaves, moss, and grass, of which they find as much as is sufficient for them, even among the mountains; and in winter live only on a kind of moss that grows in almost every part of Lapland. They come at this moss by scraping away the snow with their feet, and are taught by instinct to find the spots where it grows. During a journey of several days, in which they are drawn in sledges by these animals, the only trouble a traveller is at, is either to turn them loose, or tie them to a tree, where the quantity of food they eat at a time does not exceed a handful. The Laplanders are at other times only solicitous to keep their herds of rein-deer from going astray, and to protect them from wild beasts; and this, particularly in summer, they think no inconsiderable task. They have no occasion to house these animals, for they always lie out in the open air, without any inconvenience; and when after a strict search they find that there is no danger from beasts of prey, they turn them loose into the woods; but they are watched by the Lapland herdsmen, when they are under any apprehension of danger from that quarter.

With respect to their manner of living and habitations, they consist of two different tribes, namely, the Forest, and Mountain Laplanders. The former spend the greatest part of the summer in the woods, and have no property; but the latter live among the mountains. The food of the former chiefly consists of fish and fowl: but that of the latter principally depends on their herds of rein-deer. The Laplanders in general, and particularly the Foresters, are esteemed good marksmen. They have a great aversion to mining. In most of the lapmarks they make it their employment to carry the burghers to the yearly fairs; and some of the Laplanders, for a reasonable reward, look after the rein-deer belonging to other people. Most of them choose rather to sleep away the whole day in their tents, than to engage in any laborious employment; but those whom want has prompted to industry, give evident proofs that they are not without a capacity for mechanic trades, nor even for exquisite pieces of workmanship. Their boats and utensils are plain indications of their skill, and some of their sledges are inlaid with horn in a variety of figures. Their horn spoons, their Runic calendars, their moulds for casting pewter utensils, their bows and arrows, and the like, are all of their own making.

The Lapland women make use of a horn perforated with large and small holes, through which they draw pewter into wires of different thickness, with which they neatly embroider their girdles, cloaths, and sledge furniture. They also prepare all kinds of skins by various methods, and cut out and sew the habits they wear.

Besides the herds of rein-deer, several of them are masters of a considerable quantity of silver in rings, buckles, large and small spoons, cups, &c. and money grows more and more in use among them: but they prefer the Holland rix-dollar to all other coins, because the Norwegians, with whom they trade in summer, will not take any other money in exchange for their goods. The rest of their substance consists of domestic utensils and other furniture, as tents, iron pots, copper and brass kettles, furs and other cloaths, bed-furniture, fine sledges with harnesses, hatchets, boats, and fishing-tackle. As to the poorer sort, they are obliged to be satisfied with fewer conveniencies.

The procuring food for their herds of rein-deer being the chief employment of the Laplanders, it occasions them frequently to shift their habitations. At the approach of spring most of them move, with their families, twenty or thirty Swedish miles among the mountains of Norway, as far as the North Sea, where they fix their abode till autumn, and then quit the mountains and return to the south, to prevent their being frozen to death for want of fuel, and their rein-deer being starved, there being little or no moss so far to the north. The other Laplanders, who make no excursions to the mountains, but dwell in the village districts, or live by fishing, likewise never settle in one place: to this they are obliged by their rein-deer, which at certain times shew a disposition to remove, either from the want of fodder, or their being sensible of the changes that will happen in the weather.

On account of their unsettled way of life, they are obliged to provide portable dwellings; and such are their tents, which are thus formed: they first set up several poles in a circular position, gradually closing together on the top, much in the form of a sugar-loaf with the top of it broken off. Over these poles they lay a kind of coarse cloth, and thus form tents, some of which are sufficient to contain twenty persons. The hearth is in the middle, with stones laid round it, to prevent the fire from spreading. An aperture is left at the top, where the poles almost join, which serves both for chimney and window. From this hole hang two chains with hooks at the end, to hang the pots on, in order to boil their victuals, or melt the ice or snow into water to drink. Round the inside of the tent they lay their cloaths to keep out the cold wind, and spread branches of birch or fir round the tent, by way of seats to sit upon; for they have neither chairs, stools, nor benches. About the tent stand the cupboards, where they keep their provisions; these are fixed on posts or blocks of wood, and have some resemblance to a pigeon-house erected on pillars.

The Laplanders, whenever they have an opportunity, pitch their tents near dried pines, for the convenience of fuel; but in spring and autumn they are forced to be contented with brush wood. It ought not to be omitted, that in some of the lapmarks they erect boarded cottages, or wooden houses, that resemble those of the Swedes.

Sledges, shaped like small boats, with a broad keel, serve them for carriages; and those so thick, that no water can penetrate through them. They have a back-board for the traveller to lean against, who sits fast laced in the sledge, and well secured from the cold. This vehicle is drawn by the rein-deer with incredible swiftness through the snow over mountains and valleys. The rein-deer is harnessed with a large cloth girt, embroidered with pewter wire, and fastened on his back. The bit is a piece of leather tacked to the reins of the bridle over the deer's head and neck, and from the breast a leather strap passing under the belly is fastened to the fore part of the sledge, which serves instead of shafts. The rein-deer in a great measure lose their vigour and swiftness in summer, when these are less necessary; but even then they are very proper for carrying the Laplander's effects from place to place.

They use a kind of skates, like those of the Fins and Norlanders; consisting of a board three or four Swedish ells in length, and six inches broad, and ending in a point which turns up before. With these boards fastened to their feet, and a pole, with a round piece of wood at the end to prevent its sinking too deep in the snow, the Laplanders skate along with such swiftness as to overtake wolves and other beasts.

Those among them who practise fishing, and live in South Lapmark, make use of a kind of boat or little bark for crossing rivers, made of slight boards curiously joined together with filaments of the roots of trees, or hempen strings, and are so light that a Laplander carries his boat on his shoulders, with the oars and every thing belonging to it, besides his bag of provisions. These boats they steer with amazing dexterity, even among the rocks and down

the moſt rapid water-falls; and though the cataract be ever ſo dreadful, and the Laplander ever ſo great a ſtranger to it, he undauntedly ventures down the precipice in his little boat: but when he ſteers againſt the ſtream, and comes to a water-fall, he puts aſhore, takes his boat upon his back, and travels till he comes to ſmooth water.

The inhabitants of the northern lapmarks have larger boats, four or five fathoms in length; theſe they either haul up the great water-falls with ropes, or where the caſcades are ſmall, ſhove them up with poles; which is done by two men, one of whom ſits at the head, and the other at the ſtern. As for going down the water-falls with the ſtream, they conſider it as attended with no difficulty.

In ſummer, the mountain Laplanders live chiefly upon milk, and on the cheeſe made of it, of which they lay up a ſtore for winter. In the month of September, before the piercing froſts ſet in, they kill as many of their rein-deer as they think will ſerve them till Chriſtmas; afterwards they kill as many as will ſupply them the reſt of the winter, and ſometimes kill one or two occaſionally. It is not unuſual with the weſtern Laplanders to buy Norway cows and ſheep in ſummer, which they kill for their winter proviſion. They alſo eat the fleſh of bears and beavers, ſea and wild fowl, &c. The poor who live in villages are contented with the fleſh of dogs, wolves, foxes, and horſes, when they can get them.

The fiſhing Laplanders live on fiſh, which they have various ways of dreſſing; and thoſe who have rein-deer on their high days and feſtivals, dreſs fleſh and fiſh together. In ſummer they buy their ſalt of the Norwegians, and in winter purchaſe it of the burghers. Tobacco is not very uncommon among them but they buy it at a very high price. In this country none of the women have any hand in dreſſing proviſions, that office belonging to the maſter of the houſe. They never omit ſaying grace before and after meat, and before they riſe from table ſhake each other by the hand.

SECT. II.

Treating of the Marriage Ceremonies of the LAPLANDERS, Management of their Children; their Diſeaſes, Funeral Rites, Religion, Government, Trade, Revenue, &c.

WHEN a young man has made choice of a female, he employs ſome friends as mediators with the girl's parents; and theſe being provided with ſome bottles of brandy, the ſuitor accompanies them to the hut of his intended father-in-law, who invites the mediators to enter; but the ſuitor is left without, till the liquor be drank, and the propoſal diſcuſſed. After this, he is called in, and entertained with ſuch fare as the hut affords, but without ſeeing his miſtreſs, who, on this occaſion, is obliged to retire. The ſuitor having at length obtained leave to make his addreſſes to the girl in perſon, he goes home, puts on his beſt attire, and then returns to the hut, when his miſtreſs appears, and he ſalutes her with a kiſs; after which, he preſents her with the tongue of a rein-deer, a piece of beaver's fleſh, or ſome other kind of proviſion. The girl at firſt declines the offer, it being made in the preſence of her relations; but at the ſame time ſhe makes a ſignal to the lover to follow her into the fields, where ſhe accepts the preſents. Thus encouraged, he begs permiſſion of her to let him ſleep with her in the hut: if ſhe conſents, ſhe keeps the preſents; but if not, ſhe throws them with contempt on the ground.

When the lovers are agreed, the youth is permitted to viſit his miſtreſs as often as he thinks proper; but every time he comes, he muſt purchaſe this pleaſure with a freſh bottle of brandy; a perquiſite ſo agreeable to the father, that he often poſtpones the celebration of the nuptials for two or three years. At length the ceremony is performed at the neareſt church, by the prieſt of the pariſh; but even after this, the huſband is obliged to ſerve his father-in-law a whole year, at the expiration of which he retires to his own habitation with his wife, and then receives preſents from all his relations and friends. From this time he watches over his wife's conduct with the moſt jealous attention, and ſequeſters her from the company of all ſtrangers, eſpecially of the male ſex.

Immediately after the birth of a child, they waſh the infant all over with ſnow or cold water; except the head, which muſt not be touched with water till after baptiſm. The woman does not remain in child-bed above four or five days, and in fourteen is generally quite recovered. She then carries the child to be baptized; but before ſhe can reach the reſidence of the prieſt, ſhe is often obliged to traverſe large forelts, mountains, lakes, and wide extended waſtes of ſnow. The infant is faſtened in a hollowed piece of wood, ſtretched naked on a bed of fine moſs, covered with the ſkin of a young rein-deer, and ſlung by two ſtraps to the back of the mother, who always ſuckles her own child. This little cradle, when at home, is hung to the roof of the hut, and is ſwung from one ſide to the other, to lull the child aſleep.

Parents are very careful in teaching their children, as they grow up, moſt kinds of work; but they have a great averſion to ſchools. The boys, from their infancy, are taught to practiſe the bow; and they are not allowed to break their faſt till they have hit the mark. The females are alſo initiated very early in ſuitable buſineſſes.

There are no phyſicians in Lapland, nor have they occaſion for any, not being ſubject to thoſe diſtempers common in other countries. They are chiefly ſubject to ſores, occaſioned by the ſmoke and fire which is almoſt continually in their huts: they are alſo ſometimes viſited with rheumatic pains, and the ſcurvy; and a few are afflicted with the vertigo and apoplexy. For the cure of all inward diſorders, they uſe a drink made with the root of a certain ſpecies of moſs, which they call jerth; and when that cannot be procured, they boil the ſtalk of angelica in the milk of the rein-deer. When they feel a pain in any part of the body, they take a kind of muſhroom, which grows upon the birch-tree like a cake; and, having ſet fire to it, they apply it, burning hot, to the part affected; and this produces a bliſter, which is ſuppoſed to draw off the peccant humour. They have no other plaſters for wounds but the reſin which drops from fir-trees. When they have any member benumbed with froſt, they put a red-hot iron into a cheeſe made of rein-deer's milk, and with the fat that drops from it, like an oil, they rub the part, which is almoſt inſtantly cured by that method.

If the friends of a Laplander ſuppoſe him to be on his death-bed, they exhort him to die in the faith of Chriſt, and bear his ſufferings with reſignation, by remembering the paſſion of our Saviour. But thoſe who have no great regard for religion, forſake the dying perſon, and think of nothing but the funeral entertainment.

When a perſon dies, moſt of the company leave the hut, being of opinion they ſhall receive ſome injury from the ſpirit of the deceaſed, which they believe remains with the corpſe, and takes all opportunities of doing miſchief to the living. The deceaſed is wrapped up in linen, according to his circumſtances, and depoſited in a coffin by a perſon ſelected for that purpoſe; but this office he will not perform till he receives a conſecrated braſs ring, which is placed on his left arm, and what he imagines will prevent the ghoſt of the deceaſed from doing him any injury.

Theſe people, before they embraced Chriſtianity, uſed to bury their dead in any common place, which they ſtill do when they are at a great diſtance from a church. Many of them alſo preſerve the rites of heatheniſh ſuperſtition; for with the body they put into the coffin an ax, a flint and ſteel, a flaſk of brandy, ſome dried fiſh, and veniſon. The proviſion is for his ſubſiſtence during the journey; the flint and ſteel are to furniſh him with a light, ſhould he find himſelf in the dark; and with the ax the deceaſed is ſuppoſed to hew down the buſhes and boughs that may obſtruct him in the other world.

The friends of the deceaſed, before they carry the body to the place of interment, kindle a fire of fir-boughs near the coffin, and expreſs their ſorrow in tears and lamentations. They walk in proceſſion ſeveral times round the body, demanding, in a whining tone, the reaſon of his leaving them on earth: they aſk whether he was out of humour with his wife? whether he was in want of meat, drink, cloathing, or other neceſſaries? and whether he had not ſucceeded in hunting or fiſhing? Theſe, and other ſuch interrogations, are intermingled with groans and frightful howlings; and in the interval the prieſts ſprinkle the corpſe and the mourners alternately with holy water.

After theſe ceremonies are ended, the body is conveyed to the place of interment, in a ſledge drawn by a rein-deer, and followed by the friends and relations, who ſhew their concern for the loſs of the deceaſed, by dreſſing themſelves in the worſt garments they have, and keeping a continual hooting during the proceſſion. After the ceremony, the people retire; and the ſledge, with the cloaths which belonged to the deceaſed, are the prieſt's perquiſite. Three days after the funeral, the relations and friends of the defunct are invited to an entertainment, where they eat the

fleſh of the rein-deer which conveyed the corpſe to the grave. The animal being made a ſacrifice to the manes of the deceaſed, they collect the bones together, which, being put into a baſket, are with great ceremony interred.

It is cuſtomary to divide the effects of the deceaſed between the brothers and ſiſters, the former having two-thirds, and the latter one; but the lands, lakes, and rivers, are held jointly by all the children of both ſexes, according to the diviſion made by Charles IX. of Sweden, when he aſſigned to each family a certain tract of land.

The language of the Laplanders is a very barbarous one, and varies in different parts of the country, according to the correſpondence which the natives maintain with the different nations; ſuch as the Norwegians, Swedes, Finlanders, and Ruſſians. Arts are very little known among them, except ſuch as neceſſity has taught them for their own preſervation; and moſt of them are totally ignorant of letters.

It is ſuppoſed that Chriſtianity was firſt introduced into Lapland by St. Eric, about the year 1300. However, no material progreſs was made in the eſtabliſhment of it till the laſt century, when miſſionaries were ſent for that purpoſe from Norway, Sweden, and Ruſſia. Guſtavus Adolphus founded two ſchools, one in the province of Pitha, and the other in that of Ulma, for inſtructing the children of the Laplanders in the Chriſtian religion, and in letters. He alſo ordered ſeveral books to be tranſlated from the Swediſh into the Lapland language; ſuch as the catechiſm, with ſome prayers, and the manual, containing the pſalms of David, the proverbs of Solomon, &c. And that they might be encouraged to ſend their children to ſchool, an annual revenue was allotted to maintain the ſcholars both in victuals and cloaths. Hence Lapland now produced ſome preachers which greatly promoted the knowledge of Chriſtianity in that country; for, heretofore, their clergy having been Swedes, whoſe language the people did not underſtand, it could not be reaſonably ſuppoſed they ſhould profit much by their inſtructions. Since that time, however, the greateſt misfortune hath been, that many Laplanders, at preſent, intermix too much idolatry with the pure profeſſion of Chriſtianity; and from local cuſtoms, the ridiculous fondneſs for omens, particular times and ſeaſons, diſtinguiſhed by the names of black and white days, &c. retain many of their former ſuperſtitions.

They ſuppoſe the exiſtence of a good and evil principle, and imagine that theſe, when at variance, occaſion the happineſs or miſery of mankind. With reſpect to the pagan ſuperſtitions ſtill remaining, they adore the gods Thor, Storjunkar and Bacwe, whom they worſhip under the ſymbols of ſtones, trunks of trees, and fire. They have ſome notion of the metempſychoſis, or tranſmigration of ſouls; for they not only reſpect the remains of their departed relations and friends, but dread them as being miſchievous till they imagine the ſpirits of the deceaſed have re-animated other bodies. They alſo believe there are fairies, that wander among rocks, mountains, rivers, and lakes; and give them alſo a ſhare of their devotion.

They own one ſupreme God, whom they arm with thunderbolts: they make the rainbow his bow, and have the ſame notion of him that the old Pagans had of their Jupiter. They have another ſubordinate God, to whom they acknowledge they owe all the bleſſings of life, and never fail to worſhip him. The ſun, whom they call Baiwe, is another of their divinities, becauſe of his influence on the bodies of men and beaſts. They have temples and images conſecrated to each of their gods. Their idols are either the trunks of trees rudely carved, or of ſtone. One of thoſe is preſerved in the royal cabinet of antiquities at Upſal. All their women are excluded from worſhip. They anoint the idol with the heart-blood of the ſacrifice; and when they cannot reach the top of a mountain conſecrated to Storjonkar, one of their deities, they dip a ſtone in the blood of the ſacrifice, throw it up to the mountain, and ſo conclude their devotion. Sometimes they ſtrew branches of birch and pine about their images.

As the Laplanders have always been charged with practiſing the art of divination; La Motraye, travelling in their country, enquired what notion they had of witchcraft and magic: to which one of them anſwered, that the profeſſors of the black art were to be found moſt commonly in Kimi Lapmark and Finland; that they converſed with the devil, and knew every thing that was done: and if they were provoked by any one, or hired to do a man miſchief, they could inflict diſeaſes on him, his wife, children, or cattle. He pretended to inſtance in ſome whom they had ſtruck blind, and others whoſe cattle were killed by their ſorcery; adding, that there were ſome of them who could remove the diſeaſes which they themſelves, or others, had inflicted: and they had done ſo on their being treated with good liquors, or receiving handſome preſents from the ſufferers. They gave our traveller an inſtance of a young and wealthy Laplander, who, upon breaking his word with a girl he courted, was ſtruck blind by her mother, who was ſkilful in the black art, and would not reſtore him to his ſight, till he agreed to marry her daughter.

It is certain, that the poor ignorant Laplanders have a very great veneration for thoſe pretenders to magic, and by all imaginable means avoid their anger. The ſame writer relates, that he hired a perſon to carry him to the tent of one of theſe conjurers, in the moſt northerly part of Lapland, having firſt given him all poſſible aſſurances that he would not betray him to the government (the laws againſt witchcraft being as ſevere in Sweden, as they were formerly with us). He found the wizard in a poor hut, and in as wretched circumſtances as thoſe people are uſually repreſented to be in this part of the world: upon which he made the common obſervation, that if theſe people had really any intereſt with the devil, he would ſurely reward them better. The conjurer gave our traveller his hand, and ordered him to follow him to the top of a high mountain, that lay to the eaſtward of his hut, where he deſired him to ſtand till he fetched his drum, and other untenſils neceſſary to the acting his part. Soon after the man returned with his drum, which he had hid among ſhrubs and ſtones, for fear of a diſcovery. It was of an oval form, and had but one head; there was faſtened to it a chain, with ſeveral braſs rings.

Before the operation began, the wizard demanded if they had any brandy; and half a pint being preſented to him, he immediately drank two thirds of it; then putting the chain and rings into the inſide of his drum, and turning the bottom upwards, he beat upon it with a forked piece of a rein-deer's horn (the head was covered with a tranſparent parchment, wretchedly painted with the celeſtial figns); he beat upon it for a few minutes, the rings all the while jumping about, and making a jingling noiſe: then he laid himſelf down flat on his back, ſetting the head of his drum upon his bare breaſt, and having ſhut his eyes, ſeemed to be in a trance, not breathing for ſome time; and, having fetched a deep ſigh, he gently raiſed the drum above his head, and looked upon the rings, which he could eaſily diſcern through the parchment; and having conſidered their poſition, and diſtance from the celeſtial figures, he fixed his eyes upon our traveller, and declared that he would run a great hazard upon the water as he returned in his ſledge; and again in going down the cataracts, or water-falls, in a boat: that he would have another great eſcape from fire; that his life would be long and healthful, after he had overcome two great fits of illneſs, both which would ſeize him within the ſpace of two years. And as for the interpreter, who led La Motraye to his cell, he directed him to go out a fiſhing, on the 20th, 22d, 24th, 26th, and 28th days of that month; and the 3d, 6th, 9th, 12th, 16th, 20th, 24th, and 28th, of the next: and he ſhould return home loaded with fiſh: and the ſame days in the months of September, October, and November, would be equally fortunate to him in hunting.

When he had finiſhed his predictions, the traveller aſked if he could tell whether he was a bachelor, or a married man; into what countries he had travelled, beſides Torno, Lapmark, &c. but our conjurer was too wiſe to gueſs at things that were paſt, in which he knew his ignorance might be too eaſily diſcovered. Our author afterwards made the poor fellow a preſent of half a crown, with which he ſeemed extremely ſatisfied, as the guide was with the predictions concerning his ſucceſs in fiſhing and hunting. So exceſſive credulous theſe poor Laplanders are, and ſo prepoſſeſſed in favour of their conjurers, that they implicitly follow their directions. If theſe pretended wizards tell them, that on ſuch a day they ſhall take plenty of fiſh or game, they will not fail to go out that day; and as there is moſt commonly abundance of both in this country, they uſually verify the prediction, by coming home loaded whenever they go to in ſearch of game. And if the wizards mark another day as unfortunate, they infallibly make it ſo, by not going abroad in queſt of any game at that time.

With reſpect to their government, Lapland being now ſubject to three different powers, governors, or præfects are deputed by each of them, to preſide over their reſpec-

tive diſtricts. The Laplanders, however, had kings of their own till the year 1277, when the Swedes conquered part of the country, and the remaining part was ſoon after ſubdued by the Ruſſians and Norwegians.

The laws of Sweden are obſerved in Swediſh Lapland, which, as we have already noticed, is the moſt conſiderable of the three: here are erected three tribunals, or courts of juſtice: one for Angermanland-Lapmark; a ſecond for Uma, Pitha, and Lula-Lapmark: and the third for Fomo and Kimi-Lapmark; in each of which courts there is a præfect, who determines all cauſes. They adminiſter juſtice in the king's name, on which occaſions a prieſt always attends.

Such of the Laplanders, as live near the mountains which part Norway from Sweden, trade with the inhabitants of thoſe countries. Thoſe who are at a greater diſtance from thoſe mountains trade only with the Swedes; and others, who are ſituated towards the north and eaſt, trade with the Ruſſians and Finlanders. The commodities they receive from thoſe nations are, rix-dollars, woollen, ſtuffs, linen, copper, tin, flour, ſalt, hides, needles, knives, ſpirituous liquors, and tobacco, of which laſt article they are extremely fond. They give, in return, rein-deer and fiſh, of the latter of which they take ſuch large quantities, that they ſtock whole reſervoirs with them, and put them afterwards into barrels, which they carry to the neighbouring countries: namely, the north of Bothnia, and White Ruſſia. They alſo trade in dried pikes, cheeſe made of the milk of their rein-deer, fine ermins, and the ſkins of ſeveral wild beaſts.

They formerly paid the tribute in ſkins of wild beaſts; but it now conſiſts in a certain coin, rein-deer, and ſkins, either dreſſed for certain uſes, or raw; and is proportionable to the quantity of land poſſeſſed by each head of a family. The largeſt are ſtyled entire territories, or territories of a full tribute; and the owner is obliged to pay yearly two rix-dollars, in coin, to the crown of Sweden. They who poſſeſs a territory in land, of half a tribute, pay only one rix-dollar. But as it happens very often that many of them have no rix-dollars, they are allowed to give ſkins of foxes or ſquirrels inſtead of coin. Fifty ſquirrels ſkins, or one fox's ſkin, with a pair of ſhoes after the faſhion of Lapland, are valued at one rix-dollar; beſides which, every head of a family is obliged to give yearly a white fox's ſkin, or a pair of ſhoes; and if he cannot procure thoſe things, he muſt give half a pound of dried pikes. Part of theſe taxes is employed for the maintenance of the prieſts who live in that country, to inſtruct the Laplanders. The inhabitants of the other diſtricts of Lapland pay their revenues in a ſimilar manner to the reſpective ſtates to which they belong, and trade much in the ſame commodities.

CHAP. VI.

THE NEW HISTORY AND DESCRIPTION OF

POLAND.

SECT. I.

Deſcribing the Extent, Situation, Climate, and Produce of POLAND, properly ſo called; together with the Geographical Diviſion of the Country.

POLAND, before its late diſmemberment, was a very conſiderable country, extending about ſeven hundred miles in length, and ſix hundred and eighty in breadth; the ſituation of it is between forty-ſix and fifty-ſeven degrees north latitude, and ſixteen and thirty-four degrees eaſt longitude. It is bounded by Hungary, Turky, and Little Tartary, to the ſouth; by Germany, to the weſt; Livonia, part of Ruſſia, and the Baltick ſea, to the north; and by another part of Ruſſia, to the eaſt. Its name is derived from Polu, a Sclavonian word, which implies a country adapted to hunting.

The climate is rather temperate, and the air not exceſſively cold; yet ſometimes its lakes and rivers are ſo frozen, that coaches and carts paſs over them for five or ſix months together. The ſoil alſo is generally fertile, fit for tillage and paſture, and produces a vaſt quantity of corn and cattle; even enough to feed the populous nation of Holland, who yearly ſend vaſt fleets to Dantzick to buy the corn and oxen ſent down thither from the ſeveral parts of Poland. Lithuania in particular, produces honey, wax, hemp, flax, leather, pot-aſhes, ſalt, woad, ſalt-petre, vitriol, and quick-ſilver. With theſe ſtaple commodities they purchaſe thoſe of other nations, viz. wines, cloth, ſtuffs, wrought-ſilk, tapeſtry, jewels, ſables, martens, tin, ſteel, iron-ware, aqua-vitæ, brandy, and ſpices.

The country of Poland in general produces alſo all kinds of fruits and herbs, and a good breed of horſes; ſo that their cavalry is numerous, and well-mounted. There are vines in many places, whoſe grapes are grateful to the taſte, eſpecially if the ſummer and harveſt be favourable; but the wine is generally very ſharp, when drawn off.

In the mountains there are mines of lead, ſilver, copper, and iron; but the moſt conſiderable of all are the ſalt-mines in Leſſer Poland, which are the chief riches of the country, and bring moſt money into the exchequer: they work in thoſe mines as the colliers do in our coal-pits. The ſalt is generally of a bluiſh colour, but ſome of it white and tranſparent. When it is firſt dug, it has a brackiſh taſte; but, when expoſed to the air, it becomes brittle, and more ſweet. They have alſo ſome veins of Sal-Gemmæ. The woods are well-ſtored with hares, coneys, ſquirrels, deer, foxes, bears, wolves, and boars. The Maſovian foreſts have plenty of elks, wild aſſes, wild oxen, called Uri, and buffaloes, whoſe fleſh, when powdered, the Poles eſteem a great dainty. In the Ukrain there are wild horſes alſo, whoſe fleſh is equally eſteemed by the nobility. The wolf, reſembling a hart, or the European lynx, called Lupus Cervarius, and by the natives Ris, with ſpots on its belly and legs, affords the beſt furs in Poland. The quails in Podolia have green legs: it is ſaid their fleſh is unwholſome, and breeds the cramp, if immoderately eaten.

The country in general is plain and flat, rather inclining to marſh lands, ſo that no conſiderable woods or mountains are found here, except thoſe that make the frontier to Hungary, which is a craggy ridge of three hundred miles in length, and called the Crapach, or Carpathian mountains. The eaſtern part of the country, indeed, is full of woods, foreſts, lakes, marſhes, and rivers, which afford a delightful proſpect to that part of it which is open.

Its moſt conſiderable rivers are the Viſtula, the Nieſnen or Cromes, the Nieper or Boriſthenes, the Nieſter or Tyras, and the Bog or Vagus; and the only lake worthy of obſervation is, the great lake of Gopto, or the White Lake, which, it is affirmed, will dye of a ſwarthy complexion thoſe who bathe in it. One of the moſt ſingular productions of Poland, is the manna, which proceeds from the aſh and quicken-tree, and alſo from the larix, pine, fir, oak, juniper, maple, olive, fig-tree, &c, and flows in July and Auguſt from the nervous fibres of the leaves.

With reſpect to the geographical deſcription of Poland; if conſidered in its utmoſt extent, it may be divided into the twelve following diſtricts: I. Poland, properly ſo called; II. Poliſh Pruſſia; III. Lithuania; IV. Samogitia; V. Courland; VI. Warſovia; VII. Polachia; VIII. Poleſia; IX. Red Ruſſia; X. Podolia; XI. Volhinia;

hinia; XII. Ucrania. Moſt of theſe provinces are divided into palatinates: which are again ſubdivided into bailiwicks, or ſtaroſtics.

Geographers divide Poland, properly ſo called, into Upper or Little Poland; and Lower or Great Poland. The firſt of theſe hath Great Poland and Warſovia, on the north; Hungary, on the ſouth; Red Ruſſia, on the eaſt; and Sileſia, on the weſt; extending, from eaſt to weſt about two hundred miles, and from north to ſouth, about a hundred and twenty. It contains many woods, but is fertile in ſome places, and in general well watered.

There is but one mountain in Little Poland, and that is abſurdly called the Bald Mountain, though there is a monaſtery on the ſummit of it. This diviſion of Poland compriſes the palatinates of Cracow, Lendomit and Lublin; which, together, form the dioceſe of Cracow, containing one thouſand and eighteen churches, among which eleven collegiate are included.

The palatinate of Cracow has Sileſia on the weſt, the palatinate of Lendomir on the eaſt, Hungary on the ſouth, and Siradin on the north. This palatinate contains, beſides four diſtricts, three dutchies, and one county. The four diſtricts are, 1. Cracovia, ſubdivided into Xianzen and Proſſovia; 2. Lelovia; 3. Briecz; 4. Sandecz. The three dutchies are, Oſvieczin, Zalor, and Severia, which belongs to Hungary, and contains thirteen towns. There is a ſort of manna in this palatinate, which they gather in May and June, ſweep it off the graſs with ſieves, together with the dew, and make ſeveral diſhes of it.

Cracow or Cracovia, the capital of the whole kingdom, and the fixed head reſidence of the ſovereign, is ſeated in a fertile country, at the conflux of the Viſtula and Ridawa, in nineteen degrees thirty minutes eaſt longitude, and the fiftieth degree of north latitude. The city contains a great number of convents and churches, and among the latter that of the Virgin Mary, which is the principal. On the weſt ſide of it is a ſuburb, with handſome gardens, and near it is the king's palace, which has the advantage of elegant gardens incloſed with a wall. On the ſouth ſide of it is the royal caſtle, ſeated on a high rock near the Viſtula. This large ſtructure is defended by walls, towers, and baſtions, and has the appearance of a town; it including the king's palace, the cathedral, and two other churches, with ſeveral dwelling-houſes.

The cathedral is dedicated to St. Staniſlaus, formerly biſhop of this ſee, whom Boleſlaus II. killed at the altar with his own hands, becauſe that biſhop's admonitions were grown inſupportable to him. St. Staniſlaus's remains are incloſed in a ſilver ſhrine, and maſſes are continually performed day and night in this church. In the treaſury of the cathedral, among other things of great value, are the regalia, on which account it is under the care of the treaſurer of the kingdom. Here the kings of Poland are always crowned, and their remains interred. The annual revenue of the biſhopric of Cracow amounts to forty thouſand dollars. The chapter conſiſts of thirty-ſix canons, beſides other prieſts, whoſe revenues are alſo very conſiderable.

Near the caſtle is the ſuburb of Stradomo, which includes ſeveral churches, convents and hoſpitals: and from thence a bridge over the Viſtula leads to the town of Cazimircz, which may be conſidered as the ſecond diviſion of the city of Cracow; it lies to the eaſt of the latter, was built by Caſimir the Great, and is encloſed by a wall. The chief edifice in this part of the city is the univerſity, which conſiſts of eleven colleges, to which are ſubordinate fourteen grammar-ſchools, diſperſed in ſeveral parts of the city. The Jews-town joins to Cazimircz. To the north of the city lies the ſuburbs of Kleparz, or Klepardia, which has no walls, but contains ſeveral churches, particularly that of St. Florian, which is a very ſtately edifice, and the biſhop's palace.

The city of Cracow is large, and was formerly populous and flouriſhing; but by the removal of the court, and the many calamities it ſuſtained in both the Swediſh wars, has much declined. The citizens have this particular privilege, that no appeal lies from the city council, but to the king only; and his majeſty can judge no cauſes relating either to the city or its ſuburbs in any other place but in Cracow. The palatine of this city has the power of chuſing the council, but not of diſplacing any member when elected. This city has often been conſumed by fire, and in 1707 and 1708 was viſited by the peſtilence, which ſwept away ſeveral thouſands of the inhabitants. In 1655 it was beſieged and taken by the Swedes; but in 1657 they were obliged to reſtore it to the Poles. It was ſtormed by the Ruſſian army under prince Repnin and general Apraxin, Auguſt 19, 1768. Its citadel was ſurprized by the confederates the beginning of 1772, and it ſurrendered to the Auſtrians a few months afterwards.

There are ſome valuable ſalt-mines near this city, which were diſcovered in 1548. They produce a great annual revenue to the crown, and the proprietors are likewiſe obliged to make a yearly preſent to every city in Poland. The ſalt is of four kinds; and on one ſide of the mines runs a ſtream of brackiſh water, and, on the other ſide, a fine freſh one.

In this palatinate are alſo the following towns, viz. 1. Zator, twelve miles ſouth-weſt from Cracow. 2. Siveria, the capital of the duchy of the ſame name; it is celebrated for the ſilver and lead mines in its neighbourhood. 3. Biecz, thirty-three miles ſouth-eaſt of Cracow; ſulphur is made here from the ſurface of the river Rapa. 4. Sandrecz, twenty-four miles ſouth of Cracow, celebrated for gold and copper mines in its vicinity; has a collegiate church, and ſeveral monaſteries. 5. Lelow, on a little river of the ſame name; near it, are mines of ſilver and lead. 6. Oſveczin, on the ſouth ſide of the Sala, and twelve miles from Sileſia: it is the thorough-fare from Cracow to Vienna, and has a great trade in ſalt. 7. Czentochow, on the river Warta, near the confines of Sileſia, celebrated for remarkable good beer.

Here is a ſilver mine twenty-five miles north-weſt from Cracow, and near the little town of Slacovia. A provincial diet is held in Proſzovice, ten miles north of Cracow; and Ilcuſſia, twenty miles weſt of Cracow, is famous for ſilver and lead mines, and the beſt bread and beef in Poland. Near Veliſca, twenty-five miles eaſt from Cracow, are excellent mines of rock-ſalt; but the miners, who work under ground, ſoon become blind from the acrimonious effluvia of it; and there is a very ſtrong fortreſs at Lubawla, fourteen miles ſouth of Sandecz.

The biſhop, palatine, and caſtellan of Cracow, are the ſenators of this palatinate. The juriſdiction of the palatine extends not only over the citizens and peaſants, but alſo over the nobility and gentry of the palatinate. The prætor, or mayor of Cracow, is named by the king; but the caſtle is principally under the command of the palatine, who has ten deputies or burgraves, choſen out of the gentry, by whom, in times of peace and war, a ſtrict guard is kept both night and day.

II. The palatinate of Sendomir, or Sandomir, has that of Cracow, on the weſt and ſouth-weſt; Hungary, on the ſouth; Maſovia and Great Poland, on the north; and Red Ruſſia, and the palatinate of Lublin, on the eaſt. It is divided into eight diſtricts, and has nine ſenators, viz. the palatine and caſtellan of Sendomir, and the caſtellans of Wiſlicz, Radom, Zawichoſt, Zarnow, Malagoſch, Polovicz, and Sechow. It abounds with mines of gold, ſilver, copper, iron, lead, ſteel, and marble; and derives its name from Sendomir, or Sandomir, which is the capital of this palatinate.

This town is ſeated on an eminence near the influx of the river San into the Viſtula; and its delightful ſituation rendered it the favourite reſidence of Caſimir the Great, and other kings of Poland. This city is well fortified both by art and nature, and has a college of Jeſuits and other orders, with a rich foundation called Collegium Canonicorum. A provincial court of juſtice is alſo held here.

In the year 1259 the Tartars and Ruſſians committed terrible ravages in this city, and put the inhabitants to the ſword. In 1656 the caſtle, which ſtands on a ſteep rock, was blown up by the Swedes. It is now claimed by the Auſtrians. Here are two churches much frequented by pilgrims, both which ſtand in the middle of a foreſt. This town was diſmantled by king Auguſtus in 1704.

The towns of leſs note are, 1. Kunow, forty miles north of Sandomir; it has ſeveral quarries of marble in it. 2. Schydlowiecz, forty miles north-weſt of Sandomir; there are great quantities of timber, iron and ſteel in its neighbourhood. 3. Viaſden, a new-built town of good trade. 4. Optatow, fifteen miles north-weſt of Sendomi; it has ſeveral famous religious ſtructures. 5. Radom, the capital of its diſtrict, forty-three miles north-weſt of Sandomir. 6. Ilza, a neat town belonging to the biſhop of Cracow, ſeventy miles to the north-eaſt of that town. 7. Solecia, on the Weiſſel, celebrated for its caſtle. 8. Bozentin, near the bottom of the bald mountain; there is plenty of iron in its neighbourhood. 9. Kielcz, ten miles weſt of Bozentin, is famous for mines of copper and lapis lazuli. 10. Chencin, twelve miles eaſt of Kielcz, noted for mines of lead and ſilver, and quarries of marble. 11. Racow, or Racovia, noted for having

been formerly a neſt for the Socinians and Arians, whoſe academy there was ſuppreſſed about the year 1660. 12. Lagovia, famous for making earthen-ware. 13. Corzin is the capital of its diſtrict, and has a caſtle near the river Viſlock. 14. Viſlicza, or Wiſlicz, a city and caſtellany, watered by the Nida, ſtands on a rock, fifty-one miles eaſt of Sandomir; there are many ſerpents and inſects in the adjacent country.

III. Lublin palatinate hath that of Sendomir, to the north-eaſt; Padlactria, to the weſt; and Lithuania, to the eaſt. The whole palatinate, independent of the cottages of the peaſants, contains near two thouſand noblemens and gentlemens ſeats. It is governed by four principal perſons, viz. the palatinate, the caſtellan, and two ſenators. The Weiſſel and Viepers are the chief rivers of this palatinate.

Lublin, in the palatinate of the ſame name, is ſurrounded by a wall and ditch; but though it is not large, it is a place of good trade. It has a caſtle built on a high rock, and ſtands in a very pleaſant and fertile country. It has ſeveral churches and convents, a college of Jeſuits, and a great number of Jews live in the ſuburbs; they have there a very ſpacious ſynagogue. In this city are held three annual fairs, each of which laſts a month, and theſe are frequented by a multitude of German, Greek, Armenian, Ruſſian, Turkiſh, and Arabian traders and merchants. The chief tribunal for Little Poland is held in this city, beſides the provincial diet and a court of judicature. In 1240 this city was ſet on fire by the Tartars, after which it continued for a long time in the poſſeſſion of the Ruſſians. It alſo ſuffered much by fire in 1447 and 1606, and in 1656 was reduced to aſhes by the Swedes. It ſuffered the ſame fate from the Ruſſians in 1768.

Among the rocks, near the Weiſſel is the large town of Caſimir, built of timber; it is about twenty-ſix miles diſtant from Lublin. Here are a beautiful palace and extenſive gardens belonging to the archbiſhop of Gneſna. In this town Charles XII. of Sweden cauſed general Patkul to be broke alive upon the wheel. The Weiſſel ſometimes overflows, and lays above half the town under water.

Twenty-eight miles ſouth of Lublin ſtands Urzendow, which is a conſiderable town, built of timber. The town of Lulow, likewiſe built of wood, is about fifty-ſix miles from Lublin, in a plain: it has a conſiderable juriſdiction, and is defended by bogs and paliſadoes.

Lower or Great Poland is bounded, on the north, by Pomerania and Poliſh Pruſſia; on the ſouth, by Little Poland; on the weſt, by Sileſia and Brandenburgh; and, on the eaſt, by Maſſovia. It is near two-hundred miles in length, and about one hundred in breadth. Though called Great Poland, it is rather ſmaller than Little Poland, for it did not receive the appellation of Great from its extent, but from having been firſt ſettled into a kingdom by Lechus the Great, by whom the Poliſh monarchy was originally founded.

This is, in general, a level champain country, has pleaſant rivers, lakes, and ponds, and is well furniſhed with all manner of fiſh and fowl. The moſt conſiderable of its rivers is, the Warta, which paſſes through great part of it. Its hills abound with ſheep, and other cattle; and its vallies with corn.

The firſt ſubdiviſion of this country, we ſhall take notice of, is Poſnania, which is bounded on the weſt by Sileſia and Brandenburgh; on the north, by Pomerania; on the eaſt, by Pomerelia; and on the ſouth, by the palatinate of Kaliſch and Sileſia.

The archbiſhop of Gneſna, the biſhop, palatine, and caſtellan, of Poſnania; and ſix other caſtellans are ſectors of this palatinate. There are ſeveral other officers in this palatinate, both civil and military. The ſtaroſtas, or governors of cities, have ſome of them juriſdiction, others none; as it is, likewiſe, all over the kingdom. Some of its towns are walled, but the houſes, in general, are of timber, except the public edifices, which are of ſtone or brick.

Its capital city, of the ſame name, ſtands in a plain, amongſt ſeveral little hills, by the river Varta, or Warta, twenty-eight miles weſt of Gneſna, forty north of Wratiſlaw, forty-three north weſt of Kaliſch, one hundred and thirty-five ſouth of Dantzick, and one hundred and forty-three weſt of Warſaw. It is thought to be inferior to no city of Poland, except Cracow. It is the ſee of a biſhop, ſuffragan of Gneſna; and is defended by a good caſtle, a double wall, and a deep ditch. It is famous for its trade, is well-built, and has a cathedral, the biſhop's palace, and an univerſity, in its ſuburbs, which are large, and encompaſſed by a moraſs, and a deep lake, but incommoded, ſometimes, by the overflowing of the river. The Jeſuits have a fine college and monaſtery in the city, in the former of which they have many ſcholars. The inhabitants make as handſome a figure in their houſes and dreſs, as any where in Poland; and their ſtaroſta, or chief magiſtrate, who is choſen annually out of the echevins, or aldermen, is dignified with the title of general of Great Poland. Moſt of them are papiſts, but here are many Jews, who have greater privileges than the citizens. In 1704, the Saxons laid ſiege to it, but were ſoon obliged to raiſe it, by the approach of the Swedes. In 1716, the Swedes attacked the Saxons here, contrary to a ſuſpenſion of arms, and made them priſoners of war in the caſtle. The public buildings are generally of free ſtone, of which the moſt conſiderable is the caſtle, that ſtands on a ſmall eminence, between the rivers Warta and Proſna; but its moſt ſtately edifices are on the other ſide of the Warta, in the ſuburbs. The ſuburb is commonly called Valiſovi, and built ſo ſtrong, that like the town it is able to withſtand a ſiege. There are three very famous fairs kept in this city, much reſorted to by the German traders and gentry. The firſt is kept about the beginning of Lent, and laſts a month; the ſecond and third at Midſummer and Michaelmas, each of which continues five weeks. In St. Magdalen's, which is the principal church of the city, they ſhew the tomb of the duke Mieceſlaus, who introduced chriſtianity into Poland. Here are ſeveral other churches, beſides monaſteries; the ſtreets are ſpacious, and its town-houſe is a large building, of fine architecture.

The other towns of note are, 1. Koſon, about thirty-three miles ſouth weſt of Poſnania. 2. Miedzyzecze, on the frontiers of Sileſia, about ſixty miles ſouth eaſt of Poſnania. 3. Slupeza, on the Warta, about thirty miles ſouth eaſt of Poſnania. 4. Liſſa, thirty-three miles north-weſt of Poſnania; it was plundered and burnt by the Ruſſians in 1707, ſo that of three thouſand houſes, only ſeven were left ſtanding. 5. Frauſtad, on the frontiers of Sileſia, ten miles ſouth weſt of Liſſa; it is remarkable for the victory obtained near it over the Saxons by the Swedes, which proved fatal to king Auguſtus.

IV. The palatinate of Kaliſch, or Kalis, lies along the river Warta, between the palatinate of Poſnania on the weſt, Siradia on the ſouth, Sendomir on the ſouth-eaſt, and Lencicſa and Cujavia on the eaſt and north-eaſt. Its ſenators are five, viz. the palatine and caſtellan of Kaliſch, and the caſtellans of Land, Naklo, and Kamin. It has its name from the city of Kaliſch, mentioned by Ptolemy, on the river Proſna, which falls, a little lower, into the Warta, twenty miles eaſt of Sileſia, and north of Siradia, thirty-ſeven ſouth of Gneſna, a hundred and thirty-three weſt of Warſaw and north-weſt of Cracow. It lies among marſhes, and is fortified only with a brick wall, and low towers. Here are the ruins of a ſtrong caſtle which was deſtroyed by the Teutonick knights. It has a magnificent college of Jeſuits, and ſome religious houſes. It was taken, and ill-treated, by the Swedes, during the wars of the laſt century. The Saxons and Poles defeated the Swedes near this place, in October 1706, juſt as a treaty had been ſigned, whereby king Auguſtus renounced the crown to king Staniſlaus, his electorate of Saxony being then over-run by the Swedes, and no other way left him to relieve it. But the chief city of this palatinate is Gneſna, called Gniſen by the Germans, which is the capital of the Lower Poland, and was formerly the metropolis of the whole kingdom, and ſeat of the king. It ſtands in the middle of the palatinate, in a plain, between hills and lakes, thirty-ſeven miles north of Kaliſch and eaſt of Poſnan, forty-ſix ſouth-weſt of Thorn, ninety-five north of Breſlaw, one hundred and eighteen ſouth of Dantzick, a hundred and twenty-one north-weſt of Warſaw, and a hundred and fifty-five north-weſt of Cracow. It was built, as is generally reported, by king Lechus I. founder of this monarchy, and called Gneſna, from an eagle's neſt found there, which, in the Poliſh language, is called Gneſiad. The kings of Poland were crowned, and the regalia kept here, till 1320, when they were removed to Cracow. It ſuffered very much by a dreadful fire, in 1613, and has been declining ever ſince; ſo that it is now only conſiderable for being the ſee of an archbiſhop, who is primate of all Poland, legate of the Holy See, and, in caſe of the king's death, regent till a new king be choſen, whom, alſo, he claims the right of declaring and crowning. He ſigns himſelf "Legatus natus, & regni Poloniæ primus, & primus princeps." He can reverſe all proceedings in any of the biſhop's courts, and it is death to draw a ſword in his preſence. A golden croſs is carried before him when he goes to the diet, or to the king; and when he

he ſits, his chaplain holds it behind his chair. His marſhal, who is a ſenator, carries a ſtaff before his coach, and ſalutes none with it but the king. He viſits no embaſſadors, though they viſit him. During the interregnum, he may coin money in his own name; the revenues of the crown belonging to him, and he has then the ſame officers with the king; but at all times he has drums beating, and trumpets ſounding, within and without, before he ſits down to table; and he may viſit the king when he pleaſes. The canons muſt all be of noble birth and deſcent.

In the cathedral there is a vaſt treaſure of gold, ſilver, and curious enamelled veſſels, left to it by Sigiſmund III. other kings, and ſome archbiſhops. The tomb of one of the archbiſhops is caſed with ſilver, and the gates are of Corinthian braſs, curiouſly wrought.

III. To the north and ſouth of the Warta is ſituated the palatinate of Siradia, and contains, 1. Siradia, the capital town, which is ſmall, but populous, and has a caſtle to defend it. 2. Wielun, the ſeat of the ſtaroſta, caſtellan, and provincial diet. 3. Petrikow, a tolerable well-built town; and at preſent one of the great tribunals of the kingdom, for determining differences among the nobility, and appeals from inferior courts, aſſembles in this town; as does alſo the ſynod of the clergy, and a provincial court.

IV. Leneicia is ſituated eaſt from Kaliſch and Siradia, and has little Poland, towards the ſouth. It is divided into three diſtricts, and hath five ſenators, viz. the palatine and caſtellan of Leneicia, and the other caſtellans.

Leneicia, the principal town of this palatinate, is eighty miles weſt of Warſaw, and a hundred and thirty miles north of Cracow. It is ſurrounded by a brick wall and a ditch, defended by a caſtle, ſituated on a rock; has a great annual fair, and is the ſeat of one of the diets. 2. Piontkum, ſituated on the Warta, is ten miles eaſt from the above-mentioned town.

V. Rava palatinate lies eaſt from that of Leneicia, and hath four ſenators, viz. the caſtellan of Sochaezow, the caſtellan of Goſtinin; the caſtellan of Rava, and the palatine of Rava.

The town of Rava, which is the capital of this palatine, ſtands on a river of the ſame name, upwards of forty miles to the ſouth-weſt of Warſaw. It is ſituated in the midſt of a plain, is built of wood, tolerably populous, and defended by a caſtle, which is at once the depoſitory of ſome of the crown revenues, and a ſtate priſon. The caſtle, which is flanked with four towers, and ſurrounded with a broad ditch full of water, is a large ſtone building. The other towns of leſs note are, 1. Louitz, on the river Rava, about fourteen miles from the above town. It hath a caſtle ſurrounded by the river; is adorned with a ſtately church, and the palace of the archbiſhop of Gneſna. 2. Volhora is a populous town, where is a noble palace belonging to the biſhop of Cujavia.

VI. Brezeſty palatinate lies to the north of Leneicia, is fertile, ſends five members to the diet, and hath its name from a little town ſixty miles to the eaſt of Gneſna. It lies on a cauſeway among marſhes, and is built of brick and wood. Its towns are, 1. Cruſwick, thirty miles weſt of Brezeſty; there is a brick caſtle in the middle of it; and in the ſuburbs ſtands the church of St. Peter, built with free-ſtone, together with a college of twenty-four canons. 2. Radziew is ſituated on a lake, twenty-eight miles north-weſt of Brezeſty; and the houſes in general are built of timber; hence it is ſubject to conflagrations, like many other towns of Poland.

VII. Uladiſlau, in Latin Uladiſlavia, is a palatinate, whoſe capital city, of the ſame name, is built among marſhes, near the Weiſſel, in the midway between Ploczko and Thorn, fourteen miles north-eaſt of Brezeſty, twenty ſouth-eaſt of Thorn, and ſeventy-five north-weſt of Warſaw. It is the ſee of the biſhop of Cujavia and Pomerania, ſuffragan of Gneſna, who always crowns the king, in caſe of the death, indiſpoſition, or obſtinacy, of the primate. The cathedral is an antient Gothick ſtructure, but rich in plate, ornaments, and relicks; and encompaſſed with the houſes of the canons and prebendaries, and a large free-ſchool. The chief ornament of the place is, the biſhop's ſtately palace, built by Matthias Golanciew, who was forty-two years biſhop of this ſee, and founded the church of St. Vital the martyr. The houſes are generally of brick, as alſo the caſtle on the Weiſſel, which is well fortified. Though the adjacent ſoil is marſhy, and ſo ſcarce of fuel, that the inhabitants ſuffer very much for want of it; yet it is fruitful in corn, and ſends great quantities to Dantzick, for exportation.

VIII. The palatinate of Inowlocz, or Inowladiſlaw, extends from the lake of Goplo, and the city of Cruſwick, to the Weiſſel and the confines of Pomerania: it has Pruſſia on the north, the Weiſſel on the eaſt, Kaliſch on the ſouth, and lies north-weſt from Brezeſty. It is divided into theſe territories, and ſends four caſtellans to the diet, beſides the palatine. The chief town of the ſame name, is on the river Norez, thirty-eight miles weſt of Uladiſlaw: it is ſmall, but defended by a ſtrong caſtle. 2. Bydgoſt, is a walled town, noted for a trade in ſalmon: it is ſituated in a plain, on the river Barde, by which goods are brought up to it from the Weiſſel, particularly from Uladiſlaw, from which it is twenty four miles diſtant.

IX. Dobrin, by ſome made a diſtinct palatinate of the province of Maſſovia, and by others a territory belonging to that of Brezeſty, lies on the eaſt of Weiſſel, between Cujavia and Pruſſia; abounds with fruit and fiſh, was formerly the occaſion of many quarrels between the Teutonic knights, Pruſſia, and Poland, and is divided into three diſtricts. Its ſenators are, the three caſtellans of Dobrin, Ripin, and Slouſk.

On a rock near the Weiſſel, over-againſt Uladiſlaw, ſtands the town of Dobrin, built of timber. It had formerly a ſtrong caſtle, which the Teutonic knights demoliſhed.

X. On the weſt ſide of the country is Ploczko, or Ploſkow, by ſome alſo reckoned a palatinate of Maſſovia, from which it lies rather to the eaſt between the Weiſſel and Ducal Pruſſia. It is divided into four diſtricts; and its ſenators are, the biſhop, palatine, and caſtellan of Ploſkow.

Its chief town, of the ſame name, ſtands on a high bank of the Weiſſel, from whence there is a proſpect of a pleaſant and fruitful country. It is fifteen miles ſouth of Dobrin, near thirty eaſt of Brezeſty, forty-four ſouth-eaſt of Thorn, forty north-eaſt of Leneicia, and fifty north-weſt of Warſaw. It has been a biſhop's ſee a long time, is very populous, has a good trade by its river, and is defended by a caſtle. It has a cathedral with other churches and monaſteries, well endowed, eſpecially that of the Benedictines, in the ſuburbs; where, among other relics, they keep the head of St. Sigiſmund, given by Sigiſmund III. in a gold ſhrine.

SECT. II.

Containing a Deſcription of POLISH PRUSSIA, its Boundaries, Extent, Produce, &c. their Religion, Civil and Political Governments; ſeveral Diviſions of the Country, principal Towns, &c.

POLISH Pruſſia hath been diſtinguiſhed by the appellation, of royal Pruſſia, and has been added to the general province of Great Poland, though it is a very different country, inhabited by a different people, who have their peculiar laws and privileges; and therefore deſerves to be ſeparately conſidered. It is bounded on the north by part of Pomerania and the Baltic ſea; on the eaſt, by the kingdom of Pruſſia; on the ſouth, by Great Poland; and on the weſt, by Great Poland and Pomerania. It is far inferior in extent to the kingdom of Pruſſia, it being only about ſixty miles in length, and fifty-one in its greateſt breadth; but the latter does not exceed eighteen miles in ſome places.

This country is diverſified with mountains, woods, and lakes; but in the ſouth part there is little paſture ground, and conſequently few cattle. The fiſheries are of great advantage to this country, which alſo yields a vaſt quantity of honey and wax.

The woods abound with wild boars, roe-bucks, and wild fowl, and a good deal of lime is alſo burnt in ſome parts of the country.

Here are thoſe remarkable heaths of Skal, Maſura, Nicholait, and the deſart of Iohanniſberg, which is four German miles in breadth, and four in length.

The inhabitants conſiſt partly of Poles, and partly of Germans. The reformation was introduced here early in the ſixteenth century, and in a few years the profeſſors of the Lutheran religion increaſed ſo faſt, that their number in the principal cities and towns far exceeded that of the papiſts, and they had almoſt as great a ſuperiority in the ſmaller towns and villages. But ſucceeding times have introduced conſiderable alterations. The kings of Poland have, indeed, allowed the inhabitants the free exerciſe of the Lutheran religion in the cities of Pruſſia; but there are at preſent only a few towns in which the Lutherans have churches, and in other towns they have been compelled

pelled to give them up to the papiſts. Beſides, the proteſtants are continually oppreſſed, and promiſes of preferment and other means are too ſucceſsfully employed, in order to ſeduce the Pruſſian nobility from the Lutheran church to the Romiſh.

As we hinted above, Poliſh Pruſſia is a diſtinct political body or ſtate, that hath nothing in common with Poland, except its having the ſame ſovereign, and being connected with that crown by a perpetual alliance. For when the inhabitants put themſelves under the protection of king Caſimir IV. in 1466, it was expreſsly ſtipulated, that the duchy of Pruſſia ſhould have nothing to do with the republic of Poland; but that the king alone ſhould perſonally order and determine all matters relating to the former; and for that purpoſe ſhould come among them, and ſummon general diets. Hence this ſtate enjoys the ſame right as Poland and Lithuania, of voting at the election of a king, who after his coronation is obliged to ſwear, that he will maintain the Pruſſians in their rights and privileges; and when this is done, they pay homage to the new ſovereign in the uſual manner.

With reſpect to matters of a public nature, the king can determine nothing without the concurrence of the ſtates, who are divided into ſpiritual and temporal members, the latter conſiſting of nobles and burghers. Of theſe the ſenate is at preſent compoſed. This council conſiſts, firſt, of the biſhops of Ermland and Culm. The former is the preſident and chief among the nobility, and is not under any ſubordination to the archbiſhop of Gneſna; but holds immediately of the pope. His dioceſe, in which he has the ſupreme authority both in civil and eccleſiaſtical cauſes, is of a very large extent. Its revenues are divided into three parts, one of which belongs to the chapter; but the other two, which are computed at ſixty-four thouſand dollars, are aſſigned for the epiſcopal table.

The dioceſe of the biſhop of Culm is not near ſo extenſive, and conſequently the revenue is much inferior to that of the biſhop of Ermeland. The biſhop of Culm is a ſuffragan to the archbiſhop of Ermeland. The biſhop of Gneſna, and the king abſolutely diſpoſe of that biſhopric without calling a chapter. The other members of the council are three palatines, who are of equal dignity with thoſe of Poland; three caſtellans, who are not inveſted with any particular office or employment, but on a general ſummons of the nobility may be looked upon as the lieutenants of the palatinates; three vice-treaſurers, who have only a bare title; but as they are counſellors of ſtate, they take place of the reſt of the nobility; two counſellors from each of the three great cities, Dantzic, Thorn, and Elbing; and each of theſe repreſentatives has a vote in the ſenate.

According to the laws of the country, theſe ſtate counſellors ought to be native Pruſſians; but this is ſeldom the caſe. They are nominated by the king of Poland, and take a particular oath at their admiſſion. The biſhop of Ermeland ſits as preſident in the Pruſſian diet; but, in his abſence, his place is ſupplied by the principal perſons among the nobility who are preſent. Theſe members are ſtyled the two ſtates of the duchy of Pruſſia, and royal counſellors: they may likewiſe be termed the ſuperior ſtates, to diſtinguiſh them from the inferior, compoſed of the lower nobility, and the deputies of the ſmall towns. King Caſimir IV. engaged for himſelf and ſucceſſors, not to determine any affair of conſequence without the previous concurrence of the ſtates of Pruſſia. Hence ſprung the origin of the Pruſſian diets, which before had no connection with thoſe of Poland. But in 1569, part of the ſenate or council of Pruſſia was united with the ſenate of Poland, and the ſtates of the former were compelled to appear at the general diet of the kingdom. The political conſtitution of Pruſſia has been much changed from that time; but it ſtill enjoys particular rights and privileges, and is not entirely interwoven with that of Poland.

After the general Pruſſian diet is ſummoned (which is alternately held at Marienburgh and Graudenz,) the king ſpecifies the time of holding the leſſer diets, where the repreſentatives of the former are choſen, and receive their inſtructions. Theſe provincial diets are held in every palatinate, and the happy concluſion of them indicates the proſperous iſſue of the general diet; for if only one of theſe aſſemblies riſes abruptly, the general diet is ſeldom expected to aſſemble. The numbers of repreſentatives for every palatinate is not fixed, but they have lately been more numerous than heretofore. During the ſeſſion of the diet, their expences are defrayed; and the inſtructions given to the members are in the Poliſh tongue.

Beſides their own general diet, the Pruſſians aſſiſt at that of Poland: though they do not agree to the taxes impoſed on them in the Poliſh diet, but only in their own general one. Formerly the Pruſſians had their own coin, which is now reduced to the ſtandard of the Poliſh money. But the three principal cities of Pruſſia have ſtill the privilege of coining gold and ſilver pieces, impreſſed with the king's head on one ſide, and their reſpective arms on the reverſe; which paſs as the current money of Pruſſia, after receiving the royal ſanction. Here are ſeveral other public officers, beſides the counſellors of ſtate, ſuch as the treaſurer, who is the principal, and the only one who has an annual ſalary; the ſword-bearer, who has only the bare title; the ſtandard-bearer, who bears the ſtandard of the province, when all the nobility take the field; and ſeven judges, with their attendants and clerks.

The towns of Pruſſia are compriſed in the three celebrated ones of Dantzick, Thorn, and Elbing, and twenty-ſeven royal towns, beſides thoſe that belong to the biſhop of Ermeland and Culm. An aſſociation was formed among the ſmall towns, under the government of the knights of the Teutonic order. By this union, which ſtill continues, they are to act jointly in behalf of their common privileges; to conſult their intereſt as a community in their particular aſſemblies; and to recommend their common concerns, in the general diet of Pruſſia, to the repreſentatives of the great cities. Marienburgh, which is the moſt conſiderable among theſe towns, has the directory, and this with Graudenz, Dirſhau, Stargard, and Konitz, are called the plenipotentiary towns; for, beſides their own affairs, theſe are charged with thoſe of all the other towns, which they lay before the directory, and the latter repreſent them to the deputies of the great cities. Theſe ſmall towns are at preſent far from being in a flouriſhing condition. An appeal lies from the ſentences of their magiſtrates to the ſtaroſtas, and alſo to the king from the latter.

There are four provinces or palatinates of Poliſh Pruſſia. That of Pomerelia, or Little Pomerania, was antiently a part of the duchy of Pomerania; but at laſt fell under the dominion of Poland. This palatinate contains five circles, and has four provincial judges. The moſt remarkable places in it are the following, viz.

The celebrated and commercial city and fortreſs of Dantzick, called by the Poles Gdantzk, ſituated on the Viſtula, near five miles from the Baltick, in fifty three degrees, thirty-eight minutes north latitude, and in eighteen degrees thirty-five minutes eaſt longitude. The ſmall rivers called the Radaune and the Motlau run through the city; the latter divided into two channels, which run between the Old and New Town, and afterwards unite again below the city, and, with the Radaune, fall into the Viſtula.

This is a large, beautiful, and populous city, built after the antient manner of the Hanſe-towns. The houſes are generally five ſtories high, which make the ſtreets appear the narrower, eſpecially as the entrance into the houſes is by four or five ſtone ſteps, and a balcony, which make a projection of ten or twelve feet. Theſe houſes are kept clean after the manner of the Dutch, though with leſs nicety. Many of the ſtreets are planted with cheſnut-trees about thirty feet high, which afford an agreeable ſhelter from the heat of the ſun.

There is a beautiful harbour belonging to this city; and the inhabitants who are remarkably civil and obliging to ſtrangers, carry on a conſiderable trade, eſpecially in corn. The ſhips belonging to this port are very numerous, and the privileges of this city are very valuable. As it is one of the three great cities, it ſends repreſentatives to the Pruſſian ſenate or council of ſtate, who have likewiſe a ſeat in the general diet of Poland, and vote at the election of a king. The Dantzickers have alſo the privilege of gathering amber, coining money, &c.

Here are twelve Lutheran churches, excluſive of thoſe in the houſe of correction and in the alms-houſes, two Calviniſtical churches, one popiſh church, and a college of Jeſuits. The cathedral, which is a large Lutheran church dedicated to the Virgin Mary, is the moſt magnificent, and the principal church in Dantzick. Mr. Hanway obſerves, that this is an antient ſtructure that has not been much changed by the eſtabliſhment of the proteſtant religion in this city: for it was agreed by treaties to have the crucifixes, images, and pictures, as in the times of popery. They ſhew a very curious painting on wood, of the reſurrection, by Van Eyck. There is a Lutheran academy in the Grey Friars convent, in which are ſeven profeſſors, and one teacher of the Poliſh language. In this convent is alſo

alſo the city library. The other public buildings are the exchange, the council houſes in the Old and New Town, the public weigh-houſe, the arſenal, which contains a good collection of arms, but many of them are old and uſeleſs; they have a hundred and fifty large braſs cannon, ſome of which are ſaid to weigh fifteen thouſand pounds. They have alſo a fine mill erected on the river Radaune, which has eighteen wheels, is the largeſt in all the city, and is ſaid to have produced to the proprietors a ducat every hour.

Dantzick was anciently the principal of the Hanſe-towns, and the firſt that entered into the Hanſeatic aſſociation. The German is almoſt the only language ſpoken here, the inhabitants being little uſed to the Poliſh. The city has its own garriſon; and the fortifications make a good appearance, eſpecially towards the ſouth and weſt; thoſe parts of the town being ſurrounded with eminences, ſome of which riſe higher than the towers of the city itſelf.

In the year 1752, one thouſand two hundred and eighty-eight Poliſh veſſels, ſmall and great, from the Viſtula, and one thouſand and fourteen ſhips from the ſea, arrived in this port, and fifty-eight thouſand and ſixty buſhels of corn were brought into this city for exportation. Indeed the moſt conſiderable branch of the trade of Dantzick is that of corn, which is brought by the Polanders in large barks of about fifty tons burden down the Viſtula. In plentiful years theſe barks annually amount to about ſixteen hundred. As theſe cargoes are often expoſed to the weather, it is cuſtomary to ſpread their ſails on the banks of the river, and to dry their corn upon them. They alſo export bees wax to the annual amount of near a thouſand ſchippounds; beſides narrow linens, ſacking, pot-aſh, pearl-aſh, pipe-ſtaves, oak-plank, &c.

We learn from antient records, that Dantzick was a large commercial city ſo early as the year 997. The New Town was founded by the Teutonick knights in the year 1311, and was firſt encompaſſed with a wall and moat in 1343. Dantzick ſhook off the yoke of thoſe knights in 1454, and the inhabitants, upon certain conditions, ſubmitted to Caſimir, king of Poland, who, among other privileges, granted them the right of coining their own money. Afterwards they refuſed to do homage to Stephen, king of Poland, without the previous confirmation of their rights and privileges; upon which the city was put under the ban, and beſieged by that prince; but the affair was accommodated, and on their publicly acknowledging their error, and paying a large fine, the king received them into favour, confirmed their privileges, and granted them the free exerciſe of the Lutheran religion. In 1734, Staniſlaus, king of Poland, took refuge here, which occaſioned a hot ſiege and bombardment from the Ruſſians and Saxons; but Staniſlaus making his eſcape, Auguſtus III. was acknowledged as rightful ſovereign, by the Dantzickers.

The king of Pruſſia exempted this city, as well as that of Thorn, from thoſe claims which he made on the neighbouring countries; notwithſtanding which, his Pruſſian majeſty ſeized on the territories belonging to Dantzick, under the pretence of their having been formerly part of Poliſh Pruſſia. He then proceeded to poſſeſs himſelf of the port duties belonging to that city, and erected a cuſtom-houſe in the harbour, where he laid inſupportable arbitrary duties upon goods exported or imported. Although the Engliſh merchants had in right of treaties ſeveral immunities at Dantzick, theſe could not protect them from the rapacity and extortion of this monarch, who laid ſuch heavy taxes on the principal articles of commerce, as amounted nearly to a prohibition of them; and likewiſe eſtabliſhed companies to whom he granted an excluſive right of trading in certain articles. To complete the ſyſtem of oppreſſion, no perſon could go in or out of the town, not excepting the ladies, without being ſearched in the ſtricteſt manner.

Hiſtory will hardly furniſh a more ſtriking inſtance of the futility, if not of the abſurdity of treaties, ſo far as they are conſidered as guarantees or acts of ſecurity, than the fate of Dantzick. Few cities ever exiſted, and it is probable that none do at preſent, that have been comprehended in ſo many general and particular treaties, whoſe rites and liberties have been ſo frequently ſecured, and guaranteed by ſo many great powers, and by ſuch a long and regular ſucceſſion of public acts, as that of Dantzick has been. Nor have the commercial powers of Europe ſo often armed in the defence or ſupport of any other. The city is in the dioceſe of Cujavia, and the inhabitants pay the Popiſh biſhop all the regard conſiſtent with the difference of their religion, and the privileges and immunities of the city.

Without the walls of Dantzick lie the following places within its juriſdiction, viz. 1. The Dantziger, Werder, or Iſland, which is ſurrounded by the Viſtula, the Motlau, and the moraſſes cauſed by theſe rivers, and contains about fourteen hundred hides of lands, and about thirty-three villages. 2. The Friſche Nehrung; which is a long narrow ſlip of land, extending between the ſea and the harbour. It contains five villages that have churches; but the moſt remarkable place on this iſland is a fort called Munde, which is very ſtrong, and has a church and a commodious harbour. And, 3. about a German mile from Dantzick is Oliva; a celebrated convent, that has been frequently conſumed by fire. It is at preſent inhabited by about fifty Ciſtercian monks. Near the entrance of the church is a marble table in the wall, in commemoration of the treaty of Oliva concluded in this monaſtery between the Poles and Swedes in 1660. The diſpenſary belonging the convent is elegant and well contrived. This monaſtery has the privilege of gathering amber on the ſea coaſt. Round this ſtructure a pretty village has been gradually built. There are in the diſtrict belonging to Dantzick, ſeveral other ſmall towns.

The province of Culmerland, or the palatinate of Culm, has a palatine, who is the firſt of thoſe belonging to Pruſſia, a caſtellan, a vice-treaſurer, a ſword-bearer, a judge, and eight ſtaroſties.

The principal places in this palatinate are, 1. Culm, or Chelmno, the capital of the province, which ſtands on an eminence on the banks of the Viſtula, in fifty-three degrees twenty minutes north latitude, and in nineteen degrees twenty minutes eaſt longitude. This city was founded in 1239, and bequeathed by one of the dukes of Maſſovia to the knights of the Teutonic order. The inhabitants afterwards withdrew themſelves from their obedience, and ſubmitted to Poland. While the Teutonic knights had the ſovereignty of Culm, the high tribunal of Pruſſia was held in this city, and the Culmean law became in ſuch reputation, that there were few places in Pruſſia or Maſſovia, where it was not received. The city is at preſent ſubject to the biſhop. The biſhopric of Culm is the moſt antient ſee in Poliſh Pruſſia, and the college or chapter conſiſts of only four canons, who are choſen by the biſhop, and the reſt of the chapter. Culm is a large city, though but thinly inhabited, and was formerly one of the Hanſe towns.

2. Thorn, the chief of the three great cities of Poliſh Pruſſia, ſtands on the Viſtula, ſeventy-two miles ſouth of Dantzick, in fifty-two degrees forty-ſix minutes north latitude, and in nineteen degrees fifteen minutes eaſt longitude. This city was founded by Herman Balck, firſt grand maſter of the Teutonic order, who, in 1231, built the caſtle of Thorn, and in the following year laid the foundation of the town; but in 1235, the building of it was diſcontinued on account of its inconvenient ſituation, and the city was built about four miles and a half up the river, where it now ſtands. It is ſuppoſed to have been called Thorn, becauſe the knights, by building it, open to themſelves a thor, or door, into Ruſſia. Thus the ſeal of the city repreſents a gate thrown open. Thorn ſoon after its being built became diſtinguiſhed above the other towns of Pruſſia by its enjoying ſeveral valuable privileges; but when the Teutonic knights made a very ill uſe of their power throughout all Pruſſia, this city was the firſt that formed the noble ſcheme of ſhaking off their oppreſſive yoke.

The inhabitants having concerted an agreement with the other towns in the year 1454, made themſelves maſters of the caſtle, and demoliſhed it; and having expelled the Teutonic knights by force of arms, the confederates put themſelves under the protection of Caſimir the Great, king of Poland; but their rights, privileges, and immunities were to remain entire. They were to honour his Poliſh majeſty as their ſovereign; but without any further connection with Poland than a cloſe harmony and alliance, by which they engaged to have the ſame allies and enemies on all occaſions, and reciprocally to promote each other's welfare and proſperity.

Three cities had the following privileges granted them in common: they were declared free, and were to be governed by their own magiſtrates, conſiſting of the council, the chief perſons of which are the burgrave and preſident, the judges, and the repreſentatives of the burghers. The members of the council were to be ſtiled noble; they were allowed to hold a ſupreme court of judicature, and in criminal caſes to puniſh capitally even thoſe who were not inhabitants of the city, if they were taken in the fact; to have their own garriſon; to coin money, and to have

have their law-ſuits decided only in Pruſſia. They were to pay no other cuſtoms in Poland but thoſe uſually demanded at the firſt barrier on the frontiers. Laſtly, they were to be members of the ſtate-council of Poliſh Pruſſia, and to have a ſeat and vote in the Poliſh diet, and at the election of a king. The third jubilee of this event was commemorated with great rejoicings in the ſchools of all the three great cities in February, when medals were ſtruck on the occaſion in the cities of Thorn and Dantzick.

The records of Poliſh Pruſſia are kept in the city of Thorn, which has ten gates, and is divided into the Old and New town, each of which had formerly its reſpective council, magiſtracy, and police; but in 1453, they were incorporated into one city. They are, however, ſeparated by a wall and moat within the town, but on the outſide are defended in common by a double wall and moats. This is eſteemed the handſomeſt city in Poliſh Pruſſia, its ſtreets being broad and regular, and for the moſt part planted with rows of trees: the houſes are alſo remarkable for their elegant appearance and cleanlineſs.

The wooden bridge over the Viſtula in this city may be juſtly eſteemed the longeſt, the moſt extraordinary and expenſive bridge in Europe, the city being obliged to expend great ſums in keeping it in repair. It properly conſiſts of two bridges, the iſland of Bazar dividing it in the middle. That part of it next to Thorn is called the German bridge, and the channel over which it lies is eſteemed the German Viſtula; but the other part is diſtinguiſhed by the name of the Poliſh bridge, it lying over the channel called the Poliſh Viſtula. As the river runs conſiderably wider, the bridge muſt neceſſarily be lengthened, ſo that at preſent it takes up half an hour to walk over it from one bank of the river to the other. It is alſo the moſt ſingular on account of the quickſand into which the piles are driven, which occaſions the whole bridge to ſhake and totter whenever any carriage or horſes are upon it, or even when it is paſſed by a conſiderable number of foot-paſſengers: a ſtranger who is unacquainted with its conſtruction, apprehends himſelf in great danger in paſſing over it. The ice on the Viſtula, which is frequently two or three feet thick, and the rapidity of the current, carry away every year one-third of it. Hence ſome idea may be formed of the vaſt expence the annual repairs amount to; for the Poles pay no part of that, notwithſtanding the heavy loads they bring over it.

The reformation was very early embraced by the inhabitants of this city, which has its own garriſon, conſiſting of only one company. This city found as little ſecurity from the king of Pruſſia's declaration in 1772, as that of Dantzick. Its territories and revenues were ſeized upon, cuſtom and exciſe-offices erected at their gates, and heavy exactions demanded even upon the neceſſaries of life. Thus blockaded and plundered, they were declared free; but at the ſame time were ſummoned to do homage to the king of Pruſſia for all the lands they poſſeſſed without the walls. In theſe circumſtances, with force and famine to encounter, the magiſtrates and citizens behaved with wonderful reſolution and firmneſs. They returned for anſwer, that they had already paid homage and ſworn allegiance to one ſovereign; and that they could neither renounce their allegiance, nor break their oaths, upon any account or conſideration whatſoever; in which laudable reſolution they have ſtill perſevered.

3. The town of Graudentz, formerly called Grodee, and in the Poliſh language Graudzianz, makes a handſome appearance, being pleaſantly ſituated on an iſland formed by the river Oſſa, which here flows through the two channels into the Viſtula. The Pruſſian diet is held alternately in this town and at Marienburg.

The præfecture of Marienburg comes next under our conſideration. Here is a palatine, a vice-treaſurer, and a provincial judge. This palatinate contains three warders. A warder is a fen or moraſs, ſurrounded with water, and improved for tillage and habitation. They produce plenty of graſs and corn, but have ſeldom either woods or hills. That called the wood of Elbing is the moſt conſiderable in this diſtrict. In many parts the fuel is turf, ſtraw, and ſtubble; and even where there are woods, they afford very little game, except hares, woodcocks, and other wild fowl, but harbour very fierce wolves. The freſh water in theſe warders is very good; the air is tolerably healthful; a great number of cattle are bred here, and the horſes are much eſteemed.

The inhabitants of the warders have from time immemorial been free peaſants, and are ſtiled the royal vaſſals and wanderers. Thoſe, however, who are ſubject to the juriſdiction of the cities, are under greater reſtrictions than the royal peaſants who live in the Marienburg warders. They ſpeak the German and Poliſh languages, and are for the moſt part Lutherans or Papiſts: here are alſo a conſiderable number of Mennonites (a ſort of baptiſts), and ſome Calviniſts.

Marienburg and Elbing are the principal places in this præfecture. The former of theſe is a well-built town, in fifty-four degrees twelve minutes north latitude, and nineteen degrees twelve minutes eaſt longitude. It ſtands on an eminence near the river Nogat, in a pleaſant and fertile country.

The city of Elbing was built in 1239: it ſtands on a river of the ſame name, in fifty-four degrees twenty-one minutes north latitude, and nineteen degrees fifteen minutes eaſt longitude. It is a handſome large city, fortified after the antient manner, and carries on a conſiderable trade. Between the Old town and the ſuburbs, where the ſtorehouſes of the merchants are erected, runs the river Elbing; and the Old town is divided from the New by a wall and moat. The houſes are high, narrow in front, and built in the old taſte, much like thoſe at Dantzick. The ſtreets are very narrow, occaſioned by the balconies that project into them, and before them are receptacles for all the filth and dirt thrown out of the houſes.

Elbing is one of the Hanſe-towns; and as it is inhabited by a colony from Lubeck, it is governed by the laws of that city; but the burghers have their particular rights and privileges. Here are ten churches, in which divine ſervice is performed. That of St. Nicholas, which is the largeſt and handſomeſt church in Pruſſia, was given up to the Papiſts in 1616. The caſtle, which was built in 1237, was demoliſhed by the burghers in 1454. The fortifications towards the Warder are very ſlight, but on the oppoſite ſide they are in a much better condition; yet it is eſteemed one of the ſtrongeſt towns in Poliſh Pruſſia. Some companies of the crown-army of Poland are cantoned in this town; but the burghers keep guard at the gates, and there is a Pruſſian garriſon in the ſuburbs.

With reſpect to eccleſiaſtical matters, this city is under the juriſdiction of the biſhop of Ermeland, as far as is conſiſtent with the difference of religion, and without prejudice to the rights and privileges of the city; but in civil affairs it is only ſubject to the king.

In 1703, Elbing fell into the poſſeſſion of the Swedes, who laid it under contribution; but the Ruſſians took it from them by ſtorm. It was formerly mortgaged to the elector of Brandenburg, as a ſecurity for the payment of four hundred thouſand rix-dollars; but as the elector did not receive the ſum ſtipulated, the king of Pruſſia, in virtue of the above agreement, took poſſeſſion of the diſtrict belonging to the city.

The province of Ermeland is entirely ſurrounded by the kingdom of Pruſſia. This province belongs to no palatinate, but is entirely ſubject to the biſhop and chapter; ſo that neither the nobility nor the other inhabitants of Ermeland can appeal to any other judicature. Two thirds of this province belong to the biſhop, and the remaining third part to the chapter. Their ſubjects have free recourſe to the ſame courts of judicature as the reſt of the Pruſſians; but they have ſome particular laws to themſelves. They have alſo a provincial diet, to which the nobility, burghers, country judges, and alſo the freemen, are ſummoned. Though the Ermelanders do not aſſiſt at the Pruſſian diets, the biſhop is always preſent, and propoſes whatever is debated concerning his dioceſe, particularly in relation to the taxes, according as they have been agreed upon in a provincial meeting held for that purpoſe, where the Ermelanders generally concur in opinion with the Pruſſian ſtates, and their own biſhop.

The following are the moſt conſiderable places in Ermeland, viz. 1. Braunſberg, a pretty large trading town, ſituated on the Paſſarge, at a ſmall diſtance from its mouth, in fifty-four degrees fifteen minutes north latitude, and twenty degrees five minutes eaſt longitude. It was built in 1255, and received its name from Bruno, biſhop of Prague. It is divided into the Old and New town, and is very populous. The celebrated college of the Jeſuits in this town was formerly a Franciſcan convent. Here is alſo a convent for nuns. The cathedral has ſixteen prebends: it is now under the juriſdiction of the biſhop.

In the beautiful town of Heilſburg, on the Alle, ſtands an elegant ſeat belonging to the biſhop of Ermeland. There is a college of Jeſuits in the town. It is ſaid to have been built in 1244, and was deſtroyed by fire in 1551. Charles II. king of Sweden, had his head-quarters here in 1703.

Keſſel is an elegant little town with a caſtle, has a college

of jeſuits, to which the church of the Holy Linden-tree in Brandenburg Pruſſia belongs. This town carries on a good trade, and is well ſupplied with proviſions.

Beſides the above-mentioned, here is 1. the ſmall town of Putzig, with a ſtrong caſtle. 2. Dirſchon, a ſmall but ſtrong town on the Viſtula, where a provincial court of judicature is held. 3. Schoeneck, with a caſtle, on the river Ters. 4. Stargard, a ſmall town on the ſame. 5. Meve, a town with a caſtle at the confluence of the Ters and Viſtula. 6. Munde, or Weiſſelmunde, a ſtrong fortreſs at the mouth of that branch of the Weiſſel which runs by Dantzick, and can hinder the entrance of ſhips. 6. Pantſko, on a gulf of the ſame name, eighteen miles north-weſt of Dantzick.

SECT. III.

Deſcribing the ſeveral Countries, Provinces, and Duchies of LITHUANIA, SAMOGITIA, COURLAND, WARSOVIA, PALACHIA, POLERIA, RED RUSSIA, PODOLIA, VOLHINIA, and UKRANIA, with an Account of their Situation, Produce, Inhabitants, Towns, Commerce, Manufactures, Religion, &c.

LITHUANIA, called Letwa by the natives, is a very extenſive country, and was united to Poland in 1501. It has Red Ruſſia, Volhinia, and Podolia, on the ſouth; Great Poland, on the weſt; the Baltick, on the north; and Ruſſia, on the eaſt. It is in length about three hundred and ſixty miles, and three hundred and forty in breadth, where wideſt; was formerly almoſt covered with woods, and ſtill contains a great many conſiderable foreſts. It abounds in honey, wax, timber, pitch, tar, buffaloes, wild horſes, wild aſſes, boars, elks, uris, woodcocks, pheaſants, &c.

Great numbers of fiſh are produced in the numerous lakes; but their many lakes and foreſts occaſion the air to be thick and foggy. Here are many flocks and herds; and buckwheat, as well as other grain, is pretty plentiful, ſo that proviſions are cheap, though agriculture is greatly neglected; but money is extremely ſcarce.

The Roman catholic is the eſtabliſhed religion; but Lutherans, Calviniſts, Jews, Turks, Greeks, Socinians, &c. are tolerated. The nobility affect great pomp and dignity, and are exceeding fond of retaining a numerous train of domeſtics and attendants.

This country was governed by its own duke till it was united to Poland by the marriage of the great duke Jagello to Hedwig, the dowager of Lewis king of Poland and Hungary; but each country ſtill retained its own laws, cuſtoms, privileges, dialect, &c. In a diet held at Lublin, in the year 1659, it was more firmly compacted with Poland than before, and a decree was made, that both countries ſhould be under the ſame prince, and form but one ſtate.

With reſpect to their courts of juſtice, the tenth part of what is adjudged in all real actions goes to the judge's bar, and is immediately paid into court. The judge claims half the damages given in perſonal actions, and a Lithuanian nobleman is permitted to compound for murder by paying a fee. Thoſe who are condemned to death, muſt either execute themſelves, or be executed with the moſt excruciating torments.

The common people, the Germans and burghers, in the royal towns excepted, are ſlaves; and ſo exceedingly illiterate, that ſome of them even retain many of their antient idolatrous ſuperſtitions. The poor have only Monday to themſelves, and ſometimes their lords even deprive them of that.

They generally ſpeak the Sclavonic, which is the language uſed in all their courts of judicature; thoſe of Pruſſia and Livonia have the jargon of both their languages.

They have a great mixture of Poliſh, and alſo of the Latin, which laſt is as common here as in Poland, and ſpoke by people of all ranks, inſomuch that Michalon, one of the authors, makes no doubt of their being deſcended from the old Romans; and the rather, becauſe the Lithuanians had, not long ſince, the ſame cuſtoms and ſuperſtitions; as burning the dead, divining by augurs, and the like.

They commonly eat a coarſe black ſort of bread, made of rye, the ſooty wheat unwinnowed, and barley-ears, all ground together. They have fiſh, fleſh, and fowl; and what cattle or poultry they think they ſhall not be able to keep in the winter, they uſually kill in Autumn, and preſerve with ſalt. Being for the moſt part good markſmen, they maintain their families by it, in a great meaſure. In every houſe in the country they have four or five handmills to grind their corn.

They have alſo a ſort of very long wooden trumpet, which when they ſound, ſo deafens bye-ſtanders, that they do not recover their hearing for a good while.

Country people have a ſort of waggons or carts, all of wood, and made very light, by raddling or interweaving boughs with one another; and their coverings are commonly the ſame, not much unlike the colliers or lime-burners carts in England. The wheels are of one flat and entire piece of wood; and as the axletrees are never greaſed, a number of them together make an intolerable ſqueaking noiſe.

They build their houſes round, and therefore call them towers. They are narrow, and open at top, to let out the ſmoak and ſtench; and they are generally covered with boards, ſtraw, or bark of trees. In theſe the people and their cattle live together, by which both often receive hurt.

The men, in the winter, beſides other buſineſs, ſtuff beds with chopt feathers and ſtalks that grow in the marſhes; and part of the women's buſineſs within-doors is, to weave coarſe cloth. Huſbandry is followed here without-doors as in other countries. For fear of the incurſions of the Tartars, the Lithuanians ſecure all their corn, ſtraw, ſalt meat, and, in ſhort, all their proviſions, in caves, which they dig in the foreſts, and hide the entrance with the bark and branches of trees

Vilna is the firſt palatinate of Lithuania: it comprehends three large diſtricts, and is divided into two equal parts by the river Wilia, which afterwards paſſes through Samogitia and Pruſſia, by the name of Ruſſe, into the Baltic, and has only three ſenators, viz. the biſhop, palatine, and caſtellan of Vilna. The name is derived from the capital, not only of this palatinate, but of Lithuania, namely,

Vilna, Vilda, or Wilna, which the inhabitants call Vilenſki, and the Germans Wilde. It ſtands at the conflux of the Vilia and Wiln, ſeventy Engliſh miles north-eaſt from Grodno, one hundred and fifty-two eaſt from Koningſberg, and one hundred ſouth from Mittaw, one hundred and thirty-one ſouth from Riga, two hundred and ſeventeen north-eaſt from Warſaw, two hundred and thirty-five eaſt from Dantzick, one hundred and thirty Poliſh miles north-eaſt from Cracow, and one hundred eaſt from Smolenſko. It was founded in 1305. It has a large populous town, with a good trade, but chiefly carried on by foreigners, the natives being poor and lazy. Their houſes are ſo ſmoaky, and the inhabitants who are ſlaves to their noblemen and their bellies, eat ſo much garlic and onions, that half of them are blind before they grow old. They are much given to quarrels, and, if they murder a foreigner, pay only ſixteen dollars. The ſtreets are badly paved, dirty, and ſwarm with beggars; for here is no hoſpital. Moſt of the houſes are low and mean, and built of wood, except thoſe of ſome foreign merchants; the great duke's palace, the cathedral and churches, are all built of ſtone; as are alſo, the Bernardine monaſtery, the univerſity, and the Moſcovite company's warehouſes, where they keep their ermines, ſables, &c.

This being the moſt conſiderable ſtaple for trade, is the ſeat of the chief court of judicature for Lithuania, who meet yearly at this place and at Minſk, by turns. All the inhabitants, except the members of the tribunal are under the juriſdiction of the palatine, who is governor of the city. Here are a ruinous old caſtle upon a hill, and another much more beautiful one of a modern ſtructure at the lower part of the town; and in the duke's palace there is a well-furniſhed arſenal, or armoury. and a good library. The cathedral, dedicated to St, Staniſlaus, ſtands in the lower caſtle: it has a large ſilver tomb of St. Caſimir, who was canonized by Pope Leo X. Its revenues are conſiderable; and though the archbiſhop is a Roman catholic, he challenges juriſdiction over all the biſhops of Poliſh Ruſſia who are of the Greek religion; which is, however, diſputed by the biſhop of Kiow, who ſtiles himſelf metropolitan of Ruſſia. Here is a great bell, which requires twenty-four men to ring it, which was given by king Sigiſmund III. who alſo gave the ſilver tomb, and an altar of the ſame metal. The Jeſuits college here was founded in 1579, by king Stephen, with profeſſors of divinity, law, philoſophy, the Hebrew language, and philology; and honoured with the title of an univerſity by pope Gregory XIII.

The town is inhabited by Poles, Ruſſians, Germans, Tartars, and other nations; as well as by the Lithua-

nians. The ſuburbs are as big as the town, and full of the like timber cottages, which have not partitions, but conſiſt only of one room, common to the family and their cattle. Both the caſtles are built of bricks, and flanked with towers. The fortifications are but indifferent, and its gates are only ſhut in time of war. The proteſtants had a church and college here formerly, but were deprived of both by a decree of the diet of Poland, which, nevertheleſs, left the Greeks in poſſeſſion of their monaſteries, churches, and the free exerciſe of their religion.

The Tartars, who live along the banks of the river Vaca, which does not run far from Vilna, have waggons for the ſervice of travellers. They live according to their own laws, without giving cauſe of complaint, and own the king of Poland for their ſovereign. Great numbers of them reſide in the villages of a valley three miles from hence in the way to Koningſberg. Foreign merchants ſeldom come hither but in the winter, when the marſhes are frozen, and they can bring their goods on ſledges over the ſame. There was ſo great a famine in theſe parts, in 1571, that in Vilna alone there died of it no leſs than twenty-five thouſand; here was a great tumult in 1581, on account of the biſhop's zeal in burning the books of the Lutherans, Calviniſts, and Ruſſians: in 1610, the Ruſſians, to be revenged for the miſchief done by the Poles at Smolenſko, took this place, and ſet fire to it, by which four thouſand ſeven hundred houſes were reduced to aſhes, together with ſeven catholic and three other churches: ſo that the queen of Poland had but juſt time to eſcape, with her attendants, in boats; of which ſome, nevertheleſs, were drowned. In 1644, the ſcholars raiſed a great tumult, which could not be appeaſed till major Oginſki came with four hundred ſoldiers, of whom ſeveral were killed in the ſkirmiſh, together with the major himſelf.

Eighty miles north-eaſt from Vilna, and eighty-eight ſouth-eaſt from Riga, is the town of Braſlaw; and the town of Wilkomitz is ſituated on the river Swiera.

The province of Troki has Novogrodoc to the ſouth, Samogitia to the north, Vilna to the eaſt, and the kingdom of Pruſſia to the weſt. It is divided into four diſtricts; but the palatine and the caſtellan of the city, which gives name to it, are the only two ſenators.

The town of Troki, which gives name to the palatinate, is large, and built of wood, and ſituated among lakes, marſhes, &c. It has two caſtles, and was formerly the reſidence of the dukes of Lithuania. Here are alſo the towns of Birze, Kowno or Conno, Calvarie, and Merocz.

The town of Grodno is large and handſome, and, next to Wilna, the beſt in Lithuania: it is ſituated in fifty-three degrees, thirty minutes, north latitude, and in twenty-three degrees, fifty-two minutes, eaſt longitude. It ſtands on the river Niemen, partly on an eminence, and partly on a level, and is encompaſſed with hills. The old caſtle, which is ſurrounded with a deep moat, is fallen to decay, ſo that no more than one wing of it is inhabited. The new palace is a large, regular, and beautiful ſtructure, conſiſting of two ſtories; the great hall, that for the ſenate, and the chapel, are its fineſt apartments; and in the court ſtands the chancery or ſtate-office, which is an elegant ſtructure.

In this city are nine Popiſh and two Greek churches, and alſo a ſynagogue for the Jews, which is built of ſtone. The Jeſuits college has a ſplendid church, and that belonging to the Carmelite nuns is likewiſe very magnificent. The palace of prince Radzivil is a very large ſtructure, and that of the Sapichan family is a ſuperb edifice: both of them ſtand in the market-place, which, together with the caſtle-ſtreet, and the area before the palace, are clean and well-paved; but the other ſtreets are generally dirty. In 1673, it was enacted that, for the future, every third general diet ſhould be held here; and during the ſeſſion, the concourſe of people has been ſo great, that four apartments, with the ſtables adjoining to them have been let for two hundred and ſixty ducats a month. Here are alſo held a provincial diet and a court of judicature.

The province of Poleria, in Lithuanian Ruſſia, contains ſeveral large moraſſes, that reſemble ſo many extenſive lakes.

The principal towns in this palatinate are, 1. Brzeſk, which is a ſtrong, but not a very large town, ſituated on the river Bug, and a caſtle built on a rock, near which is a royal palace with a fine garden. In this town is a famous ſynagogue, to which the Jews reſort from all the countries of Europe, both on account of ſtudy, and preferment among their own people. A provincial diet is held here, and a Greek biſhop reſides in this town. 2. Pinſk, where a provincial diet is alſo held, is a large, handſome, trading town, on the river Pina, ſituated in the midſt of extenſive moraſſes, and inhabited not only by the Jews, who have a ſchool here, but alſo by people of many other religions, eſpecially by the Greeks, who have a biſhop here. The leather dreſſed in this town, after the Ruſſian manner, is eſteemed the beſt in the whole kingdom.

Black Ruſſia is alſo comprized in Lithuanian Ruſſia. This province is called, by the Poles, Rus Czarna, which includes the palatinate of Novogrodec and contains four diſtricts, the principal place of which is, Novogrodec, a town ſituated on a hill, in which are ſeveral popiſh and Ruſſian convents, with a college of Jeſuits. It has a provincial diet, and an inferior court of judicature: an high tribunal, after the model of that of Wilna, which continues ſitting five months in the year, is held alternately here and at Minſk.

There are four palatinates in White Ruſſia, called, by the Poles, Rus Biala, the moſt conſiderable places in which are, 1. Minſk, which is ſeated on the river Swiſloez, in the palatinate of Minſk, and has two caſtles. This town was taken by the Ruſſians in 1656. A provincial diet is held here, beſides a high tribunal once in two years. 2. Mohilow, in the palatinate of Miſciſlaw, is a handſome commercial town on the river Nieper, and the inhabitants carry on a conſiderable trade with the Ruſſians. In 1654, Mohilow was taken by the Ruſſians; and though it was inveſted by the Poles in 1660, they were obliged to raiſe the ſiege. It was, however, taken from the Ruſſians in 1662 by the inhabitants, who ſent off part of the garriſon by ſtratagem, and then made the reſt priſoners of war. 3. Poloc, a fortified town on the river Dawina, and in the palatinate of Poloc. It has two ſtrong caſtles, and carries on a conſiderable trade. In 1563, this town was taken by the Ruſſians, but retaken by the Poles in 1579. The Jeſuits have a college here, and the Greeks an academy for the ſtudy of philoſophy. A popiſh Greek biſhop alſo reſides here. In this town are likewiſe held a provincial diet, and a court of judicature.

The Livonian palatinate, called by the Poles Woicwodztwo Inſlantſkie, was formerly a part of Livonia, and is alſo termed the palatinate of Wend; the Poles, on delivering up Livonia to the Swedes, by the treaty of Oliva, reſerved this part, which has a biſhop, a palatine, and a caſtellan, and ſends ſix deputies to the general diet. It has alſo five or ſix ſmall towns within its diſtrict.

The province of Samogitia, called by the Poles Zmuyds, or Xieſtwo Zmudſkie, is bounded on the north by Courland, on the eaſt by Lithuania, on the ſouth by Regal Pruſſia, and on the weſt by the Baltick Sea, it being about an hundred and ſeventy miles in length, and about an hundred and twenty-five in breadth; but as the two territories are much contracted, this is only to be underſtood of its largeſt and broadeſt parts.

This country has for the moſt part a marſhy ſoil, and abounds with rivers and lakes, which at ſome ſeaſons overflow the land. Here are alſo inacceſſible mountains; the country is much over-run with woods, in which the inhabitants find great quantities of honey; for it is ſaid that almoſt every tree has a ſwarm of bees; and their wax is whiter and purer than either that of Lithuania or Ruſſia. We are told that though the arable land is very ſtiff, the inhabitants uſe none but wooden plough-ſhares; becauſe one of their ſtaroſtas, introducing iron ſhares, and the ſeaſon afterwards proving leſs kindly than uſual, they had the weakneſs to attribute the cauſe ſolely to this change; upon which he was forced to let them return to the uſe of the wooden plough-ſhares, for fear the prohibition ſhould cauſe an inſurrection. Samogitia abounds with cattle, and has a breed of horſes, which are ſprightly, ſwift, and hardy, though ſmall.

Samogitia anciently belonged to Lithuania; but in the year 1404, was ceded to the knights of the Teutonic order: about four years after, it was taken from them by Uladiſlaus Jagello, king of Poland; after whoſe death it returned again to them; but in 1525, when Albert of Brandenburgh was made hereditary duke of Pruſſia, it returned to the crown of Poland. The Chriſtian religion had been introduced for ſome time, and it was made a biſhop's ſee in 1413.

There is but little difference between the peaſants of this country and thoſe of Lithuania; but the former are not ſo laborious, and conſequently enjoy leſs plenty. Many of them, inſtead of bread, eat turneps, which grow wild, and are of a prodigious ſize. They are robuſt, bold, and nimble; and it is not uncommon for people to live to a hundred or a hundred and twenty years of age. The

peaſants live in cottages, for the moſt part near lakes and rivers, and theſe are covered with thatch or boards. They are low, and of an oblong ſquare, with a hearth in the middle; their furniture is but mean, and they and their cattle lodge together in one room.

Perſons in good circumſtances drink out of horn cups, and eat out of wooden platters. However, moſt of the inhabitants differ but little from the Lithuanians in their manners, habit, or language.

There are about twenty-eight towns in Samogitia; but all of them are ſmall and ill built; among theſe is Mednicki, where the biſhop of Samogitia reſides, and Roſienie, where the provincial diet and a court of judicature are held.

The duchy of Courland, which is dependant and under the protection of Poland, is bounded on the weſt by the Baltick, on the north by the gulf of Riga and Livonia, towards the eaſt by Lithuania Proper, and by Samogitia towards the ſouth. It extends fifty German miles in length, and ſome places twenty, and in others hardly ten German miles in breadth; but towards the ſouth-weſt it gradually terminates in a point of land, or promontory.

Except in a few diſtricts, the ſoil is heavy, fat, and clayiſh, and the country abounds in woods and ſwamps: hence the roads of Courland are remarkably bad. In ſpring and autumn the meadows and low grounds are under water; but this only ſerves to improve the land. Some ſkilful farmers have drained ſeveral of the fenny parts of Courland, and converted them into what they call ſtaungens: that is, land which is ſown three years ſucceſſively with ſummer ſeed, and then left uncultivated for a like term. Courland, however, contains good arable land and fine paſtures, and produces great quantities of excellent flax. Here is alſo plenty of ſea fiſh, and the woods abound with elks, bears, and wolves. Courland has alſo its mines of iron ore and other minerals, its quarries of ſtone, chalk, and ſtucco, and its mineral ſprings. Amber is likewiſe found on the coaſt.

The Windau and Aa are the principal rivers in this country; the former riſes in Samogitia, and diſcharges itſelf into the Baltick near the town of Windau; and the Aa, which has alſo its ſource in Samogitia, empties itſelf into the gulf of Riga. The ſmall rivers are the Anger, the Abau, the Berſe, the Bartau, the Muſſa, and ſome others.

Moſt of the inhabitants of Courland are Germans and Lettonians; but the latter are not only the tenants and vaſſals of the former, but in a manner their ſlaves. Hence there are two languages uſually ſpoken in Courland, the German and the Lettonian.

So early as the year 1522, the reformation, or Lutheran religion, took place in this duchy; and in 1532 Courland joined with Riga in a particular religious league; ſo that when this country fell under the dominion of Poland, all the inhabitants were Lutherans, and they had no papiſts amongſt them. But the miſunderſtandings which afterwards happened between the dukes and nobles of Courland occaſioned ſeveral orders to be iſſued by the court of Poland, and judiciary commiſſions to be deputed from thence, by which means a fatal gap was opened, by which popery entered.

The Roman catholics were at firſt only permitted to have churches in this country; but they ſoon raiſed themſelves to a level with the Lutherans. In 1717 and 1727 they received ſome additional privileges, and ſeveral of the nobility who had embraced the doctrines of popery, exerting their zeal in order to introduce it into the churches within their juriſdictions, greatly contributed to its ſpreading over the country. The marriages of the dukes of Courland with princeſſes who were Calviniſts, alſo introduced that religion into the duchy; but the Calviniſts are excluded from all employments in the ſtate.

Great privileges are enjoyed by the nobility of Courland, and the more antient claſs of them is carefully diſtinguiſhed from the new; for by an old law, which has been frequently confirmed, the former alone are capable of filling poſts of honour. The noblemen of Courland generally embrace a military life. They enjoy in Poland the ſame privileges as the natives, and a Poliſh nobleman has the ſame indulgence in Courland. However, neither of them enjoy that privilege till they are ſettled in thoſe countries; and indeed a Courlandiſh nobleman at preſent ſeldom holds any eminent poſt in Poland, except that of the law, unleſs he be a papiſt.

The nobility of Courland have no ſeat in the general diet of Poland. But a noble Courlander is proprietor of all the mines diſcovered in his eſtate: he is not to be taken into cuſtody, or his effects confiſcated, till he has been previouſly ſummoned and legally convicted before a court of judicature: his houſe is an aſylum, from which no perſon can forcibly be taken: his tenants, vaſſals, and domeſtics are exempted from paying any toll, cuſtom, or exciſe; and no ſoldiers are to be quartered on the eſtate of a Courlander. No new created nobleman is qualified to hold a poſt of honour, or to be a magiſtrate till the third generation; nor can he be ſent as an envoy, unleſs he has diſtinguiſhed himſelf in the ſervice of his country, or is recommended by ſome of the ancient noble families.

Among other privileges, the nobility have an unlimitted power over their vaſſals, which extends even to life and death; but before they can puniſh a vaſſal with death, they are obliged to hold a regular court, under the penalty of paying a hundred florins; each florin equal to fourteen-pence ſterling. Hence the reſpect paid by the peaſants to their lords riſes almoſt to adoration, and whatever theſe require from them they are obliged to give up, and immediately obey their commands without murmuring. The nobility are all on a level, and have, in conjunction with the duke, the patronage of the pariſh churches; the duke being patron of ſome, and the nobility of the others.

In war-time, they appear on horſeback, according to the ſervice they owe the duke as his vaſſal: but when ſuch a general military appearance is required, the duke is obliged to march at their head. They indeed chuſe their own colonels and other officers; but theſe are all under the duke's command. They are, however, not obliged to march beyond the frontiers of Couriand, except the duke voluntarily agrees to paſs beyond thoſe limits.

Diſputes between the duke and his nobles are decided only by the king of Poland in perſon. The judges here are four captains or ſuperintendants; two of which are for Courland properly ſo called, and two for Semigallia; but from theſe an appeal lies to the high council, in which the duke preſides in perſon, and even from this council a ſecond appeal may be made to the government of Poland, if the caſe is ſufficiently important.

The whole duchy is divided into Courland Proper on the weſt ſide, and Semigallia on the eaſt ſide of the river Maſſa; and each of theſe into captainſhips: the firſt captainſhip of Courland Proper is Goldingen, ſo named from its chief town, which was formerly one of the Hanſe. It is not conſiderable at preſent, except for its large juriſdiction, though it is adorned with a very fine caſtle. This town ſtands on the river Wataw, which falls into the Baltick thirty miles off, and is ſeventy ſouth-weſt from Riga.

The town of Windaw, called by the inhabitants Kieſe, hath a harbour on the mouth of the Baltick, ninety miles north of Memel, and forty miles north-weſt from Goldingen. It is reckoned the capital city of a palatinate of the ſame name, has a caſtle, formerly the reſidence of the Livonian knights, and the palace where the ſtates of Courland held their aſſemblies: but is now much decayed, being only ſupported by building ſhips for the duke, and by its trade in pitch, tar, wax, &c. which it exports.

The town of Libaw lies on the coaſt thirty miles ſouth-weſt from Goldingen, and forty-two north of Memel, and has a good road and harbour. And Piltyn, or Pilten, on the river Anger, eighteen miles north-weſt of Goldingen, is a palatinate, as well as the ſeat of the biſhop of Courland. About fifty miles eaſt of Goldingen is the captainſhip of Tuckum, ſo called from its chief town. The eaſtern diviſion of Courland, namely Semigallia, has Livonia Proper on the north, the palatinate of Ploczkow on the eaſt, and Samogitia on the ſouth.

On the river Muſſa, fifty-two miles ſouth of Riga, ſtands Mittaw, the capital of Semigallia, and indeed of the whole duchy, as well as the ſeat and burial-place of its dukes, who have a magnificent caſtle, which is fortified by two baſtions encompaſſed by marſhes, and has always a ſtrong garriſon. The town is alſo well-fortified, though meanly built, the houſes being partly of brick, partly of timber, and ſome of mixed meterials: it is large, and the ſeat of the diets of the duchy; the inhabitants are only between three and four thouſand. It was ſeveral times taken by the Swedes, particularly by Guſtavus Adolphus in 1621, again in 1701, and alſo by the Ruſſians in 1705, but as often recovered. The Aa river, on which the caſtle ſtands, paſſes by the city to the Dwina, with a deep channel, which might be navigable, if the people of Riga had not choaked up the mouth of it, for their own intereſt.

The town of Bauſke, ſeventeen miles ſouth-eaſt of Mittaw, is another ſtrong town, on the river Muſſa, or Pluſſa, with a caſtle built on a rock; here is a large garriſon. It was taken by the Swedes in 1701, with the king

of

of Poland's magazines, valued at three hundred thouſand crowns, and he demanded ſixty thouſand from the duchy, beſides vaſt quantities of proviſions. In 1705 the Czar ſurpriſed this town by ſtratagem, and forced the Swediſh garriſon in the caſtle to ſurrender, juſt after a victory he had obtained over them near Maſiendorf in this duchy. The Swedes repoſſeſſed it, but quitted it, with the whole duchy, in 1709, after levying from the inhabitants large ſums of money.

Warſovia, or the duchy of Warſaw, called by the Poles Mazouzſe, may be reckoned the moſt conſiderable part of their king's dominions, becauſe it is honoured with the reſidence of the king, and vaſt numbers of the nobility; Pruſſia on the north, Upper Poland on the ſouth, Lower Poland and Cujavia on the weſt, and Polachia, which parts it from Lithuania, on the eaſt. It is about a hundred and twenty miles in length from ſouth-weſt to north-eaſt, and about ninety in breadth; though ſome make the former a hundred and thirty, and the latter a hundred and twenty. It has the benefit of ſeveral navigable rivers, eſpecially the Weiſſel, which runs through the ſouth part; and the Bug, which paſſes quite croſs from eaſt to weſt.

The country is plain, and the ſoil fruitful, yielding plenty of corn, cattle, fiſh, and fowl. It was formerly governed by Princes of its own, but in 1526, fell to the king of Poland. The people, who are generally warlike, ſpeak the ſame language with the Poles, only they differ in a few guttural accents; and their manners, habits and religion are much the ſame. It is divided into three palatinates, of which Maſſovia Proper, has eight ſenators, and is ſubject in ſpirituals to the biſhop of Poſen.

Warſaw is the capital of this province, and the metropolis of all Poland: it is ſituated on the weſt ſide of the Weiſſel, in the very centre of Poland, a hundred and twenty miles eaſt of Gneſna, and weſt from the confines of Lithuania, a hundred and fifty-one ſouth from Koningſberg, a hundred and fifty-four ſouth-eaſt of Dantzick, and a hundred and thirty-three north of Cracow and Poſen, three hundred north-eaſt of Vienna, and four hundred and fifty ſouth of Stockholm. Dr. Connor places it three Poliſh miles (each of which are four Italian miles) from Leſſer Poland, twenty-four from Landſcut, as many north-eaſt from Lublin, twenty-nine ſouth eaſt from Thorn, and thirty north from Sandomar. It is a large, handſome, populous, and trading city, defended by a double wall, and a ditch. The kings of Poland uſually keep their court here in a noble large ſquare palace, built by Sigiſmund III. and beautified by his ſucceſſors; and the grand diets of the kingdom have their ſeſſions here.

The city is divided into four parts, viz. the old and new towns, the ſuburbs of Cracow, and the Brag or Prag. The chief church, dedicated to St. John Baptiſt, is very fine; as are the arſenal, the caſtle, the market-place, and other public buildings. There is a wooden bridge of excellent workmanſhip over the river, and beyond it the king's palace, called Viaſdow, where the general diet meets. It was built by Ladiſlaus VII. and ſtands amidſt delicate gardens and groves; and not far from it, in the ſuburb called Craeow, there is a ſmall chapel erected by the king of Poland, in token of a victory over the Moſcovites; wherein is a ſepulchral monument of Demetrius Suiſcius, great duke of Moſcovy, who, being taken priſoner, died a captive in Poland. Goods are brought to this city by the neighbouring rivers, and ſent from hence to Dantzick.

The king of Sweden took poſſeſſion of this city in 1704, put a garriſon into the caſtle next year, when he demanded two thouſand four hundred florins a week for their ſubſiſtence; but in 1706, king Auguſtus recovered both the town and caſtle, and the town paid him fifty thouſand rix-dollars to be exempted from plunder. In 1705, the Swedes defeated the Saxons and Lithuanians near this city, when the Saxon general Patkul was taken priſoner; and next year Staniſlaus, king Auguſtus's rival, was crowned here with his queen. In 1707, the Moſcovites plundered the palaces and gardens of the king and nobility here, and ſent the ſtatues, &c. to Moſcow. Next year a plague raged here, that is ſaid to have carried off near thirty thouſand people; and a fire broke out, which continued burning nine days, and almoſt reduced the whole city to aſhes. In 1712, king Auguſtus returned hither, and held a general diet, which re-acknowledged his title. In 1715, he ordered this city to be fortified with intrenchments, to prevent ſurprize by the Swedes, and their allies.

A gentleman who ſpent ſome time in this city, ſays, he obſerved the ſame politeneſs here as at Paris; that the king maintains a ſet of French comedians, and frequently gives balls and concerts, with noble feaſts, for the entertainment of the nobility: and that the ladies, eſpecially, are paſſionately fond of muſic and plays; are very amiable, witty, and ſprightly; and have a moſt delicate taſte for diverſions of every kind.

Near the village of Wola, which is about half a league from this city, there is a plain, where the nobles meet, and incamp in tents, for the election of a king; and about a league from the city there is another palace, called Villa Nova, that was built by the late king John Sobieſki.

The city of Czerſko, or Czeſtochow, is alſo ſituated on the weſt ſide of the Weiſſel, eighteen miles ſouth from Warſaw. It is the capital of its palatinate, and is reckoned the ſtrongeſt city in this part of the country, it having a fortreſs, wherein is kept that rich treaſure called the Virgin's: and the nobility ſend their beſt effects hither in time of war.

The town of Wiſchgood is ſeventeen miles from Ploczko, and thirty-three north-weſt from Warſaw. Lumſa is a large city on the Narew, about twenty miles from Novogrod. Pultowa is twenty-ſeven miles north-eaſt of Warſaw.

The province of Poluchia hath Warſaw on the weſt, Lithuania on the eaſt, the palatinates of Polena and Lublin on the ſouth, and the kingdom of Pruſſia on the north. It is a hundred and twenty miles long, from north to ſouth, and thirty in breadth from eaſt to weſt.

The chief places are, 1. Auguſtaw, a handſome town on the lake Auguſtine. 2. Bielez, a large town on the river Biela. 3. Bialyſtock, a ſmall town, of which great part was deſtroyed by fire in the year 1753. 4. Tykoczin, a conſiderable town, with a handſome caſtle, on the river Narew.

Southward of the palatinate of Novogrodec, is that of Polena, betwixt Red Ruſſia on the ſouth-eaſt, Lublin on the north-weſt, and that of Novogrodec on the north. It is overgrown with woods, has many lakes and pools; is two hundred and thirty miles from eaſt to weſt, eighty from ſouth to north.

This palatinate has two ſenators, viz. the palatine and caſtellan of its capital, which is Brieſcia, a large wooden city, which has a bridge over the river Bug, on the confines of Lithuania, fifty miles ſouth of Bielik, and ninety-five eaſt of Warſaw. It is fortified with a ſtrong caſtle, built on a rock, and waſhed by the river Muchavecz. Here is an academy, the moſt famous in Europe for Jews, who frequent it from Italy, Germany, Moravia, Sileſia, &c. Here is a royal palace of modern architecture, with variety of pleaſant gardens, without the city. 2. Puiſko is another timber-built city, ſeventy-five miles eaſt of the former, on the river Peripet, which paſſing by divers towns in Ruſſia, falls into the Boriſthenes. 3. Biela, twenty miles ſouth-eaſt of Brieſcia.

The diſtrict of Red Ruſſia is near a hundred and eighty miles in length, and upwards of a hundred in breadth, fertile in ſome parts, but mountainous in others, and in general well watered. It is bounded on the ſouth, by Hungary and Moldavia; on the eaſt, by Tartarian deſerts; on the north, by White Ruſſia; and on the weſt, by Little Poland.

Here are three palatinates in Red Ruſſia, viz. Lemberg, Chelm, and Belz. That of Lemberg has nine ſenators, and is ſituated on the ſouth part of Red Ruſſia, eaſt of Cracow, and north of Hungary.

Lemberg, or Leopold, is the capital of the palatinate of the ſame name, and alſo of all Red Ruſſia. It is ſituated among hills, on the river Peltew, at the diſtance of a hundred and thirty-five miles ſouth-weſt from Warſaw, and is the ſee of an archbiſhop, who is deemed both a ſpiritual and temporal lord.

The city is large, well-built, and well-fortified, having two caſtles, one within the walls, and one without, on a riſing ground, which commands the town; both which, together with the city, were founded by Leo, duke of Ruſſia, about anno 1289. The churches here are generally fair and well-built, and abound with coſtly ornaments of all kinds. Here is an academy, ſupplied by profeſſors from that of Cracow; and learned men are much encouraged here. The Armenian Roman catholics, have dwelt here time out of mind, and are wholly governed by their own prelate: they enjoy great privileges, on account of the conſiderable commerce they maintain with the Perſians, and other eaſtern nations. They are not only provided with fiſh for their own conſumption, from the many ports belonging to it, and from the neighbouring rivers, but ſalt great quantities, and tranſport them over Poland. Barbels are taken in great numbers in

Roxolania. Here is kept a very famous winter-fair, to which great numbers of Hungarian, Moldavian, and, in time of peace, Turkiſh merchants, reſort.

Other places of leſs note are, 1. Javarow, thirty-five miles weſt from Lemberg. 2. Premiſlaw, a populous, pleaſant, trading, and well-built city, and an epiſcopal ſee, on the river Saa, fifty-three miles weſt from Lemberg: it is defended by ſtrong walls. 3. Jaroſlaw, on the ſame river, ſixty-two miles weſt from Lemberg. It is famed for a fair held on Lady-day, to which are uſually brought four hundred thouſand black cattle, and two hundred thouſand horſes. 4. Reſovia, on the river Wiſtoch, ſix miles ſouth-weſt of Lanſut: it has a ſtrong caſtle, an annual fair, and a linen manufactory. 5. Lencut, or Lanſut, eighty-five miles weſt from Lemberg.

Pocutia, or the diſtrict of Halicz, is the name given to the ſouth-eaſt part of Red Ruſſia. It has the mountain of Tranſylvania on the ſouth and weſt, and Moldavia on the eaſt, and is divided into two parts by the river Nieſter, which riſes in it.

The town of Halicz. at the conflux of the Nieſter and Prut, is ſituated forty-two miles ſouth-eaſt from Lemberg. It was once the metropolis of a kingdom, then the capital of a duchy, and afterwards the ſee of an archbiſhop, which hath been ſince tranſlated to Lemberg, ſo that now it is greatly fallen from its ancient ſplendor. The other towns are, 1. Croſna, on the river Wiſlock, eighty-four miles ſouth-weſt of Lemberg. 2. Sniatyn, on the river Prut, and the confines of Walachia and Moldavia, forty miles ſouth-eaſt of Halicz: it is a wooden palliſadoed town.

The town of Chelmiſin the palatinate of the ſame name. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Lemberg, and is ſituated a hundred and ten miles ſouth-eaſt from Warſaw. Here is alſo the town of Kraſnoſtow, on the Vieprz, which has a court of judicature, and is the reſidence of a ſtaroſta, and of the biſhop of Chelm.

The following towns are in the palatinate of Belz, viz. 1. Horodla, where a provincial diet and court of judicature are held, and a ſtaroſta reſides. 2. Rava, a ſmall town. 3. Belz, a conſiderable town, from which the palatinate receives its name. 4. Zamoſki, which is ſtrongly fortified, has many conſiderable privileges, contains a charitable foundation called Mons Pietatis, and ſeveral churches.

Caminiec, called by the Poles Kaminiet Podolſki, is watered by the river Smertick, and is ſituated about one hundred and ten miles below the Dineſter. The city of the ſame name is the capital of the province, is two hundred and twenty-four miles eaſt from Cracow, and two hundred and thirty ſouth-eaſt from Warſaw.

It is a populous, well-built city, ſurrounded with high rocks, beſides being fortified with walls, a deep, broad, and ſteep ditch filled with water by the river, which almoſt ſurrounds it, and by a very ſtrong caſtle; ſo that it is the ſtrongeſt place on this ſide, and uſed to be reckoned one of the keys of Poland. In the reign of king Sigiſmund III. it was taken by the Coſſacks, by capitulation. It has been attacked ſeveral times by the Walachians, Turks, and Tartars.

In 1669, it ſuffered miſerably by fire; and in 1672, was taken by the Turks, who kept poſſeſſion of it, and thereby often made inroads to Poland, and carried away vaſt numbers of captives; till it was agreed to be ſurrendered by the peace at Carlowitz, in the year 1609, and evacuated next ſpring to the Poles; when the diet reſolved, that this town and Podolia, ſhould be free from taxes, for ten years. It is the ſee of two biſhops, one a papiſt, the other an Armenian. The Greeks of Podolia pleaded to be reſtored to their churches, but this was not granted.

Lower Podolia, which is the eaſt part, and alſo called the palatinate of Braclaw, from its chief town, on the river Bog, forty miles from the confines of Moldovia, and ninety-two eaſt from Caminiec. It was taken by the Turks in 1672; but reſtored in 1699, by the treaty above-mentioned.

In this diſtrict are alſo the following places, viz. 1. Winnicza, on the ſame river, fifty-four miles north-weſt from Braclaw. 2. Zbaras, a little city on the frontiers of Lower Volhinia, ten leagues north from Braclaw. 3. Humarn, about five leagues weſt from the frontiers of Lower Volhinia.

The diſtrict of Volhinia lies eaſtward of the palatinate of Chelm, and is divided into upper and lower palatinates: it is three hundred and ten miles in length from ſouth-eaſt to north-weſt, and a hundred and ninety miles in the broadeſt part.

The Upper Volhinia, called alſo the palatinate of Luſuc, or Lucko, from its chief town, has Chelm and Belcz on the weſt, Poleſia on the north, Podolia on the ſouth, and the Ukrain on the eaſt. It is a plentiful country, near two hundred miles in length, and a hundred in breadth.

The chief town of this palatinate ſtands on the river Ster, near a lake, which encompaſſes part of the caſtle, ninety miles north-eaſt from Lemberg. It is a large city built of timber, and the ſee of a biſhop, ſuffragan to the archbiſhop of Gneſna, but is chiefly inhabited by Jews, Armenians, and other eaſtern people, who traffic in theſe countries. The cathedral and chapter-houſe are in one of the caſtles, there being two built on the hills near their city. A Ruſſian biſhop alſo reſides here.

Here are alſo the following towns of leſs note; namely, 1, Pilaveze, on the river Bug, two leagues from Chimielnich. 2. Krzemence, the capital of Cremen, thirty-five miles ſouth-eaſt from Luſuc. 3. Ulodimir, or Weldzimiers, on the river Lug, forty-eight miles from Luſuc. It is the reſidence of a Ruſſian biſhop, with a conſiderable juriſdiction. 4. Brodi, a ſtrong town, which has a collegiate church and a public academy. 5. Olika, twenty miles eaſt from Luſuc, with the title of a duchy; it is adorned with a fair cathedral, and has an academy. 6. Conſtantinow, ſeventy-five miles north from Caminiec, ſtands near the ſource of the river Slacz, and is adorned and defended by a well-fortified caſtle.

Lower Volhinia, commonly called the palatinate of Kiow, together with Lower Podolia, comprehended in the Ukrain, lies eaſt from the Upper Volhinia; and the river Boriſthenes, or the Nieper, paſſes through the middle of it, from north-weſt to ſouth-eaſt, dividing it into two parts, of which only the weſtern is now ſubject to Poland; the eaſtern being under the Ruſſians: the former is fruitful, but the latter, from the Tartar incurſions, is a mere deſart.

Ukrania is a large country, bounded on the north by part of Poland and Ruſſia; on the ſouth, by Little Tartary; on the eaſt, by the Oczakow Tartars; and on the weſt by Moldavia. The name Ukrain is Sclavonic, and ſignifies a frontier, which it really is to the Turks and Tartars. This is the country of the Coſſacks, who have their name from Koſa a Scythe, their uſual weapon, or Coſa, which in the Ruſſian language ſignifies a free-booter, or plunderer. They were originally a crew of diſſolute rovers, that aſſembled together, from the frontiers of Ruſſia, Volhinia, and Podolia, to practiſe piracy on the Black Sea. Their chief habitation was betwixt the rivers Nieſter and Nieper; but they extended themſelves a great way eaſt from the latter. The Coſſack language is a dialect of the Poliſh, and is full of diminutives, and pleaſant expreſſions. Their common people are of the Greek church; but the better ſort are generally Romans, or proteſtants.

Their firſt conſiderable appearance, as an united body, was in 1548, in the reign of Sigiſmund I. king of Poland, when they called themſelves volunteers, and aſſembled, to the number of ſix thouſand, for defence of the country againſt the Turks and Tartars, whom they frequently intercepted, at the paſſes of Nieper, in returning with their prey. Being ſoon joined by multitudes to ſhare their booty, they could with ſhallow boats paſs thoſe rocks in the mouth of the river Boriſthenes, that hinder the navigation from the Ukrain, to the Black Sea; and during the ſummer, they roved all over that ſea, and its coaſts, making deſcents upon Natolia, and pillaging and ſpoiling wherever they came, even to the walls of Conſtantinople.

Stephen Bathori, king of Poland, formed them into an orderly militia; and, intending to uſe them againſt the Tartars, gave them the town and territory of Trethimirow in this palatinate (which they made their magazine) appointed a general over them, and gave them many privileges; and for ſome time they did the Poles great ſervice, by oppoſing the Tartars: but being ſenſible of their ſtrength, they began to ſet up for themſelves; and in the year 1589, rebelled; but their general being taken and executed, it was for a time quieted.

About the year 1600, they were ſo powerful, that the Poles were forced to raiſe a large army againſt them, who often worſted them, and took their generals; but ſtill they continued mutinous: wherefore their privileges were taken away, and they continued in a ſtate of enmity, till about the year 1640. King Uladiſlaus VI. making war upon the Tartars, collected them together, and ſet over them

them for a general, Chmielniſki, who was afterwards a bitter and formidable enemy to Poland; for the Coſſacks being oppreſſed by the Poliſh nobility their landlords, and on complaint, receiving no redreſs, they armed in vaſt numbers; and calling in the Tartars, furiouſly attacked the Poles; but king John Caſimir made ſuch a ſtand againſt them, that in 1649, the Tartars accepted a peace.

Chmielniſki, having obliged the prince of Moldavia to join him, it produced another war in 1651, wherein the Tartars and Coſſacks were worſted, and ſince that time they have not been ſo conſiderable as formerly.

This country was reſigned in 1677 by the Poles to the Turks, with liberty to the Coſſacks of this part, to chuſe their own general, or prince, dependant on the ſultan, who kept poſſeſſion of it till the year 1699, when by the peace of Carlowitz it was reſtored to the Poles.

The only towns of note, on the weſt ſide of the Nieper, are, 1. Bialacerkiew, about forty miles ſouth of Kiow. 2. Trethimirow, on the Nieper, fifty miles above Kiow, a ſtrong place defended by a caſtle, is the ſame, which, as we ſaid above, was given to the Coſſacks, by king Bathori. 3. Czyrkaſſy, which uſed to be the chief retreat of the Coſſacks, ſtands near the ſame river eighty miles above Kiow. 'Twas burnt by the Poles, in 1636, but has been repaired ſince that time.

SECT. IV.

Treating of the Inhabitants of POLAND, their Manners, Cuſtoms, Conſtitution and Government, Trade, Manufactures, Revenues, Land-Forces, &c.

THE complexion of the Poles is generally inclining to be fair, and their hair to a pale yellow. Their ſtature is commonly ſomewhat above the middle ſize. Their conſtitutions are generally good, and their bodies inclinable to be groſs; ſo that the women of quality make it their chief ſtudy to be lean and thin: but they abhor painting and waſhes, nor have they any occaſion for it. The Poles in general have no manner of regard to their clergy, and think themſelves wiſe enough to be their own guides. They exceed moſt of the European nations in vivacity, ſtrength, and long life. The poorer ſort have a liquor diſtilled from wheat, barley, oats, and cyder; which the gentry rectify with aniſeeds and ſpices. The Poles hate effeminacy, and love a cottage as well as a palace. The gentry ſeldom lie on any other beds but quilts. The ſlaves ſleep frequently in ſnow and froſt without any bed, or other conveniency. Their chief exerciſes are hunting, dancing and vaulting; and they are expert horſemen. The common people frequently weave tapeſtry and arras as they travel.

As to the genius of the people, they are, as Puffendorf obſerves, commonly downright and honeſt, very ſeldom guilty of diſſimulation, of a generous ſpirit, and expect a great deal of reſpect, to which they make ſuitable returns; yet they are fierce and extravagant, much inclined to an uncontrouled liberty, or rather licentiouſneſs and petulancy, which produces frequent factions and conſpiracies. They do not want courage, but are more fit for ſudden action than the long fatigue of a war. This is ſpoken of the gentry: but the meaner ſort are poor ſpirited, and therefore the Poliſh infantry are not valuable; but Coſſacks, or foreigners, are made uſe of on all occaſions of war.

With reſpect to their apparel, the nobility, merchants, and ſuperior tradeſmen, dreſs like the Engliſh and French, though in a few trivial articles they retain ſome of their original modes. The ladies abhor painting; but in general are very coarſe and indelicate in their manners; and the common people dreſs in bear ſkins; and are ſo wretchedly poor as to be unable to build a ſmall hut, ſo that they are ſometimes obliged to live in caves and holes under ground.

Their language is not copious, as they ſpeak a dialect of the Sclavonic: it is at the ſame time harſh, and hard to pronounce: for it ſo abounds with conſonants, that ſome words have ſeven or eight without any vowel; yet they ſound them with vowels in ſpeaking.

Freſh meat, fowl, and fiſh are their uſual diet; and they drink the ſtrongeſt of Rheniſh, French, Spaniſh, Italian, and Hungarian wines; brandy, aqua vitæ, aniſeed water, and other ſpirits. Their ſauces, &c. are ſo enriched with ſpices, that ſome of the nobility ſpend great ſums in that commodity; and their uſual breakfaſt is a hot-pot of beer, with eggs, ſugar, and ginger. They hang the carcaſes of elks at their gates till they ſtink; then dreſs and eat them as a great curioſity, to be met with no where but at the tables of their chief nobility; yet their butchers meat is delicious, and they have plenty of good fiſh.

When they are invited to another's table, they muſt carry their ſpoons, knives, &c. with them; and their linen, too, if they would be cleanly: for they have no napkins, but a broad piece of ſtarched linen ſewed round the table cloth, that their ſervants may not ſteal it. The ladies carry napkins with them, and put up as much ſweetmeats and dried fruit as they pleaſe. The maſters reach meat from the table to the ſervants, who eat it as they ſtand by the chairs: and the maſter of the feaſt is reckoned a niggard, if he don't make his gueſts drink.

The Hungarian wine, though very dear, is drank as common as water: but it is cuſtomary for the maſter of the houſe and his intimates, to drink the beſt wine, while the other gueſts that are invited are obliged to put up with the common ſort. Their houſes are generally low, for they ſeldom lie above ſtairs. Some of them are of brick and ſtone, but the greateſt part of wood. The kitchen is on one ſide of the court, the ſtable in another, the dwelling-houſe is on a third, and the gate in the front. The richer ſort have hangings of tapeſtry or arras, and beds with taffety-curtains; but ſeldom any accommodation to lodge ſtrangers.

The Poles were converted from Paganiſm to Chriſtianity by Aldeber, archbiſhop of Gneſna, about the year 964, and ever ſince, the religion of the church of Rome hath been predominant here, except in Red Ruſſia, where many of the people adhere to the Greek church. Some of the Greek church ſubmit to that of Rome, and are called Uniti, or Uniats, but have their worſhip in the Greek. They have alſo Armenians who comply with the church of Rome, but have their worſhip in their own language. The king, though a Papiſt, is obliged by his coronation oath to tolerate Lutheraniſm in Poliſh Pruſſia, where there are whole cities of Lutherans, as Dantzick, Elbing, Thorn, and Marienburg: and ſome Calviniſts, eſpecially in the ducal Pruſſia.

Fauſtus Socinus was of this nation; and his followers, from him called Socinians, grew numerous in the laſt century: but king John Caſimir made an edict againſt them, which was enforced by his ſucceſſor king John Sobieſki, who drove them quite out of the kingdom for publiſhing a book intituled, Tormentum Trinitatem Throno deturbans. The generality of the Papiſts here are very great bigots, and their intereſt is ſtrengthened by the preſidencies of the biſhops in the grand and petty diets. The inferior clergy have a place alſo in all the courts of judicature; and the great ſecretary of the kingdom is always a churchman.

The regular clergy, as they call the monks, are more eſteemed than the ſecular; and the mendicant friars have the privilege to enter the privateſt room of any houſe without knocking at the door. The ſecular clergy are generally rich, but openly debauched; and are neither rebuked for it by their ſuperiors nor the people. The inferior clergy ſeldom attend their office in the church, but give poor ſcholars two-pence a day to officiate for them; nor do the biſhops correct the inferior clergy for their miſbehaviour. The common people may be drunk without rebuke on their faſt-days, provided they abſtain from fleſh, &c. and they will not eat butter and cheeſe on ſuch days, though the pope give them a diſpenſation; as he did in cardinal Radzioufki's time; for which they called the pope a heretic.

At the elevation of the hoſt the people knock their heads againſt the pavement, or benches, hard enough to be heard at a diſtance. Their churches are fine, and well adorned; and the prieſts affect rich veſtments. The prieſts at Leopold have a cape they wear at maſs ſo thick embroidered with pearl and jewels, that it is quite burdenſome. In order to preſerve their feet from the exceſſive cold in winter, the ladies, and ſome of the men, uſe furred bags in churches.

Their diſeaſes chiefly proceed from drunkenneſs, to which they are ſo addicted, that they have a proverb ſignifying, that a man may as well drink water as wine, if he does not feel the effects of drinking. The diſtemper peculiar to the Poles, is that called the Plica; in which the hair of the head is matted together and entangled in one night's time, in ſpite of all care to prevent it. If it be cut off, it occaſions a dimneſs of ſight, if not a total loſs of it, together with an eruption of puſtules all over the body, and pains in the head and limbs; yet foreigners, who have been infected with it, ſay, they have cut off their hair without any bad conſequence. The Poles are not much troubled with other diſeaſes; and the ſcurvy, ma-

lignant

lignant fevers, and pleuriſies, are ſeldom of ſuch ill conſequence here as in other countries. Their baptiſmal and matrimonial ceremonies are the ſame as among the Roman catholics in general.

The funerals of the people of quality are ſo pompous and magnificent, that they look more like triumphs. The corpſe is carried in a hearſe or chariot drawn by ſix horſes, all covered with black. The coffin has a large black velvet paul over it, with a croſs of red ſattin in the middle, and ſix long black ſilk taſſels, ſupported by ſix of the deceaſed's domeſtics in cloſe mourning. Several prieſts, monks, and others, walk before the hearſe with wax-tapers; and immediately before it come three men on horſeback, who carry the arms of the deceaſed, one his ſword, another his lance, and the third his dart; and as ſoon as the funeral ſervice is over, they ride furiouſly into the church, break the arms of the deceaſed upon the coffin, and the body is interred: after which there is a feaſt, wherein both clergy and laity drink to exceſs. When women of quality mourn, they wear coarſe black ſtuff, and their linen is not much better than canvas; and the greater the quality, the coarſer are the mourning weeds. When the king dies, he is laid on a bed of ſtate; and a certain number of ſenators, eccleſiaſtical and temporal, are appointed to attend his corpſe. The republic defrays the funeral expences out of the revenue of the crown. The queen has the ſame honours paid her, when ſhe dies, as the king; and all the ſenators, deputies, &c. that repair to the diet for the election of a king, muſt wear black at that time.

The laws of Poland decree the eſtate of the father to be equally divided among the children, except any of them go into a monaſtery; in which caſe their parts are divided among the reſt; and the younger children here, as in other popiſh countries, are encouraged by their parents to take the vow upon them, that their eſtates may be preſerved entire to the eldeſt ſon.

They hunt bulls and bears, in the following manner: They ſurround their wild bulls with a great number of horſemen, of whom every one rides up and darts an arrow at him; upon which the creature purſues him, during which another darts him behind: whereupon he faces about to purſue the latter; and thus by turns they ſo harraſs him, that the beaſt being quite tired with purſuing ſo many aſſailants, falls down, and is eaſily taken. Another way of taking them is by felling a great number of trees, and thereby incloſing them, when each hunter, having his poſt, throws darts at him; and as the bull runs towards his enemy, the hunter from behind gives him his death wound: but if he breaks through the incloſure, the next hunter holds out a piece of red cloth, againſt which the beaſt having an antipathy, he forthwith leaves that perſon, and runs at another, who, being provided for him, commonly kills him.

When they go a hunting for bears, they take thoſe of the biggeſt ſize with nets; and, when they have hampered him, all the hunters ride about him, and having pinned down his head and feet with great wooden forks, they ſo bind him about with ſtrong hempen cords, that he is not able to ſtir; then they roll him into a great wooden cheſt. The knots of the cords are ſo contrived, that with one pull they may be untied. The bear is kept thus till they have a mind to hunt him, and then they let him out of a trap-door made to confine him in.

With reſpect to the conſtitution and government of Poland, it may be juſtly remarked, that ſince its diſmemberment, no regular form of government can be ſaid to exiſt in that unhappy country, for the three partitioning powers, who act in concert, direct every thing as they think proper, while the king of Poland, the ſenate and diet, are only the tools to execute what theſe command.

This government was once one of the freeſt and moſt regular imaginable, though at preſent it is one of the moſt tyrannical and oppreſſive: the preſent conſtitution is the only perfect remains of the Celtic government, which was the union of a republic with regal dignity. Every gentleman has a right to give his voice at the election of a king, and even to be elected himſelf; but this is one of the ſources of all their evils, and of the vitiated ſtate of their preſent government. The throne, ſince the extinction of the family of the Jagellons, has been always put up to the beſt bidder; and it has often been ſold to ſtrangers, as few of the Poles have been rich enough to buy it.

They have no written laws prior to the reign of Caſimir the Great, in the fourteenth century; before which time they were governed by the cuſtoms of their anceſtors: but he introduced the Magdeburg laws, now called the conſtitution of Poland: ſome of the provinces, particularly thoſe of the royal and ducal Pruſſias, have ſtill their own municipal laws, as have likewiſe Lithuania, Volhinia, and Pruſſia.

As to their form of government, the Poles live under one head, who bears the title, and lives in the ſplendour becoming a king; but if we conſider his power as being circumſcribed within very narrow bounds, he is in effect no more than the prime or chief regent in a free commonwealth.

Civil and criminal courts are held, as uſual, in Poland, for the adminiſtration of juſtice; but the moſt conſiderable are the parliaments, compoſed of a certain number of gentlemen, clergy, and laity, who are choſen in each palatinate; the lay-members once in four years, and the eccleſiaſtical once in two years. Of theſe parliaments, there are two for the kingdom, and one for the duchy; thoſe for the kingdom ſit at Lublin in Upper, and Petricow in Lower Poland: and that for the duchy is held one year at Vilna, and the other at Minſki, or Novogrodec, by turns. There lies no appeal from theſe courts, except to the king and ſenate; but they receive appeals from the inferior courts.

A Poliſh king can neither marry, nor divorce a wife, without conſent of the republick. If he marries after his coronation, the queen cannot be crowned without his aſking their conſent, nor even then, unleſs ſhe be a Roman catholick. When ſhe is to be crowned, the king muſt conduct her to the church, and preſent her to the archbiſhop of Gneſna, or the biſhop, who anoints her with the conſecrated oil, and puts the crown upon her head, the ſceptre into her right hand, and the globe of gold into her left. The queens of Poland have no officers but a marſhal and a chancellor, neither of whom are ſenators, but only judges of the differences that happen among her domeſticks. They anſwer the harangues that are made to the queen when an ambaſſador makes her a compliment in his maſter's name, or when a preſent is made to her at the marriage of a maid of honour. The king furniſhes the queen with money to defray the charge of her houſhold; but after his death ſhe muſt maintain herſelf, and all her retinue, with the revenue which the king beſtows upon her, with the conſent of the republic, both for her dowry, and for her marriage-preſent. Theſe revenues are called the Reformation, and conſiſt of the reverſion of a certain number of ſtaroſties, which ſhe cannot enjoy till they become vacant by the death of the preſent poſſeſſors: ſo that a queen of Poland is frequently kept from her eſtate till ſhe be juſt ready to leave it; for ſometimes thoſe who poſſeſs the ſtaroſties that are in her Reformation, outlive her: but if the king dies before the queen's Reformation be ſettled upon her, the republic allows her a yearly penſion out of the lands belonging to the crown.

The king's titles are, king of Poland, great duke of Lithuania, duke of Ruſſia, Pruſſia, Maſſovia, Samogitia, Kiovia, Volhinia, Podolia, Podlachia, Livonia, Smolenſko, Severia and Czernichovia. All his revenue is clear to himſelf; for he pays no troops, not even his own guards; all the public expences being provided for by the ſenate; and all the officers of the houſhold are Poliſh gentlemen, who ſerve without ſalary, in expectation of ſome lucrative employment.

Notwithſtanding the limitations of the king's power, as in the Pacta Conventa, &c. he can remit fines and capital puniſhments; and, upon invaſions or rebellions, can ſummon the nobility to his ſtandard. He can enliſt mercenary troops, create officers of the militia, diſband armies, and puniſh thoſe who tranſgreſs their duty. He appoints the governors and magiſtrates of towns, makes archbiſhops, biſhops, abbots, palatines, caſtellans, marſhals, counſellors, and treaſurers; who are all ſenators. He alſo appoints judges and magiſtrates of the provinces, ſecretaries, maſters of requeſts, and all ſuperior and inferior officers of the court. He can ennoble plebeians who ſignalize themſelves either in peace or war, and grant the uſage and occupation of royal caſtles, towns, and villages, to ſuch as deſerve well of himſelf and the republick. He diſpoſes of the eſtates of thoſe who are proſcribed, or die without heirs. All the laws, leagues, negotiations, and embaſſies, muſt be in his name, and paſs under his ſeal; as do all letters patent, &c.

The Poliſh ſenate is compoſed of ſixteen biſhops, beſides the primate, who is chief, and about one hundred and thirty laymen named by the king, and are for life; viz. the ten great officers of ſtate of the kingdom of Poland, and duchy of Lithuania; to whom are added, the palatines and the leſſer ſenators, who are the caſtellans and lieutenants of the palatinates, and the deputies of the nobility.

bility. They are created by the king, after they have taken an oath to preſerve the liberties of the republick, by virtue whereof they controul the king, when he invades their privileges: and as this court is looked upon to be the bulwark of the commonwealth, againſt the attempts of the king, therefore four of the ſenators are always about his perſon, on pretence of being his counſellors, though, in truth, they are but ſpies on him.

None of the ſenators can go out of the kingdom without leave of the republick, not even for change of air, or to drink the waters, &c. for their health. In the general diets, they ſit on the right and left hand of the king, according to their dignity, and not according to the ſeniority of their reception; and they, with the king, approve and ratify all the conſtitutions which the nobility propoſe to them by their deputies: ſo that the ſenators are, as it were, mediators between the king and the nobility, to preſerve and defend the authority of the ſtate.

In Poland there are but ſixteen biſhopricks, of which, Smolenſko and Kiovia are uſurped by the Moſcovites, and Caminiec by the Turks; but they are generally of a vaſt extent, and endowed with great revenues, as may be eaſily believed, when it is conſidered that this kingdom, after all its loſſes, is as big as France.

There are thirty-ſix chief ſecular ſenators; viz. thirty-two palatines, who are, properly, governors of provinces; three caſtellans, viz. of Cracow, Vilna, and Troki; and the ſtaroſta of Samogitia. It is obſerved by M. Hauteville, that though the quality of caſtellan and ſtaroſta is inferior to that of palatine; theſe four laſt mentioned poſſeſs almoſt the firſt rank among the lay-ſenators. The office of a palatine is, to lead the troops of his palatinate to the army, to preſide in the aſſemblies of the nobility in his province, to ſet a price upon goods and merchandize, to ſee that the weights and meaſures be not altered, and to judge and defend the Jews. He has a vice-palatine under him, who muſt take an oath to him, and who ought to have an eſtate in land, which they call 'Poſſeſſionatus,' or a poſſeſſor.

The next in dignity to the palatines are the caſtellans, and there are two ſorts of them in the kingdom, who are uſually diſtinguiſhed by the title of great caſtellans, and petty or ſub-caſtellans. The number of the former, both in the kingdom and dutchy, amounts to thirty-two; and that of the latter to forty-nine; and they are all ſenators, lieutenants, or deputies of the palatines, and heads of the nobility, in their reſpective juriſdictions.

There are two kinds of Poliſh diets, which are either ordinary or extraordinary. The ordinary diets meet every ſecond year, but the extroardinary diets only upon particular occaſions, when ſummoned by the king. They ſit but ſix weeks, and the diſſenting voice impedes the paſſing of any law, or coming to any final reſolution concerning what hath been propoſed by the throne. Here are not only diets, but dietines or provincial diets; and when the nobility enter into an aſſociation, either during an interregnum, or while the king is living, it is termed a confederacy.

In this country, every gentleman is a ſovereign prince in his own eſtate, and has power of life and death over his tenants, who are perfect ſlaves, without laws or privileges to protect them. They dare not leave their maſter's lands to go to another's, unleſs he violate their wives or daughters; ſo that they are often glad of that plea. If a gentleman actually kills one of his own ſlaves, he only pays fifteen livres; and if he kill another's, he is only obliged to furniſh another, or as much money as will buy one, and to maintain the deceaſed's family. If one gentleman kill another, he cannot be executed without the king's conſent; ſo that they frequently eſcape.

No ſoldiers can be quartered upon the gentry; and if any officer do it, he is ſentenced to die, or elſe declared infamous by the diet: nor can the king himſelf lodge at a nobleman's houſe, without aſking his leave. Mean time, their houſes are ſuch ſanctuaries for delinquents, that though they may be arreſted there, they cannot be taken from thence without the maſter's leave. By the conſtitution of Poland, the gentry cannot be arreſted till convicted by juſtice; ſo that he muſt be firſt ſummoned to the tribunal, where he is to be tried: if he does not appear, he is declared contumacious; and if he does appear, and is convicted, he is then arreſted, and impriſoned, in order to be afterwards ſentenced, according to the laws, and the nature of his crime. If a foreigner die without iſſue, his eſtate falls not to the king, but to the lord of the manor.

The product of the gentry's lands may be exported, without paying cuſtom; and his certificate, upon oath, exempts the purchaſer from paying it. The nobility have alſo the right of pre-emption; and both they, and the gentry, are reckoned equal by birth; ſo that they do not value titles of honour, but think that of a 'noble Pole,' or 'gentleman of Poland,' the greateſt they can have. Nor have they any but what is given by foreign powers, for which the perſons are rather deſpiſed than eſteemed by the reſt, who ſay that it is only intrinſic merit, and ſervices done to their country, that deſerve preferment. Neither the king nor the republic confer the title of prince on any but the ſons of the royal family; and though five or ſix of the chief families have, perhaps, the title of princes of the empire; it gives them no ſort of precedency.

When their gentry travel into France or Germany, they aſſume the title of counts and barons, that they may have the eaſier acceſs to perſons of quality, eſpecially in Germany; where they ſcarce think any a gentleman under a baron, and, conſequently, not worthy of their converſation. They never had any order of knighthood before that of the Immaculate Conception, erected by Sigiſmund III. with ſome privileges above the reſt of the gentry; who ſo much deſpiſed it, that the order ſoon came to nothing. King Auguſtus, in 1705, created that called the order of the White Eagle, in remembrance of his happily meeting the diet in Lithuania, when the Swedes and Staniſlaus thought to have intercepted him. The badge is a white eagle, crowned with diamonds; and the motto, Pro Fide, Lege, & Rege: 'For the Faith, the Laws, and the King.' He conferred it on ſeveral lords, but the ſenators are diſtinguiſhed by wearing a golden croſs, with the badge and motto in the middle of it. His late majeſty, on the twenty-ſixth of September, O. S. 1736, (which was the anniverſary of his birth) created eight knights of a new order, in honour of St. Henry, of which he aſſumed the title of grand maſter. The badge of this order is a red ſtar with eight points, in the middle of which there is a repreſentation of the emperor Henry, with theſe letters, A. III. R. In the middle of the reverſe is this motto, 'Pietate & Virtute Bellica;' and upon each ray or point, appears the electoral ſword of Saxony. The ſtar is appendant, by a ſilver ſtring, to a ribband of crimſon velvet.

Many of the gentry have ſuch large territories, that they can raiſe from five thouſand to ten thouſand men each, and maintain them; which makes them ſo proud, that when great mens law-ſuits are decided by the diet, or other tribunal, the execution of the ſentence muſt be left to the longeſt ſword; for the grandees ſometimes raiſe five or ſix thouſand men of a ſide, plunder and burn one another's towns, beſiege caſtles, and fight it out, rather than ſubmit to the ſentence of a bench of judges. They eſteem themſelves, eſpecially the ſenators, above any German prince; and want nothing of ſovereign power but the liberty of coining money, which is reſerved to the republick. They have from five to thirty leagues of land, contiguous; but the poor gentry have their votes in the diet as well as the richeſt. Some of them are hereditary ſovereigns of cities, with which the king cannot interfere.

In treating of the commerce, trade, manufactures, &c. of Poland, it may not be improper previouſly to obſerve, that not only the laws of the ſtate, but even the diſpoſitions of the people, are diametrically oppoſite to commercial improvements; hence it is no wonder that in ſuch a country the manufactures are badly conducted, trade neglected, and commerce abſurdly regulated.

By the fundamental laws of the ſtate, no merchant or manufacturer is at liberty to purchaſe any landed eſtate, or to acquire any real property in the kingdom; and the pride and arrogance of the nobility and clergy are ſuch, that they look on thoſe uſeful members of ſociety with the greateſt contempt, and will, in many reſpects, ſcarcely give them the preference to their ſlaves. Hence it is that their manufactures are in ſuch an unimproved ſtate, and that all their inland commerce is carried on by Jews and foreigners, who take every opportunity to cheat and over-reach thoſe who are ſupporting them.

A learned writer remarks, that "the meaſure which the king of Pruſſia has lately taken to diſtreſs Dantzick, and interrupt the exportation of the natural production of Poland, will not at all anſwer the end which he has propoſed: this prince may be a great general as well as a tyrant, but he is not a great politician; acts of violence will never make his ſubjects enter into commerce, nor force the Poles, and the inhabitants of Dantzick, to commit all their property to his direction. If the other ſtates of Europe ſuffer him to conquer this city, he may then obtain the end which he propoſed, namely, the being maſter of all the exports of Great Poland, and of regulating the price

price of the grain of that kingdom as he thinks proper; but as long as this poſt continues free, he will never be able to carry his point.

"In the treaty of commerce which the king has lately concluded with the republic of Poland, it is ſtipulated, that all the merchandize imported from the towns of Pruſſia into Poland, is only to pay two per cent. duty, but ſuch merchandize as is landed at Dantzick, and from thence brought into Poland, is to pay twelve per cent. It will appear, at firſt ſight, that the Poles were forced into this treaty, otherwiſe they would never give the preference to ſtrangers, who were taking every meaſure to oppreſs them; but ſtill it will not anſwer the king of Pruſſia's deſign. Dantzick is an excellent port, and there is a navigation by the Viſtula from thence to the interior parts of the kingdom, whereby all kinds of merchandize may be imported and exported with great facility. It is true, that as the Viſtula paſſes through Pruſſia, the king may lay a heavy duty upon ſuch merchandize, and thereby diſtreſs the Poles, Dantzickers, Hollanders, and all who are concerned in this trade, but as he has no good ſea-port, which has a communication with the Viſtula, his ſubjects muſt paſs by the port of Dantzick, or they will never be able to import and export heavy merchandize to and from Poland, without the greateſt inconveniences."

It is not eaſy to aſcertain the revenues of Poland, as they fluctuate according to the reſolutions of various diets. The royal revenues accrue from certain lands veſted in the crown, from the different cuſtom-houſes of the kingdom, and from ſalt-works. But ſince the diſmemberment of the kingdom, the ſalt-works, and ſome of the crown-lands, have been ſeized by the late empreſs-queen of Hungary, many of the cuſtom-houſes by the king of Pruſſia, and a few of the crown-lands, with the cuſtoms of Mohilow, by the empreſs of Ruſſia; therefore it muſt be left to ſome future diet, and the permiſſion of the partitioning powers, to appoint from henceforth the eſtabliſhment of the crown revenue.

The nobility, by the ancient laws of Poland, were, upon extraordinary occaſions, to take the field on horſeback, together with their adherents; and when this rule was properly carried into execution, a body of an hundred thouſand men might be raiſed. This army was always called the poſpolite; but, from a variety of cauſes, it uſually moved with great difficulty, and was generally without diſcipline, ſubordination, or experience; but the Poliſh army, of late years, hath not been ſo numerous. Previous to the late diſmemberment, the peace-eſtabliſhment was thirty-ſix thouſand men; that is, twenty-four thouſand for Poland, and twelve thouſand for Lithuania, two-thirds of which were cavalry.

The two bodies of troops that form the Poliſh army are commanded by two generals, who are independent of each other; and though they are named by the king, they are not obliged to give an account of their operations but to the republic, and have an abſolute authority over the troops. The colonels are likewiſe abſolute maſters of their regiments, and it is their buſineſs to find ſubſiſtence for them and to pay them as well as they can; but being rarely paid themſelves, they deſtroy the country, and ruin the farmers, to ſatisfy their avarice and the demands of their troops.

The Poliſh nobility appear with more magnificence in the field than in their towns; their tents are more elegantly ornamented than their houſes. The cavalry, which is the greateſt part of the army, is chiefly compoſed of gentlemen; they have fine horſes, and their ſaddles, bridles, &c. are richly ornamented. The very contraſt to their cavalry is their infantry; for as the former is magnificently ornamented, the latter is badly cloathed, badly armed, and without any uniforms; this corps is recruited from among the meaneſt of the people, and they reſemble an army of vagabond Tartars. The Poliſh troops have but very little diſcipline among them: they attack with great fury, but if they are repulſed, they immediately retire with great precipitation, and it is impoſſible to rally them afterwards.

The members of the diet have lately agreed continually to ſupport an army of thirty thouſand men, for the defence of thoſe parts of the kingdom which the partitioning powers have ſtill ſuffered them to retain; and that the troops which compoſe this army ſhall be better diſciplined, more regularly paid, and alſo placed upon a footing ſuperior to what hath ever yet been known in Poland. For the payment of this army, the ſupport of civil government, and other contingencies, they have likewiſe come to the reſolution of regularly taxing ſpirituous liquors, foreign merchandize, ſtamped papers, ſalt, chimnies, playing cards, and all kinds of luxuries. They have likewiſe doubled the poll-tax upon the Jews. The ſtaroſties, who heretofore paid but one quarter of their revenues annually, muſt now pay three-eighths; and the clergy are now aſſeſſed in proportion to the other claſſes of people, though they had always hitherto found means to exempt themſelves from paying taxes.

Their trade, of which we have already mentioned the chief exports and imports, is carried on chiefly by foreign merchants reſiding here; for the gentry are abſolutely forbid to follow trade of any kind, on pain of forfeiting their honour; at the ſame time the commonality want funds, and the ſpirit of induſtry as well as an inclination to manufactures; inſomuch that their cloaths are all made abroad, or by merchant taylors who travel to noblemen's houſes. Beſides, ſuch of the Poles as have any fortunes, ſpend too much of their revenues in coſtly habits, and other articles of luxury, to be able to undertake any conſiderable traffic; nor have they any good port, except Dantzick, for improving the trade of ſo large a country; and, indeed, for want of neceſſary improvement in general, and not ſo much from the nature of the ſoil, the inland communication is alſo very bad.

The Poliſh current gold coin is ducats, worth two French crowns; and two ſilver coins, of a baſe alloy, one called the tinfe, a little larger than the French fifteen-pence, and the chouſtack, of which three make a tinfe.

The inns here are only long ſtables built up with boards, and covered with ſtraw. They have windows, but no furniture. There are chambers at one end, but ſo annoyed with vermin and ſtench, that ſtrangers chuſe rather to lodge in ſtables among the horſes, or in the common room, which is the only part where they have a fire; but if it be a holiday, they can expect no reſt; for the boors ſpend the whole day, and night too, in drinking, ſinging, dancing, and ſuch like kind of merriment.

It appears from the relations of the moſt intelligent travellers who have lately viſited Poland, that the kingdom in general hath for many ages been miſerably neglected by its legiſlators, and that the preſent ſpirit of improvement hath unfortunately been exerted too late. A gentleman who was in this country not long ſince, has obſerved, that if the Poles had agreed to a plan of this kind ſome years before, they might in all probability have ſaved their country, and made a reſpectable figure among the ſtates of Europe; but now it is too late; their beſt provinces are ſeized upon by ſtrangers, and all their operations are dictated by thoſe powers which united to annihilate their ancient form of government; and as theſe great powers have guarantied to each other reſpectively the ſeveral diſtricts which they have ſeized in Poland, there ſeems no poſſibility that the Poles will ever be able to recover themſelves, in the preſent ſituation of things: time alone muſt determine how far ſome future arrangement of the political affairs of Europe may change their unhappy ſtate.

SECT. V.

Containing the Hiſtory of POLAND; the civil Diſſentions in that Country; and an Account of the late Claims made by the ſeveral Northern Powers, to the Territories of that Kingdom.

HISTORIANS relate, that the Poles were antiently a tribe of Scythians, who lived in tents or covered waggons, rambling from one country to another, till Lechus, their firſt ſovereign we read of, taught them to build towns, of which Gneſna, in the province of Great Poland, was the firſt. Their records are obſcure and unſatisfactory till towards the cloſe of the fourteenth century.

Jagellon, grand duke of Lithuania, who became king of Poland by marrying the daughter and heireſs of Lewis then king, annexed his hereditary dominions to thoſe of Poland, which rendered his name ſo dear to the Poles, that they decreed the crown to be hereditary in his family; his deſcendants poſſeſſed it for a century and an half, when the male-line being extinct in 1572, in the perſon of Sigiſmund Auguſtus, two competitors aroſe, Henry duke of Anjou, brother to Charles IX. king of France; and Maximilian of Auſtria. The French intereſt prevailed, and Henry became king of Poland; but his brother dying four months after his acceſſion to the throne, he quitted it to take poſſeſſion of France, which kingdom he governed by the name of Henry III. Maximilian then renewed his attempts; but Stephen Batori, prince of Tranſilvania, ſecured to himſelf the election by marrying Anne, the ſiſter

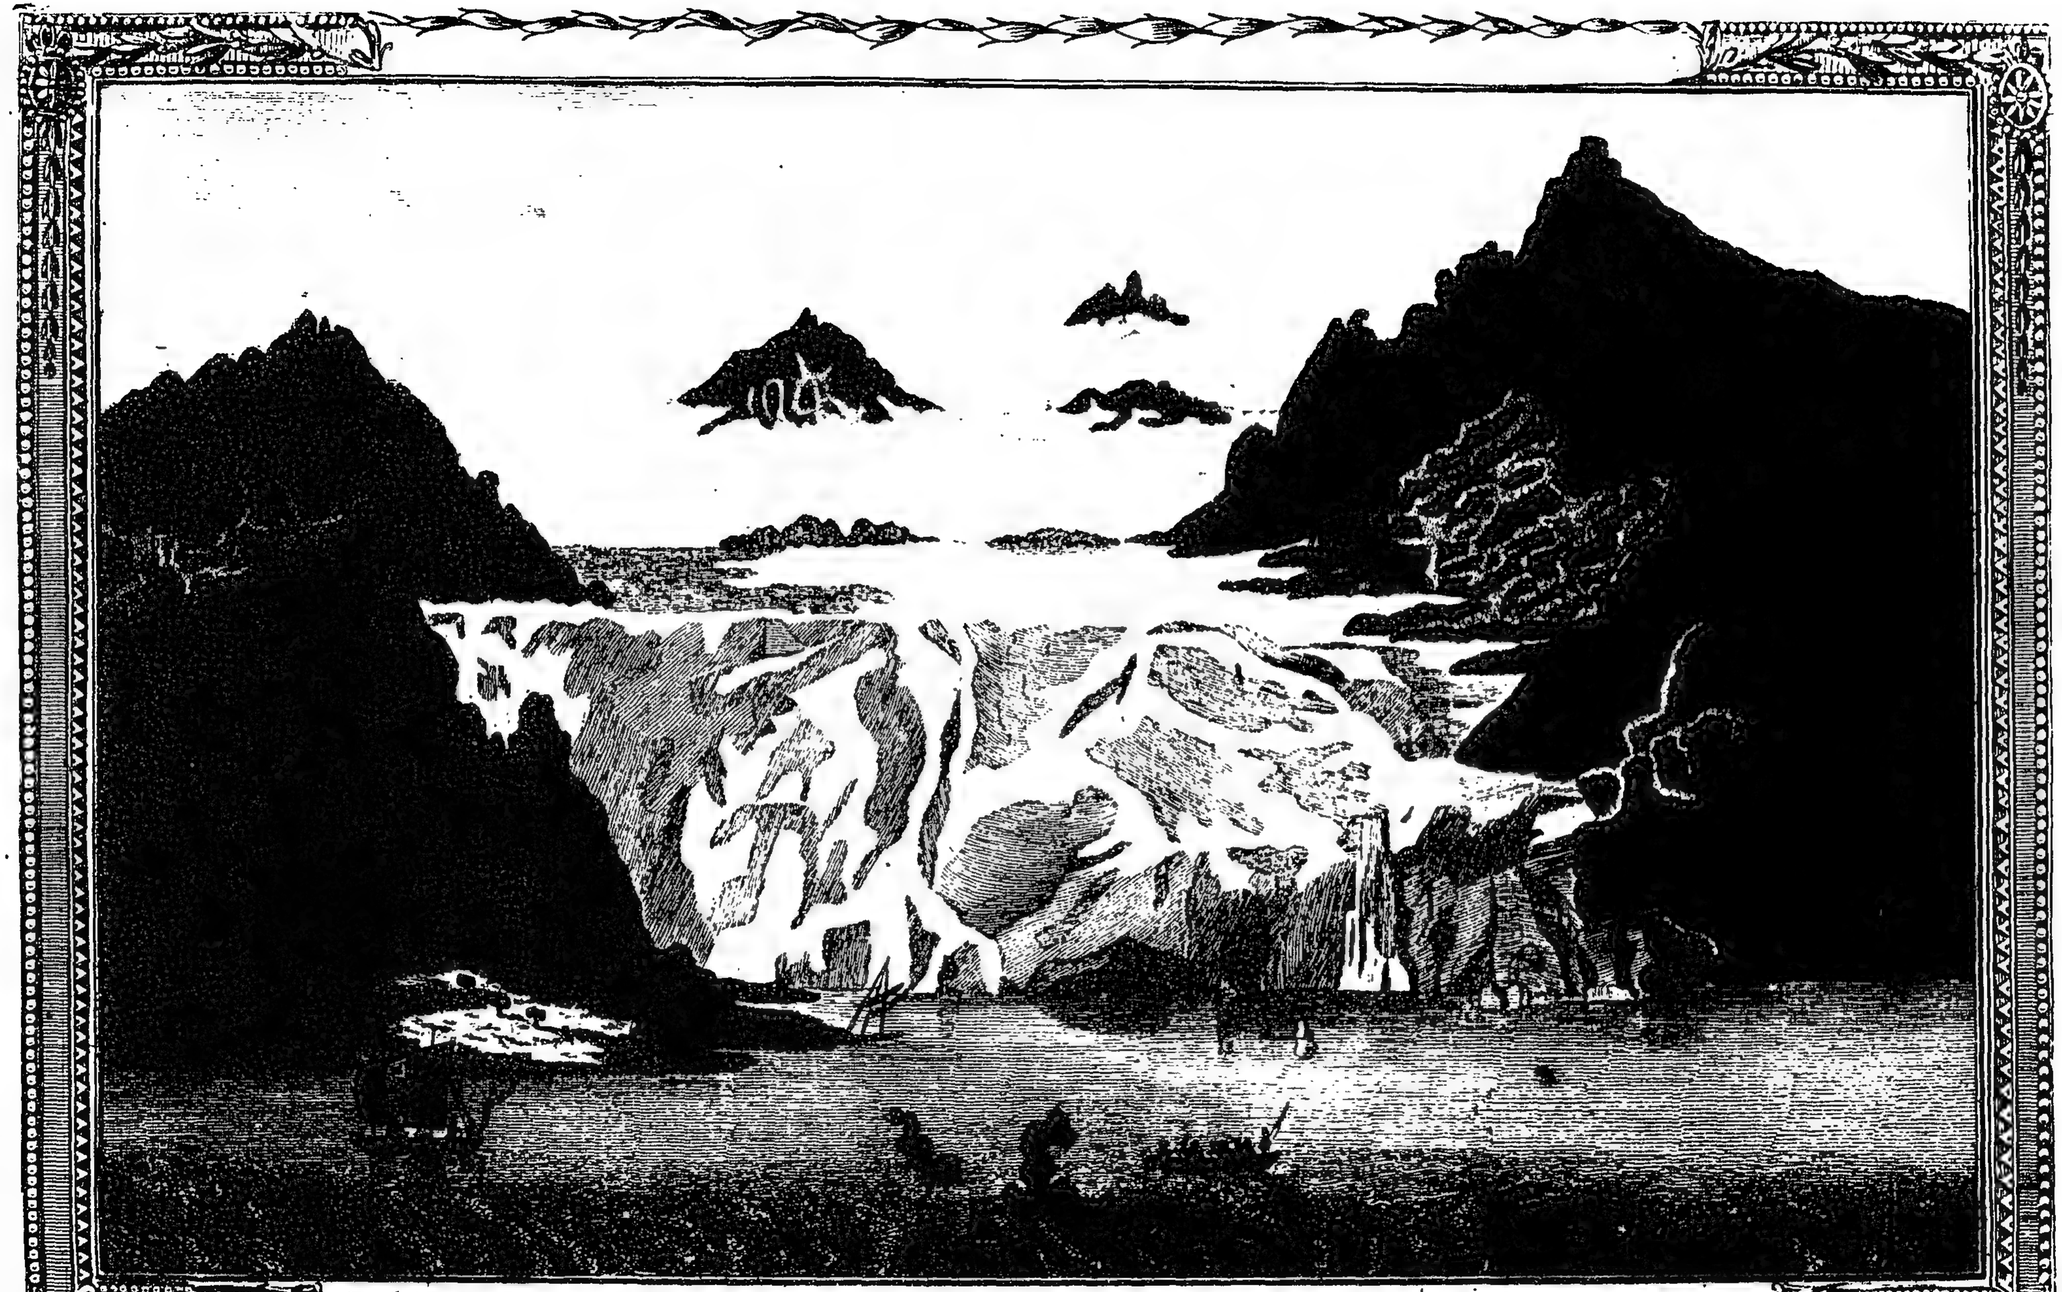
of Sigiſmund Auguſtus, of the royal houſe of Jagellon. This prince died in 1586. The Poles then choſe Sigiſmund, ſon of John king of Sweden, for their king, who ſoon after was deprived of his Swediſh dominions, which he attempted to recover without effect: his long reign was ſpent in wars with the Swedes, Ruſſians, and Turks, which all terminated to the diſadvantage of the Poles. This prince died in 1632, and Uladiſlaus his ſon ſucceeded him.

During the remainder of the ſeventeenth century the Poles were engaged in deſtructive wars, at one time with the Coſſacs in the Ukraine, then with the Ruſſians in Lithuania, which was followed by a rupture with Charles X. of Sweden, who ravaged Great and Little Poland. The Turks too invaded the province of Podolia, and became maſters of the ſtrong fortreſs of Caminiec: their ſucceſſes compelled the Poles to pay an annual tribute to the ſultan. The intrepidity of John Sobieſki who commanded the Poliſh troops, recovered the declining credit of his country. As a reward for his ſervices he was choſen king in 1676, ſoon after which he compelled the Turks to remit the tribute exacted from Poland. This great man died in 1696, not before he had experienced the moſt ungrateful returns from the ſenate, as well as from the emperor Leopold, whom he had laid under the greateſt obligations by driving the Turks out of Hungary, and obliging them to raiſe the ſiege of Vienna.

Upon the death of Sobieſki great diſtractions aroſe in Poland on the choice of a new king. Such was the prevalent venality of the times, that the crown was in a manner put up to ſale. The prince of Conti, of the blood royal of France, bad faireſt for obtaining it, but Auguſtus, elector of Saxony, bore away the prize, and ſupported by an army of Saxons, was crowned at Cracow in 1699. Auguſtus ſupported himſelf on the throne by the help of a Saxon army, and cloſed a long and unquiet reign by death in 1733. His ſon, Auguſtus II. was deſtined to the ſucceſſion by the combined force of Saxony and Ruſſia; while France procured the election of Staniſlaus to the throne, which was ſoon after ſet aſide in favour of Auguſtus. This prince was driven from his Saxon dominions by the king of Pruſſia; he died at Dreſden in 1763, upon which count Staniſlaus Poniatowſki, born January 17, 1732, was choſen with uncommon unanimity king of Poland, September 7, 1764. The perſonal merit of this nobleman, and the diſguſt which the Poles had conceived againſt their Saxon alliance, induced them to accede to this choice, although his birth and fortune gave him no claim to ſuch a dignity.

A diet which met in 1767 ſeemed to treat their complaints with greater moderation, which gave flattering expectations of thoſe unhappy diſſentions being at length appeaſed. The ſecret cauſes which obſtructed theſe effects, cannot be certainly traced, but ſome ſpeculating politicians do not ſcruple to charge the king of Pruſſia with having privately promoted the violent meaſures afterwards taken by the diſſidents, as well as with encouraging the rancorous ſeverity with which the governing powers proceeded againſt them. The intervention of the Ruſſians in the affairs of Poland gave great diſguſt to all parties in the kingdom; for from the authority which a powerful army conferred, the Ruſſian ambaſſador became in reality king of Poland, and every commander of a party, whether Ruſſian or confederate, was an abſolute and arbitrary deſpot, ſo far as the force in his hands was capable of extending his power. This unfortunate country became the theatre of the moſt cruel and complicated of all wars; partly civil, partly religious, and partly foreign. The miſerable Poles in this extremity threw themſelves upon the Turks for protection.

The whole nation ran into confederacies formed in diſtinct provinces, which at length became only diſtinguiſhed by the general confederacy of the ſtates, and that of the diſſidents: and ſoon after a thorough union and coalition took place between thoſe two; againſt the Ruſſians, and the adherents to the governing powers. The moſt active of theſe confederacies was that formed at Bar in Podolia. Poland continued to groan under the calamities of a war carried on in her beſt provinces, and ſupported by devaſtations on her natives: at once enduring foreign cruelty and oppreſſion, and convulſed in every part by the domeſtic rage of her citizens: to theſe complicated evils however were added in 1770, that moſt dreadful ſcourge the peſtilence, which ſpread from the frontiers of Turkey to the adjoining provinces of Podolia, Volhinia, and the Ukraine; in theſe provinces it is ſaid to have ſwept off two hundred and fifty thouſand of the people.



The firmneſs which the confederates ſtill continued to maintain notwithſtanding the frequent loſſes, defeats, and ſlaughters which they ſuſtained, ſhews how much they execrated the Ruſſian controul. In 1771 their exhauſted ſtrength ſeems to have been recruited by ſome ſecret ſupplies; which it is probable that the views of France might lead her to advance, and this ſeems more probable from the number of French officers who engaged as volunteers in the ſervice; by which means diſcipline was introduced, and the ſtruggle became leſs unequal. To cruſh this renewed ſtrength, an army of Auſtrians, and another of Pruſſians entered the country from different frontiers. Cracow was ſurrendered to the former of theſe powers, they likewiſe ſeized the royal ſalt mines of Wiebickza, Bochinia, and ſome other places, from whence the king's private revenue was principally drawn: the Pruſſians at the ſame time cut off the remainder of it which aroſe from the duties in Royal Pruſſia. The king of Pruſſia was the firſt who threw off the maſk, by diſtinguiſhing the country which he had poſſeſſed himſelf of, by the name of New Pruſſia.

Manifeſtoes were delivered at Warſaw by the Ruſſian, Pruſſian, and Auſtrian miniſters in September 1772, wherein they declare their intentions, and ſoon after ſpecify the countries which they had agreed reſpectively to appropriate. In the ſpecifications delivered by the court of Vienna, the empreſs queen takes the countries contained within the following limits as a portion equivalent to her pretended rights in Poland. All that lies on the right ſide of the Viſtula, from the duchy of Sileſia above Sandomir to the mouth of the river San; and from thence along Tarnopol to Zamoiſe and Rubieſzow up to the river Bog, croſſing the Bog, and going along the proper frontiers of Red Ruſſia to where the frontiers of Volhinia and Podolia meet at Zabraz, from thence in a ſtrait line to the river Nieſter, taking in that ſmall part of Podolia which is cut by the little river Podhorze to its influx into the Nieſter: and ſo on to the bounds which ſeparate Pocutia from Moldavia. Soon after the empreſs queen extended her claims to the remainder of the palatinate of Cracovia, and of the whole of that of Sandomir, on the left ſide of the Viſtula; and on the ſide of Podolia to within a few miles of Caminiec. By this tranſaction the houſe of Auſtria becomes poſſeſſed of two-thirds of the upper Poland, the provinces of Red Ruſſia and Pocutia, together with a part of Podolia, if not of Volhinia, containing in a direct line, from the borders of Sileſia, weſt, to the diſtrict of Caminiec, eaſt, an extent of country conſiderably more than three hundred Engliſh miles, and in its greateſt breadth, from the Crapach mountains, which divide Pocutia from Moldavia on the ſouth, to the borders of Lithuania in the north, of not leſs than two hundred, forming a vaſt extent of frontier, along the borders of Sileſia, Hungary, Moldavia and Tranſylvania.

In the next place, the empreſs of Ruſſia, by way of indemnification and exchange for divers antient rights, and juſt and indiſputable pretenſions, ſeizes on the following provinces and people, whom ſhe incorporates for ever with her empire, viz. all Poliſh Livonia; that part of the palatinate of Poloczk ſituate on the right of the Dwina, or Duna; all the palatinate of Witepſk, on both ſides of that river; all the palatinate of Miſciſlaw; the upper part of the palatinate of Minſk, along an imaginary line to the ſource of the Druetz; and alſo the lower part of the ſame province, which extends on the other ſide of the Druetz and the Nieper. Though theſe limits take in a vaſt extent of country, comprehending, beſides Poliſh Livonia, about one half of the great duchy of Lithuania, it is ſaid, that the uſurpation of this ſide has been ſince much increaſed, and now includes the country between the Berezina and the Nieper rivers.

The ſpecifications of the king of Pruſſia were iſſued under the title of letters patent, in which he claims the duchy of Pomerelia in Pomerania as the deſcendant from the houſe of Stettin, to whom theſe diſtricts of right belonged. To this end he therefore ſeizes all that part of Great Poland ſituated on this ſide of the Nottee; and alſo, all the territories of Pruſſia and Pomerania on this, and on the other ſide of the Viſtula, which the kings of Poland have hitherto poſſeſſed under the name of Poliſh Pruſſia; excepting only Dantzick and Thorn. About a month after theſe manifeſtoes a counter-declaration was delivered from the king and his reduced ſenate at Warſaw. After expatiating pathetically upon the five years of ſcourge and deſolation which have ruined the country, whoſe miſeries aroſe in proportion to the interpoſition of foreign courts, the number of their troops, and the length of

time

Curious Prospect of an ICEBERG *in the* ISLAND *of* SPITSBERGEN.

time which they were in it, every argument is made uſe of in oppoſition to the preſent meaſures, which reaſon and juſtice can urge, againſt force and injuſtice. The rights of the republic are reſted upon long and uninterrupted poſſeſſion, avowed and maintained by the moſt ſolemn treaties, and guarantied by the greateſt powers in Europe; all which are particularly pointed out.

The queſtion is then put, what titles the three powers can oppoſe, to rights ſo long eſtabliſhed, and fixed upon ſuch authentic and ſolid foundations? If there are titles dug out of the obſcurity of antient times, thoſe times of ſudden and momentary revolutions, which erected and deſtroyed, ceded and reſtored ſtates, in a few months or years; ſuch titles, if admitted, would re-unite to Poland many provinces which formerly belonged to her, but which have been for many years cupied by the very powers who make theſe pretenſions. And that as it is undeniable, that all tranſactions are annihilated by ſubſequent ſtipulations, and as all the latter ſtipulations between Poland and her neighbours oppoſe directly the partition they now would make, it follows, that the titles on which that partition is founded, cannot be admitted without undermining the rights of every ſtate, and ſhaking every throne from its foundation.

Theſe repreſentations had no effect on the parties to which they were addreſſed, for they proceeded to call upon the inhabitants of their newly acquired territories to take oaths of allegiance to them on a day ſpecified, threatening them with pains and penalties in caſe of refuſal or neglect thereof. It is ſaid that the partitioning powers have a deſign of forming part of Poland into an hereditary kingdom, with which the preſent king is to be inveſted. Such is the preſent unnatural alliance between three powerful northern ſtates. The balance of power has ſometimes armed Europe when it was really in no danger; but now that the northern powers ſeem leagued againſt the ſouthern, no one appears alarmed. However, future ages willl certainly regard this meaſure with the greateſt indignation, thoſe who projected it with horror, and thoſe who acquieſced in it with contempt; and the more ſo, as thoſe very ſovereigns, who have been ſo liberal in their profeſſions of friendſhip, are the perſons who have jointly invaded the unhappy kingdom of Poland, diſtreſſed its inhabitants, ſeized on its moſt valuable revenues, diſmembered its palatinates, duchies, &c. and partitioned out ſome of its richeſt provinces among themſelves.

CHAP. VII.

THE NEW HISTORY AND DESCRIPTION OF GROENLAND OR GREENLAND.

SECT. I.

Deſcribing the Situation and Climate of GREENLAND, with its Produce, and various Kinds of Fiſh.

THE full extent and dimenſions of Greenland, are entirely unknown. The moſt ſoutherly part lies in the fifty-ninth degree fifty minutes north latitude, from whence the coaſt ſtretches to the north-weſt beyond the ſeventy-eighth degree of north latitude, while the eaſtern coaſt reaches, according to the Daniſh writers, to the eighty-ſecond. The weſt coaſt was firſt diſcovered in 1585 by Mr. John Davis, an Engliſhman, from whom the ſtreights that run between the continent of North America and Greenland are called, after his name, Davis's Streights.

The eaſtern and ſouthern coaſts abound with vaſt flakes of ice, and theſe are driven from Spitzberg, by a very ſtrong current, towards the ſouth.

The eaſt ſide of Greenland, which is oppoſite to Iceland, is at preſent inacceſſible, on account of the mountains of ice, which riſe to an aſtoniſhing height, and cover the ſea: this part is therefore unknown; but ſailing between theſe and Iceland, ſeveral adventurers have ſafely arrived there; and this courſe in particular has been actually ſteered by the Dutch.

The weſt ſide of Greenland towards Davis's Streights, is, however, better known. On that ſide the coaſt is defended by rocks and ſeveral large and ſmall iſlands. It has alſo wide and deep bays, which run a great way into the land, ſome of which are the mouths of large rivers, and others form good roads and harbours. The main land conſiſts of little more than confuſed heaps of rocks, the ſummits of which, and alſo ſome of the vallies, are always covered with ice and ſnow.

As far as the Daniſh colonies have penetrated, the climate is not inſupportable; but the weather is very changeable and unſettled. During the ſummer ſeaſon, which laſts from the end of May to the middle of September, the ſun ſhines bright and very warm, and on the main land, above which no cloud can be ſeen, the weather is very pleaſant and always clear: but a cold damp fog that intercepts the ſun-beams continually hovers over the iſlands, except in the month of Auguſt, which is the only time in the whole year when the vapours are diſſolved. The rains that fall here are neither frequent nor heavy. In this climate it ſeldom thunders; and ſtorms, which are very rare, are of no long continuance; but the moſt violent guſts of wind come from the ſouth.

The winters, as far as the ſixty-fourth degree of latitude, are generally reckoned by the Danes and Norwegians pretty temperate, to which the calm and clear weather may greatly contribute. But when a north-eaſt wind blows, which comes from mountains covered with ice and ſnow, it is extremely ſevere; the air being thick and filled with clouds of icy particles, which cauſe a moſt piercing froſt. The ſnow falls in leſs quantities in that part of Greenland known to the Danes, than it does in Norway; for in the former, eſpecially near the rivers in the inland parts, the ſnow does not exceed half an ell in depth.

We muſt, however, confine this account of the weather to the ſouthern parts of this country ſubject to the Danes; for to the northward of the ſixty-eighth degree of latitude the cold is in winter ſo exceſſive, that the moſt ſpirituous liquors, as French brandy, &c. will freeze near the fire ſide. As the weather is in this climate very calm, the ice in the bays between the iſlands is not diſturbed till the end of Auguſt; and even in the creeks it does not begin to thaw till the cloſe of May, when it is gradually waſhed away by the agitation of the waves. From June to Auguſt the ſun is continually above the horizon, and conſequently during that time they have no night; but in winter the ſun is inviſible to the Greenlanders, and their day is nothing more than the morning and evening twilight, which do not laſt above two hours.

The ſoil in the vallies and plains conſiſts of moor and turf land, and in ſome few ſpots, particularly in the ſouth parts, in about ſixty-one degrees of latitude, grow angelica, ſcurvy-graſs, wild roſemary, ſome good eſculent herbs, and alſo fine graſs with yellow flowers, the roots of which ſmell in the ſpring like roſes. Indeed that part of the country which lies between the ſixtieth and ſixty-fourth degree of latitude has the beſt ſoil; ſo that in ſome places cabbages and turnips thrive very well, and the latter are remarkably ſweet. There is not a tree of any kind to be ſeen in the country except on the ſides of a bay, ſixty Norway miles to the ſouth of Hope-colony, where a little coppice of birch-trees grow: but their trunks are no thicker than a man's leg. Some ſhrubs are diſperſed here and

and there; as ſmall juniper, gooſeberry and bilberry buſhes, brambles, and the like.

It is not yet known what minerals are contained in the Greenland mountains; but there are rocks, from which conſiderable quantities of aſbeſtos have been hewn. Some mountains alſo conſiſt of an imperfect kind of variegated marble, of which kettles, and other utenſils, are made by the inhabitants.

Some hares are found on the main land; but theſe, which are very ſmall, are grey in ſummer, and perfectly white in winter. Here is alſo a ſpecies of rein-deer; but they are very different from thoſe of Lapland. The foxes are white, brown, and grey, but ſmall. White bears are ſometimes found here and are very numerous towards the north; but the Greenlanders are very daring and active in deſtroying them; theſe differ from the bears of other countries, their heads being long like that of a wolf, which they much reſemble in form.

Dogs are the only domeſtic animals in this country; they never bark, but ſnarl and howl; are timorous, and unfit for the chaſe; yet if not tamed when young, become wild and very miſchievous. The Greenlanders kill and eat theſe dogs, and alſo uſe them to draw their ſledges, yoking four, ſix, and ſometimes eight or ten to a ſledge, loaden with five or ſix of the largeſt ſeals, with the maſter ſitting upon them, who drives as faſt with them as we can do with good horſes: for they often travel ſixty miles in a winter's day upon the ice. They have no beetles, rats, mice, &c. and neither ſnakes or any other venomous creatures can live in this climate.

Muſketoes, or gnats, ſwarm here, and are extremely troubleſome, but they have neither ants nor bees. Their land-fowl are, the ryper, a ſort of large parrot, which is grey in ſummer, and white in winter; but builds his neſt very high in the clefts of the rocks; they have alſo eagles, falcons, large ſpeckled owls, ravens, different ſorts of ſparrows, and all kinds of land and ſea fowl known in Norway are ſeen in amazing numbers.

The rivers afford plenty of trout, cray-fiſh, and ſalmon; and the ſea yields an inexhauſtible variety of all kinds of fiſh, except oyſters; but it abounds with excellent muſſels, and very large ſhrimps or prawns. The ſmaller ſpecies of fiſh are dried here for winter ſtore, eſpecially the lodden, a ſort of ſmall herring. Here are alſo great plenty of cod, haddock, thornback, and the holybutt, by ſome called the turbot of the north, which is ſo big that it will fill a large caſk. The freſh water in Greenland has been highly recommended for its ſalubrity and palatableneſs.

Their ſeas, like other parts of the northern ocean, that lie under the north pole, contain a very great number of the largeſt ſpecies of fiſh, particularly whales, which there ſwim in vaſt ſhoals. In theſe regions the beneficent Creator has dealt out their food with a liberal hand, and of all climates this is the beſt adapted to their hot conſtitutions and enormous bodies, which are as it were incloſed in fat. This ſpecies of fiſh differs from all other kinds in many particulars; for in their internal parts they reſemble land animals. They breathe with lungs, and conſequently cannot remain long under water. They alſo copulate like quadrupeds, bring forth their young alive, and ſuckle them with their milk.

They have ſeveral kinds of whales, which may be divided into ſuch as have apertures in the head, and ſuch as have noſtrils for reſpiration. Some of the former have two holes or apertures; as the whale properly ſo called, the finfiſh, &c. others have only one, as the cachellotte, or ſpermaceti whale: but thoſe that reſpire through the noſtrils are ſeldom to be met with. This ſpecies of whales may alſo be divided into thoſe that have plain, and thoſe that have prominent backs. The fins of other fiſh conſiſt of bones, or cartilages faſtened together by their membranes running between them; but the whale has articular bones, like the fingers of a human hand, with their proper ligaments covered with a thick ſkin like that of the other parts of its body. By means of this mechaniſm the whale can move and turn about with greater eaſe than he could with fins of the common form, and ſecure himſelf from falling precipitately upon the rocks when he dives to the bottom of the ſea; for which end he lays his thick tail horizontally on the ſurface of the water, which is of great ſervice to him on this occaſion.

The ſpecies of Greenland whale with a flat back is thick and unweildy, its head taking up one third part of its bulk. Theſe are from ſixty to ſeventy feet in length, the fins on their ſides from five to eight feet; and the tail, which is in a horizontal poſition, or bent a little upwards on both ſides, is from three to four fathoms broad. When the whale is in danger, he turns up his ſide, and brandiſhes his tail, which it is dangerous to approach. The tail alſo ſerves him for an oar, with which he rows himſelf forward with ſurpriſing ſwiftneſs. The ſkin of the back is black and ſmooth, but in ſome places variegated or marbled. Next to the ſkin, which is not thicker than ſtrong writing paper, or thin parchment, is the rind, which is near an inch thick; and between this and the fleſh lies the fat, to the thickneſs of nine, and ſometimes twelve inches. Under the fat is the fleſh, which is dry and very red. In its upper jaw, on both ſides, are the ſpicula or whalebone, which ſerves him for teeth; and the largeſt of theſe, which are placed in the middle, are ſeven or eight feet in length, and ſometimes more. On each ſide are generally two hundred and fifty of theſe ſpicula, ſo that they amount in all to five hundred. The tongue is very fat; and ſo large, that it fills ſeveral caſks. The eyes of a whale, which are no bigger than thoſe of an ox, are in the hind part of the head, where it is broadeſt, and are defended by eyelids and eyebrows. This fiſh is very quick of hearing, though it has no external ears, and has only a ſpot under the upper ſkin behind the eye, and under that ſpot a narrow duct, which ſeems to convey the ſound to the tympanum or drum. They generally bring forth only one at a birth, though they have ſometimes two, and their milk is like that of a cow. Their uſual food is that of a ſmall, black, round inſect, of about the ſize of a horſe-bean, which abounds in theſe ſeas, and of which the whale ſucks in prodigious ſwarms with his mouth, and afterwards grinds them with his ſpicula.

The nord-caper, ſo called from the vaſt number of them ſeen about the north cape in Norway, is much ſlenderer and ſmaller than the whale. The fin-fiſh equals the whale in length, but not in thickneſs, and has a fin on his back, from whence he received his name. He is extremely nimble, as well as ſtrong. He throws water higher than a whale of his ſize, has brown lips, which are twiſted like a rope, and his body very much reſembles that of a tench in colour.

Here is alſo the narval, or ſea-unicorn, which is chiefly remarkable for its long horn reſembling ivory, but is generally more ſolid and weighty. This fiſh is ſmooth like an eel, its colour white ſprinkled with black ſpots, and its eyes ſmall. It has two fleſhy fins, and a ſemicircular hole on the top of its head, from whence it ſpouts water like a whale. The horn from which it receives its name, grows ſtrait forward from the middle of its upper jaw, is curiouſly wreathed, and terminates in a point: with this it attacks the largeſt whale, and can ſtrike with ſuch violence as to pierce the ſide of a ſhip.

The laſt we ſhall take notice of is the ſword-fiſh, ſo called from their ſharp-pointed upper jaw, which reſembles a ſword: they purſue whale and fin-fiſh with great eagerneſs. They are of a ſlender form, of various ſizes, from three to twenty feet in length, and their eyes ſtand far out of their head. A few of them will diſpatch a large whale; and they feed chiefly on his tongue, after they have killed him.

The morſe and ſeal are among theſe amphibious animals. The morſe is as large as an Engliſh bullock, with four feet, a thick round head, and a ſhort neck, in which lies his principal ſtrength. He has red eyes, ſmall ears, and large noſtrils, from whence he ſpouts water. His ſkin is very thick, and covered with hair, and from his upper jaw proceed two long teeth as white as ſnow, and more eſteemed than ivory, as they keep their colour better. This creature is very bold, making towards the boat as ſoon as attacked, and endeavouring to overſet it.

Seals are of the ſize of a large dog, are moſtly black, but ſome grey, with very fine ſmooth hairy ſkins. The old ones make a noiſe like the howling of dogs, and the young ones like the bleating of lambs. Their head and body are ſhaped much like thoſe of a dog, whence they are by ſome called ſea-dogs. Theſe are the moſt ſerviceable of all animals to the Greenlanders, for their fleſh ſerves them for food, and the ſkin for cloathing and boats: of its entrails and membranes they make ſails and windows; its ligaments ſerve them for thread and cords; and of the bones they make all kinds of domeſtic utenſils and hunting implements.

The catching of ſeals makes a valuable branch of the fiſhery practiſed in theſe ſeas; three hundred ſeals yield near as much blubber as a middling ſized whale. The ſeals are not killed by the harpoon, but generally knocked on the head with clubs; and many bears are likewiſe ſhot, killed with lances, &c. upon the ice. The ſhips ſet ſail in

February for the seal-fishing, and in April for the whale-fishery; government allowing a bounty to these ships of forty shillings per ton, as far as three hundred tons, so that a ship of such a burden receives six hundred pounds country money. If a ship is clear of the ice after the first of June, and goes back again, she forfeits her bounty; and also if it is known she carries out with her less than six months provisions.

SECT. II.

Giving a Description of the Inhabitants of GREENLAND, their Language, Dress, Houses, Furniture and Boats: their Method of catching Whales, Seals, &c. with an Account of the Manners, Customs, Religion, and Trade of the People.

THE inhabitants of this country, Greenland, are in general short, but fat, plump, and well proportioned. Their faces are something flat, their hair black and lank, and their complexion of a browniſh red. They are strangers to the small-pox, and are seldom afflicted with epidemical diseases; but the scurvy is the reigning distemper, and on this occasion their common remedy is scurvy grass and other simples. They have neither surgeon nor physician among them; but readily rely on certain impostors who pretend to foretel future events, and to be skilled in physic. They have some instances among them of longevity, and these perhaps would be more frequent, were it not for the numberless dangers to which their manner of life exposes them.

There is something very singular in their language, which is difficult to be learnt, and yet is said to have many elegant phrases. The women have a particular manner of pronouncing their words, which generally terminate in an n. Mr. Egede has published a dictionary of their language, and for the instruction of the Greenlanders, the four gospels, with several small tracts, have been translated into the Greenland tongue, and printed at Copenhagen. The Greenland dialect is mostly the same throughout the whole country known to the Danes, except some little difference in the pronunciation.

They dress the skins of their deer, those of seals, and of certain birds, sewed together with the small guts of the seal. There is very little difference between the dress of the two sexes.

The cloathing of the men consists of a coat or jacket, with a cap or hood sewed to it, that covers the head and shoulders. This coat reaches down to the knees. Their breeches are very small, and fit close: and the hair of the skins the coat is made of is turned inward, to keep them warm. Over this coat they put a large frock made of seal-skins, dressed and tanned without the hair, in such a manner as to keep out the water. Between the leathern frock and the under coat they wear a linen shirt, or for want of linen, one made of seals guts, which also helps to keep out the water from the under coat. Those seated near the ports frequented by the Danes and Dutch have shirts of striped linen, with coats and breeches made of red and blue stuffs, which they buy of the Danish or Dutch merchants, but after their own fashion, and these they wear upon extraordinary occasions. Their shoes and boots are made of seal-skins well dressed or tanned. They formerly wore stockings made of rein-deer or seal skins; but now they have worsted stockings of different colours, as white, blue and red, which they buy of the Danes.

The coats worn by the women are higher on the shoulders, and wider than the mens, with higher and larger hoods. The married women who have children have much larger coats than the rest, on account of their carrying their children in them upon their backs, for these are their only swaddling cloaths and cradle. They wear drawers, which reach to the middle of their thigh, and over them breeches, the drawers they keep on day and night; but the breeches, which come down to the knee, they only wear when they go abroad in winter, and as soon as they come home, pull them off. Next to their body they wear a waistcoat made of a young fawn's skin, with the hairy side inward. The coat, or upper-garment, is sometimes made of fine coloured swan-skins, trimmed and edged with white, neatly wrought in the seams and about the edges, which look very well. Their shoes and boots, with little difference, are like those of the men.

Their hair, which is very long and thick, is braided, and tied up in a knot, which becomes them; they commonly go bare-headed, both without and within doors; and in these southern parts seldom wear their hoods except it rains or snows.

The chief finery of the women consists in wearing glass beads of several colours, corals about their necks and arms, and pendants in their ears; some of them also wear bracelets of black skin set with pearls, with which they adorn their cloaths, and even their shoes. The Greenland women have likewise another more extraordinary kind of embellishment: they make black streaks between their eyes, on their forehead, upon the chin, arms and hands, by passing under the skin a needle and thread made black. Hideous as this renders them in the eyes of strangers, they think it extremely ornamental, and say, that those that do not thus adorn their faces, will have their heads turned into train oil tubs, that shall be placed under the lamps that burn in the land of souls, or departed spirits.

Their habitations are of two kinds, one of which serves for the winter, and the other for the summer season. The winter dwellings are the largest. These are dug deep in the earth, and raised a little above the surface of the ground with stone and turf. In this hut the windows are on one side made of seal-guts dressed and sewed together, or the maws of holybutts, which are white and transparent. On the other sides the beds are placed, which consist of benches made with boards, raised half a yard from the ground. Their bedding consists of the skins of seals and rein-deer. On the hearth is a great lamp in the form of a half moon, and over it are hung their kettles formed of a kind of marble, or, where they have the advantages of trade, of brass or copper, in which they boil their provisions. The entrance is dug narrow and winding under ground, and the door so very low, that they must creep on their hands and feet to get in, which is so contrived in order to keep out the cold. The inside is lined with seal-skins. Some of these houses are so large as to afford lodgings for seven or eight families. Upon the benches where their beds are placed, is the seat of the women, who employ their time in sewing and making up cloaths, while the men belonging to the family, or strangers, sit on the opposite side under the windows, upon benches placed there for that purpose.

It is observable, that though in one of these houses there are ten or twenty lamps of train oil kept constantly burning, their smoke is not perceived to fill the room; which is probably owing to the care they take to prevent it. Dry moss rubbed very small is laid on one side of the lamp, which being lighted, burns softly, and if not laid on too thick does not cause any smoke. This fire gives such a heat, that it not only serves to boil their victuals, but also heats their rooms to that degree, that they are as hot as a bagnio; however, to those who are not used to this method, the smell of the house is very disagreeable, as well from the number of burning lamps, all supplied with train oil, as from various sorts of raw meat, fish, and fat, heaped up in these habitations; but their urine tubs in particular emit a very disagreeable stench.

Every master of a family has one of these winter retreats, to which they betake themselves in October, and continue in them till the beginning of May. All the warm part of the year they lodge in tents, which are their summer habitations. These are made of poles set in a circular form, bending to a point at the top, in the form of a sugar-loaf, fenced by a double cover, the innermost of which is of the skins of seals or rein-deer, with the hairy side inward; and the outermost of the same skins, but without hair, and dressed with fat, that they may not be penetrated by the rain. In these tents they have their beds, lamps to dress meat, and a curtain made of the guts of seals, sewed together, through which, instead of windows, they receive the day-light.

These people commonly eat when they have an appetite, but their chief meal is at night; their common food is the flesh of the rein-deer and hares, all kinds of land and water-fowl, seals, several sorts of fresh water and sea-fish, and even some parts of the whale. Their manner of dressing victuals is extremely disgustful. They usually quench their thirst with water, yet can drink a great deal of brandy without being intoxicated; but they are said to prefer the blood of the seals to any other drink.

With respect to their marriages, the chief qualifications required in the bride are skill in domestic affairs, and especially in cutting out and sewing their garments. On the other hand, nothing recommends a suitor more than boldness, activity, and success in fishing and hunting. The bride, at the marriage festivities, puts on a shew of gravity, and a melancholy air. Relations never intermarry here,

not even to the third and fourth degree of conſanguinity. They have a reſpectful idea of marriage, and in general every Greenlander has but one wife. They indulge their children to a culpable exceſs; letting them do whatever they pleaſe, inſtead of moderately correcting, or checking them for their faults.

Hunting or fiſhing are the chief employments of the men, for which they have very curious tackle. The boats in which the men row to ſea are about ſix yards long, and only three quarters of an ell broad in the middle, ending in a very ſharp point at both extremities. They are made of very thin narrow boards faſtened together with whale-bone, and covered with ſeal-ſkins. Only one man goes out in a boat, the top of which is covered with ſkin, with only an opening in the middle, which, when the man has entered, is faſtened cloſe round his waiſt, ſo that no water can enter the boat; and thus equipped, he will row ſixty or ſeventy miles a day, though he has but one oar, which is ſix or ſeven feet long, and flat at both ends. Theſe boats are eaſily overſet, which they conſider as no great damage, if the owner eſcapes with his life. The larger ſort of boats are chiefly uſed by women. They have alſo a kind of open barges, pointed at both ends, but not very deep; theſe are covered with ſeal-ſkins, and are high at the extremities. They make uſe of them in coaſting from one part to another, in conveying their effects in their emigrations, or when they embark for the whale fiſhery.

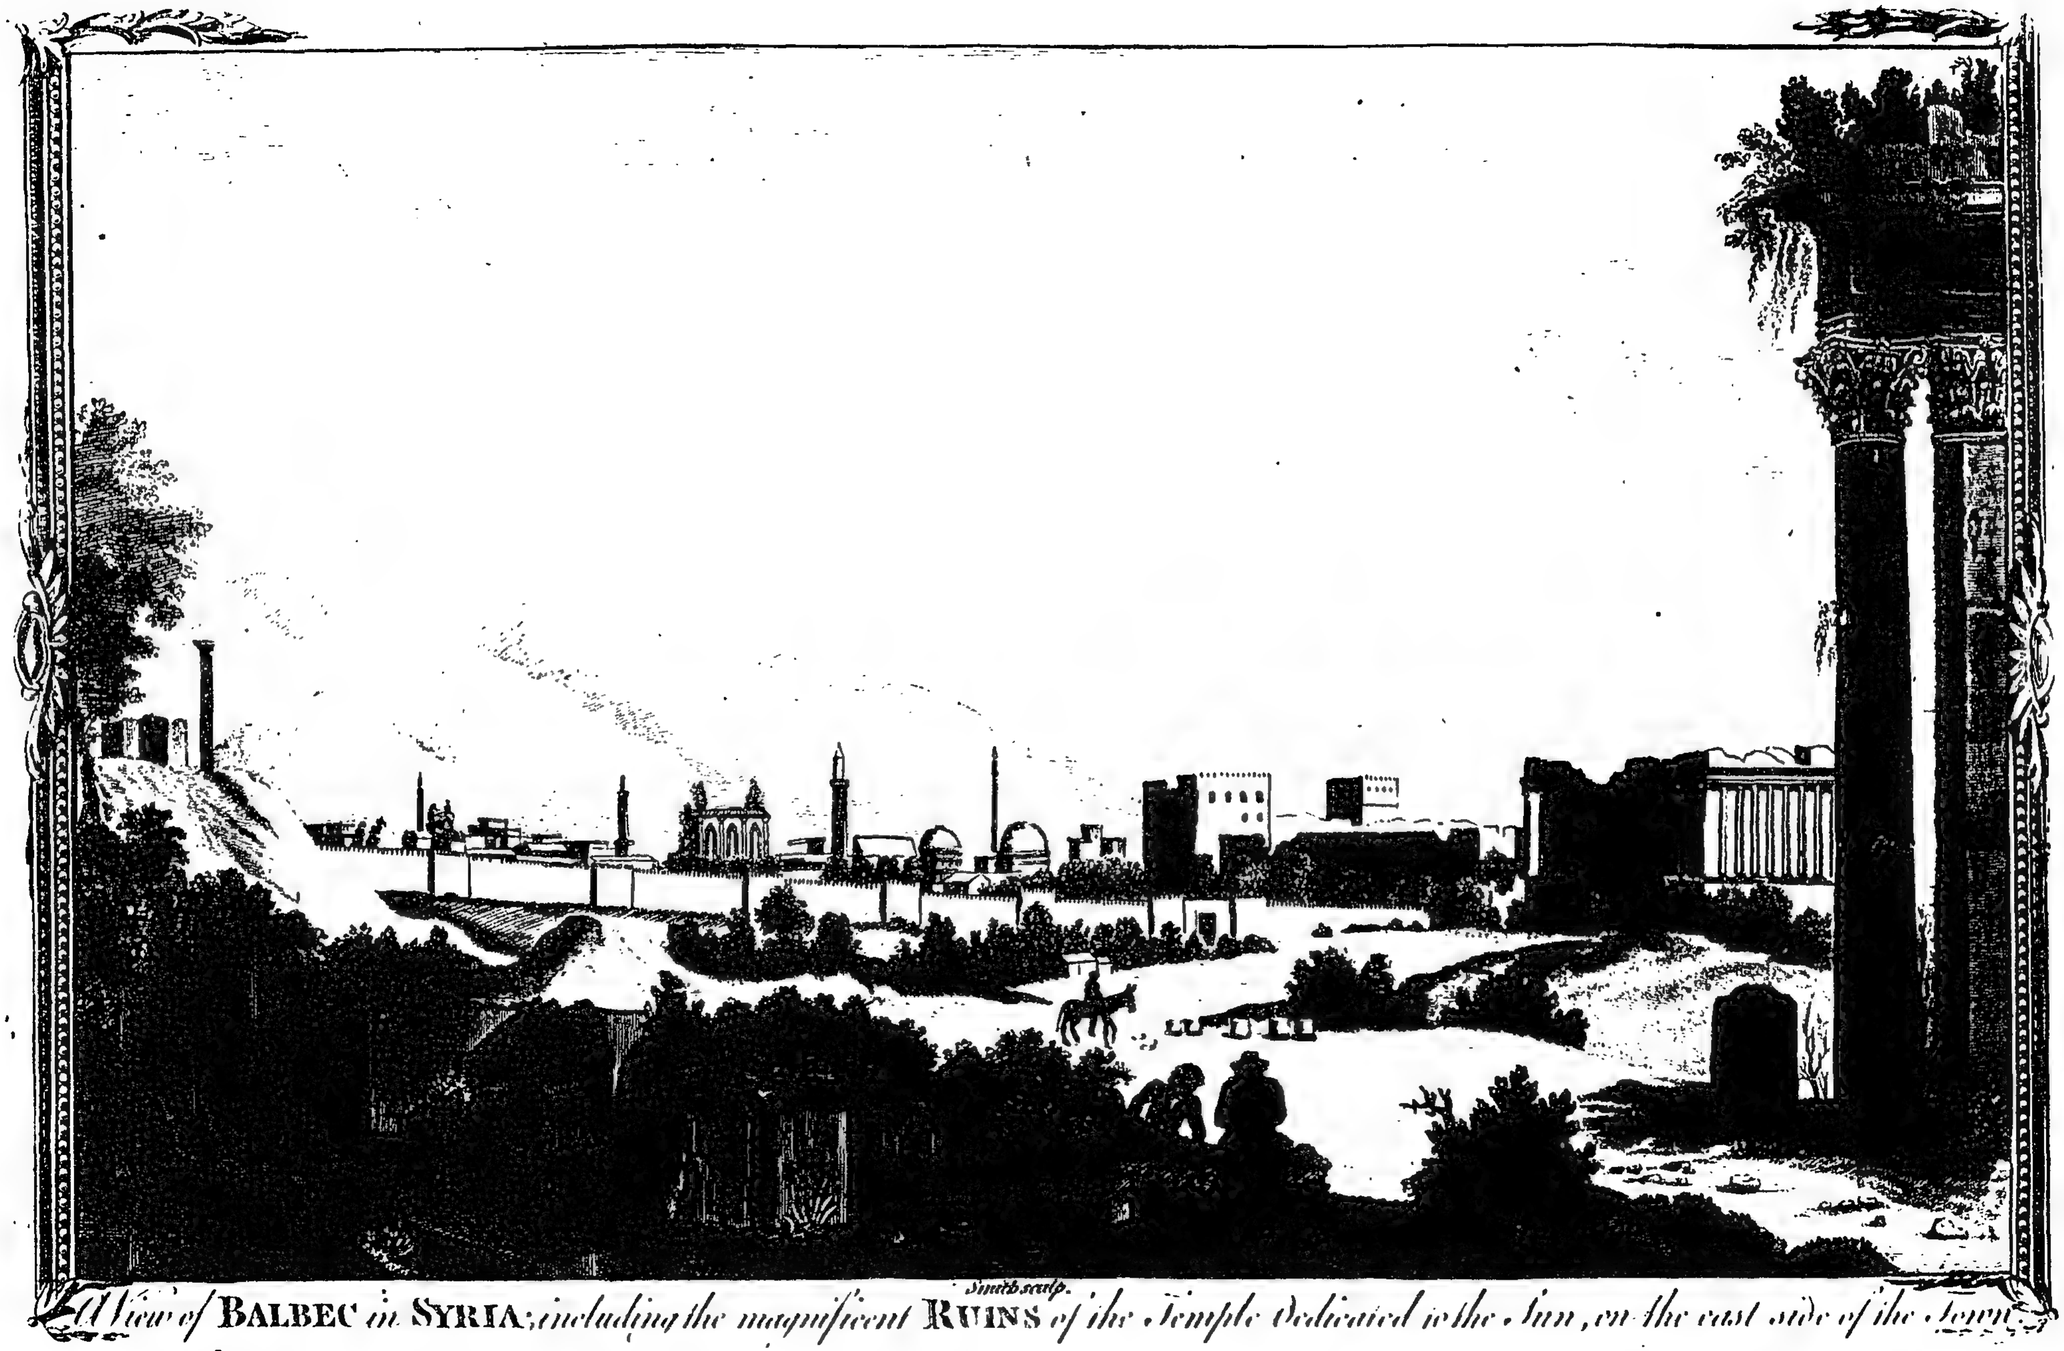
The employment of the Greenlanders is for the moſt part at ſea. When they go to catch whales, they put on their beſt apparel; fancying, that if they were not neatly dreſſed, the whale would ſhun them. Upon theſe occaſions, about fifty perſons, of both ſexes, ſet out together in one of the large boats. When they have found the whale, they ſtrike him with their harpoons, to which are faſtened lines or ſtraps two or three fathoms long, made of ſeal-ſkins; at the end of which they tie a bag of a whole ſeal-ſkin filled with air like a bladder, that the whale, when he finds himſelf wounded and flies away, with the harpoon ſticking in his body, may be the ſooner tired and eaſily found, the air-bag hindering him from keeping long under water. When he loſes ſtrength they attaek him with ſpears and lances till he is killed, and then put on their coats made of dreſſed ſeal-ſkin, with boots, gloves, and caps, laced ſo tight together, that no water can penetrate them. In this garb they leap into the ſea, and begin to ſlice off the fat all round the body, and are ſometimes ſo daring as to get upon the whale's back, while he is yet alive, in order to make the quicker diſpatch in killing him, and cutting away the fat.

Nearly the ſame method is uſed in killing the ſeals, only the harpoon is leſs, to which is faſtened a line of ſeal-ſkin, ſix or ſeven fathoms long, and at the end of it a bag of ſeal-ſkin filled with air, to keep the ſeal when wounded from eſcaping by diving: but in the northern parts, where the ſea is frozen, they uſe other methods in catching of ſeals. They firſt look out for the holes, which the ſeals themſelves make with their claws, of about the bigneſs of a halfpenny, that they may fetch their breath. On their finding one of theſe holes, they ſeat themſelves near it, and as ſoon as they perceive the ſeal put his ſnout to it for air, immediately ſtrike him with a ſmall harpoon, which they have ready in their hand, to which is faſtened a ſtrap of a fathom long, which they hold in the other hand. After he is ſtruck, and cannot eſcape, they cut the hole large enough to bring him up through it, and as ſoon as they have got his head above the ice, kill him, and then lift him out of the water.

Another way of catching ſeals, is: they make a large hole in the ice; but in ſpring they find holes made by the ſeals themſelves, through which they get upon the ice, in order to repoſe and baſk themſelves in the ſun. Near theſe holes the fiſhermen place a low bench, upon which they lie down on their belly, having firſt made a ſmall hole near the large one, through which they ſoftly let down a pole headed with a harpoon, a ſtrap being faſtened to it, which one holds in his hand, while another, lying upon the bench with his face downwards, watches the coming of the ſeal, which when he perceives, he cries 'Ke,' whereupon the ſeal is inſtantly ſtruck by him who holds the pole.

In the ſpring, when the ſeals lie upon the ice, near holes which themſelves make to get up and down, the Greenlanders, diſguiſed in ſeal-ſkins, with a long pole in their hands, move their heads backwards and forwards, and ſnort like a ſeal, till they come ſo near that they are able to reach and ſtrike them with the pole. It is of the utmoſt importance to theſe people to excel in hunting and fiſhing, ſince on their ſkill in theſe employments depends their whole ſubſiſtence.

In fiſhing, they make uſe of hooks of iron or bones; their lines are made of white whalebone, cut very ſmall and thin, and with this tackle they catch abundance of fiſh. Their way of fiſhing for ſmall ſalmon or ſea trout is as follows: at low water they build ſmall incloſures of ſtone, near a river's mouth, or any other place where the ſalmon come: when the tide comes in, the ſalmon, which enter the river, paſs at high water over the incloſure, and remain in the river till the water falls again, when they endeavour to return to the ſea; but the fiſhermen way-lay them at the incloſure, and ſtop their paſſage at the time of low ebb, when the ſalmon are left on dry land, and may be caught with the hand: if they are left in holes, they take them with a pole headed with two ſharp hooked bones, or iron hooks.



They are ſtrangers to trade, arts, and ſciences; have no traffic one among another, and their commerce with foreigners is very inconſiderable. They neither uſe nor have any knowledge of money; but fix a certain value on iron, which they barter for goods.

At their entertainments, they expreſs their mirth by drumming, ſinging, and dancing. They are accuſtomed from their very childhood to an unbounded liberty, all of them being on a level. They have indeed little regard to the forms of ceremony and decorum, which in other places obtain the name of politeneſs; yet are free, open, and cheerful in converſation; nothing pleaſing them better than merry jeſts and raillery. They live very ſociably, and repoſe great confidence in each other. Amorous intrigues of an unlawful kind are ſeldom or never heard of among them; and as they abſtain from theft, rapine, and violence among themſelves, they are never known upon any pretence to make war on their neighbours. They think themſelves greatly ſuperior to the Danes, and make no ſcruple to pilfer any thing from them, when it can be done with ſafety; but it is probable they have little idea of property: and as they behave with ſuch integrity to each other, it is natural to ſuppoſe that they have learnt this pilfering of the Dutch and Daniſh ſeamen. They exerciſe great hoſpitality, and indeed have moſt things in common; ſo that if there be any among them who cannot work, or get his livelihood, they do not let him ſtarve, but admit him freely to their table. They are remarkable for their good nature and inoffenſive behaviour: hatred and envy, ſtrife and rage, are rarely heard of among them. They have as great an abhorrence of ſtealing from each other as any nation upon the earth, and therefore keep nothing under lock and key; but leave all ſo free that every body may come at it, notwithſtanding which they have no fear of loſing it.

The Greenlanders are charged with having no idea of a God, and ſome authors have ſaid that their language has not any expreſſion to denote a Supreme Being; though they themſelves acknowledge that they are convinced of the immortality of the ſoul, and believe that as ſoon as a perſon dies he goes to the land of ſpirits, and there enjoys the felicity of hunting from age to age; while the body remains behind and moulders in the duſt. They maintain, however, that there is a ſpirit, which they call Torngarſuk, to whom they aſcribe a ſupernatural power, though not the creation of the world. The Angakuts, or prophets, form very whimſical ideas of this being, ſome repreſenting him as without form or ſhape, others giving him that of a bear, and others pretending that he has a large body and but one arm. They aſſign him his abode in the lower regions of the earth, where they tell you is conſtantly fine ſun-ſhine weather, good water, deer, and fowls in abundance. They likewiſe maintain that a ſpirit reſides in the air, whom they name the moderator, or reſtrainer; for theſe Angakuts pretend, by his order, to command the people to abſtain from certain things, as preſervatives from evil and danger.

They believe that there are ſpirits who govern the elements; and their notions of the heavenly bodies are very whimſical; they ſay the moon was once a young man, and the ſun a young woman his ſiſter, with whom he was familiar in the dark; but that ſhe being deſirous to find out her lover, rubbed her hands with ſoot, with which ſhe marked his white bear-ſkin coat, and hence they ſay came the ſpots in the moon. The ſun flying from his embraces, aſcended the air, whither the moon followed her, and ſtill continues to purſue, without being able to overtake her; but this is probably only a fiction of their poets, like thoſe of Ovid in his Metamorphoſes.

Their

Smith sculp.

Their time is not computed or meaſured by weeks or years, but only by months, beginning their computation from the ſun's firſt riſing above their horrizon in the winter, from whence they tell the moons, in order to know exactly the ſeaſon in which every ſort of fiſh, ſea animals, or birds, ſeek the land, that by this knowledge they may regulate their different employments. According to their aſtronomical ſyſtem, the heavens turn round the point of a huge rock.

A circumſtance very extraordinary in theſe people, thus ſeated in frozen regions, which might be ſuppoſed to damp the genius and extinguiſh the fire of imagination, is their talent for poetry, in which they take extreme delight. The poems they compoſe are a kind of lyric odes, the harmony of which depends both upon rhyme and quantity, there being a viſible regularity in the number of ſyllables of which their verſes are compoſed, and a plain regard to cadence even in their manner of reading them. They uſe this ſort of poetry, which, all things conſidered, is as far from being rude, as it is from being exact, to expreſs all their paſſions, ſuch as love, joy, grief, but more eſpecially anger; for when two people quarrel in this country, it is ſaid they challenge each other, not to fight, for that they never do but in jeſt, or by way of diverſion, but to contend in verſe; and he who firſt wants words to expreſs himſelf in this poetical duel, is held to be conquered, and ſo the controverſy ends without either law-ſuit or ſhedding of blood.

The Rev. Mr. Egede, who was ſent to Greenland by the Daniſh ſociety for propagating the Goſpel, lived among this people fifteen years, which he ſpent with the moſt indefatigable zeal and laborious application, by which means he made a great number of converts. He returned to Copenhagen in 1736, and by his ſolicitation a ſeminary was founded in that city for educating able miſſionaries and catechiſts to be ſent to Greenland. The Miſſion-college alſo ſends young lads to Greenland to learn the language, and to be inſtructed by the miſſionaries there, in order to qualify them for the miniſtry.

The trade of this country is at preſent carried on by the Copenhagen company, who ſend thither three or four ſhips every year, and the Dutch are prohibited from coming within ſeveral miles of their colonies. The commodities Greenland affords for commerce are whale-blubber, whalebone, ſea-unicorns horns, the ſkins of reindeer, bears, ſeals, and fox-ſkins, which they barter for the following merchandizes; ſhirts made of white, blue, red, and ſtriped linen, coarſe woollen cloth, knives, ſaws, needles, large fiſhing-hooks, and other hard-ware; looking-glaſſes, rafts, poles, deal boards, cheſts, kettles of copper, braſs, tin, &c.

Before we take our leave of this country, it may not be amiſs to preſent our readers with a ſingular, but well authenticated, relation of the adventures of four Ruſſian ſailors, who remained ſeveral years in Greenland.

Jeremiah Okladmkof, a merchant of Meſen, a town in the province of Jugovia, and in the government of Archangel, fitted out a veſſel, in the year 1743, carrying fourteen men; ſhe was deſtined for Spitzbergen, to be employed in the whale or ſeal fiſhery. The wind was fair for eight ſucceſſive days after they had ſailed; but on the ninth it changed, ſo that inſtead of getting to the weſt of Spitzbergen, the uſual place of rendezvous for the Dutch ſhips, and thoſe of other nations, annually employed in the whale fiſhery, they were driven eaſtward.

After ſome days, however, they approached within two Engliſh miles of the ſhore, when the veſſel was ſuddenly ſurrounded by ice, and they found themſelves in an extreme dangerous ſituation. In this alarming ſtate a council was held; when the mate, Alexis Himkof, informed them, that he recollected to have heard that ſome of the people of Meſen, ſome time before, having formed a reſolution of wintering here, had accordingly carried from that city timber proper for building a hut, and had actually erected one at ſome diſtance from the ſhore. This information induced the whole company to reſolve on wintering here, if the hut, as they hoped, ſtill exiſted; for they clearly perceived the imminent danger they were in, and that they muſt inevitably periſh if they continued in the ſhip.

Accordingly they diſpatched four of their crew in ſearch of the hut, or any other ſuccour they could meet with. Theſe were, Alexis Himkof, the mate; Iwan Himkof, his godſon; Stephen Scharapot, and Feodor Weregin. But as the ſhore on which they were to land was uninhabited, it was neceſſary that they ſhould make ſome proviſion for their expedition. They had almoſt two miles to travel over looſe ridges of ice, which being raiſed by the waves, and driven againſt each other by the wind, rendered the way equally difficult and dangerous: prudence therefore forbad their loading themſelves too much, leſt, being overburdened, they might ſink in between the pieces of ice, and periſh. They then provided themſelves with a muſquet, and a powder-horn containing twelve charges of powder, with as many balls, an ax, a ſmall kettle, a bag with about twenty pounds of flour, a knife, a tinder-box and tinder, a bladder with tobacco, and every man his wooden pike.

Thus accoutred, theſe four ſailors quickly arrived at Spitzbergen, little ſuſpecting the misfortunes that would befal them. They began with exploring the country; and ſoon diſcovered the hut they were in ſearch of, about an Engliſh mile and a half from the ſhore. It was thirty-ſix feet in length, eighteen feet in height, and as many in breadth. It contained a ſmall antechamber about twelve feet broad, which had two doors, the one to ſhut it from the outer air, and the other to form a communication with the inner room; this contributed greatly to keep the larger room warm when once heated. In the large room was an earthen ſtove conſtructed in the Ruſſian manner; that is, a kind of oven without a chimney, which ſerves occaſionally either for baking, or heating the room, or for a place to ſleep upon when the weather is very cold, to which latter uſe the Ruſſian peaſants frequently apply it.

The diſcovery of the hut was very agreeable to the ſailors, who perceived it had ſuffered much by the weather, it having been built a conſiderable time, but, bad as it was, they contrived to paſs the night in it. Early the next morning they haſtened to the ſhore, impatient to inform their comrades of their ſucceſs; and alſo to procure from their veſſel ſuch proviſion, ammunition, and other neceſſaries, as might better enable them to winter there.

When they reached the place of their landing, the aſtoniſhment and agony they felt was inexpreſſibly great, on ſeeing nothing but an open ſea, free from the ice, which but a day before had covered the ocean. A violent ſtorm, which had ariſen during the night, had certainly been the cauſe of this diſaſtrous event. But they could not tell whether the ice, which had before hemmed in the veſſel, agitated by the violence of the waves, had been driven againſt her, and ſhattered her to pieces; or whether ſhe had been carried by the current into the main; a circumſtance which frequenty happens in thoſe ſeas. Whatever accident had befallen the ſhip, they ſaw her no more; and as no tidings were ever after heard of her, it is moſt probable that both ſhe and all on board went to the bottom.

The unhappy wretches being deprived, by this melancholy event, of all hope of ever being able to quit the place, returned to the hut full of horror and deſpair, and their firſt intention was employed, as may be eaſily imagined, in deviſing means for their ſubſiſtence, and repairing their hut. The twelve charges of powder which they had brought with them ſoon procured them as many rein-deer; and it fortunately happened that there were great numbers of thoſe animals in the country.

On examining the hut, they found that there were cracks in many places between the boards of the building, that freely admitted the air. This inconvenience, however, was eaſily remedied, as they had an ax, and the beams were ſtill ſound, ſo that it was eaſy for them to make the boards join again; beſides moſs growing in great abundance all over the country, there was more than ſufficient to ſtop up the crevices, which wooden houſes muſt always be liable to.

Theſe climates are habitable but to few ſpecies of animals, by reaſon of the intenſe cold, which alſo renders them equally unfit for the production of vegetables. No tree or ſhrub of any kind is found in Spitzbergen; a circumſtance of the moſt alarming nature to theſe ſailors. Without fire it was impoſſible to reſiſt the rigour of the climate; and without wood, how was that fire to be produced or ſupported? Providence however, has ſo ordered it, that in this particular, the ſea ſupplies the defects of the land. In wandering along the beach, they collected plenty of wood, which had been driven aſhore by the waves, and which at firſt conſiſted of the wrecks of ſhips, and afterwards of whole trees with their roots, the produce of ſome more hoſpitable, but to them unknown, climate, which had been ſent into the ocean by the overflowing of rivers, or other accidents.

During the firſt year of their exile, nothing proved of more eſſential ſervice to them, than ſome boards they found upon the beach, having a long iron hook, ſome nails of about five or ſix inches long, and proportionably thick,

and

and other bits of iron fixed in them; the melancholy reliques of ſome veſſel caſt away in thoſe remote parts. Theſe were thrown aſhore by the waves at that time when the want of powder gave our men reaſon to apprehend that they muſt fall a prey to hunger, as they had nearly conſumed the rein-deer they had killed.

This fortunate circumſtance was attended with another equally ſo; for they found, on the ſhore, the root of a fir-tree, of a form nearly reſembling that of a bow, which faſhion they ſoon brought it to, by the help of a knife; but ſtill they wanted a ſtring and arrows. Not knowing how to procure theſe at preſent, they reſolved upon making a couple of lances, to defend themſelves againſt the attacks of the white bears.

As neither the heads of their lances nor arrows could be made without the help of a hammer, they contrived to form the large iron hook before-mentioned into one, by beating it, and widening a hole, it happened to have about its middle, with the help of one of their largeſt nails: this received the handle, and a round button at one end of the hook ſerved for the face of the hammer. A large pebple ſupplied the place of an anvil, and a couple of rein-deer horns made the tongs. By means of theſe tools they made two heads of ſpears; and after poliſhing and ſharpening them on ſtones, they tied them as faſt as poſſible, with thongs made of rein-deer ſkins, to ſticks about the thickneſs of a man's arm, which they got from ſome branches of trees they found on the coaſt.

Having now equipped themſelves with ſpears, they reſolved to attack a white bear; and after a moſt dangerous encounter, they killed one, and thereby procured a new ſupply of proviſions. The fleſh of this animal they reliſhed exceedingly, as they thought it much reſembled beef in taſte and flavour. They ſaw, with much pleaſure, that the tendons could, with little or no trouble, be divided into filaments of what fineneſs they thought fit. This, perhaps, was the moſt fortunate diſcovery they could make; for they were hereby furniſhed with ſtrings for their bow, beſides other advantages.

They next proceeded to forge ſome pieces of iron into heads of arrows of the ſame ſhape, though ſomewhat ſmaller in ſize than the ſpears. Having ground and ſharpened theſe like the former, they tied them, with the ſinews of the white bear, to pieces of fir, to which, by the help of fine threads of the ſame, they faſtened feathers of ſea fowl, and thus became poſſeſſed of a complete bow and arrows. Their ingenuity reſpecting this was crowned with ſucceſs far beyond their expectation; for, during the time of their continuance here, they killed no leſs than two hundred and fifty rein-deer, beſides a great number of blue and white foxes. The fleſh of theſe animals ſerved them alſo for food, and their ſkins for cloathing and other neceſſary preſervatives againſt the intenſe coldneſs of a climate ſo near the pole. But they killed only ten white bears in all, and that not without the utmoſt danger; for theſe animals, being prodigiouſly ſtrong, defended themſelves with aſtoniſhing vigour and fury.

They attacked the firſt bear deſignedly, but the other nine they killed in defending themſelves from their aſſaults: for ſome of theſe creatures even ventured to enter the outer room of the hut, in order to devour them. It is true, all the bears did not ſhew equal ferocity, either owing to ſome being leſs preſſed by hunger, or to their being naturally leſs carniverous than the others: for ſome of them which entered the hut immediately betook themſelves to flight on the firſt attempt of the ſailors to drive them away. A repetition, however, of theſe attacks, threw the poor men into great terror and anxiety, as they were almoſt in perpetual danger of being devoured.

The three different kinds of animals before-mentioned, viz. the rein-deer, the foxes, and the white bears, were the only food theſe wretched mariners taſted during their continuance in this dreary abode. They were alſo for ſome time reduced to the neceſſity of eating their meat quite raw, and without either bread or ſalt, for neither of theſe could be procured. The intenſeneſs of the cold, together with the want of proper conveniences, prevented them from cooking their victuals in a proper manner. There was but one ſtove in the hut, and that was not well adapted for boiling any thing. Wood alſo was too precious a commodity to be expended in keeping up two fires; and the one they might have made out of their habitation to dreſs their victuals, could never have ſerved to warm them: beſides, the continual danger of an attack from the white bears, was another reaſon againſt their cooking in the open air.

As the eating their meat half raw proved very diſagreeable, in order, therefore, to remedy in ſome meaſure that hardſhip, they bethought themſelves of drying ſome of their proviſions, during the ſummer, in the open air, and afterwards of hanging it up in the upper part of the hut, which was continually filled with ſmoak. This meat, ſo prepared, they uſed for bread, and it made them reliſh their other fleſh the better, as they could only half-dreſs it. Finding this experiment anſwer their wiſhes in every reſpect, they continued to practiſe it during the whole time of their confinement in this country, and always kept up, by that means, a ſufficient ſtock of proviſions. In ſummer, they had water from ſmall rivulets that fell from the rocks; and in winter from the ſnow and thawed ice; this was of courſe their only beverage; and for drinking, and other purpoſes, their ſmall kettle was the only veſſel they could make uſe of.

Seafaring people are known to be extremely ſubject to the ſcurvy, and this diſeaſe increaſes in proportion as they approach the poles; which muſt be attributed to the exceſſive cold, or ſome other cauſe yet unknown. The ſailors, therefore, ſeeing themſelves quite deſtitute of every means of cure, in caſe they ſhould be attacked with ſo fatal a diſorder, judged it expedient not to neglect any regimen generally adopted as a preſervative againſt this impending evil. Iwan Hinkof, one of their number, who had ſeveral times wintered on the coaſt of Spitzbergen, adviſed his unfortunate companions to ſwallow raw and frozen meat broken into ſmall bits; to drink the blood of rein-deer warm as it flowed from their veins immediately after killing them; to uſe as much exerciſe as poſſible, and, laſtly, to eat ſcurvy-graſs, which this country produces.

Theſe remedies experience proved to be effectual; for three of the ſailors, who purſued this method, continued totally free from all taint of the diſorder. The fourth, Feodor Weregin, who was naturally indolent, averſe to drinking the rein-deer blood, and unwilling to leave the hut when he could poſſibly avoid it, was, ſoon after their arrival, ſeized with the ſcurvy, which afterwards became ſo bad, that he paſſed almoſt ſix years under the greateſt ſufferings: in the latter part of that time he became ſo weak, that he could no longer ſit erect, nor even raiſe his hand to his mouth; ſo that his humane companions were obliged to feed and attend him to the hour of his death, as if he had been a new-born infant.

They ſoon found the neceſſity of keeping up a continual fire in ſo cold a climate, and perceived that if it ſhould unfortunately go out, they had no means of lighting it again; for though they had a ſteel and flints, yet they wanted both match and tinder. In their excurſions through the country they had met with a ſlimy loam, or a kind of clay, out of which they found means to form a utenſil that might ſerve for a lamp; and they propoſed to keep it conſtantly burning, with the fat of the animals they ſhould kill. This was certainly the moſt rational ſcheme they could have thought of; for to be without a light, in a climate where, during winter, darkneſs reigns for ſeveral months together, would have added much to their other calamities. Having therefore faſhioned a kind of lamp, they filled it with rein-deer's fat, and ſtuck in ſome twiſted linen ſhaped into a wick. But they had the mortification to find, that as ſoon as the fat melted, it not only ſoaked into the clay, but ran through on all ſides. It was therefore neceſſary to deviſe ſome means for preventing this inconvenience, not ariſing from cracks, but from the ſubſtance of which the lamp was made being too porous. They therefore made a new one, dried it thoroughly in the air, then heated it red-hot, and afterwards quenched it in their kettle, wherein they had boiled a quantity of flour (part of the ſmall bag they had preſerved) down to the conſiſtence of thin ſtarch. The lamp being thus dried, and filled with fat, they now found to their great joy, it did not leak: but, for greater ſecurity they dipped linen rags in their paſte, and with them covered all its outſides.

Succeeding in this attempt, they immediately made another lamp, for fear of an accident, that in all events they might not be deſtitute of light; and when they had made theſe two, they thought proper to ſave the remainder of their flour for ſimilar purpoſes. As they had carefully collected whatever happened to be caſt on ſhore to ſupply them with fuel, they had found among wrecks of veſſels ſome cordage, and a ſmall quantity of oakum, which ſerved them to make wicks for their lamps. When theſe ſtores began to fail, their ſhirts and drawers were employed to make good the deficiency. By theſe means they kept a lamp burning without intermiſſion, from the day they firſt made it, till that of their embarkation.

They

They were, however, expoſed the more to the rigour of the climate, from the neceſſity they were under of converting their ſhirts and drawers to the uſe above ſpecified; they alſo found themſelves in want of ſhoes, boots, and other articles of dreſs; and, as winter was approaching, they were again obliged to that ingenuity which neceſſity ſuggeſts, and which ſeldom fails in the trying hour of diſtreſs. They had ſkins of rein-deer and foxes in abundance, that had hitherto ſerved them for bedding, and which they now thought of employing in ſome more eſſential ſervice; but the queſtion was, how to tan them. After deliberating on this matter, they took the following method: they ſoaked the ſkins for ſeveral days in freſh-water, till they could pull off the hair tolerably well; they then rubbed the wet leather with their hands till it was nearly dry, when they ſpread ſome melted rein-deer's fat over it, and again rubbed it well. By this proceſs, the leather became ſoft, pliant, and ſupple, proper for anſwering every purpoſe for which it was intended. Thoſe ſkins which they deſigned for furs they only ſoaked for one day, to prepare them for being wrought, and then proceeded in the manner before mentioned, except only that they did not remove the hair. Thus they ſoon furniſhed themſelves with the neceſſary materials for all the parts of dreſs they had occaſion for.

Another difficulty which occurred was, they had neither awls for making ſhoes or boots, nor needles for ſewing their garments. Theſe wants, however, they ſoon ſupplied, by means of the bits of iron they had occaſionally collected. Out of theſe they made both; and by their induſtry even brought them to a certain degree of perfection. The making eyes to their needles gave them indeed no little trouble; but this they alſo performed with the aſſiſtance of their knife; for having ground it to a very ſharp point, and heated red-hot a kind of wire, they pierced a hole through one end, and by wetting and ſmoothing it on ſtones, brought the other to a point, and thus gave a very tolerable form to the whole needle.

A pair of ſciſſars to cut out the ſkins, was the next material thing wanted; but this deficiency was ſupplied by their knife; and though there was neither taylor nor ſhoemaker amongſt them; yet they contrived to cut out their leather and furs well enough for the purpoſe. The ſinews of the bears and rein-deer ſerved them for thread; and then they proceeded to make their new cloaths with the neceſſary implements which they had provided.

They wore, in ſummer, a kind of jacket and trowſers, made of ſkins, prepared as above; and in winter they wore long fur gowns, like the Samoieds or Laplanders, furniſhed with a hood, which covered their head and neck, leaving only an opening for the face. Theſe gowns were ſewed cloſe round; ſo that they were obliged to bring them over their heads, like a ſhirt, when they put them on.

After theſe diſtreſſed exiles had paſſed near ſix years in this diſmal place, Feoder Weregin, whoſe illneſs we before took notice of, and who all along had been in a languid condition, died; after having, in the latter part of his life, ſuffered the moſt excruciating pains. Though they were thus freed from the trouble of attending him, and the grief of being witneſſes to his miſery, without being able to afford him any relief, yet they were greatly affected at his death. They ſaw the number leſſened, and every one wiſhed to be the firſt that ſhould follow him. As he died in winter, they dug a grave in the ſnow as deep as they could, in which they laid the corpſe, and in order to ſecure it from the bears, covered it over in the beſt manner they could.

While the melancholy reflections occaſioned by the death of their comrade were freſh in their minds, and when each expected to pay this laſt duty to the remaining companions of his misfortunes, or to receive it from them, they unexpectedly got ſight of a Ruſſian ſhip. This happened on the 15th of Auguſt, 1749. The veſſel belonged to a trader of the ſect called by its adherents Stara Vieva, that is, the Old Faith, who had come from Archangel, and, propoſed wintering in Nova Zembla; but the contrary winds they met with in their paſſage made it impoſſible for them to reach the place of their deſtination. The veſſel was driven towards Spitzbergen, directly oppoſite to the reſidence of our mariners, who, as ſoon as they perceived her, haſtened to light fires on the hills neareſt their habitations, and then ran to the beach, waving a flag made of rein-deer's hide faſtened to a pole. The people on board, ſeeing theſe ſignals, came to an anchor not far from the land, as they concluded that there were men on the ſhore who implored their aſſiſtance.

The joy of theſe poor people, on ſeeing the moment of their deliverance ſo near, was almoſt indeſcribable. They ſoon agreed with the maſter of the ſhip to work for him on the voyage, and to pay him eighty rubles on their arrival, for taking them on board with all their riches, which conſiſted in fifty pud, or two thouſand pounds weight, of rein-deer's fat, in many hides of theſe animals, and in ſkins of the blue and white foxes, together with thoſe of the ten white bears which they had killed. They took care not to forget their bows and arrows, their ſpears, their knife and ax, which were almoſt worn out; alſo their awls and their needles, which they kept carefully in a bone box very ingeniouſly made with the knife only.

On the 28th of September, 1749, our adventurers arrived ſafe at Archangel, having ſpent ſix years and three months in their rueful ſolitude. But the moment of their landing had nearly proved fatal to the loving and beloved wife of Alexis Himkof, who, being preſent when the veſſel came into port, immediately knew her huſband, and ran with ſo much eagerneſs to his embraces, that ſhe narrowly eſcaped being drowned by ſlipping into the water.

On their arrival, they were all three ſtrong and healthy; but having lived ſo long without bread, they could not reconcile themſelves to the uſe of it; neither did they drink any thing but water, as they could not bear any ſpirituous liquors.

We ſhall conclude our deſcription of Greenland with a curious narrative of the methods made uſe of by eight ſeamen, viz. William Fakeley, gunner; Edward Pelham, gunner's-mate, the writer of this narrative; John Wiſe, and Robert Goodfellow, ſeamen; Thomas Ayerss, whale-cutter; Henry Bett, cooper; John Dawes and Richard Kellet, landmen; who wintered in Greenland, to preſerve their exiſtence in that inhoſpitable clime; and of their happy deliverance and return from it.

On the firſt of May 1630, the Salutation ſet ſail from the Thames, and arrived at Greenland on the 11th of the next month. Being in want of proviſions the latter end of the year, they ſent eight men on ſhore at a place pretty much frequented by rein deer, to kill veniſon, leaving them a boat, and orders to follow the ſhip to Green-Harbour, which lies to the ſouthward of the place where they went aſhore. Theſe men having killed fourteen or fifteen deer, lay that night aſhore, and propoſed next day to have gone on board the ſhip; but a great quantity of ice driving towards the ſhore, obliged the ſhip to ſtand out ſo far to ſea, that when they came to Green Harbour they were out of ſight. However, the ſhip being to rendezvous in Belſound, further to the ſouthward, and being to leave the country within three days, our huntſmen began to be very anxious, leſt the ſhipping ſhould be gone from thence too before they arrived. They thought it proper, therefore, to fling their veniſon into the ſea, in order to lighten the boat, and make the beſt of their way to Belſound, diſtant from thence about ſixteen leagues: but none of them knowing the coaſt very well, they overſhot their port about ten leagues, when, ſenſible of their error, they returned to the northward; but one of their company being ſtill poſitive Belſound lay farther to the ſouth, they were induced to make to the ſouthward again, till they were a ſecond time convinced of their miſtake; and then they turned their boat to the north again, and again arrived at Belſound; but had ſpent ſo much time in rowing backwards and forwards, that the ſhips had actually left the coaſt, and were gone to England, to their great aſtoniſhment, being provided neither with cloaths, food, firing, or houſe to ſhelter themſelves from the piercing cold they were to expect in ſo rigorous a climate. They ſtood ſome time looking on one another, as men amazed at the diſtreſs they were on a ſudden reduced to; but their conſternation being a little abated, they began to think of the propereſt means to ſubſiſt themſelves during the approaching winter; and the weather being favourable, they agreed in the firſt place, to go to Green Harbour, and hunt for veniſon; having two dogs with them very fit for their purpoſe.

Accordingly, on the 25th of Auguſt, they went in their boats to Green Harbour, where they arrived in twelve hours, being ſixteen leagues to the northward of Belſound. Here they ſet up a tent made with a boat's ſail, the oars ſerving for poles; and, having ſlept a few hours, went early next morning to their ſport, killing ſeven or eight deer and four bears, and the day following they killed twelve deer more, with which they loaded their boats; and, finding another boat which had been left there by the company, they loaded that with the greaves of whales (being the pieces which remain in the coppers, after the oil is drawn from them), and returned with their booty to Belſound. Here happened to be ſet up a large ſubſtantial

booth, which the coopers worked in at the fiſhing ſeaſon: it was eighty feet long, and fifty broad, covered with Dutch tiles, and the ſides well boarded. Within this booth theſe ſailors determined to build another of leſs dimenſions, being furniſhed with boards and timber, by pulling down a booth which ſtood near the former: and from the chimnies of three furnaces, uſed for the boiling of oil, they got a thouſand bricks, they found alſo four hogſheads of very fine lime, which, mingled with the ſand on the ſea-ſhore, made excellent mortar.

The weather was by this time grown ſo cold, that they were obliged to have two fires, to keep their mortar from freezing. They perſiſted, however, in their work, and raiſed a wall of the thickneſs of a brick againſt one of the ſides of their innermoſt booth; but wanting bricks to finiſh the reſt in like manner, they nailed thick boards on each ſide the timbers, and filled up the ſpace between with ſand: by which means it became ſo tight and cloſe, that the leaſt breath of air could not enter in; and the chimney's vent was in the greater booth. The length of this leſſer booth, was twenty feet, the breadth ſixteen feet, the height ten; their ceiling being made of deal boards five or ſix times double, and ſo overlaid, that no air could poſſibly come in from thence. Their door they did not only make as ſtrong and cloſe as poſſible, but lined it with a bed which they found there: they made no windows, except a little hole in the tiles of the great booth, by which they received ſome light down the chimney of the leſſer: they then made four cabbins, chuſing to lie two in each cabbin. Their bedding was the ſkins of the rein-deer, the ſame that the Laplanders uſe, and they found them exceedingly warm; and for firing, they took to pieces ſome caſks, and ſeven or eight of the boats which were left behind (for it ſeems they uſe a great many boats in whale-fiſhing, which they leave in the country every winter, rather than be at the trouble of carrying them backwards and forwards). Our ſailors ſtowed their firing between the beams and roof of the greater booth, in order to make it the warmer, and keep out the ſnow, which would have covered every thing in the greater booth, if it had not been for this contrivance.

On the 12th of September, obſerving a piece of ice come driving towards the ſhore, with two morſes, or ſea-horſes, aſleep upon it, they went out in their boat with a harping iron and ſpears, and killed them both; and on the 19th of the ſame month another, which was ſome addition to their food. But taking a very narrow ſurvey of all their proviſions, they found that there was not half enough to ſerve them the whole winter; and therefore they ſtinted themſelves to one meal a day, and agreed to keep Wedneſdays and Fridays as faſting days, allowing themſelves then only the fritters or greaves of the whales, which is very loathſome food. By the 10th of October the nights were grown long, and the weather ſo cold, that the ſea was frozen over; and having no buſineſs now to divert their thoughts, as heretofore, they began to reflect on their miſerable circumſtances, ſometimes complaining of the cruelty of the maſter of the ſhip, in leaving them behind; and at others, excuſing him, and bewailing his misfortunes, as believing him to have periſhed in the ice. At length putting their confidence in heaven, which only could relieve them in their great diſtreſs, they redoubled their prayers for ſtrength and patience to go through the diſmal trial, and received great ſatisfaction from their devotions, which no doubt were as ſincere and fervent as ever were offered up to the Divine Being.

Having now again ſurveyed their proviſions, they found that the fritters of the whale were almoſt all mouldy, having taken ſome wet; and of their bear and veniſon there was ſcarce enough left to afford them five meals a week; whereupon it was agreed to live four days of the week upon the mouldy fritters, and the other three to feaſt upon bear and veniſon: and leſt there ſhould want firing hereafter, to dreſs their meat, they thought it proper to roaſt every day half a deer, and ſtow it up in hogſheads; and with this kind of food they filled three hogſheads and a half; leaving ſo much raw as would ſerve to roaſt every Sunday a quarter, and a quarter for Chriſtmas-day.

It being now the 14th of October, the ſun left them, and they ſaw it no more till the third of February; but they had the moon all the time, both day and night, though very much obſcured by the clouds and foul weather.

There was alſo a glimmering kind of day-light for eight hours, the latter end of October, which ſhortened every day till the firſt of December, from which time, to the 20th of the ſame month, they could perceive no day-light at all. It was now one continued night, there appearing only in clear weather a little whiteneſs like the dawn of day towards the ſouth.

On the firſt of January they found their day a little to increaſe. They counted their days it ſeems, by the moon; and were ſo exact, that at the return of the ſhipping, they were able to tell the very day of the month on which the fleet arrived. As for light within doors, they made them three lamps of ſome ſheet lead they had found upon one of the coolers; and there happened to be oil enough to ſupply them in the cooper's tent; for wicks, they made uſe of rope-yarn; and theſe lamps were very comfortable to them in that long continued night. But ſtill their miſery was ſuch, that they could not forbear uttering haſty ſpeeches againſt the authors of their misfortunes; at other times, reflecting on their former ill ſpent lives, they conſidered this as a juſt puniſhment of their offences; and at other times that they were reſerved to bear witneſs to God's wonderful mercy in their deliverance; therefore they implored the protection of the Almighty, and continued conſtantly to fall down on their knees two or three times a day.

The cold increaſed to that degree, after the new year commenced, that it ſometimes raiſed bliſters in their fleſh, as if they had been burnt, and the iron they touched ſtuck to their fingers. When they went abroad for water, the cold often ſeized them in ſuch a manner, that it made them ſore, as if they had been ſeverely beaten. Their water, the firſt part of the winter, iſſued from a bay of ice, and ran down into a kind of baſon, or receptacle, by the ſea-ſide, where it remained with a thick ice over it, which they dug open at one certain place with pick-axes every day. This continued to the tenth of January, and then they drank ſnow-water, melted with a hot iron, until the twentieth of May following; and now they took another review of their proviſions, which they found would not laſt them above ſix weeks longer.

To alleviate their miſery, on the third of February, they were cheered again with the bright rays of the ſun, which ſhone upon the tops of the ſnowy mountains with an inconceivable luſtre: to them, at leaſt, this afforded the moſt delightful ſcene that was ever beheld; and after a night of many weeks or ſome months, what could be imagined more pleaſing to a mortal eye! As an addition to their joy, all the bears began to appear again, on the fleſh of which they had made many hearty meals: but theſe animals were as ready to devour our countrymen, as they were the bears, and, being pinched with hunger in this barren place, came up to their very door. One of theſe creatures, with her cub, they met at the entrance of their apartment, and gave her ſuch a reception with their pikes and lances, that they laid her dead upon the ſpot, and the young one was glad to make his eſcape; but the weather was ſo cold that they could not ſtay to flay her, but dragged the beaſt into their houſe, and there went to work, cutting her into pieces of a ſtone weight, one of which ſerved them for a dinner; and upon this they fed twenty days, eſteeming her fleſh beyond veniſon, only her liver did not agree with them; for upon eating it, their ſkins peeled off; though one of the company who was ſick, attributes his cure, in part, to the eating of it.

If it be enquired how they kept their veniſon and bear's fleſh without ſalt, it is to be obſerved, the cold is ſo extreme, that no corpſe or carcaſe ever putrifies. Had they been ſtocked with ſalt proviſions, they had infallibly died of the ſcurvy, as others did, who were left on ſhore, much better provided with liquors and other neceſſaries than theſe poor men were. By that time they had eaten up this bear, others came about their booth frequently, to the number of forty and more, of which they killed ſeven (one of them ſix feet high at leaſt) roaſting their fleſh upon wooden ſpits. Having now plenty of proviſions, they ate heartily two or three times a day, and could find their ſtrength increaſe apace, and their health eſtabliſhed.

The ſixteenth of March being now come, and the days of a reaſonable length, the fowls, which in the winter ſeaſon were fled to the ſouthward, began to reſort to Greenland again in great abundance; here they live and breed in ſummer, feeding upon ſmall fiſh. The foxes alſo which had kept cloſe in their holes under the rocks all the winter, now came abroad, and preyed upon the fowls, of which our countrymen, having taken ſome, baited traps with their ſkins, and caught fifty foxes in them, which they roaſted, and found to be very good meat; at leaſt in the opinion of men who had fed hitherto pretty much on bear's fleſh. Thus they continued taking fowls and foxes till the firſt of May, meeting with no other misfortunes,

except

except the loſs of one of their two maſtiff dogs, which went from their houſe one morning, in the middle of March, and was never ſeen afterwards; being probably overpowered by the bears, and eaten by thoſe animals.

In May, the weather beginning to grow warm, they rambled about in ſearch of willocks eggs, a fowl about the bigneſs of a duck, of which they found ſome, being a change of diet, they were very much pleaſed with: and now the ſeaſon coming on for the arrival of ſhipping, they went ſome of them every day almoſt to the top of a mountain, to ſee if they could diſcern the water in the ſea, which they had no ſight of till the twenty-fourth of this month, when it blowing a ſtorm, and the wind ſetting from the main ocean, broke the ice in the bay, and, ſoon after, turning about eaſterly, carried great part of the ice out to ſea; but ſtill the water did not come within three miles of their dwelling. The next morning, the twenty-fifth of May, none of their men happened to go abroad; but one of them being in the outward booth, heard ſomebody hail the houſe, in the ſame manner as ſailors do a ſhip, to which the man in the outward booth anſwered in ſeamen's terms: they were then juſt going to prayers, and ſtayed but for the man above-mentioned to join with them. Surely no ſailors were ever ſo devout: but even ſailors will addreſs themſelves to heaven in their diſtreſs, when no human aid can help them; as ſick men will ſend for the prieſt, when the phyſician hath given them over.

The man who hailed them was one of the boat's crew that belonged to an Engliſh ſhip juſt come from England, which our religious ſailors no ſooner underſtood, but they put off their devotions, and ran out to meet their countrymen, looking upon them as ſo many angels ſent from heaven to their relief: but there was one mortification ſtill in ſtore, which no man would have expected; one of the ſhips which now arrived was commanded by the ſame maſter which left theſe poor wretches on ſhore; and he, barbarous brute! in order to excuſe his own inhumanity, began to revile and curſe them, calling them rogues and runaways: and this ſame man, it ſeems, had left ſeven or eight other men in Greenland two years before, which were never heard of afterwards; for which, no doubt, he richly deſerved the gallows, though our laws take but little notice of offences of this kind. But notwithſtanding the barbarity of their own captain, the commander and officers of the other ſhip took care they ſhould be kindly uſed, and brought to England, when the ſeaſon for whale-fiſhing was over, where they received a gratuity from the Ruſſia company, and were otherwiſe well provided for by them.

CHAP. VIII.

THE NEW HISTORY AND DESCRIPTION OF

PRUSSIA.

SECT. I.

Containing a general Account of the Kingdom of PRUSSIA, with its chief Diviſions; alſo a particular Deſcription of the Kingdom of PRUSSIA, properly ſo called, Brandenburg, Pruſſian Pomerania, Swediſh Pomerania, Magdeburg and Halberſtadt; their Boundaries and Extent, Towns, Rivers, Inhabitants, Trade, Climate, Soil, Produce, Animals, &c.

THIS monarchy is compoſed of twenty-one principal diviſions; namely, 1. Ducal, now Regal Pruſſia, ſituated in Poland; 2. Brandenburg; 3. Pruſſian Pomerania; 4. Swediſh Pomerania, in Upper Saxony; 5. Magdeburg; 6. Halberſtadt, in Lower Saxony; 7. Glatz, in Bohemia; 8. Minden; 9. Ravenſburg; 10. Lingen; 11. Cleves; 12. Meurs; 13. Mark, in the duchy of Weſtphalia; 14. Eaſt Frieſland; 15. Lippe; 16. Gulick, 17. Tacklenburgh, in the circle of Weſtphalia; 18. Gelder, in the Netherlands; 19. Neufchatel, in Switzerland; 20. Part of Sileſia; 21. The countries lately diſmembered from Poland, and now added to Pruſſia.

The kingdom of Pruſſia is bounded on the north by part of Samogitia; on the South by Maſſovia and Poland Proper; on the eaſt by part of Lithuania; and, on the weſt, by Poliſh Pruſſia and the Baltic: the length being one hundred and ſixty, and the breadth one hundred and twelve miles.

With reſpect to the climate, the autumn, in this country, is uſually wet, and the winter ſevere; yet the air, being purified in ſome meaſure by the high winds, is tolerably wholeſome.

This country produces corn, flax, hemp, fruit, hops, paſturage, game, foxes, cattle, ſuch as horſes, ſheep, deer, &c. alſo bears, wolves, lynxes, wild-boars, &c.

The inhabitants are plentifully ſupplied with fiſh from the Baltic, and the rivers and lakes; and on the ſhore of the former great quantities of amber are found, incloſed in which are often ſeen ſpiders, flies, gnats, minerals, leaves, fiſhes, frogs, ants, drops of water, pieces of wood, &c.

There is likewiſe found a kind of manna, and an inſect, of whoſe eggs that beautiful red colour, called St. John's blood, is made. Wood, pit coal, wax, honey, pitch, &c. abounds; and glaſs is made of the aſhes of ſome kinds of wood. Beſides the lakes and canals, ſeveral fine rivers water the country, which afford good inland navigation; but the inundations ſometimes occaſion great damages.

The inhabitants of Ducal Pruſſia only, capable of bearing arms, amounted, previous to the year 1719, to ſix hundred, thirty-five thouſand, nine hundred and ninety-eight perſons. Since that period, ſeventeen thouſand Saltzburgers, and the ſame number of German, Swiſs and French coloniſts, have ſettled in this country; and theſe emigrants have, ſince their coming into this kingdom, erected and founded eleven towns, four hundred villages, fifty churches, eighty-ſix ſeats, and a thouſand ſchools; hence the number of inhabitants at the preſent time muſt be greatly augmented.

In Pruſſia, moſt religions are tolerated; but the Lutherans and Calviniſts prevail. In the thirteenth century, the knights of the Teutonic order made a conqueſt of the whole country, and committed the moſt inhuman barbarities; for they extirpated the natives, and put the Germans in their place; inſtead of converting the people, which they pretended was their view. But in 1454, one half of Pruſſia revolted from the knights, and put itſelf under the protection of Poland.

This occaſioned an almoſt continual war betwixt that country and the order, till the year 1525, when by a treaty concluded at Cracow, it was agreed that Albert, margrave of Brandenburg, the thirty-fourth and laſt maſter of the order, ſhould have the eaſtern part, under the title of a duchy, and that it ſhould deſcend to his and his brother's male heirs as a fief of Poland: but in 1657, the elector, Frederic William, had the ſovereignty confirmed to him and his heirs, on condition of its returning to the Poles in caſe of the failure of heirs male. In 1701, it was raiſed to a kingdom, by the elector Frederic, who was in a ſhort time after univerſally acknowledged as king of Pruſſia. He inſtituted the order of the black eagle, at Koningſberg, at the time of his coronation. The enſign is a gold croſs, like that of Malta, enamelled with blue, and worn at the end of a broad orange-coloured ribbon, which paſſes over the left ſhoulder: the number of knights is always thirty, and the ſovereign is the grand maſter.

In the year 1740, his late Pruſſian majeſty founded the order of merit. The mark is a golden croſs, with eight

eight points, enamelled with azure, and on the uppermoſt point is the letter F crowned, on the three lowermoſt points this motto, 'For Merit;' and on the four other points, which form a St. Andrew's croſs, are ſo many ſpread eagles in gold; this ſtar is fixed to a black ribbon, which they put about their necks, from whence it hangs down before.

By the inſtitution of an excellent police, the preſent king of Pruſſia hath brought this country into a very flouriſhing ſituation. The imports are trivial, and the exports many, conſequently the balance is greatly in favour of the country. The manufactures, exports, &c. being iron-work, paper, copper, braſs, linen, gold lace, ſilver lace, naval ſtores, fiſh, oatmeal, tallow, glaſs, gunpowder, cloth, camblet, ſilk, ſtockings, amber, lintſeed, hemp-ſeed, mead, caviar, &c. With theſe commodities, upwards of three hundred ſhips are annually laden, moſt of which go to Koningſberg, and ſome to other places.

His Pruſſian majeſty has a very conſiderable revenue from this country, amber alone producing twenty-ſix thouſand dollars annually: the other revenues ariſe from crown demeſnes, duties, cuſtoms, tolls, ſubſidies, &c. This monarch is abſolute, in political, civil, eccleſiaſtical, and feudal matters, in this as well as all his other dominions. And as he uſually reſides at Berlin, in his electorate of Brandenburgh, this country is governed by a regency, conſiſting of four great officers of ſtate, viz. the great maſter, burgrave, chancellor and marſhall. Theſe are aſſiſted by counſellors of ſtate, deputies from the nobles and from the commons. Here are likewiſe a board of commerce, a board of navigation, a college of war, a demeſne chamber, and ſeveral tribunals of juſtice.

Here, as in all other parts of his Pruſſian majeſty's dominions, the military eſtabliſhment is very conſiderable. Each regiment is quartered upon a particular diſtrict, and all the young men of that diſtrict being regiſtered, are obliged, when called upon, to join the regiment.

This country was formerly divided into German and Lithuanian Pruſſia; German Pruſſia containing two hundred and eighty pariſhes, and Lithuanian Pruſſia one hundred and five pariſhes; but its modern diviſion is into the provinces of Little Lithuania, Oberland, Nantangan, and Samland. This latter province or circle lies near the gulf of Courland, and is celebrated for the vaſt quantities of amber which is found upon the coaſt.

The principal places are; Konigſberg, or Koningſberg, the capital, not only of this province, but of the whole kingdom of Pruſſia; which is ſituated on the river Pregel, in fifty-four degrees, forty-two minutes, north latitude, and twenty-one degrees, thirty-five minutes, eaſt longitude. It is well fortified, has ſeven bridges over the Pregel, and was founded by Offocarus or Premiſlaus I. king of Bohemia, in the year 1255, when that king came to the aſſiſtance of the Teutonic knights, againſt the pagan Samlanders. It conſiſts properly of three towns, formed by ſo many branches of the river, with the reſpective ſuburbs to each. Some geographers affirm, that this is a beautiful city: but on the contrary, the moſt judicious travellers are unanimous in its diſpraiſe. An ingenious Engliſh writer, in particular, the lateſt we know of who hath viſited theſe parts, ſays, "This is a vaſt city; I do not believe it is leſs than Copenhagen, and it contains fifty thouſand inhabitants, excluſive of eight thouſand ſoldiers: it is a great collection of houſes and ſtreets, without elegance, beauty, or order: the buildings are in a vile taſte and moſtly old. Here is an academy founded by one of the firſt dukes of Pruſſia, but our grammar ſchools in England are in general much ſuperior to it. A profeſſor ſhewed me the library and other apartments; there is nothing worth looking at, except the original paſsport given by Charles V. to Martin Luther, when he attended the diet of Worms, in 1521, and ſigned by the emperor's hand: this merits preſervation. Koningſberg has a conſiderable trade in hemp and flax; but it is ſeven German or thirty-five Engliſh miles from Oillau, the ſea-port, at the mouth of the river Pregel; ſo that only very ſmall veſſels can come up to the town. The preſent king of Pruſſia has not ſhewn any particular attachment for this part of his dominions, nor has he viſited the city ſince the year 1753, though he comes annually to make a general review of the troops at Graudentz, near Marienwarder, on the Viſtula, not far from hence."

The three diviſions of Koningſberg are Alſtadt, or the Whole Town, Lobenicht, and Kneiphoff. In the city and ſuburbs are a great many private gardens. The townhouſe and exchange are tolerable buildings; and the palace erected b the margrave Albert, is a magnificent pile, and very capacious, as it contains many courts, public offices, &c. The gardens and parks are great embelliſhments to it. The citadel, called Fredericſburg, erected in 1657, is a regular fortification, of a ſquare form, and ſurrounded by broad ditches. This city was formerly a hanſe town, and its trade is very conſiderable, and near the palace is The Collegium Fredericianum. Beſides the ſeveral hoſpitals and alms-houſes, there is a charitable fund, which diſtributes weekly penſions to above eight hundred perſons.

The town of Pillaw is well fortified, and has an excellent harbour, ſituated at the mouth of the bay or lake called the Freſche-Hoff, thirty miles to the weſt of Koningſberg. The larger veſſels, conſigned to Koningſberg, deliver and take in their cargoes here, as the Freſche-Hoff hath not a ſufficient depth of water to carry them up to Koningſberg: hence Pillaw is a place of conſiderable trade, and the town and harbour are defended by a ſtrong fort well planted with cannon. The peninſula in which Pillaw is ſituated, is, from its fertility and pleaſantneſs, termed the Pruſſian Paradiſe.

The ſmall village of Wogram is in the neighbourhood of Pillaw, where ſturgeons are boiled and packed up, and caviar is made of their rows.

Here is a narrow ſlip of land called the Curiſche Nerung, or Peninſula Caronenſis, which ſeparates the Baltic ſea from the bay called Curiſche-Hoff; it is a barren, narrow, and ſandy tract.

The town of Walau, ſituated at the conflux of the Pregel and Alle, conſiſts of two principal and five croſs ſtreets, but does not contain above three hundred houſes: it was founded in the year 1336.

Near this place are Great and Little Frederic's canals, which much facilitate the inland navigation of the kingdom: the king of Pruſſia purchaſed the property of theſe canals, and their reſpective tolls, of the Waldenburg family, in the year 1713.

The circle or province of Nantangan adjoins to Samland: it is fertile and populous; and contains, 1. Angerburg, which is defended by a ſtrong caſtle; it is celebrated for a capacious, beautiful, and well endowed church. 2. Raſtinburg, a handſome town, with a caſtle on the river Guleer. 3. Gardawen, on the river Omer, founded in 1325; it has two caſtles to defend it, and an elegant palace with fine gardens.

Oberland was formerly a very conſiderable province; is at preſent equally fertile, but leſs populous than it has been. It contains, 1. Oſterode, a conſiderable town on the lake of Dribentz, remarkable only for its ſalt works. 2. Holland is a well-fortified, handſome town, near the river Weiſke: here are ſome excellent ſalt-works, a magazine for corn, forrage, &c. 3. Morungen, a ſmall well-built town, ſituated upon a lake to which it gives name, is exceedingly well-fortified. Marienwarder is a conſiderable town, neatly built, and pleaſantly ſituated near the Viſtula, and on the borders of Pomerania.

Little Lithuania is one hundred and forty-four miles in length, and in general above fifty in breadth. This province is very woody, and was almoſt depopulated by the peſtilence in 1710; but King Frederic William reſtored it, by encouraging a great number of foreigners to ſettle in it; ſince this time it has been extremely well cultivated, and abounds with all the neceſſaries of life. It contains the following places: 1. Memel, a well-fortified town on the lake Curiſche-Hoff, about eighty miles from Koningſberg. It has a conſiderable trade in flax, lintſeed, thread, and hemp. Here are alſo a brewery, a ſoap manufactory, a ſalt factory, royal magazine, and a ſtrong citadel to defend the whole. 2. Tittſet, defended by a caſtle, is famed for its cattle, and the excellent butter made in its neighbourhood: it alſo contains a ſalt-factory. 3. Inſterburg, at the conflux of the Inſter, with the Angerap, is defended by a caſtle, contains a granary, ſalt-factory, and high court, and has a conſiderable trade for beer and corn; it is inhabited by about three thouſand families. 4. Stallupe-heren, a ſmall town of great trade in cattle; it had a charter granted to it in 1722: wood is ſcarce, and freſh water ſtill more ſo. 5. Ragint, a ſmall town: it is ſurrounded by palliſadoes, and has a ſtrong caſtle to defend it.

II. Brandenburg. This electorate has Poland on the eaſt; Luneburg on the weſt; Pomerania on the north; and Sileſia, with the electorate of Saxony on the ſouth. It is two hundred miles in length, and its greateſt breadth is about one hundred.

The climate is exceedingly cold in winter, and the ſoil in general not fruitful, as it is in a great meaſure ſandy, though under the reigns of the late and preſent ſovereigns a variety

a variety of methods have been taken to improve it. The productions which are moſt plentiful, are buck wheat, millet, flax, woad, tobacco, herbs, alum, ſalt-petre, amber, iron, ſtone, &c. Abundance of cattle and ſheep are bred here: and the woods not only ſupply the inhabitants with fuel, but with timber, charcoal, tar and wood-aſhes, not only for domeſtic uſes, but for exportation. They have likewiſe a very conſiderable ſilk-manufactory here.

About ten years ago Brandenburg contained one hundred and twenty towns, two thouſand five hundred villages, and eight hundred thouſand inhabitants. But his preſent majeſty has greatly increaſed not only the manufactures, but the number of people, villages, and even towns in his dominions, and more particularly thoſe in this electorate.

The chief rivers in Brandenburg are, the Elbe, Preignitz, Warta, Oder, Havel, and Spree. The rivers and lakes abound with fiſh, and are united by canals.

Brandenburg is generally divided into three parts, called Marcks, viz. 1. The Middle Marck, which lies weſt of the river Oder, extending to the Havel and Elbe. 2. The New Marck, which lies to the north eaſt on the banks of the Oder and Wart, ſtretching northward to Pomerania. 3. the Alt, or Old Marck, on the weſt ſide of the Elbe, between that river and Lunenburg. To theſe ſome add the Upper Marck, or Ukermarck, near the river Uker, and the Preignitz, which has the duchy of Mecklenburg on the north-weſt and north-eaſt; its northern ſituation makes it very cold, and the winter ſharp for ſeven or eight months; but they have plenty of firing. It is not very fruitful, by reaſon of its cold and watery ſoil; but it has large foreſts abounding with deer. The Old Marck, however, is ſaid to have plenty of herbs and fruit, and the New Marck has ſome corn and paſture, wherein are fed great flocks of ſheep, and ſome black cattle. They boaſt, indeed, in ſome parts, of their wine, but the Saxons deſpiſe it to a proverb. The country people are generally poor, and have ſorry houſes of accommodation. La Foreſt ſays, that if they were as much given to trade, as to drinking and feaſting, they might make conſiderable profit of their ſheep, and breed more black cattle; yet they are univerſally allowed to be brave. Their commodities are chiefly exported by the Elbe and the Oder, betwixt which there is a communication by a canal, which ſaves their paying toll in the Sound. The country is alſo watered by other good rivers, particularly the Spree, the Havel, the Netze, the Uker, and the Warta; and it has many lakes (the chief of which is the Ukerzee) the beſt ſtocked with fiſh of any in Germany.

I. The New Marck, lying next to Sileſia, we chuſe to deſcribe firſt. It has Sileſia on the ſouth, the Middle Marck on the weſt and ſouth-weſt, Poland on the eaſt, and runs out to Pomerania on the north. The Oder divides it from the Middle Marck, and the Uker Marck. It is about one hundred miles in compaſs. It belonged many years to the knights of the Teutonic order, till the 13th century, when it was purchaſed by the Brandenburg family; but they had not peaceable poſſeſſion of it till the 16th. Bimo, in his notes on Cluverius, ſays, that moſt of this marquiſate was ſold to the emperor Charles IV. by Otho of Bavaria, for twenty hundred thouſand pieces of gold, which Otho afterwards ſpent in the caſtle of Wolfſtein, upon a baker's wife, whom he had debauched. This diviſion abounds more than any of the others in corn and paſture, and has vineyards on the banks of the Oder, but they are of no great account. Sometimes the boors find quantities of old coin, and precious ſtones, which they ſell for little.

The chief places in it, are, 1. Cuſtrin, or Kuſtrim, its capital, thirteen miles north of Frankfort, and forty-five eaſt of Berlin. It was but a fiſhing village till 1537, when it was walled with ſtone, and otherwiſe fortified, and is reckoned the key of the New Marck. Guſtavus Adolphus beſieged it in vain in 1631. It is ſtrong both by art and nature, being ſituate in a marſh, at the conflux of the Oder and Warta. It has an arſenal well furniſhed, and a citadel which is reckoned impregnable. The burghers have neat houſes, well furniſhed, and the market-place is the beſt in all the marquiſate. It has two churches, in one of which, near the palace, are interred its princes. Beſides the town council, there is a council of the regency here for this diviſion, and a court of bailiwick.

2. Falkenburg, on the river Frage, or Rega, thirty-eight miles ſouth of Colberg, fifty eaſt of Stetin, and one hundred and ſeven miles north-eaſt of Berlin, on the frontiers of Pomerania, is only noted for its ſtrong caſtle.

3. Drieſſen, or Dreyſen, in Latin Drieſa, another town with a fortreſs, reckoned impregnable, near the Poliſh frontier, at the conflux of the Netze and the Frage, eighty miles north-eaſt of Berlin. On the Poliſh ſide it is defended by a large marſh, which reaches almoſt a muſquet-ſhot from the town; and its two rivers part at the entrance of the place, and encloſe it. The fortification is a regular pentagon, with ditches. The Swedes took it by the treachery of one of the inhabitants in 1639, but reſtored it by the peace in 1659.

4. Landſperg, on the river Warta, over which it has a bridge twenty miles eaſt of the Oder, twenty-four eaſt of Kuſtrim, thirty-five north eaſt of Frankfort, and ſixty-eight eaſt of Berlin. It is very conveniently ſituate for trade, which conſiſts much in caſting of iron ordnance. It was twice taken by the Swedes in the German wars, and as often retaken.

5. Sunneberg, or Sonneberg, on the ſame river, fifty miles eaſt of Berlin, was the reſidence of the bailiffs of the order of Malta, till the electors ſeized it in the 16th century, and aſſumed the power to preſent their bailiffs, and diſpoſe their commanderies.

6. Schwedt, upon the Oder, forty-ſeven miles north-eaſt of Berlin, is the appenage of one of the ſons of the family, who has a pleaſant garden and palace here; and from hence Philip, great uncle to the late king of Pruſſia, was denominated prince of Brandenburg Schwedt. The town is noted for a treaty of neutrality for Swediſh Pomerania, to prevent its being ruined by the late war in the north: but Charles XII. of Sweden refuſing to ſtand to it, loſt that country.

II. The Middle Marck lies in the middle of the marquiſate, and in the largeſt of the three diviſions, containing about one hundred miles from the banks of the Elbe to the Oder. It has Preignitz on the north, together with Mecklenburg, the Uker Marck, and the New Marck; which laſt diviſion bounds it likewiſe on the eaſt, together with Sileſia; on the ſouth it has Luſatia, and the duchy of Saxony; and the duchy of Magdebourg, on the weſt.

The chief towns are, 1. Lebus, or Libus, on the Oder, ſix miles north of Franckfort, twelve ſouth of Cuſtrin, and forty eaſt of Berlin. It was formerly a biſhopric, founded by Miceſlaus, the firſt Chriſtian prince of Poland, about the year 695. It embraced the reformation in 1555, and in 1628, it was united to the dominions of Brandenburg, by the elector, who was its biſhop, and, as ſuch, chancellor of the univerſity of Franckfort. The ſee, which has ſince been ſecularized, was ſuffragan to the archbiſhop of Gneſna, in Poland. The town ſtands between two hills, on one of which are the ruins of the old caſtle of the biſhop, which was burnt.

2. Franckort on the Oder, about ten miles north from the borders of Luſatia, ſixteen weſt from thoſe of Poland and Stetin, one hundred and thirty north of Prague, and two hundred and fifty-three north-weſt of Vienna. The Oder, over which there is a large timber bridge, divides it into two parts. It is ſaid to have been founded in the year 146, by Sunno, a prince of the Franks, who drove out the Vandals, and planted a colony here of his own people. In 1253, it was rebuilt, and enlarged one third by the elector John I. In 1379, the elector Sigiſmund gave it great privileges, upon its entering into the league of the Hanſe towns; and Joachim I. founded an univerſity here in 1506, ſupplying it with learned profeſſors from Leipſick; ſince which time it has bred many learned men. The Proteſtant religion was eſtabliſhed here in 1538. It was once a free and imperial city; but now exempt, and not ſo conſiderable as formerly. Nevertheleſs it has a conſiderable trade, chiefly in linen cloth and fells, by the Oder, and the canal betwixt that river and the Elbe; and has three great fairs a year. The ſtreets are wide, the houſes well built, and the market place is ſpacious and ſtately.

This city has ſtood the ſhock of various revolutions. It was put under the ban of the empire by the emperor Charles IV. and, to pacify him, the inhabitants forced to pay him down twelve thouſand marks of ſilver. In 1631, the Swedes took it by ſtorm, when they put all the inhabitants to the ſword, to revenge the maſſacre of two thouſand Swedes, whom the emperor's general, count Tilly, had inhumanely put to death in the city of Brandenburg. However, it was reſtored to the elector by the peace of Weſtphalia. Without the gates there are the ruins of an antient Carthuſian monaſtery, of which Johannes ab Indagine, ſaid to have wrote three hundred tracts on various ſubjects, was prior. From hence to Berlin, which is a flat ſandy country, the road leads through.

3. Munchenburg, ſituated between Frankfort on the Oder and Berlin. This is a ſmall town, inhabited chiefly by the deſcendants of thoſe French Proteſtants who left their country when the edict of Nantz was repealed.

The little pleaſant city of Furſtenwald ſtands on the north ſide of the Spree, is the ſeat of a bailiwick, and contains an electoral palace.

Berlin, the capital of all the king of Pruſſia's dominions, and one of the largeſt, fineſt, and moſt populous cities in all Germany, conſiſts properly of five towns united under one town-council. In it are ſeveral fine palaces, with other magnificent and ſuperb buildings. The ſtreets are, for the moſt part, broad, regular, ſtraight, and ſome of them very long and elegant. There are alſo ſeveral large and beautiful ſquares, together with pleaſant walks. There are twenty-five churches, fourteen of which are Lutheran, eleven Calviniſt, and one Roman catholic; an academy of ſciences, another of arts and painting, a college of anatomy and ſurgery, five ſeminaries and two public libraries.

In 1575 it was computed to contain five thouſand eight hundred and twenty-ſix houſes, and a hundred and twenty-ſix thouſand, ſix hundred and ſixty-one perſons, among which were ſix thouſand five hundred and forty-one French, one thouſand two hundred and fifty-three Bohemians, two thouſand five hundred and ninety-five Jews, and twenty-ſix thouſand three hundred and twenty-five ſoldiers who had families. This city is ſeated on the Spree, which paſſes through it in two principal branches, and is in the fifty-ſecond degree twenty-eight minutes north latitude, and the thirteenth degree forty-four minutes eaſt longitude, an hundred and fifty miles to the north-weſt of Prague, and is encompaſſed with agreeable gardens and vineyards.

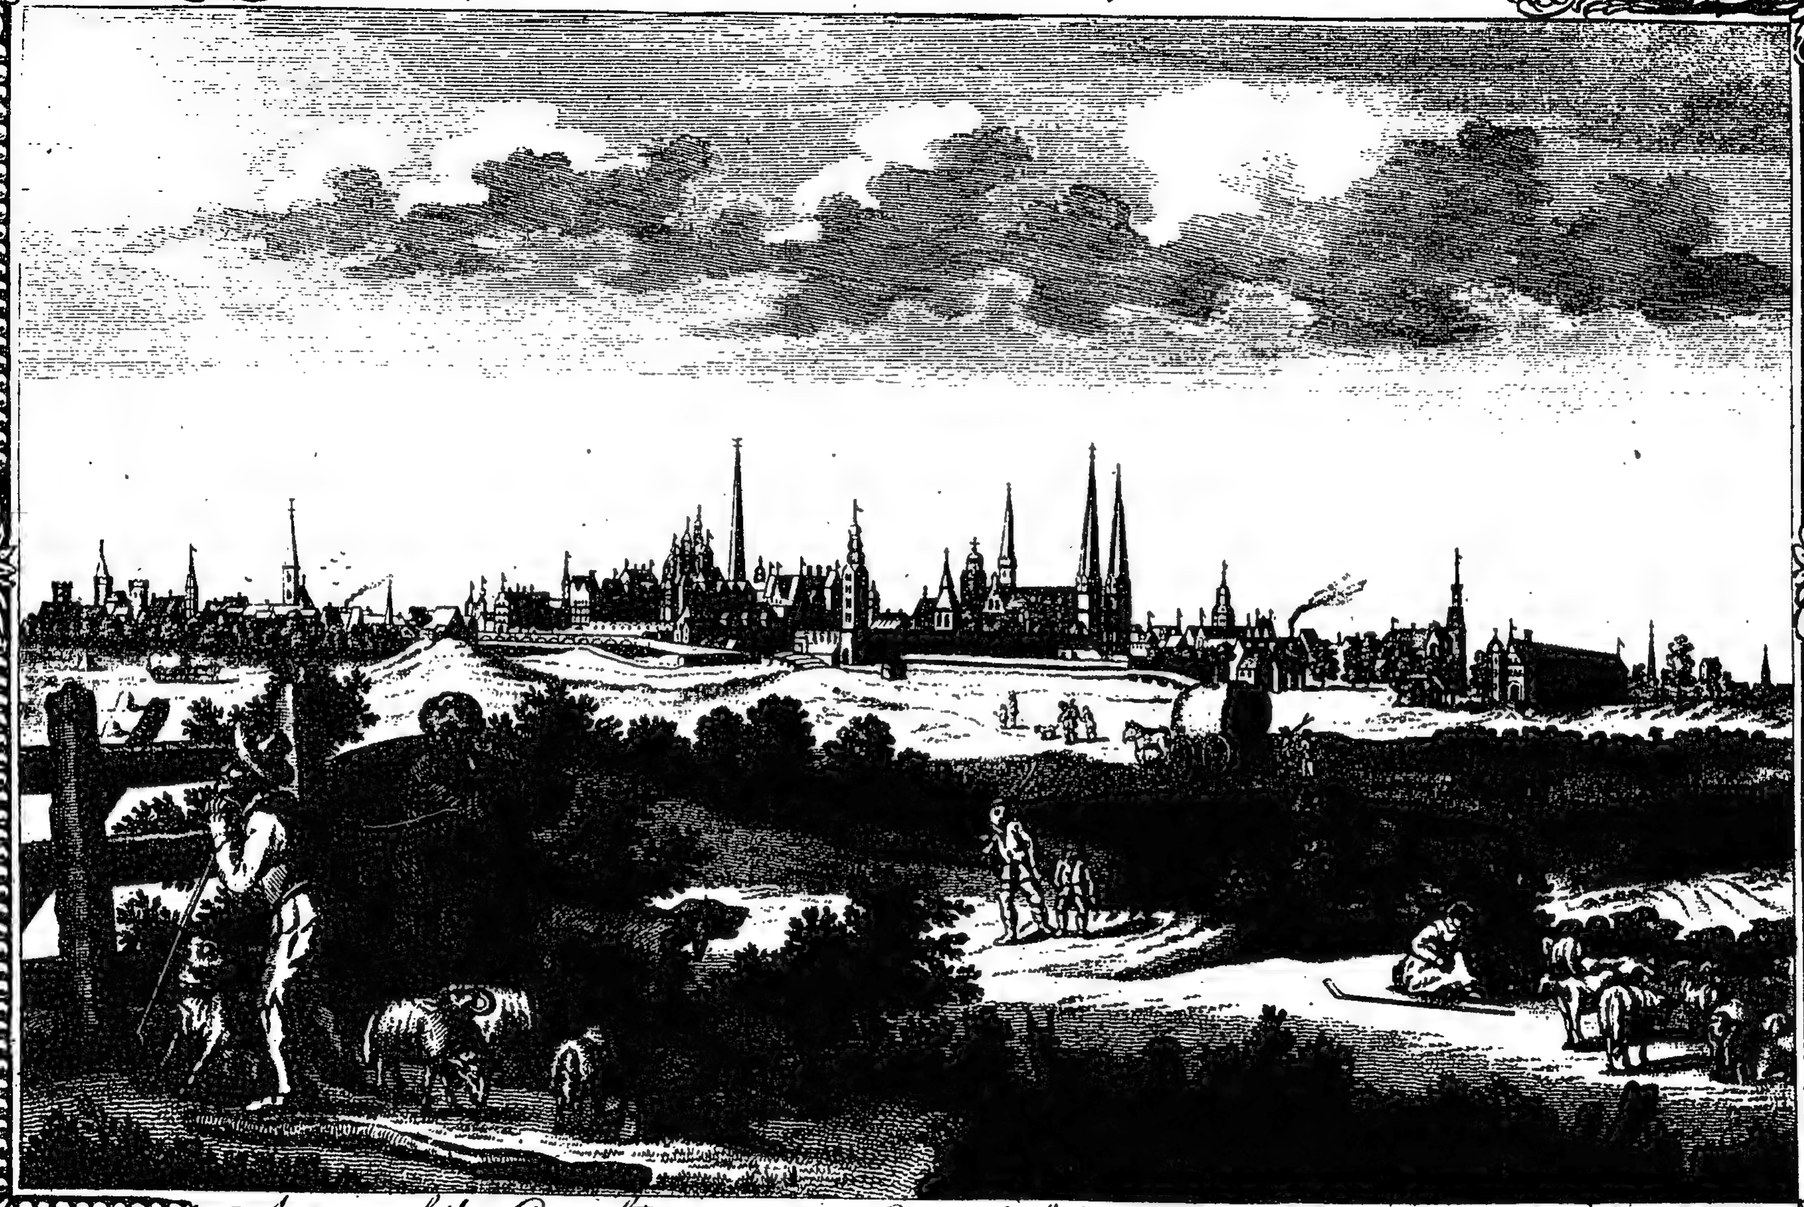
The entrance into Berlin is airy and elegant. In going towards the palace, on the new bridge, which is of ſtone, over the Spree, is an equeſtrian ſtatue of Frederick-William the Great, which is eſteemed a piece of exquiſite workmanſhip, and was erected by *Frederick I. king of Pruſſia.* Both the man and horſe are of one entire piece, caſt at the ſame time, and coſt forty-thouſand crowns. The elector is repreſented in a Roman habit, ſomewhat above the common ſize, on a pedeſtal of white marble, adorned with baſſo relievo, repreſenting four ſlaves bound in chains to the corners of the baſe that ſupports the ſtatue.

The royal palace is a magnificent ſtructure of free-ſtone, begun by Frederick I. in 1699, and conſiſts of four ſtories, with fine cielings, large apartments, and ſuperb furniture; in particular the quantity of ſilver every where ſeen is amazing, for the tables, ſtands, luſtres, chandeliers, looking-glaſs frames, couches, &c. are ſaid to be all of that metal. Mr. Hanway obſerves, that the apartments in the palace are adorned with ſilver in every ſhape; but theſe ornaments are ſo maſſy, that the faſhion does not exceed ſeven per cent. ſo that four millions of dollars might with great eaſe be realized, if the exigencies of the ſtate required it. Here are the pictures of Charles V. and his empreſs, the frames of which are of ſilver, each weighing ſix centners, or ſix hundred and fifty pounds; and, there is a ſuperb crown luſtre of ſeventeen centners. There are alſo pieces of three, four, and five centners, and a grand muſic-gallery, finely ornamented, all of ſilver; beſides one end of a large apartment, for about twenty feet high, and as many broad, is richly furniſhed with gilt plate: yet all this is merely for ſhew, the court having other ſervices of plate for uſe. The king's particular apartments are elegant; but have nothing extraordinary; the prevailing taſte is white ſtucco and gilding. Several of the private apartments have tables with pens, ink, and looſe papers, which indicate the diſpatch of buſineſs, more than the regularity and elegance one naturally expects to find in a royal palace.

The hall has ſeveral good paintings, and the grand ſaloon is adorned with four pieces of tapeſtry, repreſenting our Saviour driving out the money-changers, his waſhing the diſciples feet, the miraculous draught of fiſhes, and his laſt ſupper. The throne in the audience-chamber is of velvet, embroidered with gold in a grand taſte; but not loaded with ornaments. There is nothing extraordinary in the old quarter of the palace, except a bed of crimſon velvet, which has above two hundred cyphers with electoral crowns, all ſet with pearls, and the chairs in this room are in the ſame taſte. It is uſual for perſons of the royal blood to lie in this bed on their wedding night. The library is far from having a beautiful appearance; but all gentlemen have the liberty of reading there, from ten in the morning till two in the afternoon.

Here is a ſpacious building for the king's ſtables, which are divided into two courts and nine pavillions, at an equal diſtance from each other. The architecture on the outſide is gothic; but the inſide is more magnificent, and very lofty and lightſome. The mangers are of ſtone, and the pillars of the ſtands of iron, adorned with his majeſty's cypher gilt. Over the mangers are ſeveral large pictures of the fineſt horſes bred in the king's ſtuds. The backſide of theſe ſtables projects towards the river, a ſlope being formed inſtead of a ſtair-caſe, by which they deſcend. Here are noble apartments for the maſter of the horſe and the inferior officers, with large rooms over the ſtables, in which are depoſited a great deal of rich furniture and harneſs; among which are the accoutrements of the horſe on which Frederick I. rode at his public entry; all the ornaments of the bridles, the breaſt-leather, and crupper, as well as the bits and ſtirrups, being of gold, adorned with brilliants. Theſe ſtables are ſaid to have room for four hundred horſes.

One of the nobleſt ſtructures of the kind in Europe is the arſenal, which conſiſts of four grand buildings, that form a ſpacious ſquare, with four fronts almoſt exactly alike, and a handſome portico at the entrance of each. The lower ſtory is of ruſtic architecture, with arched windows, and that above it is of the Corinthian order. Over the principal gate, which is in the middle, is the model of the late king's grandfather in braſs gilt, incloſed in an oval frame; the four cardinal virtues, of a gigantic ſize, are placed on pedeſtals on each ſide of the portico, and ſeem to look towards the picture: over it is his majeſty's cypher ſupported by two men, and above it a large pediment covered with a beautiful baſſo relievo repreſenting Mars, reſting on a trophy, and looking at a couple of ſlaves chained at his feet. This edifice is crowned with a baluſtrade, and ſeveral noble trophies and ſtatues contribute to embelliſh it. The inſide is not leſs magnificent, the rooms of the upper ſtory being full of arms ranged in great order; the lower rooms are ſtored with braſs guns, and the walls and pillars that ſupport the roof covered with cuiraſſes, helmets, &c.



The houſe of the general of the ordnance is behind the arſenal: within it is contained the foundery, where a number of men are continually employed. There are ſeveral other arſenals in this city, where are kept field pieces, iron cannon, &c.

In this city is alſo an opera-houſe, elegantly built, the front of which is adorned with a noble portico, ſupported by ſix Corinthian columns, and in the architrave is written, "Fredericus rex Apollini et Muſes;" above which is a pediment adorned with baſſo relievo and ſtatues. The ſcenes are ſplendid, and in an elegant taſte. It has three galleries, and is ſaid to contain two thouſand perſons. The columns that ſupport the roof are calculated to throw the whole into a grand ſaloon; and the orcheſtra conſiſts of about fifty muſicians. The opera is entirely ſupported at the king's expence, and rendered in ſome degree ſubſervient to the ends of government. The extreme delight the late king took in muſic, and his great knowledge in that ſcience, carried this entertainment to a very high degree of perfection. In the upper galleries on each ſide of the ſtage were ſeated ſix trumpeters, who ſaluted the queen conſort when ſhe entered the houſe or retired; but the king himſelf would not allow this ſalutation to his own perſon, as he paid little regard to ceremony.

The houſes in the ſuburbs are generally of timber; but ſo well plaſtered, that they ſeem to be of ſtone, and the ſtreets are broad, ſtraight, and lightſome. Here was the reſidence of the queen mother, who was ſiſter to king George I. of England. This palace is named Mon Bijou, or My Jewel; it is a ſmall, elegant ſtructure, beautifully furniſhed, and has very fine gardens that have the river beyond them.

The palace of Charlottenburg is about five miles from the city of Berlin: it was founded by the late king's grandfather, and his majeſty finiſhed it according to his own taſte, which was extremely elegant. There is a range of about ten apartments, well diſpoſed, adorned with white ſtucco and gilding. The ball-room is worthy of the king, who is ſaid to have deſigned it: it has ten windows on each ſide, and beſides the ſtucco and gilding, which are here richer than in the other rooms, it is adorned with buſts, ſtatues, and large pier glaſſes. The ſtatues are well diſpoſed, and the gardens elegantly laid out.

The town of Oranjeburg, ſo called by its founder Frederick I. in honour of his mother, who was born princeſs of Orange, it delightfully ſituated near the Spree, about ſixteen miles north-weſt of Berlin. The apartments of this palace are grand. The miles from hence

A View *of the City of* BERLIN, *Capital of the electorate of Brandenburg, and the residence of the King of Prussia.*

Thornton Sculp.

to Berlin, and from thence to Potſdam, are diſtinguiſhed by mile-ſtones. Near this ſeat is a ſmall city of the ſame name, ſurrounded by beautiful meadows, watered and divided by many canals drawn out of the Havel, and bounded by woods, acroſs which ſeveral long viſtas are cut.

Spandaw, which is chiefly uſed as a priſon for ſtate criminals, is eight miles north-weſt of Berlin, at the conflux of the Havel and the Spree.

Brandenburg is ſituated in the fifty-ſecond degree twenty-five minutes north latitude, and thirteen degrees twelve minutes eaſt longitude, on the banks of the Havel, which not only divides the Old and New Town from each other, but ſeparates the fort from both, and likewiſe environs the New Town with a particular trench, on which a ſluice has been erected. The Old Town contains about four hundred inhabitants, and the New Town about twice that number. They are both under one magiſtracy, and each contains two churches. The fort reſembles a ſuburb, and in it is the cathedral church; the houſes of the greateſt part of the members of the chapter; and a riding ſchool, in which young noblemen are inſtructed. The biſhopric is ſecularized; but the chapter is ſtill kept up, and conſiſts of ſeven perſons, who are the provoſt, the dean, the ſenior, the ſubſenior, and three other canons. In 1755 king Frederic II. conferred upon it a peculiar diſtinction, conſiſting of a chapter croſs of gold enamelled with violet, terminating in eight points. There is here a ſmall colony of French Calviniſts, with a manufacture of cloth, fuſtian, and canvas: and by means of the Havel a pretty good trade is carried on in this town.

The third diviſion, called Ni Alt, or Old Marck, has Mecklenburg on the north, Magdeburg on the ſouth, Saxe-Lawenburg and part of Lunenberg on the weſt, and the Middle Marck, on the eaſt. Some authors call it The Galibee of Germany, becauſe it abounds in fruits and herbs. It is divided into four petty provinces, namely, Oſtland, on the eaſt; Zermunland, on the weſt; Angerland, on the ſouth; and Zealand on the north. It is ſeparated from Preignitz, on the eaſt, by the Elbe. The chief places in this diviſion are,

1. Stendal, or Stendel, the metropolis, on the river Ucht, twenty-eight miles north of Magdeburg, and thirty-ſeven north-weſt of Brandenburg; it is a Hanſe town, neatly built, and well fortified. 2. Seltwedel, a large town, on the weſt ſide of the Jetz, thirty-ſix miles north-weſt of Stendal, and fifty north eaſt of Zell. Their chief trade is in beer, which they export. 3. Gardeleben, thirteen miles ſouth weſt of Stendal. 4. Tangermund, on the Elbe, at the mouth of the Anger, was firſt a caſtle built by the emperor Charles IV. who bought this Marck, and reſided here: it is a place of pretty good trade in corn, and other commodities. 5. Otterburg, ſeventeen miles north of Stendal, is noted for a good corn-market. 6. Werben, antiently Varinum, at the conflux of the Elbe and Havel, twenty miles north-eaſt of Stendal, was built by the emperor Henry the Fowler, on the ruins of the old Caſtellum Vari. 7. Havelburg, forty-one miles north-weſt of Brandenburg, was in 946 made a biſhopric, ſuffragan of Magdeburg, and its biſhop reſided at Witſtack, a town of Preignitz but aboliſhed at the reformation; ſince which the religion here has been Lutheran. 8. Potſdam, which lies four miles to the ſouth-weſt of Berlin, is agreeably ſituated on a branch of the Spree: it is of a conſiderable extent, and the buildings neat and regular. The elector Frederic William made this his ſeat, and in 1662 built the caſtle, which was afterwards enlarged by king Frederic I. and adorned with a fine portal. King Frederic William began to erect ſome coſtly additions to the town, for which purpoſe he cauſed ſeveral moraſſes to be filled up and built upon, with a canal fifty paces wide and two thouſand in length, to be carried on from the Havel, through the centre of the town to a branch of the ſame river. This canal is planted on both ſides with trees and environed with well-built houſes. King Frederic II. has raiſed the caſtle one ſtory, enlarged it with two wings and adorned it with magnificent apartments. The old houſes in the neighbourhood of the caſtle are pulled down, and inſtead of them, new, regular, and grand buildings have been raiſed for the owners at the king's expence. The apartments are remarkable for their elegance, particularly his majeſty's writing-chamber and ſtudy: the laſt is partitioned off by baluſtrades of ſilver.

The palace of Sans Souci (Without Care) is ſituated not far from Potſdam, on the top of a mountain, from whence there is a delightful landſcape, compriſing a view of the town, neighbouring country, rivers, lakes, woods, vineyards, groves, &c. This palace, though not very large, is extremely magnificent; and the furniture, though not ſuperb, is excellent. The paintings, ſtatues, gardens, &c. contribute to make the whole a moſt delightful place. The ſmall, but excellent library, is kept in an apartment wainſcotted with cedar, and adorned with foliage of gold; and the elevated ſpot on which the palace is built has plantations of vineyards, in which ſeveral terraces are cut.

Brandenburg contains, beſides the above principal diviſions, ſome other inferior diſtricts, &c. which are as follow, viz.

Preignitz, bounded by the Elbe and Havel, the duchy of Mecklenburg, and a part of the middle Marck, extends about forty miles in length, and thirty in breadth, and contains the following places: 1. Perlburg, the capital, on the river Stepenitz, contains about four hundred houſes. 2. Wittenburg, a ſmall town on the Elbe. 3. Prizwalk, on the Domnitz; it gives name to a circle, and an inſpection: it includes alſo the ſmall towns of Freinſtein, Putlitz, and Marienburg, with two foundations for proteſtant ladies. 4. Kyritz, on the river Jagelitz. 5. Lenzen, a ſmall town. 6. Witſtack, a ſmall town on the river Doſſe: theſe three laſt have a cryſtal and glaſs-houſe. 7. Weſſnack, on the Kartau.

In this diſtrict are alſo the following ſmall towns, viz. 1. Werder, ſituated upon an iſland in the Havel. 2. Sechauſen, a ſmall town ſurrounded by the river Aland. 3. Diſtorf, a Lutheran cloiſter, containing twelve ladies, ſix of whom are noble, and the other half deſcended from burghers. 4. Buck, a ſmall town on the Elbe. 5. Arendſee, a proteſtant nunnery, containing ſix proteſtant ladies and an abbeſs. 6. Arneburg, a ſmall town on the Elbe. 7. Nuendarf a proteſtant nunnery. 8. 9. Betzendorf, and Apenburg, belonging to the Schulenburg family, and forming a diſtrict. 10. Kalbe, belonging to the family of Alienſleben.

Pruſſian Pomerania is bounded by the Baltick ſea, on the north; by the principality of Mecklenburg, on the weſt; by part of Poland and Brandenburg, to the ſouth; and by Pruſſia to the eaſt. It is above two hundred miles in length, from eaſt to weſt, and from fifty to eighty in breadth. Its air, by reaſon of its being the extreme north-eaſt corner of Germany, is reckoned the coldeſt of any part of it. The ſoil in many parts is ſandy and barren, and their arable lands near the ſhore are frequently overwhelmed with ſand; yet in other parts they have corn enough, both for conſumption and export, beſides good paſtures filled with cattle, and many large woods and foreſts which abound with deer, wild boars, hares, foxes, wolves, wild horſes, wild bulls, &c. and fowls of all ſorts. Here are alſo beavers, and ſuch plenty of water fowl, that they reckon twenty ſorts of ducks. They have great plenty of ſalt and freſh-water fiſh; particularly ſalmon, and very large lampreys, eſpecially in the bay of Stetin, and lake of Laſſen. About Grypſwald and Rugen they have good herring fiſhing, and in the lake Madduje, near Colbatz, there is a large broad fiſh called Muſcum, found no where elſe in Germany. There are many fair and fertile meadows betwixt the branches of the Oder, and as great quantities of fruit of all kinds, as in any province of Germany. They have no wine of their own growth, but excellent mum, and beer of ſeveral ſorts; particularly, the bitter beer of Stetin, the mum of Gripſwald, and the ſtout of Wollin, which mariners tranſport elſewhere: and as there are ſcarce any mountains in the country, it has no mines but ſome few of iron in the Upper Pomerania.

This country abounds with amber, eſpecially on the coaſts of Brandenburg-Pomerania, where it is not only thrown up by the ſea, and found among the ſea-weeds and ſands, but alſo dug out of the rocks and mines. It is frequently dug out of the ground, at a great diſtance from the ſea, and many times found by the huſbandmen, as they plow their lands. There is a particular lake in this country, that communicates with the ſea, where they gather it in nets when the ſea begins to flow, and ſometimes hale up pieces as big as one's fiſt. At firſt taking up it is ſoft, but ſoon hardens, by the air, into a ſtony ſubſtance. It is of ſeveral colours, white, yellow, black, and red. The ſort found in Pomerania is a dark-yellow. It is ſuppoſed to be an oil diſtilled from rocks, like Petroleum; and that the inſects, which are ſometimes found incloſed in it are entangled there while it is liquid; and that what is taken in the ſea, and in the adjoining lakes and rivers, is broke off from ſome rock or vein under-ground, by floods and tempeſts. In ſome places it is found in a matrix of wood, which the ſkilful know at firſt ſight.

This part of Pomerania is well watered by rivers and lakes. Among the former are, the Oder, the Pene, the Rega, the Perſant, the Wiper, the Stolp, the Rekenitz, and the Barte. The Rekenitz ſeparates Pomerania from Mecklenburg, forming a large lake near Damgarten, and falling into the Baltick at Dars. The Barte riſes near Stralſund, and falls into the ſea at Bardt. The Oder, ſoon after its entrance into Pomerania, divides into ſeveral branches; and, after having paſſed by Garts, Griffenhagen, Schwedt, and Stetin, flows into the Damnith lake, and then into Damantzkt; and at laſt dilates itſelf into a freſh-water lake, or ſea, called the Great Friſche Haff, which is an excellent road for ſhipping, thirty miles in length, and ten in breadth, abounds with fiſh, and falls into the Baltick by three currents, viz. the Divenow, the Swyn, and the Penemund, through which ſhips paſs to Stetin. Beſides the above-mentioned, there are many more rivers in Pomerania, which fall into the Baltick ſea.

With reſpect to the people, they are reckoned as ſtout and nimble as any in Germany, but are charged on the other hand, with being intemperate in drink, credulous, and prodigal. Cromer gives this character of the antient inhabitants, that they were ſtrangers to deceit or robbery, locked up nothing, were hoſpitable to all ſtrangers, and ſo kind to one another, that there were no beggars among them: but in the Pagan times, if fathers had more children than they could maintain, they were allowed to kill the females, though not the males. This, however, ſeems very inconſiſtent with their character for mutual benevolence.

The Pomeranian coaſt begins ſixteen miles eaſt of Roſtock; and as the iſle of Rugen bears due ſouth from the Sound, and the Baltick ſea is very open and wide between them, this has been the conſequence, viz. that the ſeas between the iſles of Iceland north, Bornholm eaſt, and Rugen ſouth, have been generally the ſtage of war between the fleets of the Swedes and Danes.

Formerly, the nobles, as well as the ſeveral towns of this duchy; had very particular privileges, which his late Pruſſian majeſty greatly abridged. The inhabitants are about half a million in number, being principally of German and Sclavonian deſcent, a dialect of the latter being the language of the country. Calviniſts and Roman catholics are tolerated there, but Lutheraniſm is the eſtabliſhed religion. The duchy contains an univerſity, ſeveral colleges, grammar-ſchools, &c. Here are ſeveral manufactures, and great commerce is carried on by means of the Baltick and the ſeveral navigable rivers.

The following are the principal places in Pruſſian Pomerania, viz.

The capacious and handſome town of Stetin, or old Stebin, which is reckoned the capital of all Pomerania, and is ſituated on an elevated ſpot near the Oder, about ſeventy-four miles north-eaſt of Berlin. It is deemed one of the beſt fortified places in Europe; contains various manufactures, hath great trade, and exports prodigious quantities of corn, timber, linen, and naval ſtores. The proſpect of the river, and the iſlands formed by it, is very agreeable, and the neighbouring hills have a very romantic appearance.

The principal buildings are the colleges for education, college of phyſicians, tribunals of juſtice, board of health, chamber of commerce, court of admiralty, royal gymnaſium or ſchool of exerciſe, ſuperintendency, arſenal, caſtle, free-ſchool, and dock.

Ships of conſiderable burden come up to this town, and ſmaller veſſels may go much higher, though it is at the diſtance of forty miles from the ſea.

The inhabitants are noted for their civility to ſtrangers, and for the valorous defence of their city againſt the Imperialiſts, who beſieged it four months, in 1659, in vain; and again in 1677, when it held out five months, from July to December, againſt Frederick-William the Great, then elector of Brandenburg; who after one of the moſt remarkable ſieges that has been known in Europe, whereby moſt of the city was burnt to the ground, at the expence of thirty thouſand granadoes, twenty-four thouſand hand-granadoes, a hundred and fifty thouſand cannon-ſhots, and ninety-eight thouſand pounds of powder, and the garriſon reduced from three thouſand men to ſeven hundred, was obliged to grant it very honourable terms of capitulation. The account of this remarkable ſiege, and its deſperate defence, is ſo amply recorded in hiſtory, that all we ſhall obſerve farther of it is, that the burghers were even more reſolute, if poſſible, in the defence of it, than the Swediſh garriſon.

On the 15th of Auguſt, when moſt of their ſhips in the river had been ſunk and ſhattered, and the cathedral, with many of the houſes, burnt, the elector offered them honourable terms, which they refuſed; on the 22d, when the town had ſuffered much more, he took pity of the inhabitants, and made them another offer; but they were obſtinate, made it death for any to talk of a ſurrender, ſecured their wives and children in places prepared for them under ground, and made vigorous ſallies, but were repulſed. The 6th of September he ſent a trumpet to forewarn them of their danger, and to offer them larger privileges than they had; but they ſtill refuſed. He ſummoned them again on the 22d, after being joined by eight thouſand Danes, but to no purpoſe. The elector, having undermined their wall, filled the ditch, &c. ſummoned them again on the 1ſt of November, and threatened their ruin if they refuſed his new offers; but they replied, they would hold out to the end of the year, and hoped to have the ſame terms then: and though the town was in ruins, and one thouſand four hundred citizens killed, beſides ſoldiers, they continued reſolute, and made vigorous ſallies. On the 20th, and alſo on the 30th of that month, there were quarrels betwixt the garriſon, which was for capitulating, and the burghers, that oppoſed it, in which ſeveral fell on both ſides.

The king of Sweden, having ſent the town a new charter, the elector ſummoned them again December 19th, and offered to confirm their new privileges, with an exemption from taxes for many years, but ſtill they refuſed, and made ſeveral ſallies; but next day, finding no hopes of relief, they propoſed an honourable capitulation, which, if not granted, they declared they would die ſword in hand, and be buried in the ruins of the city. The elector generouſly complied, and ratified all the privileges granted them by their ſaid new charter: but the burghers, inſiſting on too high terms for the garriſon, hoſtilities were renewed with vigour on both ſides, till the 26th, when they accepted the elector's terms, who, on the 6th of January following, entered the town in triumph. He continued their magiſtrates, who, with the judges and miniſters, ſwore fealty to him; and, of his own accord, exempted their fiſhery from taxes for eight years, on condition, that they ſhould rebuild their churches; and he promiſed to rebuild the great one himſelf. He alſo continued the univerſity, the ſchools, and religion, as they were. The beſieged had a fine train of artillery, but wanted powder, ſalt, and wood. He reſtored the town to the Swedes by the treaty of Nimeguen.

The town of Anklam, or Anclam, on the river Pene, is ſeventeen miles ſouth-weſt from Grypſwald, and thirty-one north-weſt of Stetin; it is a well-fortified town, and was taken by the elector of Brandenburg in 1676, together with Demain on the ſame river, but both reſtored three years after by the treaty of St. Germain. Anklam, however, was retaken by the Pruſſians in 1715. It was formerly called Tanglim, and ſome authors will have it to be the ſeat of the Angli mentioned by Tacitus, who advanced from hence to the Elbe, and from thence to the iſland of Great Britain. It made a good figure once among the Hanſe towns. It is advantageouſly ſituated among good arable lands, and excellent paſture, with the conveniency of fiſhing, and of exporting their commodities abroad by the river Pene. It has four pariſh churches, and a yearly fair on the ſecond Sunday after the birth of our Lady. Martiniere ſays it ſuffered by ſeveral fires in the fourteenth century, when its churches, with a monaſtery and a town-houſe, were burnt; but the town was rebuilt with more beauty.

The town of Paſſewalck, antiently Pozdewalck, ſtands between Prentzlow and Turgelow, on the weſt ſide of the river Ucker, by which the inhabitants ſend their goods through the Haff to the Baltick. It has two parochial and two other churches. There is an excellent ſort of beer brewed here. It is a provoſtſhip, with ſpiritual juriſdiction over ten pariſhes. When Pomerania and the marquiſate were under different ſovereigns, this place was frequently a bone of contention, being on the confines of both.

Gartz is another town on the ſame confines, and is one of the paſſes of the Oder. It was walled in 1258, by Barnimus I. duke of Pomerania. It has eight pariſhes under its juriſdiction, and ſeveral yearly fairs. It was a great ſufferer during the long wars in Germany; for it always was a place of importance to the poſſeſſor from its ſituation.

Ukermunde ſtands where the Uker river falls into the Groſs Haff. It was walled in 1190, and Bogiſlaus III. duke of Pomerania, cauſed a caſtle to be built here. In

1469, it was beſieged by the elector of Brandenburg, aſſiſted by the Mecklenburgers, but they were obliged to abandon it. There is a fine walk of fir trees from hence through the middle of a great foreſt, which continues almoſt twenty miles, and within a league of Stetin; and there is a good road for ſeven miles from hence to Anklam.

The town of Demin, which gives name to a circle, is ſituated near the river Pene, and has a tolerable trade. Trepts, on the Tallen lake, is defended by a ſtrong caſtle, and has three annual fairs: and Politz, a ſmall town near the Triſchen-Haff, is celebrated only for its hop-trade.

Twenty-two miles north eaſt from Rugenwald, is ſituated the fortified town of Stolpe, with an antient caſtle.

Other places of leſs note are, 1. Neuwarp. 2. Tergelo, a caſtle on the Ucker. 3. Verchen, where is a convent of ladies. 4. Jarmen, on the river Pene. 5. Penkum, a remarkably pleaſant town. 6. Griffenhagen, on the Oder. 7. Dam, on the river Pene, where a ſteel manufactory is eſtabliſhed. 8. Baton, remarkable only for being the ſeat of a provoſt. 9. Piritz, which gives name to a circle and provoſtſhip, and is ſituated in a fine corn country.

Wollin is the eaſtermoſt of the two iſlands formed by the three mouths of the Oder. It is twenty-five miles long, fifteen where broadeſt, and is divided by the Swine from Uſedom. The town, which ſtands at that mouth of it called Druenow, is five or ſix miles ſouth-eaſt of Rugen, twenty-five miles north of Stetin, and twenty ſouth-weſt of Wolgaſt. It was built out of the ruins of Julinum, once a very famous town; and was one of the largeſt cities in Europe, and its greateſt mart next to Conſtantinople, being inhabited by Danes, Swedes, Ruſſians, Jews, and merchants of all nations, who had their ſeparate ſtreets, and houſes of exchange; and ſaid to have been ſo powerful, as ſingly to maintain a war againſt Denmark, and to have taken its king Suinotte priſoner three ſeveral times: But, having been partly deſtroyed by lightning, and partly by the arms of Woldemar king of Denmark, it was in 1170, totally demoliſhed, and has been but an inconſiderable town ever ſince, its commerce having been transferred to Lubeck and Dantzick. In the late war it was taken by the northern allies.

The iſle of Uſedom lies weſt from that of Wollin, and is formed by the Pene, where it falls into the Baltick along with the Oder; ſo that one of the mouths of the Oder, which runs betwixt this and Wollin, is called the Swine; and the other, beyond Uſedom, and Pfin. Upon the deſtruction of Wollin the town of Uſedom was reſorted to by the Daniſh and Poliſh merchants, and became a place of good trade, being very large, and well fortified; but ſince 1473, when it was burnt down by accidental fire, it has been only an inconſiderable ſea-port. It received Chriſtianity by the preaching of the biſhop of Bamberg above-mentioned, who baptized many of the nobility that were aſſembled at the diet here in 1128. The iſland is about ſix miles in length, abounds with wild boars, deer, and hares, and was the park, in ſhort, where the dukes of Pomerania kept their game.

In 1630, the Swedes, to the number of three thouſand, landed here, and took it without reſiſtance; but in 1637, two thouſand Imperialiſts came upon it by ſurprize, and put them to the ſword; but, finding their countrymen were preparing to retake it with vengeance, they conſumed all the proviſions that were in the iſland, and then abandoned it. Mr. Hubner, who obſerves, that the harbour is commanded by two forts, ſays, the town was built in the room of Vineta, formerly a large and wealthy city, but covered with an inundation, notwithſtanding which he ſays the houſes and ſtreets are ſtill plainly ſeen in clear weather.

In the diſtrict of Colbatz are the towns of Neumark, Wolten, Worben, and Bennſtein; and the laſt town in the Stetin territory is Fidichio on the Oder.

On the Ihna, twenty-two miles from Stetin, ſtands the capacious handſome town of Stargard, which contains ſeveral churches, in one of which the Calviniſts are allowed the exerciſe of their religion. Here are, beſides a college, a free-ſchool, a houſe of correction, various manufactories, and a conſiderable trade. Golno is alſo ſituated on the Ihna; Greiffenberg on the Rega; Trepto, on the ſame river; and Camni, on the Dweno, thirty-two miles north of Stetin.

The ſmall town of Belgarden, or Belgart, on the ſame river, five miles ſouth-eaſt of Corlin, ſixteen from the Baltick, and fifty-ſix north-eaſt of Stetin. It has been a great ſufferer by wars and conflagrations; particularly in 1506, when it was quite burnt down to the ground.

Between the Willern and ſome other lakes is ſituated the town of New Stetin, which was built in the beginning of the fourteenth century, after the model of Old Stetin: it is commanded by a caſtle. There is a well-endowed religious foundation for ladies in the village of Manerillies, which gives name to a bailiwick.

Here are, beſides, many inconſiderable villages and hamlets; and the following towns, or their remains, viz. Satzig, Zachan, Jacobſhagen, Buto, Lawenburg, Stolpemunde, Ravenſtein, Maſſo, Stepenitz, Lepe, Lupo, and Stolpe on the river Stolp.

On the Zarn, not far from the confines of Poland, is the village of Ratzbur, which, in 1758, was ſacked and burnt by the Coſſacks and Ruſſians, together with nineteen neighbouring villages.

On the river Wiper, eighteen miles north-eaſt from Coſlin, and twenty from Camin, ſtands Rugenwald, the capital of Wenden duchy. It has four pariſhes in its diſtrict, is a well built town, and has a handſome caſtle. The town of Slage, or Slagven, ſtands on the ſame river, a few leagues above Rugenwald; but is ſmall, and ill-built.

Eighteen miles north-eaſt of Colberg, ſtands the town of Coſlin; it is pleaſantly ſituated, enjoys a good air, and is the uſual reſidence of the biſhop of Camin. It is not only ſurrounded with tides at high-water, but has a ſtream called Neſenbach, which turns mills for ſeveral uſes. The adjacent country is beautiful, and interſperſed with ſeveral hills. Here are a pariſh church and two others; alſo a college, which hath ſent forth many good ſcholars. Here are three annual fairs, viz. on All-Saints Day, the Thurſday after the fourth Sunday in Lent, and the Saturday after Lady-Day.

Thirteen miles eaſt of Colberg, and twelve weſt of Coſlin, ſtands the town of Carlin, which is the capital of a bailiwick. At the entrance of it there is a wooden bridge over a river, formed by the conflux of three ſmaller ones. It is a very pleaſant place, and has belonged to the biſhops of Camin ever ſince 1240. In 1643, it held out againſt a ſiege by the Imperialiſts. It has two annual fairs, viz. on the Saturday before Palm-Sunday, and on Aſcenſion-day.

At a ſmall diſtance from Colberg are Fredericſburg, a market-town, which gives name to a bailiwick, Gulzo a market-town, which gives name to a diſtrict; and Naugaſten, a ſmall town, ſituated on a lake, from which a lordſhip receives its name.

Thirty miles north-eaſt from Camin, and fifty-five from Stetin, is ſituated the town of Colberg, or Colburgh. Salt is made here, of which great quantities are ſent abroad, to the great enriching of the town, and the king of Pruſſia, to whom the town came by the treaty of Munſter. Its harbour, which is a good one, though ſomewhat too narrow, is defended by a ſtrong caſtle. It was antiently called Colobrega, and was the moſt conſiderable town belonging to the biſhop of Camin, who had it in exchange for Stargard, with three thouſand five hundred marks along with it. If they had more fuel, we are told there would be a greater quantity of ſalt made here than there is. This town is large, contains four churches, one of which is collegiate; has a grammar-ſchool, and a foundation for ladies.

Swediſh Pomerania comprehends the iſland of Rugen, which we have already deſcribed in our foregoing account of Sweden; the iſland of Hiddenſee, which is remarkable for a light-houſe; a few ſmaller iſlands, which are too inconſiderable to deſerve deſcription, and ſome places on the continent, of which the following are the moſt remarkable:

Stralſund, (which is the largeſt and richeſt town in Pomerania, the ſixth in rank of the Hanſe towns, and a free imperial city, by ſome reckoned the moſt conſiderable in the circle of Upper Saxony) ſtands near the banks of the ſea, over againſt the iſland of Rugen, nineteen miles north of Grypſwald, thirty two miles north-eaſt of Roſtock, and ſixty-ſix north-weſt of Stetin. Some derive the name from Senno II. king of the Franks, its ſuppoſed founder; but it more probably comes from the narrow ſea betwixt it and Rugen, all ſtreights, in the old German language being called Sundt. The firſt certain account of it is, that being for the moſt part deſtroyed, it was magnificently rebuilt, enlarged, and peopled with Germans by Jaromar, the prince of Rugen, about 1209; and that moſt of it being afterwards burnt by the Danes, the ſituation was altered by his ſon about 1230, when it was rebuilt, ſoon grew populous, and was fortified.

In the civil wars of Germany, count Wallenſtein, the imperial general, beſieged this city in vain; not long after which, the citizens put themſelves under the protection of Guſtavus Adolphus, king of Sweden. The elector of Brandenburg took it in 1678, after deſtroying one thouſand five hundred houſes by bombs, and was the only prince that ever took it by force till then, the citizens having baffled the attempts of ſeveral princes to ſubject them, and having at one time oppoſed the united forces of Denmark, Sweden, and ten other princes; but he reſtored it with other towns of this country, next year, by the treaty of St. Germains. In 1711, the kings of Poland and Denmark beſieged it in vain. In 1715, the king of Sweden, Charles XII. arrived here from his long confinement in Turky, after his defeat at Pultowa, animated the garriſon to hold out a vigorous ſiege againſt the kings of Denmark and Pruſſia, aſſiſted by the Ruſſians and Saxons; but notwithſtanding his continually ſupplying them with men and proviſions from the iſles of Rugen, the town was forced to ſurrender on terms, after four months ſiege. It was, however, by the treaty of peace in 1720, relinquiſhed again to the Swedes, who continue maſters of it.

The magiſtrates of Stralſund are empowered to determine all cauſes among themſelves without an appeal; to coin money, and raiſe troops for ſea and land ſervice; to make leagues and confederacies for advancing their trade; to chuſe what prince of the empire they pleaſe for their protector; and in caſe of a naval war by the empire, they are not obliged to venture their ſhips farther abroad than is conſiſtent with the ſafety of the city; nor are they obliged to give more than they pleaſe in the contributions which the other towns in the duchy are taxed at. It ſuffered much by a fire in 1680, as well as by its ſeiges above-mentioned, but is now a flouriſhing city. It lies in a ſort of peninſula formed by the ſea and the lake Franeken. The ſea from hence to Rugen is about a mile over, and there are ſix gates, with as many bridges, leading to them from the city, to which the merchant ſhips in the harbour are faſtened.

On the land ſide the town is regularly fortified with bulwarks and fiſh-ponds, two muſquet-ſhots in breadth, beſides large ditches, and natural marſhes, only paſſable by four cauſeways and bridges, leading from four gates, and all fortified; which make approaches to it very difficult. It has an excellent haven, where ſhips come up into the very town; and is ſo well ſituated for trade, that it has a very great and gainful commerce both by ſea and land; for here begins the exports of all thoſe ſtaple commodities which all Europe ſends for to the Baltick, as corn and naval ſtores, viz. hemp, flax, &c. but eſpecially corn, of which great quantities are exported, this being the firſt city in the Baltick to which the Dutch trade for it. Here are alſo great quantities of honey and wax, tar, pitch, roſin, hides, tallow, and linen; eſpecially canvas, of which a good ſort is made here. The ſtreets are broad, and the buildings beautiful, the private houſes being of ſtone, and uniform.

The town of Barth, which is upwards of ſeventy miles north-eaſt of Stetin, ſtands in a bay ten miles from Stralſund. It gives name to a ſmall principality, and is celebrated for an excellent kind of beer. It is defended by a ſtrong caſtle, and has a foundation for ladies, firſt begun in 1733.

Beſides the above, in this duchy, are the following places of leſs note: 1. Kenz, a ſmall village in the neighbourhood of Barth. 2. Daingard. 3. Treberis, an old but important frontier town. 4. Gruim. 5. Franburg. 6. Richtenberg, on the Trebel. 7. Eldena, a large village. 8. Wagaſte, a town near the river Pene. 9. Gutſkow, on the river Pene, eight miles ſouth of Grypſwald, and ten weſt of Wolgaſt, between Anclam and Loytz. This town was the firſt in theſe parts that embraced Chriſtianity, upon its being preached by Otton, biſhop of Bamberg, called the apoſtle of Pomerania, who built a church here in the room of its pagan temple. 10. Loytz, on the river Pene, between Gutſkow and Demain. 11. Laſſau, ſituated alſo on the river Pene.

The laſt to be mentioned, is Grieffswalde, ſituated at the bottom of a gulf oppoſite to the iſle of Rugen. It is handſomely built, ſtrongly fortified, poſſeſſes a good trade, has great privileges, and produces a large revenue. Here is an univerſity, a grammar-ſchool, and a German ſeminary; and the three paſtors of the town are theological profeſſors. In the neighbourhood are ſalt ſprings, which are not of any utility for want of fuel. Here are two annual fairs, on St. James's and All Saints days. The town has a good harbour, with a great many ſhips belonging to it.

The duchy of Magdeburg has Brandenburg and the duchy of Mecklenburg on the north; Anhalt and Halberſtadt, on the ſouth and ſouth-weſt; the Upper Saxony, with part of Brandenburg, on the eaſt; and the duchy of Brunſwick Wolfembuttle on the weſt; and the Elb runs through it. It is fifty, or at moſt ſixty miles, from eaſt to weſt, and thirty from north to ſouth, according to ſome, yet others make it ſeventy from north to ſouth: but the diſparity of theſe computations is, no doubt, owing to the inequality of its form, by reaſon it is ſo indented with its neighbouring dominions. That part of the duchy on the weſt-ſide of the Elbe abounds with corn, but no wood, and that on the eaſt ſide of has plenty of wood, but no corn.

It was formerly an archbiſhopric, erected at the requeſt of the emperor Otho I. with ſubjection to none in ſpirituals but the Pope; and its prelate was primate of all Germany till the reformation, when the canons, having embraced Luther's doctrine, choſe the elector of Brandenburg's ſon adminiſtrator of the archbiſhopric; after which it remained in the adminiſtration of a ſecular prince, till 1648, it was eſtabliſhed by the treaty of Munſter, that after the death of the then adminiſtrator, the whole country ſhould devolve on the elector of Brandenburg as a ſecular eſtate, and a dukedom; which, together with the biſhopric of Halberſtadt, was given him as an equivalent for the Hither or Upper Pomerania, granted by that treaty to the king of Sweden, who is condirector with the elector, of the circle of Lower Saxony. It is accordingly now ſubject to that elector, and is ſaid to have advanced his annual revenue at leaſt ſix hundred thouſand rix-dollars.

Magdeburg, its capital city, (formerly one of the Hanſe-Towns, and reckoned the chief city of all Germany, as it is now the metropolis of the circle of Lower Saxony) ſtands on the Elbe, thirty-nine miles ſouth-weſt of Brandenburg. It is as ancient a city as moſt in Germany: the name ſignifies Maiden Town, which ſome aſcribe to the worſhip paid in it to Venus, till her image and temple were deſtroyed by order of Charlemagne, who, being in love with its ſituation, built St. Stephen's church there, with its treaſure, together with a fort to curb the Saxons. The town was firſt built about the year 940, by Otho I. who made it imperial, and enlarged by his empreſs Editha, daughter to our Saxon king Edmund, who, ſome ſay, founded it; but others, with more probability, that ſhe received it from him as part of her dowry in marriage.

The firſt tournaments in Germany were appointed here by the emperor Henry the Fowler, to which none were admitted but thoſe of noble extraction both by father and mother, and of a clear reputation, eſpecially in their conduct to the ladies; with an excluſion alſo of all uſurpers, traitors, oppreſſors of widows and orphans, heretics, murderers, and cowards. This city had formerly the ſupreme juriſdiction in ſpirituals and temporals over all Saxony. Its archbiſhop was alſo a count palatine, and determined all cauſes; but now they have no other court beſides what is kept by their burgomaſters and magiſtrates, who govern here under the elector of Brandenburg. The ſituation of this city is very fine, having an outlet on all ſides to ſpacious plains that are all very fruitful in corn, as well as an inlet of riches by the river Elbe; but there are few towns in Germany that have ſuffered ſo much as this by war, and other misfortunes.

In 1013, Magdeburg was almoſt entirely ruined by Boleſlaus king of Poland, and reduced to aſhes in 1180, by a fire. In 1214, the emperor Otho IV. came and deſtroyed its ſuburbs, with its three churches of St. Peter, St. James, and St. Catharine, which were afterwards, however, rebuilt. It has been ſeveral times put under the ban of the empire, and puniſhed with long ſieges, particularly in 1547, when, depending on aſſiſtance from John Frederick elector of Saxony, the citizens turned out the canons; and in 1549, and 1553, when, for refuſing to receive the interim of Charles V. it not only loſt the title of archbiſhopric, and was put under the ban of the empire, but was beſieged at leaſt a year by Maurice elector of Saxony, who was ſent to reduce it; but, being himſelf a Proteſtant, ſpun out the ſiege; and having prevailed on the Magdeburghers to ſurrender at laſt, on a promiſe to join his proteſtant brethren in the war againſt the emperor, was as good as his word, and made uſe of his garriſon to reinforce his army in the war he then declared againſt the emperor. But this city was the greateſt ſufferer in that called the thirty years war; becauſe, for ſo long a time, Germany was ravaged on all ſides: for in 1631, the emperor's general

general count Tilly, took it by ſtorm, after a long ſiege, maſſacred the inhabitants in a moſt barbarous manner, and burnt and deſtroyed the whole town, except the cathedral, and a few inconſiderable houſes, or rather cottages, of fiſhermen, ſo that ſixteen churches and chapels, many of them covered with lead, and one with copper, were reduced to aſhes; and of forty thouſand burghers, not above four hundred eſcaped, and theſe had no ſupport. The general having ordered his ſoldiers to ſpare neither age nor ſex, they ripped up women with child, murdered ſucking infants in ſight of their parents, and raviſhed young women in the very ſtreets; to prevent which, many of them ran into the Elbe, and others into the fire before the face of the barbarous and brutiſh general, who uſed afterwards to boaſt of this cruelty in his cups, and called it the marriage feaſt of Magdeburg.

Great aſſiſtance has been afforded to this city by the electors of Brandenburg, who have repaired its fortifications, which having been carried on many years, are very ſtrong; and they have rebuilt one ſtately church. The jeſuits have alſo a very fine one, the three religions being tolerated here according to the treaty of Weſtphalia; and the town is populous and extenſive, and ſaid to have a more flouriſhing trade than any in the Elector's dominions. The cathedral, which, as we obſerved, was ſpared, is a very fair and magnificent ſtructure, built after the Engliſh model, was founded in 1210, by archbiſhop Albert I. and dedicated (as the former that was burnt) to St. Maurice. Here is that called Otho's chapel, where he is repreſented in baſſo relievo over the altar, with his empreſs Edgitha, and the figures of nineteen caſks of gold which had been ſpent by them upon the former cathedral. This church has forty-nine altars, and the high altar in the quire is of one ſtone of divers colours, curiouſly wrought, nine Hamburgh ells long, four broad, and one thick. Here is a fine large organ, the maſter-pipe of which is thirty-three feet long, and ſo big, that a man can ſcarce claſp it, and is valued at two tun of gold. Behind the high altar are the tombs of the emperors Otho, and the empreſs Edgitha, whoſe bones were removed hither from the ruins of the old cathedral. In the front of the choir there is a fine marble ſtatue of St. Maurice, the patron of the church, having a ſhield in one hand, with the imperial eagle; and in the other, the ſtandard which the citizens march to field with in time of war. Among other ornaments, here are the ſtatues of the five wiſe virgins ſmiling, and the five fooliſh ones lamenting; both very well done. In the ruins of the cloiſter of the Auguſtine friars, of which order Martin Luther was one, there are a chamber, bedſtead, and table, which appear by an inſcription over the door, in German verſe, to have belonged to that reformer.

The elector Frederick I. built a houſe in this city, which faces the great ſquare before the cathedral, and is oppoſite to the citadel he built, which is divided from it by the Elbe. This river brings up a great many merchant ſhips from Holland, Hamburg, &c. to its quay, and forms an iſland before the town, which has ſome works of earth caſt up, with ſeveral houſes, and large warehouſes of fir-timber for building ſhips, which is carried to Hamburgh, and there bought up by divers foreign nations. The iſland is joined both to the country and the town by two bridges, whereof the firſt is defended by a fort built of free-ſtone. Over againſt the town-houſe there is incloſed, in a ſort of cage, an equeſtrian ſtatue, which the city erected in honour of Otho, accompanied with the ſtatues of his two wives, Edgitha above mentioned, and Adelais; and ſeveral figures of armed men, holding the arms of his chief hereditary domains. In the great market-place there is the ſtatue of Roland, ſuch as Charlemagne cauſed to be ſet up in all the towns, which he either founded or repaired. The late elector erected an academy of cadets here, as well as at Berlin, and other towns, where the young gentlemen are inſtructed in the rudiments of war.

The great ſquare before the elector's palace has few equal to it for extent, and fine houſes that encompaſs it, which are all uniform, three ſtories high, and were all raiſed in the time of the late elector. There is an arſenal in it, which is full of cannon and ſmall arms, and though not ſo magnificent as that of Berlin, may be ranked among the chief elſewhere. The chapter of Magdeburg meets in the cathedral, and bating the change of religion, is on the ſame footing as before the reformation; and the canons muſt all make proof of their nobility; though this is a punctilio with which the elector, who confers all its prebends and dignities, ſometimes diſpenſes. The revenue of its provoſt is computed at twelve thouſand crowns a year. The town of Halle, which is large, is ſituated on the Saole, twenty-four miles north-weſt. It received its name from the ſalt-pits diſcovered, before the birth of our Saviour, and which was beſtowed by the emperor Otho the Great on the archbiſhopric of Magdeburg. His ſon Otho gave the place a charter, called it Halle, and made it an imperial city. The town contains four ſalt-ſprings, many boiling-houſes, &c. Theſe ſalt-ſprings, and the univerſity, have rendered Halle a flouriſhing place.

The univerſity was founded in 1694, by Frederick I. king of Pruſſia. From the year of the foundation, to the year 1744, the number of ſtudents amounted to twenty-nine thouſand two hundred and twenty; of whom two were princes, one hundred and twenty counts, two thouſand two hundred and fifty-three barons and gentlemen, twelve thouſand two hundred and ſeventy-eight ſtudents of divinity, twelve thouſand ſix hundred and twenty-ſix ſtudents of law, and one thouſand nine hundred and forty-one ſtudents of phyſic. Since which time, to the preſent period, the improvement has been more rapid, and the number of ſtudents conſiderably increaſed. This is ſuperior to the univerſity of Leipſic, with reſpect to the abilities of the profeſſors, the diſcipline of the ſtudents, and the cheapneſs of living. Here are, 1. A library conſiſting of above ten thouſand volumes. 2. A Lutheran and Calviniſt gymnaſium. 3. A free ſecular Calviniſt nunnery. 4. Three Lutheran churches. 5. Many Calviniſt churches. 6. A popiſh chapel. 7. A Jew's ſynagogue. 8. Several chapels, hoſpitals, &c. Excluſive of the ſtudents, garriſon, &c. the inhabitants only are computed at fourteen thouſand.

The magiſtrates have a large eſtate, and extenſive juriſdiction, great power, and many privileges. The orphan houſe is a laudable inſtitution, and the houſe of correction and work-houſe are extremely beneficial. The manners of the inhabitants is courteous and polite, and the German language is ſpoken here in its utmoſt purity.

In this town are various manufactories for gloves, ſtuffs, fuſtians, flannel, porcelain, gold, ribbons, metal buttons, ſilk ſtockings, woollen ditto, red and yellow leather, cloths, linen, tobacco-pipes, ſilver, ſtarch, &c. Here are many plantations of mulberry-trees, for the purpoſe of feeding ſilk-worms, and the improvement of the ſilk-manufactory.

This duchy alſo contains the following towns, viz. 1. Calbe, on the Saole. 2. Great Salze. 3. Engeln, on the Bode. 4. Troſe, on the Elbe. 5. New Holdenſleben, on the Ohre. 6. Newſtadt, or New Magdeburg. 7. Sudenburg. 8. Elmen. 9. Stasfuſt, on the Bode. 10. Wolmerſtadben on the Ohre. 11. Schozebeck, on the Elbe. 12. Acken, alſo on the Elbe. 13. Oebsfield, on the Aller. 14. Berg. 15. Burgh, on the Ihle, where is a conſiderable woollen manufactory. 16, 17. Sandau and Jericho, both on the Elbe. 18. Lobun. 19. New-market. 20. Lebegun. 21. Wettin. 22. Connern. 23. Rotenberg. 24. Giebickenſtein. 25. Alſleben.

The town of Glauche, near Hallis, is in the bailiwick of Giebickenſtein; is celebrated for an orphan-houſe, in which two hundred orphans are continually maintained and educated, and many other perſons occaſionally relieved. In the ſchool are taught Hebrew, Greek, Latin, and French; theology, logic, mathematics, phyſic, geography, hiſtory, writing, arithmetic, ſinging, and epiſtolary correſpondence. Here are two inſpectors, fifty preceptors, a diſpenſary, laboratory, muſeum, printing-preſſes, &c. Excluſive of the preceptors, officers, and orphans on the foundation, above a hundred other ſtudents and poor ſcholars are allowed their dinner and ſupper, inſomuch that, with perſons occaſionally admitted, near ſeven hundred perſons eat together in one large hall. Independent of the above, here are four German ſchools, under the direction of two inſpectors, and one hundred and ten preceptors. Near the orphan-houſe is an academy, where young gentlemen are taught every polite and valuable branch of erudition at their own expence.

Halberſtadt is a ſmall province, or principality; it is bounded on the ſouth-eaſt, by the principality of Anhalt; on the weſt, by the archbiſhopric of Hildeſtein, on the eaſt, by part of the electorate of Saxony; and on the north, by Brunſwick Wolfenbuttle. It is thirty miles in length, and thirty-five in breadth, has a good ſoil, yields plenty of corn, and the foreſts have ſtore of veniſon. The north-weſt part is full of fens and marſhes, through which dikes and roads are caſt up.

Halberſtadt, the capital, which gives name to the country, was heretofore an imperial city. It ſtands on the river Hotheim, or Hotteim, twenty-five miles ſouth-weſt of Magdeburg, and twenty-eight ſouth eaſt of Brunſwick. It

It was made a biſhopric by Charlemagne in 780, when the ſee was transferred hither from Oſterwick. Hiſtorians give an account of forty-eight of their biſhops, moſt of them of the Houſe of Brunſwick, and more remarkable for being ſoldiers than ſcholars. Their fifteenth biſhop Rambard defeated the emperor Henry V. in the woods of Welfo. Their eighteenth, Utric, was routed by Henry the Lion, duke of Brunſwick, who took and burnt the town, with the citizens and clergy that fled to the cathedral. Their twenty-ninth, Albert of Brunſwick fought twenty battles, and gained moſt of them, over his rivals, who were ſet up againſt him by the Popes. Their thirty-firſt was Albert a great philoſopher, who being defeated by Gerard the eloquent, biſhop of Hildeſheim, it occaſioned a jeſt here, That Rhetoric was too hard for Logic. Their forty-fourth, Henry Julius of Brunſwick, was choſen when but two years old, on condition, that the dean and chapter ſhould have the government for twelve years, and pay their infant-biſhop an annuity. In 1591, he introduced Luther's reformation here. He was ſucceeded by his three ſons, one after the other, the laſt of whom, Chriſtian, took part with the Proteſtants in the civil wars of Germany, and was a great, but unfortunate warrior. Their forty-eighth and laſt biſhop was Leopold William of Auſtria, who, being put in by the Imperialiſts, reſtored popery; but the Swedes, retaking the town, reſtored Lutheraniſm, and kept poſſeſſion of bith city and dioceſe, till the biſhopric was ſecularized, and given to the elector of Brandenburg by the treaty of Weſtphalia.

The ſtreets of this town, which is well-built, are ſtrait and uniform, and many of the buildings fair and ſtately: but the moſt remarkable is an inn called the Commis, or factory, reckoned the largeſt in Europe, and to have the beſt, and greateſt accommodation of the ſort, for ſtrangers: ſo that in the time of the civil war, Wallenſtein the emperor's general kept his court in it for ſome months, and found lodging in it for all his attendants and guards. The trade here is inconſiderable, by reaſon of the ſmallneſs of the river; but as it is the ſeat of the regency of the principality, and of the courts of juſtice, it is much frequented. Its cathedral, which is a free-ſtone pile, adorned with remarkable ſtatues, and worth ſeeing, belongs to a chapter wherein the catholics and proteſtants are equally admitted, and both are allowed their public worſhip. Behind its choir there is an image of the Virgin Mary, with ſeventy-two titles of honour. The catholics have ſeveral convents in the town, of which that of the Recollets is the moſt beautiful, and their church is very fine: upon the whole, it is ſaid to be a ſtrong and populous city. It has ſix gates and a town houſe. The houſes which are on the hill, or about it, are called the town; thoſe below it, the ſuburbs. On the top of an hill, in an eſplanade, ſtand two churches with the canons houſes.

In this province are alſo the following towns, viz. 1. Gimingen, on the river Folke, ten miles to the eaſt; it was formerly the reſidence of the biſhops of Halberſtadt. 2. Aſcherſleben, on the Enne. 3. Weferlingen, on the Aller. 4. Ermſleben, on the Selke. 5. Dardeſſen. 6. Zilly. 7. Horenburg. 8. Reinſtein. 9. Oſterwick, on the Ilſe; where are ſeveral woollen manufactories.

SECT. II.

Treating of the Counties of GLATZ and MERIDEN; alſo of the Duchy of CLEVES, the Principality of MEURS, and County of MARCH, in the Duchy of WESTPHALIA: and of EAST FRIESLAND, LIPPE, GULICK, and TACKLENBURG, in the Circle of WESTPHALIA; their Boundaries and Extent, Situation, Towns, Rivers, Mountains, Produce, Revenues, Manufactories, &c.

GLATZ is bounded by Sileſia, Moravia, and Bohemia, and ſeparated from them all by almoſt inacceſſible mountains, ſo that it is a country very difficult to be entered. It is about thirty miles in length, and twenty in breadth, and is beautifully diverſified with villages, hills, dales, meadows, fields, ſtreams, &c. and produces wheat, paſture, wood, quarry-ſtones, jaſper, cornelians, game, fiſh, pit-coal, marble, topazes, mineral waters, &c. It is exceedingly fertile and populous. There is in it a high mountain, which ſerves as a weather-glaſs to the whole country.

The diets have been diſcontinued, ſince Glatz became ſubject to the king of Pruſſia. It was not conquered by that monarch, but ceded to him in 1742. For the government of Glatz, a regency is appointed; but an appeal, either in civil or eccleſiaſtical matters, lies to the court of Berlin; and the offices are ſubject to the war and domain chambers at Breſlaw. The language is German. The principal manufactures are thread and cotton; but the favourite employment of the inhabitants are tillage and grazing. The people in general were Roman catholics till the country came into the poſſeſſion of the king of Pruſſia: ſince which, he has eſtabliſhed Lutheraniſm.

The capital, which bears the name of the country, is ſituated near the Neyſs, on the declivity of a hill. It is ſtrongly fortified, contains an old caſtle, which hath been much improved by the Pruſſians, and a new one which they have lately erected; the latter is admirably ſituated on a hill oppoſite to the former, with a river between them. Here are commodious barracks for the garriſon; and the adjacent country may be laid under water by means of ſluices. The town contains a college, two convents, ſeveral churches, and enjoys a tolerable trade.

The other leſs conſiderable towns are, 1. Laudee, on the Biela. 2. Habelſchwardt, on the Neyſs. 3. Reiſnerz, remarkable for its mineral ſpring, and its manufactures of cloth, pluſh, and paper. 4. Hunſdorff, which has a copper-mine. 5. Wimſchelburg, it carries on a great trade in thread and woollens. And Neurode, chiefly noted for cloths, ſtuffs, and ſnuff.

Meriden is a principality, and was ceded to the elector of Brandenburg at the treaty of Munſter; it lies between Oſnaburg and Schoumburg, is twenty miles from eaſt to weſt, and twenty-five from north to ſouth. The northern parts are full of woods and hills, and have plenty of game, and the ſouthern parts abound with corn, great quantities of which they export.

The capital, of the ſame name, is a neat, well-fortified town, on the north ſide of the Weſer, thirty miles eaſt of Oſnaburg. It was made a biſhopric by Charlemagne, and continued ſo as ſuffragan to the archbiſhop of Cologne till 1638, when it was ſecularized by the treaty of Munſter. In Charlemagne's time a caſtle was built at the foot of its bridge over the Weſer; of which ſome remains, with other antiquities, are yet viſible. In 1529 the reformation took place here with ſuch vehemence, that the chapter was obliged to leave the city, for which the inhabitants were, in 1538, put under the ban of the empire; and in 1547 they were, in conſequence, obliged to ſurrender their town to Charles V. They were almoſt ever after in continual troubles and revolutions, on account of religion, during the wars in Germany. The city was taken by the Imperialiſts under count Tilly in 1628, and by the duke of Brunſwick Lunenburgh in 1634. It was taken the firſt time by ſtorm, when Tilly put near three thouſand men, ſoldiers and inhabitants, to the ſword. In 1636, the Swedes undertook to protect the proteſtant inhabitants againſt the perſecution of the chapter, and kept poſſeſſion of it on that account till 1650, when, in purſuance of the treaty of Weſtphalia, this once-imperial city, and alſo one of the Hanſe-towns, was delivered to the elector of Brandenburg, who keeps a garriſon here. It was again taken by the French in the war in the reign of George II. and retaken by the Engliſh and Hanoverian forces, who engaged the French on the 1ſt of Auguſt 1759, and defeated their army.

The majority of the inhabitants are Proteſtants; but the cathedral, a noble and large, though dark ſtructure, is in the poſſeſſion of the Roman catholics; as are likewiſe the churches of St. John and St. Simeon, with a large monaſtery adjoining to the latter. This place is encompaſſed with a wall, and defended with ſome half moons, but is commanded by a neighbouring hill. It has two chapters, one of canons, and the other of canoneſſes, into the latter of which the ladies muſt make proof their nobility, in order to be admitted. They have here a particular ſort of pale beer, much eſteemed in Germany, and reſembles oat-ale.

Here are alſo the following places: 1. The town of Peterſtagen, defended by a caſtle. 2. Hanſberg, made a city in 1722. 3. Lubeck, a fortified town inhabited by Lutherans. Here are a ſchool, alms-houſe, ſugar-houſe, chapter-houſe, &c. The trade conſiſts of cattle, yarn, woollen, linen, beer, and ſpirits.

Ravenſburg lies ſouth from Oſnaburg and Meriden, north-weſt from Lippe, and north from Rheda. This county has its name from the capital: it is thirty-eight miles long, and forty broad, and belongs to the king of Pruſſia; but is for the moſt part rocky and mountainous.

The town of Ravenſburg, with its ſtrong fort, are ſituated on a hill near the river Heſſell, eighteen miles ſouth of Oſnaburg. Moſt of the antient ſeats of the German

princes and nobility are ſituated on a hill, which accounts for ſo many of their counties, &c. terminating in berg, a hill; and their towns in burg, or borch, ſignifying a town.

The principal places are thoſe which follow: 1. Bilevelt, or Bielfeldt, formerly a Hanſe-town, in the road from Meriden to Munſter, ten miles ſouth-eaſt of Ravenſburg, at the bottom of a great hill, and defended by the impregnable fort of Sparenburg. It made a brave reſiſtance againſt the French, when they attacked it from a neighbouring hill with granadoes and fire-balls; for the burghers covered their houſes with webs of linen (their chief manufacture) dipped in milk, which prevented their doing much damage. Their linen is bleached on the adjacent hills, where it is watched by boys, who, on the approach of travellers in the night-time, make a hedious howling.

Twenty-two miles ſouth-eaſt from Oſnaburg is, 2. The town of Hervoden, or Herfurt, pleaſantly ſituated, and famed for the manufacture of linen. It is divided into the Old Town, the New Town, and Radewich, by the rivers Elſe, Aa, and Werne. It was formerly an imperial city, but it is ill built, and chiefly noted for a famous nunnery founded in 832, the abbeſs of which formerly held this city in ſubjection, till Anne counteſs of Limberg, and abbeſs of this nunnery, gave up the city to William duke of Juliers, in the year 1547. The king of Pruſſia has a garriſon in the town. The abbey embraced the reformed doctrine about two centuries ago, and is perhaps the only one of its kind in Europe, becauſe the abbeſs and all the nuns are Calviniſts. There is alſo another nunnery on a hill near the town, which is a ſort of nurſery to the abbey, and where the young ladies are taught needle-work, &c. It was founded in 1101, and is governed by a deaconeſs, a treaſureſs, and all the officers that belong to collegiate churches; but otherwiſe ſubject to the abbeſs of Hervoden, who, as princeſs of the empire, has all the hereditary officers common to electors.

The king of Pruſſia, as count of Ravenſburg, is protector of the abbey.

The places of leſs note are, 1. Engeren. 2. Ulotowe, on the Weſer, twenty miles ſouth-eaſt of Hervoden, and thirty eaſt from Ravenſburg. 3. Schideſche, a ſmall hamlet, with a foundation for ſeventeen Roman catholic, Lutheran, and Calviniſt ladies. 4. Verſmold, which has a conſiderable linen trade. 5. Bunde, where is a mineral ſpring, and alſo a linen manufactory.

The province of Lingen is ſituated between the biſhoprics of Munſter and Oſnaburg, is fifteen miles long, ten broad, has a fertile ſoil, and produces plenty of pit-coal and ſtone. On the death of William III. of England, the whole country was ſeized by the king of Pruſſia, and incorporated with Tecklenburg. Calviniſm is the eſtabliſhed religion: but here are many Lutherans and Roman Catholics. The principal place is Lingen, the metropolis, which ſtands on the river Ems, ten miles ſouth of Meppen, and forty-five north of Munſter. It came to William prince of Orange by his lady the heireſs. The Ems here is very broad, and bears large veſſels that get into the ſea near Embden. It once had a caſtle and other fortifications. The ſands about this place keep the air dry, and free from fogs. King William erected an academy here; beſides which, he founded five places in a Latin ſchool for poor ſcholars, and did every thing he could to promote the proteſtant religion in this country, which was at that time entirely popiſh; the profeſſors of it were obliged to have their marriages and baptiſms in the proteſtant church; and a prieſt could not lie here one night without leave from the magiſtrates, as a puniſhment for the revolt they excited among the people in the year 1674, which was ſuppreſſed by the prince of Orange in perſon. At the academy are a printing-houſe, and a good library.

Here is alſo the ſmall town of Rheda, with a caſtle, near the Ems, and that of Ibbenbukren, near which are ſeveral coal-pits and ſtone quarries.

Cleves is bounded by Juliers, on the ſouth; Zutphen, on the north; Guelderland, on the weſt; and Munſter, on the eaſt. It is forty miles long, about fifteen broad, and in general fertile, pleaſant, and well watered by the Rhine, Roer, Emſer, Lippe, Iſſel, &c. Dikes are cut as a ſecurity againſt inundations; and the country abounds in corn, fruits, black cattle, game, fiſh, horſes, &c. The inhabitants are fond of trade, and the rivers and lakes afford them many commercial advantages.

The metropolis of this duchy, alſo called Cleves, is ſituated fifty-five miles weſt from Munſter. It has its name from being chiefly among cliffs, and on the declivity of a hill, between the Rhine and the Maeſe, in one of the fineſt countries of Germany. Over the ſouth gate of the town is an inſcription, denoting that Julius Cæſar founded a caſtle here, that Auguſtus garriſoned it, that Ulpius Trajanus made it a colony, and Ælianus Adrianus a city. It is now ſmall, but pleaſant, well built, and well peopled, having ſeveral fine houſes belonging to perſons of quality; but thoſe of the ordinary towns-people are mean. The caſtle is large, and pleaſantly ſituated on the top of a hill, but irregular, and not very ſtrong. From an ancient Gothic ſtructure, called the Swan Tower, there is a noble proſpect of the neighbouring country, and particularly of the Rhine, which lies three miles from it to the north, and there divides itſelf into two branches, both commanded by the fort Schenk. There are ſtately apartments in the caſtle, which was the palace of their ancient dukes, and where the king of Pruſſia reſides when he comes to this city, which ſubſiſts chiefly by the reſidence of his deputies, who govern the duchy; and by the meeting of the ſtates, who aſſemble in the caſtle. The governors and magiſtrates are Calviniſts, and have a large handſome church, beſides the chapel of the caſtle; but the public churches here, and in moſt parts of the dutchy, are in the poſſeſſion of the papiſts, by virtue of an agreement with the duke of Newburg and Juliers, who was thereupon obliged to allow the proteſtants a liberty in his dominions. The river Hel, which runs by the foot of the caſtle is navigable, by ſmall veſſels, to the Rhine.

Prince Maurice's parks are on the weſt ſide of the city, where are alſo pleaſant ponds, canals, fine water-works, grottoes, &c. Above them lies the high hill of Sternberg, from whence may be ſeen Utrecht, though fifty miles off, with near forty other cities and great towns, twelve of which are ſeen through ſo many walks cut in the woods. The prince's houſe ſtands in a wood on the eaſt ſide, and among other rarities, has a noble collection of old Roman urns, and divers other monuments of antiquity. Beſides the great church, a monaſtery of Capuchins, and another of Franciſcans, are the only public buildings in the city. On the road, two leagues from this city, there is the palace of Moiland, where the king of Pruſſia reſided in 1734, as he returned from the Imperial army on the Rhine; and there is a continued range of walks from hence to Santen, which is five leagues.

Gennep is a ſmall town on the Niers; Udema, a little village pleaſantly ſituated; and Gock, a town which formerly belonged to Gueldres, but in 1773 was incorporated with Cleves; Craneburg is a ſmall town with a Roman catholic collegiate church.

The town of Emmerick, or Embrick, is large, rich, and beautiful, pleaſantly ſituated on the eaſt ſide of the Rhine, four miles eaſt of Cleves. It is very antient, one of the Hanſe towns, and has a pretty good trade. It was formerly poſſeſſed by the Dutch, but, on the emperor's perſuation, they reſigned it to the duke of Cleves in 1609, on condition that the Spaniards ſhould reſtore Rhinberg to the elector of Cologne; which they not performing. the Dutch repoſſeſſed it, and fortified this and ſeveral other towns of the duchy, as a frontier againſt the Spaniards: but they afterwards gave them up to the elector of Brandenburg. This town was taken by the French in 1672, but reſtored in 1674 to the elector, who had mortgaged it to the Dutch. Over-againſt it, in the Rhine, there is a large iſland, at the corner of which, next to the town, there was a fort, which commanded the river. The governor and magiſtrates, and many of the burghers, are Calviniſts, and have a church here; but the reſt, by agreement, are poſſeſſed by the papiſts.

The town of Rees is ſituated on the ſame ſide of the Rhine, nine miles higher, and eight miles eaſt of Cleves: it was a fortified town, and taken and reſtored by the French in the ſame manner as Emmerick, but lately diſmantled. An excellent ſculpture in gilt wood, containing the hiſtory of the life of Chriſt, is preſerved in a proteſtant church here.

Nine miles weſt of Weſel, and thirteen from Cleves, is Stanten: it ſtands in a valley between hills, half a league from the Rhine; is a large town, and ſuppoſed to have been the Vetera Caſtra of the antients, in which Julius Cæſar reſided. The place is much decayed: but has a great church, like a cathedral, with thirty fine altars, and the goſpel hiſtory carved exquiſitely in wood; here are alſo fine altars, and abundance of relics. This was the place where the provincial treaty was made in 1614, for the partition of the ſucceſſion of Juliers, Berg, and Cleves, between the families of Brandenburg and Newburg. The town is walled, but has no fortifications.

The ſmall town of Burich, on the Rhine, is oppoſite to the mouth of the Lippe; near which are Dinſlaken, Orſoy, Holt, and Iſſelburg.

Over-againſt Rees, on the weſt ſide of the Rhine, ſtands the Calcar, on the river Men, between Santen and Cleves, being five miles ſouth-eaſt of the latter, and north-weſt of the former. It was built and fortified by the dukes of Cleves, for a defence againſt any ſudden invaſion from Cologne and Guelderland. It ſoon grew populous and rich, by a trade in linen; but ſince one of its dukes built a vaſt granary here, for the boors to bring their corn to, it has been more conſiderable for making malt and beer. Its moſt ſtately buildings are, the Town-houſe, St. Nicholas's church, and a monaſtery of Dominicans; the latter of which has a good library. It has a ſtrong caſtle, and a fine market-place. but the ſtreets are narrow, and it is ſurrounded with water and moraſſes. The road from hence to Cleves is through a barren country, but there are ſome caſtles in it.

Marienboon ſtands between Calcar and Santen: this is a rich monaſtery, with a Latin inſcription on the wall next the road, expreſſing their gratitude to Frederic William, elector of Brandenburgh, for accepting their great collection of manuſcripts in 1650, inſtead of turning them out, and converting their revenues to the public uſe.

The town of Weſel, called Nether Weſel, to diſtinguiſh it from Upper Weſel, in the electorate of Treves, ſtands on the eaſt ſide of the Rhine, near the mouth of the river Lippe, ten miles eaſt of Santen, and eighteen ſouth-eaſt of Cleves. It was formerly a Hanſe-town, and alſo Imperial, but exempted, by the dukes of Cleves, from the contributions paid by theſe towns to the military cheſt of the empire, according to the Matricala.

It is not only the largeſt and beſt-built town of the duchy, but populous and well ſituated for trade. It grew rich by the concourſe of merchants that fled thither from the perſecution in the Spaniſh Netherlands, and was garriſoned by the Dutch, to whom it was mortgaged by the elector of Brandenburgh, but taken and plundered by the French in 1672, they alſo exacted heavy contributions from the inhabitants, which forced many of them to retire; but it was reſtored in 1674 to the elector, after the French had diſmantled it. Though the place ſubmits to the king of Pruſſia as its ſovereign, it is governed by its own laws. Both the town and its two ſuburbs are full of ſoldiers, and well fortified after the modern way; in the middle of the courtines are galleries which run into the ditch, and have ſeparate places for the men and women in caſe of a ſiege. This may well be reckoned one of the ſtrongeſt towns in Europe: it has a good citadel towards the Rhine, a ſmall harbour for veſſels that trade on that river, an arſenal well ſtored with all neceſſaries for defence or offence, and ſeveral churches and monaſteries. The porch of the great church is remarkable for the birth of Peregrine Bertie (afterwards earl of Lindſay), whoſe mother, the ducheſs dowager of Suffolk, and Mr. Bertie, her huſband, being forced to fly beyond ſea from queen Mary's perſecution, were reduced to ſuch difficulties here, becauſe they durſt not make themſelves known, that they could not get any better accommodation. There is an hoſpital in this town, founded and richly endowed by a chancellor of this duchy and his ſon, for the aged and decrepid. The country is a plain and gravelly ſoil from hence to Duiſburg.

Here is alſo the ſmall town of Lobith, on the Rhine; and Eltenburg, near that river, which has an imperial foundation for ladies. Deuſburg, on the Roer, thirty-one miles from the ſouth of Cleves: it is well fortified, has a proteſtant univerſity, a commander of the Teutonic order, two monaſteries, a nunnery, and two pariſh churches.

Meurs is a ſmall principality, ſurrounded by the archbiſhop of Cologne and the duchies of Cleves, Berg, and Gueldres. It is watered by the Rhine, and yields plenty of corn, cattle, and veniſon. The revenue is upwards of thirty thouſand rix-dollars. As prince of Meurs, the king of Pruſſia has a ſeat and voice in the college of the princes of the empire, and the diets of the circle.

The principal places are, 1. Meurs, or Mors, a compact, ſmall, well-fortified town, where the provincial colleges hold their meetings: here is a caſtle, a Calviniſt church, and a Latin ſchool. 2. Crefeld, a ſmall town, containing manufactures of ſilk, linen, velvet, &c. and defended by a citadel.

Marck is reckoned the largeſt county in Weſtphalia, being forty miles in length and breadth. It is ſituated between the Lippe and the Roer, divided into fifteen bailiwicks, and ſubject to the king of Pruſſia. It lies weſt from the duchy of Weſtphalia, north from that of Berg, and ſouth-eaſt of Cleves; and is thought to have its name from being the antient boundary between Germany and Gallia Belgica. This country is both fertile and rich, as it yields grain, pulſe, fruit, coals, lead, ſilver, ſalt, game, flax, hemp, wood, iron, copper, ſtone, cattle, fiſh, and other neceſſaries. Iron and ſteel are the principal manufactures. People of all perſuaſions are tolerated here, and the government is inveſted in the ſame colleges as that of Cleves.

On the river Lippe is ſituated the town of Hamem, the capital of the county: it is fifty-five miles north-eaſt of Cologne, was antiently one of the Hanſe-towns; but though the adjacent country abounds with corn, flax and hemp, it is a poor place, that ſubſiſts chiefly by lodging travellers who paſs between Brandenburg and the Netherlands.

Schwertes, on the Roer; Camen, on the Zeſick; and Weſthoven, are very inconſiderable towns, though very pleaſant. Syberg has a church ſeated on a rock, where formerly ſtood a caſtle belonging to the Saxons.

On the river Arſe, Weſt of Hamem, ſtands Soeſt, or Sonſt. It is a populous city, ſeated in the neck of this country, which ſhoots into Weſtphalia. It is fortified with a double wall, whereon are thirty watch towers, and a large deep ditch. It has fourteen pariſhes, and many churches, beſides chapels, one of which is collegiate, and under the juriſdiction of the archbiſhop of Cologne. It has many privileges, particularly the liberty of hunting and killing veniſon in any of the neighbouring counties. It has alſo a court of judicature within itſelf, from which there lies no appeal, except to the chamber of Wetzlaer. It has as many gates as pariſhes; but it is in ſo ruinous a ſtate, that very few of the ſtreets are paved. Here are ſeveral convents, and a famous nunnery called Paradiſe. The Lutherans poſſeſs two of the pariſh churches, and a nunnery, which, like other proteſtant nunneries in Germany, is a ſort of free boarding-ſchool, raiſed on the ancient popiſh eſtabliſhments, where young ladies, generally of the beſt families, are educated; and ſome ſpend their lives in them; but take neither the vow nor the habit; nor are they tied down to many rules.

In this country are alſo the following places: 1. Lipſtadt, on the river Lippe. 2. Hoken-Limburg, a borough on the Lippe, is a fief of the county of Marck, and under the protection of the regency of Cleves. 3. Hoerde, on the Emſcher, where are a Lutheran and Calviniſt church; near it is a free ſecular foundation for an abbeſs, and fifteen other ladies, partly proteſtants and partly Roman Catholics: the inhabitants are chiefly employed in nail-making. 4. Hagen, on the Volme, contains a Lutheran, Calviniſt, and Romiſh church. The inhabitants manufacture cloth, ſword-blades, paper, knives, hammers, &c. White alabaſter with red veins, and black with white veins, are found in the diſtrict. 5. Plettenberg, on the Elbe, has ſtone quarries, and iron and woolen manufactures in its neighbourhood. 6. Schwelm, a trading town, with a Latin ſchool, a foundation for proteſtant and Roman catholic ladies, a Lutheran, Calviniſt, and popiſh church, and a medicinal ſpring. 7. Hattingen, on the Roer. 8. Blankenſtein, on the ſame river. 9. Caſhiop has in it a Roman catholic, Lutheran, and Calviniſt church. 10. Nienrade, on the Lippe. 11. Bockuna. 12. Lindenſcheid. 13. Herdicke, on the Roer, has a free ſecular foundation, for Roman catholic and proteſtant ladies, and a Lutheran, Calviniſt, and Roman catholic church. 14. Iſerlon, or Lon, has manufactures of ſilk, braſs, iron, and wool, and has three Lutheran churches, one Calviniſt, and one Roman catholic.

The town of Dartmund is twenty-ſix miles weſt of Soeſt, and thirty-ſeven north of Cologne. Though it is a ſmall place, it is rich and populous; having a pretty good trade, and a communication with the Rhine, by its river Empſer. It has an univerſity, which was erected in 1548. The eſtabliſhment here is Lutheran.

In a large plain, fourteen miles eaſt of Dartmund, ſtands Unna, now ſubject, with the above, to the houſe of Brandenburg. It is not ſo large as Hamem, but was formerly reckoned one of the richeſt cities of Lower Germany.

The town of Altana is large and populous: it has a Lutheran and Calviniſt church, a caſtle on a high rock, and ſome trade in iron and wire. Being ſurrounded by mountains on all ſides, there is but little arable ground near it; ſo that the inhabitants are ſupplied with grain from other places.

We

We next proceed to the circle of Weſtphalia, containing Eaſt Frieſland, Lippa, Gulick, and Tacklenburg,

The firſt of theſe, namely Eaſt Frieſland, called alſo the earldom of Embden, has the German ocean on the north, the county of Oldenberg on the eaſt, the biſhoprick of Munſter on the ſouth, and the gulph Dollart, with the mouth of the river Ems, on the weſt, which parts it from the province of Groningen. The king of Pruſſia claimed and ſeized this country after the death of the emperor, Charles VI. the laſt count of Eaſt-Frieſland, who left no iſſue.

The chief river is the Ems: the language ſpoken by the people is High and Low Dutch. The prevailing perſuaſion is Lutheran, and the trade is very conſiderable in horſes, horned cattle, butter, cheeſe, linen, rape-ſeed, barley, and wool. The air is thick and moiſt, the country low and marſhy, and the inundations frequent and dangerous; but the paſtures are rich and fertile. Here are abundance of horſes, ſheep, horned cattle, &c. and plenty of butter, cheeſe, milk, &c. The great number of dikes are ſignally ſerviceable to the country, which, however, produces but little corn; but, beſides what we have already mentioned, here is great plenty of turf provided for fuel.

The city of Embden is rich, large, and populous; fortified towards the land by a double ditch, regular bulwarks, and baſtions; and on the ſouth by a ſtrong wall and the river. It is ſituated on the north ſide of the Ems, and on the bay called Dollart; twenty-four miles diſtant from Groningen to the north-eaſt, and fifty-five from Bremen to the ſouth-weſt. The iſland Neſſa, which lies in the Dollart bay, over againſt this city, makes the harbour as large and convenient as any on the German coaſt. They have alſo artificial canals, by which they can bring large veſſels into the heart of the town; and by opening their ſluices, they can lay the neighbouring country under water, and make the town inacceſſible. Their houſes are generally neat and high, and the town hall very magnificent. They are very induſtrious, and much addicted to trade; aſſerters of their liberties, and excellent ſoldiers. They make good proviſion for their poor, and allow freedom of worſhip to all but papiſts. It is divided into three parts, the Old Town, the Faldern, and the ſuburbs. The moſt remarkable buildings, are the town-houſe, library, and cathedral church. In 1750, the king of Pruſſia eſtabliſhed an Eaſt-India company here.

The other places of leſs note are, 1. Norden, ſituated on a little gulph, about fifteen miles diſtant from Embden to the north. 2. Aurick, about ten miles from Embden to the north-eaſt, is defended by a ſtrong caſtle, the reſidence of the count prince of Eaſt-Frieſland. This is the capital of a little diſtrict called Auricherland, which is marſhy and full of woods. The ſupreme court of judicature is held here. 3. Jemgum is an opulent borough, and has a harbour on the Ems. 4. Hoge, which gives name to a diſtrict. 5. Leer, a large well-inhabited town, on the Leda. 6. Gretſyhl, a borough town on the German ocean. 7. Eſens, about fourteen miles diſtant from Aurich towards the north, and twenty-five from Embden to the north-eaſt. 7. Witmund, about five miles from Eſens to the eaſt.

The county of Lippe, which is narrow, lies between Paderborn on the ſouth, and Ravenburg on the north. It is in general mountainous and heathy, but has ſome corn land. This country hath ſeveral proprietors, viz. the king of Pruſſia, the king of Great Britain, the counts of Lippe Schawenburg, and Lippe Detmold, and the biſhop of Paderborn. The inhabitants are Calviniſts.

The chief places are the following; viz. Lemgau, which contains a Lutheran academy, two Lutheran and one Calviniſt church, a palace, and a foundation for ladies. 2. Detmold on the Warra. 3. Blomberg. 4. Horn. 5. Sabz-Uffen. 6. Bandorf. 7. Swalenberg. 8. Lipſtadt, already mentioned, which partly belongs to the county of Marck and that of Lippe. 9. Alverdiſcen, a borough town. 10. Sternberg is a caſtle appertaining to a diſtrict belonging to the king of Great Britain.

The people who profeſs Calviniſm are remarkably induſtrious; and, as an encouragement thereto, the country is extremely fertile.

Gulick or Juliers, ſituated between the Mars and the Rhine, has Cleves and Gelderen on the north, Cologne on the eaſt, the Palatinate on the ſouth, and the Netherlands on the weſt; being ſixty miles long and thirty broad. The ſoil produces woad, or wood for dyeing; and the country abounds in corn, paſture-grounds, good neat cattle, and an excellent breed of horſes.

The only place worthy of mention is Juliers, or Gulick, the capital city; it is ſituated on the river Roer, twenty-five miles weſt of Cologne, in ſix degrees eaſt longitude, and fifty-one north latitude. It is a ſmall fortified town, defended by a caſtle.

Tacklenburg lies eaſt from Lingen, and weſt from Oſnaburg, and is about thirty miles long, and ten broad: in 1560, it fell to the counts of Benthem, and ſince to the king of Pruſſia. Its antient counts had large dominions, now parcelled out to others. Its capital, which bears the ſame name, has a ſtrong caſtle and a fort: this town is ten miles weſt of Oſnaburg, and twenty-three north of Munſter.

SECT. III.

Containing a Deſcription of GELDER in the Netherlands, and NEUFCHATEL in Switzerland; their Situation and Boundaries, Towns, Rivers, Soil, Produce, Manufactures, &c.

THE High Quarter, or Upper Gelderland, has Dutch Brabant, and part of the biſhopric of Liege on the weſt, part of the duchy of Gulick on the ſouth, part of the duchy of Cleves on the north, and part of the ſame duchy, and of the electorate of Cologne on the eaſt; ſo that it is entirely divided from Dutch Gelderland. Its breadth is unequal, and about twenty-four miles in the broadeſt part; and its greateſt length, from north to ſouth, is about thirty-five miles.

The Spaniards kept poſſeſſion of this country after the commonwealth of the United Provinces was ſettled; but it was conquered by the allies during the war occaſioned by the death of king Charles II. of Spain, about his ſucceſſion. The king of Pruſſia, for whom it is very conveniently ſituated, laid claim to it: and, by the treaty of Utrecht, it was agreed that he ſhould keep the city of Gelder, the præfectorſhips, towns, boroughs, fiefs, lands, quit and other rents, in that part of the high quarter of Gelderland, which he was actually in poſſeſſion of; which was yielded to him, his heirs and ſucceſſors, of either ſex, for ever; together with the county of Keſſel, and the bailiwick of Krickenbeck.

The town of Gelder, from which the whole province derives its name, is twenty miles diſtant from Cleves to the ſouth, and eight from Venlo towards the north. It ſtands in a plain, on the river Niers, which, dividing itſelf here into two branches, forms an iſland, in which this city ſtands. It receives the Niers into its trenches, lies in the midſt of marſhes; and is ſo well fortified beſides, that it is reckoned one of the ſtrongeſt places in the Netherlands. It has an handſome caſtle, formerly the ſeat of its governors, and is ſuppoſed to have been built by Wichard, the firſt lord of this country, who erected it into a principality after the death of Charles the Bald. The heireſs being afterwards married to Otho of Naſſau, who was created count by the emperor Henry IV. about the year 1069; one of his deſcendants was made duke by the emperor Lewis, of Bavaria, in 1339; but his poſterity failing, it came to the count of Egmont, who ſold it to Charles duke of Burgundy, by whoſe daughter it came to the houſe of Auſtria.

Gelder was taken by the confederates in the beginning of the war in the Low Countries, but betrayed to the Spaniards in 1587. The Duch beſieged it in 1637, 1639, and 1640, but without ſucceſs. The French ſeized it in the beginning of the laſt continental war; but it was re-taken by the Pruſſians, after a blockade of fifteen months and fourteen days bombardment. By the treaty of Utrecht, it was ceded to the king of Pruſſia, in exchange for the principality of Orange, to which he had a right, as heir to king William III. and which had been ſeized upon by the French king.

This country contains, beſides the capital, the following places; viz. 1. Keſſel, a large borough with a fine caſtle: this borough lies on the Maeſe, about thirteen miles diſtant from Gelder to the ſouth. It is the capital of a county, or diſtrict, which was yielded to the king of Pruſſia by the treaty of Utrecht.

2. Stralen is about four miles diſtant from Gelder towards the ſouth. It was formerly fortified; but the French having taken it in 1672, demoliſhed its fortifications. It belongs now to the king of Pruſſia, and is the capital of a ſmall territory. The village of Zant lies near it.

3. Five miles above Gelder to the eaſt, on the river Niers, ſtands Wachtendenck: it is well fortified; but its chief ſtrength conſiſts in the marſhes that ſurround it, and in its ditches, filled with the waters of the Niers. In the beginning of the wars in the Low Countries, it was taken

Louis, count of Naſſau, brother to the prince of Orange, in a hard winter, by marching ſome troops over the ice, which the garriſon had neglected to break. In 1588, it was furiouſly battered by count Mansfield, general of the Spaniards; and it is obſerved, that bombs were uſed for the firſt time at this ſiege; notwithſtanding which, the beſieged defended themſelves ſo bravely, that the Spaniards were going to retire after three months ſiege; but juſt as the town was on the point of being relieved, it was betrayed to them by the governor.

Neufchatel is a principality, being bounded by the biſhopric of Baſil, and the territory of Biel, towards the north; by the lake Neufchatel towards the eaſt; by the canton of Bern on the ſouth; and by Franche Comte, or Burgundy on the weſt; being about twelve leagues in length from north to ſouth, and ſix in breadth from eaſt to weſt. The air of this country, near the lake, is temperate, but very ſharp in the mountainous parts of it; the ſoil is ſtrong, but produces the beſt wine in Switzerland, by the ſale whereof to foreigners, great advantages accrue to the natives.

The French language is ſpoken here, and the inhabitants reſemble that nation more in their manners and cuſtoms than the Germans, having more vivacity than the reſt of the Switzers, with a great ſhare of vanity. They are, in a manner, a free and independent people, notwithſtanding they have always had a prince for their head; for nothing is determined but by the concurrence of the three eſtates. They have alſo the privilege of chuſing their own magiſtrates and ſtandard-bearer, and are ſubject to no taxes but what they lay upon themſelves; and the whole country is of the reformed religion, except the two villages Crerior and Landeron, the inhabitants of which are Roman catholicks.

Upon the death of the ducheſs of Nemurs, the laſt countefs of Neufchatel, as heireſs of the houſe of Longueville, the ſtates of the country were inclined to ſubmit themſelves to the late king of Pruſſia, as heir by his mother to the houſe of Orange, which derived its title to Neufchatel from the marriage of one of its princes with the heireſs of the houſe of Chalons, the direct ſovereign of theſe two countries. Several competitors alſo aroſe at the ſame time, who claimed as heirs in blood to the houſe of Longueville; but the ſtates rejected their claim, and adjudged it to the heirs of the houſe of Chalons, and the king of Pruſſia accordingly took poſſeſſion of it.

The chief towns in the country of Neufchatel, are, 1. Neufchatel, the capital; and, 2. Landirm. The firſt of theſe, called by the Germans Newburg, is ſituated at the north-eaſt end of the lake, to which it communicates its name, about twenty miles north-eaſt of Bern, and fifteen north-weſt of Friburg. The town is well built, and adorned with ſeveral handſome fountains; it is governed by a council of ſixty burghers, and enjoys great privileges; among which, the moſt conſiderable is, that they are fellow citizens with the canton of Bern, which is not only their protector, but umpire of all the differences between them and their ſovereign; and this canton ſupported them in their civil and religious rights, while they were under the dominion of popiſh princes. The counts of Neufchatel were formerly allied to the cantons of Bern, Lucern, Solcure, and Friburg; but ſince the inveſtiture of the king of Pruſſia, the popiſh ſtates do not ſeem fond of renewing the alliance. Landeren is remarkable for its advantageous ſituation, and noble caſtle, the reſidence of the prince, which is ſituated near the lake of Biel.

With reſpect to the duchy of Sileſia, as ſome parts of it have been ceded to the king of Pruſſia, and others have been ſeized upon by him at various times, and under different pretences, he now poſſeſſes the principal places in the whole; it may therefore with great propriety be deemed, and conſequently deſcribed, as a Pruſſian province. It extends on both ſides of the Oder from the Carpathian mountains, where it riſes, to the borders of Brandenburg. It is ſeparated from Bohemia and Moravia to the ſouth-weſt and ſouth, by the mountains called Riſſenbergen, and bounded by Poland on the eaſt, Luſatia and part of Bohemia on the weſt, Brandenburg on the north, and Hungary on the ſouth. From north-weſt to ſouth-eaſt it is about two hundred and twenty-five miles, and about an hundred where broadeſt; but it is much contracted at both extremities.

There are many barren mountains on the ſide next to Bohemia, but the reſt of the country is good ſoil, abounding with corn, wine, ſweet cane or galengal, madder and flax; and on the mountains that divide this duchy from Moravia, there are mines of ſilver, the richeſt in Germany, which were mortgaged by the late emperor, Charles VI. upon the advance of money from Great Britain, &c. by the title of the Sileſian loans, at five and ſeven per cent. There are others of copper, lead, iron, quickſilver, ſalt, ſaltpetre and chalk.

Its four chief mountains are, 1. Zottenberg, or the Sileſian Weathercock, becauſe by the top of it the neighbours prognoſticate the weather. Here are the ruins of an old caſtle demoliſhed by the citizens of Breſlaw, becauſe it was a ſhelter for robbers. From this hill they dig a fine dark-greeniſh marble. 2. Gratzberg, or Gradiſberg, on which duke Frederick built a caſtle, now a watch-tower. 3. Spitſberg, with a beacon near the former. 4. Georgenberg, in the duchy of Schweidnitz, famous for the Terra Sigillata, firſt diſcovered by Montanus, an eminent phyſician and chymiſt, who wrote a Latin tract on its virtues.

Its chief river is the Oder, which riſes near a town of that name on the borders of Moravia, and traverſes this duchy from ſouth to north-weſt. Many ſmaller rivers riſe here, and fall into the Oder, increaſing it to a large navigable ſtream before it paſſes into Brandenburg. Its rivers abound with freſh-water-fiſh, as do alſo its ponds and lakes, eſpecially lampreys, which are taken in vaſt quantities in the Neiſſiſh lake, &c. Its meadows alſo have cattle, and its foreſt veniſon, with all the wild and tame beaſts and fowl that are in any part of the German empire.

The number of inhabitants are computed at a million and a half, being a mixture of Germans, Moravians, Poles, &c. The language is in ſome places German, and in others Sclavonic. Since the country fell under the dominion of the Pruſſians, no diets have been held, but all the other privileges of the inhabitants have been confirmed to them. The eſtabliſhed religion is the proteſtant; but Roman catholics, Jews, Greeks, &c. are tolerated. The principal manufactures are hats, glaſs, gunpowder, iron wares, woollens, linens, cottons, and thread.

Chriſtianity was planted here, as in Poland, about the end of the ninth, or beginning of the tenth century; but at firſt the Chriſtians worſhipped in private, for fear of their magiſtrates, till about 965, that the court itſelf turned Chriſtian, when no leſs than nine biſhopricks were erected in this country. Soon after Luther's appearance they embraced the Augſbourg confeſſion, for which they had a charter granted them by the emperor Rodolph II. in 1609, but Ferdinand II. repealed their charter, and very much reſtrained the exerciſe of their religion, which, though reſtored by the treaty of Weſtphalia, was again invaded by the Auſtrian family, till Charles XII. king of Sweden, obliged the emperor Joſeph, to allow it them again, with freſh conceſſions. Since that time theſe too have been virtually revoked by degrees; but ſince Sileſia has fallen into the hands of the king of Pruſſia, the Calviniſts and Lutherans, as well as the Roman catholicks, have had full liberty of conſcience.

The whole revenue from Sileſia and the county of Glatz, is very conſiderable, and is managed by the domain officers of Breſlaw and Glogau. In this part of Sileſia the exciſe revenue is only levied in walled towns, and fluctuates; but in the reſt of the duchy the contributions are fixed, and the ſame both in peace and war.

Geographers divide Sileſia into Upper and Lower, and theſe are again ſubdivided into principalities and lordſhips. The property and juriſdiction of ſome of theſe belong immediately to the king, and others to his ſubjects.

Lower Sileſia is divided into the principalities of Breſlaw, Brieg, Schweidnitz, Jauer, Lignitz, Wolau, Glogau, Neyſze, Oels, Shgan, Munſterburg, Trackenberg, Carlath; and the lordſhips of Wartenburg, Miltſch, and Goſchietz.

Breſlaw principality is a pleaſant and fruitful country, in the middle of Sileſia, lying on both ſides of the Oder, with the duchies of Wolaw and Oels, and the barony of Wartenberg on the north; the duchy of Brieg on the eaſt, part of Brieg and the duchy of Schweidnitz on the ſouth, and part of Schweidnitz and the duchy of Lignitz on the weſt. Its firſt duke was Boleſlaus, a Poliſh prince, ſo created by the emperor Frederick I. in 1163, but the following princes not being able to defend themſelves againſt the Tartars and Poles, they were forced to put themſelves under the protection of the king of Bohemia, to whom, Buno ſays, the emperor Frederick II. gave it as a fief of the empire; but it was ſubject to the houſe of Auſtria before its late ceſſion to the king of Pruſſia.

Breſlau, or Breſlaw, the capital of this principality, is ſituated on the Oder, which, on the north ſide, runs cloſe by the walls, and in that part receives the Ohlau, after its winding

winding courſe through Old Breſlau. The preſent old city was formerly encompaſſed by this laſt river, as with a moat, all without the Ohlau to the walls of the city being additions made by the emperor Charles IV. The ſeveral parts comprehended under the name of Breſlau are collectively of great extent; for, including the ſuburbs, the whole circumference is not leſs than nine Engliſh miles. The fortifications of the city are of no great importance. It has ſeveral large and regular ſquares; the main ſtreets are broad, and, beſides many noble edifices, it contains a number of very elegant houſes and other private buildings. The part called the Dominſel, though lying without the circuit of the town, is defended by low walls, ſtrengthened with baſtions, and in it ſtands the citadel of St. John, which, in 1759, together with the deanery, was deſtroyed by fire. In the ſame part is alſo the biſhop's library, which forms a particular building; the abbey of the Holy Croſs; three or four ſmall churches; the biſhop's palace, which is a very ſpacious ſtructure; the dwellings of the prebends, ſome of which have very beautiful gardens; and the electoral hoſpital for poor children of both ſexes.

Brieg, in Latin, Brega, the capital of a circle of the ſame name, and of the whole principality, ſtands on the river Oder, and is not only well fortified, but is one of the largeſt, handſomeſt, and moſt conſiderable cities in all Sileſia. It has four ſuburbs, and a very long, lofty, and ſtrong wooden bridge. The caſtle, which was anciently the reſidence of the dukes of Brieg, was burnt down during the ſiege of the city, in 1741. On the ſouth ſide of Brieg ſtands the abbey of St. Hedwiga, which is in the poſſeſſion of the papiſts; beſides which there is alſo a Jeſuits college and a Franciſcan convent. To the Lutherans belongs the parochial church of St. Nicholas, and they have alſo an academy founded by duke George II. with the church of the Holy Trinity, in which the Poliſh congregation aſſemble. In 1643, this city held out a ſiege againſt the Swedes, but in 1741, the Pruſſians made themſelves maſters of it in four days.

Schweidnitz principality borders to the eaſt on thoſe of Brieg and Breſlau, to the northward on thoſe of Lignitz and Jauer, to the weſtward alſo on Jauer, and to the ſouthward on Bohemia and the country of Munſterberg. It is one of the largeſt and moſt populous principalities in all Sileſia, and, in conjunction with the principality of Jauer, is ſuppoſed to form one-eighth of the duchy. In this principality are ſeveral very high mountains: it, however, affords a ſufficiency of grain, timber, and fruit; and, abounds in game of all kinds; as alſo in cattle and pit-coal. Beſides theſe advantages, it has excellent flax and wool; and the inhabitants are remarkable for their induſtrious improvement of theſe advantages, by carrying on a variety of manufactures. This is chiefly done in the hilly parts of the principality, where its greateſt trade is carried on. It has no large rivers, the principal of them being the Werſtitz, Polnitz, and Bober.

The town of Schweidnitz, the capital of the circle of the ſame name, and of the whole principality, is ſtrongly fortified, ſituated on the little river Werſtitz, one of the moſt delightful ſpots in all Sileſia. Its ſtrength formerly conſiſted of a triple wall; but in 1748, Frederic II. cauſed it to be fortified with regular works of very great ſtrength. The pariſh church was in the hands of the Jeſuits, who got footing in this town in 1629, and are likewiſe poſſeſſed of a college and ſeminary adjoining to it. There are here a Dominican, Minorite and Capuchin monaſtery, with an Urſuline nunnery, all of which have their reſpective churches. St. Michael's church, without the lower gate, is a commendam of the red ſtar prebends of St. Matthias at Breſlau. Without the town is a Lutheran church, the head miniſter of which is inſpector of the churches within the circles of Schweidnitz, Reichenbach, and Strigan, and the principality of Munſterberg. The greateſt part of this city was burnt down in the year 1716; but has been ſince rebuilt with much more beauty than before, and all entirely of ſtone; in particular, the new town-houſe is a moſt elegant ſtructure. However, in 1757, it was taken by the Auſtrians, after a ſiege of ſixteen days, during which it was in a great meaſure deſtroyed by the bombs, red-hot bullets, and fires occaſioned by them; but in 1758, the Pruſſians recovered it, after a ſiege of the ſame continuance.

The town of Reichenbach is ſituated on the little river Peil. In this town is a commandery of the order of St. John, to which belongs the patronage of its parochial church, which is popiſh; and there is here alſo a Lutheran oratory. Without the Frankenſtein gate is a priory dedicated to St. Barbara, and without the Schweidnitz gate, an hoſpital that has a ſmall church. In 1632, this city was pillaged by the Saxons; in 1634, by the Imperialiſts, and in 1638, it ſuffered ſtill greater calamities from the Croats. In 1642, it was ſacked by the Swedes, and in 1643, its imperial garriſon demoliſhed upwards of one hundred and forty houſes for fuel. In this town are ſome conſiderable manufactures of fuſtian, linen, and canvaſs.

Striga, one of the towns of the laſt mentioned duchy, eight miles north of its capital, ſtands on the river Polſnitz, and is noted for excellent beer, and that remarkable mineral called Terra Sigillata.

The duchy of Jauer contains twelve towns, which came to Charles IV. king of Bohemia, by marriage. It has Bohemia on the ſouth, Upper Luſatia on the weſt, the duchies of Sagan and Glogaw on the north, and thoſe of Lignitz and Schweidnitz on the eaſt. The river Bober, which riſes in it, runs through it from north to ſouth.

Jauer, its capital, lies in a pleaſant valley, and a good air, near the rocky mountains which divide Sileſia from Bohemia, ten miles ſouth of Lignitz, and twenty-ſeven weſt of Breſlau. It is not ſo big as Schweidnitz, and no river paſſes through it; but it has ſtrong walls, with high ramparts, and deep ditches. It has a fair pariſh-church, with a convent of Bernardines, and a great citadel, in which reſides the bailiff or lieutenant of both the duchies of Jauer and Schweidnitz. There is a fine town-houſe in the middle of a large ſquare of houſes, built with galleries for people to walk under. It ſuffered much by the civil wars in 1648, when the church was burnt down, but has ſince been rebuilt in a more ſtately manner.

The principality of Lignitz is divided into ſeven diſtricts, denominated from the principal towns, is the beſt corn country in Sileſia, and abounds with a white ſort of Terra Sigillata. It lies betwixt the Oder and the duchy of Jauer. It had its particular princes, the laſt of whom died in 1675, when this, together with the duchies of Brieg and Wolau, which he alſo poſſeſſed, devolved to the emperor, in ſovereignty and propriety.

Its capital, of the ſame name, ſtands on the Cat, or Katſbach, a ſmall rivulet, two German miles north from Jauer, and ſix weſt from Breſlau, and ſouth of Glogaw. It was walled round, made a city, and, moreover, ſo adorned by Boleſlaus, the firſt duke, who reſided here about 1170, that it was the chief city of Sileſia, next to Breſlau. It was farther beautified and fortified by Boleſlaus the Bald. Frederic II. another of its dukes, encompaſſed it with a ditch in 1532, to ſecure it from the frequent incurſions of the Turks: and Henry XI. augmented the ditch, and made new works to ſtrengthen it. It is, in ſhort, a large town, has a noble ſtrong caſtle, a ſtately town-houſe and hoſpital, and is famous for a victory obtained near it, over the Imperialiſts, in 1635.

In this town are many meal, ſawing, tan, paper, fulling, and powder-mills, and a conſiderable trade in linen and madder. It alſo contains ſeveral churches, Lutheran, Roman catholic, &c. a college, military academy, and the palace of the antient princes, with the chapel in which they were buried. In this principality are alſo the towns of Geldberg, Haynaw, Luben, and Parchwitz.

Wolaw principality is in general woody and marſhy, yet has a few corn lands: the rivers are the Katſbach and Oder. Its chief towns are Wolaw, the capital; Winziz, Rautdem, Steinau, on the Oder: Ratzen, on the Baltick, and Henenſtadt, on the ſame river, which was burnt down by the Auſtrians in 1739.

Glogaw is the largeſt principality in Lower Siberia. It is watered by the Oder, Batch, and Bober, yields abundance of corn, wine, and wood, has ſeveral woollen manufactories, and is divided into ſix circles.

Its capital, Glogaw, has the epithet of Great, to diſtinguiſh it from another town of the ſame name in Upper Sileſia. It was taken in 1741, by the Pruſſians, and its fortifications conſiderably augmented: here is a lake, the fiſhery of which is farmed out, and produces a conſiderable ſum annually. It is the ſeat of ſeveral courts, officers, &c. has a college, a Lutheran, a Calviniſt, and ſeveral Roman catholic churches and convents, and is ſtrongly fortified and well garriſoned.

In this principality are alſo the following towns; viz. 1. Gurau, which was burnt by the Ruſſians in 1759. 2. Sproltau, at the conflux of the Sprolte and Bober. 3. Grunberg. 4. Schuibus, on the Schwemme; and, 5. Freyſtadt.

Neyſze principality is remarkable for its northern diſtricts, being more fertile than the ſouthern. It is watered

by the Olaw, the Neyſze, the Billaw, and the Oppar; tobacco is cultivated here.

The principal places are, 1. Ottmackaw, on the Neyſze, where the biſhop has a palace and a court of regency. 2. Neyſze, on the river of its own name, ten miles to the ſouth of Grotkaw, and twenty-ſix eaſt of Glatz; it is watered by the river Billaw, and is the ordinary reſidence of the biſhop of Breſlau. Moſt of its houſes are very high, and built of free-ſtone, forming fine ſtreets and public ſquares. It is encompaſſed by a good wall, and a ditch full of water, has ſeveral churches and convents, and is commanded by a fort on a neighbouring hill, erected in 1743, by order of the king of Pruſſia, and defended by a ſtrong garriſon. It it noted for a great trade in bed-ticking. 3. Grotkaw is eight miles north-eaſt from Munſterberg, and eighteen from Oppelen. The houſes are moſtly built of timber; but the biſhop's palace, the church, and town-hall, are of ſtone. It has good gates and walls, with a triple ditch. It ſtands in a fine plain, near a foreſt, in a good air, and a fruitful ſoil, between Brieg on the north, and Munſterberg on the ſouth-weſt. It has a large pariſh church.

Oels principality is ſandy and barren; is divided into four circles, and has the following towns; viz. 1. Oels, the capital, which is ſmall. 2. Bernſtadt, on the Weyda. 3. Conſtadt.

Sagan principality abounds with wood and iron; and contains, 1. Sagan near the frontiers of Luſatia. 2. Priebus, on the Neyſze. 3. Naumberg, on the Bober.

Munſterberg is a very mountainous principality; notwithſtanding which, it yields abundance of grain, flax, hemp, wood, hops, cattle, ſheep, &c. It is watered by the Neyſze and Olaw, and contains, 1. Munſterburg, the capital, twenty miles north-eaſt of Glatz, and thirty ſouth-eaſt of Schweidnitz; it ſtands in a fruitful plain, at the head of the river Olaw, which falls into the Oder at Breſlau, thirty-two miles to the ſouth: it takes its name from a monaſtery built here by the emperor Henry I. who founded the city. 2. Henrichau. 3. Frankenſtein, on the Pauſo, which contains a palace, a convent, two churches, a Ciſtercian abbey, ſeveral offices, courts, &c. 3. Warlka, a little town on the Neyſze.

Trachenburg abounds in grain, cattle, and timber, but contains only the two ſmall towns of Trachenburg and Praſnitz.

Carolath is tolerably fertile; but contains only the two inconſiderable towns of Carolath and Benthen, on the Oder.

Wartenberg contains only a ſmall town of the ſame name, a Roman catholic and Lutheran church, a Calviniſt meeting-houſe, and a palace.

Militſh, a lordſhip, is only remarkable for its large foreſts, belonging to the king, and for one town of the ſame name, ſituated on Bartſch.

Goſchutz lordſhip contains only two inconſiderable towns: it is ſurrounded by the principality of Oels.

In Upper Sileſia, the moſt conſiderable places are, the principalities of Oppelen, Troppau, Yagerndorf, Ratiber, Teſchen, Bilitz, and the lordſhip of Pleſs.

Oppelen is a very barren principality, and full of lakes, but contains twelve circles, which receive their names from the following towns; viz. 1. Oppelen, on the north bank of the Oder, over which it has a bridge, thirty-ſix miles from the frontier of Poland, forty north of Troppau, thirty above Breſlau to the ſouth-eaſt, and ſixteen ſouth-weſt of Brieg. It is the capital of the principality, contains a college, ſeveral convents, and in the circle to which it gives name, there is a royal foundation for caſting bombs. 2. Roſenburg. 3. Lublinitz. 4. Great Strelitz. 5. Toſt. 6. Gleowitz. 7. Schlawentitz. 8. Koſel, a fortified town, with a palace, Roman catholic church and convent. 9. Little Glogaw. 10. Newſtadt, on the Prudnitz. 11. Zulz, in which are many Jews. 12. Falkenſtein, on the Steira.

Troppau principality is watered by the Oppa, is very fertile, and contains, 1. Troppau on the Oppa, the capital of Upper Sileſia; it is a walled town, and contains ſeveral churches, convents, a college, a palace, &c. 2. Hildſchim, a ſmall, fortified, and walled town.

Jagerndorf is likewiſe a fertile principality, and contains ſeveral mineral ſprings. The principal towns are, 1. Jagerndorf, which takes its name from the great number of huntſmen that formerly lived in it, there being plenty of game in the neighbouring woods. The capital of its own name, on the river Oppa, is a ſmall town, defended by a caſtle and other fortifications, erected by George, marquis of Brandenburgh, and is fourteen miles weſt of Troppau, and above thirty miles ſouth-eaſt of Munſterberg. The king of Pruſſia founded his claim to Sileſia on that of the late marquis. 2. Leobſchutey, a walled town. 3. Katcher, a ſmall open town.

Patibor principality has a ſoil tolerably fertile in corn and paſture, and abounds in lakes, ponds, ſtreams, &c. It forms a circle, the inhabitants of which are Poles, or deſcendants of Poles; and the only place worth naming is Ratibor on the Oder, which contains ſeveral convents, a palace, &c.

Teſchen principality is likewiſe full of lakes, moors, mountains, &c. The only places worth mentioning are, 1. Teſchen, a walled town with a palace, Lutheran and Roman catholic church, a college; and, 2. Skorow, a ſmall open town, on the Viſtula.

Bilitz principality is tolerably fertile: Bilitz, a little walled town, on the Biala, is the only place worthy of obſervation.

In the lordſhip of Pleſs, there is only a little city of the ſame name, and a caſtle near the river Weiſſel, with the title of a barony. The Lutherans and Roman catholics have each of them a church here; but the former are the moſt numerous.

SECT. IV.

General Account of the PRUSSIAN Dominions; Religion and Manufactures of the Inhabitants; Titles of the King of PRUSSIA: Number of Inhabitants, Troops, Revenue, &c.

LUTHERANISM is the eſtabliſhed religion in Pruſſia; but Calviniſm is greatly encouraged, and Greeks, Jews, Roman catholics, &c. are tolerated. The nobility, in general, are deſcended from the antient Germans; but the peaſants are a mixed breed, and either vaſſals to the king or nobles. The manufactures of Pruſſia are daily advancing and improving, particularly thoſe of ſilk, linen, cloth, camblets, glaſs, iron, copper, paper, gunpowder, braſs, &c.

Pruſſia is by nature well ſituated for trade, and the late acquiſition of maritime territories has greatly increaſed the revenue, and added to the power of his Pruſſian majeſty: but it is hard to ſay, whether his ſubjects have been greater gainers by his encouraging and promoting commerce, manufactures, agriculture, population, order, and the regular diſtribution of juſtice, or ſufferers by the wars in which his ambition hath involved them, and the prodigious ſtanding army he keeps conſtantly on foot, to maintain his conqueſts, and extend them as opportunity offers.

The titles of the king of Pruſſia run thus: "Frederick, king of Pruſſia, margrave of Brandenburg, of the holy empire; arch-chamberlain and elector, ſovereign and ſupreme duke of Sileſia; ſovereign prince of Orange, Neufchatel, and Valengin, of the county of Glatz, Gelders, Magdeburg, Cleves, Juliers, Berg, Stetin, Pomerania, the Caſſubi and Wends; Mecklenburg and Croſſen; duke burgrave of Nurenburg; prince of Halberſtadt," &c. &c. As an elector, he poſſeſſes the ſeventh place; as arch-chamberlain, carries the ſceptre before the emperor at his coronation; and in the college of the princes of the empire, he poſſeſſes five voices.

The ingenious Mr. Hanway, who has, in his writings, given many intereſting particulars concerning the dominions of the king of Pruſſia, tells us, that "Berlin abounds in elegant ſtructures and elegant ſtreets, and is computed near one third as big as London, but has not above one eighth part of the inhabitants; from whence we may eaſily account for graſs growing in many of the principal ſtreets. The inhabitants were formerly computed at eighty thouſand, now they are reckoned at one hundred and ten thouſand, including the garriſon of ten thouſand; all the Pruſſian dominions, Sileſia excepted, hardly contain two millions of people. This acquiſition of twenty thouſand inhabitants and ſubjects is imputed to the good conduct of the king, in granting privileges and lands, ſufficient to induce many to eſtabliſh themſelves in this capital; and, conſidering this country is ſo extremely deſpotic and military, without any foreign trade, and ſurrounded by neighbours who want little or nothing of them, manufactures here may be ſaid to flouriſh. They make woollen cloth ſufficient for the army, and great part of home conſumption, and Sileſia is well known to produce a great ſupply of fine linens, which are ſent all over Europe, and alſo to America. Their export of woollen cloth to Ruſſia was once conſiderable, but at preſent is very ſmall: ſo many thouſands of French manufacturers having found protection in this country, gold and ſilver lace, and wrought ſilks, are hardly to be bought in any place ſo cheap.

"The

"The king of Pruſſia has generally an hundred and twenty thouſand troops in his pay; his officers included, they amount to an hundred and forty thouſand. This prince has a body of eighty ſquadrons of huſſars, each of one hundred and thirty men. I ſaw many of them (ſays our author) in the towns through which I paſſed, and was ſurpriſed by what means they could be collected, ſo youthful, comely, ſtrong, and well-ſhaped; but the king has his emiſſaries all over Europe. Whilſt I was at Dantzick, continues he, a young man, of whom I had ſome knowledge, had procured himſelf a lodging in priſon; but, on condition of entering into the Pruſſian ſervice, his debt, which was about twenty pounds, was immediately offered to be paid.

"The huſſars are armed with a light muſket and ſabre, both which are kept in admirable order. Their cloathing is of coarſe red cloth, made cloſe to their bodies, and ſtrengthened at the elbows by leather in the ſhape of a heart; their breeches are of well-dreſſed ſheep-ſkins; their boots ſhort and light, but the ſoles of them durable; their caps are ſtrengthened in the ordinary way, ſo as to ſtand a cut. They are the only denomination of ſoldiers in the Pruſſian ſervice who have no chaplain.

"Beſides the huſſars, the king has a ſmall body of men, whom they call hunters, who are reputed the moſt faithful couriers in the army, and are often times promoted for their fidelity in hazardous enterprizes. The Auſtrians are ſaid to have employed men under this denomination among their ranks, with pieces loaded with ſingle balls, to mark out the officers of the enemy, in which they are very dextrous. This, which is confeſſedly an unwarrantable practice, induced the Pruſſians, according to the report of the latter, to take the ſame method: but no quarter is granted on either ſide, when theſe hunters are taken priſoners.

"In general, the Pruſſian ſoldiers are remarkable for their very ſhort cloathing, which is calculated for many wiſe ends, though at firſt view, it ſeems to be frugality to a ridiculous degree.

"The army has uſually new regimentals twice in three years only; but the king's guards, and ſome few other regiments are cloathed annually. The late king required the ſoldiery to wear white ſpatterdaſhes winter and ſummer; but his preſent majeſty, obſerving the inconvenience as well as inelegance of it, gives his men black for the winter; theſe are made of fuſtian, or a thick kind of linen cloth. The ſoldiers have alſo breeches of woollen cloth in this ſeaſon; whereas in ſummer they are of white dimity or linen, which are very light and clean. They obſerve an uniformity about their heads, by wearing queues, which are eaſily kept in repair; they are generally powdered, but always ſo when on duty; and this modern elegance in dreſs not only ſerves to preſerve the natural hair or wig, but gives the ſoldier a reſpect for his own perſon; and the ſmallneſs of his pay is in ſome ſort compenſated by the rank in which he is taught to conſider himſelf.

"The Pruſſian arms are reported incomparably the largeſt and moſt weighty of any in Europe; though ſome of the fuſileers, who are ſmaller-bodied men, have their arms proportioned to their ſize. As to the cleanneſs of them, it is ſcarce credible how far this is carried; a ſoldier can hardly find time to be idle or wicked. Notwithſtanding the great weight of their arms, the tactic art is carried here to the higheſt perfection: and nothing can give more pleaſure to thoſe who have any idea of the harmony of this ſort of motion, than the exerciſe of the Pruſſian ſoldiers, which they go through twice a day; when the weather is bad, it is performed under cover, for which proper places are appointed. A ſoldier in this ſervice muſt apply diligently to his duty, or he will paſs his time very ill; inaſmuch as the leaſt motion of the head, not according to art, is corrected.

"According to their eſtabliſhment, two thirds of the army ſhould be compoſed of foreigners; and this method, as well as the ſmall number of inhabitants in the Pruſſian dominions, make it obvious how difficult it muſt be to recruit an army; ſo that however formidable this prince may appear, if we conſider his country as little plentiful in reſources of wealth as of inhabitants, that ſtrength muſt be deemed artificial in a great meaſure, which has ſo great connection with foreign dependencies: however, all the world muſt allow that the ſtrength derived from the acquiſition of Sileſia, which conſtitutes a great part of this prince's power, is more natural; but whether it is more ſtable, we will not pretend to determine.

"A common ſoldier's pay, in this country, is eight groch (fourteen pence) a week, and of this three pence is ſuppoſed to go in waſhing and materials for cleaning their arms, for which they are ſo much diſtinguiſhed: but they have alſo bread allowed them. Upon this calculation, one hundred and twenty thouſand men coſt but three hundred and ſixty-four thouſand pounds, ſo that if we reckon thrice this ſum, in order to include their ammunition bread, the pay of officers, and cloathing, it does not much exceed one million ſterling: ſuch is the incredible force of diſcipline and œconomy: but this is a leſſon which we are not well acquainted with in Great Britain. One remarkable proof of this œconomy is, that the Pruſſian army, as well as the officers of the crown, receive their pay before it is due. Sileſia, according to ſome calculations, ſupports near forty-thouſand men; from whence we may judge how reluctant the houſe of Auſtria muſt have been to part with it. The ſubſidy which the king receives from France is ſaid to be no leſs an object than three hundred thouſand pounds ſterling in value.

"It is computed that the revenues of the houſe of Brandenburg, including the late king's conqueſt, amount to eight millions of dollars (one million, four hundred thouſand pounds); but this ſum is thought to exceed the reality. Theſe revenues ariſe from a tax of about half the rent of the lands, and near forty per cent. on the value of all eatables, ſoap, candles, &c. and yet what muſt appear moſt ſtrange to us in England, is, the advantages ariſing from the national œconomy, and the regularity which runs through every branch of the government, and particularly in the parſimony of the court, ſecures the property of the people enough to animate their induſtry, and make their chains ſit eaſy."

We now proceed to the hiſtory of Pruſſia; previous to which, it will be proper to obſerve, that the houſe of Brandenburg, or rather that of Hokenzollern, is ſo antient, that its origin is loſt in the darkneſs of antiquity. However, the ancient Pruſſians are allowed to have been a very brave and warlike people, and refuſed to ſubmit to the neighbouring princes, who, on various pretences, attempted to reduce them to ſlavery. They made, in particular, a noble ſtand againſt the kings of Poland, and in the year 1163, the Poliſh monarch, Boleſlaus IV. was defeated and ſlain by them.

With reſpect to religion and policy, they remained Pagans in opinion, and independent in circumſtances, till the time of the cruſades, when the German knights, of the Teutonic order, about the year 1230, attempted to convert them by force of arms. Several bloody wars enſued, in which the inhabitants of Pruſſia were almoſt extirpated by the zealous fury of the Teutonic knights, and the latter endeavoured to re-people the country with Germans, after having ravaged it with incredible barbarity.

A treaty was entered into, in 1466, between Caſimir, king of Poland, and the Teutonic knights, in which it was agreed, that the country now called Poliſh Pruſſia ſhould continue a free province, under the protection of the king, and that the knights ſhould poſſeſs the remainder, on condition of acknowledging themſelves vaſſals to Poland. However, this treaty was ſoon broken, another ſeries of bloody wars enſued, and the knights attempted, but in vain, to become independent of the Poles.

Albert, margrave of Brandenburg, and the laſt maſter of the Teutonic order, in 1525, concluded a peace, and entered into a treaty at Cracow, in which it was ſtipulated, that the margrave ſhould be acknowledged duke of the eaſt part of Pruſſia, which, on that account, was called Ducal Pruſſia, but ſtill it was to remain a fief of Poland. In this manner the ſovereignty of the Teutonic order ended in Pruſſia, after it had ſubſiſted near three hundred years. In the year 1657, the elector Frederick William of Brandenburg, ſurnamed the Great, had Ducal Pruſſia confirmed to him; and by the conventions of Welau and Bromberg, it was freed from its vaſſalage to Poland; and Caſimir, king of Poland, acknowledged its independency.

The late king of Pruſſia, in his Memoirs of the Houſe of Brandenburg, ſays, that this Frederick William began his reign under the moſt deſperate circumſtances: "He was, ſays he, a prince without territories, an elector without power, a ſucceſſor without inheritance, and juſt in the flower of his youth; an age which, expoſed to the boiſterous current of his paſſions, renders mankind almoſt incapable of direction; yet he gave marks of the moſt conſummate wiſdom, and of every virtue that could render him worthy of command: he regulated his finances, proportioned his expences to his revenues, and got rid of thoſe ignorant or corrupt miniſters, who had contributed to the injuries of his people.—Europe, in him, beheld a

prince, whoſe actions diſplayed the noble ſoul, and the ſuperior genius; one while tempered with prudence, another time bearing that character of enthuſiaſm which forces our admiration; a prince who conſtantly repaired his loſſes without foreign ſuccours; who formed all his projects himſelf, and put them in execution; who by his wiſdom retrieved a deſolated country; by his policy and prudence acquired new territories; by his valour aſſiſted his allies, and defended his people; a prince, in fine, who was equally great in all his undertakings." This celebrated prince died of a dropſy, April 29, 1688, and was ſucceeded by his ſon Frederick, who was afterwards the firſt king of Pruſſia.

This great titular alteration was chiefly owing to the intereſt of the Proteſtant powers; for as the reformed religion had been introduced into this country by the margrave Albert, and the electors were of that perſuaſion, the Proteſtant intereſt was made uſe of to raiſe Frederick to the dignity of a king, and he was accordingly ſoon acknowledged as ſuch, not only by the empire of Germany, but by all the other powers of Europe. His grandſon, the late king of Pruſſia, gives no very favourable picture of the virtues or abilities of this prince; but he ſpeaks warmly in praiſe of his own father, Frederick William, who ſucceeded Frederick, the firſt king of Pruſſia, in the year 1713. This prince certainly had great talents and uncommon courage, but he too frequently exerted both at the expence of that magnanimity and humanity which ought ever to embelliſh the heart of a monarch. He amaſſed ſo much money during his reign, that at his death, which happened in 1740, he left behind him the enormous ſum of ſeven millions ſterling, a treaſure which afterwards enabled his ſon, the late king of Pruſſia, to purſue the moſt important plans; and which, joined to his ſagacity, courage, and great military talents, raiſed him to the utmoſt degree of conſequence and reſpectability in the opinion of all the reſt of the European powers.

The late monarch, Frederick II. was born in 1712, married in 1733, to Elizabeth Chriſtina, of Brunſwic Wolfenbuttle, born November 8, 1715; and began his reign January 21, 1740. Nothing remarkable of his early years hath been tranſmitted to us, except that he had an early taſte for literature, and the polite arts, and ſhewed a particular paſſion for French breeding and delicacy of manners, in oppoſition to the inelegant cuſtoms that had prevailed in his father's court. In particular, his father was fond of drinking to exceſs, a vice which the prince abominated: this, and other ſimilar circumſtances, determined him at length to leave his father in a ſecret manner, and, as is generally believed, to retire to the court of England, where he propoſed to live under the protection of his uncle, king George I. till either the death of his father, or ſome change of conduct, ſhould remove the difficulties of his return. Whatever the deſign was, it is certain that he had concerted it with a young officer of the gens d'armes, named Katte, and two others. The ſecret however, was diſcovered, and the prince, Katte, and one of the officers, were ſeized; but the other fortunately made his eſcape. A council of war, which aſſembled at Koppenick, was appointed to enquire into the conduct of theſe officers. One of them was caſhiered, and condemned to three years impriſonment; another, who had retired to foreign countries, was outlawed; but with regard to young Katte, the votes were equally divided; one half of his judges were for finding him guilty of death, and the other half were for acquitting him, ſo that they were obliged to leave the deciſion of it to the king. The affair being at this criſis, young Katte wrote a pathetic epiſtle to the king, imploring his clemency, but in vain; the king ordered him to be beheaded; which ſevere ſentence was put in execution; notwithſtanding ſeveral perſons of diſtinction intereſted themſelves in his behalf, and tried to ſave him. The prince, who had been ſecured, was ſoon afterwards ſet at liberty; but that he might feel the power of a king and father in its utmoſt rigour, he was, againſt his will, married to the princeſs Elizabeth Chriſtina, already mentioned. He did not, indeed, oppoſe the commands of his father, but ſubmiſſively married the princeſs, but without profeſſing either eſteem or affection for her; and conſidering the claim of filial duty as fully ſatisfied by the external ceremony, he abſtained, during the life of his father, from her bed. Thus ſecluded from public buſineſs, and in a ſtate of alienation from his wife, his whole time was ſpent in literary acquiſitions and uſeful ſpeculations. Hence he acquired that fund of learning and knowledge of mankind which have ſince rendered him ſo conſpicuous to the world. After the death of his father, he did an act of juſtice to his princeſs, by receiving her as his wife, and acknowledging her as his queen before the whole court.

We ſhall here annex a further account of the family of this great monarch; viz. Louiſa Amelia of Brunſwick Wolfenbuttle, born the twenty-ninth of January, 1722; married January the ſixth, 1742, to William Auguſtus, prince royal, who died June the twelfth, 1758. Their iſſue,

1. Frederick William, now king of Pruſſia, born September the twenty-fifth, 1744. Hath iſſue by his firſt conſort Elizabeth, princeſs of Brunſwick Wolfenbuttle, Charlotte, born May the ſeventh, 1767. He was married July the fourteenth, 1769, to his ſecond conſort, Frederica Louiſa, of Heſſe Darmſtadt. Hath iſſue by her,
   1. Frederick William, born Auguſt 3, 1770.
   2. Frederick Charles Louis, born Aug. 3, 1773.
   3. Frederica Louiſa Wilhelmina, born Nov. 18, 1774.
   4. Frederick Chriſtian Auguſtus, born May 1, 1780.

Frederica Sophia Wilhelmina was married to prince William, of Orange Naſſau, Stadtholder.

CHAP. IX.

THE NEW HISTORY AND DESCRIPTION OF THE EMPIRE OF

GERMANY.

SECT. I.

Deſcribing the Boundaries and Extent, Soil, Produce, Rivers, &c. in GERMANY; with a Geographical Survey of the Country in general, and a Topographical Account of the Circle of UPPER SAXONY; its Towns, Rivers, Trade, Manufactures, Inhabitants, Animals, &c.

GERMANY is bounded on the north by the German ocean, Denmark, and the Baltic; on the eaſt by Poland and Bohemia, on the ſouth by Switzerland and the Alps, which divide it from Italy; and on the weſt by France and the Low Countries. It is ſituated between forty-five and fifty-five degrees north latitude, and five and nineteen degrees eaſt longitude; is ſix hundred miles in length and five hundred in breadth.

In ſpeaking of the German empire, a judicious writer has, with great juſtice, obſerved that this country, for divers good reaſons, muſt challenge the ſpecial notice and ſtudy of the curious; it being the ſeat of a great people, and of many ſovereignties of different denominations, and under various forms of government; a country of large extent, and the ſcene of many and great actions; a country whoſe affairs and tranſactions are interwoven with thoſe of every nation in Europe, of which it may be termed both the head and center; a country whoſe princes are every day forming alliances of marriage, &c. which pave their way to the principal thrones of Europe, ſeveral of which, viz. thoſe of Great Britain, Poland, Sweden, and Pruſſia, we

A NEW & CORRECT MAP of the EMPIRE of GERMANY, from the Latest IMPROVEMENTS and Regulated by Astronomical OBSERVATIONS.

we ſee filled at this day by four of its princes; a country which, for the great work of the reformation begun there, the good ſenſe, conſiderable learning, and the many uſeful and ingenious inventions of the natives, highly deſerves of all her neighbours: to all this it may be added, that it is our original country; that from hence came our anceſtors, whoſe language, cuſtoms, laws, we in good meaſure ſtill retain, together with what conſtitutes the chief glory and happineſs of the Britiſh iſles, viz. their form of government. Upon theſe accounts no Engliſhman can call this country foreign, nor its natives foreigners to him. Indeed, moſt nations in Europe have been either peopled from hence, or ſubdued by its armies; as happened to this iſland by the Saxons; to Gaul, by the Franks; to Italy, Spain, and Africk, by the Goths and Vandals: to thoſe glorious people almoſt all Europe, and part of Aſia and Africa, owed their freedom from thoſe chains wherewith the Roman power had ſo long bound them: and wherever any of their colonies ſettled, they eſtabliſhed juſt and mild government on the ruins of tyranny and deſpotiſm.

That ſort of earth, called terra ſigillata, is found in Germany, but ſeldom any where elſe; ſome call it terra lemnia, becauſe it is alſo brought from the iſle of Lemnos: it is a ſort of hard earth, with white, yellow, and red veins, and ſaid to be an antidote againſt all ſorts of poiſons. There are good quarries of marble in Bavaria, Tirol, Liege, and other provinces; and for precious ſtones, as diamonds, agates, cryſtals, jaſpers, of ſeveral colours, fine alabaſter, ſeveral ſorts of pearls, Turquois ſtones, rubies, &c. this country ſurpaſſes moſt others in Europe, there being vaſt collections of them in the cabinets and rarity-chambers of the emperor, the electors of Bavaria, Brandenburg, Hanover, Saxony, and other princes, and of many private men, as well as thoſe which are the ornaments of churches and images. They are dug for the moſt part out of the mines, and frequently found in the rivers. A remarkable natural curioſity, peculiar to Germany, is the ſchiefferſtein, a blackiſh, glittering kind of ſtone or ſalt, which, melted and brayed, yields much copper, and ſome ſilver. In one part of Saxony theſe ſtones are dug up every where in the fields. They exhibit a lively repreſentation by fair copper ſtrokes of fiſhes of divers ſorts, frogs, and other animals, that abound in a neighbouring lake.

In this country, the ſoil is exceeding fruitful, eſpecially on the banks of the Rhine and the Danube, where alſo the air is very temperate; but in the northern part it is cold, and the ground leſs fruitful. The ſituation of this country is the reaſon that the weather is more conſtant, and the ſeaſons more regular, than in thoſe countries that border upon, or lie in the ocean. In thoſe provinces that lie next the ſea, and that abound with lakes and rivers, there is plenty of rain. In other parts, where the ſurface of the earth is drier, there are ſometimes conſiderable droughts. The north wind from the Baltick, and the bleak mountains of Sweden, bring froſts and ſnow: the eaſtern blaſts coming over a vaſt continent of three or four thouſand miles, from China and Japan, bring dry and unwholeſome weather: the ſouth, in the ſummer, brings refreſhing breezes from the Alps: but the ſouth-weſt wind, as with us, is both the moſt frequent and wholeſome that blows in Germany. In general, this country, and Poland, are ſo like to Britain, both in climate and ſoil, that no countries in Europe agree better with Engliſh conſtitutions.

Beſides great plenty of corn, cattle, ſheep, wool, cloth, horſes, fiſh, &c. the earth alſo affords mines of divers ſorts of metals and minerals, as iron, bitumen, nitre, ocre, copper, tin, lead, and even ſilver in ſome parts; allum, vitriol, quickſilver, ſalt, coal, &c. In general the ſurface is even, and though in ſome parts it is hilly, it is no where mountainous, except towards the ſouth and ſouth-weſt, where the Alps, and a few mountains in Alſace, ſerve as boundaries and bulwarks againſt France and Italy.

In their foreſts and waſtes are many things, both for the ſuſtenance of the poor, and the delight and luxury of the rich; they yield plenty of wood for fuel and building, and abound with great variety of wild-fowl, and all ſorts of good veniſon; they alſo feed vaſt numbers of hogs, and ſome of them, as the foreſt of Ardenne, afford good paſture for ſheep.

Fiſh abound in the rivers and lakes, in greater variety and perfection, than in any other country, perhaps, in Europe.

They have, in their orchards, great numbers of our common fruit-trees; and in the ſouthern provinces there is plenty of the more delicate ſort, as peaches, apricots, figs, olives, &c. in good perfection. They have rich wines, of which the Rheniſh and Moſelle, in particular, are exported in vaſt quantities to foreign nations; and not only equal, but preferable, to ſome of the wines in Italy. The very mountains of the Alps, on the German ſide, are in many places cultivated to the top, and the valleys abound with paſtures and vines. In ſhort, no country, perhaps, in the world abounds with ſo great variety of every thing conducing to the comfort of life as this; though others may exceed it in the goodneſs of ſome particular articles of product: nevertheleſs, even of theſe they have enough and good, of every ſort; and they might ſtill have them in greater perfection, were the inhabitants induſtrious; or rather, did the landed men give encouragement to huſbandry and induſtry; for want of which, it is obſerved, that the people neither underſtand, nor take care to manure the ſoil, or to improve the native treaſure of the country; and that to this general neglect it is owing, that the ſovereign princes in Germany are ſufferers, as well as the ſubjects; and the landlord becomes bankrupt with his tenant: for to this ignorance and diſcouragement of huſbandry, on the one hand, and to the exceſſive vanity and paſſion of their great men for foreign luxury and finery, on the other, it may chiefly be attributed, that Germany exports leſs, and imports more, than, perhaps, any country whatever.

The moſt conſiderable rivers in Germany are, the Danube, the Rhine, the Elbe, the Oder, and the Weſer; to theſe may be added, the Aller, the Mein, and the Inn.

The firſt of theſe rivers, namely the Danube, antiently called the Iſter, riſes in the Black Foreſt, in Suabia; runs through that country and Bavaria to Ratiſbon, and thence to Vienna. After dividing Hungary into two parts, it continues its courſe to Belgrade, in Servia, and then, proceeding to Turkey, falls into the Black Sea by ſeveral channels.

It is very broad, runs with a very rapid current, and hath three great cataracts, which are, 1. The Saw Ruſſel, or Swine's Snout, near Lintz: ſo called, from a pointed rock hanging over, which hath under it a dangerous whirlpool; it is ninety-two miles from Vienna. 2. Der Strudel, near Greinon, in Auſtria, where the falling of the water makes a horrid noiſe. And, 3. Der Wurbel, another very dangerous whirlpool, about a furlong from Der Strudel. The watermen of theſe parts have a method of paſſing them without much danger. As ſoon as this cataract is paſſed, a fellow comes on board from a chapel dedicated to St. Nicolas, on the bank of the river, with the ſaint's picture, and an alms-box for the paſſengers to throw in ſomething, as a thank-offering to that ſaint for their deliverance from the danger.

On this river are frequently ſeen market-boats, &c. of ten or fifteen tons, going every week from Ulm to Vienna, which, with the turnings and windings, is a courſe of about four hundred miles. It receives ten other conſiderable rivers before it comes to Belgrade: it enters Hungary thirty-five miles beyond Vienna; and, before it leaves Germany, runs about five hundred miles, and about one thouſand more through Hungary, and Turkey in Europe, before it falls into the Black Sea. Its whole courſe thither from its fountain, is about twenty-ſeven degrees; which, reckoning ſixty miles to a degree, is one thouſand ſix hundred and twenty miles, without including its turnings and windings, which muſt make it at leaſt one third more; ſo that it may well be affirmed to be longer than the Nile in Egypt, which in many particulars it reſembles. It has three heads; but which is the true one, the German geographers themſelves are not agreed. Cluverius, whoſe authority ſeems the beſt in matters of this nature, places it in the Black Foreſt, at the foot of a little hill, and ſays the fountain is walled in.

The waters of the Danube are always muddy and whitiſh; and the channel is kept almoſt as full in the ſummer, by the melted ſnow from the hills, as by the floods in the winter. Its waters have been found by repeated experiments to be medicinal, though not to the ſame degree as mineral ſprings; and, it is ſaid, that in thoſe places, where there are no natural baths, the people bathe with the water of this river warmed: theſe, with its other virtues, are aſcribed to its waſhing ſo many mines, and to its ſaline tinctures, which are ſo ſtrong, that a ſort of a ſalt has been actually made of the water, which has ſupplied the want of better; yet, after it has ſtood ſome hours to ſettle, it is freſh enough for drinking.

This celebrated river abounds with all thoſe fiſh that are

to be found either in our running or ſtanding waters, and they are generally much larger, but not ſo ſweet as ours. There are ſeveral fiſh in it not common elſewhere, which ſeem to be of the ſalt-water kind, and are ſuppoſed to come from the Euxine. Of theſe, the moſt remarkable is the hanſon, a griſly fiſh, ſomewhat like our ſturgeon, almoſt as big as a crocodile, ſome being eighteen or twenty feet long. Shoals of them come about the fiſhermen's boats at the ſound of a trumpet or horn. It is reckoned a dainty by the Auſtrians and Hungarians, and is only to be met with at the tables of noblemen.

The Rhine riſes in two ſprings in the Alps, which, falling into Swiſſerland, unite eight miles from the city of Coire: and ſoon after dilates itſelf into a large lake, called the Boden Sea, or Lake of Conſtance; whence, paſſing weſtward to Baſil, it turns up to the north, and runs between Swabia and Alſace into the Palatinate, receiving the Neckar at Manheim, and the Maine at Mentz; then it runs to Coblentz, where it receives the Moſelle: it afterwards waters Cologne, and paſſes on through the duchy of Cleve, receiving the Roer and the Lippe, and other ſmaller rivers by the way; and paſſes into the Netherlands at Schenchenſchant, five miles below Cleve, where it is very broad, and its courſe very ſwift; but the navigation of it is interrupted by nine cataracts, the moſt dangerous whereof are two in Swiſſerland, one near Scaffhuyſen, (where the whole river falls ſeventy-five feet) and the other near Lauffenburg. Here the watermen either hale their boats aſhore, and launch them on the other ſide, or elſe let them down by ropes. The direct courſe of this noble river is above four hundred miles, and, including turnings, ſix hundred.

The Elbe riſes out of the mountains near Hirchburgh, in Sileſia, upon the confines of Bohemia, through which it runs in eleven ſeveral ſprings; which, being united, paſs northward, between Miſnia and Luſatia, into Saxony; receiving by the way, the Warlitz, Orlitz, Moldau, and Ægra, paſſing by Magdeburg, Lawenburg, and Hamburg; and, a little below Gluckſtadt, divides into two branches, which fall into the German Ocean ſixty miles below Hamburgh. It is very large and deep at that city; ſo that ſhips of four or five hundred tons ride at anchor in it. The courſe of this river, which is very winding, is as long as that of the Rhine. It runs above five hundred miles through the north of Germany; as the Rhine does through the weſt, and the Danube through the middle and ſoutherly parts. The tide runs about ten miles above Hamburgh, and the river is navigable, by ſmall veſſels, a great way up into Germany; which very much promotes the trade of the country, eſpecially by its communication with the Spre, in the marquiſate of Brandenburg, and the Moldaw in Bohemia. As the courſe of it is very ſlow, it abounds with ſuch fiſh as are common in ſtanding waters.

The Oder has its ſource in Moravia; and, after a current of three hundred Engliſh miles through Sileſia and Brandenburg, falls into the Baltick Sea, betwixt Swediſh and Brandenburg Pomerania: it runs in a pretty ſtrait courſe through the north-eaſt part of Germany: it is navigable by ſmall veſſels a great way above Stetin: canals are cut betwixt this river and the Elbe, which very much promote the trade of the electorate of Brandenburg. Before it falls into the ſea, it forms ſeveral iſlands; and, juſt at its mouth, there is a great freſh-water lake, called Freſh Haff, from whence it falls into the ſea in three currents, which make as many ſafe harbours. This river, and the adjoioing lakes, are full of fiſh; the bare cuſtoms on the ſalmon and lampreys, ſome of which are of a vaſt bulk, amounting to a conſiderable ſum. Not far from the mouth of this river, in the Baltick, there is a herring fiſhery, which is a great rarity in this country, the Baltick having very few fiſh of any ſort.

The Weſer riſes in the mountains of Thuringen, runs through Heſſe and Weſtphalia, and empties itſelf into the ocean forty miles below Bremen, within twenty miles of the mouth of the Elbe: it runs above two hundred and fifty miles, and is ſo full of fiſh of ſeveral ſorts, that here are ſome in ſeaſon for every month.

The Aller runs through the country of Lunenburg, and falls into the Weſer below Verden.

The Mein riſes near the borders of Bohemia, paſſes through Franconia, the electorate of Mentz, the ſouth part of the principality of Naſſau, waſhes the walls of Frankfort, and other conſiderable cities, and falls into the Rhine at Mentz.

The Inn is a large river that riſes on the frontiers of Swiſſerland, runs through Tirol and Bavaria, and falls into the Danube at Paſſau. Its courſe being among the Alps, it cannot be very navigable; and, as it waſhes ſeveral ſalt-pits and minerals, there are but few fiſh in it.

There is a vaſt number of foreſts in every part of this country, which are well ſtocked with game of all ſizes and colours, and many of them of a vaſt growth; plenty of hares, rabbits, foxes, bears, wolves, boars, &c.

The emperor Maximilian, the grandfather and predeceſſor of the celebrated emperor Charles V. divided Germany into ten great circles, and this diviſion was confirmed in the diet of Nuremberg, in 1552; but the circle of Burgundy, or the provinces of the Low Countries, being now detached from the empire, we ſhall confine ourſelves to the nine circles which now actually ſubſiſt; and theſe are, in the north—1. Upper Saxony. 2. Lower Saxony; and 3. Weſtphalia. In the middle—4. Upper Rhine. 5. Lower Rhine. 6. Franconia. In the ſouth—7. Auſtria. 8. Bavaria. 9. Swabia.

Upper Saxony is bounded on the weſt, by thoſe of the Upper Rhine and Lower Saxony; on the eaſt by Pruſſia and part of Poland and Siberia; on the ſouth, by Bavaria, Bohemia, and Franconia; and on the north, by the Baltick. This circle is of a conſiderable extent, and contains the places immediately to be deſcribed.

The ſoil in the electorate of Saxony is rich and fertile, yielding corn, fruit, flax, tobacco, wild ſaffron, timber, coals, terra ſigillata, marble, ſerpentine ſtone, vitriol, ſalt, cinnamon, antimony, arſenic, ſilver, tin, iron, pulſe, hops, hemp, anniſeed, wood, wine, porcelane clay, fuller's-earth, free-ſtone, copper, lead, precious ſtones of various kinds, ſulphur, allum, amber, quickſilver, biſmuth, cobalt, &c. Here are alſo plenty of horſes, horned cattle, ſheep, deer, &c.

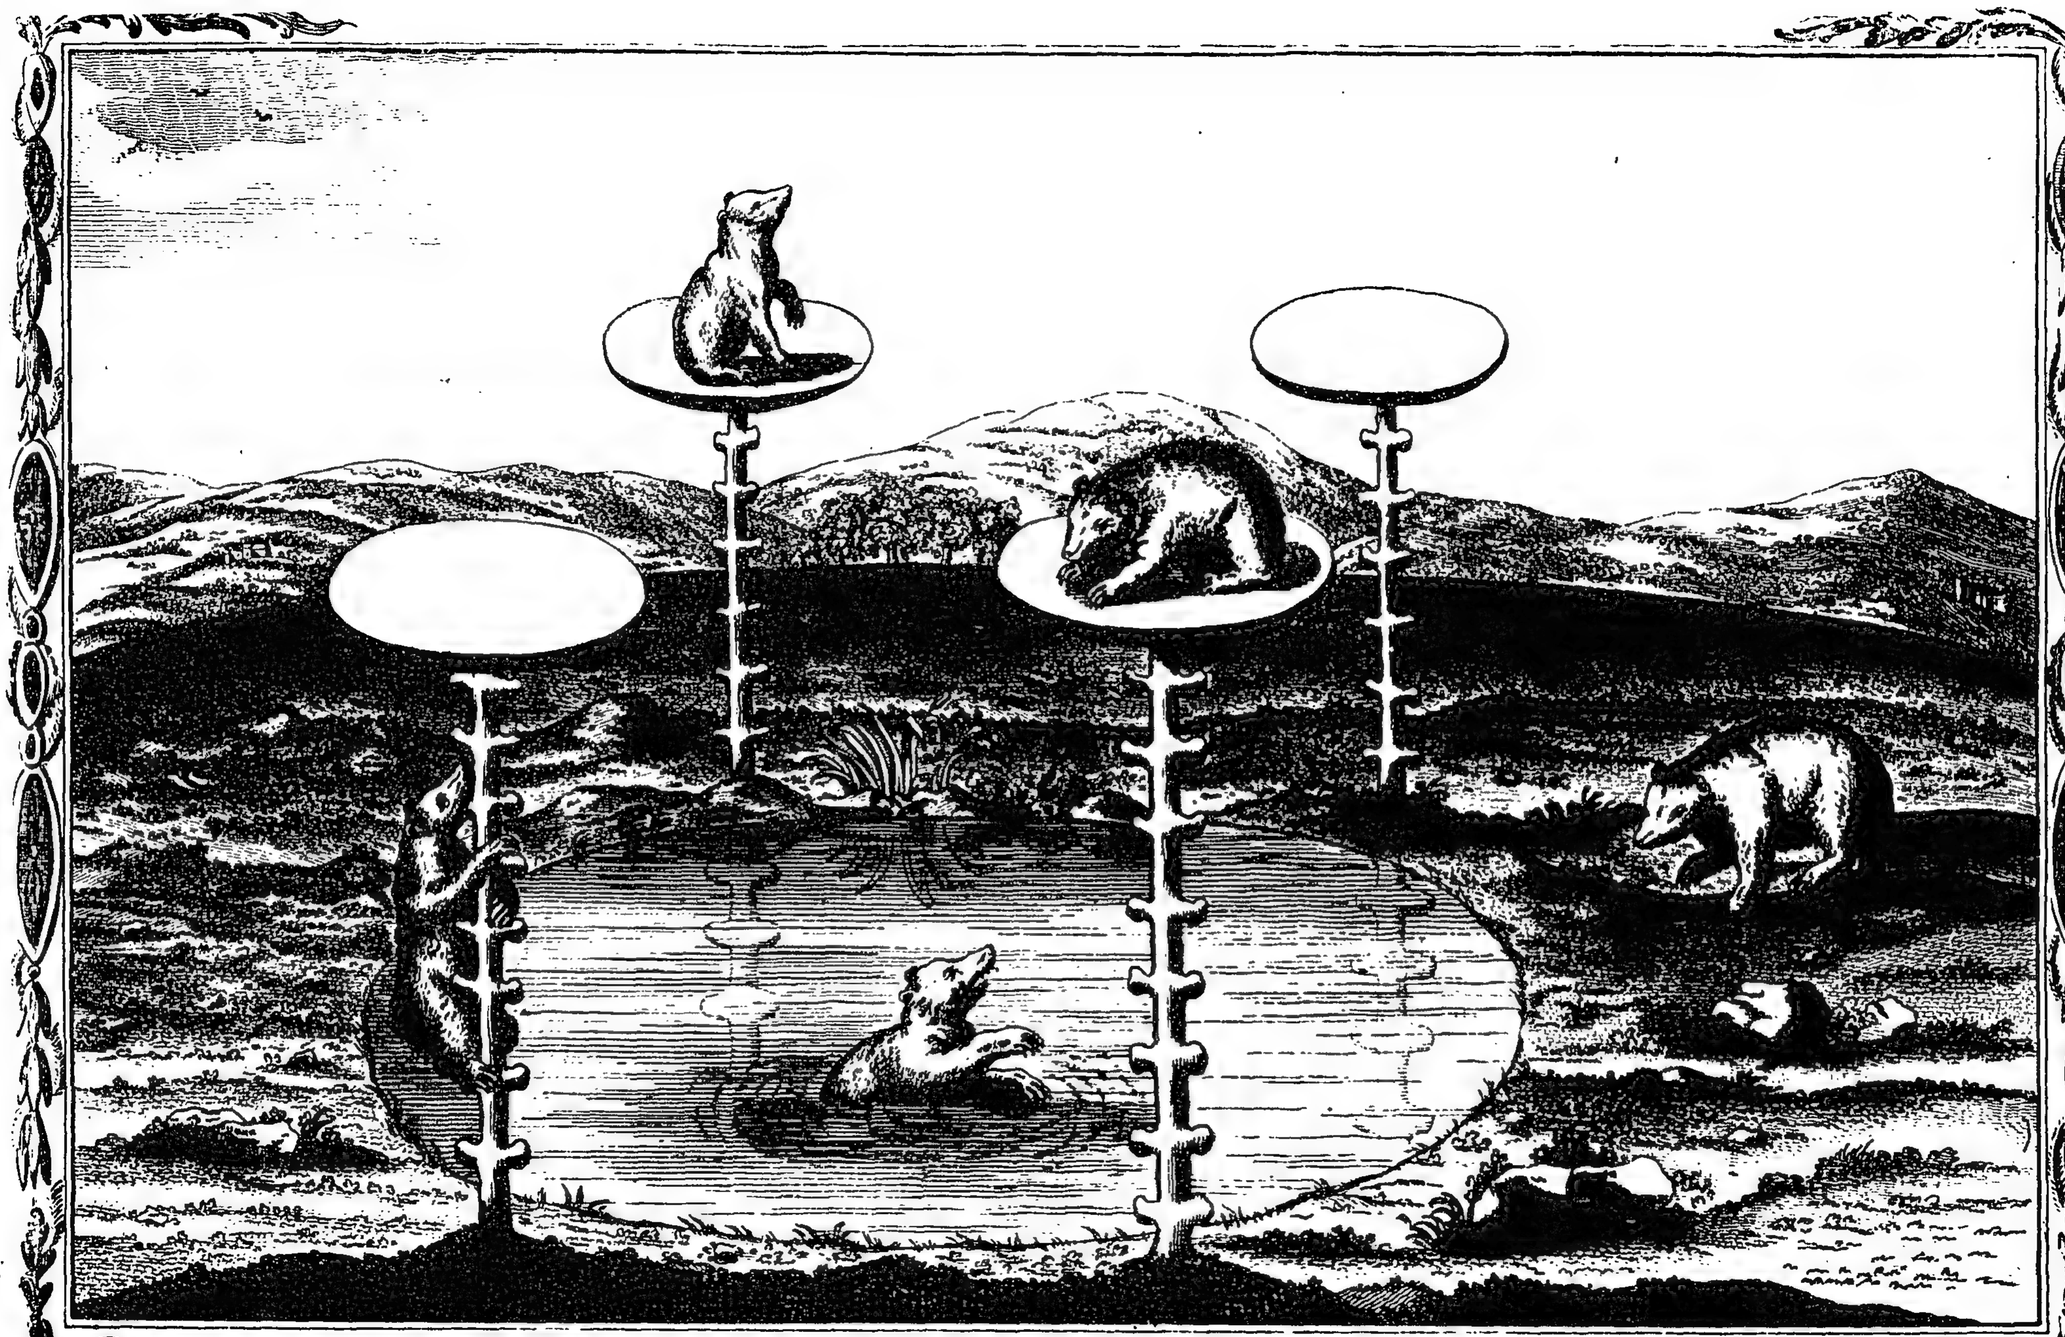
In this electorate, the principal rivers are, the Elbe, Mulde, Pleiſſe, Saoli, White-Elſter, and Schwarze Elſter. Theſe as well as the lakes and rivulets, contain great quantities of fiſh; and the White-Elſter yields abundance of beautiful pearls. The country is, in general, well cultivated and populous.

The provincial diets are held every ſix years, and the ſelection diets convened every two years. Lutheraniſm is the eſtabliſhed religion, though the different branches of the electoral family have uſually been Roman catholics, who, as well as the Calviniſts, are tolerated in moſt parts of the electorate. With regard to eccleſiaſtical matters, the country is divided into pariſhes, ſubordinate to ſpiritual inſpectors, which latter are all accountable to the eccleſiaſtical council and upper conſiſtory of Dreſden.

Learning flouriſhes here, commerce is encouraged, and manufactures are arrived at great perfection, particularly thoſe of porcelane, iron, braſs, ſteel, gold, ſilver, cotton, ſilk, wool, hats, caps, dyeing, tapeſtry, &c.

The elector of Saxony is the ſixth in dignity, and great marſhal of the empire: his revenues are very conſiderable; notwithſtanding which, the electorate is ſaid to be deeply in debt.

With reſpect to the extent of the electoral circle, or duchy of Saxony, it is very near forty miles in length, and almoſt as much in breadth: the ſoil is ſandy.



The capital, Wittenberg, ſtands on the eaſt ſide of the Elbe, fifty-five miles north-weſt from Dreſden. It is the ſeat of an aulic judicatory, a conſiſtory, a ſpiritual inſpection, and a general ſuperintendency. It is ſmall, but well fortified, and contains an univerſity and a Latin ſchool. The library appertaining to the univerſity is very valuable; but the Pruſſians, who took the place in 1756, greatly damaged the fortifications. Martin Luther firſt preached here againſt the pope's indulgencies, and was buried in the cathedral of All-Saints.

Here are alſo the following towns, viz. 1. Kemberg, a ſmall town. 2. Zahna, which, though ſmall, has a ſeat and voice in the diets. 3. Schmiedeberg, ſurrounded by mountains. 4. Remhards, where is a curious laboratory for making mechanical and optical machines; in particular, the camera obſcura. 5. Barby, on the Elbe. 6. Gomberg. 7. Annaburg, a borough town, on a little iſland. 8. Herberg, which has a woollen and ſalt-petre manufactory. 9. Lichtenberg, containing an electorate palace, with pleaſure-gardens. 10. Grafenhaynchen. 11. Niemeck. 12. Schweidnitz. 13. Lieberwerden. 14. Ubigau. 15. Slieben. 16. Pretch. 17. Belziz. 18. Seyda. 19. Jeſſen. 20. Wahrenbruch. 21. Schonewalde. 22. Protin. 23. Bitterfield. Moſt of theſe are inconſiderable towns, yet have a ſeat and voice in the diets. 24. Hohenbuckau. 25. Baruth, in the Gaila. 26. Sommowevalde. 27. Brehna, a little town, which has a ſeat and voice in the diets.

Thuringia

Perspective View *of* DRESDEN, *the Capital* City *of* Saxony

White sculp.

View of the Elector of Saxony's BEAR-GARDEN, *at Dresden in Germany*

Thuringia circle abounds in corn, cattle, ſheep, horſes, &c. It contains the following places, viz. 1. Tenſtad, which gives name to a bailiwick. 2. Pforte, where is a free-ſchool for one hundred and fifty ſcholars. 3. Frawenprieſnitz. 4. Treffurt, near the Werra. 5. Weiſenfels, a handſome town on the Saale: above the town is a white rock, at the ſummit of which is a fine caſtle, called Auguſtuſburg, is erected. This town likewiſe contains manufactures of ſilk and velvet, a Latin ſchool, and a gymnaſium, or ſchool of exerciſe. 6. Roſbach, a village celebrated for the defeat of a formidable army of French and Auſtrians, in the year 1757, by the preſent king of Pruſſia, in its neighbourhood.

Meiſſen margraviate, or circle, is a plentiful country, and its fields produce great quantities of grain; the foreſts furniſh plenty of veniſon; the rivers are full of fiſh; and the hills abound with minerals. It contains likewiſe many conſiderable vineyards, but the wine is not generally admired: upon the whole, however, it is allowed to be one of the moſt fruitful and populous diſtricts in Germany; and its inhabitants have univerſally the character of being the moſt lively and poliſhed people in the whole empire.

The city of Dreſden, which is the capital, not only of Meiſſen, but of all Saxony, is ſituated in fifty-one degrees north latitude, and thirteen degrees thirty ſix minutes eaſt longitude. It is ſixty-ſeven miles north of Prague, and two hundred and ten north-weſt of Vienna. The name is derived from three lakes in the neighbourhood, which are called, in the country-language, Dreyen-ſeen. This is one of the fineſt cities in Germany, with reſpect to the pleaſantneſs of its ſituation, the beauty of its ſtructure, and the number and magnificence of its embelliſhments. It was originally fortified by Charlemagne, and ſince his time the works have been ſo greatly augmented and improved by its dukes and electors, that it is now a place of great ſtrength and importance. Many of its parts are defended by a double ditch, and the baſtions have ſtone facings. The houſes, which are built of free ſtone, are high and ſubſtantial; the ſtreets are ſtrait, ſpacious, elegantly paved, and well lighted: the cathedral church is a noble ſtructure: and ſeveral large ſquares give the whole city an uncommon air of magnificence. The ſtone bridge over the Elbe, which divides the city into Old and New Town, and conſiſts of ſeventeen arches, is one of the nobleſt ſtructures in the univerſe. At the entrance of New Dreſden is a noble building, called the palace of the Indies; it conſiſts of three ſtories, all the apartments of which are filled with the moſt curious and coſtly Japan and China wares, brought from thoſe countries.

The houſhold goods are all Indian, and there is one ſet of furniture ſcarce to be paralleled, which conſiſts of feathers of various colours, all natural, but inlaid with ſo much art, that it might be taken for a fine flowered ſattin. A very pleaſant garden belongs to this magnificent palace, which runs down to the Elbe, and is adorned with ſtatues of white marble, which were purchaſed for the late elector, at Rome, of the cardinals Annibal and Alexander Albani, nephews to Pope Clement XI. beſides two noble obeliſks, and two very fine fountains. Near the palace of the Indies ſtands a magnificent ſtructure, built by the ſtates of Saxony, for maintaining two companies of cadets, all gentlemen of the country, who are here inſtructed in all the ſciences fit for perſons of quality. In the ſame ſtreet there is an amphitheatre, or area, for the battles of wild beaſts, ſuch as lions, tigers, bears, and, in ſhort, all the fierceſt animals from the four quarters of the world; of which great numbers are kept for the purpoſe. Here is a hunting-houſe, where bears are kept, with fountains and ponds in which they waſh, and ragged poſts round them, by which they climb up to ſcaffolds on the top, where they dry themſelves; alſo a place called the horn gallery, which has ſeveral apartments, well painted with all ſorts of hunting of wild beaſts and fowls. In the old town there is a large caſtle, and ſome of the fortifications ſtill to be ſeen, which were made by Charlemagne. In this quarter ſtands alſo that called the prince's palace, which was formerly a very fine building, but all of it has been conſumed by fire, except one part, containing very fine apartments, nobly furniſhed, and accommodated by the elector to the modern taſte; but they belong only to the elector and electreſs; for the electoral prince and princeſs live in a ſeparate palace, which communicates with it by galleries, where the rooms are ſomewhat too ſmall, but they are perfectly well diſpoſed, adorned with fine paintings and rich furniture.

The palace, or caſtle of the elector, joins to the bridge, at the entrance of the new town: it is an antient ſtructure; and makes ſo mean an appearance, that it is ſaid the late king, if he had lived, propoſed to pull it down, and had ſet apart eight millions of crowns for the expence of building a new one. The inſide of it, however, far ſurpaſſes the outſide; the apartments being noble, and ſplendidly furniſhed. There is a great gallery, which contains antique buſts, veſſels, pictures, and ſeveral other curioſities; a ſpacious hall, adorned with fine draughts of cities; pictures of giants, and the habits of many nations, and divers large chambers full of a ſurpriſing collection of rarities, and the greateſt curioſities, both of art and nature, eſpecially pictures, of a very great value, and wonderful performances in clock-work. In this palace are two chapels, one for the Roman catholicks, the other for the Lutherans. The firſt was heretofore a theatre for the operas, but the late elector turned it into a chapel, on account of the marriage of his only ſon (the preſent elector) with the eldeſt daughter of the emperor Joſeph. The ſecond, which was always the chapel of the proteſtant electors of Saxony, he left for the uſe of his wife, who conſtantly adhered to that religion. The treaſure of it is extremely rich, conſiſting of veſſels, chaſubles, and other moveables, of gold and ſilver, heretofore conſecrated and given to this chapel by the electors. In this palace is alſo the regal treaſury, commonly called the grune gewolbe, or the green vault, compoſed of three arched rooms, which contain prodigious riches, and ſhines all over with gold and precious ſtones: ſo that it is one of the fineſt places in the world. Here are ſeveral ſets of brilliant diamonds, rubies, emeralds, pearls, ſapphires, and other precious ſtones: every ſet is complete, and conſiſts of buttons, buckles, loops for hats, &c. ſwords, hangers, ſword-belts, canes, muffs, ſnuff-boxes, watches, tweezer-caſes, pocket-books; in ſhort all the jewels that can poſſibly be imagined, even to the furniture of a horſe; and they are ranged in caſes of cryſtal, with admirable nicety.

There is a very fine garden, near this palace, called the Zwinger-Garten, which is reckoned the Thuilleries of Dreſden, though not large enough to deſerve the name. It is ſemicircled, in the ſhape of a horſe-ſhoe, with magnificent buildings of free-ſtone, that form arches, over which there runs an open gallery, that unites three large pavilions, and has baluſtrades adorned with ſtatues. In the middlemoſt there is a fine grotto, and here are green-houſes for orange-trees, &c. The upper ſtory contains a very beautiful ſaloon, faced with marble, with gilded ornaments: the ceiling is magnificent, the windows are of large plate glaſs, and the reſt of the building which joins to this garden is of the ſame magnificence, but ſeems a little too much incumbered with carved work, which is more in the Gothic taſte than the modern.

The elector's ſtables and riding-houſe are next to the garden. In them are a great number of exceeding fine horſes, and ſome of all ſorts of the rareſt breeds, which have iron racks, and copper mangers. There is a curious fountain and pond near them, ſurrounded with baluſters, for the horſes to water and waſh in; and before the ſtables there is a long arched walk, painted with curious horſes, over which there is a gallery with the pictures of all the dukes and electors of Saxony in their robes and military habits; particularly, the two generals Hengiſt and Horſa, under whom the Saxons invaded England, are depicted here, after the romantic manner they are deſcribed by our monkiſh hiſtorians. In the chambers over the ſtables are kept the rich harneſſes, and other ſumptuous equipages, many of which are of the Turkiſh mode, plated with maſſy ſilver, and adorned with precious ſtones. Here are likewiſe a great many curioſities; particularly, a gun which diſcharges forty times ſucceſſively, without intermiſſion; a ſilver equeſtrian ſtatute, which, moved by a ſpring, carries a cup of wine, or other drinking veſſel.

Here is an arſenal, with great quantities of all ſorts of arms, ſeveral ſuits of armour, and coats of mail, in ſilver and ſteel, that have been uſed by the electors in their wars, and repreſentations of Turkiſh and Hungarian parties of horſe and foot, with their commanders at their head, ſo contrived, as to turn round. There are five or ſix houſes here, called hotels, which in Italy would paſs for palaces; but that called the Hotel de Hoym, from its preſent owner, who is the fourth in ſix years time, is reckoned the moſt conſiderable of them all. The count bought it of the veltmarſhal Fleming's widow (one of the greateſt matches in Europe), on her marriage to a Polander, who took her into Poland with him.

This city has very extenſive ſuburbs, but they contain no building of conſequence, except the palace in the elector's great garden, built by his grandmother; and that called

called the Turkiſh Palace, from being finiſhed entirely after the Turkiſh manner, where a former elector gave an entertainment to his daughter-in-law, on her firſt arrival here from Vienna.

The elector had other ſeats, which, however, he ſeldom viſited; as Pilnitz, Moritzbourg, Auguſtuſburg which lies in the circle of the mountains), and Anneburg (which we deſcribed juſt now): and the preſent elector has built a very handſome ſeat at Warmſtorf, or Hubertſbourg, five miles from Leipſick, where he hunts in ſpring and autumn: but ſome think thoſe of Pilnitz and Moritzbourg are the fineſt.

About three miles from the city there is a bed or quarry of ſtones, which, according to the deſcription, ſomewhat reſemble the Giants Cauſeway, which we ſhall give an account of, in Ireland: they riſe about ſeventeen ells above ground, repreſent columns with ſeveral corners, and are ſo joined, as if done by art. They have from four to ſeven columns apiece, are ſmooth on the outſide, look as if they were mixed with iron, are hard as adamant, and very weighty.

The inhabitants of Dreſden vie with thoſe of Halle for ſpeaking the beſt High Dutch. It has been obſerved of them in the general, there are none more devoted to pleaſures; ſuch as plays, maſquerades, balls, feaſts, running at the ring, races on ſleds, tournaments, hunting matches, &c. of which they have abundance, except when the elector is in Poland; and then foreigners complain they have but a melancholy time, for want of company, as well as the uſual entertainments; becauſe nobody keeps open houſe, and they are all ſelect ſocieties, to which it is difficult to gain admittance: but, when the elector is here, the people partake in moſt of the pleaſures of his court, the generality of the entertainments which he gives being public; ſo that plays and maſquerades are free for all people of faſhion, without any thing to pay. The citizens wives are ſaid to be more ſociable here than in any town in Germany, and fondly give themſelves the airs of quality, eſpecially in the article of dreſs, a luxury which has infected the wives of the mechanics, and even of the livery-gentry, to ſuch a degree, that were a ſtranger to come hither on Sunday, or a holiday, when every body is dreſſed, he would think that money was extremely plentiful.

Next to Dreſden, the following are the moſt remarkable places: 1. Lommatſch, on the Jahne, which has a ſeat and voice in the diets. 2. Rieſſa, on the Elbe. 3. Pilnitz, on the ſame river. 4. Wilſobruff, belonging to Schonbrug. 5. Kotſkenbroda, celebrated for the vineyards in its neighbourhood. 6. Keſſeldorf. 7. Dipoldiſwalda. 8. Rabenau. 9. Dohna. 10. Gottleulic. 11. Berggieſzhubel, each of which has a voice and ſeat in the diets. 12. Liebſtadt. 13. New Gayſznig. 14. Hohenſtein. 15. Neuſtadt.

16. The town of Meiſſen, from whence the marquiſate is denominated, was built in 928. It was formerly its capital, but is now inconſiderable: it ſtands twelve miles north-weſt of Dreſden, and forty-ſix ſouth of Wittenberg, on a river of its own name, on the left ſide of the Elbe. Here is an admirable porcelane manufactury, which produces ware far ſuperior to that brought from China, and is ſold much dearer. It lies partly in a valley, and partly on the ſide of a hill, on the top of which are the palace, a venerable old pile, in the form of a caſtle; and the cathedral, in which are the tombs of many princes and noblemen.

17. 18. The towns of Wehlau and Sebnitz have each a ſeat and voice in the diets. 19. Altſtadt. 20. Scandau, on the Elbe. 21. Beſchoſswerda, on the Weſenitz. 22. Stolpen, on the ſame river. 23. Hayn, or Haya, on the river Reder, ten miles north-eaſt of Meiſſen.

24. The town of Torgaw has a bridge with ſtone pillars, on the Elbe, twenty miles ſouth of Wittenburg, and forty north-weſt of Dreſden. The caſtle, which is adorned with a beautiful church, has ſeveral very large and noble apartments: there is one dining room that will hold ſeventy-eight tables, another twenty-nine, and a fine large hall, adorned with the pictures of ſeveral emperors, kings, electors, and other princes; and in another room, there are portraits of their fools, or jeſters: here is alſo a chamber lined throughout with looking-glaſs. In a gallery of this caſtle is to be ſeen the genealogy of the Saxon family, with the pictures, arms, and abſtract of the lives of its princes.

25. The town of Mulberg, on the Elbe, ſituated about nine miles ſouth of Torgaw, and twenty-eight north-weſt of Dreſden, is the capital of a bailiwick, near the coaſt of Rederwack. Here is an antient caſtle, which was a few years ago repaired; this was yielded to the elector by the biſhop of Meiſſen, at the ſame time with the caſtle of Dreſkaw, a little below it. 26. Belgern. 27. Schilda. 28. Dommitzſh. 28. Oſechatz, are all ſmall towns, with each a ſeat and a voice in the diets. 30. Dahlen, belonging to the Bunau family. 31. 32. Strehla and Finſterwalda, which are Bohemian fiefs. 33. Frederickſtal. 34. Seinſtenburg. 25. Zeithayn. 36. Krahau. 37. Muckenburg. 38. Ortrand. 39. Eiſenberg. 40. Lauſznitz. 31. Monitzburg. 42. Neuſalſa. 43. Radeburg, on the Roder, gives name to a diſtrict. 44. Pirna, on the Elbe, gives name to a diſtrict, and has a ſeat and voice in the diets.

The town of Konigſtein, on the Elbe, has a ſeat and voice in the diets, a fuſtian manufactury, and is defended by an impregnable fortreſs, on the top of a rock. On the ſide towards Dreſden there are ſtrong works, and a triple battery of cannon. The caſtle can neither be undermined, nor raked with ſhot from the adjacent eminences; and, as it contains a well, magazines of all kinds of proviſions, paſture and arable land, gardens, &c. it would be impoſſible to reduce it by blockade. It commands the navigation of the Elbe, is the repoſitory of the archieves, and the place of retreat of the electoral family in times of danger.

The city of Leipſick, or Leipzig, (in Latin Lipſia) gives name to the circle whereof it is the capital. It ſtands in a charming fruitful plain (between the rivers Saale and Mulda), abounding with all neceſſaries and pleaſures; particularly, large and rich meadows, mowed conſtantly twice, and ſometimes thrice a year, beſides pleaſant woods, and many fine orchards, with all ſorts of fruits, there being neither orchards nor gardens within the walls of the city. It is ſituate at the conflux of three other leſſer rivers, the Elſter, Pleiſſa, and Pardo, or Barde, twenty-eight miles north-weſt of Meiſſen, forty ſouth of Wirtemberg, forty-one weſt of Dreſden, ſixty-four ſouth of Magdeburg, and two hundred and thirty-eight north-weſt of Vienna. It is ſuppoſed to have been built by the Vandals about anno 700, and to have derived its name from Lipzk, a lime tree, with which the country once abounded; and hence ſome Latin authors call it Philurea, from the Greek φίλυρα a lime tree. It was in this city that in 1520 Luther diſputed with Eckius againſt the pope's ſupremacy, and it ſoon after embraced the reformed religion.

As it was the misfortune of this part of the country to become the chief theatre of the long German war, this city was in two years taken five ſeveral times, and at laſt by the Imperialiſts, in 1633, but reſtored by the treaty of Prague, in 1635. It is noted for three ſignal victories obtained near it by the Swedes over the Imperialiſts, viz. in 1631, when Guſtavus defeated Tilly; in 1641, and in 1642, when the arch-duke Leopold, and general Picolomini, were defeated by the Swediſh admiral Torſtenſon, who afterwards obliged the town to ſurrender. It is famous alſo for an univerſity, which was founded in 1409, by Frederick and William, dukes of Saxony, out of a detachment of the ſcholars from Prague, of whom there came hither not leſs than two thouſand in one day, by reaſon of the quarrel between the Huſſites and papiſts.

The univerſity has twenty-four profeſſors in four colleges, wherein the nations are diſtinguiſhed by ſeveral claſſes, bearing the names of Miſnia, Bavaria, Saxony, and Poland. It has bred many learned men, and been honoured with the dukes of Sleſwick and Holſtein, Stetin and Pomerania, the duke of Mecklenburg, and other ſovereign princes, for its rectors. It is not ſubject to the elector, but to the town. Their library has abundance of MSS. that belonged to the monaſteries demoliſhed at the time of the reformation, of which the moſt valuable, becauſe it was a rarity, perhaps, not to be met with elſewhere, is, Tretzer's Greek Commentary on Homer's Iliads, in a fair character. A monthly book is publiſhed here, being a ſort of Journal des Scavans, or Memoirs of Literature; containing an account of remarkable pieces in all parts of learning, intituled, Acta Eruditorum Lipſiæ; which ſhew, that phyſick, anatomy, and the mathematicks, are very much cultivated here; though divinity, eſpecially the controverſy with the Socinians, Papiſts, Jews, &c. is their chief ſtudy. It is ſaid, this univerſity has lately been eclipſed, in ſome degree, by the neighbourhood of Halle, it has always ſupported itſelf with credit.

Leipſick is the ſeat of a high court of judicature, where the elector himſelf is obliged to appear, when ſummoned. It was firſt opened about the year 1520, when Auguſtus,

the then elector, eſtabliſhed the college, to conſiſt of a preſident, and ſix aſſeſſors; of whom, three are civilians, and the other three of the city council, with a regiſtring clerk. Its method of proceeding is deſcribed in the "Chronicon Lipſienſe," as well as by Zobelius, in his "Differentia Juris Civilis & Saxonici."

This city is called, by ſome, the jewel of the electorate of Saxony, not only for its fine ſtructures, but for the conſiderable revenue it yields to its ſovereign. The town itſelf is not great, but it is populous, with regular ſtreets, and ſtately houſes, generally five or ſix ſtories, but about the market-place eight or nine ſtories high, and ſubſtantially built of free-ſtone, adorned with great fine windows, but a little too much charged with ſculpture, and not duly proportioned; and they are high-rented. The town-houſe is a large noble ſtructure. St. Nicholas's church is very fine, and the beſt adorned within of any Lutheran church in Germany. The ground-floors of moſt of the houſes are warehouſes, where the merchants ſtore their goods for the fairs at New-Year's-tide, Eaſter, and Michaelmas, to which there is a vaſt concourſe of merchants from the moſt noted places in Europe, who are exempted from tolls. So many rich curioſities are then brought hither, and there is ſo great a vent for them, that at the fair of 1737, the goods entered at the cuſtom-houſe were computed to be worth near five millions. The king and queen of Poland, who were there, together with the dukes of Saxe-Gotha, Weiſſenfels, Merſberg, &c. laid out vaſt ſums. The late kings of Poland and Pruſſia uſed often to be at theſe fairs; and we are told that, at the New-Year's fair in 1709, were counted no leſs then forty-four princes or princeſſes of ſovereign families. The German tongue is ſpoken here with ſo much purity, that the citizens boaſt they herein excel thoſe of Halle. The town is fortified with ramparts and a ditch, but they are not of ſo much importance as its ſtrong caſtle of Pleiſſenburg, or the river Pleſſe; which, however, when Charles XII. of Sweden marched into Saxony, in 1706, the late elector did not think tenable, and ordered the governor to ſurrender it, without hazarding a ſiege. There is commonly a good garriſon in it, and the ſuburbs are very large.

The city of Leipſick has four magnificent free-ſtone gates, at each of which is ſet up a mile-poſt, after the manner of the Romans; which kind of poſts are at the gates of all the towns, and even of the villages of the electorate; and from hence they count the leagues, which are divided at the end of every quarter of a mile by other poſts, not ſo big, upon all the great roads, ſhewing the diſtances. The gardeners of Leipſick are reckoned the beſt in Germany, and value themſelves upon forcing the products of nature more early than others. Their aſparagus is delicious, and extraordinary large. This place is particularly noted for its larks, which are ſent all over Germany, Poland, Holland, and Denmark; inſomuch that the very cuſtom-duty paid here for larks is ſaid to amount to twelve thouſand crowns a year, which is almoſt incredible; if it be alſo true, as is aſſerted, that ſixty of thoſe birds pay but a groſh, or about two pence halfpenny of our money, for the duty: but certain it is, that the fields hereabouts are covered with larks from Michaelmas to Martinmas. In the woods alſo are abundance of nightingales, of which great numbers are taken and kept in cages. There are tolerable good ordinaries here, and at Dreſden; but the proviſion at the towns and villages in the road betwixt thoſe cities, though ſo much frequented, is ill-dreſſed, and the houſes naſty. There is a remarkable wood in this neighbourhood, called Roſendahl, which, in the language of the country, ſignifies the Vale of Roſes; it conſiſts of fourteen walks, all agreeably diverſified, with a great meadow in the middle, and each walk commands a noble proſpect.

The other places in this circle are, 1. Tacho. 2. Rotha. 3. Liebertwolkwitz. 4. Old Ranſtadt. 5. Delitzſh. 6. Landſburg. 7. Zorbig. 8. Duben. 9. Eilenberg. 10. Nawenhof, on the Borde. 11. Brand. 12, 13. Trebſen and Nerchau, both on the Malde. 14. Grimmia, on the Mulder. 15. Mutſchen. 16. Wermſdorf. 17. Colmen. 18. Reiſznig. 19. Dobeln. 20. Lochlitz, has a ſeat and voice in the diets; ſeveral manufactories, a ſtrong caſtle, and a ſuperintendency.

Erzgeburg circle receives its name from its mountains, which are rich in mineral ores. The following are the moſt conſiderable places; viz.

1. Freyberg, which is the principal mine town, on a branch of the Mulde, ſituated thirteen miles to the ſouth-weſt of Dreſden, contains about ſixty thouſand inhabitants, and is ſtrongly fortified. Near the principal church is a chapel, in which many of the electors have been buried. It is the ſeat of ſeveral mine-offices, a court of juſtice, ſuperintendency, &c. In the neighbourhood are ſeveral valuable mines of ſilver, copper, tin, lead, ſulphur, vitriol, &c. Here are likewiſe a public library, a gymnaſium, a cannon and bell-foundery, a lace and thread manufactory, and a brewery.

The other places of note are, 2. Brand, inhabited by miners. 3. Grimthall, where the ſilver is ſeparated from the copper. 4. Schellenberg, which has a ſeat and voice in the diets. 5, 6, 7. Haynichen, Sayda, and Seiſſen, belonging to the lords of Schoneberg. 8. Schopa. 9. Oedern, a manufacturing town, with a ſeat and voice at the diets. 10. Chemnitz, a large town, with a ſuperintendency. 11. Fromkenberg, which has a ſeat and voice in the diets, and gives name to a diſtrict. 12. Mulde, which gives name to a bailiwick. 13. Granaten. 14. Travenſtein. 15. Rechenberg. 16. Altenberg, which has a ſeat and voice in the diets, and gives name to a bailiwick, in which are the ſmall towns of Old Geyſzing, Glaſzhutte, and St. Georgenfeld, an electoral foreſt and hunting-ſeat, with ſeveral tin, ſilver, and iron-mines, mills, ſmelting-houſes, &c.

17. The ſmall town of Zoblitz, in the diſtrict of Lauterſtein, has a ſeat and voice in the diets, an iron-foundery in its vicinity, and is celebrated for the great quantities of aſbeſtos, of divers colours, granites, &c. found in its neighbourhood, which likewiſe abounds with the ſerpent-ſtone, which is of various colours; but the red, being the moſt valuable, is claimed by the electors, though all the ſeveral kinds are worked, by the inhabitants, into various trinkets and utenſils. 18. Wolkenſtein, on the Zſchopa, gives name to a bailiwick, which contains the little towns of Marienberg, Goſtadt, Geyer, Thumb, Annaberg, Bucholz, Irberſdorf, Lengefeld, and Drebach; the inhabitants of all which are either employed in the lace manufactory, or in mining, as this bailiwick produces great quantities of iron, tin, ſilver, allum, cobalt, vitriol, ſulphur, and arſenic. 19. Stolberg has a cloth manufactory. 20. Grunhayn gives name to a bailiwick. 21, 22. Zwonitz and Schlottau are mining towns. 23. Schwargenberg, inhabited by miners, &c. gives name to a bailiwick. 24. Schuberg, on the Mulde, has a conſiderable trade in gold and ſilver lace, thread, ſilk, ſmalt, &c. 25. Neuſtadt, a ſmall mining town, has a ſeat and voice in the diets: ſome of the mines not only produce metals, but various kinds of jewels. 26. Joharm Georgenſtadt, famous for the mines in its neighbourhood, a lace manufactory, and for the great quantity of emery made by its inhabitants. 27. Wieſonberg, on the Mulde. 28. Korchberg. 29. Zſchorlaw. 30. Werdaw. 31. Criminitzſchau on the Pleſſe. 32. Zwickau, on the Mulde, which gives name to a bailiwick and ſuperintendency. It carries on a great trade in wool, cards, deals, coals, marble, cloth, leather, iron, ſandſtone, corn, and other commodities.

In the circle of Vogtland are the following places; viz. 1. Oelſnitz, on the Elſter, remarkable for a pearl-fiſhery, and giving name to a ſuperintendency. 2. Vogtſberg, which gives name to a bailiwick. 3. Adorf, on the Elſter, which has a ſeat and voice in the diets. 4. Mark-Neukerchen, celebrated for being inhabited by ſome of the beſt inſtrument-makers in Germany. 5. Schoneck. 6. Elſterberg, on the Ulſter. 7. Plauen, a pleaſant place, on the ſame river, ſixty-eight miles from Dreſden, is the capital of this circle, the ſeat of a ſuperintendency, and defended by an old caſtle. 8. Netzſchau. 9. Mylau. 10. Keichenback.

In the circle of Neuſtadt are the following towns and places; viz. 1. Neuſtadt, on the Oſta; it has a caſtle, mine-office, and ſeat of ſuperintendency. 2. Ranis. 3. Berga, on the Elſter. 4. Werdn. 5. Muchenberſdorf, 6. Lubenguma. 7, 8, 9. Triptis, Auma, and Ziegewrucks, each of which has a ſeat and voice in the diets of the empire.

Merſburg circle, or foundation, is ſituated betwixt Saxe-Hall and Saxe-Naumberg. It was formerly a biſhoprick (ſuffragan to Magdeburg), but ſecularized by the treaty of Paſſaw in favour of the houſe of Saxony. One of the dukes, who was adminiſtrator of it, having introduced Lutheraniſm here about 1562, it has been ſince applied as a portion for one of the younger ſons, to whom it gives the title of duke, who is enabled to keep a very genteel court, with the revenues of other bailiwicks, as well as of this once noble biſhoprick.

The city of Merſburg, where the duke reſides, is in a charming ſituation, amidſt gardens and meadows, on the banks of the Sala, or Saal, ſixteen miles north of Naum-

burg, and ten south-east of Halle, and seventeen north-west of Leipsick. The emperor Otho I. who founded its see in 952, made it also an imperial city. It is a pretty large populous place, and thought to derive its name from Mars, whom the pagan Saxons worshipped here by the name of Irmanseul. The great church, which was the cathedral founded by the emperor Henry II. a gothick building, is worth seeing, were it only for the magnificent tomb of the emperor Rodolph, who died, after the loss of a hand, in battle with his competitor Henry IV. and near it is a library of very antient MSS. It may be observed here, once for all, that part of the revenues of this, and the other bishopricks, secularized in favour of the Saxon and Brandenburg families, is appropriated towards the maintenance of a number of canons belonging to each cathedral, and the rest to the administrators of the respective princes.

The city is well built, though not in the modern taste. Its walls and its seven towers are of free-stone. The wars in the last century did great damage to this place, which was successively the prey of the contending armies. Count Tilly took it in 1631, as the Swedes did afterwards, and the Imperialists and Saxons all mattered it in their turn. It had formerly a very flourishing trade, and a very famous yearly fair from 1047 to the year 1200, when it was almost entirely burnt down, and the merchants removed, with their effects, elsewhere. The baron de Pollnitz tells us, that when he was here, in the time of the late duke, he was carried into a hall hung quite to the top of it, with bass viols; and that there was one, in particular, that reached from the floor to the cieling, so that there was a ladder set for those who wanted to inspect it more minutely.

In this circle are the following places: 1. Zwenkau, on the Elster. 2. Skeuditz, on the same river; it gives name to a bailiwick. 3. Shaafstadt. 4. Lauckstadt. 5. Letzen, in the neighbourhood of which was fought the famous battle between the Imperialists and the Swedes, in which the former were defeated; but the celebrated Gustavus Adolphus was slain.

Saxe-Naumburg is a secularized bishoprick, about twenty-five miles long, and fifteen broad, which lies betwixt Saxe-Altenburg on the north-east, and Saxe-Gotha on the west, and was seized by the late elector of Saxony, in 1718, on the death of the last duke of Saxe-Zeits.

The chief city, which was once a bishop's see, under the archbishop of Magdeburg, and an imperial town, stands on the river Sala, or Saal, where it receives the Unstrut, fifteen miles south of Merseburg, twenty-five south-west of Leipsick, thirty-four east of Erfurt, sixty south-west of Wittenberg, and seventy-five west of Dresden. This town is famous for its fairs, which are the most considerable in Saxony, next to those of Leipsick. Hubner says, that in 1714, it was burnt down upon its fair-day, which is the twenty-ninth of June, and that here is a large castle built by one of the landgraves of Thuringia. Its antient cathedral is yet standing, and the Lutherans have a chapter of canons, who must prove their nobility by sixteen descents, both by the father's and mother's side. The suburbs of this city are almost all vineyards, but the wine so bad, that they give it away.

The bishoprick was founded by the emperor Otho I. in 951, at Zeits, and transplanted hither in 982. Lutheranism was introduced here in the beginning of the sixteenth century, by its bishop, after whose death the elector took the administration. It was quitted to him by the treaty of Passaw, in 1552, and it gave a title to a branch of the family, which was called administrator; but the last turning papist in 1717, by which he was made incapable of enjoying the protestant bishoprick, this emperor pleaded, that he should enjoy half of the revenue, which amounts in the whole to seventy thousand crowns a year; but the chapter refused it, as contrary to the treaty of Westphalia. He was duke of Saxe-Zeits, recanted before he died, but did not live to be restored to the administration.

The following places are in this bishoprick: 1. Weissenfels, on the Sala, ten miles east of Naumburg. 2. Zeits, on the Elster; is the seat of a regency, and has other colleges. 3. Osterfeld. 4. Regis, on the Plesse. 5. Crossen, on the Elster.

Weimar principality lies on the east side of the bishoprick of Eufurt, to the west of Naumburg, and between the river Saal and the county of Schwartzburg, is about forty miles long, and sixteen broad, and contains the bailiwicks of Bercka, Jena, Orlamund, Dornsberg, and Tondorf, with the forests of Tanroder and Brembach, the lakes of Ilmenau, Rosta, and the towns of Bustet, Battelstet, Almanstet, &c. Besides those we have mentioned, which is properly the duchy of Weimar, the duke's other estates in Upper Saxony are those of the branch of Saxe-Jena, which was extinct in 1691, viz. the bailiwicks of Bomberg, Burget, Capolendorf, Apolda, &c. and the university of Jena, of which the prince is joint-sovereign with the duke of Saxe-Eisenach, with whom he enjoys many other things in common, such as the reversion of several estates, archives, tolls, and mines. His revenues are computed at about eighty thousand pounds a year, with which he maintains a thousand regular troops in the finest order and uniform, and keeps a tolerable court.

The chief places in this principality are: 1, Magdela. 2. Butstoff, on the Losse, where there is a superintendency. 3. Berka, on the Ilm; gives name to a bailiwick. 4. Tanzoda, on the same river. 5. Rosenburg, on the Losse. 6. Buttlestadt. 7. Apolda. 8, New-Mark, in the bailiwick of Burgelin, which last place is a walled town, with a superintendency. 9. Dornburg, on the Saal, likewise a superintendency. 10. Oldisleben, near the Unstruct, gives name to a bailiwick. 11. Salza, on the Ilm.

Eisenach principality lies on the frontiers of Hesse. It is mountainous, and the surface barren; but the hills are replete with mines of iron, copper, allum, vitriol, saline springs, &c. The established religion is Lutheranism.

The principal places are, 1. Eisenach, its capital, which gave name to the principality. It is situated on the Nesse, where that river receives the Horsel into it; and contains a gymnasium, a ducal palace, a seat of high colleges, and a superintendency. Martin Luther suffered eleven months imprisonment in a castle on a neighbouring mountain. 2. Willhemthal. 3. Rahla. 4. Kreutzburg, on the Werra. 5. Marksula, on the Suhl. 6. Gerstergen, on the Werra, gives name to a bailiwick which includes Barka, a small town on the same river. 7. Allstert, an antient town, which gives name to a superintendency and a bailiwick. The emperor Otho had a palace in this town, and held a diet here in 974. 8. Remba. 9. Ringleben, on the Gera, which, with the Great Rudestet, gives name to a bailiwick, which contains Mark Uppach, a county town. 10. Farnroda, a village, which gives name to a lordship.

11. The town of Jana, on the Saal, fourteen miles east of Weimar, is pleasantly situated among vineyards, and well fortified. Here is an university, with a library, observatory, physic-garden, &c. a consistory, superintendency, Latin and German society, free-school, and ducal palace. Both the town and university have fine gardens and good estates. The former gives name to a bailiwick, in which are Kirchberg, an old castle, which gave name and title to a burgrave; and Labedo, a small town, about two miles from Jana.

Coburg duchy is placed in the circle of Upper Saxony, though the inhabitants call themselves Franconians; and it is by the matricula deemed to be in this circle: it belonged formerly to the counts of Henneberg, bnt has been possessed by the dukes of Saxe-Gotha ever since 1674. It extends sixteen miles in the broadest part, and is forty-three in length.

The principal town of this duchy, of the same name, lies about twenty-one miles north-east from Bamberg. It is one of the most antient towns in Germany, is pretty large, and well-built, and defended by the duke of Saxe-Gotha's strong castle, on a neighbouring hill, where Euther, who resided here for the most part during the diet of Augsburg, in 1530, to be at hand to instruct his adherents, was several times imprisoned for speaking freely of his superiors; and where he composed several hymns and epistles, some of which he dated from the Desart, and others from Gruboc, by a transposition of the letters, as it is thought, to conceal his confinement. Here is a college with eleven professors of several faculties, called Casimir college, because founded, in 1602, by John Casimir, the elector of Saxony, who had, in 1597, also built the house for the courts of justice. In the citadel are the old archives, wherein are preserved many important memoirs relating to the history of the Reformation. The court or palace where the dukes resided is in the town itself, very near the great church. The Augsburg confession is the religion professed in this duchy.

This duchy, according to Hubner, belongs in part to the duke of Hildburghausen, or Hilpershausen, which is the name of a town, with a fine castle, where he resides, a grand building of free-stone, in the modern taste. To him also belongs Holdburg, another small town, with a fine castle, and several others.

The rest of the places in this duchy are as follow: 1. Gestingshausen, on the Steinach. 2. Rodach, on a river of

of the ſame name; it has a caſtle and ſuperintendency. 3. Neuſtadtander-heyde, on the Rote. 4. Steinhead. 5. Schalkau, on the Itſch: it gives name to a bailiwick. 6. Senneburg; it alſo gives name to a bailiwick, in which are two market-towns, named Indenbach and Murſchnitz. 7. Neuhauſz; it gives name to a bailiwick. 8. Eiſzfeld, on the Werra, has a ſuperintendency, and gives name to a bailiwick. 9. Koningſberg contains a ſuperintendency, and gives name to a bailiwick. 10. Haſſtaden. 11. Heldbury, on the Kreck, contains a ſuperintendency, and gives name to a bailiwick, in which is Ummerſtadt, a ſmall town on the river Rodach.

The principality of Saxe-Gotha bounds with Naumberg on the eaſt; the landgrave of Heſſe, and Saxe-Eyſenach, on the weſt; the county of Eufurt, and Saxe-Hall, on the north and north-eaſt, and Franconia on the ſouth. Its dukes are deſcended from the elector John Frederick the Magnanimous, who was deprived by the Emperor Charles V. in 1574, ſince which the electorate had devolved to the upper branch.

Its ſovereign poſſeſſes (beſides the duchy of Gotha, which is about thirty miles long, and twelve broad, including the lordſhips of Tenna, Wachſenburg, and Ichterſhauſen) the bailiwick of Kranickfeld, the monaſtery of Volkenroda; and in the county of Altenburg, the towns of Altenburg, Orlamunda, Kala, Leuchtenburg, Schmoelle, Sichweighoff, in the principality of Coburg, and the ſmall principality of Eiſenberg, where are Renneberg, Comburg, and Roda. His titles are the ſame as thoſe of the duke of Saxe-Eyſenach, with the addition only of the lordſhip of Tonna, and they differ but little from thoſe of the elector of Saxony: and as of all the Saxon princes of the Erneſtine branch this duke is the moſt powerful, ſo of all the courts of Saxony, next to that of Dreſden, he is the moſt numerous, and the moſt magnificent. He has all the officers of ſtate that are common to ſovereign princes. By the prudent management of his public finances, his ſubjects are the leaſt burdened with taxes of any ſtate in Germany; yet the revenues of the late duke were computed at a million of crowns, or two hundred thouſand pounds a year, with which he kept on foot between two and three thouſand men, regular troops. His guards are well cloathed, his liveries rich, and his tables ſerved with more elegance than luxury.

The capital, Gotha, is a large walled town, on the river Leina, twelve miles weſt of Erfurt, and twenty eaſt of Eyſenach, and in a fine corn country, about two days journey ſouth of Hanover. Here are two churches and an hoſpital. Its chief trade is in dyers woad, of which they have three crops, whereof the third grows wild. This herb is reckoned ſuch a ſovereign balſamick, as to cure wounds almoſt with a touch, if taken in time: it reſembles plaintain, but has a longer leaf: the roots fatten barren ground exceedingly, and being brought over England, thrives well in ſeveral places.

Martiniere, who quotes Zeyler's Topography of Saxony, and Hubner's Geography, for his authorities, writes, that after the year 1530, eight or nine thouſand men were employed eleven years in fortifying its old caſtle; that John Frederick, elector of Saxony, being taken priſoner by Charles V. it was by his order demoliſhed; but that when the elector was ſet at liberty, in 1552, he rebuilt it, and made it larger; but that his ſon, having refuſed to deliver up Grumbach, and ſome others, who had taken refuge there, and were put under the ban of the empire, he himſelf was alſo put under the ban, and beſieged there by Auguſtus, elector of Saxony, the executioner of the mandate; and the place, being taken in 1567, was demoliſhed a ſecond time, at the expence of fifty-five thouſand, five hundred and fifty-nine florins, after a ſiege which coſt nine hundred, fifty-three thouſand, ſix hundred and thirty-four, when the duke was carried priſoner to Auſtria, his chancellor and Grumbach quartered, and the others hanged or beheaded; but duke Erneſt, ſurnamed the Pious, rebuilt it, cauſed both that and the town to be encompaſſed with ditches and ramparts, and gave it the name of Friedenſtein, or the Caſtle of Peace, in oppoſition to its antient name of Grimmerſtein, or the Caſtle of Furies. It ſtands by itſelf on a hill, from whence there is a vaſt proſpect over a fertile plain. In one of the chambers there is a library and cabinet of curioſities: it contains alſo a chapel, a mint, an armoury, a playhouſe, and a laboratory, and is embelliſhed with fine gardens; as is Fredericſhall, another ducal palace in the ſuburbs. Here are ſeveral churches, a military and other hoſpitals, porcelane and other manufactories, an academy for cadets, various ſchools, a college, foundery, riding-houſe, green-houſe, water-works, &c.

Other towns in this principality are, Hernia, Frederichrode, Waltherhauſen, Ichterſhauſen, Ohrdorf, Grafen Tonna, Blaſſi Zell, Frederickſwerth, Herbſleben, and Kramchfeld.

Altenburg principality has Theringe on the north, Vogtland on the eaſt, and Franconia on the ſouth and weſt. It is well watered, has a fruitful ſoil and rich mines. The inhabitants are Lutherans, and have five ſuperintendants.

The principal places are, 1. Eiſenberg, which gives name to a diſtrict and ſuperintendency. 2. Carnburg, on the Saal. 3. Sulza, on the Ilm. 4. Roda on the Roda. 5. Orlamunda, on the Saal. 6. Ronneburg, which gives name to a ſuperintendency and diſtrict.

7. The town of Altenberg, on the Pleſſe, thirty-ſeven miles weſt of Dreſden, is the ſeat of the chief officers for the diſtricts of the principality. This town gives name to a diſtrict, which contains Lucca, Schmollen, Goſzitz, and Muſelwitz. It is a large place, and was once an imperial city; contains a foundation for the education of young ladies of decayed families, a houſe belonging to decayed families, another belonging to the Teutonic order, an orphan-houſe, a houſe of correction, a college, muſeum, and library.

Saxe-Coburg-Saalfeld principality contains the following places: 1. Saalfeld, a handſome town on the Saal, in which are a mint for the circle of Upper Saxony, a ducal palace, a grammar-ſchool, vitriol-houſe, ſmelting-houſe, ſeveral churches, manufactories of cloth, gold and ſilk ſtuffs, &c. 2. Poſneck, a ſmall, but populous town, full of potters, clothiers, and curriers. 3. Lehſten, in whoſe neighbourhood is an excellent ſlate-quarry. 4. Grafenthal, near the river Zepten. 5, 6. Blankenhayn and Wandelleben, are the only towns in the territories belonging to the houſe of Hatzfeld.

Querfurt is a ſmall principality, containing only the following places worthy of notice: 1. Querfurt, from which the principality receives its name, is the ſeat of a ſuperintendency. 2. Heldrungen gives name to a diſtrict and ſuperintendency. 3. Dahrne, the ſeat of a ſuperintendency. 4. Juterback, on the Angerback.

Anhalt principality, ſituated between the rivers Elbe and Saal, is ninety miles in length, and extends thirty-five in the broadeſt part. It is divided into the four branches of Deſſau, Bernburg, Zerbſt, and Cothen; and, when the dominions were divided, it was agreed to ſubmit to the eldeſt of the family; who has the ſupreme government, and the only power to aſſemble the reſt upon buſineſs of importance. They have all but one vote in the diet, in which they generally depute one of their number to repreſent them. The right of ſeniority has been eſtabliſhed for ſome years in the branches of Bernburg and Zerbſt, which are the moſt numerous.

The prince of Anhalt-Deſſau poſſeſſes the principality of Deſſau, with the town of that name, Worlitz upon the Elbe, Rudegaſt, Sunderſleben, Oranienbaum, a ſeat on the confines of the electorate of Saxony; Ragun, Jeſnitz, &c. The prince of Anhalt-Bernburg has the lordſhips of Bernburg, on the Saal, and Ballenſtadt, Old Anhalt (from whence the family is denominated), Hartzgerode, Little Zeitz, where he reſides, and the abbey of Gernrode, for ladies, of which laſt the princes of Anhalt have the advowſon. The prince of Anhalt Cothen has the town and territory of that name, between the Saal and Mulda, with Plotzkow, the bailiwicks of Nienburg, on the Saal, heretofore an abbey; Wolfen, the upper country of Warenſdorf, and Guſten. And the prince of Anhalt-Zerbſt poſſeſſes the town of that name, with the bailiwicks of Lindau, Coſwitz, Roſwick, Roſla Muhlingen, of Magdeburg, Water-Nienburg, Domburg, Meckern, and the lordſhip of Javern, and he has the reverſion of the territory of Kniphauſen. It is computed, that the revenue of each is about ſeven thouſand pounds a year, except Deſſau and Zerbſt, which are believed to be worth more.

There is no univerſity in this country, but prince Lewis, of Cothen, founded a learned ſociety, the members of which have been chiefly employed in tranſlations of antient Greek and Latin authors, and the improvement of the German language. He was the firſt preſident; and in a ſhort time, above twenty princes and ſix hundred noblemen entered into the ſociety, which is called the Fructifying Society, and have very much advanced the learning, and improved the language of the Germans. This is a good corn country, is watered with the Saal and the Mulda, and its principal trade is in beer. The people of Deſſau are partly Calviniſts, and the reſt Lutherans; but in the town of Zerbſt there are of both theſe perſuaſions.

The chief towns are, 1. Deſſau, on the Elbe, at the influx

influx of the Mulda, eight miles ſouth of Zerbſt, and twenty eaſt of Bernburg. It lies in a pleaſant fruitful country, is well fortified, and adorned with the prince's palace. In one of the chapels there is the tomb of one Rehebeck, an old miller, who having followed Waldemar, marquis of Brandenburg, to the wars, where the latter was ſlain, the former perſonated him ſo artfully, that he was reſpected as the marquis himſelf. The trade of this town is in excellent beer, which is tranſported all over the country.

2. The town of Zerbſt ſtands a little eaſt of the Elbe, ten miles north of Deſſau, and forty-ſix north of Leipſick. It is very antient, and well fortified, according to the import of the name, which, in the Wendiſh dialect, ſignifies fort. It is remarkable for little elſe but being the ſeat of its prince, and having a ſtrong beer brewery, of a more excellent quality than that at Deſſau.

3. The fortified town of Benburg ſtands in a fruitful territory, on the banks of the Saal, eight miles from the Elbe, eighteen eaſt of Deſſau, and twenty ſouth of Magdeburg. The prince has a palace here, ſeparated from the town by the river.

4. Barbi ſtands near the influx of the Saal into the Elbe, between Anhalt and Magdeburg. It belongs to a prince of the Weiſſenfels branch of Saxony, who has erected a noble caſtle in it, with commodious apartments, and crimſon velvet furniture, embroidered with gold. Here is a ſuperb ſaloon, which, with the cloſet and cieling, are finely painted. It has gardens delightfully ſituated by the ſide of the Elbe. The duke of Barbi is reckoned to be the only Calviniſt prince of the Saxon family.

5. Quedlinburg is a little ſtate in this circle, betwixt the principalities of Anhalt and Halberſtadt, which has the title of an abbacy, from an abbey of great note, that was founded here by Henry I. who was buried in it in 936: and, becauſe he ſpent much of his time here in taking birds, was ſurnamed, The Fowler. After he had defeated forty thouſand Huns, near Merſburg, he began to build the church, to fulfil a vow which he had made for the proſperity of his arms; but dying ſoon after he had dedicated the church to St. Servetus, his widow Matilda carried it on; his ſon, the emperor Otho, completed, and richly endowed it; and his daughter Matilda was the firſt abbeſs. On the extinction of the then Imperial family, the protectorſhip paſſed into that of Anhalt, and thence into that of Saxony, in which it hath continued till the cloſe of the laſt century, when the late elector ſold the protection fee of the abbey, and of the city of Northauſen, to the elector of Brandenburg, for fifty-thouſand pounds; when the latter garriſoned the town, and eſtabliſhed ſeveral courts in it. The abbeſs being a princeſs of the empire, and the firſt of thoſe princeſſes who only derive their title from their abbeys, complained of this to the diet, (wherein ſhe has her deputy among the prelates of the Rhine) but without effect; ſo that ſhe has little more than the ſhadow of power in the city, and the abbey itſelf has loſt much of its antient ſplendor; for the abbeſſes have not, as formerly, their hereditary officers, &c.

The chapter has four dignitaries, viz. the abbeſs, the prioreſs, the deaneſs, and the canoneſſes, or nuns. All theſe ladies muſt be at leaſt baroneſſes, and prove their noble extraction for eight deſcents. The abbeſſes have commonly been of the Imperial or electorate families. Thoſe of Brandenburg, Brunſwick, and Anhalt, poſſeſs fiefs which they hold of the abbey. No abbeſs can be choſen without the conſent of its hereditary protector; and the emperor's confirmation is ſufficient to render his election valid, without need of any from Rome; for that court has had nothing to do with the abbey ſince 1539, when Lutheraniſm was introduced by its abbeſs, the counteſs of Stolberg. No vows are made here; the canoneſſes, who receive and return viſits, know no reſtraints; both the abbeſs and her nuns may leave the abbey, and marry; and ſince the reformation, ſeveral of the abbeſſes have been widows.

The revenue of this Lutheran abbey does not exceed five thouſand pounds a year; its eſtate, beſides the little city of Quedlinburg, being only the villages of Ditfurt and Suderole, which laſt is claimed by the elector of Brandenburg, as belonging to his ſecularized biſhoprick of Halberſtadt. The title of the preſent incumbent is ſaid to be Mary-Elizabeth, by the grace of God, abbeſs of the Imperial and ſecular abbey of Quedlinburg, born princeſs of Holſtein, &c. She gives audiences with all the affected pomp of ſecular princes, and is ſeated under a canopy, ſurrounded by her chaplain and officers: her abbey has more the air of a little court, than of a religious houſe.

The little city of Quedlinburg, where the abbeſs reſides, is ſituated on the river Bode, that was formerly a hanſe-town, and afterwards ſubject to the abbey; but the citizens rebelling againſt their abbeſs in 1745, they were made ſubject to the elector of Saxony, though now it is in other hands. It is eight miles ſouth-eaſt of Halberſtadt, and forty-nine north-weſt of Halle. This town is ſo very near the frontiers of Lower Saxony, that ſome geographers have placed it in that circle. A famous council was held here in 1085.

The family of Brunſwick Wolfenbuttle poſſeſs the free Imperial palace of Walkenreid, by whom it is held as a bailiwick; but, on its account, pay an aſſeſſment to the empire, and to the chamber of Wetzlar. The only places of the leaſt importance in the whole bailiwick, are, the town of Walkenried, on the Zorge, and the town of Zorge, where two iron manufactories are eſtabliſhed.

Schwarzburg principality (the ſouth part of which is ſeparated from the north) is ſurrounded, on the ſouth, by Coburg, Altenburg, Eiſenach, and Erfurt; on the north part, by Thuringia, the electorate of Saxony, the counties of Stolberg, Hohenſtein, Eichsfelde, and the territory of the imperial town of Mulhauſen.

In this principality are many fertile ſpots, yielding all kinds of grain, roots, fruits, &c. The country produces wine, game, veniſon, ſalt, timber, ſilver, alabaſter, and copper. The rivers are, the Schwarze, Saale, Helme, Wepper, Ilm, Gera, Elbe, Gera, and Zorgange. The inhabitants amount to about one hundred thouſand; the profeſſed religion is Lutheraniſm.

The principal places are, 1. Ehrich, on the Helme. 2. Kinglen. 3, 4. Haſzelben, and Ebeleben. 5. Grueſſen, on the Helme.

6. The town of Sonderhauſen, on the Wepper, has a palace near it, the apartments of which are fine, and the gardens elegant. In the armoury is an image of Puſtrich, a Wandiſh idol, in ſhining black metal. Its head, on which the right hand reſts, is large and diſproportionate, with a hole in the top of it, and its belly is prominent and hollow. In lieu of a mouth, a round hole is ſubſtituted; the legs are both mutilated, and the right is bent in a particular manner. The middle of the left arm, which reſts on the lap, is broken off. This town gives name to a bailiwick, and is the ſeat of the public offices.

7. Keula is a ſmall town, which gives name to a bailiwick, at which a foreſt begins that is twenty miles in length. 8. Arnſtadt, on the Gera, has a handſome ſtone bridge, with ſix arches. 9. Planen is a ſmall town on the Gera. 10. Keſurnburg, an old caſtle, which gives name to a bailiwick. 11. Auguſtenburg. 12. Geren. 13. Langewieſen, on the Ilm, is a fief of Mentz. 14. Breituback, on the ſame river.

The territories of Rudolſtadt contain the following places, viz. 1. Rudolſtadt, on the Saale: and in the bailiwick to which Rudolſtadt gives name, there is a ſmall town called Teichel. 2. Blankenburg, on the Rhine. 3. Konitz. 4. Leutenberg. 5. Ehrenſtein. 6. Frankenhauſen. 7. Arnſberg. 8. Stranſberg. 9. Hermingen, on the Helme. 10. Kalbra.

The county of Stolberg, which lies north of the lower county of Schwartzburg, eaſt of Hohenſtein, and weſt of Mansfeld, is about twenty miles long, and ten broad, and gives name to counts of a very antient, and once a very powerful family, whoſe domains lie diſpoſſeſſed, but moſt of them are in the circle of the Upper Rhine; and they have right to the ſucceſſion of the counts of Schwartzburg. They are divided into the two chief branches of Iſenberg and Gudern; and the latter into thoſe of Stolberg and Orenberg. They are ſovereign counts, of the Lutheran religion; and, beſides their large bailiwicks in the circle above-mentioned, they have the county of Weringerode, in the principality of Halberſtadt, near the borders of which, among the mountains, ſtands the caſtle of Stolberg, which, it is ſaid, was built by Otho Colonna, a Roman gentleman.

The county of Mansfeld is one of the four, called Hyrcinian counties, the other three being Stolberg, Hohenſtein, and Zegenſtein. It has Stolberg, and the upper county of Schwartzburg, on the weſt; the principality of Anhalt, on the north; the duchy of Saxe-Merſburg, and Saxe-Hall, on the ſouth; and part of Anhalt and Saxe-Hall, with the river Saale, on the eaſt. It is above thirty miles from eaſt to weſt, and eighteen from north to ſouth. It abounds with ſeveral ſorts of minerals, very profitable to the inhabitants, particularly that called the Scheifferſtein, peculiar to this and the neighbouring provinces: it is a blackiſh, glittering kind of ſlate, which, melted and bruiſed,

bruiſed, yields much copper, and ſilver. Out of it the inhabitants melt copper, each hundred weight of which contains ten or twelve ounces of pure ſilver. In theſe ſtones are lively repreſentations, in fair copper ſtrokes, of fiſhes of ſeveral ſorts, frogs, water rats, and other animals, that abound in a neighbouring lake. This ſtone is very common hereabouts.

Some writers aſſert, that the pedigree of the counts of Mansfeld is derived from Burchard, viſcount of Quernfurt, to whom the emperor Frederick Barbaroſſa gave this country, for his ſervice in the Holy Land; and his ſucceſſors have enjoyed it ever ſince, but pay homage to the elector of Saxony. There have been ſeveral great men of this family, ſome of whom have been privy counſellors to the emperors of Germany, and deputy-governors of Saxony: and the names of ſeveral of them ſhine in the annals of Germany and the Netherlands; but it is now divided into four or five branches, which makes them leſs conſiderable than formerly. Some of the young counts, in the ſixteenth century, oppoſed ſeveral of the Lutheran doctrines, which gave riſe to a ſect, called Mansfeldians. The two chief branches left are thoſe of Bornſtet and Eiſleben: the latter lives now at the town of that name, and has nothing to depend on but the hunting, fiſhery, and patronage of the churches; the family being ſo deeply in debt, that the greater part of the eſtates which formerly belonged to it, are ſeized by the creditors, and the remainder was ſequeſtered to the elector of Saxony, who mortgaged his part, in 1715, to George I. of Great Britain, for ſix hundred thouſand ſix-dollars; ſo that Bornſtet, with its diſtrict, two eſtates in Bohemia, and the ſmall principality of Pondi, are all the preſent count is poſſeſſed of.

The counts who have voices in the Imperial diets, may purchaſe eſtates in any part of the emperor's dominions, may inliſt volunteers, and cannot be ſued by the emperor, but only in the Imperial chamber: but that which properly belongs to counts of territories, ſuch as thoſe of Mansfeld, &c. is, that they were antiently created and inveſted by the delivery of one or more banners, for ſeiſin of their territories, as dukes were inveſted; and the re-delivery of thoſe banners to the emperor, was deemed the ſurrender of them.

The only town or village in this country, worthy of deſcription, is Eiſzleben, the capital of the county, which is divided into Old and New. It is populous, a great thoroughfare, contains many breweries, and has a caſtle to defend it: this place is celebrated for the birth and death of the great reformer, Martin Luther.

Wernigerode county is ſituated on the borders of the principality of Halberſtadt; is twelve miles long, nine broad, partly level, and partly mountainous. The Blockberg mountain here is reckoned the higheſt in Germany, and the ſnow generally covers it all the year round.

The level parts of this country are fertile in grain, pulſe, flax, fruit, herbs, timber, &c. and the whole abounds in horſes, cattle, game, ſalt-petre, chalk, cobalt, lime-ſtone, free-ſtone, marl, clay, iron, and lead. The eſtabliſhed religion is Lutheraniſm.

The principal places are; 1. Wernigerode, which gives name to the county; and is defended by a ſtately caſtle, adorned with admirable gardens, and containing a fine library, with many valuable archives. This town conſiſts of three parts, viz. the Old Town, the New Town, and the ſuburb of Noſchonſade, containing, in the whole, about eight hundred houſes. It may be laid under water, by means of the Zillicher rivulet. The corporation has a property in ſome large woods, from which the burghers are allowed timber for building, and a certain quantity for fuel. The inhabitants are employed in breweries, diſtilling, and cloth and woollen manufactories. Along the Villiche are ſeveral oil, fulling, copper, meal, ſawing, and other mills.

2. The large village of Drubeck has a foundation for ſix proteſtant ladies. 3. Ilſenburg is defended by a ſtrong caſtle. 4. Haſſerode, which gives name to a bailiwick.

The lordſhips of Reuſſen are ſurrounded by Etzgeburg, Vogtland, Neuſtadt, Culmback, Bamberg, Saalfeld, Lentenberg, Altenberg, and the bailiwick of Zeitz. The plains are fruitful; the hills rich in minerals, and the rivers abound in fiſh. The people employ themſelves in woollen and iron manufactures, and profeſs the Lutheran religion.

The principal places are, 1. Greitz, on the Elſter, encompaſſed with woods and mountains. 2. Zeulenroda. 3. Burg, a caſtle on a rock. 4. Trawrenth. 5. Moſchlitz. 6. Gera, in a pleaſant vale near the Elſter. 7. Schlewitz, gives name to a lordſhip; in which are three market-towns, viz. Tanna, Gorgwitz, and Market Hohenleuben. 8. Lobenſtein, on the Lemnitz. 9. Hirſchberg, in the lordſhip of Eberſdorf. The lordſhips are very rich, which is owing to the great induſtry of the inhabitants.

In the lordſhips of Schonberg are ſeveral flouriſhing manufactories. The greateſt part of the inhabitants are Lutherans, and very induſtrious. The counts of Schonburg have a ſeat in the diet of the empire, and in that of the circle.

The principal places are, 1. Waldenburg, on the Mulde. 2. Hartenſtein, which gives name to a lordſhip. 3. Stein, on the Mulde. 4. Loſnitz. 5. Wechſelburgh. Theſe are all ſmall towns. The people of theſe lordſhips ſeem to be unaffectedly pious in their deportment, and particularly attentive to their religious duties.

The county of Honſtein, though rather hilly, abounds in corn, graſs, cattle, deer, game, timber, iron, jaſper, and alabaſter.

The moſt remarkable places are, 1. Honſtein, which gives name to the county, and to a bailiwick. 2. Ilfild, on the Behr. 3. Bleickrade, in the lordſhip of Lora, which, with the town of Kaettenberg, is now incorporated with the principality of Halberſtadt: both of which belong to the king of Pruſſia. 4. Ebrich, on the Zorge, is the ſeat of a ſuperintendency. 5. Sachſa. 9. Great Bodungen, on the Bode. 7. Benneckſtein, famous for its iron mills.

SECT. II.

Treating of the Circle of LOWER SAXONY, the ſeveral Dominions belonging to it, their Boundaries and Extent, Towns, Buildings, Inhabitants, Manufactures, Produce of the different Countries, &c.

LOWER SAXONY is bounded, on the north, by the duchy of Sleſwick and the Baltick; on the ſouth, by the circle of Upper Saxony, and a part of that of the Upper Rhine; on the weſt, by the circle of Weſtphalia and the North Sea; and, on the eaſt, by part of the circle of Upper Saxony. This country, in general, may be deemed very fruitful, though in ſome parts it is woody, ſandy, and marſhy.

We ſhall proceed to a deſcription of thoſe parts of this circle which we have not yet mentioned; beginning with Brunſwick-Lunenberg, ſeveral diſtricts of which country (though many places abound in heathy, marſhy, ſandy, and barren ſoils), are exceedingly fruitful in wheat, oats, peas, vetches, roots, tobacco, wood, barley, rye, beans, fruit, madder, flax, hemp, &c. Here are likewiſe great quantities of timber, cattle, game, horſes, ſheep, fiſh, minerals, turf, honey, wax, pitch, ſalt-ſprings, &c.

There are, in theſe territories, ſeveral manufactories of woollen cloths, ſtuffs, linen, thread, lace, cotton, carpets, gold twiſt, galoons, fringe, ſword-knots, taſſels, halberts, embroidery, tobacco-pipes, tobacco, ſkins, hats, gunpowder, paper, colours, fire-arms, ſalt, &c.

The eſtabliſhed religion here is Lutheraniſm: but Roman catholics are tolerated in ſome places, particularly at Hanover and Gottingen; and in all the electoral dominions, Calviniſts and Jews enjoy the free exerciſe of their religion.

With reſpect to the anceſtors of this illuſtrious houſe, it may be proper to mention, that the houſe of Brunſwick being united in the two ſons of Henry, duke of Zell, in 1546, the branch of Brunſwick Wolfenbuttle and Beveren, deſcended from Henry, the eldeſt of thoſe ſons; and the electoral branch of Brunſwick-Lunenburg from William, the youngeſt ſon; and that the anceſtreſs of both branches was Margaret, queen of Scotland, wife of king Malcolm III. and ſiſter to Edgar Atheling, the Saxon, who was the true lineal heir of the crown of England, both of the Daniſh and Saxon race; which Edgar dying without iſſue, the right of ſucceſſion to the crown fell to queen Margaret's poſterity, in whom centered at once the hereditary titles of the Scottiſh, Pictiſh, Britiſh, Daniſh, and Saxon royal families.

In 1692, the creation of the electorate, which is attached to the duchies of Hanover and Zell, was concerted at the congreſs at the Hague, by our king William III. of glorious memory, and happily effected by its influence, in conjunction with moſt of the proteſtant princes of the empire, on purpoſe to counterbalance the acceſſion of the popiſh branch of the Palatine family in the electorate of the Rhine. It was oppoſed by ſeveral German princes,

and particularly by the duke of Brunſwick-Wolfenbuttle, out of envy; but the then emperor Leopold, in order to teſtify his gratitude to the proteſtants for their aſſiſtance in the war againſt France, and conſidering not only the perſonal merit of duke Erneſt, but the great dignity of the Brunſwick family, who had the firſt ſeat in the college of princes at the diet, and was one of the moſt conſiderable in the empire for antiquity, wealth, and power, ordered it to be put to the queſtion, in the college of electors at Ratiſbon; wherein it was reſolved, on the 7th of October, 1692, that the electoral dignity ſhould be conferred on the ſaid prince Erneſt and his heirs. The college of princes immediately entered their proteſt againſt this reſolution, as contrary to the laws of the empire, becauſe done without their concurrence: nevertheleſs, the emperor gave prince Erneſt the inveſtiture, by delivering the electoral cap to his plenipotentiaries, and declaring him elector, in the following December.

The following is ſaid to be the extent of the particular dominions of this elector; namely, the principality of Grubenhagen, forty miles both in length and breadth; the duchy of Hanover, or Calenburg, forty miles long, and twelve broad: the duchy of Lunenburg, eighty miles long, and fifty broad; the duchy of Saxe-Lawenburg, thirty miles long, and fifty broad; the duchy of Bremen, including Verden, ſixty miles long, and forty broad; the county of Hoya, thirty miles long, and fifteen broad; and the county of Diepholt, thirty miles in length, and ten in breadth.

The pretenſions of the elector are only to the ſmall county of Eichfeld, (of which the elector of Mentz is poſſeſſed), as part of the principality of Grubenhagen; to the county of Reinſtein, as as vacant fief; to the larger half of the biſhoprick of Hildeſheim; and to the fortreſs of Peyna. His revenues ariſe, 1. From the ſalt-pits, or ſprings, within the walls of Lunenburg. 2. From taxes on land, cattle, merchandize, public houſes, and inns. But his greateſt revenues ariſe from the rich mines of ſilver, iron, and copper. The mines of Clauſthall, with thoſe of St. Andrew and Altena, yield near two hundred thouſand pounds a year; but whether this computation is to be underſtood as clear of all charges, is not ſpecified; ſo that, upon the whole, this elector's revenue is calculated to amount to, at leaſt, four hundred thouſand pounds a year.

In the year 1692, the elector had near fourteen thouſand regular troops on foot. Now that the eſtates are increaſed above one half, by the addition of Lunenburg and Bremen, he may raiſe an army of betwixt thirty and forty thouſand men, without greatly diſtreſſing his ſubjects, In the year 1729, he reviewed a body of nineteen thouſand eight hundred and ninety men; and in September 1735, that number was augmented to twenty-two thouſand regular troops.

In the year 1687 there was an hereditary and perpetual union made between that electoral family and that of Saxony, for the mutual guarantee of the peaceable poſſeſſion of their eſtates againſt all diſturbers and invaders; which treaty was renewed in 1731 and 1736.

Bremen duchy has the Weſer on the weſt; the Elbe, and part of Lunenburg, on the eaſt; the German Sea on the north, and part of Verden and Oldenburg, on the ſouth. It is about ſixty miles in length, and forty in breadth, including Verden. It is divided into, 1. The land of Bremen, properly ſo called, which lies ſome miles round the city. 2. Wurſterland, along the coaſt from the Weſer to the mouth of the Elbe. 3. Hadeland, the north part of the duchy at the mouth of the Elbe, where the people are reckoned ignorant, but ſo fond of gay cloaths, that their neighbours have a proverb, "that there are no peaſants in Hadeland." Part of it belongs to Hamburg, and part to Saxe-Lawenburg. 4. Kedingerland, in which lies Stade. 5. Altland, a pleaſant fruitful tract, of about fourteen miles in length. Betwixt Bremen and Stade the country is deſart, and either a barren ſand, or a moraſs; but the other parts towards the rivers are very pleaſant, and abound with fields, meadows, and orchards. The inhabitants, who formerly relied ſo much on their valour, that they ſcorned to build forts, are ſtill reckoned as good ſoldiers as any in Germany; and it is ſaid of the Wurſtlanders, in particular, that they will fight and drink with the beſt men in Germany. The ſituation of the country betweeu two ſuch navigable rivers, has given the people in general a diſpoſition for trade and commerce.

Ludovicus Pius, the emperor, gave this country to Anſgarius, the firſt archbiſhop of Bremen and Hamburg, whom he made metropolitan of Denmark, and all the known countries to the north. He died in 865, and his day is as much obſerved by the common people here, as Chriſtmas. Denmark and Sweden were no longer dependent on this ſee, when Lunden was erected into an archbiſhoprick: but this country continued ſubject to its archbiſhops, till, by the treaty of Weſtphalia, the archbiſhoprick was ſecularized, converted into a duchy, and given to the Swedes, for reſtoring the peace of the empire, and giving up other places which they had taken during the war. As their anceſtors had frequent wars with their archbiſhop in defence of their liberties, they pleaded for the ſame exemptions when made ſubject to the Swedes, who continued their maſters till 1712, when this country and Verden were conquered by the king of Denmark. This prince mortgaged it ſoon to the elector, our late king, who in 1715, had two hundred and fifty-thouſand pounds granted him by his parliament, to enable him to make the purchaſe of it. There was an oppoſition, indeed, made to it, in both houſes, and a clamour raiſed againſt it without doors; but however convenient it might be for the elector of Hanover, whoſe family was poſſeſſed of Bremen once before, and to whoſe dominions it lay contiguous, the legiſlature wiſely judged it might be of the moſt dangerous conſequence to the crown of Great Britain, that any foreign prince, eſpecially a maritime power, ſhould hold the key, which the king of Denmark then had, of the Elbe and the Weſer.

Any one who takes the pains to peruſe the maps of this part of the empire, will perceive, that, whilſt that king was in poſſeſſion of the duchies of Bremen and Verden, he was maſter of the ſea-coaſt from Denmark almoſt to the Seven Provinces. The maps ſhew, that the Elbe runs, for above five hundred miles, through Bohemia, Saxony, Brandenburg, and the reſt of Germany, and that the Weſer paſſes, for about two hundred and fifty miles, through Heſſia, Weſtphalia, Oldenburg, and ſome other countries of the empire: and the vaſt importance of thoſe rivers to our trade, will be confeſſed by every one who conſiders that all our woollen, and other Engliſh manufactures, and almoſt all our commodities, both domeſtic and foreign, to the value of many hundred thouſand pounds a year, are by thoſe ſtreams conveyed to innumerable markets; and that by the ſame navigation a great part of our riches flows continually home to us; a trade too precious to have lain at the mercy of any foreigner, either to lock it up from us, or to lay what impoſitions he pleaſed on it, as might have been the caſe, if his late majeſty had not got Bremen and Verden out of the hands of the king of Denmark.

In 1717 this country ſuffered very much by inundations from the Elbe, the banks of which are in ſome places very low, and would be frequently overflown, where it not for the dikes. In 1720, the crown of Sweden conſented in form to the diſmemberment of this duchy from its other dominions, and confirmed it to the Brunſwick family.

In this, and a very large part of the lower circles of Germany, the common dialect is a ſort of Lower-Saxon, neither Dutch nor High-German, but partaking of both, or rather the root of both; for it ſeems to have retained more of the antient Anglo-Saxon than of the Dutch or High-German: yet every one underſtands High-German, and it is the language of their printed books, and written letters, and ſermons.

This country is watered by many rivers. The Tech, the Umme, and the Hamma, join together, and fall into the Weſer; as do the Brept, the Lun, the Stotel, and ſeveral others: the Eſſa, the Schwingel, and the Oſte, fall into the Elbe.

We ſhall deſcribe the places of moſt note from Harburg to the mouth of the Elbe; which are,

1. Boxtehude, on the Eſſa, or Eſt, fifteen miles weſt of Hamburg, and eaſt of Stade, and forty-eight north-eaſt of Bremen, in a pleaſant country, ſo fruitful, as to be reckoned one of the granaries of Hamburg. It is a pretty large town, with broad ſtreets, and is ſurrounded with a ditch and wall, upon which there are old ruinous towers. Its river, which comes out of Lunenburg, and is navigable for boats up to the town, falls into the Elbe at Crantz, about four miles off, where the latter is about a mile over; and from hence there is a fine proſpect of Hamburg. The town, which firſt had its riſe from a nunnery of ladies of a family of that name, was of ſuch note formerly, as to be admitted into the Hanſeatick league, and ſtill retains the privileges of a city, with burgomaſters, and ſenators. One of the dukes of Brunſwick attempted, in vain, to reduce this place in 1424, as did,

in

in 1552, one of the counts of Mansfeld, who, for mere ſpite, becauſe he could not take it, ſet fire to the neighbouring nunnery. During the civil wars of Germany it was ſeveral times taken from, and retaken by the Swedes; who being, at length, reſtored to it in 1679, kept it, with the reſt of the duchy of Bremen, till the whole country was conquered by the Danes, and made over to the late elector of Hanover.

2. Stade, which is reckoned the ſecond town in the duchy, next to Bremen, has a good trade, and a healthy air, in a fruitful country, on the river Zwinga, or Schwingel, which falls into the Elbe two miles below it, twenty-ſeven miles weſt of Hamburg, and forty-four north of Bremen. This, beſides its having been a free imperial city, and one of the Hanſe Towns, was formerly endowed with great privileges; particularly, for being an aſylum or ſanctuary for all offenders, with a right of toll for ſhips paſſing up the Elbe; but became ſo poor, by Hamburg's outſtripping it, that it was forced to ſell its ſtock to that city, and put itſelf under the protection of the archbiſhop of Bremen, it having formerly been the capital of a marquiſate of its own name, which was annexed to that ſee by its marquis in the thirteenth century. After its abovementioned decay, our Engliſh merchants, upon ſome diſguſt taken at Hamburg, removed hither: which revived its trade, ſo that again it became rich and populous, and is in good condition at preſent, though the Engliſh returned to Hamburg. The town is well built, and its town-hall, market place, and churches, are handſome ſtructures.

3. Bremerfurd, or Breme-Verden, is a walled town, with a good caſtle, that commands the neighbouring plains; and a palace, which was formerly the archbiſhop of Bremen's, on the river Oſte, that runs into the Elbe. It is fifteen miles ſouth from Stade, and twenty-eight north of Bremen; and the chief trade of it is by paſſengers betwixt theſe towns. The chancery of the duchy is kept in this town.

4. Ritzbuttle, or Rutzenbuttle, is a bailiwick, conſiſting of a caſtle, with fourteen villages, belonging to the Hamburghers, and ſituate on the coaſt where the South Elbe falls into the North Sea, not ten miles from the utmoſt point of land of this country, and thirty-two north-weſt of Stade. Here the Hamburghers have a pretty good harbour, called Cuxhaven, which is of great benefit to ſhips coming on the Elbe in winter, when the river is full of ice. Here likewiſe their ſhips often ſtop, at their arrival from long voyages, for orders and news, and to know whether all is well with the city, before they venture up. Here are their privileged pilots, who by their ſtatutes, are obliged to have a yacht always at ſea, near the outermoſt buoy, ready to put a pilot or two, as occaſion ſhall require, on board every ſhip coming into the Elbe. But, notwithſtanding this is one of the moſt dangerous rivers in Europe to come into, as all ſhips coming to Hamburg are obliged to pay half pilotage, whether they have pilots on board, or not, they are ſeldom at ſea but in good weather, when they are leaſt wanted; which has occaſioned the loſs of many a rich ſhip within the river. The Hamburghers have another fort in this neighbourhood, called New-werck, or Nieu-wark, which ſerves for ſtrengthening the former, on the land, againſt the country.

Adjoining to the bailiwick of Ritzbuttle is the little diſtrick of Hadeln, or Hadeland (the moſt northern part of this duchy), which, with its capital, Otterndorff, on the river Medame, and the town of Hadeln, came in the ſixteenth century from the archbiſhops of Bremen to the houſe of Saxe-Lawenburg: but the male line of that houſe becoming extinct in the year 1689, and a diſpute ariſing, about the inheritance between the female heirs and the king of Sweden, the emperor cauſed it to be taken into ſequeſtration, under which it remains, as it is ſaid, to this day. The caſtle of Otterndorff, which belongs to Saxe-Lawenburg, commands moſt of the diſtrict.

The next that follow are the towns on the Weſer, viz.

1. Carelſtat, or Carlſbourg, as Baudrand calls it, is rather a fortreſs than a town, on the river Geeſte; which, having filled its ditches, falls into the Weſer, thirty-one miles north-weſt of Bremen. It was founded by Charles X. of Sweden, taken by the dukes of Brunſwick in 1676, and reſtored by the treaty of Fontainebleau in 1679. The late Charles XII. in 1698, granted liberty of conſcience, with thirty years exemption from taxes, to all proteſtants that would ſettle here: but there are but a ſmall number of inhabitants.

2. Bremen, the capital of the duchy, ſtands in a fruitful plain, twenty-three miles eaſt of Oldenburg, ſixty ſouth-weſt of Hamburg, fifty-five eaſt of Embden, eighty-three north-weſt of Brunſwick, eighty-nine weſt of Lunenburg, ſixty-five weſt of Zell, ninety north of Munſter, and about four hundred and ſixty north-weſt of Vienna. It is an antient, large, populous, and flouriſhing town, a free imperial city, and the third in rank among the Hanſe, of whoſe three renowned free imperial cities, viz. Hamburg, Lubeck, and Bremen, though it is reckoned the leaſt conſiderable, it is certainly much the oldeſt, it being noted for ſhipping when the monks, ſent by the pope to convert the Saxons, embarked here for England, which was two hundred years before Hamburg was built, and above five hundred before the building of Lubeck. An archbiſhoprick was founded here by Charles the Great, who made it the metropolis of the north. The archiepiſcopal ſee at Hamburg was tranſlated hither, or rather incorporated with this ſee, in 1223. Henry V. granted the cities great privileges, in reward of their valiant performances in the holy war. It had ſeveral privileges alſo granted it by the emperor Wencenſlaus, for clearing the coaſt from pirates, and protecting the merchants trading on the Weſer; and no goods were allowed to go down this river, and paſs this city, without being firſt landed here. The inhabitants have the privilege alſo of fiſhing from the bridge of Hoye, four German miles above Bremen, down to the ſea; as likewiſe in the rivers Hunte, Ochtum, Wemme, and Leeſum, which flow into the Weſer. The city is well ſupplied with fiſh, both from its rivers, and the ſea; and they have every month ſeveral ſorts in ſeaſon. Among others, they catch great quantities of ſalmon and lampreys, the former of which, being dried and ſmoked, and the latter pickled, are in great eſteem throughout all Germany. Rudolph II. endowed them with the privilege that neither their perſons nor goods ſhould be liable to arreſt, attachment, or other impoſition, throughout the empire; and Charles V. gave them the right of coinage.

On receiving the reformation in 1552, and zealouſly defending it againſt one of their archbiſhops, that emperor ordered the city to be beſieged by the duke of Brunſwick; againſt whom it made ſo gallant a defence, that, after almoſt a year's continuance, he was forced to raiſe it. The archbiſhops did not embrace the reformation till 1585. This city pretends to a right of vote and ſeſſion in the diet ever ſince Charlemagne, which was confirmed to them, though the archbiſhop oppoſed it, by the emperor Ferdinand III. in 1641. Afterwards, on the ſecularization of the archbiſhoprick in the reign of Queen Chriſtina of Sweden, new diſputes aroſe, which came to a rupture in 1654, and though they were compoſed under Charles Guſtavus in 1658, they broke out again under Charles XI. who claimed the ſovereignty of that city, as well as that of the duchy, which had been yielded to the Swedes by treaty: but the ſenate totally diſclaimed it, on the baſis of the tenth article of the treaty of Oſnaburg, whereby it was declared a free imperial city; though the archbiſhoprick, with all the rights belonging to it, was added, by the emperor and empire, to the crown of Sweden. The Swedes, nevertheleſs, not being ſatisfied, beſieged it above ſix weeks, but raiſed the ſiege, at the interpoſition of the neighbouring princes; and then followed the treaty of Habenhauſen in 1666, by which the city was obliged to part with ſome of its antient privileges, and to wave its pretenſions to the right of ſitting and voting in the diet till 1700, which right is diſputed with them to this day.

The town is governed by a ſenate, compoſed of four burgomaſters, or conſuls, and twenty-four ſenators, or common-councilmen, conſiſting of four diviſions, viz. one burgomaſter, and ſix ſenators, to each of the four wards. They are choſen out of the chief citizens, ſo that the government is a kind of ariſtocracy. This ſenate decides all cauſes, eccleſiaſtical, civil, and criminal; and from it there lies no appeal, except in the latter, where the ſum litigated exceeds ſix hundred Rheniſh guilders of gold, or about two hundred and ten pounds ſterling; in which caſe, there may lie an appeal to the imperial chamber of Wetzlar. If any of the members die, or become incapable, they muſt chuſe another in twenty-four hours; for which end, one elector is choſen out of each claſs by lot, and then ſhut up in a room, without ſeeing any one till the election is over. They have their own ſtatute-laws, which were enacted in 1281, but have been ſince amended. It has a juriſdiction of about ten miles round, abounding with paſtures, well ſtocked with cattle, and is bordered with territories belonging to his Britannic majeſty. The river Weſer, which is navigable about thirty miles from the ſea, runs through it, and divides the old city from the new; but there is a communication by a bridge of boats, and ſeveral wooden bridges. The river is

not

not navigable for ships of burden farther than Fegefack, six miles below the town, where there is a custom-house, and where all ships load and unload: so that all goods are brought up from thence in flat-bottomed vessels.

The city of Bremen carries on a considerable trade with England, particularly in all sorts of Westphalian linens, and sends several ships, particularly to London, every year; here being a great consumption of the English woollen manufactures, which they receive not only from England, but chiefly by way of Hamburg and Holland, and disperse again through the whole circle of Westphalia. It sends ships likewise to France, Spain, Portugal, and Italy, and a great number to Davis's Straits. It has a considerable inland trade, particularly to the great fairs and marts in Germany, to which, among many other goods, it sends large quantities of callicoes and sugar, printed and refined here, though not to that perfection as at Hamburgh. Its beer is very much esteemed in Germany, and therefore exported in large quantities. Its other commodities are minerals, timber, corn, cattle, and leather; in dressing of which, and cloth, they are very expert; so that both are sent hither, for that purpose, from other countries. Its duties upon importation and exportation are very low, which is a great encouragement to its trade, and gives it an advantage over the Dutch in the countries betwixt this city and their republic. It is reckoned, in short, the next port to Hamburg, in the whole empire, for commerce; and, in time of war, it also fits out ships of force to convoy their merchantmen. It generally sends twenty-five or thirty ships a year to the whale-fishery in Greenland; and their harpooners are frequently hired both by the Dutch and English, being esteemed the most expert in all Germany.

The old and new towns are both of them pretty well fortified with high walls, a broad ditch, and a counterscarp: the former has several towers on the walls, after the old manner, but the walls of the new town have eight fine bulwarks. It is, however, stronger by nature than art. A garrison of five hundred men is kept here, besides the guard, day and night, at the town-house, by two hundred of the citizens. From the city wall, or ramparts, which are planted with rows of trees, there is a most agreeable prospect of the river and adjacent country; and on it there is a road for coaches, as well as foot-passengers.

Here is a grand arsenal, well stored with artillery, small arms, and other utensils and tools of war, both antient and modern. There is also a lesser, which is a sort of armory for the burghers; it being a spacious hall, where their council of trade meets, the walls of which are handsomely adorned with small arms. At the entrance of it there is a figure of a warrior in complete armour, who, by some mechanism under the steps, as soon as you tread on them, lifts up the bearer of his helmet with his truncheon to salute you. From the gallery of the grand arsenal, which contains the greater part of the small arms, ranged in a very beautiful manner, there is a passage to the gymnasium, or academy, built after the Reformation, which was at first only a free-school, afterwards advanced to the title of an university; which, by the munificence of several worthy citizens, makes as good a figure as some of the best in Germany; and many great men have been produced by means of this seminary.

The town-house, senate, or council, is a large gothic structure, built in 1405, and adorned, on the outside, with several statues of the emperors and electors, besides those of Plato, Aristotle, Cicero, and other antients; and a picture of the old and new towns. The council-chamber has the pictures of twelve German emperors, down to Leopold. The courts of justice and other apartments here, are plainer than suits with the dignity of the offices they are put to; and the lower part, or hall, in which there are doors that lead to the courts of justice, is filled with toy and print-shops, and in others (like ours at Westminster) are sold stationary and haberdashery wares, &c. At the one end of this building, but separated by a street, there is a public structure, with a piazza and shops under it, which serves for an exchange.

Here are several hospitals, particularly, one for superannuated or disabled mariners; and another for the sick, lame, decrepid, and old poor people, of both sexes. It is a plain, but commodious structure, with a very handsome chapel. Adjoining to it is a house of correction for vagabonds and criminals, where lunatics are also kept, and such as happen to kill a person inadvertently, the plea of chance-medley not being admitted in this country. Such a strict discipline is kept in it, that it is observed, though there are at least an hundred profligate persons in it, not an indecent word is heard out of their mouths, they being almost continually obliged to accompany the task-master in singing psalms and hymns.

The new town, on the south side of the Weser, in which stands the university and the arsenal, consists chiefly of gardens and little pleasure-houses, belonging to the principal merchants and other inhabitants of the old city, has larger and much more regular streets than the latter, and they are most of them planted with wild chesnut and lime-trees.

The old town is said to have been walled eight hundred years ago. On the largest of its wooden bridges there is an engine that raises water, and distributes it all over the city; and there is a sort at the head of it, which is well guarded. The streets of this town, on the north side of the river (in which are the cathedral and senate-house) center in the market-place, wherein stands an old gigantic image, one of those erected in many of the German cities, by order of Charles the Great, by the name of Statua Rolandina; on which is an antient inscription, denoting it to be a testimonial of the liberty granted by Charles the Great to this city. On the opposite side of the market is a public-house, which, at the same time, serves as a sort of common hall for the several colleges or assemblies of the burghers and the council of trade.

There is a spacious wine-cellar under the senate-house, wherein are five huge vessels, each of which contains upwards of an hundred hogsheads, whereof four are always kept full of Rhenish wine, and the fifth is left empty, to gratify such as have the curiosity to enter it. There is one vault of choice old hock, the key of which is kept by the presiding burgomaster, and only a number of bottles left in the hands of the master of the cellar, to be sold at about a dollar, or four and six-pence a bottle. The custom, which afterwards became general in the other Hanse towns, of swearing new-comers by bread and salt, and making them free, on paying a fine of good liquor to the company, is said to have originated here. The city coins a little piece of money of its own, called a groat, which is worth about a halfpenny: an hundred and sixty-three of their yards make one hundred English.

The little town of Ottersburg is situated about fourteen miles north-east of Bremen: it has a strong castle, or pass, on the borders of the bishoprick, and was formerly the bishop's seat. It was twice taken by the Imperialists, and once by the Swedes, in the German civil wars. It has a pretty large borough on the river Wemme, from whence the road towards Bremen is very bad, sandy, and full of the branches of the river, in the middle of which is a fort, with four bastions, that commands a long dike, or causeway, with several cuts in it, over which are bridges.

On the other side of the town, at the distance of twelve miles, stood the monastery of Closterseven, charmingly situated, which is now a considerable borough, adorned with many fine gardens, and embellished with a handsome church. This is the place where, in 1757, the convention was concluded between the duke of Cumberland and the duke de Richlieu, the French general.

Besides the above, here is, 1. The large village of Scharmbeck, which gives name to a district. 2, 3. Hagen and Stotel, which give names to bailiwicks. 4. Bardel. 5. Neuenwalde.

Wildeshausen bailiwick, on the Hemte, has but an indifferent soil. The crown of Sweden, in 1700, mortgaged this bailiwick to the electoral house of Brunswick Lunenburg; and in 1720, at the peace of Stockholm, made over all right and claim thereto, as well as to Bremen and Verden.

The town of Wildeshausen, from which the whole receives its name. It is situated on the Hemte, contains about three hundred dwelling houses, a few churches, and some other public buildings; about half the inhabitants are Roman catholicks, who are not allowed the use of bells, church-music, or processions: nor are they permitted to be baptized, married, or buried by their own priests, but must have those ceremonies performed by a Lutheran minister. The vestiges of an antient abbey, and the ruins of an old castle, are still to be seen here.

The principality of Lunenberg-Zell is bounded on the north by the duchy of Lawenburg and the Elbe; on the south by Calenberg, Hildersheim, and part of Brunswick; on the east by another part of Brunswick, and the duchy of Mecklenburg; and on the west by Bremen, Verden, and Hoya.

The soil is in many parts sandy, heathy, and marshy; the banks of the Elbe, Aller, and Jetze, however, are fertile, and abound in wheat, rye, barley, oats, pease, buck-wheat,

wheat, pulſe, hops, alder, pines, beach, oak, firs, birch, flax, hemp, &c. Here are likewiſe plenty of horſes, cattle, ſheep, bees, veniſon, ſalt-ſprings, and lime-ſtone. The rivers Elbe, Aller, and Ilmenau, produce great quantities of fiſh, and, being all navigable, are of great advantage to the country in a commercial point of view.

This whole principality contains about two hundred Lutheran churches, which are under the direction of two general, and fifteen ſubordinate ſuperintendants. The manufactures are linens, ribbons, hats, bleached wax, gold wires, ſilver ditto, cottons, ſtockings, ſtarch, refined ſugars, wooden wares, barges ready built, ſmall ſhips and boats.

The king of Great Britain, on account of this principality, has a ſeat and voice both in the college of the princes of the empire, and the circle of Lower Saxony. The revenues ariſe from the demeſne, tolls on the Elbe, contributions, duties on cattle, beer, wine, brandy, and other commodities.

The principal places are the following; viz. 1. Lunenburg, the metropolis of the principality. This is a large city, ſituated on the river Elmen, or Elmenau, which is navigable from hence to the Elbe. It is twenty-ſeven miles from Hamburg, and ſixty-eight from Hanover. It was formerly a Hanſe-town, and an imperial city, and at preſent is ſuppoſed to contain about nine thouſand inhabitants. Here were formerly ſeveral convents, out of the revenues of one of which, viz. the Benedictine, an academy for martial exerciſes was founded, where the youth of the principality are taught the French language, dancing, fencing, and riding.

A Latin ſchool, conſiſting of four claſſes, was likewiſe founded, and well endowed, out of the ſame revenues. The ſuperintendency of theſe, and the eſtate appropriated to their ſupport, is veſted in a landſchaff director, and an aufreiter, who are both ſelected from the Lunenburg nobility. The firſt of theſe officers is the head of the ſtates of the principality, and the preſident of the provincial college. He aſſumes the title of excellency, and in public writings ſtiles himſelf, "By the grace of God, landſchaff-director, and lord of the manſion of St. Michael, in Lunenburg."

The public edifices are, three pariſh churches, three hoſpitals, a ſalt magazine, an anatomical theatre, the ducal palace, the town-houſe, the academy, the barracks for the garriſon, and the conventical church of St. Michael, in which the antient dukes lie interred, and where the celebrated table taken from the Saracens by the emperor Otho is depoſited: it is eight feet long, and four broad, was plated over with chaſe gold, and had a rim richly embelliſhed with precious ſtones of an immenſe value; but in 1698, a gang of robbers broke into the church, ſtripped this magnificent table of a large diamond, two hundred emeralds and rubies, and moſt of the gold.

Here are many rich ſalt-ſprings, a fifth of the product of which belongs to the king of Great Britain. The ſalt is the beſt in Germany. The other articles, in which the commercial part of the inhabitants deal, are wool, honey, wax, lime-ſtone, flax, linen, beer, &c. and warehouſes are erected along the borders of the Elmenau, for the reception of goods from all parts of Germany, to be conveyed to Lubeck and Hamburgh.

2. The town of Bugdorf, on the Aw, which gives name to a bailiwick and ſuperintendency. 3. Ahlden, on the Aw, where Sophia Dorothea, conſort of his Britannic majeſty George I. reſided, after their ſeparation, till her death in 1726. It is the ſeat of a bailiwick.

4. Ulrzen, which is a neat, little, compact town, at the conflux of the Wiper and two other rivulets, which form the river Elmenau: it is twenty ſix miles ſouth of Lunenburg, and thirty-three north-eaſt of Zell. It was formerly called Lawenwald, i. e. Lion Foreſt, and had its preſent name from the neighbouring monaſtery of Oldenſtadt, formerly called Old Ulſen. It is ſaid that the firſt Anglo-Saxons came to Britain from this place, and thoſe who returned hung up a gilt tin ſhip in the market-place, as a memorial of their ſucceſs, which continued there till 1646, when moſt of the town was burnt down, and never wholly rebuilt ſince; but the houſes are more ſplendid and regular than before, and the ſtreets larger.

5. Hudemuhlen, on the Aller. 6. Rethem, on the ſame river, and gives name to a bailiwick. 7. Garto. 8. Brome, on the Ohre. Theſe two laſt belong to the barons of Berufdorf. 9. Elſel, on the Aller, gives name to a diſtrict. 10. Soltau, at the conflux of the Soltau and Bohme, gives name to a bailiwick. 11, 12, 13. Klotze, Fullerfleben, and Gifforn, give name each to a bailiwick and ſuperintendency. 14. Wittengen, an old town in the bailiwick of Kneſebec. 15. Hoſſering, on the Hardau. 16. Badenleick, ſituated on a lake. 17. Wuſtro. 18. Blekede, on the Elbe. 19. Dalenburg, on the Retze.

20. The ſmall town of Hitzacker is ſituated in a little iſland in the Jetzer. Here is a great annual fair; and the bailiwick, to which the town gives name, contains the foreſt of Ghorde, which is about ſixteen miles in compaſs.

21. The town of Zell is ſeated on a ſandy plain, near the conflux of the Aller and Fuhſe, twenty-four miles north of Hanover, and forty-ſeven ſouth of Harburg. The town is antient, having a charter dated in 1203, wherein it is called Tſelle. It only conſiſts of three ſtreets that run parallel, but is well fortified, the ramparts being broad and high, well mounted with cannon, but not regular. Here are held the chief courts of judicature for this dutchy; and in 1485, its duke, Henry, built a palace next to that called the Hanover Gate, which is a ſquare building, with four platforms at the four corners, moated round. Several coaches may go in front on the terrace round the town, which is adorned with trees planted all along; and the adjacent fine gardens, orchards, and grottoes, form a very agreeable landſcape. There is but one church in the town, and that without a ſteeple. The French refugees have their church in the ſuburbs, which are very large. Here are ſtill a great many French catholics, as well as Proteſtants, and the former have a chapel. All the buildings are of timber, except the churches, the caſtle, and the houſe of correction, which are of brick. The elector has a regency here, which judges all cauſes without any appeal to the council of ſtate at Hanover. Betwixt this town and Harburg is a ſandy road, with ſcarce any thing but heath. The poſt ſtages, which are of four miles, are very ill ſerved, and the inns the worſt in Germany. Though there is a good deal of heath betwixt this town and Hanover, yet the country is very well cultivated; for the inhabitants not only make turf of the heath for fuel, but it alſo ſerves for paſturage and manure. By the river Aller, a trade is carried on from hence to Bremen.

The caſtle of Ahlen is in the neighbourhood of this town: the heireſs of Lunenburg-Zell, who was married to the late elector, and afterwards divorced, died in it, after thirty years reſidence; which was more a voluntary retirement than any ſort of confinement, and where ſhe had the beſt of uſage and reſpect, and full liberty to go whither ſhe pleaſed; and here the late queen of Denmark retired, after the unhappy treatment ſhe experienced at the Daniſh court.

During the war in 1757, a moſt barbarous tranſaction reduced the inhabitants of Zell to great diſtreſs; for, after the convention above-mentioned, the duke de Richlieu, commander of the French forces, by a piece of cruelty ſcarce to be paralleled in hiſtory, ordered not only the ſuburbs of Zell to be burnt, but even the orphan-houſe, which contained a great number of children, to be ſet fire to, when the whole was reduced to aſhes, and a great number of the poor innocent infants periſhed in the flames—the ſtain of which barbarous act will remain indelible on that *polite* nation to the lateſt poſterity!

The town of Bardewic on the Luke, is ſituated four miles from Lunenburg: it was formerly a ſtrong populous city, but is now a ſtraggling village: it had nine churches, of which the cathedral only is left, wherein there is ſtill a college of eight reſidentiary canons, and a few vicars; but the biſhopric was transferred to Verden, and the diſtrict about the church was transformed into kitchen-gardens. Over the gate, there are ſome barbarous Latin verſes, in an old Gothic character, which ſhew that the town was built two hundred and thirty-five years before Rome, and deſtroyed by Henry the Lion, in 1189. They write, that he took this revenge on the city becauſe it refuſed to acknowledge him, after he was proſcribed by the emperor Frederic I.

In the moſt eaſtern part of this duchy, ſtands the town of Daneburg, on the river Jetze, ſix miles from its influx into the Elbe, and thirty-three ſouth eaſt of Lunenburg. It is the capital of the rich and fruitful county of this name, which was given by its count, in 1642, to Otho, duke of Brunſwic-Wolfenbuttle, and yielded by the latter to the houſe of Lunenburg Zell, for their pretenſions to the city of Brunſwic. This country lies along the Elbe, having Mecklenburg on the north, the marquiſate of Brandenburg on the eaſt and ſouth, and the duchy of Lunenburg on the weſt. The Germans write this place Dannenburg, agreeable to the etymology of its name, which ſignifies a Mountain of Fir-trees.

The other towns in this dutchy are, 1. Snackenburg, a large trading town at the confluence of the Elbe and Weckt, or Beſſe, ſixty-five miles ſouth-eaſt of Lunenburg;

2. Harburg, on the Seeve, fifty miles from Zell. 3. Lucino, on the Jetze. 4. Lune, a village. 5. Medingen, on the Elmenau. 6. Winsen-an-der-Luke, a small city on the Luke. 7. Ebstorf. 8. Wienhausen, on the Aller. The two last contain convents for ladies. 9. Isenhagen, on the Ise, has likewise a Lutheran convent for ladies. 10. Walstrode, that is, Walo's Cross, on the river Bohome, twenty-five miles north-west of Zell, and forty south-west of Lunenburg, not far from the confines of the dutchy of Verden.

Grabenhagen principality is surrounded by Calenburg, Wolfenbuttle, Wernegerode, Blackenburg, Hohenstein, Klettenburg, &c. Some parts of it are fertile, and others very rich, producing wheat, barley, pease, buck-wheat, slate, marble, jasper, sulphur, zink, rye, oats, beans, flax, lime-stone, alabaster, sand-stone, salt, cobalt, gold, silver, lead, iron, and copper.

Here are several quarries, or mines, which are chiefly in the mountain and forest called the Hantz. The rivers are the Leine, the Oder, and the Ocker. The states are composed of the abbey of St. Alexander, and that of the blessed Virgin at Einbeck; the noble proprietors of mine manors, and the cities of Einbeck and Osterode, at which the diets are alternately held once a year.

The manufactures and commodities of the country are flax, linen, sand-stone, marble, copper, iron, lead, slate, timber, salt, sulphur, zink, starch, printed cottons, woollen goods, thread, fire-arms, vitriol, lapis calaminaris, powder-blue, &c.

The electors, on account of this principality, have a vote in the college of princes, both in the diet of the empire, and in that of the circle of Lower Saxony. The sovereign's revenues arise from the produce of the demesnes, and of the mines; and appeals lie from the courts here to the chancery of Hanover.

The principal places are the following: 1. Einbeck, the capital of the principality; it is situated at the conflux of the Ilme and the Leine, about forty-two miles from Hanover. It is well fortified by towers, bulwarks, ramparts, a double ditch, and outworks; and is surrounded by a fine country, very fertile, particularly in corn. It was formerly a free imperial town, and its magistrates still enjoy some valuable privileges. It is large and populous, divided into three parts, called the Munster, the Neustadt, and the Markt, and has a tolerable trade, particularly in beer, woollen manufactures, and printed cottons. It was formerly a bishop's see, the cathedral and chapter of which still remain. The latter consists of a Lutheran senior, nine canons, one vicar, and four vicarii ordinarii, who, together, send a deputy to the diet. The revenues of the antient abbey of the blessed Virgin are now enjoyed by a senior and nine canons, who have likewise a representative at the diets. A large district belongs to and is subject to the jurisdiction of Einbeck, which formerly coined gold, silver, and copper money, and was a town so early as 1256.

2. The mine town of Wildeman is surrounded on all sides by lofty rugged mountains. 3, 4. Lautenthal and Schulenburg. 5. Collerfeld. 6. St. Andreasberg, a mine-town, pleasantly situated. 7. Altenau, a small mine-town in a valley.

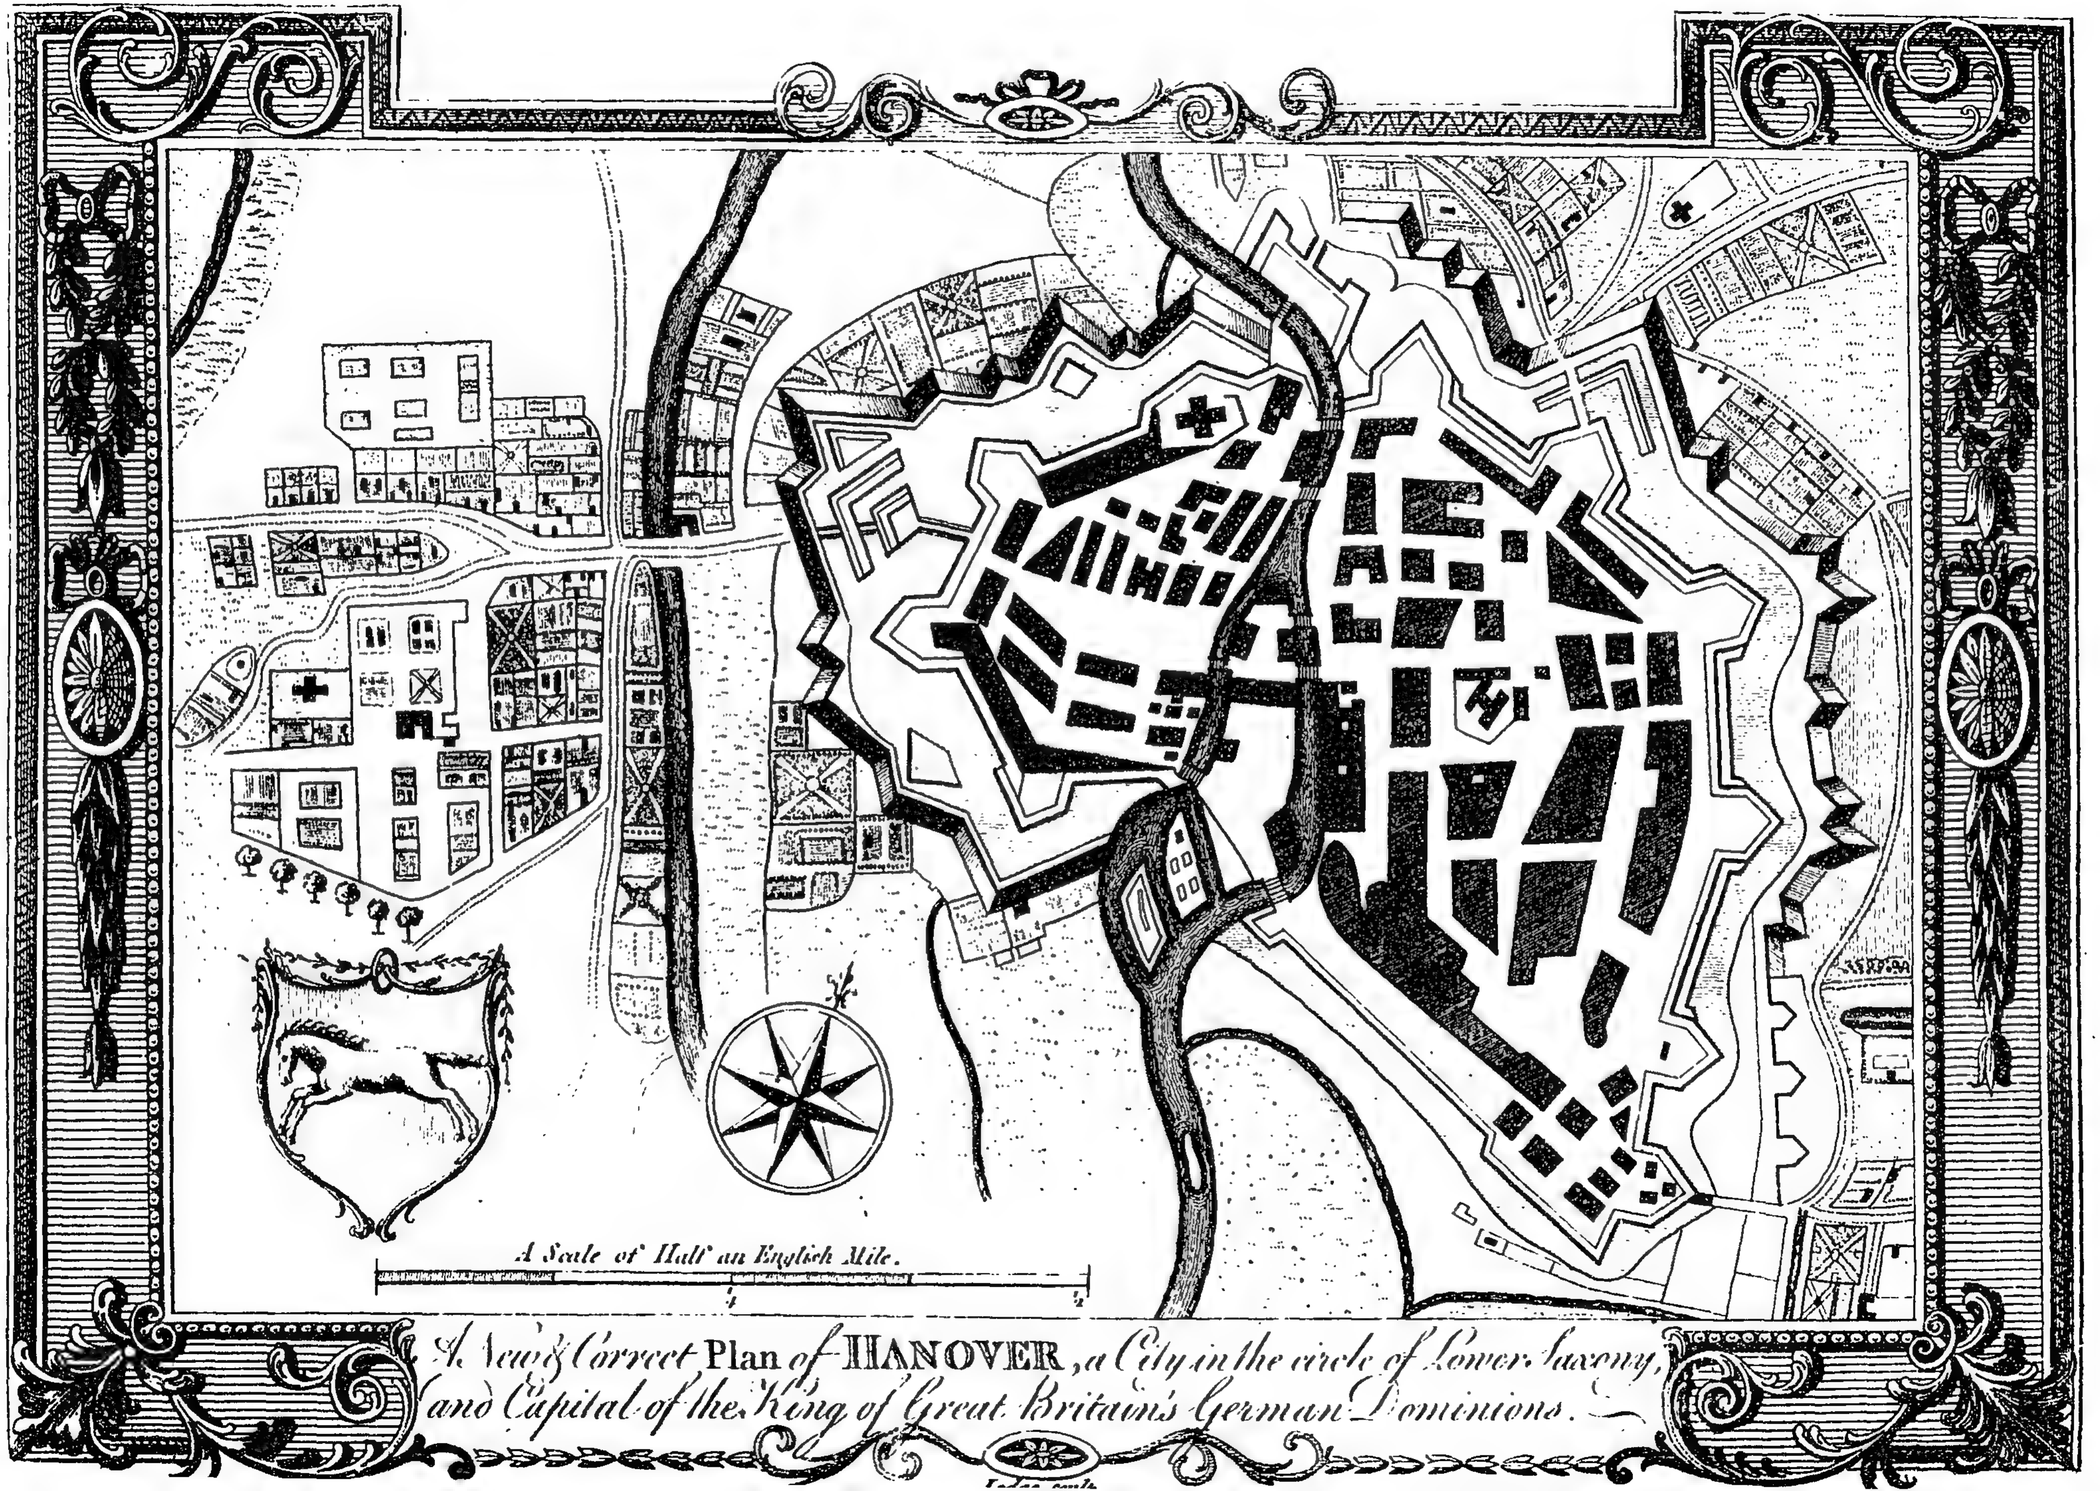
8. The large open mine-town of Clausthall contains near a thousand houses, and above ten thousand inhabitants. Here is a silver smalting-house and a mint, where about five hundred thousand rix dollars are annually coined. The place is defended by a garrison of invalids, and contains two churches, an orphan-house, a grammar-school, a mine-office, and a forest-bailiwick-office. Though the rest of the country is so pleasant, the air of the Hantz-Forest, almost the whole year round, is so cold, and rain, hail, snow, fogs, storms, &c. are so frequent, that the cultivation of the land cannot be pursued with any degree of success. On the mountain, which covers part of the forest, are produced oaks, ash, alder, pines, beech, aspin, birch, and firs; and this amazing plenty of wood is of the utmost importance, as, without it, the mining works could not be carried on. That part of the forest called Brunswic-Lunenburg-Hartz is divided into mine and forest-bailiwicks, part of which belong to the king of Great Britain, and part to the prince of Brunswic. The inhabitants of the Hartz are composed of miners, smalters, officers, handicraftsmen, wood-heavers, carriers, servants, ministers, and school-masters.

9. The town of Osterode is situated not far from the Hartz, and is divided into Old and New Town: it contains about three hundred houses, three parish-churches, a grammar-school, woollen-manufactory, &c. 10. Salzder Helden, on the Leine. 11. Herberg. 12. Scharzfels is defended by a castle situated on a high rock. The castle gives name to a bailiwick, which contains stone-quarries, iron-works, chalk-pits, copper-mines, a linen manufactory, and plenty of flax: in the neighbourhood are fine caverns, called the Scharzfel caves, where the ebur, fossile, and drop-stone are found. 13. Lautenbury, on the Oder. 14. Elbingerode, which gives name to a bailiwick, that abounds in pine, slate, warm baths, marble, iron ore, jasper, &c.

There is a mill, at the village of Lucashoff, for sawing marble; at those of Ludershoff and New Hutte, are flatting-mills; and at Konigshoff stood antiently the palace of Konigsburg.

Calenberg principality is bounded, on the south by Grubenhagon, on the north by Lunenburg, on the west by Schawenburg and Brunswic Wolfenbuttle, and on the east by the bishopric of Hildesheim. It is thirty-five miles in length from north to south, and eighteen in breadth from east to west. A considerable part of this principalty is mountainous and barren, but other districts are rich and fertile, and abound in corn, pulse, tobacco, beech, pine, aspin, flax, fruit-trees, oak, alder, birch, turf, coal, free-stone, mill-stone, horses, black cattle, sheep, venison, game, marl, iron ore, salt springs, medicinal springs, &c. and the streams abound with all kinds of fish.

In this principality are three protestant abbeys and six convents, of which three are inhabited by men and six by women. Lutheranism is the established religion; and the Lutherans have two hundred churches; the Calvinists are allowed five, and the Roman catholics six.



The commodities and manufactures of the country are wool, cotton, tobacco, flax, silk, gold lace, silver ditto, embroideries, leather, carpets, stone wares, iron, brass, copper, glass, galoons, fringes, tassels, gunpowder, linen, &c.

The French, in 1757, over-ran this principality, and did great damage, though they were soon dispossessed of it. The proprietor of it is entitled to a vote in the college of princes at the diet of the empire, and that of the circle. To the supreme tribunal of Hanover it nominates two assessors, and two to the high court of appeal at Zell. The revenues arise from demesnes, excise, a military tax, stamp-duty, card ditto, duty on corn, cattle, sheep, magazines, &c.

The principal towns and places are the following; viz. 1. Hanover, which is the metropolis and seat of the present elector, as it always was of the dukes, after the removal of their court hither from Calenberg, on the death of George, the last duke of Brunswick-Calenberg. It is pleasantly situated in a sandy soil, on the river Leine, which is navigable here for small boats. It is twenty-six miles south-west from Zell, twenty-seven west from Brunswick, and three hundred and sixty-five east from London. It was antiently called Lawenroda, from a neighbouring castle, subject to the counts of that title; and had its present name in Henry the Lion's time, because of a ferry here; Hanover in the old Saxon dialect, signifying as much as Have-over in English. It is divided by the river into the New and Old Towns. Most of the houses are of timber and clay, but there are many of brick and stone. The streets are regular, broad, and well furnished with lanthorns for the winter nights. It is regularly fortified, and the ravelins before the gates are well mounted with cannon. Here was once a monastery, since metamorphosed into a palace, at one end of the city, near the ramparts, though they scarce deserve that name. It is a large structure of free stone, with several square courts, and fine staircases; but the whole is rather commodious than magnificent: it is, however, adorned with charming tapestry and paintings, and very richly furnished. Here is a closet of rarities, with a noble collection of medals, antient and modern, and a very fine chapel. When the court is here, there are frequent concerts, balls, and assemblies; and a French comedy used to be acted three times a week, at a pretty theatre in the palace, where all people are admitted gratis, the expence being defrayed by the elector. Here is also an opera-house visited by all foreigners, the paintings and contrivance being not inferior to any in Europe of the kind.

The most remarkable of its churches are, 1. St. James's, in which there are two crucifixes, with fine pictures of the apostles and many saints, though the Lutherans pay no adoration to them. 2. That of the Holy Cross, much finer and neater than the other, having a double row of galleries round it from the altar, and upon the first the history of the gospel in fifty-three parts, painted by the ablest masters. Besides these, there are St. George's and

St.

A New & Correct Plan of HANOVER, a City in the circle of Lower Saxony, and Capital of the King of Great Britain's German Dominions.

St. Giles's churches. Here are four fairs a year, much frequented by foreigners. It was once a free imperial city, and a Hanſe town, when it had a flouriſhing commerce; but its chief trade now is in that ſweet, but muddy liquor, called Brewhan, which they ſend in great quantities to the neigbouring towns and villages. This liquor had the name from a famous brewer, one Conrade Brewhan, of this neighbourhood; who, having ſerved his time at Hamburg, came and ſet up here in 1526. Though it is not a large town, it is bigger than Zell. The Roman catholic church here was granted to thoſe of that communion by Erneſt, the firſt elector, as one of the conditions demanded by the emperor Leopold,* who inveſted him, and alſo engaged him to admit of an apoſtolical vicar in his dominions, and to permit him to reſide at Hanover. Here is a conſiderable number of Roman catholics, but the nobility and gentry are almoſt all Lutherans. The princeſs Sophia cauſed a new church to be built here for the French refugees, to which our king William III. was alſo a benefactor. Beſides a houſe here for orphans, there is one hoſpital within the town, and another without. This city has acquired a new luſtre ſince the acceſſion of the illuſtrious houſe of Hanover to the electoral college in the diet of the empire; but more eſpecially ſince its advancement to the throne of Great Britain; and is of particular note for the famous treaty concluded here in 1725, to counterbalance that of Vienna, between the Roman catholic powers.

There are ſeveral pretty ſeats in the neighbourhood; one particularly called the Fantaſy, or the Whim; and another Montbrillant, or Mount Pleaſance; which were built by two ſiſters-in-law; viz. Madame de Kilmanſeck (late counteſs of Arlington), and the counteſs of Platen. Theſe lead to the pleaſant palace of Herenhauſen (i. e. the Houſe of the Lord of the Manor), a caſtle built on the river Leine, by order of the prince who was the firſt elector, about the ſame diſtance north from Hanover as the palace of Kenſington from St. James's. A ſtrait walk leads up to the houſe, which is adorned with charming gardens; a wilderneſs of ever-greens; one of the largeſt and nobleſt orangeries in Europe; a perfect theatre cut out into green ſeats, with arbours and ſummer houſes on both ſides of it, for the actors to dreſs in, the whole ſet off with fine ſtatues, many of them gilt; and, above all, here are noble fountains, with very large baſons, beautiful caſcades, and water-works that throw the water up much higher than the famous fountain at St. Cloud in France, which was always looked upon as the moſt conſiderable of the kind till this was ſet up, by the direction of William Benſon, Eſq; whom his late majeſty took with him to Hanover, for that purpoſe, in 1716, made him ſurveyor-general of his works, and gave him other marks of his favour.

2. The village of Linner. 3. Rehburg is the ſeat of a bailiwick, which yields grain, flax, hops, oak, beech, coal, &c. 4. Ricklingen is a parochial village, near which is a ſtone monument erected to the memory of duke Albert of Saxony. 5. Neuſtadtam Rubenberge, on the Leine, gives name to a bailiwick and ſuperintendency. 6. Calenburg, from which the principality took its name. 7, 8. 9, 10. Marienſee, Wennigſen, Marienwarder, and Walſinghauſen, have each Lutheran convents for ladies, and ſend repreſentatives to the aſſemblies of the ſtates. 11. Marienrode. 12. Munder, on the Hamel. 13. Lockum. 14. Eldagſen. 15. Winſtorf, the ſeat of a ſuperintendency, and of a Lutheran abbey, to which belong an abbeſs and four conventualiſts, with ſeveral canons. The abbey has a ſeat and voice in the diets of the principality; it was founded in 870, by a biſhop of Minden.

16. Hamelen, which is a very ancient city, twenty-three miles ſouth-weſt from Hanover, and forty-one ſouth from Brunſwick. It is ſituated in a fine country, on the river Hamel, from which it takes its name. The Hamel diſembogues itſelf into the Weſer, on which an admirable ſluice was finiſhed in 1734, at a great expence. There is likewiſe a bridge of nine wooden arches over the Weſer. The other public edifices are an abbey, two Lutheran churches, a Calviniſt ditto, barracks, an hoſpital, a poor-houſe, a town-houſe, and a free ſchool.

Woollen, ſilk, linen, and leather manufactories, are carried on here. The magiſtrates are allowed to coin money, and have very extenſive privileges, and civil and criminal juriſdiction within their liberties, which contain many villages, foreſts, a ferry, &c. The abbot of Fulda, who was formerly ſovereign of the town, ſold it to the biſhop of Minden; and when the latter came to take poſſeſſion of it, the citizens oppoſed him, but were defeated with great ſlaughter, near Sedemunde.

17. The town of Bodenwerder, which is ſubject to inundations. 18. Lauenau gives name to a bailiwick. 19. Reker. 20. Erzen, on the Humme. 21. Sprunge gives name to a bailiwick. 22. Lawenſtein, the capital of a bailiwick. 23. Hemmendorf, on the Saal. 24. Salz-Hemmendorf, a borough. 25. Dumgen. 26. Grohode. 27. Polle, on the Weſer, the ſeat of a bailiwick.

28. The town of Gottingen is ſituated on the New Leine, which is a canal drawn from the Old Leine, and about fifty miles from Hanover. It is ſtrong, well-built, and well-paved. The ancient gymnaſium was, in 1734, converted by his Britannic majeſty, king George II. into an univerſity. Its library is the beſt in Germany: and here is alſo a fine obſervatory, an anatomical theatre, a phyſic-garden, a ſchool for teaching midwifery, an academy of exerciſes, ſciences, and belles lettres, and a German ſociety, which are all included under, and belong to, the univerſity. The Latin ſchool has eight maſters, and is under very good regulations. Here are an armoury, ſix Lutheran churches, and one Calviniſt ditto, an alms-houſe with a church belonging to it, and an orphan-houſe. The ſauſages made here are in great eſteem.

On a hill, in the territory belonging to the town, antiently ſtood an imperial burgh and palatine town, called Grone, which was the principal reſidence of the Saxon emperors after Otho the great. The town's eſtate and juriſdiction are very conſiderable, conſiſting of ſeveral villages, woods, meadows, and paſtures. It was formerly one of the Hanſe, and had a mint for coining. This town was for ſome time in the hands of the French, namely in the campaigns of 1757 and 1758.

29. Lauenforde, on the Weſer. 30. Norton, on the Leine. 31. Hedemunden, on the Werra. 32. Sichelſtein (in Engliſh, Sickle-ſtone). 33. Burſfield. 34. Northeim, on the Rhume. 35. Hardegſen, on the Eſpolde. 36. Uſlar, divided into the Old and New, the former of which is walled. 37. Dransfield, between Goſſingen and Minden. 38. Moringen, on the river Mohr. 39. Munden, ſituated in a vale on the Fulda, which a little below joins the Werra, and then the united ſtreams take the name of the Weſer. Theſe rivers, with the iſlands they form, and the neighbouring gardens, hills, woods, &c. afford a moſt delightful proſpect. The buildings are two Lutheran churches, one Calviniſt ditto, a bridge over the Werra, a free-ſchool, and barracks for a regiment of ſoldiers. The gardens within and around the town amount to the amazing number of two thouſand; and the manufactures are ſilk, flax, and tobacco.

This being the commercial centre for Heſſe, Thuringia, Nuremberg, Franckfort, Franconia, Bavaria, and all parts of Saxony, a great number of factors reſide here; and none, who are not freemen of Minden, are allowed to trade beyond this town, but muſt conſign their goods to factors here; and whatever is brought in any veſſel muſt, according to the ſtaple weight, be unladen here. On Tueſdays and Fridays a veſſel goes up the Fulda from hence to Capel, which none but Freemen of Munden have a right to navigate. The French had for ſome time poſſeſſion of this town, in the laſt war, in the reign of George II.

Wolfenbuttle principaliy is part of the duchy of Brunſwic, being divided into two parts by the dioceſe of Hildeſheim and the principality of Halberſtadt. The northern port is rather level, and produces conſiderable quantities of grain, flax, hemp, pulſe, fruits, cattle, ſilk, &c. The ſouthern parts contain ſeveral mines and ſalt-works. The ſtates deputize repreſentatives to the diets, which are held at Brunſwic four times a year. The chief manufactures are flax, ſilk, wool, tobacco, glaſs, lead, iron, ſteel, porcelain, wax, blacking, &c. The high colleges for this principality are the privy-council, convent-office, chancery, treaſury, high court of juſtice, and conſiſtory. Lutheraniſm is the eſtabliſhed religion. The rivers are the Weſer, Leine, Ocker, Schimter, and Aller.

The town of Brunſwic, which is the metropolis of the country, ſtands ſixty-one miles weſt from Magdeburg. It had its name from the founder, Bruno, duke of Saxony, who built it in the year 861. It was once a Hanſe town, and an Imperial free city. Though at preſent much decayed from its priſtine ſplendor, it is ſtill rich and populous. It is ſituated on the Ocker, contains handſome houſes, is well paved, and very ſtrongly fortified. It is about two miles in circumference, and divided into the Old and New Town. The principal trade is in leather, butter, hops and mum.

The chief buildings are the ducal palace, which is capacious, magnificent, ſplendidly furniſhed, and contains many

many fine paintings, an excellent library, and a cabinet of curioſities; an armory, a cavalier-houſe, an academy for martial exerciſes, a college, a play-houſe, a cuſtom-houſe, a houſe of correction, a council-houſe in the Old and New Town, a mint, an orphan-houſe, two gymnaſiums, a college of phyſic, an anatomy and ſurgery-ſchool, a lazaretto, a caſtle, St. Leonard's hoſpital, a kind of college called the Templehof, which formerly belonged to the knight's templars; and the following churches; one for the Calviniſts, one for the Roman catholicks, and ten for the Lutherans, among which is the cathedral, dedicated to St. Blaſius, which contains the ducal burying-place, the records of the electoral family, and two large monuments of duke Henry the Lion, and his ſecond conſort. The chapter of this cathedral conſiſts of a provoſt, a dean, a ſenior, ten canons, and ſeveral inferior prebendaries and vicars: but the dean is the firſt member of the ſtates. The Lutheran foundation of St. Eyriac conſiſts of a dean, who is one of the ſtates, a great committee, and five canons.

The convent of Riddaghauſen is about two miles from Brunſwic; the ramparts of the city are planted with mulberry-trees, and the gardens belonging to the ducal palace are laid out in a very exquiſite taſte. Spinning was introduced here in the year 1530, by one Jurgen, a ſtatuary and ſtone-cutter. This was the firſt capital place that embraced the Reformation. The road from hence to Wolfenbuttle is paved, and lined on each ſide with trees. The Lutheran convent of the Holy Croſs has a church of its own, and is ſituated without St. Peter's Gate. The French got poſſeſſion of this city in 1757, but evacuated it in the following year.

Scheppenſtadt, on the Altenau, is the ſeat of a ſuperintendency; and in the village of Lucklum there is a commander of the Teutonic order.

The village of Salzdalum gives name to a bailiwick, and takes its own from a conſiderable ſalt-work in the neighbourhood. The ducal palace here has a fine large gallery, which contains above a thouſand pictures, by the moſt eminent maſters; and here is likewiſe a ſmall gallery, embelliſhed with many beautiful paintings. In the china cabinet are above eight thouſand pieces of exquiſite beauty, and in another above a thouſand enamels of Raphael de Urbino, admirably executed. The great gallery is two hundred feet long, fifty broad, and forty high, and the leſſer are an hundred and ſixty long and twenty broad. In the latter, beſides the above cabinet, are ſix ſmaller ones, for curioſities of art and nature. Adjoining to the palace is a convent, which ſends repreſentatives to the diets; was founded by duke Antony Ulric and his dutcheſs, dedicated to the Virgin Mary, and has a provoſt, a domina, and fifteen ſiſters of noble families. The garden, chapel, &c. are extremely grand.

The town of Wolfenbuttle, from whence the dutchy is denominated, ſtands on the river Ocker, ſeven miles ſouth-eaſt of Brunſwick, nineteen eaſt of Hildeſheim, and twenty-ſix north-weſt of Halberſtadt. It is the antient ſeat of the dukes, being ſtrong, by its ſituation near the marſhes, and ſo well fortified, that it is reckoned one of the ſtrongeſt towns in Germany; and here is an arſenal, well furniſhed. It is divided into two parts, one called Arx Guelphica, which is the ducal palace, ſo named from duke Ecbert, of the family of the Guelphs: the other, Henrickſtadt, from the founder, duke Henry. The palace, which is the ſtrongeſt and moſt ſtately that belongs to the duke's family, has noble apartments, rich furniture, coſtly paintings, and a library reckoned one of the beſt in Europe, which was founded by the learned duke Auguſtus. The librarian's catalogue, publiſhed in 1604, numbered the volumes at one hundred and ſixty-four thouſand; another in 1660, mentioned only twenty-ſeven thouſand, ſix hundred and ſixty-ſix volumes, and one hundred, fifteen thouſand, five hundred and four tracts, by fifty-ſix thouſand, three hundred and ninety-three authors. There are two thouſand MSS. particularly four hundred and thirty-eight folios of French embaſſies, tranſcribed from the French king's library; forty-one volumes written by the founder himſelf, twelve of which are on muſic, beſides his Commentary on Trithemius's Cryptography, and a very learned tract on the antiquity and myſtery of the game of cheſs.

The new church here is an admirable piece of architecture, and twenty-one dukes and dutcheſſes are interred under it: here is alſo an academy and a muſeum. The town is not half ſo big as Brunſwic. There is another palace of the duke's at Saltzdahl (about a league from the town, and from Brunſwic), the road to which is lined with a very fine row of trees. This caſtle, built by duke Antony Ulric, is as magnificent a ſtructure as any that has been raiſed by ſovereign princes; and, beſides its immenſely rich furniture, there is a numerous, but choice collection of pictures, in a great gallery, which is one of the fineſt rooms in all Germany; and there are two cabinets, one full of vaſes and urns, painted by Raphael, and the other full of the fineſt porcelane.

Twenty miles eaſt of Brunſwic and Wolfenbuttle, and near the frontiers of Magdeburg, ſtands the town of Helmſtadt, which has its name from the elms about it. Charles the Great built this town, anno 782: it is chiefly noted for the Academia Julia, or univerſity founded and richly endowed, about 1576, by duke Julius, and his ſon Henry Julius, who alſo furniſhed it with a good library. It has very conſiderable privileges, particularly one granted by the emperor Maximilian II. that its rector is to have for ever the title and dignity of count palatine. The elector of Hanover, and the duke of Wolfenbuttle, are joint ſovereigns, and have the direction of it alternately. No univerſity in Germany has made a better figure, or had more learned Lutheran profeſſors than this. The three faculties, on account of which it confers degrees, are divinity, law, and phyſic. Among the manuſcripts in its library, there is an antient Hebrew pentateuch, in two volumes, for which ſome Jewiſh rabbies offered a great ſum. The town is encompaſſed with walls, ditches, and ramparts: has three churches, and a fine ſuburb, called Oſtendorff. The faculty of divines here was charged with giving their opinion in the caſe of the marriage of the princeſs of Brunſwic-Wolfenbuttle, with the late emperor Charles VI. that a proteſtant princeſs might, with a ſafe conſcience, embrace the Romiſh religion; but they refuted it in 1708, by a public declaration, as a popiſh forgery.

The abbey of Gandersheim is ſituated on the borders of the biſhopric of Hildeſheim, eighteen miles ſouth-weſt of Goſlar, which was founded by a duke of Saxony, in the ninth century, for ladies of noble families; and its firſt abbeſſes were ſucceſſively the founder's three daughters. It is now greatly reduced, and depends on the duke of Brunſwic-Wolfenbuttle, who maintains an abbeſs, four canoneſſes, and eight canons. Though this abbey is in Lower Saxony, the abbeſs takes her ſeat among the prelates of the Rhine. It embraced the Reformation in the ſixteenth century, ſo that the abbeſs and nuns are Lutherans. Its bailiwick is about two miles in compaſs, and contains about twenty villages. There is a caſtle in the bailiwick, which is watered by the river Ganda, that runs into the Leine.

In this principality are alſo the following towns and places; 1. Scheningen, which has a ſuperintendency. 2. Konigſlutter, on the rivulet of Lutter. Here is at preſent a Lutheran monaſtery, governed by an abbot, a prior, and four conventuals. In its church lie buried the emperor Lotharius, his empreſs Richenza, and duke Henry the Magnanimous. It takes precedence of the other convents in the principality, and ſends a repreſentative to the diet, and the grand committee. 2. Supplengenbury, a commandery of the order of St. John. 3. Calvorde, on the Ohre. 4. Vorsfeld, a market-town on the Aller, is the ſeat of a bailiwick and ſuperintendency. 5. Heſſen. 6. Marienburg. 7. Marienthal. 8. Seeſen, the ſeat of a ſuperintendency and bailiwick. 9. Gittel. 10. Julius Halle.

The moſt remarkable places between the Weſer and the Leine are, 1. Holzmunden. 2. Stadt-Olendorf, the ſeat of a ſuperintendency. 3. Amelunxborn. 4. Eſcherhauſen. 5. Otterſtein, which gives name to a bailiwick. 6. Furſtenberg. 7. Greene, on the Leine. 8. Bevern, a market-town on the Bever.

Mecklenburg dutchy is bounded by Pomerania on the eaſt, by the biſhoprick of Lubeck, and the territories of Brunſwic and Lunenburg, on the weſt; by the electorate of Brandenburg on the ſouth, and by the Baltick on the north. It is ſituated between fifty-three degrees, ten minutes, and fifty-four degrees, forty minutes, north latitude; and between thirty-one and thirty-four degrees, thirty-five minutes weſt longitude, from the iſland of Ferro, being an hundred and thirty-five miles in length, and about ninety at its greateſt breadth. It is well watered by ſeveral fine rivers and lakes, and conſequently well ſupplied with fiſh. It is likewiſe extremely fertile and rich, and yields plenty of corn, hemp, timber, paſture, ſheep, game, cattle, horſes, wine, butter, cheeſe, flax, fruit, wool, &c.

In this dutchy the peaſants are in a ſtate of villainage,

but the nobility enjoy very conſiderable privileges; the ſtates are compoſed of the nobility and towns, in the diets, which are ſummoned annually, and held alternately at Sternburg and Malchin. The inhabitants of this country are moſtly Lutherans, under the direction of their ſuper-intendents. There are alſo ſome Calviniſts and Roman catholics.

The whole dutchy is divided into three circles; viz. the circle of Mecklenburg, the circle of Wenden, and the circle of Stargard; the principal places in which are the following:

Schwerin, in the circle of Mecklenburg, is the capital of the dutchy, and a very pretty town, being ſituated on a great lake of that name, eighteen miles ſouth of Wiſmar, and thirty-eight ſouth-weſt of Roſtock. It was the ſee of a biſhop, tranſlated hither from Mecklenburg, in 1062, and ſuffragan to the archbiſhop of Bremen, but converted into a ſecular principality by the treaty of Oſnaburg, and granted to Adolphus-Frederic, duke of Mecklenburg, as an equivalent for Wiſmar, which was to remain to the Swedes. Henry the Lion, duke of Saxony, who fortified the town, built and endowed a cathedral here, and drove the pagan Mecklenburghers, by thouſands, into a place of the lake of Schwerin, where the then biſhop baptized them; from whence that part of the lake is ſtill called the Font. The duke of Mecklenburg has his reſidence here at a caſtle, in which he impriſoned the burgomaſters of Roſtock, in 1716, and, after ſix months confinement, ſet them at liberty, on renouncing, upon oath, their immunities and privileges.

Sternburg, a ſmall town on the lake, is one of the places where the diets are held. Boitzenburg, on the Baitze, has a priory and a toll on the Elbe. Panchim is ſituated on the Elbe, which divides it into Old and New Town. It had once a caſtle and a mint, and has ſtill two churches. Rhena is a ſmall town on the Radegaſt. Greves Mulen, Kropeliën, Kriewitz, Hagens, Newſtadt, Buko, Bruel, Wittenburg, Grabo, and Lyaz, are all ſmall towns of little conſideration at preſent.

The town of Domitz, forty-three miles eaſt of Lunenburg, ſtands in an iſland made by the conflux of the Elbe and Elda, with a caſtle on the former, where the duke of Mecklenburg Schwerin obliges ſhips to pay toll. This fort, which is ſaid to be the ſtrongeſt, if not the only one in the dutchy, is acceſſible but by a timber bridge. In 1328, the elector Lewis, of Brandenburg, alienated this town to the count of Schwerin, with the cuſtoms, and all the country on both ſides the Elbe, for ſeven thouſand five hundred marks of Brandenburg coin. The ſaid country, or moſt part of it, returned back to the Brandenburg family by marriage, but the caſtle remained in the hands of the dukes of Mecklenburg, who are ſtill poſſeſſed of it, together with the cuſtoms, which are ſaid to amount, one year with another, to eighty thouſand rix-dollars. In 1627, the Imperial general, count Tilly, took this town; but in 1631, it was retaken by the Swedes. In 1637, the Imperialiſts and Saxons took it again. The Swediſh general, Bannier, attempted to recover it in 1639, and blocked it up part of the following year, but did not reduce it till 1643. They generally ſend hither thoſe priſoners who are deſtined to a long confinement.

The town of Gadebuſh, twenty-two miles weſt of Wiſmar, is remarkable for a great victory obtained near it, in 1712, by the Swedes over the Danes. Mecklenburg, which gives name to the dutchy, and title to the dukes, though formerly a large town, is now but an indifferent village. It formerly had three convents, and was the ſee of a biſhop, but gradually declined as Wiſmar roſe. Dobberan, which was antiently a Ciſtertian monaſtery, is now only a hunting ſeat. Many great perſonages have been formerly interred in the church. Eldena, on the Elda, has a hill containing allum, a ſalt-work, and gives name to a bailiwick.

The circle of Warden contains the following places; viz. 1. Guſtrow, a pretty large town, well fortified, ſeventeen miles ſouth of Roſtock, and thirty-ſeven from Schwerin. It has a caſtle, which was the reſidence of the dukes of Guſtrow; after the extinction of which branch, the emperor adjudged the city and its dependencies, in 1697, to the late duke of Mecklenburg Schwerin, who reinforced the garriſon; but the troops of Sweden and Lower Saxony refuſed to quit the place. The duke, however, continued there till April, when three thouſand of the troops of the directors of the circle attacked and obliged him to ſurrender, and forced the duke and the Imperial miniſter to quit the place, into which they put a garriſon, and deſired the emperor to name commiſſioners to take the adminiſtration upon them till the ſucceſſion was ſettled, which was in 1701. Its caſtle is adorned with a moſt elegant garden, it is a grand edifice with four fronts, and is ſaid to be the fineſt in all the country.

2. Malcho is a ſmall town between the Plan and Calpin lakes. 3. Krako is ſituated on a lake of the ſame name. 4. Plan is on a lake from which it receives its appellation. 5. Dobbertin is a Lutheran convent for ladies.

6. Roſtock, is a free imperial city, and one of the Hanſe towns, ſtands on the river Warna, which falls eight miles below it into the Baltick ſea, and is ſeventeen north of Guſtrow, and twenty-five north-eaſt of Wiſmar. It is an antient city, walled in 1160, by Burevinus, king of the Heruli, and, as appears by its charter, dated in 1218, modelled by the laws of Lubeck. This town being, with the duchy, ſeized by the Imperialiſts in 1629, was retaken by the Swedes in 1631, and after the treaty of Munſter, they built a fort here, and by their garriſon demanded a toll of all ſhips, which very much leſſened the trade of the town, and induced many of the merchants to remove the Mecklenburg miniſters, who endeavoured to have it redreſſed at the treaty of Nimeguen, but without effect. Moſt of the town was burnt in 1677, but is ſince rebuilt with more magnificence. In 1712 it was ſeized by the Swedes, on pretence of its having furniſhed their enemies with proviſions; and in 1715 the duke of Mecklenburg, not being ſtrong enough to defend it againſt the Danes, agreed that, on condition of their not interfering with the civil government, they ſhould have a garriſon and a magazine here.

This city is divided into the Old, New, and Middle Towns, conſiſting of fourteen wide long ſtreets, beſides ſmaller, and many thouſand ſtately houſes. It boaſts of ſeven remarkable things, each ſeven in number: ſeven doors to St. Mary's church; ſeven large ſtreets centering in the market place; ſeven gates; ſeven bridges over the Warna; ſeven towers on the town-hall; ſeven great bells belonging to the town-clock, which chime at certain hours; and ſeven vaſt lime trees in their common garden. The chief commodity is beer, the ſame as formerly called Lubeck beer, which they export in great quantities; for ſome years ago they had two hundred and fifty privileged brewers, who brewed, it is ſaid, as many thouſand tons a year, beſides what private perſons brewed for their own uſe; ſo that the duke of Mecklenburg's revenue, from the exciſe on beer, is ſaid to be greater than from all other articles together. The Warna is navigable to the very walls; but large ſhips come no farther than Warnemunder, a little town ſeven miles lower, juſt where the Swedes built their fort. The city is governed by twenty-four aldermen, choſen from the nobility, univerſity, and merchants. Four are burgomaſters, two chamberlains, two ſtewards, or bailiffs, for the river, to cleanſe it, and take care of the haven at Warnemunder; and here are two judges, to determine all cauſes finally, coin money, and chuſe officers; but on matters extraordinary, a lower houſe of one hundred common councilmen, choſen out of the trades, is ſummoned to give their opinion.

The univerſity, one of the beſt and largeſt in Germany, was founded in 1419. The city, being at half the charges with the duke, chuſes nine of the eighteen profeſſors; and out of them the Rector Magnificus, who appoints their meetings, takes care of their treaſury, &c. During theſe two laſt centuries, this has been one of the moſt flouriſhing univerſities in Germany. The biſhop of Schwerin was, by charter, made perpetual chancellor, who deputed one of the oldeſt profeſſors vice-chancellor.

7. Teſzien and Laoga are both ſituated on the river Reckenitz. 8. Schwan on the Warna. 9. Iwenaſh, near Stavenhagen. 10. Dargem. 11, 12, 13, 14, 15, 16. Goldberg, Penzlion, Stavenhagen, Tetero, Neukalden, and Groyen, are ſmall inconſiderable towns. 17. Wahren, on the lake Calpin. 18. Robel, on the lake Maritz. 19. Malchion, on the borders of Pomerania; it is one of the places where the diets are held. 20. Sultz. 21. Ribnitz; has a nunnery for ladies, of the order of St. Clere.

Stargard circle contains, 1. New Brandenburg, ſituated on a lake; it ſends a deputy to the leſſer committee of the ſtates, has a grammar-ſchool, two churches, a ſuperintendent, and is celebrated for its hop trade. The neighbourhood is ſingularly pleaſant, and the inhabitants remarkably healthy.

2. Old Stargard gives name to a lordſhip and circle. 3. Friezland is a town on a lake, which gives name to a bailiwic. 4. Euſterbergh, a ſmall town. 5. Weſembergh is the principal place, in a fertile territory called Pomel,

the inhabitants of which are extremely benevolent and charitable. 6. Strelitz gives name to a branch of the ducal family, and is ſituated among marſhes. It conſiſts of New and Old, which ſtand at a ſmall diſtance from each other: the prince's palace, which is at the latter, is adorned with pleaſant gardens, and has a very elegant appearance. 7. Nemaro, a bailiwic. 8. Miro.

9. The town of Wiſmar ſtands among fens, on a bay of the Baltic, between Roſtock and Lubeck, twenty-five miles weſt of the former, and eaſt of the latter, and fifty-five miles weſt of Stralſund, eaſt, long. twelve degrees eleven minutes, lat. fifty-four degrees, three minutes. It is ſuppoſed to have been built in the thirteenth century, out of Mecklenburg's ruins; for, being of timber, it was burnt in 1262, and rebuilt handſomely of ſtone, and its government modelled in 1626, upon the plan of Lubeck; ſo that it ſoon became one of the Hanſe towns, ſtrongly fortified, and the harbour for their men of war. It was taken by the Imperialiſts during the civil war, 1629, but retaken by the duke of Mecklenburg and the Swedes in 1632, and by Munſter treaty given to the latter. It has been ſeveral times taken by the Danes, but again reſtored to the Swedes. In 1690, its magazines were blown up by lightning, moſt of the new city deſtroyed, with one of the new gates; the arſenal, churches, and houſes damaged, thirty people killed, and two hundred wounded. In 1711 it was beſieged by the Danes; and in 1716 ſurrendered to the allies, Danes, Brandenburgers, Hanoverians, Saxons, and Ruſſians, who found in it three hundred cannon, a vaſt quantity of bombs, grenadoes, and ammunition. In 1720 it was reſtored by treaty to the Swedes, on condition that the walls and fortifications ſhould be demoliſhed; in which ſtate it now remains.

The houſe of Mecklenburg is divided into two branches, namely, Schwerin and Strelitz. The latter commenced with duke Adolphus-Frederic II. younger brother of the duke of Schwerin, and grandfather of the preſent duke of Strelitz, Frederic IV. who was born May 5, 1738, and ſucceeded to the government December 11, 1752. He was made a knight of the garter in 1764, and has three brothers, and two ſiſters; the younger ſiſter is our moſt gracious ſovereign, Sophia Charlotte, who was born May 19, 1744, and married the 8th of September, 1761, to his preſent Majeſty George the Third, king of Great Britain, &c. This princeſs wrote an elegant epiſtle to the king of Pruſſia, during the war which ended with the reign of king George II. which has been equally admired for the humanity of the ſentiment, and elegance of the diction. Her Majeſty's ſhining qualities have endeared her to the Britiſh nation; being no leſs admired for her literary accompliſhments, than reſpected for her amiable diſpoſition, and thoſe virtues which adorn her ſex.

The imperial city of Hamburg, the greateſt emporium of Germany, and the ſecond of the Hanſe towns, ſtands on the north ſide of the river Elbe, twenty-ſeven miles north weſt of Lunenburg, thirty-ſeven ſouth-weſt of Lubeck, fifty-five north of Zell, fifty-one ſouth of Sleſwick, ſixty-five north-eaſt of Bremen, ſeventy-two from the mouth of the Elbe, one hundred and fifty-five ſouth-weſt of Copenhagen, one hundred and ninety-five north-eaſt of Amſterdam, and four hundred and ſixteen north-weſt of Vienna, in ten degrees eleven minutes eaſt longitude, and fifty-three degrees forty-one minutes latitude. The town owes its origin to Charlemagne, who, to ſtop the progreſs of the Sclavi, or northern Sclavonians, cauſed his lieutenants to build two forts on the Elbe, one of them at this place, which thoſe people took and demoliſhed in the year 810, but Charlemagne rebuilt it next year, and erected a church, the only one in Hamburg for above three hundred and fifty years. It was firſt declared a free and independent city in 1220. The emperor Maximilian, in the diet of Augſburgh, declared it free and imperial. Since that time, Hamburg has been inveſted with ſovereign power within its own juriſdiction, like other imperial cities; and in the year 1641, was accordingly ſummoned to the diet of the empire, though, as both Denmark and Holſtein proteſted againſt it, the Hamburghers have not yet enjoyed their right of ſitting and voting there. Great privileges have, from time to time, been granted them by ſeveral emperors. And, for their keeping a light houſe at Helgoland, above-mentioned, which is four German miles within the ſea; they are alſo excuſed paying toll at Stade to our king, as Elector of Hanover; yet the kings of Denmark have ſince compelled them ſeveral times to pay tolls at the caſtle of Gluckſtadt.

They derived their chief ſecurity from the continual jealouſies between Sweden and Denmark; but in 1712, on occaſion of the northern war, the Danes, Muſcovites, and Saxons, having their armies in the neighbourhood, made their ſeparate demands, with threats in caſe of refuſal: and they were obliged to compound with the firſt for two hundred and thirty thouſand dollars, and with the ſecond for two hundred thouſand. Denmark has ſix times extorted money from it ſince 1645. At the firſt time it received one hundred and twenty thouſand crowns; in 1679, two hundred and twenty thouſand; in 1686, two hundred and forty thouſand, which they gave the Danes to buy off the ſiege; two hundred thouſand at another time; one hundred and eighty thouſand in the war with Sweden, and two hundred and forty-ſix thouſand in 1712, after which the late czar got two hundred thouſand crowns of them on ſome other pretences. In 1713 the city was viſited by a plague.

It is very advantageouſly ſituated, both for domeſtic and foreign trade. It has ſuch a port and river as none in Europe, except the Thames, excels. Beſides the Elbe, which enters the German ocean here, they have a channel open to the Trave, for the ſake of a communication with Lubeck and the Baltic, without being at the trouble and hazard of going about by the eaſt ſea, round the coaſt of Jutland and the Scaw, and without the obſtructions of the toll, and other difficulties of the Sound; ſo that the veſſels in the Trave are within forty miles of the Baltic, whereas it is upwards of four hundred miles round Jutland, &c.

The trade of this place exceeds that of any city which has no kingdom or republic annexed to it; and the exports and imports of it ſingly exceed thoſe of many great kingdoms, even in Germany. The Elbe, and many great navigable rivers that fall into it, after a courſe through ſome of the largeſt, richeſt, and moſt trading parts of Germany, furniſh it with all the product and manufactures of Auſtria, Bohemia, and Upper and Lower Saxony. By the Havel and Spree it has trade with Brandenburg electorate; and by a canal from the Spree to the Oder, its commerce extends into Sileſia, Moravia, Poland, almoſt to Hungary: ſo that it has more manufactures, &c. for exportation, than moſt cities in the world. The principal exports (chiefly to Great Britain) are of various kinds of different countries; particularly Sileſia diapers, and the lawns of Miſnia and Luſatia; German linen from Oſnaburg, Lunenburg, &c. Hamburg dowlas, and other ſtrong linens, from Lower Saxony; coarſe linen, barras, crocus, hinderlands, and many other ſorts from Lower Germany; linen-yarn from the ſame countries; tin-plates, braſs, iron, and ſteel wire, chiefly from Upper Saxony; clap-boards, pipe and hogſhead ſtaves, wainſcot boards, oak plank and timber, and kid ſkins from Brandenburg; corn from many provinces, chiefly Brandenburg and Saxony. Of the number of articles which they import from abroad, the chief are the woollen manufactures of England. The value of ſuch from Yorkſhire only is ſaid to be above one hundred thouſand pounds. The article of Engliſh ſtockings formerly came to above twenty thouſand pounds per annum; and all Engliſh goods vended here, amount to ſeveral hundred thouſand pounds annually.

The Engliſh merchants, having great privileges, make an extraordinary figure here. They appear as a body, hold a court, with particular juriſdiction and powers among themſelves; and as they are called in London the Hamburg company, ſo they are here called the Engliſh hans or ſociety. They have a church and miniſter of their own. The Engliſh are numerous, this being ſtill the ſtaple of the Engliſh trade. They have the ſame privileges to import herrings, as the Dutch are allowed.

The Hamburgers drive great trade to Ruſſia and Livonia; and for goods ſent to the north of the empire, and to Poland, they have great returns, not only in linen, yarn, and fine flax, but in honey, wax, anniſeed, lintſeed, drugs, &c. all by the Oder into the Spree, and ſo into the Elbe, in the marquiſate of Brandenburg; and therefore the Danes cannot interrupt this trade, nor obtain any part of it. Above two hundred Engliſh ſhips alone come into this harbour in a year, though moſtly from Spain, Portugal, and Italy, from and to which the Hamburg merchants pay them double the freight they do for their own ſhips, becauſe the Engliſh being free from the Turks by their Mediteranean paſſes, they ſave more than that by inſurance. Indeed they, in 1751, aimed at taking much of this trade into their own hands, on their own bottoms, &c. but happily the king of Spain ſo deeply reſented their Treaty with the piratical ſtates of Barbary, and eſpecially furniſhing them with warlike ſtores, &c. that he not only inhibited commerce with Hamburg, but laid an embargo on

on their goods, &c. in Spain. But on reſtraining them from any more ſuch trade with the Barbarians, the difference ſubſided.

Hamburgh has a great ſhare in the Greenland whale-fiſhery; and the fins and whale-bone is a manufacture managed by its people. It commonly ſends fifty or ſixty ſhips a year in this trade; ſo that they export great quantities of oil and fins, though they buy from the Dutch more than their own ſhips ſupply. In war, it fits out ſhips of force to convoy the merchantmen, and may be ſaid to be ſtrong both at land and ſea, being able to arm twelve or fourteen thouſand men, beſides having a conſtant garriſon of near two thouſand. It exports great quantities of beer brewed here, and hath ſeveral manufactories, viz. weaving of damaſks, brocades, velvets, the richeſt ſilks, and ſugar-baking, here being as good loaf ſugar as is made in London, though indeed they are forced to buy their Muſcavado ſugars chiefly from Great Britain. Callico-printing employs numbers of people: and of late they have begun to print linens alſo. In ſhort, Hamburgh is become a rich and powerful city, and without diſpute, drives the greateſt inland trade, at this time, of any city in Europe, London and Amſterdam excepted. It has an undoubted right to a place in the diet of the empire. She has pretenſions alſo to her being a free city, as not to be ſubject to the empire like other imperial cities, and on that account always refuſes to pay contributions to the military cheſt in time of war; but then the Hamburgers, under colour of a particular treaty with the emperor, wiſely avoiding to embarraſs themſelves with the affairs of Germany in caſe of a war, do the ſame in effect.

The government is veſted in the ſenate and three colleges of burghers, and is a mixture of the ariſtocratical and democratical. Of the latter, becauſe all their taxes and impoſts are granted by the burghers, without whoſe conſent the ſenate cannot raiſe one penny, and becauſe the management of the finances is in ten of the burghers: of the former, becauſe they have a ſenate choſen out of the principal perſons of the republic, who alone have the powers of aſſembling and diſſolving the convention of the burghers; to whom the burghers that are managers of the finances are accountable, who treat with foreign princes without the intervention of the burghers, and who are veſted with almoſt every act of ſovereignty, but that of managing the finances and laying taxes. The government, thus conſtituted, is under the protection of the emperor, for which the Hamburgers pay him eighty thouſand crowns a year. But how little this has availed them, is too well known; and the protection they have from England, for the ſake of trade, is certainly their greateſt ſecurity.

The ſenate conſiſts of four burgomaſters, of whom three are lawyers, and one a merchant, (two of whom preſide alternately for a year), twenty-four ſenators, viz. eleven lawyers, and thirteen merchants; four ſyndics, who are all lawyers, and give their opinions as our judges do in the houſe of lords, but have no vote; and four ſecretaries, of whom the principal is called prothonotary: all theſe are, upon every vacancy, choſen out of their own bodies. Here is alſo a court of Admiralty, conſiſting of a burgomaſter, four ſenators, ſix merchants, and two maſters of ſhips, aſſiſted by a ſecretary, and a water-bailiff. Their law is the civil, or Juſtinian, and, in criminal cauſes, the ſtatutes of the emperor Charles IV. with which they have likewiſe their own ſtatutes, but both puzzled and obſcured by numberleſs comments, and contradictory precedents. The firſt or chief of the three colleges is that of the Ober-Alten (or principal elders), which conſiſt of three members, choſen out of each of the five wards of the city; has great power, like that of the tribunes at Rome; can demand of the ſenate to call a convention of the burghers, and even impeach a ſenator, and require a conference with the ſenate on that or other occaſions. When the three colleges, conſiſting in the whole of one hundred and eighty members are aſſembled, and the ſenate at the ſame time, which is in all extraordinary caſes, particularly, for laying taxes, the gates of the city are ſhut, a ſtrong guard is drawn up before the ſenate houſe, and centinels poſted at all its avenues. Each ward debates and votes by itſelf, and, when the queſtion is put by the ſenate, the majority of the five determines it. Their eccleſiaſtical government, of which the ſenate is the head, is managed by a conſiſtory, or convocation of the paſtors, archdeacons and deacons, of the five principal, and ſeven ſmaller churches or chapels; in all, 29.

The principal religion is the Lutheran, and the Calviniſts were obliged to go to worſhip at Altena till within theſe few years paſt, that they have been allowed one or two churches within the walls of this city; but this is a favour not granted to the Roman Catholics, againſt whom they were ſo exaſperated in 1719, upon a public attempt of their prieſts to make proſelytes in the city, that a mob ſtripped and demoliſhed a chapel that was building here by the Imperial reſident, together with the ſaid miniſter's houſe; for which the Hamburgers being threatened by the emperor (Charles VI.) with military execution, they were forced to find another houſe and chapel at their own expence, and to make good all the other loſs and damage, beſides paying a fine, and ſending two members of the ſenate, and two of the burghers, to Vienna, to beg the emperor's pardon; after which, he took the citizens into his ſpecial protection, and eſpouſed their cauſe heartily againſt the antiquated pretenſions of the Danes. They are obliged, however, to allow the Roman catholics their worſhip in the ambaſſadors houſes. They have here what they call a private confeſſion, previous to the holy communion, though it differs in nothing from ours that is general, and the abſolution the ſame; but even the pooreſt of the people here are forced to give a fee to the prieſt for ſuch confeſſion, which cuſtom, not known in any other proteſtant city, is reckoned the more inexcuſable in this, becauſe its churches are immenſely rich, and have great ſums of money at uſury, out of which they might afford the clergy a competent maintenance.

The fame of Hamburg is juſtly great for its care of the poor, here being more hoſpitals, in proportion to its bigneſs, than in any other proteſtant city in Europe: one, in particular, for orphans, like our Blue Coat hoſpital in London, the yearly revenue of which amounts to betwixt fifty and ſixty thouſand pounds. Sometimes they have above three hundred infants abroad at nurſe, who, when able to dreſs themſelves, are taken into the houſe. The boys that are qualified, are put out and maintained at the univerſity; the reſt are put out to trades; and the girls, after they can read, ſpin, knit, &c. are ſent to ſervice. The building is decent, but not very coſtly, and borders on one of the canals. There is a large ſumptuous hoſpital for receiving poor travellers that fall ſick, and another for the relief of maimed, antient, and decayed ſeamen; where alſo care is taken of the widows, as well as children, of thoſe who loſe their lives in the ſervice of the public. In that called the Oldeſt Hoſpital, one hundred and fourteen poor, old, blind, and dumb people, are maintained. There is St. Job's for thoſe poor that have the French diſeaſe; and a Peſt-houſe for thoſe that have the plague, or other infectious diſtempers; to which even people of the beſt rank come for cure, but pay for it to the houſe. There are many leſſer hoſpitals, beſides theſe, for poor widowers, widows, orphans, &c. and great numbers of free-ſchools; beſides two workhouſes, or houſes of correction, where they manufacture rugs, and coarſe kerſeys, with which thoſe confined there are cloathed, and where they alſo ſpin. In one of them, thoſe who have not performed their taſk are hoiſted up in a baſket over the table in the common hall, while the reſt are at dinner, that they may be tantalized with the ſight and ſmell of what they cannot taſte. Here are alſo ſocieties for making good loſſes and damage by fire. The houſes here are ſaid to be about thirty thouſand.

The churches are antient, large, and handſome fabrics, but open thoroughfares all day long, and in ſome there are bookſellers ſhops. Here are ſix lofty ſteeples, ſome of them covered with copper, which make a grand appearance, though the frames are only of timber. The great ſpire of St. Peter's is the higheſt in the city; that of St. Nicholas is ſupported by large gilt globes; St. Michael's ſteeple is four hundred feet high; St. Catharine's has a ſtately front, with abundance of ſtatues in niches; and the ſteeple is formed of ſundry lanterns, diminiſhing gradually to the laſt, which ſupports a ſpire, like St. Bride's in Fleet-ſtreet, but much taller. Round the middle of its ſteeple is a crown richly gilt. Its pulpit is of white marble, curiouſly carved, and adorned with figures, and other ornaments of gold; and its organ, reckoned one of the beſt in Europe, has ſix thouſand pipes. That called the Thum, or Dome, was the cathedral while the town remained an archbiſhopric, and was built about 830. The ſpire, and tower that ſupports it, are near three hundred and ſixty feet high. There ſtill belong a dean and chapter to it, though ſecularized, from whoſe court there lies no appeal but to the imperial chamber at Wetzlaer. Many of the counts of Schawenburg and Holſtein are buried here, whoſe names are writ in a fair catalogue, with their other benefactors, and hung up in the body of the church.

This

This cathedral, with the chapter, and a large number of houſes belonging to it, are under the immediate protection of his Britannic majeſty, as biſhop of Bremen, and independent of the city juriſdiction. There are five other very large churches here, and eight leſſer churches or chapels of eaſe. There is a Schola Illuſtris, or univerſity, here, well endowed, and furniſhed with ſix able profeſſors, of whom were lately the learned Fabricius, and M. Hubner the geographer.

The ſenate-houſe and town-hall is an antient, large, and noble ſtructure, adorned with the ſtatues of emperors, and the Nine Worthies; and a building is lately added for their new bank. Their exchange is fine, but inferior to ours in London; it is oppoſite to the ſenate-houſe. One part of the ſquare is planted with large trees, and the other covered with a hall, where the elders, or council of commerce, meet: at the other end of it is the public crane. On the ſtreet before the town-houſe the lawyers have a ſort of exchange, as the public miniſters have at an eminent toyſhop in the ſame neighbourhood. The emperor, and ſeveral princes of Germany, have their own poſt-houſes here, managed by perſons of their own appointment; but the poſt-houſe for England and Holland is the only one that can properly be ſaid to belong to the public. The Britiſh reſident and company have a ſtately hall here, built by themſelves; and the reſident has a power of judging ſuits and differences that ariſe among his countrymen. There is an opera or play-houſe here, chiefly for the entertainment of the reſidents, and other foreign gentry, of whom here are ſome from moſt trading kingdoms in Europe.

This city, which is almoſt of a circular form, and five or ſix miles in compaſs, is naturally ſtrong, and a great part of it lying upon iſlands. The walls and fortifications that lie open to view, are covered with graſs, and planted with rows of trees ſo high, than none of the houſes are to be ſeen without that ſide of the walls which is next to Altena. It has ſix gates, and three entrances by water, viz. two from the Elbe, and one from the Alſter. It is divided into the Old and New city by a canal, and ſurrounded by a fine high wall, with twenty-three bulwarks, beſides other out-works and fortifications, in the modern way, and a very deep ditch: there is alſo a noble line, or out-work, with other works, from the largeſt baſon of the Alſter to the Elbe, about half a mile above the town: and on the other ſide of that baſon, about the midway betwixt that and the Elbe, below the town, there is a very fine fortification, called the Star Sconce, ſo ſtrong, that the king of Denmark, with all his army, could not take it in 1686, after ſix weeks ſiege. In the New Town, towards Altena, there are large ſtreets of poor houſes, which the Jews chiefly inhabit.

The North and South Elbe, into which two channels that river is ſeparated, two or three miles above this city, having, with ſome ſmaller ones, formed divers beautiful iſlands towards Harburg, that belong to his Britannic majeſty, re-unite in one channel, about ſix miles below the city. Towards the eaſt it is waſhed by the little river Bille, and towards the north by another little river called the Alſter, which forms a very large baſon juſt without the town, and another, though not ſo large as that, yet of at leaſt one thouſand feet ſquare, within the walls of it; after which, it drives the public mills, and, paſſing by ſeveral ſluices and canals through the whole city, falls into the Elbe. Here are eighty-four bridges, thirty-eight water-mills (beſides ſix wind-mills), and ſix ſluices; and it has likewiſe ſix large markets. As the tide here flows in canals through moſt of the chief ſtreets, and runs four leagues above the city, that is, twenty-two from the mouth of the river, the town is frequently damaged by ſpring-tides, and many houſes and families have been ruined by tempeſts, that, eſpecially with a north-weſt wind, drives the ſea up into their channels; of which there were two melancholy inſtances in 1651, and 1719. Though the harbour is ſo commodious, and the river ſo deep, that large merchant ſhips come up to the walls, yet thoſe of an extraordinary ſize anchor at the New Mills, four miles below the town, where they unload in ſmaller veſſels. The ſtreets are generally crooked, but pretty wide, and outſtrip all Germany for high and ſtately houſes, moſt of them built of brick. The uſual way of reckoning here is, by what they call ſtivers and lubs, forty-eight of which make a dollar, or four ſhillings and ſix-pence. It is the cuſtom, that when a citizen dies, he muſt leave the tenth of his eſtate to the city; and foreigners, not naturalized, muſt pay a certain ſum annually, for liberty to trade.

Hamburg has a diſtrict belonging to its juriſdiction for twelve miles round, which abounds with excellent paſtures, intermixed with ſeveral conſiderable villages, and noblemens ſeats. It comprizes the bailiwicks of Rutzenbuttle (of which more hereafter), Bilwerder, Ochſenwerder, and Eppendorf. The four cantons of Alte-game, New game, Kirchwerder, and Roſlacke, are enjoyed by the Hamburghers, in common with the city of Lubeck: as is alſo a caſtle, with a little town and bailiwick called Bergedorf, of which they have been in poſſeſſion about four hundred years; and they put in a bailiff alternately, and garriſon the caſtle alternately, with an equal number of ſoldiers.

The merchants of this city are affable and civil, but too nice in ceremony and punctilio, and too tedious and fulſome in their compliments. They are ſaid to be very frugal in their own families, but altogether as liberal when they treat ſtrangers. They mightily affect gardens at the city gates, much in the taſte of thoſe of Holland. Coaches are ſo numerous here, though not very neceſſary, nor convenient, becauſe of the crookedneſs of moſt of the ſtreets, and the narrowneſs of many, that there is hardly a merchant or conſiderable ſhopkeeper without one: and it is obſerved, that here are ten times the number of hackney coaches now, that there was an hundred years ago. The common carts here are only a long pulley, like what our vintners uſe, laid upon an axletree between two wheels, and drawn, not by horſes but men, of whom a dozen, or more, are ſometimes linked to thoſe machines, with ſlings acroſs their ſhoulders, drawing a fat of yarn or linen of two tons weight.

The graduates in law are very numerous here, though hardly a tenth part of them can be employed in the ſenate, or at the bar. The poorer ſort of them, that cannot make a figure there, are conſtant walkers at funeral proceſſions, for which they have a fee; as have, likewiſe, ſuch of the ſenators, principal elders, divines, and regular phyſicians, as therein aſſiſt. For the encouragement of ingenuity in mechanics, every artificer who can perform a piece of work beyond the ſkill of his brother artiſts, is made free of his company; a benefit not otherwiſe to be obtained but by ſervitude, or by marrying a freeman's widow, or daughter, or elſe at a very great expence. By the care of the magiſtracy, as well as of an inferior ſort of beadles, who have a reward for what beggars they pick up, and carry to the houſe of correction, there are few or none to be ſeen in the ſtreets; though this is aſcribed, in great meaſure, to the manufacture of knit ſtockings erected here, which is ſufficient to employ all their poor, were they more numerous than they are. There are pariſh-officers employed to carry wool to be carded and ſpun, and worſted to be knit by the poor at their own habitations; from whence they alſo fetch their work every Saturday, and pay them what they have earned. The ladies here are generally attended to church, not by a footman, but by a ſervant maid with a book, hanging by a ſilver-chain on one arm, and, if it be cold weather, with a braſs ſtove on the other.

The hangman's houſe is the common priſon of this place for malefactors. After ſentence is pronounced on them, which is always on Friday (as the execution is on the Monday following), they are carried, not to a dungeon, but to a handſome upper room, where they are allowed a good bed, with all reaſonable comforts ſuiting their condition, and conſtantly attended by ſome clergyman that has a living in the city, a duty which they are all obliged to perform by rotation. As, by their laws, no criminal is puniſhable here without pleading guilty; they have five degrees of torture to extort ſuch confeſſion, which are applied one after another, in proportion to the ſtrength of the evidence in ſupport of the accuſation. The interlocutory ſentence for this torture is only general, but the degree of it is locked up in the breaſt of the judges, who are always preſent, with a clerk, to write down the confeſſion, at a table with a curtain drawn round it; ſo that they can hear and ſpeak to the tortured criminal, without being eye-witneſſes of the cruelty; and can mitigate or extend it, according to the ſtrength or other circumſtances of the ſufferer.

There is a famous walk in this city, that runs by the great baſon of the Alſter, from the play-houſe to the heart of the city: It is called the Maiden's Walk, is one thouſand feet long, and above twenty broad, railed in and bordered on each ſide by a row of large high trees. On one ſide is the water, with ſeveral ſtairs; and on the other a row of noble houſes. Here are ſeveral convents, or cloyſters, remaining in this city, which, being ſecularized, are now Lutheran; one, in particular, the tenure of whoſe foundation is continued to this day by offering a glaſs of wine

wine to every malefactor that is carried by it for execution. Both ſtrangers and natives, of the beſt faſhion, carouze at an odd kind of a tavern here, kept in a public cellar, or cave, which has a prodigious ſtock and vent of old hock, &c. brings in a conſiderable revenue to the ſtate, and is under the direction of a deputy, kept in it by a ſelect number of the magiſtrates.

To conclude our account of this famous great mart, or petty republic, Mr. Roberts ſays, in his Map of Commerce, that corn is meaſured here by the Schepel, of which eighty-three make ten quarters Engliſh; and that one hundred Hamburg ells make but forty-eight and an half in London. The cities of Hamburg and Lincoln are obſerved to be exactly in the ſame degree of latitude, but it is conſiderably colder in the winter, and hotter in the ſummer, at the former, than at the latter, for a natural reaſon, we ſuppoſe well enough known.

Hildeſheim dioceſe, which is forty miles long and thirty broad, is ſituated between the rivers Leine and Ocker, and is bounded by Halberſtadt, on the north-weſt; Lunenburg-Zell, on the north, Grubenhagen, on the ſouth; and the other parts are circumſcribed by the duchy of Brunſwic. The bailiwic of Hunderſuch lies ſeparate from it, being incloſed by the principalities of Calenburgh and Grubenhagen.

The ſoil is fertile in grain, hops, oak, aſh, flax, pulſe, beech, and birch. It is likewiſe productive of black cattle, horſes, ſheep, game, ſalt, ſtone, iron ore, &c. The ſtreams which water it ſupply great quantities of fiſh; the ſtates conſiſt of the clergy, nobility, and burgeſſes, the manufactures are, iron ware, porcelane, cloth, ſtockings, &c. and the religion is Lutheraniſm.

The principal places are, 1. Hildeſheim on the Innerſte, the capital, which is fifteen miles from Hanover. It is an old faſhioned, large, irregular town. The principal buildings are, the cathedrals, ſeveral monaſteries and nunneries, many churches, the chancery, the nobility's hall, where the diets are held, the jeſuits college, the Jews ſynagogue, the Gymnaſium Andrianium, and the Latin ſchool of St. Lambert. The town was anciently one of the Hanſe, and the capital of Henry the Lion; and in the neighbourhood there are two rich abbies. The magiſtrates exerciſe civil and criminal juriſdiction, impoſe and collect duties, and apply them to public uſes, ordinances, &c. The magiſtracy and burghers are in general Lutherans.

2. Sarſtadt, a ſmall town on the Innerſte. 3. Gronau, on the Leine, gives name to a bailiwic. 4. Bekenem. 5. Elze, on the Saal. 6. Alfeld on the Leine. 7. Peina, on the Fuſe. 8. Weddingen, a commandery of the Teutonic order. 9. Knieſtedt. 10. Salt-Detfurt. 11. Mark-Olderdorf, on the Ilme. 12. Daſſel. 13. Salzliebendall. 14. Werle. 15. Lamſpringe, in the Lannue, where there is an Engliſh benedictine ſeminary.

On the ſouth ſide of the Goſe (which riſes to the ſouth-eaſt of Cellerfeld, and falls into the Ocker near the confines of Hildeſheim) ſtands the imperial city of Goſlar, which, though independent of the Brunſwic family, is uſually deſcribed in this country, becauſe it is ſurrounded with their dominions. It is a large ancient city, twenty-two miles ſouth eaſt of Hildeſheim, twenty-five ſouth of Brunſwic, twenty-ſix weſt of Halberſtadt, and forty north-weſt of Gottingen. It was built in 1201, by the emperor Henry I. who had a palace here, and alſo fortified it. Goſlar enjoys the ſame privileges as other free imperial cities, beſides an exemption from tolls in all markets of the empire, but three: in all the imperial writs, it is called, Nobile Membrum Imperii. The houſes are covered with ſlate. It is ſituated in a valley ſurrounded with mountains, in which are mines both of iron and ſilver, viz. thoſe of Steinburg, Hertz-berg, Ramelſberg, Klockenberg, &c. It has been the reſidence of the emperors, for the ſake, it is ſuppoſed, of hunting, and its treaſures under ground; and becauſe they have often aſſembled the ſtates here, it has been called a palatinate city. The inhabitants are employed either in digging the mines, or in cleanſing, tempering, and vending the metals and minerals of all ſorts, that are dug out of them.

In the year 1235, the emperor Frederic II. with conſent of the ſtates of the empire, granted to Otho I. duke of Brunſwic, the tenth of its mines. The houſe of Brunſwic has pretenſions to this city, and ſeveral of its princes have endeavoured to eſtabliſh them by force of arms, but hitherto in vain. The protectorſhip is in the hands of the king of Great Britain, as elector of Hanover, alternately with the duke of Brunſwic-Wolfenbuttle. In this city, Barthold Schwartz is ſaid to have diſcovered the art of making gunpowder. The Lutheran is the only religion tolerated here.

Schawen is a lordſhip, ſituated between the principality of Halbertſtadt, and the county of Wernigerode. It is now veſted in the duke of Brunſwic, though it formerly belonged to the abbey of Walkenreid.

Nordhauſen is an imperial city, ſituated on the Zorge, about twenty-one miles ſouth-eaſt from Goſlar. It was formerly one of the Hanſe towns, is celebrated for its curious works in alabaſter and marble, and carries on a great trade in the diſtillery branches. In the diet of the empire, it has the tenth ſeat on the Rheniſh bench of imperial cities, and the fourth among thoſe of Lower Saxony. The inhabitants and magiſtracy are Lutherans; to the latter of whom the elector of Brandenburg, in 1717, tranſferred all the rights and prerogatives to this city, in conſideration of being paid the ſum of fifty thouſand rix dollars.

Muhlhauſen, another imperial city, is ſituated on the Unſtrut, forty miles eaſt of Caſſel; it contains two Lutheran churches, with a Roman Catholic foundation for Auguſtine nuns. It poſſeſſes the ninth place in the bench of imperial cities in the diets of the empire, and the third in thoſe of Lower Saxony. It was formerly one of the Hanſe towns, and has at preſent a tolerable trade. In the fourteenth century this city purchaſed of the emperor Lewis, the office of imperial judge within the city and its precincts.

Blankenburg and Reinſtein counties are uſually conſidered together as one. They are ſo called from their towns; and lie in the eaſt part of the duchy, about twenty-four miles from ſouth to north, but narrow at both ends; and not above nine miles where broadeſt. It was much larger once, when it included the county of Wernigerode on the weſt. Theſe counties (together with Queidlinburg, Hohenſtein, Stolberg, and Schwaſtzburg, in Upper Saxony, where they are deſcribed), were formerly one province, and then called Hartzingow, i. e. the Hercynian country, having been a part of the Hercynian foreſt, now called Hartz, of which there ſtill remains great woods and parks, that abound with game. Beinſtein was claimed by the elector of Hanover as a vacant fief, but ſeized by the late elector of Brandenburg, as holding of his principality of Halberſtadt. Theſe counties are ſouth from Brunſwic, ſouth-weſt from Magdeburg, weſt from Halberſtadt, north from Thuringia, and eaſt from Hildeſheim. It is ſo cold a country, that though the ſnow lies on its mountains till Midſummer, the lands produce but little corn; but the valleys are filled with cattle. The inhabitants are ſtrong and vigorous, and many of them live to one hundred or one hundred and ten years of age.

There are iron mines in their mountains, one of which, called Brocken, or Brockſberg, the Bructerus of the Latins, is reckoned the higheſt in Germany. Betwixt Blankenburg and Elbingerode is a remarkable cave called Buman's Hole, from its diſcoverer Buman, which has a narrow entrance, but none ever found the end of it, though ſome of the miners have affirmed, they have gone as far in it as Goſlar, which is twenty miles. Large bones of ſtrange creatures have been often found in it, which the neighbouring gentry keep for rarities; and, among others, the ſkeleton of a giant. There are two great rocks near the convent of Michaelſtein, and not far from Blankenburg, which repreſent two monks in their proper habit, as nicely as if they were carved out, and therefore are called the Monks Craigs. Many caſtles are found in theſe countries on the tops of inacceſſible rocks, and ſome actually hewn out of the rocks, but they are not regarded. The moſt remarkable of them is that near Brockſberg above-mentioned, which the inhabitants ſay was built three hundred years before Chriſt by the Chauci, a branch of the Saxons, who had an idol and temple of Saturn here, which were deſtroyed by Charlemagne, who called the place Hartzburg. A ſalt ſpring being diſcovered at the bottom of this hill in the time of Julius, duke of Brunſwic, he built a ſmall town for the workmen, called Julius Hall, which is now grown rich, and large, by their trade in ſalt, copper kettles and pots, wire, &c. The people of this country are ſaid to be the dulleſt dolts in all Germany, and mere bigots to the inſtitutions and cuſtoms of their anceſtors.

This petty country was left by the late duke Anthony-Ulric, of Wolfenbuttle, to his ſecond and favourite ſon prince Lewis, to make him ſome compenſation for the right of primogeniture which he had newly introduced into his family, to that ſon's prejudice: for the Brunſwic princes had been long uſed to a partition of lands in their families, till that cuſtom, ſo pernicious to great ones, was

firſt

firſt aboliſhed by the Hanover branch. As this country neither gives its poſſeſſor the rank of a ſovereign prince, nor admittance into the college of princes at the diet of the empire; the then duke of Blankenburg, now duke of Brunſwic Wolfenbuttle, in order to procure himſelf both theſe privileges, made a treaty with the elector of Hanover, whereby the latter yielded him the vote and ſeat which he enjoyed in the diet for his duchy of Grubenhagen; and the duke engaged never to vote at the diet, but in conformity to the ſentiments of the elector; but after his deceaſe the vote and ſeſſion for Grubenhagen reverted to the elector.

The moſt noted town here, is Blankenburg, eight miles weſt of Queidlinburg, and ſouth-weſt of Halberſtadt, and forty ſouth of Wolfenbuttle, on the frontier of the principality of Anhalt. It is but a ſmall town, the houſes ill-built, and inconvenient. The duke, who has a caſtle here, has offered the inhabitants materials for building gratis, and done all in his power to inſpire them with a taſte, and the other arts, but without ſucceſs.

Ranzau, a county, is about ten miles long, and ſix broad, and has a ſoil tolerably fertile. It was formerly a bailiwic, but erected into a county of the empire by Ferdinand III. in conſequence of a ſettlement made by count Ranzau, ſtadtholder to his Daniſh majeſty, that it ſhould devolve to the royal family of Denmark, upon failure of iſſue male in his own. 2. Barmſtedt, in the Acce. And, 3. Elmſhern, on the ſame river, are the only places of any note here.

Ratzeburg principality belongs to the Strelitz family, but does not contain any place worthy of notice, except the town of Ratzeburg, where the regency, treaſury, and conſiſtory, are held, but which belongs to the duchy of Saxe-Lauenburg; and the ſmall town of Schonberg, which gives name to a bailiwic.

Schwerin principality is ſurrounded by the duchy of the ſame name, and the lordſhips of Wiſmar and Roſtock. It is twenty miles long, ſix broad, and was formerly a biſhopric, but ſecularized at the peace of Weſtphalia. The only places of any conſideration are, 1. Schelffe, a town contiguous to Schwerin. 2. Rhun, which gives name to a bailiwic. 3. Butzo. And, 4. Wahrien.

Haldon county lies along the Elbe, is eight miles in length, the ſame in breadth, and borders on the territory of Hamburg. It is very fertile, abounds in grain, fruit, cattle, and fiſh; has its own courts, eccleſiaſtical and civil, and was ceded in 1731 to the elector of Brunſwic. The inhabitants are Lutherans; the revenues amount to ten thouſand rix-dollars. Offendorff, a ſmall place on the river Meden, is the only town.

The duchy of Saxe-Lauenburg, is the fartheſt province of his Britannic majeſty's German dominions: it is watered by the Elbe, which divides it, and is bounded by Holſtein, on the weſt and north; by Lunenburg, on the ſouth; and Mecklenburg, on the eaſt. It is about eighty miles in length, its greateſt breadth is near twenty-ſix miles, and it contains about thirty thouſand inhabitants. The duchy is not very fertile in grain, but abounds in paſturage, cattle, ſheep, fiſh, flax, wood, &c. The manors, intitling to a vote and ſeat in the diets, are twenty-three in number, and the ſtates are compoſed of the nobility and burghers. Lutheraniſm is the eſtabliſhed religion; and the clergy in general of this duchy may be propoſed as patterns for thoſe of moſt other countries, for their attention to their ſacred function, their humility, humanity, zeal, and benevolence.

The privileges of the nobility and commons are derived from an act called the Lauenburg act, which was granted by George I. king of Great Britain, and confirmed in all its articles by his ſucceſſors. The Lutheran ſuperintendent, appointed by the king of Great Britain, is obliged to viſit the ſeveral pariſhes annually. The regency is ſubordinate to that of Hanover, and a high tribunal, the members of which are appointed partly by the king, and partly by the ſtates, but an appeal lies to Zell. The duchy has a conſiſtory of its own, and the colleges meet at Ratzeburg. Here are but few manufactures, but many commodities are tranſported from here to other countries, particularly rye, cheeſe, butter, wool, timber, &c.

The principal places are, 1. Ratzeburg, twelve miles ſouth of Lubeck, ſituated on an iſland in a lake of the ſame name: it is the ſeat of a regency, conſiſtory, and chief court of juſtice. 2. Lauenburg, thirty-five miles eaſt of Hamburg, on a hill near the Elbe. 3. Schwartzenbach, which gives name to a bailiwic. 4. Mollen, ſixteen miles from Lubeck. 5. Grunau. 6. Buchen, a village where diets are held.

SECT. III.

Containing a Deſcription of the Circle of WESTPHALIA.

THE circle of Weſtphalia ſtretches along the weſt-ſide of the Weſer, from the German ocean on the north, to Heſſia on the ſouth; and between Lower Saxony on the eaſt, and the Netherlands on the weſt. The greateſt extent from ſouth to north is about two hundred miles, and one hundred and fifty from eaſt to weſt. The air, eſpecially in the north part, is very cold, and great part of the ſoil is marſhy and barren; however, it has plenty of corn and paſture; but the fruit is very ordinary, and ſerves chiefly to feed the hogs, of which this country has good ſtore of an excellent kind, ſo that the bacon they ſend abroad, is very much eſteemed. The chief rivers are the Weſer, the Ems, the Lippe, the Roer, the Aa, &c. The accommodations a traveller may meet with here, are well enough expreſſed in this diſtich, very common in Germany: thus Engliſhed;

"Who travels in Weſtphalia, is ſure to find
"Long miles, ſmall-beer, coarſe bread, and lodging
"vile."

Weſtphalia is indeed the moſt wretched part of all Germany; and a modern author, who knew it well, ſeems to conclude, that the temper of the people is in a good meaſure influenced by its climate, the generality of them being not more amiable than the country. They are good ſoldiers enough, but have not talents in common with the other Germans; for they apply themſelves much more to breeding of horſes and hogs than to the cultivation of arts and ſciences. Three parts in four of this circle are a prey to the tyranny and avarice of certain petty princes both ſpiritual and temporal, who, having a great deal of vanity, and little revenue to ſupport it, ſtudy how to rob their ſubjects rather than to right them. The Weſtphalian nobility are perpetually boaſting of their noble and antient pedigree, and they fancy themſelves rich, but are in reality ſo poor, that a traveller would be glad of ſalt beef as well as ſour beer at their tables, and a piece of tapeſtry for their furniture, of no value but for its antiquity. There are in this country almoſt as many different religions as princes, there being Jews, Roman catholics, and Proteſtants, with their various ſubdiviſions; but the major part of the latter are Calviniſts. When Charles the Great had conquered the Saxons, and planted Chriſtianity among them, he erected ſeveral biſhopricks, to which he gave lands for their ſupport. In the part we are ſpeaking of, we find three very conſiderable ones, who have ſovereign princes, and increaſed their dominions at the general partition that was made of the great dukedom of Saxony, after the proſcription of Henry the Lion; and then it was, that the biſhop of Munſter enlarged his country, and that the archbiſhop of Cologne, obtained that part of Weſtphalia which he ſtill holds, and by that tenure ſtiles himſelf duke of Weſtphalia. The elector palatine as duke of Juliers, and the king of Pruſſia as duke of Cleves, are alternately condirectors of this circle, with the biſhop of Munſter.

This circle contains the following territories; viz. 1. The biſhopric of Paderborn, which is ſurrounded with the dominions of Hanover, Heſſe, and Munſter, has the county of Lippe on the north and weſt; Heſſe-Caſſel, and Waldec, on the ſouth; and Munſter, and the duchy of Weſtphalia, on the weſt. It is forty miles from eaſt to weſt, and, in ſome places, thirty from north to ſouth. It is not very fruitful in corn, but abounds ſo much with cattle, that drovers come hither from the neighbouring countries to buy at their fairs; and they have rich ſalt ſprings, and ſome iron mines, with plenty of deer and other game. It is ſo populous, as to contain twenty-five market towns, fifty-four pariſhes, ſixteen monaſteries, and twenty gentlemens ſeats, all ſubject to the biſhop, who is a prince of the empire. The chapter is compoſed of twenty-four capitular canons, who are all obliged to ſtudy in ſome French or Italian univerſity, muſt be twenty-one years old, and prove their noble extraction by four degrees upwards. The revenue of this ſee, which is a ſuffragan of Mentz, and now enjoyed by the elector of Cologne, is thought to be about twenty-five or thirty thouſand pounds a year, and the biſhop is able to raiſe three thouſand men. The famous battle in which Quintilius Varus, with the Roman army under his command, was routed by the Germans under Arminius, and the latter thereby freed from the Roman yoke, was fought in this biſhopric.

The

The royal ſociety, in their Tranſactions, publiſhed in December 1665, gives an account of a ſpring in this territory, which loſes itſelf twice in twenty-four hours; but returns with a great noiſe, and ſuch force, as to turn three mills not far from its ſource; for which reaſon it is called Bolder Born, i. e. the Boiſterous Spring. Morery ſays, it lies in Teutberg foreſt, near Oldenburg. And in the Tranſactions of January following, there is an account of another remarkable fountain, called Meiborn, two miles from Paderborn, which is a treble ſpring; two whereof, not a foot and an half from each other, have very different qualities; the one, limpid, blueiſh, lukewarm, and containing ſal-armoniac, ochra, iron, vitriol, alum, ſulphur, nitre, and orpiment: the other, cold as ice, turbid, and whitiſh, with much the ſame contents, but ſtronger in taſte, and heavier than the other: it is ſaid to be a perfect cure for the worms: all fowls that drink it are immediately thrown into convulſions, but ſoon recovered by an infuſion of common ſalt and vinegar: the third ſpring, which is about twenty paces from the other two, is of a greeniſh colour, but very clear, taſtes both ſour and ſweet, and is ſuppoſed to be a mixture of the other two.

Paderborn, which is one of the Hanſe-towns, is a large, well-built, fortified, and populous city, twenty miles eaſt of Lippe, forty north-weſt of Caſſel, thirty-five ſouth of Minden, near fifty ſouth-eaſt of Munſter, and about ſixty ſouth-weſt from Hanover. This city was once imperial till 1604, that Theodorick, its biſhop, became both its ſpiritual and temporal ſovereign. Some of its churches are magnificent. Its cathedral is a grand fabric, inferior to few in the empire. Otho II. gave a golden crucifix to it of ſixty pounds weight, to the value of ſixty thouſand guilders, or about eight thouſand pounds ſterling. The biſhop's palace is no contemptible ſtructure; but the biſhops, when they vouchſafe to viſit this ſmall benefice, which is not very often, reſide ſeven miles off, at Nienhus, a caſtle built in 1590, by the biſhop aforeſaid. A univerſity was founded here in 1592, by the biſhop of Furſtenberg, of which the jeſuits have the direction. Though this city ſtands not far from the Lippe, which joins with the Ulme, near Nienhus, juſt now mentioned, yet it has its name from the Pader, a rivulet which has its riſe juſt under the high altar of its cathedral, and Born, i. e. a ſpring.

Charlemagne, in 777, held a general convention here of the Franks and Saxons, where a great number both of Saxons and Weſtphalians were baptized. He built a church here that was deſtroyed by the Saxons, but rebuilt in 795, by Wittekind the great duke of the Saxons, who then it is ſaid tranſlated the ſee hither from Heriſtell, five German miles off, where it had been firſt planted by Charlemagne. In 999, the cathedral, with its library, &c. and the beſt part of the city was deſtroyed by fire; and it had the like misfortune in 1058, 1133, 1165, and 1340. This city was firſt walled round by its biſhop in the beginning of the eleventh century. In 1530, the inhabitants attempted to introduce Lutheraniſm; but the biſhop executed ſixteen of the principal citizens who had embraced it, and forced the reſt to abjure it. In 1622, the biſhop of Halberſtadt, who was duke Chriſtian of Brunſwick, made a conſiderable booty here, and ſent the gold and ſilver images of the ſaints to the mint. In 1633, it was taken by William Landgrave of Heſſe, but delivered up to the emperor in 1636. In 1646, it ſurrendered to the Swedes and Heſſians, but Francis William, Biſhop of Oſnaburg, ſoon drove them out.

The other places worthy of note, are, 1. Saltzkotten, the ſeat of the land diets. 2. Lichtenau, which has the ſame privilege. 3. The borough of Neuhaus. 4. The village of Altenbecken. 5. Wunnenburgh, which takes its name from a victory obtained here by Charlemagne over the Saxons. 6. Buren, on the Alure. 7. Lippelping, ſo called from the Lippe. The popiſh inhabitants of theſe parts aſſemble once a year with a lighted taper, and, headed by their prieſts, repair to the woods and groves, to viſit images and relics placed there in little chapels, which, except upon theſe occaſions, are never opened. 8. Warberg, one of the Hanſe, is the ſecond city in rank in the biſhopric, and the ſeat of a diet: in the neighbourhood are mines of iron and lead; and a ſtrong palatable beer is brewed by the inhabitants. 9. Brakel on the Bruckt. 10. Drinkenberg, a ſeat of the land diets. 11, 12, 13, 14, 15, 16, 17, 18. Klemenberg, Kalenburg, Borchholz, Borrenrich, Wilbaſſen, Neheim, Peckelſheim, and Dryburg, have all ſeats in the land diets. 19. Beverungen, near the confluence of the Bever with the Weſer. 20. Oldenburg, on the Houta. 21. Hurſtelle, Weſer, 22. Stoppleberg, gives name to a ſeignory. 23. Swalenberg belongs to a diſtrict. 24. Lude, on the Emmer.

The biſhopric of Munſter has Embden and Oldenburg, on the north; the county of Mark, and duchy of Weſtphalia, on the ſouth; the county of Benthem, and the United Provinces, on the weſt; and the biſhoprics of Oſnaburg and Paderborn, together with the county of Ravenſberg, on the eaſt. It is one of the largeſt and moſt conſiderable biſhopries, though one of the moſt diſagreeable countries in Germany. It is about eighty miles in length, and from twenty to ſixty in breadth, and contains thirteen bailiwicks, or diſtricts; nine of which belong to the upper, or ſouth part, and four to the lower, or north part. It is in ſome places both fruitful and populous; in others, neither. Its biſhop, to whom it is ſubject, is a prince of the empire, though ſuffragan to the archbiſhop of Cologne, condirector of the circle of Weſtphalia with the elector palatine and king of Pruſſia, and able to maintain eight thouſand men, his revenues having been reckoned at ſeventy thouſand pounds. He becomes heir to ſtrangers who die here without children: an unjuſt cuſtom, unknown to any other country in the empire. He has a right to the fiſhery in the river Aa, and a pretenſion to Brockeloe in Guelderland. The inhabitants of this dioceſe are Roman catholics, though there are among them ſeveral nobility and gentry that are Proteſtants. Their chief commerce is in hogs and Weſtphalia hams. They generally affected a neutrality when their neighbours were at war; and, though there are ſeveral fortreſſes in the dioceſe, paid twelve thouſand crowns per annum for the protection of the ſtates of Holland, who uſually have great ſway in the choice of a biſhop.

Its capital, as well as that of the circle, is Munſter, on the river Aa, which falls there into the Ems: it takes its name from a monaſtery built here by Charles the Great. It ſtands on a large fruitful plain, ſixty miles weſt of the Weſer, and eaſt of the Rhine, and ſouth of Breme; one hundred and twenty north of the Maine; fifty-one eaſt from Zutphen; thirty-ſeven ſouth-weſt from Oſnaburg; ſeventy-one north of Cologne; ſeventy-eight north-weſt of Caſſel; one hundred and five eaſt of Amſterdam; one hundred and thirty-four ſouth-weſt of Hamburg; and about four hundred and fifty north-weſt of Vienna. It is a large city, and well fortified by art and nature. The houſes are generally fair and well built of free-ſtone dug from a quarry at Bamberg, or Tamberg, but eight miles off. Its cathedral is a ſtately fabric; and the dean and chapter elect the biſhop. This city will always be famous in hiſtory for three remarkable tranſactions. 1. For the peace concluded here in 1648, between the Swedes, the emperor, and empire; which put an end to the war of thirty years, occaſioned by the houſe of Auſtria's tyranny and perſecution; a treaty which eſtabliſhed the fortune of many ſovereigns, the liberties of the empire, and the free exerciſe of the proteſtant religion in it; and a treaty, on which thoſe made ſince with Germany, and the north parts, have been in a great meaſure founded. 2. For an attempt by ſome enthuſiaſts, under a taylor, in 1553, to eſtabliſh a monarchy here by the name of Anabaptiſt. This ſect, or rather faction, grew ſo powerful by the toleration of the magiſtrates, that they ſet up this taylor, who was called John of Leyden, from his birth-place, for their ſovereign; who, pretending to revelation, ſent his emiſſaries about the ſtreets, commanding all the people to repent and be baptized, on pain of damnation. They grew to ſuch a head, that at laſt the taylor, aſſuming the title of king, they ſeized the magazine and town-hall, turned out the magiſtrates, and, being by their invitation, joined by all their perſuaſion from the neighbouring countries, they alſo drove out the other inhabitants, laid the city and country under inexpreſſible calamities, and perpetrated the moſt horrid villainies. In 1534, the biſhop beſieged the town in vain; but next year being aſſiſted by the landgrave of Heſſe, and the troops of Cologne, he took it by ſurprize, together with their leader, who, after being ſent about, with two of his favourites, to ſome courts for a laughing-ſtock, was executed by the hangman, who tore off his fleſh with burning pincers, and hung his bones in a cage on the top of the higheſt ſteeple in the city. 3. For the war, and other troubles the inhabitants had with their turbulent and bloody-minded biſhop Bernard von Galen, who challenging a certain juriſdiction in temporalities, that was never enjoyed by his predeceſſors, becauſe it had been always a free imperial city, and being backed by the three ſpiritual electors, laid ſiege to the city, which the burghers defended, by help of the Dutch, till the latter

end

end of October, when it was agreed with the biſhop, that for the future it ſhould be garriſoned partly by his troops: but the biſhop quarrelling with them again before three years were at an end, and the Dutch being diſſuaded by ſeveral of the German princes from re-aſſiſting them, they were obliged, in March 1661, after an obſtinate and bloody ſiege, to ſurrender to the biſhop, who overturned the whole frame of their government; and this city has been ever ſince ſubject to its biſhop.

The city is almoſt circular, having eight gates, and a fine citadel, called the Paulus Berg, or Paul's Mount, in its neighbourhood, which was built in 1663, by the biſhop above mentioned, to awe the burghers. The river Aa falls into the Ems at the new gate. The houſes are moſt of them in the antique ſtile, and the principal in the four markets, where among other buildings, the ſenate-houſe, and the hall for the companies of artificers, are the moſt remarkable. In the ſouth-eaſt part of the city is a large place, where the fronts of the houſes reſt upon pillars, and form a handſome piazza. It has five collegiate, and ſix pariſh churches, beſides the jeſuits college, a great number of convents, and other religious houſes, moſt of them ſtately piles, and ſome of them pleaſantly ſituate in the midſt of beautiful gardens.

The other places of chief note in this biſhopric, are, 1. Berkhem and Ahlen, on the Verſe. 2. Telget, on the Ems. 3. Warendoff, on the ſame river; all of which have ſeats in the land diets. 4. Coesfeld, the largeſt town in the biſhopric, next to Munſter. 5. Coppenburg, independent of the biſhop. 6. Warne, near the Lippe, ſends deputies to the diets. 7. Bocholt, on the Aa. 8. Memmen, at the influx of the Haſe and Ems. 9. Weerdt, on the Iſſel. 10. Cloppenburg. 11. Vechla, on a river of the ſame name.

Liege, alſo a biſhopric, is bounded, on the north by Brabant; on the ſouth by Luxemburg and Champagne; on the weſt by Namur and Hanault; and on the eaſt by Limburg and Juliers. It is about ninety miles long, but very unequal in breadth. The ſoil is fruitful, the air temperate, and the bowels of the earth rich in mines. The manufactures are, beer, ſerge, leather, pit coals, lead, arms, nails, iron, marble, mineral waters, &c. The rivers are the Maeſe and Sambre.

Three bodies conſtitute the ſtates, namely, 1. The chapter of Liege. 2. The nobility of the country. 3. The deputies of the capital. The biſhop is temporal and ſpiritual lord of the country, but in the latter capacity is ſuffragan to the archbiſhop of Cologne. The chapter conſiſts of ſixty perſons, who muſt prove their deſcent to be noble for four generations, from both parents, or have diplomas from ſome celebrated univerſity.

The moſt conſiderable towns are the following: 1. Liege, the antient Leodium, called Luyck by the preſent inhabitants: it is ſituated on the river Maeſe, twelve miles ſouth of Maeſtricht, thirty miles north-eaſt of Namur, and fifty miles ſouth-eaſt of Bruſſels, in fifty degrees thirty-ſix minutes eaſt longitude, and fifty degrees forty minutes north latitude, being about four miles in circumference; a populous and wealthy city, two branches of the river Maeſe, and other rivulets and canals, running through ſeveral of the ſtreets, and forming little iſlands.

No city in Germany can equal it in fine churches or convents: there are not leſs than one hundred churches, and a very numerous clergy belonging to the churches and monaſteries, which are ſo pleaſantly ſituated, and have ſuch endowments, that the city is ſometimes called the paradiſe of the eccleſiaſtics. Here is a univerſity of great fame, and, among other religious houſes, one of Engliſh nuns.

The citadel is capable of making a good defence; but the fortifications of the town are not very ſtrong, and are commanded by the neighbouring hills. Its biſhop, who was the elector of Cologne, put the citadel into the hands of the French, at the beginning of queen Anne's war; but the duke of Marlborough took it from them, anno 1702; and the French beſieging it again in 1705, the ſame general, on his return from Moſelle, obliged them to raiſe the ſiege.

This is pretended to be an imperial city, or ſovereign ſtate, by the magiſtrates of Liege; but they have ſuffered very ſeverely for diſputing the authority of their biſhop, who is, in fact, abſolute ſovereign of the city, as well as the biſhopric. He is choſen by the ſixty major canons, moſt of whom are of noble extraction. This biſhop is one of the moſt conſiderable eccleſiaſtical princes in Germany, having within his dioceſe fifty-two baronies, eighteen walled towns, and four hundred villages full of people, with a revenue of three hundred thouſand ducats per annum, and is able to maintain a body of eight thouſand men, without oppreſſing his ſubjects, who are chiefly Roman catholics. Their trade with Holland is the moſt conſiderable; great quantities of iron, ſtone, chalk, &c. are every day carried down thither by the Maeſe; for which they bring back in return herrings, cheeſe, butter, and all kinds of grocery.

A proverbial ſaying of the following tenor prevails here, namely: that "this city is the women's hell, the men's purgatory, and the prieſts paradiſe." And we ſhall not find this proverb fall ſhort of the truth, after being told, that the women draw their boats up the river, inſtead of horſes; they dig, ſaw, carry all kinds of heavy burdens, and are for the moſt part naked. The poor laity are without money in their pockets, and their conſciences are at the abſolute diſpoſal of their prieſts; which irkſome ſtate may juſtly be deemed a purgatory. But the prieſts have truly their paradiſe here; for the greateſt princes in Europe make intereſt to be of this chapter, becauſe the revenues and power of it exceed that of any other.

The other places are: 1. Huy, or Hugum, on the eaſt ſide of the Maeſe, and fifteen miles ſouth-weſt of Liege. 2. Tongres, or Tungri, ſituated on the river Jecker, ten miles north-weſt of Liege, and ten weſt of Maeſtricht. 3. Dinant, on the Maeſe, twelve miles ſouth of Namur. 4. Bouillon, on the river Semoy, thirty miles ſouth of Dinant, and about ten from the frontiers of Champain. It is a fortified town, and, with a ſmall territory annexed to it, gives the title of the duke to the biſhop of Liege. 5. St. Tren, famous for its Benedictine abbey. 6. Viſat, a fortified town on the Maeſe. 7. Herſtal. 8. Borchlaen, gives name to a county. 9. Hoorn. 10. Tranchimon, gives name to a marquiſate. 11. Verviers, on the Weze. 12. Cuivin. 13. Thuin, on the Sombre. 14. Haſſelt, on the Damer. 15. Lobbes, a Benedictine abbey.

16. The town of Spa, or Spaw, though ſmall, is a place of ſome note: it is ſituated on the little river Weze, twenty miles diſtant from Liege towards the ſouth-eaſt, and ſeven from Linſburg towards the ſouth-weſt. The avenues to it are exceeding ſtony and difficult; and it is ſo ſurrounded by mountains, that you cannot ſee it till you approach very near to it. In travelling to Spa, either by Liege or Aix-la-Chapelle, the way lies chiefly through uncultivated deſerts, and thoſe almoſt rocky. There are mountains on every ſide, which ſucceed one another, and over which travellers have made ſome imperfect traces of a road. The rains and tempeſts, which are frequent there, even make the paſſage ſometimes dangerous, by cauſing great ſtones to roll down from the precipice. The coachmen of the country are themſelves often at a loſs, becauſe the tracks are defaced between ſeaſon and ſeaſon.

There are four ſtreets in this town, in the form of a croſs: they may contain about four hundred houſes, for the conveniency of thoſe who come to drink the waters. It was formerly but a little village, which, through the fame of its mineral waters, has been enlarged, and erected into a borough. Here are five principal wells, which go down with ſteps, like that at Tunbridge: the chief well, called Pouxhon, or Pahon, in the market-place, is the moſt reſorted to, and has a Latin inſcription upon it, which expreſſes the qualities of the waters, and may be thus tranſlated: "Sacred to health: theſe waters open obſtructions, concoct crudities, dry up exceſſive moiſture, and ſtrengthen weak parts, provided you take them properly." They draw from this ſpring that prodigious quantity of water, which is conveyed into foreign countries, and eſpecially into England and Holland, ſealed up in bottles, with the town ſeal upon them.

There is a fountain of freſh water, next to the well of Pouxhon, which has its ſpring in a meadow half a mile diſtant from the town. The bottom of it is of blue ſtone, and the top of braſs; it ſpouts its water out of the mouths of three frogs, whence it is called the toads fountain by the people.

In a wood about two miles diſtant from Spaw, towards the ſouth-weſt, is the well called Geronſterre, or Geronſtar. It is covered with a dome of blue ſtone, ſupported by four pillars of red and white marble: it affords conſiderably leſs water than the former, and yet is the moſt frequented. The three other wells, called the Saviniere, the Watroz, and the Tonnelet, or Little Tun, are not much uſed. Theſe waters have been known many ages ago, and are ſaid to have been mentioned by Pliny. The ſeaſons for drinking them are in the hot months of June, July, and Auguſt. The capuchins have a very fine monaſtery, adorned with large gardens, where all the company,

pany, who drink the waters, are allowed to walk. Several princes who have been here, have left behind them proofs of their liberality.

This place is governed by a mayor, two burgomaſters, ſeven inferior magiſtrates, and a recorder, named by the prince of Liege, and changed by him every year. The people are very good-natured, and ſpeak the ſame Walloon, or barbarous French, as at Liege. They employ themſelves in making boxes for ladies toilets, ſnuff, and other boxes, varniſhed after the manner of china-ware, which they ſell to the company as they go to and from the wells. In the hotteſt wars, this place has been always allowed a neutrality, on account of the great reſort of people for its waters.

The circumjacent territory is not very fruitful in corn, being chiefly covered with woods, mountains, and heaths; but it abounds with ſprings of mineral and ſweet waters, and in ſeveral ſorts of game; and there is plenty of trout, and other kinds of fiſh, in the little rivers which flow from the mountains.

Oſnaburg, or Oſnabrug, which is a biſhopric, is ſituated between the Weſer and the Ems, having Minden on the eaſt, Munſter on the weſt. Diepholt on the north-eaſt, and Ravenſburg on the ſouth-weſt. It is about forty-five miles long, and twenty-five broad, and produces rye, paſturage, cattle, horſes, hogs, turf, coals, and marble. The inhabitants, who are partly proteſtants, and partly Roman catholics, cure great quantities, and deal conſiderably in hams, bacon, &c.

By a treaty concluded here in 1648, this biſhopric was to be an alternative between the Roman catholics and Lutherans, and the Lutheran biſhop was always to be a younger prince of the houſe of Brunſwic Lunenburg, or, in caſe of failure thereof, of Brunſwic Wolfenbuttle; in conſequence of which ſtipulation, his preſent Britannic majeſty's ſecond ſon Frederic, born Auguſt 16, 1763, is now biſhop of Oſnaburg. But though this biſhopric is thus alternatively hereditary in this proteſtant family, it is not ſo with regard to its Roman catholic biſhops; for they are choſen out of different families by a chapter of twenty-five canons, of whoſe prebends the revenues of eighteen are enjoyed by the Romiſh eccleſiaſticks; thoſe of four by the jeſuits, for the ſupport of their college; and the other three by the Lutheran canons, who are capable of electing, but not of being elected biſhops, as the Roman catholics are. When they have a popiſh biſhop, he is ſuffragan to the archbiſhop of Cologne; but the proteſtant biſhop, who is a temporal prince indeed, has little to demonſtrate him an eccleſiaſtic, but the title; and it was agreed, by the treaty aforeſaid, that when there is a proteſtant biſhop, the archbiſhop of Cologne ſhould ſuſpend the exerciſe of his metropolitan juriſdiction, with regard to the proteſtants. Dr. Nicholſon obſerves, that, ſince the Reformation, introduced here in 1634, the biſhop, whether papiſt or proteſtant, has little more than the name, the Lutherans not allowing the exerciſe of epiſcopal juriſdiction, and the papiſts being not ſtrong enough to obtain it for the biſhop of their own opinion. It is obſerved by hiſtorians, that Charles the Great, who founded this ſee, and dedicated the cathedral to St. Peter, and the two martyrs Criſpin and Criſpinian, exempted its biſhop from all manner of homage and ſervice, except in an embaſſy, at the emperor's charge, to negotiate any match that ſhould be propoſed betwixt the families of the eaſtern and weſtern emperors.

The biſhop is able to raiſe two thouſand five hundred men, though he has only one hereditary officer, viz. a grand maitre, or ſteward. When there is a proteſtant biſhop, he keeps a neat little court at Oſnaburg; but when he is a Roman catholic, who is generally ſome elector, or one who holds ſeveral other great benefices in commendam, the epiſcopal revenue is carried out of the country, and ſpent abroad, as it now is, at the court of London. The diets are held at Oſnaburg. The manufactures are coarſe linen, woollen, and yarn. The revenue of this biſhopric amounts to between twenty and thirty thouſand pounds.

The principal places are: 1. Oſnaburg, the capital, which was formerly an imperial city, and one of the Hanſe, but is now ſubject to the biſhop. It has its name from a bridge over the Oſe, which divides it into Old and New Town, and is ſituated ſixty-ſeven miles weſt of Hanover, in the midſt of a fine plain. It is a neat well-built city, and adorned with ſeveral handſome public ſtructures. It is encompaſſed with walls and ditches, but commanded by a mountain within cannon-ſhot; upon which there is an abbey, or ſacred retirement rather, for men of quality. The biſhop's palace, called Peterſburg, or St. Peter's caſtle, is well fortified, and ſeparated from the town by a bridge. It is a hexagon with a court in the middle, and at each corner a turret. It was in one of the apartments in this palace that king George the firſt expired, the eleventh of June, 1727, in the arms of his brother Prince Erneſt, and, as ſome ſay, in the very room where he was born.

The papiſts have the cathedral church, and the church and monaſtery of the Dominicans in the old city, and the collegiate church of St. John in the new. The Lutherans have the great parochial church of St. Mary in the old city, and have a voice in chuſing the magiſtrates of both; and therefore the government of the city is mixed of both. Hubner ſays, here are three convents for monks, and five for nuns.

The inhabitants, who are very induſtrious, not only breed abundance of hogs and other cattle, but have a conſiderable trade in making linen; in brewing a palatable, though thick ſort of beer, called buſe; and in baking the beſt white bread in Weſtphalia. In the cathedral are ſtill ſeen ſome ornaments of Charles the Great, among which are his crown of ſilver gilt, his comb, battoon, &c. As the exerciſe of both religions is equally free, neither papiſts nor proteſtants are moleſted during the government of a biſhop of the oppoſite perſuaſion.

2. The town of Iburg ſtands about ten miles ſouth of Oſnaburg. 3. Furſtenaw gives name to a diſtrict, which contains fifteen pariſhes. 4. Weidenburg, on the Ems. 5. Melle. 6. Vorden. 7. Quackenburg, on the Oſe.

The county of Hoye, one of the elector of Hanover's domains, has Bremen on the north, Minden on the ſouth, Lunenburg on the eaſt, and Diepholt on the weſt. It formerly belonged to counts of an ancient Saxon family, to whom it was given by the emperor Lotharius; but after the death of the laſt, in 1582, it was divided between the families of Brunſwic and Heſſe. Hoye, with Nyenburg, Liebenau, and Bruckhauſen, became ſubject to the duke of Lunenburg; the forts of Seltzenaw, Ezenburg, and five more towns, to the houſe of Brunſwic; and Freudenburg and Ucht to the landgrave of Heſſe; the latter of which gave their ſhare to the counts of Bentheim; ſo that now it belongs almoſt wholly to his Britannic majeſty.

Its chief town, of the ſame name, ſtands on the eaſt ſide of the Weſer, twenty-five miles ſouth eaſt of Bremen, thirty-ſix north-eaſt of Minden and Diepholt, and forty north-weſt of Zell. It is a ſmall, but well-fortified town, with one of the ſtrongeſt caſtles in Weſtphalia.

2. Nyenburg, on the eaſt bank alſo of the Weſer, ten miles ſouth of Hoye, is another well-fortified town, which ſuſtained ſeveral ſieges during the wars of Germany. It was formerly the reſidence of the counts of Hoye, and its territory abounds with all ſorts of grain, fruits, paſture, and cattle. It has a caſtle on the weſt ſide of it, with broad deep ditches, and a good rampart, which commands the Weſer, and good part of the town, which has ſtrong walls with a double ditch, and other works, that almoſt ſurround it. It had a fine bridge over the Weſer, which, being ruined, is ſupplied by ferry-boats, to preſerve the commerce between the two circles of Weſtphalia and Lower Saxony, which conſiſts chiefly of corn, wool, flax, honey, wax, and cattle. It has a fine pariſh church, with all the ornaments that architecture can give it; in which are the monuments of many of the counts of Hoye, whoſe remains lie here.

3. The borough of Old Bruckhauſen. 4. Liebenau. 5. Drakenburg, on the Weſer. 6. Harpſtedt, on the Delme. 7. Baſſum, a borough belonging to the landgrave of Heſſe. 8. Kellingerode. 9. Suhlingen, the reſidence of a ſuperintendent.

Vernenburg county appertains partly to the archbiſhop of Treves, and partly to the count of Lowenſtein-Wertheim, both of whom it intitles to a ſeat and voice in the Weſtphalian college, and alſo in the diets of the circle: it is almoſt ſurrounded by the archbiſhopric of Treves. The little town of Vernenburg is the only place in it worth notice.

The county of Steinfurt is ſurrounded by the biſhopric of Munſter. It is fifteen miles long, and ten broad, and belongs partly to the empire, and partly to the primate of Munſter; is watered by the Aa, and gives to its count a ſeat and voice in the Weſtphalian college, and in the diets of the circle. The town of Steinfurt, which ſtands on the Aa, is the only town worth mentioning.

The duchy of Verden, which is in length twenty-two miles, and in breadth eighteen, is bounded by Hoye on the ſouth, Bremen on the north, Lunenburg on the eaſt, and the Weſer on the weſt. The inhabitants are Lutherans, and the whole belongs to the king of Great Britain,

who, on account of this duchy, has a ſeat among the princes at the diets of the empire, and thoſe of the circle. It is well watered, but the ſoil is poor.

The only places worthy of obſervation are: 1. Verden, on the Aller, the capital, fifty miles ſouth-weſt from Hamburg. 2. Rotenburg, on the Wumme, fifteen miles from Verden.

The abbey of Corvey is bounded by Paderborn, Brunſwic, and Swalenburg. It is a ſmall diſtrict, but is tolerably fertile, watered by the Weſer, and has a Benedictine abbey, founded by the emperor Lewis I. The abbot is a prince of the empire, having a ſeat in the college of princes, and at the diets of the circle, and the empire. It is called Corbie, or Corvey abbey, from the firſt monks having been taken from Corbie in Picardy.

The abbey of Malmedi conſtitutes a ſmall town ſituated amongſt high hills, on the little river Recht, twenty-five miles diſtant from Liege to the ſouth-eaſt, and nine from Limburg to the ſouth. They reckon here about four hundred houſes, moſt of them inhabited by leather-dreſſers or woollen-drapers. Here are ſeveral ſprings of mineral waters, which ſome phyſicians ſay are as wholeſome and as ſtrong as thoſe of Spa. The parochial church is dedicated to St. Gerçon the martyr; and here is a convent of capuchins, and another of nuns of St. Sepulchre: but it is chiefly remarkable for its abbey of Benedictine monks, under the ſame abbot with that of Stavelo. This town, though within the territory of the prince of Liege, is, nevertheleſs, reſpecting ſpiritual matters, under the juriſdiction of the archbiſhop of Cologne.

The abbey of Stavelo (by ſome erroneouſly called Stablo) ſtands on the little river Ambleve, which ſomewhere lower falls into the Recht. It is about ſix miles diſtant from Malmedi to the eaſt, and nine from Lienburg towards the ſouth. Here are about four hundred houſes, and the inhabitants carry on a pretty good trade, though this town, being quite open, has ſuffered very much during the wars. Here is a famous abbey of Benedictine monks, founded in the year 657, at the ſame time with that of Malmedi.

The abbot of Stavelo, who is ſtiled a prince of the empire, is ſpiritual and temporal lord of this town, and of its territory, which is very large, including the town of Malmedi; and his yearly income amounts to about twelve thouſand crowns. The abbey church, which is at the ſame time parochial, is a ſtately building in the modern taſte; under it there is a crypta, or ſubterraneous church, with five altars.

Here are alſo ſome mineral ſprings, ſaid to be very wholeſome. The trade of this town conſiſts in woollen cloth and other ſtuffs, and chiefly in a great quantity of leather curried here.

The abbey of Werden was founded in 778 by St. Ludger, whoſe eſtate it was, for monks of the order of St. Benedict. The diſtrict belonging to it is ſituated in the county of Mark. The revenue is twenty thouſand rix-dollars. The only remarkable place is Werden, a little walled town upon the Roer. The king of Pruſſia claims the right of ſovereignty here.

The abbey of St. Cornelis Munſter, and its territory, are ſurrounded by thoſe of Juliers, Limburg, and Aix-la-Chapelle. The abbot has a ſeat at the diets of the empire, on the Rheniſh bench of prelates; but he ſits among the princes at thoſe of the circle.

The abbey of Eſſen, and its territory, are ſurrounded by Berg, Cleves, Werden, and the county of Mark. The abbey was founded in the year 877, by Alfred, biſhop of Hildeſheim. The king of Pruſſia is hereditary protector: the abbeſs ſtiles herſelf princeſs of the holy Roman empire; the chapter conſiſts of none but noble ladies, and the abbey has a ſeat in the diets of the empire and circle. The hereditary officers are, the marſhal, ſteward, chamberlain, and ſewer.

The only place of any conſideration in the territory is Eſſen, which is ſubject to the abbeſs as its ſovereign, but has very extenſive privileges. It contains an academy, a gymnaſium, a commandery of the Teutonic order, and ſeveral Roman catholic and proteſtant churches, has ſome trade, and a cloth manufactory.

The abbey of Thern is ſituated in the biſhopric of Leige, and county of Hoarn. It has a ſeat in the diets of the empire and circle, and a chapter which conſiſts of princeſſes and counteſſes of the order of St. Benedict. It is an imperial free ſecular foundation, erected in the year 1000.

The abbey of Herford is ſituated in Ravenſburg; gives title of princeſs and prelateſs of the holy Roman empire to its abbeſs, contains none but canoneſſes, and is a Lutheran foundation. The number of ladies is indeterminate; the abbeſs is ſuperior of the collegiate church of St. Mary, of the oppoſite mountains, and the prebends are in her gift. The canoneſſes wear a ſcarlet ribbon, with a ſilver border hanging from the right ſhoulder, having a croſs at the end with the figures of Jeſus Chriſt and the Virgin Mary, and on the left breaſt is a ſtar with the ſame figures. This abbey was erected in the eighth century, and has a ſeat at the diets of the empire and circle.

The duchy of Berg is fifty miles long, and twenty broad, and takes its name from being mountainous. It is bounded on the weſt by the Rhine; on the eaſt by Weſtphalia; on the north by the county of Mark, and on the ſouth by the electorate of Cologne. Though mountainous in many places, in ſome parts it produces corn, paſturage, fruit, vines, wood, herbs, &c. and is rich in coals, iron, &c. The manufactures are cloth, iron, and ſteel. The ſame regency and diet ſerves for this duchy and that of Juliers.

The places moſt worthy of notice in Berg, are, 1. Duſſeldorp, at the confluence of the Duſſel with the Rhine: it is twenty miles from Cologne, and fifty-ſeven from Munſter, and ſtands in the midſt of a fine fruitful plain. The Rhine runs againſt it with ſuch violence, that they have been obliged to make great works to break the current. It is large, pleaſant, well built, and defended by a citadel, which is ſeparated from it by a ſmall harbour formed by the Rhine, and conſiſts of two royal baſtions faced with brick; and in the other parts it is fortified by five baſtions, and cavaliers on them. The public buildings towards the river make a fine appearance; particularly its ſtately palace, an old gothic ſtructure, (with excellent paintings by the beſt maſters, braſs antiques, ſtatues of marble, portable cabinets, &c.) which was the elector palatine's chief reſidence during the horrid devaſtations of the palatinate by the French towards the end of the laſt century.

In the market-place, over againſt the palace, is an equeſtrian ſtatue in braſs, on a pedeſtal of grey marble, of the elector John William, in armour, with the electoral bonnet on his head. The elector's reſidence being fixed at Manheim, a regency is eſtabliſhed here; for the counties of Berg and Juliers, which bring in a million of crowns per annum for the elector, are governed by ſtates, without whoſe conſent he can lay no taxes. All religions are here tolerated; but the catholics alone are admitted to civil employments. Though the poſſeſſion be the elector's, yet the title is diſputed by thoſe of Saxony and Brandenburg. Here are three weekly markets for corn, which is imported hither from the Low Countries, and exported in great quantities to Cologne, and other parts of Germany.

The other places in this duchy are, 1. Ratingen, which has a ſeat and voice at the diets. 2. Solingen. 3. Neſſelrode. 4. Blackenberg. 5. Siegberg, on the Sieg. 6. Mulkum, near Cologne. 7. Lenneſt, which has the firſt place and voice at the diets. 8. Wipperfort, on the Wipper, has a ſeat and voice at the diets. 9. Beyenberg, gives name to a diſtrict. 10. Elverfeld. 11. Langenberg. 12. Kornberg. 13. Benſberg has a ſtrong fort and monaſtery, of the order of the Holy Croſs, which was built in 1298, and is the firſt of its kind in the empire. The caſtle or palace here was built in a foreſt on a hill, by the elector John William, and is a noble edifice. It ſtands three leagues from the Rhine, between Cologne and Duitz. It is built of a very hard ſtone; and the ornaments, particularly the pillars that ſupport the gallery in the front, are a kind of grey marble, dug out of the neighbouring quarries. The apartments are large, well decorated with the fineſt paintings; and they have a very extenſive proſpect, containing a great variety of beautiful ſcenes and delightful landſcapes, and, among others, of the city of Cologne, the Rhine, and all the flat country.

The principality of Naſſau-Sigen, or Siegen, near which is an iron mine, ſtands on the river Siega, fifteen miles from Dillemberg, and thirty north-eaſt from Naſſau, on the top of a rocky hill, defended by a ſtrong wall, and regular fortifications; and gives name to a country, of which it is the capital, as well as title to another branch of the Naſſau family. It is thought to be Ptolomy's Segodunum. Here is a caſtle, in which the elector of Cologne keeps a garriſon, as director of the circle; and not far from hence is a very good iron mine. In 1559 the prince of Naſſau-Siegen's padagogium was brought hither from Herborn; and ſoon became ſo famous, that it was frequented by ſtudents from Germany, Poland, Livonia, Denmark, &c.

to

to which an academy was added for training up youth in martial exercises.

The principality of Dillemburg stands on the river Dilla, sixteen miles west from Marpurg, and thirty two north-east from Nassau, and gives name to a county; it has a good trade in cattle, and woollen goods; and two yearly fairs, viz. the day after Passion Sunday, and the Monday after St. Margaret's-day. The castle is surrounded by the town, which is built in a semicircle to the west, north, and east; and there is a fine church, where the counts of this branch are interred. The court-yard is on the south-side of the castle, and adorned with pavilions, walks, and other embellishments. The counts of that branch, called Nassau-Dillemberg, had their seat in a fine strong castle that stands on the top of a neighbouring hill, where is a large arsenal, furnished with arms and ammunition for several thousand horse and foot; and the jaw-bone of a monstrous whale caught near Catwic, in 1598, which is a great curiosity.

The town of Beilstein, or Beilinstein, fifteen miles north-east from Nassau, twenty-seven south-east from Siegen, and twelve miles south of Herborn, gives name to a county which was the inheritance of the Hadamars, a younger branch of the family of Nassau, and was the capital of it. It is an old town among rocky hills, but has a castle, and a church worthy the observation of a traveller; it lies in the mid-way between Marpurg on the east, and Coblentz on the west.

The small town of Hadamar is capital of a territory on the confines of the electorate of Treves, which had the title of a principality before the extinction of that branch of the Nassau family: it stands on the Lahn, twenty miles north of Mentz, and has a good castle for defence.

The county of Sayn belongs respectively to the margrave of Brandenburgh Anspach, the burgrave of Kirchburg, the counts of Witgenshein Hornburg, and the elector of Treves. The two first have a voice in the college: but all together have only one voice in the diet of the empire. Lutherans, Calvinists, and Roman catholics, have equally the free exercise of their religions.

The only places worth mentioning are, 1. Altenkirchen, the capital and the seat of a regency. 2. Hachenburg. 3. Bendorf, on the Rhine, gives name to a district. 4. Freusburg, on the Sieg, defended by a fortress, as is the neighbouring town of Triedwold.

The county of Wied is divided into two parts, viz. New-Wied or Lower County, and Wied Runkel or Upper County. The only places here worth notice are, 1. New-Wied, a small but regular town, on the Rhine. 2. Runkel, on the Lahn. 3. Dierdorf.

Shauenburg county is watered by the Weser, and surrounded by Calenburg, Minden, Lippe, and Ravensberg. It produces corn, pasture, salt, alum, crystals, with gold, silver, wood, free-stone, lime-stone, pit-coal, gipsum, copper, iron, pyrites, cattle, sheep, fish, &c. It is thirty miles long, twenty broad, and the inhabitants are mostly Lutherans.

This county belongs partly to the king of Great Britain, the landgrave of Hesse, and the count of Shauenburg Lippe. The two first have a distinct voice in the diets of the circle, and a joint voice in the college of the Westphalian counts of the empire.

The principal places are, 1. Steinhude, on the Steinhuder. 2. Hagenburg. 3. Sadthagen. 4. Shauenburg, from which the county derives its name, but at present exhibits only the ruins of an old castle. 5. Visbec on the Weser. 6. Mollenbeck. 7. Buckburg, which is remarkable for having a strong castle, a beautiful church, a well-endowed orphan-house, an elegant town-school, a large Calvinist church, and an admirable fountain in the market-place. 8. Rinteln, a fortified town between the Weser and Exter: here is a regency, a consistory, superintendency, and some trade is carried on by means of the Weser. 9. Oldendorf, on the Weser, between Hamelen and Rinteln. 10. Soltorf. 11. Oberinkirchen, famous for a noble foundation for Lutheran ladies. 12. Rodenberg.

Delmenhorst county, which is tolerably fertile, is surrounded by the Weser, Oldenburg, Diepholt, and Widhausen. The only place of any consideration in it is Delmenhorst, from which it takes its name. The town is situated on the river Delme, and has a strong castle to defend it. The government is vested in the regency of Oldenberg.

The county of Oldenberg is forty miles long, thirty broad, and bounded by East Friesland, on the west; Delmenhorst, and the Weser, on the east; Jover and Jode, on the north; and Munster, on the south. It is secured by dikes against inundations, and produces pasturage, cattle, horses, turf, &c. The king of Denmark, to whom this county belongs, is intitled, in right thereof, to a seat and voice both in the Westphalian college of counts of the empire, and in the diets of the circle. The administration is by a regency, subordinate judicatories, a royal consistory, and a superintendency.

The following are the most considerable places in this county, viz. Oldenberg, situated at the conflux of the Hunte and the Haare. 2. Varel, situated in a wood, called, The Bush of Varel.

The county of Bentheim is forty miles long, and fifteen broad, surrounded by Munster and the United Provinces, and abounds in wood, stone quarries, grain, pasturage, honey, venison, game, cattle, fruit, and fish. It has linen and woollen-manufactories. The count has a seat and voice in the college, and in the diets of the circle. The inhabitants are Lutherans, Calvinists, and Roman catholics.

The principal places are, 1. Bentheim, from which the county takes its name: it is a large borough town, thirty miles north-west from Munster. 2. Nienhus on the Dinkel. 3. Wietmarsen, which has a seat and voice at the land diets. 4. Schuttorf, on the Vechte. 5. Northhorn, surrounded by the Vechte. 6. Frenswegen, a cloyster of regular canons of the order of St. Augustine, has a seat and voice at the land diets.

The imperial city of Dortmund is a large, but ill-built place, situated thirty-four miles from Munster: it has a seat and voice at the diets of the circle, and also at those of the empire. It is populous, rich, has a communication with the Rhine, by means of the Empser, and carries on a considerable trade. This was formerly one of the Hanse towns, has four Lutheran churches, two monasteries, and one nunnery.

We shall now give a particular description of one of the most famous imperial cities in Germany, called by the French, *Aix-la-Chapelle*. It stands fifteen miles north-east of the city of Limburg, and thirteen south-west of Juliers; twenty-eight east of Maestricht, twenty-six east of Liege, twenty-eight south-west of Cologne, and about twenty north-east of the Spa. It lies in a valley surrounded with mountains and woods; yet it enjoys a very wholesome air; and the hills are covered with vines. Its Latin name, Aquis granum, is supposed to be derived from Serenius Granus, lieutenant-general of Gallia Belgica, who, having discovered the springs here, anno 53, adorned them like the Roman baths, and built a palace near them; in confirmation whereof, the natives still shew, at the end of the town-house, a piece of ancient architecture, which they call Granus's tower, and say it was a part of his palace, though the building does not look so antient. According to Charlemagne's pragmatic sanction, this Granus was brother to Nero and Agrippa; and the Chronicle of Utrecht says, he was banished hither by Nero. Attila the Hunn having plundered and destroyed this city, it lay in ruins till the time of Charlemagne; who, hunting in the neighbouring woods, his horse happened to strike his hoof into one of the springs; which the emperor observing, and finding by the ruins of several great buildings that this must have been the old Aquis, he ordered the baths to be searched out; and rebuilt, founded, and endowed the collegiate church of St. Mary, in which he employed a great quantity of marble, that he sent for from Rome and Ravenna; and was so charmed with the situation of the place, that he built a palace here, together with all that part of the city which is enclosed by the old wall; and made it the seat of his empire on this side the Alps; ordaining, that the future kings of the Romans should be crowned here with an iron crown, as at Milan with one of silver, and at Rome with one of gold; which, though observed for a while, has been long since disused.

Both the palace and town were burnt in 882, by the Normans; but the church, having so much marble, stood its ground. After the town was rebuilt, it suffered much by other fires in 1146, 1172, 1224, 1236, and particularly in 1656, when twenty churches and chapels, and five thousand houses, were burnt, but soon after rebuilt. In 1668, that famous treaty was made here between France and Spain. This town is called by the French Aix-la-Chapelle, from a chapel in the great church, where are abundance of relics: it was noted for several councils, in the time of Charlemagne, and Lewis the Pious, about the procession of the Holy Ghost, reformation of manners, the regulation of monasteries, and against such as had seized the patrimonies of the church. It suffered much during the

the civil wars of Germany, when moſt of the citizens were proteſtants; but the Marquis de Spinola took the town in 1614, and re-eſtabliſhed popery: ſo that the proteſtants have not ſince been allowed any place of worſhip here, but go to church about two miles off, in that part of Limburgh which is ſubject to the Dutch.

Succeeding emperors continued to honour this city with their preſence, and to enlarge its privileges; ſo that it was made free and imperial. They were crowned here alſo for five hundred years after Charlemagne, as is expreſsly ordained by the golden bull of Charles IV. but ever ſince Maximilian I. when thirty-ſeven emperors had been crowned here ſucceſſively, that ceremony has been performed at Francfort, which, being in the centre of the empire, is more convenient for the princes, but particularly for the ſpiritual electors, and for the elector Palatine, who may ſend for their equipages, and return them back by the navigable rivers, the Rhine, Main, &c. Nevertheleſs, the emperors, when crowned at Francfort, proteſt, it ſhall be without prejudice to the privileges of this city: for Charlemagne having himſelf been a canon of its cathedral, and ordered his ſucceſſors to be ſo; they take an oath as ſuch, when crowned; at which time the magiſtrates ſend Charlemagne's ſword, ſhoulder-belt, and the goſpel in golden letters, to the elector of Mentz; who gives ſecurity for reſtoring them to this city after the ſolemnity of the coronation.

Dr. Blondel, a phyſician here, in his deſcription of this city and its baths, printed in Latin at Maeſtricht, in 1683, tells us, it recovered its loſſes in the above-mentioned fires, by the bounty of ſeveral emperors, and the great concourſe of people to its baths. Frederic I. built the outer walls, towers, and ditches, in 1172. The circuit of the whole city is a league and an half, and the inner town three quarters. The inner wall has ten gates, and the outer eleven. The town-houſe, or ſenate-houſe, which was built in 1553, and lately repaired by the citizens, in hopes of having the Congreſs there, and not at Soiſſons, is a noble ſtructure of free ſtone, and one of the fineſt in Germany. It is adorned with the ſtatues of all the emperors ſince Charlemagne, and with curious hiſtory-paintings; particularly thoſe by Amiſſaga, highly valued; among which are, that of the reſurrection, and that of Charlemagne's giving the city their charter: the uppermoſt ſtory of it is one hall, one hundred and ſixty-two feet by ſixty; in which the emperors, who formerly received their firſt crown of iron here, as above-mentioned, uſed to entertain the electors, and other princes who aſſiſted at the coronation.

In the market-place, over-againſt the town-houſe, there is a large ſtately fountain, with four ſprings, that run, from above, into a copper ciſtern thirty feet in diameter, and weighing twelve thouſand pounds: round the edges of it there is a Latin inſcription, importing the diſcovery of the hot ſpring by Granus, as above; as well as the renewing of the baths by Charlemagne; that the cold fountain did formerly run into the baths; and that the ſenate adorned it, with this ciſtern, in 1620. From this the water runs, by ſix pipes, into a ſtone ciſtern below, and from thence it is conveyed through the city. On the top of the fountain there is a large braſs ſtatue of Charlemagne in armour, richly gilt, with his face towards Germany. As the city lies in a valley ſurrounded with mountains and woods, there are twenty other public fountains of good clear water, beſides many private ones. Here are ten hot mineral fountains, and ſome cold ones, without St. James's gate, beſides ſeveral in the adjacent fields; and the ſtreams that run through the town keep it very clean, and drive ſeveral mills. Here are thirty parochial or collegiate churches, beſides the cathedral, a large old-faſhioned gothic pile, which was conſecrated by Pope Leo. III. in preſence of the emperor Charlemagne, and three hundred and ſixty-five biſhops. The ſteeple at the weſt end is adorned with ſeveral pyramids, and on the top there is a large globe and croſs. From this tower, which is much higher than the body of the church, runs a gallery, ſupported by a long arch, to a cupola near the middle of the fabric: the inſide is beautified with a vaſt number of pillars of marble and braſs, gilt ſtatues, braſs doors, and partitions, and a great deal of moſaic work.

Over the place where Charlemagne was firſt interred hangs a large crown of ſilver and braſs gilt, adorned with ſixteen ſmall towers, ſurrounded with forty-eight ſtatues a foot high; and thirty-two leſſer ſtatues, all of ſilver; among which are commonly placed forty-eight candleſticks, and at certain grand feſtivals no leſs than four hundred and fifty tapers: this crown was the gift of the emperor Frederic I. who, removing Charlemagne's body, interred it, in a ſilver coffin, under the altar of the choir, and covered it with the white marble tomb-ſtone it had before, with the buſt of Proſerpina upon it, ſuppoſed to have been taken from the tomb of Julius Cæſar. Out of this tomb were taken a great many rarities and reliques, which the ſaid emperor had got from Aaron king of Perſia, the patriarchs of Jeruſalem, Conſtantinople, &c. Here is alſo the monument of the emperor Otho I. in black marble.

At the jubilee, once in ſeven years, the four chief reliques ſhewn to the pilgrims here, are 1. What they call the gown, or ſhift, ſaid to be worn by the Virgin Mary, at the birth of our Saviour, made of a ſort of flax that ſeems to be neither linen nor callico; but as it is only expoſed from the top of a high tower, it is not eaſy to determine what ſort of apparel it is. 2. A coarſe linen cloth, pretended to be girt about our Saviour on the croſs. 3. A piece of the cord he was bound with. 4. Some of the blood, as they ſay, of the protomartyr St. Stephen, richly inchaſed in gold and precious ſtones, on which the emperors are ſworn at the inauguration. Here is the picture of the Virgin Mary, with our Saviour in her arms, embоſſed on a jaſper, about two inches broad, found in the emperor Charlemagne's tomb, and pretended to be the work of St. Luke; alſo a manuſcript copy of the goſpels, in a cover of ſilver gilt, found in the ſame tomb; and Charlemagne's ſword, put on by his ſucceſſors at their coronation, and uſed in the dubbing of knights, and conferring other honours. At the eaſt end of the cathedral our Saviour is repreſented ſitting in majeſty, with a long robe, on a throne; round which are the four animals repreſented in Ezekiel's viſion: over his head is a circle of golden ſtars, and underneath it a ſymbol of the croſs which appeared to Conſtantine when he defeated Maxentius. Here is alſo a repreſentation of the twenty four elders, mentioned in the Revelation, riſing from their ſeats, laying aſide their crowns, and falling down before the throne. The windows are curiouſly gilt, and the pavement is of chequered marble. An immenſe treaſure is amaſſed here, conſiſting of veſſels of gold, and ſilver gilt, copes embroidered with pearls, and other rich veſtments. Over the chief altar there is a cheſt of ſilver and gold, of antique workmanſhip, and curiouſly engraved, in which are kept the four reliques above-mentioned. At the entrance of the choir there is a pulpit covered with plates of gold and ſilver, and adorned with precious ſtones, (eſpecially a very large agate) the gift of the emperor Henry II. The altar of the choir is covered with plates of gold alſo, repreſenting our Saviour's paſſion, which, it is ſaid, was found in Charlemagne's ſepulchre. In the upper part of the church over againſt the prince's altar, between two pillars, is a throne, or chair, of white marble, ſuppoſed to have been placed there by the emperor Charlemagne, in which the emperors uſed to ſit when conſecrated, and receive the firſt obeiſance of the electors and the chapter of the cathedral, in quality of king of the Romans. The protectors of this city are, the emperor, as Duke of Brabant; and the elector Palatine, as duke of Juliers; and the latter names the mayor, or conſul, who is for life, and is aſſiſted in the government by two burgomaſters, or joint conſuls, fourteen aldermen, who are alſo for life, and act as judges, and one hundred and twenty common council, that are elected, as are likewiſe the burgomaſters, by fifteen trading companies of the burghers; and continue two years in their office.

There are three baths within the inner walls of the Old Town, viz. the emperor's, the little bath, and St. Quirinus's. Charlemagne was ſo much delighted in the firſt, that he often invited his ſons and his nobles to bathe and ſwim there with him; for it was the cuſtom anciently to bathe there, an hundred, perhaps, together; but it is now divided into five bathing-rooms. The little bath joins to it; and the ſprings of both are ſo hot, that they let them cool ten or twelve hours before they uſe them. They are impregnated with nitre and ſulphur; and ſometimes cakes of brimſtone and ſalt-petre, of a conſiderable thickneſs, are taken out of them. They are unpleaſant to taſte at firſt, and ſmell like a rotten egg. Near theſe baths there is a fountain of warm water, much reſorted to in ſummer mornings, and drank for chronical diſeaſes; thoſe in the New Town, which are, the roſe bath, the poor's bath, and St. Corneille's, are not ſo hot and clear as the former, and their ſmell is ſomewhat offenſive. Near the hot ſprings lie many cold ones, by which their heat might be tempered; and, with a little charge, they might be made the moſt delightful baths in the world.

Dr. Blondel ſays, that bathing in theſe waters is good

againſt all nervous diſorders; ſuch as convulſions, palſies, numbneſs, trembiings, ſciatica, gout, ſwellings, diſtempers of the bowels, vertigoes, tingling of the ears, nephritic diſtempers, moiſt and cold affections of the womb, barrenneſs, abortion, ſcabs, and dregs of mercury. Though they are propereſt for bathing, they are alſo drank, in ſeveral caſes, with ſucceſs, againſt hot diſtempers of the liver, ſpleen, reins, and bowels, obſtructions of the meſentery, pancreas, &c. They cure the yellow jaundice, and its effects, a cachexy and dropſy. They are good againſt inveterate and ſtubborn fevers, tertian and quartan agues, and bleeding at the noſe. They cure the ſcurvy, gout, rheumatiſm, and other diſtempers proceeding from too much ſerum in the blood. They kill worms, dry over-moiſt parts, and help conception. They purge the urinary veſſels of all impurities, cure ſtranguries and ſtoppages, diſſolve and expel the ſtone and gravel. They are excellent againſt aſthmas, and the moſt inverate cholics, ſchirrous ſwellings, ſcrophulous diſtempers, and diarrhœas, ulcers of the gums and teeth, and various other diſorders. From theſe virtues may be ſeen the agreement between the waters of this place, and thoſe of the Engliſh baths.

The charming village of Borcet, or Porcet, is ſituated about a furlong from the ſouth gate: its name was derived from the wild hogs that formerly abounded in the neighbouring woods. Here are alſo many hot ſprings on both ſides of a ſmall cool rivulet, which runs through the town: they are conveyed by pipes and conduits into fourteen houſes, in which are formed twenty-eight baths; ſome of which are much hotter than thoſe in the town, and muſt be cooled eighteen hours before they can be uſed. Their water is clear and pleaſant, without any diſagreeable ſmell. They are, for the moſt part, five or ſix yards ſquare. There is one quite open to the air, called the Poor man's bath, which has a ſpring ſo hot, that the people ſcald pigs, and boil eggs with it; but it is obſerved, that they only harden the yolks, and not the whites. Theſe baths are not ſo ſtrong as thoſe in the city, and, by conſequence, the better for weak people; and thoſe of all ages and conditions bathe in them for their diverſion, without any danger. They are good againſt the ſame diſtempers as the others, and particularly againſt defluxions of the head and breaſt, moiſt and ſqueamiſh ſtomachs, dropſies, ſoft ſwellings, &c. and may be drank as well as thoſe of the city; but the latter are more ſolutive, and thoſe of the village more ſtrengthening. The fountains are, in both places, ſo plentiful, that they are capable of filling, ſeveral times in a day, above fifty baths, of ſixty or ſeventy tons each; and moſt of them, except thoſe for the poor, are ſo contrived, that the old water is drawn off by ſubterraneous conduits, and the baths cleanſed from all impurities. The firſt ſeaſon for theſe baths is about the eighteenth of May, the ſecond about the eighteenth of Auguſt, and continues each time ſix weeks. It is computed, that from the baths in the city, and in this village, there flow ſix thouſand tons of water per day, which carry as many pounds weight of ſalt.

Borcet is a well-built village, has four handſome churches, and a nunnery of Bernardines, whoſe abbeſs is a princeſs of the empire; but there lies an appeal from her court to the chief magiſtrates of the city. The adjacent country abounds with corn, fruit, and paſturage; the woods there furniſh them with materials for fire and building, as the quarries do for ſtone. The territories of the city are large, and contain near two hundred villages, incloſed on all ſides with mountains. They have rich coal mines here, beſides others of iron, lead, vitriol, ſulphur, and lapis calaminaris, and are well ſupplied with neceſſaries by the Rhine and Maeſe.

The circle of Weſtphalia, beſides the places already deſcribed, contains the following leſs conſiderable counties, ſeigniories, &c. namely,

Spiegelberg county, which is held by the prince of Orange of the elector of Hanover; hence the civil and eccleſiaſtical judicatories are ſubordinate to thoſe of Brunſwic Lunenburg, and the elector has a ſeat in the college, and at the diets. The only place in this county, worthy of obſervation, is Spiegelberg, an ancient caſtle in a mountain, in the vicinity of which there is a caſtle to which pilgrimages are made, and an hoſpital for old women.

Rettberg county is furrounded by Ravenſberg, Lippe, Paderborn, and Oſnaburg; its length is ſeventeen miles, its breadth ſix. Its only town, called Rittberg, is ſituated on the Ems. The county enjoys a ſeat and voice in the college, and in the diets of the circle.

Holzapfel county belongs to the prince of Anhalt-Bernburg Hoym. The ſeigniories of Wittem, Eyſs, and Schlenachen, belong to the count of Platterburgh, and both intitle their proprietors to a ſeat in the diets of the circle, and the college of the empire.

The ſeigniories of Gehmen, Gimborn, and Neuſtadt, Wickerhad, Mylendock, Richtenſtein, Kerpen, Lommerſum, Schleinden, and the counties of Blankenheim, Geroiſtein, and Hallermund, all intitle their reſpective proprietors to a ſeat and voice in the college, and in the diets of the circle. But thoſe privileges are not allowed to the lords of the ſeigniories of Dyck, Sconau, Richold, Merchemic, Jever, Koriphauſen, Dreyſz, and Wybre.

Anhalt ſeigniory belongs to the prince of Salem, who, on that account, enjoys a ſeat and voice in the college, and in the diets of the circle; as does the count Metteruic for the ſeigniories of Bielſtein and Wrurienburg.

Diepholt county lies ſouth of Delmenhorſt, is twelve miles long, five broad, and contains a lake called Dummerſee, which abounds with fiſh and wild ducks. The only town, Diepholt, ſituated on the Hunte, is a borough. The ſoil of this country is ſterile; the inhabitants trade in black cattle, and coarſe linen and woollen, which they manufacture: they profeſs the Lutheran religion.

The town of Pyrmont lies on the borders of Hanover, near Lugde, thirty-eight miles ſouth-weſt of Hanover, and twenty eaſt of Lemgow. It is the capital of a county, with a very ſtrong fort, formerly ſubject to its own lords, and now belongs to the prince of Waldec. There is a great reſort of German and other nobility hither to drink the waters, which are preferred even to thoſe of Spa, and exported abroad from Bremen, whither they are carried by the Weſer. In the neighbourhood are one or two ſalt pits; and the king's iron and ſilver mines are not far off. This town is particularly famous for its mineral waters.

Gronsfeld is a ſmall diſtrict, erected into a county by the emperor Rodolph II. and intitles its count to a ſeat in the college, and in the diets of the circle; as does the county of Reckum, which is ſeparated from the county of Limburg by the Maeſe.

SECT. IV.

Treating of the Circle of the UPPER RHINE; giving an Account of the various Places therein contained, with the Trade, Manufactures, &c. of the Inhabitants.

THE Upper Rhine is bounded by the Lower, which almoſt interſects it, and by Weſtphalia, Franconia, Suabia, Upper Saxony, Lower Saxony, Alſace, and Lorrain. It was antiently much larger than it is at preſent, as a great portion has been diſmembered from it by France. The diets are held at Frankfort, the archives are kept at Worms, and it preſents two aſſeſſors to the chambers of Wetzler.

The firſt diviſion of this circle, we ſhall deſcribe, is the biſhopric of Worms. It is about twelve miles in length, and is eight in breadth where broadeſt, is interſected by the Rhine, and ſurrounded by the Lower Palatinate. In general, it is barren, mountainous, and woody, though ſome few parts are fruitful both in corn and wine. The chapter chuſes the biſhop, whoſe revenue does not exceed two thouſand five hundred pounds, and who, in ſpirituals, is ſubject to the archbiſhop of Mentz. The proteſtants here are miſerably oppreſſed.

The capital city, Worms, is ſituated on the weſt ſide of the Rhine, at the diſtance of twenty-ſix miles ſouth of Frankfort on the Maine: while the imperial chamber was kept here, it was one of the moſt conſiderable cities in the whole empire. It is celebrated for the great diet held here in 1521, to which Luther came according to his ſummons, though his friends would fain have diſſuaded him, by putting him in mind of John Huſs, who was burnt by a decree of the council of Conſtance, notwithſtanding the paſſport granted him by the emperor Sigiſmond: but Luther, far from being terrified, ſaid, That though he was ſure to be engaged with as many devils as there were tiles upon the houſes of Worms, he was reſolved to go. He came hither accordingly; made ſuch a bold anſwer and defence of his doctrine, that he was proſcribed, and obliged to abſcond; during which time he wrote that called his Works from the Deſart. Miſſon, who was here in 1687, ſays, the Lutherans had only one church for their uſe, and had their worſhip by turns with the papiſts in that of the Dominicans; but the papiſts had all the reſt of the churches; and that the Calviniſts had one at Newhauſel, half a league out of the city, where the Lutherans ſometimes ſcrupled not to have their children baptized, contrary to the cuſtom of Frankfort. The town had no other fortifications but a

double wall, was as large as Frankfort, but ſo ill-peopled, and ſo poor, that he ſaw a houſe ſold for one thouſand crowns, which had formerly yielded as much yearly. It was often taken and retaken during the civil wars in Germany; but ſuffered moſt by the French, who in 1689, laid in aſhes in a few hours what had been the work of ages. They left ſo much as to contain a garriſon of three hundred men; who in 1692, being attacked by the landgrave of Heſſe, intrenched themſelves in a church, where they were all forced, and put to the ſword. In 1698, the popiſh clergy, who had not been allowed to make proceſſions, except on the day after Eaſter, nor to carry the hoſt in public, would needs carry it in proceſſion through the ſtreets on Chriſtmas day: The magiſtrates ſent a notary to forbid it; but the prieſt at the head of the proceſſion ſtruck him over the head with a cenſer that he carried in his hand. Moſt of the burghers, being proteſtants, ran to aſſiſt the notary, but a great number of popiſh peaſants, brought in for the purpoſe, fired upon them, which ſo incenſed the proteſtants, that they drove the proceſſion back to the church from whence it came, and wounded ſeveral of the papiſts, particularly the inſolent prieſt. The papiſts complained of this as a breach of the treaty of Ryſwic betwixt France and the empire, which reſtored Worms, and its dependencies, to the biſhop. The proteſtants pleaded the treaty of Weſtphalia in their own defence. Some of the principal authors of the tumult were ſeized, and a Palatine regiment quartered in the city to prevent diſturbances: at the ſame time the elector incloſed it with a wall. The city is ſubject to the biſhop, but under the protection of the elector palatine.

The papiſts, who are very numerous here, have the cathedral; but the magiſtrates, and moſt of the inhabitants, are Lutherans. There is ſo much vacant ground in the town, as, being planted with vines, yields annually one thouſand five hundred fodders of wine, each containing two hundred and fifty Engliſh gallons; which wine is ſo much eſteemed, that the magiſtrates make preſents of it, with ſome fiſh, to princes and other travellers of quality: Martiniere ſays, the preſent of the fiſh is to denote their right of fiſhery on the Rhine. The churches of St. Paul and St. John, are very antient: the latter is built of vaſt ſquare ſtones, in an irregular manner, with narrow windows and galleries round the outſide juſt under the roof, and the walls are above twelve feet thick; ſo that it ſeems to have been deſigned for a fort rather than a church.

The cathedral is a long, high, and ſtrong ſtructure, with a tower at each of the four corners: the ornaments are gothic, and over one of the gates there is an hieroglyphic, being a figure of the ſize of an aſs with four heads, viz. thoſe of a man, an ox, an eagle, and a lion; the two firſt are looking upwards, and the other two downwards: it is ſuppoſed to be a repreſentation of the four beaſts in Ezekiel's viſion; or, as ſome think, of the hieroglyphics of the four evangeliſts: a woman ſits on its back; which they ſay too, repreſents the goſpel. At the entrance of St. Martin's church, over a moveable altar, there is a ſtrange picture, well worth a traveller's view: it is about five feet ſquare, and at one corner of the top has a repreſentation of God the Father ſpeaking to the Virgin on her knees in the middle of the picture, holding an infant repreſenting our Saviour, by the feet, with his head in the hopper of a mill, which the twelve apoſtles turn by the help of a wheel, and of the four-headed beaſt above-mentioned; and the pope is drawn upon his knees hard by, receiving the hoſts which fall from the mill, into a golden cup; one of which he preſents to a cardinal, who gives it to a biſhop, the biſhop to a prieſt, and the prieſt to a layman.

In this city are two public halls; the magiſtrates aſſemble in one of them twice a week for matters of ſtate, and in the other for the adminiſtration of juſtice. It was in the former that Luther, above-mentioned, being heated with the debate, and the fire that was near him, called for a glaſs of wine; which being brought, he was ſo eager in his diſcourſe, that he forgot to drink it, and ſoon after it broke to pieces on the bench without any body's touching, or being near it; whence the Lutherans concluded, that there was poiſon mixed with the wine: whereupon they broke the bench, and ſtill keep the pieces as a memorial of his deliverance. A fine church was built here for the Lutherans not many years ago, in which the hiſtory of that great man was very well painted.

The mint here is a noble ſtructure, with a ſpacious portico, where a vaſt number of bones and horns hang between the arches; the former of which, they ſay, are thoſe of giants that lived among the antient Vangiones; and the latter, the horns of oxen that drew the ſtones which built the cathedral. The outſide of the houſe is adorned with many pictures, and particularly ſome of thoſe giants in armour. Miſſon ſays, he ſaw a ſmall piece of parchment in a frame here, in twelve ſorts of hands, written in divers miniatures, and ſeveral draughts curiouſly done with a pen, by the feet, as the inſcription ſays, of one Thomas Shoevener, who was born without arms.

This city, ſince it was laid in aſhes by the French in 1693, retains little more than the ſhadow of its former beauty. The richeſt traders, conſidering how much both they and their anceſtors had ſuffered by reaſon of their lying ſo open to France, retired to Frankfort and Holland; ſo that its chief ſupport now is from the biſhop and chapter; the firſt of whom, however, being always a pluraliſt, and often an eccleſiaſtic elector, very ſeldom reſides here. The late biſhop, who was alſo elector of Mentz, built a new epiſcopal palace adjoining to the cathedral. The citizens, as are indeed thoſe of moſt other imperial towns, are very complaiſant to ſtrangers. There is a ſenate, or ſupreme council here, compoſed of twenty-five members, whereof thirteen are for life.

There is the fineſt country in the world from this city to Oppenheim and Frankendale. The fine ſpacious plain in which it ſtands, abounds with corn, vineyards, and fruit-trees. A wine is produced here which is called Lieben-Frauen-Milch, i. e. our Lady's milk. The Rhine is about three or four hundred paces from the town; but it is ſaid formerly ran cloſe by its walls. Which way ſoever one approaches the town, the four towers of the cathedral are ſeen; which are all built of red free-ſtone.

The other places of moſt note, in this biſhopric, are, 1. Leiningen, a town on a mountain, the citadel of which was deſtroyed by the French. 2. Stein, which, though the only fortreſs on the river Weſchnitz, gives name to a bailiwic. 3, 4, 5, 6, 7. Newhauſen, Turbeim, Rheim, Hockheim, and Dirmſtein, are all boroughs, with proteſtant churches; in which, however, the Roman catholics are allowed to perform religious worſhip.

The biſhopric of Spire is interſected by the Rhine: the other parts of it are ſurrounded by the territories of the elector palatine, and the margrave of Baden Durlach. Some parts are mountainous and woody, and others level; it produces great quantities of corn, almonds, vines, and cheſnuts; extends thirty-two miles in length, and twelve in breadth. The biſhop, though ſuffragan to the archbiſhop of Mentz as a prince of the empire, has a ſeat and voice in the diets of the circle and of the college.

Spire, an imperial city, is ſituated on a delightful plain, on the eaſt ſide of the Rhine, twelve miles ſouth-weſt from Heidelburgh. It was erected before the time of our Saviour, and the ſee was founded in the fourth century. The magiſtrates, and many of the inhabitants, are Lutherans; but the Roman catholics have many churches, convents, &c. It has a ſeat, and votes in the diets of the empire, and thoſe of the circle, paying an aſſeſſment to the empire, and the chamber of Wetzlar. The French deſtroyed this city in the year 1689, and murdered indiſcriminately men, women, and children, deſtroyed ſeveral valuable marble monuments of emperors and empreſſes, and even ranſacked the graves, and ſcattered about the bones of illuſtrious dead. Previous to this devaſtation, it was the ſeat of the imperial chamber; ſince that time it has been built with additional beauty, but the imperial chamber has been removed.

At the diet held here in 1529, the word "Proteſtant" took its riſe, ſince which time perſons of the reformed religion have been diſtinguiſhed by that appellation. It is ſingular, that the biſhop is not permitted to reſide in this city; and when he is choſen, before he is ſuffered to enter it, he muſt redreſs all complaints; and then ſitting on horſeback between the two outermoſt gates, with one hand on his left breaſt, he muſt give it his benediction: he then makes his public entry, and the citizens pay him homage. The fortifications of this city are but very indifferent. It is under the protection of the elector palatine.

The town of Philipſburg, which is eight miles to the ſouth of Spire, was at firſt but inconſiderable: it was afterwards encompaſſed by a wall, and at length erected into a city in 1443. It is conveniently ſituated for commanding the adjacent country, and was therefore fortified with ſeven royal baſtions by Philip, biſhop of Spire, (who was alſo biſhop of Tiers) in 1629, before the civil wars in Germany, and called by his own name. The elector palatine Frederic Vunder, whoſe ſovereignty it was, ſuſpicious of the biſhop's deſigns in fortifying this place during a peace, ordered him to deſiſt; but he refuſed, alledging, that

that he had the emperor's placart for his warrant. Upon this the elector raised troops, and demolished the fortifications; for which the emperor summoned him and his confederates before the chamber of Spire, and designed to proceed against them with the utmost severity, which was one of the causes of the civil wars in Germany. It has suffered seven memorable sieges in the space of an hundred years. Spinola, the Spanish general, repaired the fortifications in 1633, and made it almost impregnable. It was taken the year after by the Swedes, who gave it to Lewis XIII. and was retaken by the Imperialists in 1635. It was taken from them in 1644 by the French under the prince of Condé, who joined the German protestants. The French kept it till 1676, by virtue of the treaty of Munster; and Louis XIV. in 1666, added to the fortifications, so that they extended to the Rhine, which lies a quarter of a league from the town; and put over the great gate an insolent Latin inscription, characteristical of the pride and ambition of that despotic monarch.

The Imperialists retook this place in 1676: and the emperor ordered the said Latin inscription to be erased, and another put up in its stead: and whereas the arrogant inscription placed by the French, ended with the words, "What he (Louis XIV.) shuts, no man opens; and what he opens, no man shuts;" that placed in its room by the emperor Leopold closed with, "What the French shut, the Germans open."

Being thus regained by the Germans, after a siege of four months, it was granted to them by the peace of Nimeguen. In 1688, the French took it again; but it was restored to the empire by the treaty of Ryswick, in 1697, with the fortifications on the right side, but those on the left were demolished. It was again taken by the French in 1734, after a long and bloody siege, in which the famous duke of Berwick (natural son of king James II.) was killed by a cannon ball, betwixt his two grandsons, as he went to take a view of the trenches; but at the peace that followed in the beginning of 1736, it was restored.

The castle in which the bishop of Spire resides, is a noble pile, founded in 1513, in a plain surrounded with marshes, by George count palatine of the Rhine, and bishop of Spire, and repaired in 1570 by bishop Marquard de Hatstein: the bishop has some sort of jurisdiction in it; but the empire has the right of garrisoning it.

The other places of note are: 1. Bruxhall, or Bruschal, a large open town in this bishopric, on the river Saltza, nine miles south-east of Philipsburg, and twelve north-east of Durlach. 2. Altrip, or Alta Ripa, in the same diocese. 3, 4, 5. Eidesheim, Weibstadt, and Rottenburg, are small towns; the first is situated on the Hart.

Weissenburg is at present a rich provostship, but was originally an abbey of Benedictines, situated in the antient imperial city of Weissenburg, in the Lower Alsace; but in 1546 it was converted into a temporal provostship, and annexed to the bishopric of Spire, on which account the bishop has a seat and voice in the diets.

With respect to the bishopric of Strasburg, or Stratsburg, in Alsace, which is under the dominion of France; so that, in respect to that part of his diocese, the bishop is subject to France; but on account of his bailiwic on the other side of the Rhine, he retains the title and state of a prince of the German empire, and has accordingly a seat and voice in the diets of the empire, and of this circle; but he is subject to the archbishop of Mentz in spirituals.

Basil is an extensive bishopric, but the situation is in different dominions, as part of it lies in Switzerland, and part in this circle. It is bounded by Neufchatel, Bern, Sundgau, Mompelgard, Burgundy, and Solothrun. The bishop, whose cathedral stands in the city of Basil, is a prince of the empire, having, as such, a seat and vote in the diet of the empire, and of the circle; he is likewise an ally of the Swiss. The inhabitants are partly of the Roman catholic, and partly of the Protestant persuasion, and the states consist of the clergy and nobility, with the towns and bailiwics.

The only places in the bishop's dominions, which belong to this circle, are: 1. Schelingen, a market-town on the Rhine. 2. Lauffen, a little town on the Birsa. 3. Arlesheim, on the same river, is the residence of a chapter. 4. Bellelay. 5. Seehof. 6. St. Ursitz, on the Daux, which contains a provostship. 7. Desperg, on the Birsa. 8. Bumtrut, on the Allen.

Fulda territory, lies south of Hesse, and north of Hanau, Keineck, &c. is about twenty-five miles in length, and twelve in breadth. This abbey belongs to the circle of the Upper Rhine, and is divided into thirteen small bailiwics. Some reckon it a part of Hesse, others of Wetteravia; and some again make it independent, because its abbot, who is elected by friars who must be all gentlemen by fifteen descent, is lord of the town and country, and primate of all the abbots in Germany and Gaul, is a prince of the empire, sits at the foot of the emperor's throne in all general diets, and depends immediately on the pope, to whom he pays four hundred florins, or forty pounds, on his installation. As the country borders on several protestant states, as Saxe-Gotha, &c. as well as Hesse-Cassel, there are several gentlemen here of that religion. The abbot is moreover perpetual chancellor to the empress, and puts the crown upon her head at the coronation. The revenue of this country is betwixt twenty and thirty thousand a year. The abbot has all the four great officers, with rich equipages and livery, a company of horse-guards, and a regiment of foot-guards well-cloathed and mounted, to attend him; and is able to raise four or five thousand men. His chapter consists of eight provosts, and maintains a magnificent houshold.

The capital town, Fulda, stands on a river of the same name. It is contiguous to the abbey, which is of the Benedictine order, and one of the noblest in all Europe: it was founded anno 741, by St. Boniface, and endowed with great privileges by several emperors. The great church, dedicated to that saint, is a stately free-stone pile of antient architecture. The monks have three manuscripts; one of the New Testament complete, the Four Evangelists distinct, and a Treatise on the Trinity, all said to be written by St. Boniface, in a character much different from any now in use. It is an open town, but dirty, and not very well built. The palace is a stately pile also of free-stone, with apartments richly furnished, and, together with the abbey, may be reckoned among the noblest buildings in Germany. An accurate writer observes, that he met with very hard drinkers, terrible bad roads, and dismal lodging in this country.

The small but neat city of Hirchfeld, on the same river, is situated twenty miles north from Fulda, and thirty south-east of Cassel: it is noted for another abbey, of as noble a structure as any in the empire, being built upon an arch supported by sixteen pillars, of one entire stone each. It was founded by Pepin, endowed by Charles the Great, and one of its first abbots was Alcuinus, or Albinus, his preceptor, who lies buried in it. Since 1606, when its last abbot died, the revenues have been kept by a branch of the family of Hesse, as administrator, and it was secularized by the treaty of Munster. Its district lies on the east side of Hesse, towards Thuringia; it has the title of a principality, is about twelve miles long, and the same in breadth.

The mastership of St. John consists only of the town of Hesterheim, and a few villages belonging to the order of St. John. The grand master is a prince of the empire, and has a seat and vote among the princes in the diets of the empire and circle. Heiretham, where the grand master resides, is a market town.

The abbey of Prum is situated in the forest of Ardennes, and was founded in the eighth century by Pepin, king of the Franks, and was, in 1570, incorporated with the archbishopric of Triers: hence the archbishops became its administrators, and, as such, have a seat and voice in the diets. Prum, from which the abbey takes its name, is a town of little note.

Swinnern duchy was long possessed by a collateral branch of the palatine family; but that failing, it devolved to the elector, who, on that account, sits and votes in the college of princes, and, joined with the bishop of Worms, are summoning princes for the circle.

Swinnern, the principal town, which takes its appellation from a river of the same name, is thirty miles west of Mentz, and has several churches. The duchy contains, besides Swinnern, the following little towns, namely, Laubach, Sobernheim, Argenthal, Monzingen, and Horrein.

Lauteren, a little duchy, reverted, in the last century, to the electoral house, which is thereby entitled to a seat and voice in the diets; as did the bailiwics of Lauteren and Veldenz, bestowing, at the same time, similar privileges. Lauteren is situated on the Glan, and Veldenz on the Moselle.

Frankfort on the Maine is an imperial and free city: it was antiently called Francofordia, that is, "The Ford of the Franks;" for the Franks used to cross the river here, in order to make their incursions on the Saxons, on which account the latter at length built this city, to restrain their ravages. Its present name distinguishes it from Frankfort on the Oder. It is eighteen miles east of Mentz, and twenty from the Rhine. It is spacious, populous, and opulent, one of the Hanse-towns, and the seat of the Imperial

perial diet. The river interſects and divides it into two parts, which have a communication by means of an elegant ſtone bridge, conſiſting of fourteen arches, with a tower at each end, four hundred paces aſunder; but the whole is under the juriſdiction of the ſame magiſtrates. The river is about half as broad as the Thames at London. The town is ſurrounded by walls, encompaſſed with deep ditches of running water, and fortified with eleven baſtions, ſuitable counterſcarps, outworks, &c. The Maine, Rhine, &c. render its ſituation admirable for trade, particularly for bringing great quantities of corn and wine from Franconia and the Palatinate. It has two annual fairs, one beginning fifteen days before Eaſter, the other on the fifteenth of September, frequented by merchants with all ſorts of commodities, particularly books from moſt parts of Europe, of which they diſtribute printed catalogues; ſo that there is greater choice here than in any town in Chriſtendom, during their mart, which laſts three weeks; but at other times the bookſellers have no buſineſs hardly at all. There are three marts every year, and the names of the foreign merchants are writ over the arch before the doors of their ſhops, which, when the marts are ended, are ſhut up. Moſt of the ſtreets are large, except two or three, which are full of merchants ſhops. The houſes are built ſome of red marble, others of timber plaiſtered, and painted or covered with ſlates. On the north ſide of the city there is a ſpacious horſe-fair or market, where a vaſt number of good horſes are ſold to the French king, and the neigbbouring princes, particularly the former, who buys ſome thouſands in a year to remount his cavalry. The Jews are the chief jockeys.

The city is round, and has no ſuburbs, but is much larger, richer, and more populous than Mentz. The chief ſtructures are, 1. St. Bartholomew's cathedral, which, though too dark a pile within, is a ſtately venerable piece of architecture, built by Pepin, father to Charlemagne. In a long narrow chapel of this church, called the Conclave, they uſed to chuſe the emperor: it has a very mean altar and benches for ſo celebrated a place; and the other chapel here, in which he is crowned, being a cloiſter of iron faſtened to the baluſtrades of the choir, looks like a great bird-cage, having no ornament but an ordinary crucifix of braſs. M. Blainville takes notice of a curioſity here of another ſort, viz. the tomb and white marble ſtatue (ſtanding in a niche of black marble) of John Charles, biſhop of Worms, who, the inſcription ſays, was deſcended of the barons of Frankenſtein, who mount up their genealogy from father to ſon for more than 900 years backwards of uninterrupted nobility. They ſay that this church was greatly enriched by Charlemagne, but that the emperor Lewis of Bavaria took away the greateſt part of its revenues, becauſe its chapter had ſided with the pope againſt him. 2. The town-houſe, where the emperor and electors uſually meet in council after the election is over; but beſides the throne, it has only ſome benches covered with green cloth, and ſome pictures. The great hall where the imperial feaſt is kept on the coronation-day, is not very regular though large: the floor is covered with black and yellow cloth, the livery of the houſe of Auſtria. On the ceiling is painted the ſtory of Ganymede carried away by Jupiter's eagle, and of a raven tearing out the eyes of a perſon who had falſely accuſed another of murder. Before the houſe is a great ſquare, where, at this ſolemnity, an ox is roaſted, ſtuffed with veniſon, wildfowl, and ſucking pigs; and thither one of the electors comes in perſon for a ſlice of beef, which he carries to the emperor, and after he has dined on it, it is abandoned to the populace. Another of the electors carries him a glaſs of wine, which on that occaſion runs from a fountain in the middle of the ſquare. A third carries him a meaſure of oats from thence: and in this ſquare, after the coronation, another diſtributes the medals, &c. ſtruck upon the occaſion. Here is a veſtry, where the electors were ſhut up during the election; and count Papenheim, marſhal of the empire, ſtood before the door with his ſword drawn, to prevent the princes from coming out till it was over. 3. Braunfeld, which was formerly the emperor's palace, and now the manſion-houſe of the Teutonic knights, where debtors have a ſanctuary for fourteen days after which they may be taken up. 4. The port or harbour. 5. The citadel or fortreſs of Saxenhauſen. There are ſeveral noble fountains in the city, particularly three in the great market-place; and there are divers mineral ſprings and baths belonging to the city, in which the women uſed to bathe when going to be married, and a month after child-birth.

The principal magiſtrates of this city are, a pretor, twelve burgomaſters, fourteen aldermen, one of which is always a burgomaſter, and forty-two common-council. The ſenate, which chuſes two burgomaſters annually out of their own number, is divided into three benches: the firſt is that of the Eſchevins: the ſecond is of the Literati, or learned, out of which the firſt bench is ſupplied in caſe of a vacancy: and the third is of tradeſmen, who never riſe higher. The grand bailiff, who is always preſident of the council, is choſe out of the aldermen, and his office is for life as well as the aldermen. Beſides theſe, there are ſyndics, whoſe power is not very great.

La Forelt ſays the magiſtrates are choſe from among the nobility, but named by all the corporations of tradeſmen, except the taylors, becauſe one of them was chief in the revolt hereafter mentioned againſt the magiſtrates. The government here is quieter than in moſt of the imperial towns: and their liberties, which they boaſt of holding from Charlemagne, ſeem better confirmed to them.

The Lutheran religion is profeſſed by the magiſtrates, and moſt of the inhabitants, who have five churches, in one of which is a good deal of painting and ſculpture, an altar of black marble, a marble pulpit, and reading deſk; the figure of Chriſt, with a globe and crucifix, both of alabaſter, &c. The altar piece is a repreſentation of our Saviour's paſſion in the garden; and the cieling and the fronts of the galleries are painted with ſcripture hiſtories. The Roman catholics are permitted to perform their religious duties in the cathedral, and have ſeveral chapels, and two convents, but they are not ſuffered to make public proceſſions. The Calviniſts have two churches about a league from the city, one for German, and the other for French refugees; but the ordinances of baptiſm and marriage muſt be performed in the Lutheran churches. In the council held here in 794, three hundred biſhops aſſiſted againſt the Neſtorian herely.

This city was one of the firſt that had ſpirit enough to demand the free exerciſe of the Lutheran religion; which being refuſed by their magiſtrates in 1522, they depoſed them, and choſe another ſet; and in 1530 the Augſburg confeſſion was eſtabliſhed here. It was beſieged twice in 1552, by Maurice, elector of Saxony; and by Albert, margrave of Brandenburg, who took it; but it ſoon recovered its liberty, and has flouriſhed ever ſince. On the wall of the great bridge to Saxenhauſen is an indifferent, though much celebrated picture, repreſenting a dead infant beſmeared with blood, and an inſcription beneath, denoting, that on Palm Sunday, 1475, a child two years and a half old, called Simon, was murdered by the Jews. Under the child a Jew is exhibited in a black cloak, with a ruff, aſtride a hog with his face towards the tail, which he holds in his hand inſtead of a bridle. A monſtrous large devil follows, and ſpits in his face; and a mob of women and little devils ſurround him, inſulting both him and his companion, whom another devil carries on his ſhoulders. The populace firmly believe this ſtory, yet it is well known to the learned and more ſenſible part of the inhabitants of Frankfort, to be an abſolute forgery, invented merely to prejudice the people againſt the Jews. Theſe people have a ſynagogue here, but the walls are as black and ſmoky as thoſe of a kitchen; and they are confined all night to their particular quarter, which is in a ſtreet about a mile in length, but very narrow and dirty, with a gate at each end of it, that are ſhut every evening, and the keys carried to the magiſtrates. Their houſes are generally of timber plaiſtered, and four, five, or ſix ſtories high, but as naſty as a hog-ſtye; yet in this little quarter it is ſaid there are three or four thouſand ſouls. Their chief trade is buying and ſelling old ware, hawking toys at the inns, &c. and changing ſuch money as is not current here: but they are not ſuffered to trade either on Saturday or Sunday, the Jewiſh and Chriſtian ſabbath.

The Jews at Frankfort are obliged, under ſevere penalties, to fetch water, when any fire breaks out in the city, be it ever ſo diſtant from their quarter: in recompence, the magiſtracy permit them to chuſe twelve judges out of their own body, to decide their own differences, who are called bawmeeſters; and they who will not ſubmit to their deciſions, are allowed to appeal to the Lutheran tribunals. They are obliged to wear a piece of yellow cloth; that they may be known from the other inhabitants, though their habit is very diſtinguiſhing; for the men generally wear coarſe threadbare cloaks, flat brimmed hats, old greaſy ruffles, and thick pointed beards. The women wear over their cloaths thick cloaks of black crape, bound about their necks by claſps of gilt copper, and round their ſhoulders a ſparkling border of tinſel, a foot in breadth; their head-dreſs is only a coarſe wrapper, ending at their

forehead in two large horns, about four fingers broad, one of which is covered with black gauze, and the other with a bit of lawn dyed blue. The Jewiſh girls are diſtinguiſhed from the married women by their head-dreſs, which is nothing but a piece of red taffeta, bordered with a gold gauze, with which their hair is gathered and tied. A great number of the Jeweſſes here wear ear-rings, which repreſent the ſigns of their houſes and ſhops, be they cat, dog, or any other animal. Their hot and cold baths are near the ſynagogue: the former are in two little rooms, where there are cauldrons to heat the water; the cold are in a ſubterraneous place, thirty feet deep, ſurrounded by an iron rail, where the women peep over, to ſee that ſhe who bathes plunges over head and ears into the water, according to their old law, which ordains, that every hair be purified. There is a place with ovens for baking victuals on their ſabbath-day, to which each family carries their pot, or pan, on the eve, and it is carried home next day, when the ſervice is over. Their timber houſes being ſo cloſe, and apt to catch fire, their quarter has been twice burnt down; becauſe, it ſeems, for fear of being robbed, they refuſed the help they might have had to ſave their houſes.

There are pine-trees planted by the doors at ſeveral houſes in Frankfort, denoting they are taverns, and cyphers painted on the door-poſts, marking the different prices of the wines in the cellars. Saxen-hauſen, formerly belonged to the elector of Mentz, but was bartered a little above one hundred years ago, for the town of Hochſt, which depended on Frankfort. One of the city council muſt reſide at Saxen-hauſen, ſince this change took place.

Two of the three originals of the famous golden bull are preſerved at Prague and Nuremberg, the third is kept in an apartment of the town-houſe of Frankfort, but is never ſhewn to ſtrangers, except in preſence of two of the council, and the ſecretary. It is a little manuſcript, in quarto, conſiſting of forty-two leaves of parchment, with a gold ſeal of three inches diameter, weighing twenty ducats, appended to it by a cord of yellow ſilk. It is written in Latin and Gothic characters, without diphthongs, and kept in a black box, together with two written copies of a tranſlation of it into the German language. This bull, which they likewiſe call the Caroline law, contains the rules and ceremonies to be obſerved in the choice of the emperor, ſettles the power and authority of all ranks of the nobility, and ſo binds the emperor and the princes to one another, by oath, that neither may with impunity inſtigate or attempt any thing to the detriment or danger of the common-wealth, the country, the empire, or its neighbours; and, amongſt other conditions for which the author of it is eſpecially commended, it decrees, That whoſoever hereafter had a view to the imperial dignity, ſhould be well acquainted with the languages, particularly the Latin, Italian, French, Tuſcan, and German; that, when he was emperor, he might be able, without an interpreter, to anſwer his ſubjects in the ſeveral languages.

We cannot omit here the character given of this famous city, by baron Pollnitz. He ſays, there are few places, upon the whole, more diſagreeable, and few towns in Germany, where the common people are more unpoliſhed; and that the burghers are not to be matched for affectedneſs. As moſt of the electors and princes of the empire have their agents here, to whom they give the title of reſidents; they are, for the greateſt part, merchants of this city, who ſolicit the title, in order to be exempt from the authority of the ſenate, and from the payment of the cuſtoms, and to qualify themſelves to place over their doors the arms of the princes to whom they ſend the Newspaper.

During the government of the empire by the French, the princes were all obliged to appear in perſon, unleſs they were excuſed by the emperor and electors; but now moſt of them ſend their deputies to ſave charges, which makes their proceedings much ſlower, becauſe their deputies are often obliged to ſend for their inſtructions. To ſuch abbots and biſhops who are not deputies, the emperor does not write, but only to their directors, that they may give them notice: though, ſince Maximilian's time, many of the princes have forborne to ſend deputies, yet they are as much obliged to ſubmit to the reſolves of the diet as if they did. Sometimes, in caſes of great importance, the emperor not only ſends letters, but embaſſadors, to require their preſence; and, in urgent affairs, thoſe who do not ſend, make their embaſſadors plenipotentiaries. All the princes bear their own charges, or that of their deputies.

When they arrive, they give notice to the hereditary marſhal of the empire, under the elector of Saxony, who aſſigns them lodgings, according to their quality. If the emperor be preſent, they beg audience of him, ſhew him their ſummons, thank him for calling the diet, and promiſe concurrence for the good of the empire. If he be not there, the princes ſend gentlemen to notify their arrival to the director of Mentz; but if they be deputies, they ſend their ſecretaries with their full powers, as do alſo the deputies of the towns. When they are all come, the marſhal of the empire acquaints them when or where the emperor, or his commiſſary, is to tell them what he has to propoſe. There is no upper and lower houſe, but all aſſembled in one room: if the emperor be there, he goes in his robes to the throne, which he aſcends by three ſteps. The electors ſit on a bench, which they aſcend by two ſteps, and the princes on other benches, not raiſed ſo high. If the emperor be preſent, the firſt thing they do, is, to attend him to church, where prayers are put up for a bleſſing on their conſultations: when they are returned, the elector of Treves, in the name of the ſtates, thanks the emperor for calling a diet; and the ſecretary of the empire, receiving the propoſals from the vice-chancellor, reads them: after this, the colleges retire to their ſeveral apartments, and, when they have conſidered them, agree upon a day for meeting and imparting their thoughts to one another, which, when paſſed into a reſolve, they ſend to the emperor; and, if approved by him, it becomes a law or conſtitution of the empire.

The princes are divided into benches, called the ſpiritual and the ſecular. The archduke of Auſtria, and the duke of Burgundy, though ſecular princes, ſat formerly on the eccleſiaſtical bench, becauſe they were princes of extraordinary eminence, and the maſter of the Teutonic order does the ſame. The Lutheran princes were formerly excluded from the diet, till, by the treaty of Weſtphalia, they were allowed a place by themſelves, between the eccleſiaſtical and ſecular princes. All the eccleſiaſtical and ſecular members have not equal votes; for ſuch of both as have princely dignities, are allowed ſingle votes, but thoſe who have not, give their votes by companies, as the deputies of the towns of the bench of the Rhine, or of Swabia. The counts of Franconia and Swabia, which include thoſe of Saxony, are alſo allowed two benches, and two votes: the deputies of the imperial towns make up the third rank of members. The deputies of the city where the diet is held, ſit at a table by themſelves, and take an account of the voices of the other delegates, which are brought to them and regiſtered by the two regiſters of Ulm and Spire, the former repreſenting the cities in the circle of the Rhine, and the latter thoſe of Swabia. The votes in this moſt auguſt aſſembly are ſaid not to exceed two hundred and fifty in the whole.

The throne on which the emperor ſits, is covered with cloth of gold, and the chairs and benches of the other princes and ſtates with cloth of ſilver, velvet, ſattin, ſilk, &c. according to their rank and quality. The elector of Treves ſits at the foot of the throne, as director of the electoral college. The electors of Cologne, Bohemia, Palatine, and Brandenburg, ſit on the right; thoſe of Mentz, Saxony, Bavaria, and Hamar, on the left: the eccleſiaſtical princes ſit under the electors on the right, and the ſecular princes under the electors on the left. The deputies of the towns, and of the bench of the Rhine, ſit under the eccleſiaſtical, and the deputies of the towns, and of the bench of Swabia, ſit under the ſecular princes. The deputies of Lubec and Oſnaburg ſit at the croſs bench, before the elector of Treves; and the marſhal of the empire ſits at a table, in the middle of the hall, before the croſs bench. The directoral table, with the officers attending it, is on one ſide, before the ſecular princes: thoſe princes only have a right to ſit in the college of princes, and to have a deliberative and deciſive voice, who contribute to the ſupport of the empire, according to the matricula. The directors of this college are, the archbiſhop of Saltzburg, and the archduke of Auſtria, who preſide by turns, as freſh matters come upon the tapis. The votes of the ſecular and eccleſiaſtical bench, which are taken alternately, are gathered by the marſhal; after which, the archbiſhop of Saltzburg and the archduke draw the reſult, and report it to the diet. Such princes as poſſeſs ſeveral dominions, have a vote for each. The magiſtrates of the city where the diet is held are directors of the colleges of the towns. The abbeſſes who are princeſſes, ſend deputies to repreſent them.

The point of precedency among the electors has, indeed, been long ſince ſettled by the golden bull, but the other princes, and the repreſentatives of the cities, have

not agreed on the matter to this day: insomuch that it occasions perpetual quarrels, and the diet would sometimes break up in confusion, if some of them did not, for peace sake, yield to the rest; entering a protest only, that such an instance should not be made a precedent. One fourth of a session is said to be generally spent in disputes on this subject; a second, in drinking-matches; a third, in disputes with the emperor about their privileges; and scarce a fourth upon the business proposed to them from the throne; the emperor alone having the power of proposing what is to be debated among them.

Another assembly of the empire, is called the assembly of deputations; where the deputies chosen for that purpose, determine things that have been referred to them by a diet; or when the elector of Mentz, in the emperor's name, summons the deputies, at the request of the directors or captains of one or more circles, to take orders about their affairs, or to appease controversies which they are not able to decide themselves.

The lordship of Britzenheim, on the banks of the Nahe, belongs to the elector of Cologne, who, in consequence of possessing it, enjoys a seat and voice at the diet of the circle; and the counts of Wartemburg, for the little county of the same name, have a seat and vote in the diets of the Upper Rhine, and in those of the empire. The lordship of Ollbruc belongs to the Waldbott-Bassenheim family; that of Dochstul belongs to the family of Oettingen-Baldern, and gives the proprietor a seat and voice in the diet of the circle.

The rich and imperial city of Friedburg, is situated fifteen miles south from Wetzlar, and twelve north from Frankfort. It is seated at the foot of a ridge of hills called De Hohe, and enjoys large privileges granted by the emperor Frederic II. The mart now held at Frankfort was kept here till the year 1340, when it was removed thither at the desire of the merchants; and, in lieu of it, this city hath four annual fairs; one of which is held on the first Sunday after Trinity, in remembrance of the dedication of their church on that day, which brought pedlars thither with goods, but at length grew to a substantial trade. This town has suffered much by terrible fires, particularly in 1383, when nine hundred houses were burnt; and in 1447, when seven hundred more had the same fate. This last is said to have been owing to a quarrel between two of the townsmen, one of whom set fire to the other's house, to be revenged on him. This was such a loss to the citizens, that they were forced to sell or mortgage the villages in their territory, to defray the expence of re-building their houses. This town is noted for the depth of its cellars, there being, in some houses, two or three one under another. Some of the emperors formerly resided here certain months in the year.

The imperial city of Wetzlar, or Westlar, stands on the borders of the county of Solons, ten miles below Giessen, eighteen miles south-west from Marpurg, and thirteen north from Frankfort. This is an old town, on the confluence of the rivers Lahan and Dillen: there is nothing in it worth notice, except the great church: it is, however, at present the seat of the imperial chamber, which was removed thither from Spire in the year 1689, by reason that city was taken and destroyed by the French. The provostship of the town belongs to the prince of Hesse-Darmstadt, to do justice in his name.

The duchy of Deux-Ponts is bounded by Lorrain and the county of Saarbruc, on the west; by Alsace, on the south; and every-where else by the other parts of the palatinate of the Rhine. It is about forty miles in length, and from eight to twenty-five in breadth, and gave title to its dukes, a branch of the palatinate family, one of whom was Charles Gustavus, king of Sweden; but it became extinct in 1732, in the person of Gustavus Leopold: since that time this duchy has been in sequestration; the landgrave of Hesse-Darmstadt, and the abbot of Fulda, both Roman catholics, being administrators. The elector palatine, as duke of Newburg, claimed this succession; as does also the prince of Birckenfeldt, who is a protestant, and next claimant to the electoral dignity after the house of Sultzbach. The duchy, which is supposed to have been an antient fief of the bishopric of Mentz, is divided into five bailiwics; one of which, called Bischweiler, lies in Lower Alsace, where there are other lands belonging to the family.

This is a mountainous, barren country, but has some fertile vallies. It has two small rivers that join near its capital city, from whence it has its name, and run south to the Saare. Calvinism was generally professed in this duchy, till the Swedes became possessed of it, and then Lutheranism began to flourish, the king of Swedes giving some of the best livings and preferments to the Lutheran clergy, which created great animosities between the two dominions: but the late king of Sweden dying without issue, and the duchy devolving on, or at least being claimed by, a popish family, the protestant subjects, fearing lest the papists should make an advantage of their quarrels, thought fit to unite.

The principal place in this duchy is the city of Deux-Ponts, called, in the German, Zweybruggen, and in the Latin, Bipontium, from its two bridges over the small rivers Blise and Schwalb, whereon it stands, is thirty-one miles north-west from Landau, and thirty-five south-east from Triers. It is a small, but neat town, and was once defended by a good castle, since demolished. It suffered much during the civil wars in Germany; and also in those between France and the empire, when it was taken by the French in 1677, but, by the treaty of Ryswic, restored to the king of Sweden.

Hesse-Landgravate lies on the north side of the river Maine: the whole country is bounded on the north by Westphalia; on the west by the duchy of Berg and electorate of Triers; on the south by the electorate of Mentz and Franconia; and on the east by the duchy of Weimar and Thuringen. Its utmost extent from north to south is about one hundred miles, and the same from east to west. The air is cold, but healthful; the water wholesome, and the soil fruitful, producing much corn, and, towards the banks of the Rhine and Lahn, grapes. Here are also large forests, with store of deer, and other game; and mountains, in which are some mines of copper and lead.

The family or house of Hesse, which is one of the most antient in Germany, is divided into two principal branches, viz. Cassel and Darmstadt. The former comprizes Hesse-Cassel and Hesse-Rhinfels: the latter, Hesse-Darmstadt and Hesse-Hombourg; though Martiniere says, that Hesse-Rhinfels, as well as Hesse-Hombourg, are branches of Hesse-Darmstadt.

The sovereign princes of this house have very extensive rights and prerogatives: they have three votes at the diet of the empire. They belong to the circle of the Upper Rhine, but Hesse-Cassel has a voice among the counts of the bench of Westphalia for the county of Schaumburg. Causes not exceeding one thousand florins, are determined by the courts of the country without appeal. These princes have several privileges in common, such as the right of protection and imperial prefecture of the city of Wetzlar, which is at present exercised by Darmstadt alone. The princes of Hesse-Cassel are not of age till they are twenty-five, but those of Darmstadt are so at eighteen.

The landgrave of Hesse-Cassel possesses, 1. Lower Hesse, in which are the county of Pless, Cassel, and Zigenheim. 2. Marpurg, in Upper Hesse and Frankenburg. 3. The principality of Hirschfeld, a secularised abbey on the Fulde. 4. The lower county of Catzenellebogen. 5. The county of Schaumburg, except Buckeburg, which belongs to the county of Lippe. 6. Smalcald, in the county of Henneberg. 7. The bailiwics of Rottenberg and Saxen-hagen. To these Martiniere adds the bailiwics of Ucht and Freadenburg.

The landgrave of Hesse-Damstadt, who is little inferior to the former, either in dominion or wealth, having a revenue of near one hundred thousand pounds a year, possesses, 1. The greatest part of the Upper Landgraviate, in which there are Giessen, Butzbach, Aendorf, Battenberg, Berg, &c. 2. The county of Nidda, which consists of several bailiwics. 3. The lordship of Itter. 4. The upper county of Catzenellebogen, in which lies Darmstadt city; the land of Epstein, Braubach in lower Catzenellebogen, and Kirnbach in Swabia. The succession also of the county of Hanau was in 1736, upon the death of its count, awarded to the prince of Hesse-Darmstadt, as next heir, on condition of his paying twenty thousand pounds, by way of compensation to the house of Cassel. The king of Poland, as elector of Saxony, ought to have had his share in the succession; but his majesty gave up his rights, by a treaty, to the landgrave of Hesse-Cassel.

To the branch of Rhinfels belong, 1. The greatest part of the lower county of Catzenellebogen, viz. Rhinfeld, St. Goar, Fort Catz, Schwalbach and Gevernhausen; the bailiwics of Riechenberg, Florenstein, and Brau. 2. Rottemburg, and its district, Wanfried, Eschwega, and Sontra in Lower Hesse.

To the branch of Hombourg belong, 1. Hombourg, and its territory. 2. Bingheim. 3. Wevelinghen and Helimstadt, with its dependencies. The prince of Hom-

bourg

bourg has, moreover, an appenage of about one thouſand pounds a year from Heſſe-Caſſel, and two thouſand from Darmſtadt.

The two branches of Caſſel and Hombourg are Calviniſts; that of Darmſtadt, Lutheran; and that of Rhinfelds profeſſes the Roman catholic religion, which is, however, not tolerated in the dominions of the other three princes, except in the ſmall principality of Hirſhfeld. Theſe countries are adorned with ſeveral univerſities and academies. The ſituation of the country betwixt Upper and Lower Saxony, and the neighbourhood of Weſtphalia, occaſions the language of the people to be a mixture of High and Low Dutch. The laws moſt in force here are the Roman or civil law, to which they join municipal laws of their own. The people are numerous and warlike, being raiſed and diſciplined by the younger ſons of the family, who are made lieutenants and captains of ſeveral diſtricts, and receive pay of the regent. In the prince of Heſſe-Caſſel's military ſervice are a general, two lieutenant-generals, a major-general, a colonel of the artillery, two commiſſaries general of the war, and one chief pay-maſter, two troops of life-guards, one of white, and the other of black horſes, three other regiments of horſe, three of dragoons, and five of foot, one of which is guards, beſides the militia, which is commanded by a lieutenant-general. The landgrave has a privy council, or court, for the game and foreſts; a chancery, or ſecretary's office, a treaſury and conſiſtory, for eccleſiaſtical affairs; and another court, called the French commiſſion, relating particularly to the French in his dominions. All the privy counſellors are members of the conſiſtory, to whom are added a ſuperintendent, a metropolitan, one of the court preachers, and a ſyndic. Dr. Nicholſon has an obſervation, that the power and ſplendor of the family of Heſſe was conſiderably advanced by the Receſſus Imperii in 1654, which eſtabliſhed the right of primogeniture in it, and prevents their dwindling into petty princes, which has been the fate of many families in Germany, by dividing the ſovereignty among the ſeveral branches.

The landgravate of Heſſe contains the following places, of which the principal is, 1. Caſſel, the capital city of the Lower Heſſe, is ſituated in a rich pleaſant plain on the river Fulda, near the confines of the duchy of Brunſwic, forty miles ſouth-eaſt from Paderborn, and ninety-eight north-eaſt from Mentz. It is a place of good trade for wool and other merchandize; and to the weſt it is fortified with walls, ditches, and a ſtrong citadel. It is the ſeat of the landgrave, whoſe palace ſtands without the town, ſurrounded by bulwarks, with apartments contrived in the very ramparts, to lodge his family during a ſiege, out of the reach of bombs. The palace is of free-ſtone, very fine both within and without, and adorned with curious gardens and fountains. Here is a gymnaſium, or academy, which has been much eclipſed by the univerſity of Marpurg. In this place is a great arſenal of free-ſtone, with arms for twenty-five thouſand men; and in the room under it are two hundred cannon, ſome ſixty-four pounders. From the palace there is a proſpect not to be matched in the empire, except from that of Cleves, it being of no leſs than ſixty towns, the leaſt of which contain three hundred houſes. The ſtreets of this city are ſpacious, and full of ſhops; and here are ſeveral fine markets, with good proviſions of all ſorts. The landgrave has a library well furniſhed with books and curioſities.

In the great church are the monuments of the landgraves, in braſs, copper, and marble, of very good workmanſhip. The cathedral, dedicated to St. Martin, is capable of containing four thouſand people. There are four other churches, which have two miniſters each; except the ſoldiers church, which has but one. Here is a church likewiſe in the palace, for the worſhip of the court. There is a fine ſtone bridge over the river that divides the city into two parts, of which that called the New Town is very well built, with uniform houſes, and the ſtreets are pretty even and ſpacious. Here is alſo an exceeding fine aqueduct, made by the landgrave who founded the bridge.

The other places moſt worthy of obſervation, are, 2. Kirchbain, on the Wohra, which gives name to a bailiwic. 3. Rauſchenburgh, does the ſame. 4. Wetter. 5, 6. Roſenthal and Gernunden give name to bailiwics. 7. Frankenaw, in the bailiwic of Heſſenſtein. 8. Louiſendorf, in the bailiwic of Geiſmar, inhabited chiefly by French refugees. 9. Hania, on the Werra, contains one of the four hoſpitals of Heſſe, in which four hundred poor and ſick are carefully attended and maintained, out of the revenues of the Ciſtertian convent. The governors of both theſe hoſpitals are nobles, which the two princes of Heſſe alternately nominate.

10. The town of Rodemburg, on the river Fulda, is pleaſantly ſeated thirty miles ſouth-eaſt from Caſſel, and has a collegiate church, with a dean and twenty canons, nobly endowed. This place ſtands in a valley between two hills in Upper Heſſe, and gives title to a branch of the Heſſian family. It is divided into the Old and New Towns: in the old, there is a caſtle, which was demoliſhed in the year 1212, by the Imperialiſts, but rebuilt by William IV. landgrave of Heſſe, who, in 1574, adorned it with a fine garden, and a church, built throughout with white marble, dug out of a quarry at Moriſen, a village on the ſame river, juſt below the town.

11. Ziegenhein, on the river Schwalm, is in the lower landgravate, thirty miles ſouth from Caſſel. It is a ſmall, but neat city, and gives name to a county, of which it is the capital, and was united, by Lewis the Pacific, the landgrave, to his demain, in 1543. The ſucceſſion to this eſtate was formerly diſputed by the counts de Hohenloe, but their claim being referred to the diet at Worms, it was adjudged in favor of the landgraves of Heſſe, who have ever ſince enjoyed it.

12. Nineteen miles ſouth of Caſſel, is Hombourg, a town with a caſtle in the Upper Heſſe, which ſtands at the eaſt end of the foreſt and mountain of Hohe, pretty near to Frankfort, and is the reſidence of the branch of the family, from thence called Heſſe-Hombourg, which has for its appenage the bailiwic of which this is the chief town.

13. Geyſmer, the capital of a bailiwic in Lower Heſſe, ſtands twelve miles north from Caſſel.

14. The walled town of Eſchwege, twenty-four miles from Caſſel, was built by Charles the Great, deſtroyed by the Huns, and rebuilt with great ſplendor, by Henry II. It ſtands on the bank of the river Werra, by which wood and coals, the principal commodities of theſe parts, are conveyed down to the Weſer, and from thence to the neighbouring countries. It is ſituated in the Lower Heſſe, near the confines of Thuringia.

15. The town of Smalcald ſtands on a rivulet of the ſame name, on the eaſt ſide of the river Werra, and extends between the duchy of Weimar and that of Saxe-Naumburg, but is disjoined from the reſt of the lands of the landgrave of Heſſe-Caſſel. The town is fifty miles ſouth-eaſt from Caſſel, and has a good trade for iron ware, many mines of the neighbourhood furniſhing the inhabitants with plenty of that metal, which they work, and ſend to foreign parts. They alſo make and temper ſteel, from whence a village near it is called Stahlberg. This place was famous for the aſſemblies of the proteſtant princes in 1730, 1731, 1735, and 1737, to make a league for the defence of the Augſburg confeſſion againſt the emperor Charles I. and the popiſh princes of Germany, which league grew ſo powerful, that they forced the emperor to a treaty held in 1757 at Paſſaw, in conſequence of which, ſeveral parts of the empire embraced the Lutheran religion.

16. The town of Marpurg ſtands in a pleaſant country on the river Lahn, forty-eight miles from Franckfort, and near forty-four ſouth-weſt from Caſſel. It is now the chief town in the Upper Heſſe, and the ſeat of the ſupreme court of judicature, to which appeals are brought from Caſſel and Darmſtadt. It has a ſtrong caſtle on a hill, and is otherwiſe well-fortified. The great church is a ſtately building, and has many noble monuments. The univerſity here, founded in 1526, is one of the moſt conſiderable in Germany: the profeſſors are Calviniſts. The town is large, and well-built, with ſpacious ſtreets. It has a very large ſquare, adorned with a town-houſe of curious architecture. The caſtle is ſeparated from the town by the river. In the other part is a ſtately, ſpacious building, the houſe of the commander of the Teutonic knights. The palace of the landgrave ſtands on a riſing ground, from whence there is a view over large plains and vallies, watered with rivulets; beſides hills and vineyards, of which, from the free-ſtone bridge over the river, there is alſo a fine proſpect.

17. The ſmall town of Lichtenau, and the antient caſtle of Spangenburg, give name to bailiwics. 13. Connefeld is a village, with a fine white alabaſter rock near it. 20, 21. Melſungen and Friedwald contain two princely ſeats. 22. Vach, on the Werra, gives name to a bailiwic. 23, 24. Waldkappel and Allendorf give name to bailiwics. 25. Grebenſtein, on the Eſſe, gives name to a bailiwic. 26, 27, 28, 29, 30, 31, 32. Immehauſen, Hermerſhauſen, Trendelberg, Sabbaburg, Karls Haven, Hof-Gieſmar, and

and Wolfhagen, all give names to bailiwics. 33. Liebenau, near Paderborn. 34. Felfburg, gives name to a bailiwic. 35. Gudenfburg, alfo gives name to a bailiwic, which is remarkably fertile, and contains, 36. Nidenftein, a very antient town; and, 37. Merxhaufen, one of the four high hofpitals of Heffe. 38. Hornberg, on the Effe, gives name to a bailiwic, which contains, 39. Wabern, a village. 40. Borken gives name to a bailiwic. 41. Treyfa, on the Schwalm. 42. Newkirchen, gives name to a bailiwic. 43. Treffurt, a town on the Werra, belongs jointly to Mentz, Saxony, and Heffe. 44. Wanfried, at the conflux of the Werra and Frieda. 45. Sontra gives name to a bailiwic. 46. Wigenhaufen is in the bailiwic of Lugwigftein. 47. Pleffais, a ruinated caftle, gives name to a lordfhip.

48. The large town of Frankenburg, or Frankenaw, on the river Eder, is twenty-five miles north from Marpurg. It ftands fifteen miles fouth-eaft of Waldec, in the weftermoft bounds of the landgravate of Upper Heffe, towards Weftphalia. In 1590, fome mines of filver and copper were difcovered here, but they turned to little account. 49. Sachfenburg is about fix miles weft of Frankenburg; here are the ruins of an old fort, built by the ancient Saxons.

50. The town of Aldsfeld, one of the moft antient in Heffe, is nineteen miles eaft from Marpurg. The townhoufe is a handfome building, and over the doors is a monument in remembrance of the fire, with a Latin infcription, denoting, "that when things are irrecoverably loft, it is the beft way to forget them." This was the firft town in Heffe that embraced the Reformation by Luther.

51. On the river Lahn ftands the good town of Gieffen, in Upper Heffe; it is eleven miles fouth from Marpurg, and thirty-eight north from Franckfort. It is defended by a ftrong wall, and regular fortifications, and hath a well furnifhed arfenal. Its trade is dreffing and felling of cloth. The royalty of the town is, according to fome authors, divided betwixt the landgraves of Caffel and Darmftadt. It has four gates, and as many fpacious ftreets, with a fquare or market-place in the centre. The compafs of its ditch is about an hour's walk. It has but one great church, dedicated to St. Pancras, which ftands in the middle of the town, with a high fteeple, and a fine ring of bells. The governor refides in the caftle, at the eaft end of it. It is governed by a council and a magiftrate, befides the officers of the landgrave. It has a fair between Eafter and Afcenfion-day, which lafts a week. Round the neighbourhood are feveral caftles, as Solms, Koningfburg, Fetzburg, Gleiber, &c.

52. The town of St. Goar, capital of the lower county, is fituated on the weft fide of the Rhine. 53. Goerfhaufen is a fmall town on the eaft fide of the Rhine, oppofite to St. Goar. 54. Rechenburg. 55. Granan is one of the four called the high hofpitals of Heffe. 56. Langenfchwalbac, in the bailiwic of Hohenftein; where is likewife, Harlfthalerlead, a celebrated medicinal bath. 57, 58, 59, 60, 61, 62, 63, 64, Allendorf, Homberg, Romrod, Ubrickftein, Grimberg, Kirdorf, Grubenau, and Schotten, give name to bailiwics. 65. Lauterbach. 66, Nidda, on a river fo called, gives name to a county. 67, 68, 69, 70. Sturnfels, Bingenheim, Lifburg, and Butzbach, all give names to bailiwics, though the three firft are only caftles. 71. Upper Rofbach, gives name to a bailiwic. On the fifth of November, 1757, the king of Pruffia obtained a great victory here over the French army. 72. Philipfec. 73. Koningfberg gives name to a bailiwic. 74. Bredencap. 75. Battenberg, on the Eder, gives name to a bailiwic, which contains, 76. Hatzfeld, on the fame river. 77. Thal-Itter. 78. Freyftadt, on the Rhine, erected in the year 1745. 79. Great Gerace. 80. Jogerfburg, gives name to a bailiwic. 81. Hofheim, one of the four high hofpitals of Heffe, is fituated in the bailiwic of Domberg. 82. Reinheins, watered by the Gernfprenz. 83. Great Umftadt, on the Odenwalde, gives name to a diftrict. 84. Epftein, gives name to a lordfhip. 85. Zwingenburg, on the Berge-Straffze, gives name to a bailiwic. 86, Braubach, on the Rhine, gives name to a bailiwic. 87. Ems. 88. Old Catzenellenbogen gives name to the county, and alfo to the village and parifh.

89. The town of Darmftadt is fituated on a river of the fame name, at the diftance of twelve miles fouth from Franckfort on the Maine; it is inclofed by palliſadoes, and defended by a ftrong caftle, which is the landgrave's palace; and, for better fecurity of the country, there are two forts, one on the Rhine, named Markburg, or Marienburg; and the other on the Maine, called Ruffelheim. The palace is a princely ftructure, and has a fpacious garden, abounding with all forts of fruits, and yielding annually great quantities of rich wines. The landgrave has befides, two fine pleafure-houfes two miles from hence, Kranchftein and Sensfeld. This town is not large, but makes a goodly appearance, moft houfes being free-ftone, and very high. Though well-fortified, it has feveral times been furprized and taken; and the French ruined the fortifications. In this town the Germans firft gave over tilts on account that, in 1403, the Franconians, and Heffians, having challenged one another to this exercife, feveral of the Franconian nobility, and nine of the Heffians, were killed on the fpot.

It is a flat, even country, with a gravelly foil, which produces excellent pulfe, and is interfperfed with woods, through which are cut noble roads. The deer come fometimes clofe to the palliſadoes of the town, there being no province in Germany more proper for hunting, nor in Europe where there are more deer; the great plenty of which is very troublefome to the poor peafants, who are abroad day and night to watch their fields, the prince being fo jealous of the game, as to reckon it as bad as murder for any one to kill a deer.

The county of Sponheim is fituated between the Rhine and the Mofelle. It was antiently divided into Hither and Farther, the former of which is now commonly called the county of Sponheim, and the other that of Starkenburg. Three-fifths of the Hither county belong to the elector palatine, and the remaining two-fifths to the prince of Baden-Baden.

The principal places in this county are, 1. Kreutznach, or Creutznach, the capital: it is a well-built town, divided by the river Nahe into the Old and New Towns. The firft emperors of the Franks had a palace here, in which they fometimes refided. 2. Spanheim. 3. Kirchberg, gives name to a bailiwic. 4. Naumberg, alfo gives name to a bailiwic.

One half of the Farther county belongs to the duke of Deux-ponts Birkenfeld, and the other to the prince of Baden-Baden.

The moft conſiderable places are, 1. Starkenburg, a caftle on the Mofelle. 2. Trarbach, or Tranerbach, a fmall town on the Mofelle. 3. Horftein, which gives name to a bailiwic. 4. Birkenfeld, a fmall town.

Solm, a principality and county, is fituated between Lorrain and Lower Alface; and, to diftinguifh it from the county of the fame name in the duchy of Luxemburg, it is called the Upper County, and the other the Lower. The princes of Solm are now divided into two branches, viz. Hoogftraat, or Solm-Zufalm; and Luetz-Loes, or Solm-Kirburg; each of which votes alternately at the diets, and poffeffes an equal fhare of the eftates belonging to the former counts.

Naffau principality lies moftly in the Wetterau. The length of it is computed at about fifty miles, and the breadth thereof about thirty. Though it is in general woody and mountainous, there are fome fine paftures and corn-lands in it, befides excellent baths and mineral waters, and feveral mines of iron, lead, copper, and other metals. The principality is divided into feveral counties belonging to the different branches of the family, which is one of the moft antient and illuftrious in Europe, having produced, befides many other great heroes, Adolphus, emperor of Germany, and king William III. of Great Britain. The elder line, or that of Walram, conſiſts, at preſent, of the branches of Naffau Saarbruc-Uſingen, Naffau-Saarbruc-Saarbruc, and Naffau-Weilburg. The repreſentative of the laft of theſe married the late prince of Orange's only ſiſter. The other line, or that of Otho, which conſiſted formerly of the feveral branches of Naffau-Siegen, which was popiſh, Naffau-Dillenburgh, Dietz, and Hadamar, is now reduced to that of Naffau-Dietz, the repreſentative of which, William V. prince of Orange, enjoys all the territories that belonged to the other branches, and on account of them has feveral votes in the diet of the empire, and thoſe of this circle, and Weſtphalia. All the branches pay a particular and chamber-taxation; but thoſe of the elder line have no ſeat, or votes, in the college of the princes of the empire, being only members of that of the Imperial Wetterau courts. Moſt of the princes and inhabitants are Calviniſts.

The chief places in this principality are, 1. Dietz, the capital of another county, belonging to another branch of the Naffau family, of which the prince of Orange is the head, is pleaſantly ſituated on the river Lahn, nine miles eaſt from Naffau, and nineteen ſouth-eaſt from Coblentz: it is walled, and has two fine caſtles, or towers, ſtanding

upon two hills in the town. It has a bridge over the river, which communicates with Fregen-Dietz. It had a collegiate church, ſubject to the elector of Treves; but ſince the Reformation, the revenues have been applied to the univerſity of Herborn. The country in which this town lies is about fourteen miles long, and ten broad; it is ſtony and hilly, has plenty of veniſon and ſheep; but in the vallies there is corn and wine enough for the inhabitants. It is ſituated between the lower county of Catzenellebogen, the lordſhips of Idſtein and Wiſhaden, and the archbiſhopric of Treves. 2. Kirberg, belonging jointly to Naſſau-Dietz and Uſingen, is a walled town, which gives name to a bailiwic. 3. Weilmunſter, on the Weilbach, gives name to a bailiwic. 4. Lahnberg, which with its bailiwic, is held in common by Naſſau Weilburg and Naſſau-Dietz. 5. Mehſenberg, with its bailiwic, belongs to Naſſau-Weilburg. 6. Kleeburg, gives name to a bailiwic, which belongs to Naſſau-Weilburg and Heſſe-Darmſtadt: to the latter alſo belongs the large country town of Reilchelſheim, in the county of Weilburg, and other eſtates. 7. Kircheim Poland, with its bailiwic, belongs to Naſſau-Weilburg, 8. Gelheim: 9. Hanſtetten; 10. Idſtein: 11. Burg; 12. New-Saarwerden; 13. Uſingen; 14. Bleidenſtalt; and, 15. Schwalbach, are all inconſiderable towns; but, 16. Wiſhbaden is a handſome, populous town, ſituated on the Rhine, and noted for its warm baths. 17. Bibarich, is a village on the Rhine.

18. Weilburg, a handſome town on the river Lahn, which gives name to a country, and title to the prince thereof, who has a fine palace and gardens in the town. Over the river is a ſtone bridge, and in the neighbourhood of the town is a large menagerie, and a pleaſure houſe. 19. Naſſau, a ſmall town on the Lahn, near which formerly ſtood Naſſau-berg, a very antient caſtle, which was the original ſeat of the family. Part of the bailiwic, named from the town, belongs to Naſſau Dietz, another to Naſſau-Weilburg, and another to Naſſau-Uſingen; and of that of Camberg adjoining Naſſau-Dietz, and the elector of Triers, are joint proprietors. 20. Schierſtein. 21. Lahn on the Schutter, gives name to a lordſhip. 22. Otiweilar. 23. Saarbruc, on the Saar. 24. Homberg, on the Weſgau, gives name to a bailiwic.

The county of Waldec is bounded, on the ſouth, by Heſſe; on the north, by the dioceſe of Paderborn; on the eaſt, by the Heſſe, and the bailiwic of Fritzlar, in the electorate of Mentz; and, on the weſt, by the duchy of Weſtphalia. Its length is computed at about twenty-four miles, and its breadth at twenty. It yields iron, lead, copper, marble, ſlate, mineral ſprings, and abounds in grain, wood, and cattle. Gold is ſometimes found in the river Eder. The inhabitants in general are Lutherans. The ſtates conſiſt of the nobility and towns. There are ſome woollen manufactories, beſides thoſe of iron and paper, in the county. The title of the family of Waldec runs thus: "Waldec, prince of the ſacred Roman empire, count of Pyrmont and Rappolſtein, lord of Hohenec and Gerolſec, &c." The females, however, are only counteſſes. The prince has not yet obtained a ſeat and voice among the princes, in the diet of the empire, but in that of the circle he has. To the empire, his quota for Waldec is four horſe and eighteen foot, or one hundred and twenty florins monthly, in lieu of them, and to the chamber of Wetzlar ſixty-ſeven rix-dollars, and ſeventy-four kruitzers. The county is a fief of Heſſe-Caſſel, the ſucceſſion to which was firſt ſettled on the eldeſt ſon and his iſſue, in the year 1697. Here are the uſual courts and colleges, for the government of the county, and the adminiſtration of juſtice. The revenue of the county is ſaid to amount to above one hundred thouſand rix-dollars per annum, and the prince generally maintains five companies of foot.

The chief places are, 1. Corbach, the capital of the county, divided into the Old and New Town, which contains a gymnaſium and two churches. 2. Lower Weldungen, ſo called to diſtinguiſh it from Old Weldungen, a ſmall town with a caſtle, called Frederickſtein. There are ſome mineral ſprings in its neighbourhood. 3. Mengeringhauſen; 4. Sachſenhauſen; 5. Rhoden; 6. Sachſenberg; 7. Landau; 8. Freienhagen; 9. Waldec; 10. Zuſchen; 11. Furſtenberg; which are all ſmall towns. 12. Arolſen, near the river Aars. 13. Adorf, a village in the bailiwic of Eiſenberg. 14. Kleinern, a village in the bailiwic of Waldec.

The county of Hanau-Munzenberg is forty miles in length, but its greateſt breadth is not above twelve. It is fertile in corn, wood, wine, fruit, and produces likewiſe ſalt, cobalt, ſilver, and copper. The rivers are, the Maine, Kinzeg, and Nidda. The eſtabliſhed religion is Calviniſm, but Lutherans and Roman catholics are tolerated. It is a populous country, and flouriſhes in manufactures and commerce.

The chief places are, 1. Hanau, its capital, which gives name to it, ſituated on the river Kinzeg, which divides it into the Old and New Towns, both of which are fortified. The New Town is regular and handſome: it was built at firſt by Flemiſh and French refugees, who had great privileges granted to them. The caſtle, in which the counts uſed to reſide, and which ſtands in the Old Town, is fortified, and has a fine flower-garden, with commodious apartments, but makes no great appearance. A canal runs from the town to the Maine, on which river, near the town, is Philipſrue, i. e. Philip's Repoſe, a pretty country-houſe, built by one of the counts of the name of Philip. The magiſtracy of the New Town, and the diſpoſal of all officers in it, belong to the French and Dutch congregations. Here is an univerſity, with ſeveral manufactories, particularly that of roll-tobacco, and a very conſiderable traffic. The Jews are tolerated here, and dwell in a particular quarter.

The other palaces are, 2. Hockſtadt, in the bailiwic of Bucherthal. 3. Windeckon, on the river Nieder. 4. Bergen, which gives name to a bailiwic, in which are alſo the two ſmall towns of Biſchofsheim and Seckbach. 5. Rodheim, which gives name to a bailiwic, in which is alſo the ſmall town of Nanheim. 7. Ortenburg, on the Nidda, which gives name to a bailiwic. 8. Steinau gives name to a bailiwic, and alſo contains Schuchtern on the river Kinzeg. 9, 10, 11, 12. Lothaupen, Hafzlau, Schwarſenfels, and Bibenhauſen, give names to bailiwics. 13. Bieber. 14. Aſſenheim, at the conflux of the Nidda and Wetter. 15. Reinac. 16. Glenhauſen, on the Kinzeg, ſixteen miles north-eaſt from Hanau. 17. Munzenburg, on the Wetter.

With reſpect to the family or houſe of Solms, it may be obſerved, that it is divided into a great many branches, of which thoſe of Solms-Laubach-Sonnewald, and Solms-Laubach-Baruth, with their collateral branches, have their eſtates in Luſatia, and the electorate of Saxony. The matricular aſſeſſment of thoſe of this circle is two hundred and fifty-two florins, and to the chamber of Wetzlar, about two hundred and thirty rix-dollars. In the diet of the empire, and the college of the imperial counts of the Wetterau, they have four votes, and the like number in the diets of this circle. The lines of Braunfels and Hohen-Solms are Calviniſts, that of Sonnenwald catholic, and all the reſt Lutheran.

The chief places worth mentioning, in the territory of Solms-Braunfels, are, 1. Braunfels, a town ſituated on a high-hill; near it is a palace, ſtrongly fortified in the antient manner, and giving name to a bailiwic, which, with the town and caſtle, belong to the Braunfels branch, and contains, beſides other places, Leun, or Lein, a ſmall town on the Lahn; Altenburg, a præmonſtratenſian convent for ladies, near which the higheſt court in the county is held in the open air, unleſs in ſtormy weather; and Burg-Solms, a village. This bailiwic abounds in grain and cattle, and has ſeveral iron-mines and woods in it. 2. Greifinſtein, which gives name to a bailiwic. 3. Hungen, on the Horloff, in that part of the lordſhip of Munzenburg which belongs to this family. In the ſame part of this lordſhip ſtands alſo Arenſburgh, a rich abbey of Bernardines, ſubject to the archbiſhop of Mentz, the revenue of which is ſaid to amount to thirty thouſand florins. 4, 5, 6. Wolfeſheim, Gambac, and Hohen-Solms, all give names to bailiwics, and the latter contains a palace. 7. Utphe, on the Horloff, gives name to a bailiwic. 8, 9. Lech and Laubach, on the Wetter, do the ſame. Excellent fuller's earth is found in great abundance in the neighbourhood of the latter.

The chief places in the territory of Solms-Rodolheim, are, 1. Rodolheim, on the Nidda, which gives name to a bailiwic. 2. Aſſenheim, ſituated at the conflux of the Nidda and Wetter, and gives name to a bailiwic.

The county of Upper Iſenburg is ſo called to diſtinguiſh it from Lower Iſenburg on the Lower Rhine. It was made a county in 1442, having been only a lordſhip before. It contains wood, corn, and wine, is well watered, and belongs partly to the houſe of Iſenburg, on account of its portion of this county, has a ſeat in the diets of this circle, and alſo among the Wetterau counts.

The principal places are, 1. Briſtein. 2. Wennings. 3. Langen-Diebach, and Offenbach, on the Maine; all of which belong to the prince of Iſenburg-Birſtein. 4.

Haynzur-Dreyeichen. 5. New Iſenburg, belonging to the above-mentioned prince. 6. Budingen, which, though a ſmall town, is the capital of the whole country. It gives name to a diſtrict, which, with two others, belongs to the count of Iſenberg-Budingen, who has a palace in the town: there is a park for deer, with ſome vineyards and ſalt works in its neighbourhood. 7. Meerholz, on the river Kinzeg, gives name to a diſtrict. 8. Wachterſbach, gives name to a diſtrict, which, with the town and two other diſtricts, belong to the counts of Iſenburg-Wachterſbach.

The county of Konigſtein lies in the Wetterau, along a ridge of mountains called the Hohe. The elector of Mentz at preſent poſſeſſes nearly the whole of the county, a ſmall part only being held by the counts of Stolberg, who, however, claim the whole; accordingly a proceſs was preferred to the aulic council about the title to it. In the mean time both theſe princes vote, on account of it, in the diet of the Upper Rhine, and both are members of the college of the imperial Wetterau counts. Mentz pays eighty florins of the matricular aſſeſſment for Konigſtein, and Stolberg twenty.

The only places in this county, worth notice, are, 1. Soden, a free imperial village. 2. Geudern. 3. Ranſtall. 4. Ordenburg. 5. Konigſtein. 6. Upper-Urſel. 7. Vilbel, which gives name to a diſtrict.

The territories of the Wild, Wald, of Rau-Graves, were ſo denominated from their rough and woody appearance; which, as well as thoſe of the Rhine-Graves, lie diſperſed about the Rhine, between Baſil and Bonn. In the twelfth century, the territories of the former devolved to the latter, from whom are ſprung the counts of Salm, thoſe of Grumbach, the Rhine-Graves of Stein, and Wild-Graves of Daun and Kirburg. The Wild and Rhine-Grave lands are moſtly fiefs. Each reigning houſe ſits and votes in the diets of this circle, and in thoſe of the empire, in the college of the imperial counts of the Wetterau, paying each a matricular aſſeſſment, and alſo to the chamber at Wetzlar.

The principal places in the territory of the counts of Grumbach, are, 1. Grumbach, which gives name to a lordſhip and bailiwic, near the river Glan, and affording amethyſts, cornelians, agate, mochas, &c. 2. Tronehen, on the Tron, gives name to a lordſhip which contains Talfang, a market-town, and fourteen little villages beſides.

The Rhin-Graves of Stein contain only Rhingrafenſtein and Wildenburg, the large village of Worſtall and Grehweiler.

In the Wild-Gravate of Daun, there is an elegant ſeat, called Daun, on a hill near the Swinnern; Puttlingen, which gives name to a lordſhip; Kirn, a town on the Nahe; and Diemringen, a market-town, from which a bailiwic receives its name.

The town of Leinengen, or Linage, the capital of its country, ſtands eight miles ſouth-weſt of Worms, and north-weſt from Spire. This county, which borders upon Frankendale, is ſhared upon four branches of the family, who take their name of diſtinction from the ſeveral parts of it in their poſſeſſion. The county of Linege, properly ſo called, is a fief of the biſhop of Mentz, and therefore it was united to France in 1681, but by the treaty of Ryſwic thoſe counts were re-eſtabliſhed in their antient ſtate, and they are therein expreſsly ſtyled the counts of Leiningen. The principal places in it are, New Leiningen, Turcheim, Grunſtadt, and Lantheim. The other branches of theſe counts, who are all Lutherans, are in poſſeſſion of Hartenburg, in the middle of the palatinate, not far from Worms; Weſterbourg, in Wetteravia; Dachſbourg, in the Weſtreich, in Alſace; and Broich caſtle on the Rhine, near Duiſbourg.

Falkenſtein county belongs entirely to the emperor, but contains only Winweiler, which gives name to a bailiwic, and Falkenſtein, a ſmall town defended only by a caſtle.

Reipoltzkirchen lordſhip belongs to the count of Hilleſheim, which intitles him to a ſeat and voice in the diets of the circle; the lordſhip of Kirchingen alſo admits the count of Wied-Runkiel to the ſame privilege.

The county of Whitgenſtein, which is about eighteen miles in length, and fourteen in breadth, is environed by the territories of Heſſe-Darmſtadt, Naſſau-Dillenburg, and the duchy of Weſtphalia. It produces little grain, but good paſture, and plenty of wood, with mines of ſilver, copper, and iron, and is watered by the rivers Lahn and Eder. The counts, who are of the ſame family as thoſe of Sayn, are divided into the two branches of Sayn-Witgenſtein, and Sayn-Witgenſtein of Berleburg. The county intitles both branches to a vote in the college of the Wetterau counts, both at the diet of the empire, and thoſe of this circle. The revenue of the county of Witgenſtein, including that of the lordſhip of Homburg, which lies between the duchy of Berg and county of Mark, and belongs to the counts of Witgenſtein, is computed at fifty thouſand rix-dollars.

The only places in this county, deſerving notice are, 1. Witgenſtein, near which ſtands Laaſphe, a ſmall town of the Lahn. 2. Berleburg, a ſmall town on the little river Berlen *.

SECT. V.

Containing a Deſcription of the Circle of the LOWER RHINE, its ſeveral Diviſions, Towns, Rivers, Produce of the reſpective Countries, Trade, Manufactures, &c.

THIS diviſion of Middle Germany is bounded, on the eaſt, by Franconia, and the lower part of the circle of the Upper Rhine; on the weſt, by the upper part of the circle of the Upper Rhine, Lorrain, and Luxemburg; on the north, by Weſtphalia; and, on the ſouth, by that of Swabia. Excluſive of the palatinate, this circle contains the three archbiſhoprics and electorate of Mentz, Triers or Treves, and Cologne. The diets are held at Frankfort on the Maine; and the elector of Mentz is the ſummoning prince and director of it. It is one of thoſe called the anterior circles; and it has generally equalled the Upper Rhine in its contribution to the empire.

Mentz, which is both an archbiſhopric and an electorate, lies on the banks of the river Maine, between the electorate of Triers, on the weſt; the palatinate on the ſouth; Franconia on the eaſt; and the Wetterau on the north. It is about ſixty miles in length, and fifty in breadth. Be-

* Here we beg leave to make our moſt grateful acknowledgments to our very *numerous Subſcribers*, and to aſſure them, that it gives us a pleaſing ſatisfaction to find our *labours* to *inform* and *entertain* are received with ſuch *univerſal approbation* both at *home* and *abroad*; many *ſets* of the *Numbers*, as far as are *already publiſhed*, having been lately ſent for from many *Foreign Countries*; as well as from the moſt *remote parts* of *England*, *Scotland*, *Ireland*, *and our Colonies*. In *other works* of this kind, (againſt which the *Public* have *juſtly* and *loudly complained*, on account of the *badneſs of the paper*, *and wretched printing*;—on account of *their limits*, which are either *too confined*, or *purpoſely run to an extravagant length* to *impoſe* on the *purchaſer*;—and, on account of their *copper plates*, which were *originally ſhamefully coarſe*, and now *entirely worn out*,) facts reſpecting the *different nations* have been *miſrepreſented* through the *careleſſneſs* or *ignorance* of the *compilers*, ſo that perſons could, by no means, depend upon their *unconnected jumble of contradictory accounts*. On the contrary, we have, by the moſt *faithful reſearches*, and from *communications never made to any other Geographers*, repreſented the *antient* and *preſent ſtate* of the *World* at *large*; and having pledged ourſelves in our original propoſals to give the public *A New, Complete, and Univerſal Syſtem of Geography*, we reſt ſatisfied with the full perſuaſion of having *punctually* hitherto *fulfilled our engagements*. At the ſame time we can aver, that not a number has been publiſhed, but contains, either in the matter or the embelliſhments, much intereſting information, which may with ſtrict truth be ſtiled *new* and *entertaining*, and which is not to be found in any work of the like kind hitherto publiſhed, or now publiſhing, by thoſe whoſe only deſign in oppoſition, is to anſwer pecuniary and ſelf-intereſted purpoſes. Hence by much labour and aſſiduity, we have eſtabliſhed what was our chief ambition, an honeſt reputation. We have nothing to fear from the unmeaning conditions and deluding promiſes of envious competitors. Let every one examine and compare our pretenſions, and give merit, wherever found, the preference. For our parts, regardleſs of the paltry artifices of intereſted perſons, we ſhall continue to hold the ſcale of impartiality and accuracy with an equal hand. We ſhall neither leſſen our original plan of *Eighty Numbers*, the *extraordinary large ſize* of our *pages*, the *fulneſs of printing*, nor our endeavours to *inform* and *pleaſe*; *truth* ſhall ſtill guide our pen, and an unſhaken integrity influence the whole of our public conduct, with regard to the *honourable completion* of THIS REAL NEW, COMPLETE, UNIVERSAL, AND AUTHENTIC SYSTEM OF GEOGRAPHY.

ſides the Maine, it is watered by three other principal rivers, namely, the Rhine, the Jaxt, and the Lahn. It is in general, exceeding fertile, and produces great plenty of corn, cattle, wines, fruits, ſalt, flax, tobacco, and timber. It hath ſeveral kinds of manufactures, particularly thoſe of woollen and linen cloth, glaſs mirrors, and porcelane, in which, and in wine, almonds, cheſnuts, flax, and tobacco, a conſiderable trade is carried on with the places contiguous to it.

The predominant religion of the electorate is the Roman catholic, but there are ſtill many proteſtants in ſeveral places: however, as this country is under the dominion of an eccleſiaſtic of the Romiſh perſuaſion, almoſt the whole property of it belongs to prieſts, monks, and nuns, and all places and offices are poſſeſſed by the clergy.

The chapter conſiſts of forty two canons, twenty-four of whom are capitulars: the elector is choſen by them. He is not only the firſt archbiſhop, but alſo elector of Germany, in conſequence of his being arch-chancellor of the empire; and he always ſits on the right hand of the emperor in all public conventions. He is viſitor of all the courts of the empire, director of its poſts, and guardian of the archives and matricula. He crowns the emperor, nominates a vice chancellor of the empire, and holds a chancery at the imperial court: to him alſo all foreign princes and ſtates direct what propoſitions they make to the empire, as well as apply for the redreſs of grievances. In ſpirituals, he ſtands immediately under the ſee of Rome. The biſhoprics ſtill ſubject to this juriſdiction are thoſe of Worms, Spire, Straſburg, Conſtance, Augſburg, Coire, Wurtzburg, Eichſtadt, Fulda, Paderborn, and Hildeſheim.

The chief colleges, for the government of this country, and the adminiſtration of juſtice, are, the privy conference, the privy-chancery, the aulic council, and the reverſion-judicatory. Appeals lie from the inferior judicatories to the laſt of theſe.

The elector is able to maintain five or ſix thouſand men at all times; but, to ſave unneceſſary expence, ſeldom keeps above half that number of regular troops; for his income, when he is only archbiſhop of Mentz, without commendams; (which is ſeldom the caſe) will not allow of any greater ſtate or expences; and his houſhold is ſuited rather to his ſacred than his temporal character. His revenues are ſaid to amount annually to about one hundred thouſand pounds, ariſing chiefly from the tolls on the Rhine and the Maine, the tax on wine, and that paid by the Jews, the latter of which is very conſiderable.

This electorate contains the following places of note; viz. 1. Mentz, on the Rhine, near its confluence with the Maine; it is the capital of the archbiſhopric and electorate, and is ſituated fifteen miles weſt from Frankfort, twenty north from Worms, forty-eight from Heidelburg, forty-five from Spire, one hundred and eighty-ſix from Straſburg, ſixty from Triers, and ſeventy-four from Cologne. This city was made an archbiſhopric in 720, by Pepin and pope Gregory III. It is large and populous; but moſt of the ſtreets are narrow, and the common buildings very plain and irregular. The elector has ſeveral palaces in and about the city, moſt of which are adorned with beautiful and extenſive gardens. The cathedral is a lofty vaulted building, and in it are ſome fine monuments erected to the memories of deceaſed electors. The veſtments in which the electors ſay maſs are extremely rich; and the canopy under which the hoſt is carried in proceſſion, is entirely covered with pearl. The elector's chief palace is built of reddiſh marble ſtone, embelliſhed with ornaments, and is regular and magnificent, though but two ſtories high, and built after the old German manner. On the windows of this building, as well as on thoſe of the cathedral, are painted a wheel, which is a part of the elector's coat of arms. Beſides the cathedral, here are many collegiate and other churches, with ſeveral monaſteries, nunneries, and hoſpitals. Here are likewiſe, an univerſity founded in the year 1482, by the elector Diether; a bridge of boats over the Rhine; manufactories of ſtockings and ſtuffs, and two yearly fairs. But the moſt conſiderable building in this city is the charter-houſe, which, for elegance and extent, is ſaid to be one of the fineſt in Europe. It has apartments large and commodious enough to lodge a ſovereign and his retinue, and is beautifully ſituated on an eminence fronting the Rhine. The Favorita, a ſmall but elegant electoral palace, ſtands at the foot of this houſe.

There is a flouriſhing trade in Mentz, eſpecially in Rheniſh wines, of which the vineyards in this neighbourhood yield the beſt, particularly thoſe of Hockham, from whence the fineſt ſort of Rheniſh wine has obtained the name of old hock. This city claims the invention of the art of printing, which, if not invented, was certainly much improved by John Fuſt, or, as others ſay, by John Guttenberg, about the year 1450; though ſome have given account of books printed by Coſter ſo early as 1430, or 1432. This uſeful art, however, ſpread itſelf from Mentz in a ſhort time, and is ſuppoſed to have been brought into England, from Haerlem, in 1468, by Caxton.

Aſchaffenburg is the next principal place in the electorate of Mentz: it is ſituated on the conflux of the rivulet Aſchaff and the Maine. Here is a fine caſtle, in which the elector frequently reſides during the ſeaſon for hunting in the Spaſſart, together with a collegiate church, a college, and a large cloiſter. The town gives name to a bailiwic, in which are alſo Oſnäburg, a ſmall town; Dettingen, a village on the Maine, remarkable for a battle fought near it in 1743, between the Engliſh and French; and Seligenſtadt, a town ſituated on the Maine, with a Benedictine cloiſter, the abbot of which ſtiles himſelf lord of Geiſalbach, Omerſbach, and Hofſtaden.

2. On the weſt ſide of the Rhine is ſituated the pleaſant, neat, and little town of Bingen. It has a caſtle, which ſtands on a hill, and overlooks the town. It is fifteen miles weſt from Mentz, and was formerly an imperial city; but it is now ſubject to the dean and chapter of Mentz. It has a handſome ſtone bridge over the river Nahe, which runs through the town, and empties itſelf into the Rhine: a toll is levied here for whatever paſſes up or down the Rhine, which is twice as broad, at this place, as the Thames is at London.

Not far from this town is the celebrated Bingerloch, where the Rhine is confined between two high rocks, which, with the water-fall occaſioned by the river Nahe's emptying itſelf there into the Rhine, makes this paſſage very dangerous. At a ſmall diſtance from hence, in an iſland or rock on the Rhine, is the famous Mauſe-thurm, that is, the Mice or Rats tower: ſome think this tower was ſo called from the Germans giving the name of rats to the officers that were placed in it to levy the tolls.

3. The town of Fritzlar, on the river Edos, is pretty ſtrong: it contains two collegiate churches, with an Urſuline nunnery. It gives name to a territory which lies betwixt Lower Heſſe and the county of Waldec, and has the ſmall town of Naumberg in it.

4. The ſmall town of Miltenburg, on the Maine, contains a caſtle, a Franciſcan cloiſter, and gymnaſium. It gives name to a diſtrict, in which is Prodgelm, a ſmall town on the Maine. 5. Eltvil, or Elfeld, a ſmall town five miles weſt from Mentz, has a ſtrong caſtle, and is the capital of the Rheingau, a track lying along the Rhine; in which are ſeveral other ſmall towns and cloiſters. 6. Cronberg is a ſmall town ſituated on a mountain, the inhabitants of which are partly Proteſtants, and partly Roman catholics. The diſtrict which it gives name to, contains ſome fine woods, with great numbers of cheſnut and other fruit trees. This town once belonged to the landgrave of Heſſe.

The archbiſhopric and electorate of Triers, or Treves, is ſituated between Cologne, Bern, and Juliers, on the north; Lorrain and the palatinate, on the ſouth; Luxemburg, on the weſt: and Wetterau on the eaſt. It extends about eighty miles from north to ſouth, and its breadth from eaſt to weſt is about ſixty. It is watered not only by the Rhine and Moſelle, but alſo by the Saar and Kyll. On the banks of the two former the country is populous, and fruitful in corn and wine, but elſewhere mountainous and woody, yet abounding in game and acid ſprings, as alſo in metals and minerals of various kinds. The ſtates conſiſt of the prelates or abbots, with the repreſentatives of the clergy, and of certain towns. The inhabitants are all papiſts, except in ſuch places as the elector poſſeſſes in common with other princes, where there are ſome proteſtants. Under the archbiſhop are five archdeacons, and ſubordinate to thoſe, twenty provincial deans. The antient Treveri, from whom the city of Triers and the electorate take their name, were a very warlike people; their general, Ambiorix, cut off a whole Roman army. They worſhipped Mars and Apollo, till Conſtantine eſtabliſhed Chriſtianity among them; but at what time the biſhopric and archbiſhopric were created, is uncertain: the church of Treves, however, is commonly accounted the moſt antient in Germany. The chapter, which elects the archbiſhop from among themſelves, and make him ſwear to a capitulation, conſiſts of ſixteen capitulary canons, all of whom are of a noble deſcent. At every new election, the pope receives large ſums for confirmation, the pallium,

and

and for annats, or firſt-fruits. The archiepiſcopal title is, "By the grace of God, archbiſhop of Treves, of the holy Roman empire throughout Gaul, and the kingdom of Arles, arch-chancellor and elector, and alſo adminiſtrator of Prum." He is the ſecond elector in rank, and has the firſt voice at the election of an emperor. The tolls on the Moſelle and Rhine, his demeſnes, and his office of noble guardian of the minors, with the taxes he lays on his ſubjects, are ſuppoſed to bring him in about ſeventy thouſand pounds per annum.

For the government of this electorate, and the adminiſtration of juſtice, beſides the regency and reviſion court, there are two aulic judicatories, to which appeals lie from the inferior courts. There are alſo two ſpiritual high courts. The hereditary officers are the marſhal, the chamberlain, the ſewer, and cup-bearer. The regular troops maintained by the elector, beſides a militia, amount to between eleven and twelve hundred, beſides a life-guard of forty men. Among other prerogatives, he has power to baniſh excommunicated perſons out of the empire, if they do not reconcile themſelves to the church within a year, and he may take poſſeſſion of the eſtates of minors till they are of age. He has alſo a right to re-unite all the fiefs of the dioceſe, upon failure of heirs, to the domains of his church. His ſubjects may appeal to the chamber of the empire, in all cauſes above one thouſand florins.

In this electorate are the following remarkable places; viz. 1. Triers, or Treves, the capital of the archbiſhopric. This town is ſituated on the Moſelle, over which it has a handſome ſtone bridge. It is ſixty miles weſt of Mentz, fifty-two ſouth of Cologne, and eighty-two north of Straſburgh; and vies with moſt in Europe for antiquity, having been a large and noted town before Auguſtus ſettled a colony in it. It was free and imperial till the year 1560, when it was ſurpriſed and ſubjected by its archbiſhop James III. The private buidings are very mean, and the city is neither well-fortified or inhabited. The cathedral is a large Gothic edifice; and in it they pretend to have our Saviour's coat and St. Peter's ſtaff, to which they aſcribe miracles. Near the cathedral is the elector's palace, which was a few years ago rebuilt, and is a tolerably handſome building. Here are three collegiate and five pariſh churches, thirteen monaſteries and nunneries, an univerſity founded in 1472, a houſe of the order of Malta, with ſome remains of the antient Roman theatre, and alſo a houſe of the Teutonic order.

There is, near Treves, a ſmall town on the Moſelle, called Pfabzel, where, in the time of the Romans, ſtood a palatium. It gives name to a diſtrict, in which is Conz, a borough on the Saar, over which is a bridge.

2. The large town of Coblentz is the next capital place to Triers in this electorate. It is ſituated near the conflux of the Moſelle and Rhine, thirty-five miles north-weſt from Mentz, forty ſouth-eaſt from Cologne, and fifty-two north-eaſt from Triers. It is well built, and ſtrongly fortified; and has a bridge of boats over the Rhine, and another of ſtone, conſiſting of fourteen arches, over the Moſelle. The Romans had a fort at this town, and the firſt kings of the Franks frequently reſided in it. Here are ſeveral collegiate and other churches, beſides monaſteries and nunneries, a gymnaſium, an archiepiſcopal ſeminary, and a caſtle.

Nearly oppoſite to Coblentz, on the other ſide of the Rhone, is Hermanſtein, or Ebſenbreitein caſtle; an impregnable fort, well defended by outworks, on the ſummit of a ſteep rocky hill, which commands the city and the two rivers. It is eſteemed one of the ſtrongeſt citadels in Germany; and the aſſent to it is by a winding road cut out of the rock, in the courſe of which are four handſome gates. On the outermoſt gate there is a ſtatue of braſs, about fifteen feet high, repreſenting the Virgin Mary with the infant Jeſus in her arms, and a lily in one hand: in the middle of the citadel is a ſquare, on one ſide of which is the governor's houſe; and in the other three are magazines and barracks. Among other curioſities, here is a prodigious cannon, ſaid to be the largeſt ever ſeen. It is eighteen feet and a half long, a foot and a half diameter in the bore, and three feet four inches in the breech. The ball made for it to carry weighs one hundred and eighty pounds, and its charge of powder is ninety four pounds. The inſcription on it only intimates, that it was founded in 1529, by one Simon. In another ſquare is a very fine fountain, being a large baſon of ſtone, in the centre of which ſtands a marble pillar on a braſs pedeſtal, with the elector's arms ſurrounded with four dolphins of the ſame metal. On the top of this column is a ſtatue of the Virgin Mary bruiſing the head of the ſerpent, which is alſo of braſs, about twelve feet in height. Here is a well dug out of the rock, two hundred and eighty feet deep, whoſe water is clear and exceedingly wholeſome.

At the foot of the caſtle is an electoral palace, incloſed on one ſide by the Rhine, and on the other by a rock. It is but an indifferent building, and the apartments are low, incommodious, and much expoſed to the ſun; but they are adorned with beautiful tapeſtries and paintings, and the chapel is very elegant. The garden, though ſmall, is embelliſhed with ſtatues, water-works, a charming orangery, and a bower, more than three hundred feet in length, by the ſide of the Rhine, from whence, through the openings, which are well contrived for the purpoſe, are ſeen the Rhine, the Moſelle, the city of Coblentz, the bridge acroſs the Moſelle, the charter-houſe, and a very fine country to the diſtance of three or four leagues. The way to the charter-houſe, which is a handſome building, beautifully ſituated about two miles from the caſtle, is full of chapels, in the manner of oratories, adorned with ſtatues repreſenting the principal actions of our Saviour, from his birth to his reſurrection. A church, ſaid to be twelve hundred years old, belongs to this town.

The other places in this electorate are, 1. St. Maximin, one of the oldeſt and richeſt abbies in Germany. The abbot is the firſt among the provincial ſtates here, as well as in the duchy of Luxemberg, and arch-chaplain to the reigning Roman empreſs. 2. Wexheim, a borough, in which, and the bailiwic named from it, as belonging in common to the elector of Triers, and the prince of Naſſau-Uſingen, both the Roman catholic and Proteſtant religion are tolerated. 3. Munſter-Meinfeld, which gives name to a bailiwic, which contains Carden, a very antient borough on the Moſelle. 4. Mayen, on the Nette, gives name to a bailiwic, in which alſo is Montreal, on the Elz, together with Kayſerſeſch, and the Benedictine abbey of Lock. 5. Boppard, a ſmall town and caſtle on the Rhine: it gives name to a bailiwic. 6. Engers, between Coblentz and Andernach, which gives name to our neighbouring territory. 7. Oberweſel, on the weſt ſide of the Rhine, at the foot of a hill, twenty-one miles ſouth from Coblentz, and eighteen weſt from Mentz. 8. Limburg, a thriving town on the river Lahn: it gives name to a bailiwic, in which is alſo Lower Brechen, a ſmall town; and Lower Salters, a village on the Emſbach. 9. Berncaſtle, on the Moſelle, gives name to a bailiwic, in which is a place called Noviomagum, on the Moſelle. 10. Wittlich, on the Leſer, gives name to a bailiwic, in which is a college of canons regular, where adoration is paid to a celebrated image of the Virgin, and whither many pilgrimages are made. 11. Welſchbillig, a ſmall town.

The archbiſhopric and electorate of Cologne lies on the weſtern bank of the Rhine, where it runs near one hundred miles in length, but the breadth is hardly anywhere more than ſeven or eight. It is bountled by the duchy of Cleves, on the north; and the electorate of Triers, on the ſouth; the duchy of Juliers on the weſt; and that of Berg, on the eaſt. It is a pleaſant and fruitful country, (eſpecially that part ſituated on the Rhine), and produces excellent wine, corn, and moſt of the neceſſaries of life. The archbiſhop is the ſupreme lord of it, as alſo of a pretty large country in Weſtphalia; and is richer and more powerful than either of the other two eccleſiaſtical electors. His dominions contain fifty-two towns, and about ſeventeen boroughs. He has the ſecond vote in the electoral college; and crowns the emperor, when the ceremony is performed in his own dioceſe, or thoſe of his ſuffragans. His ſee was raiſed to an archbiſhopric in the eighth century. His ſuffragans at preſent are the biſhop of Liege, Munſter, and Oſnaburg, and formerly alſo thoſe of Utrecht and Minden; but he has no authority in ſpirituals over the proteſtants of the biſhopric of Oſnaburg, even when he is himſelf biſhop thereof. The right of electing the emperor, excluſive of the other princes, devolved on him, and the other arch-officers of the empire, about the end of the thirteenth century. The revenues ariſing from the archbiſhopric amount to about one hundred and thirty thouſand pounds ſterling; but the elector is generally poſſeſſed of ſeveral other great benefices. He has his hereditary officers, his life guards, conſiſting of halberdiers and yeomen, beſides a regiment of foot guards, which make a handſome appearance.

In this electorate are the following principal cities and towns; viz. 1. Cologne, the capital, and from which the electorate is named. It is ſeated on the Rhine, in the ſame latitude as the Iſle of Wight, 20 miles ſouth-eaſt from Duſſeldorp, 16 eaſt of Juliers, 40 north from Coblentz, 60 eaſt from Maeſtricht, 68 north of Triers, 70 ſouth of

Munſter, eighty-two north-weſt of Mentz and Nimeguen, from Bruſſels and Antwerp, and one hundred and twenty from Amſterdam. This is one of the largeſt cities in Germany, and very conſiderable, on account of its buildings, number of inhabitants, and great trade in Rheniſh wine, and other commodities of Germany, which, by means of the Rhine, are brought hither, and tranſported to Holland. It is a free city, being governed by its own ſenate, which orders and judges all civil matters and cauſes; but criminal ones are judged by the elector. It is called, by ſome, Second Rome, becauſe of its ſenate, buildings, and extent; and by others the Holy City, becauſe of the many churches and religious houſes in it; here being, beſides the cathedral, which is a very magnificent, though unfiniſhed pile, ten collegiate, and nineteen parochial churches, alſo thirty-ſeven monaſteries, and great numbers of chapels and hoſpitals. The walls of the city are flanked with eighty-two towers, and encompaſſed with three deep ditches, lined with fine rows of trees; and all the churches and houſes are covered with ſlates.

The government of the city is in ſix burgomaſters, ſeven aldermen, and one hundred and fifty common-council, who hold their offices during life, only two of the burgomaſters are regents, during a year, by turns. The aldermen, (or eſchevins) are choſen by the archbiſhop, and the council by the companies of the city. There are only fifty of the council in power for a year, ſo that it returns to the ſame perſons once in three years. When a burgomaſter dies, the council are empowered to chuſe another. Moſt of the inhabitants are papiſts; but there are many proteſtants, who are the chief traders. The Lutherans have a church in this city, and the Calviniſts one on the other ſide of the Rhine, at Mulheim. Moſt of the houſes of the canons and prebends have large gardens and vineyards. In St. Gercon's church, they pretend to ſhew one thouſand heads of martyrs who ſuffered in the reign of Maximinianus. Some of the heads of the pretended virgin martyrs, moſt noted for miracles, are kept in caſes of ſilver in the church dedicated to St. Urſula, others covered with ſtuffs of gold, and ſome have caps of cloth of gold and velvet. Here is alſo a ſhrine, with a glaſs door, through which they ſhew, as they pretend, three of the thorns of our Saviour's crown; and in a niche, on one ſide of the altar, there is a baſe of alabaſter, which they pretend was one of thoſe our Saviour cauſed to be filled with water at the marriage of Cana, in order to change it into wine. The whole revenue of this church, which muſt be conſiderable (excluſive of the offerings and gifts made by pilgrims and other devotees), is ſaid to belong wholly to an abbeſs and ſix canoneſſes, who muſt be all counteſſes, to do honour to St. Urſula. In the church of the Carmelites, the only one in the city, whoſe altar is placed to the eaſt, is a pulpit, which paſſes for the fineſt in Cologne. In the Cordeliers church is the tomb of the famous John Scotus, ſurnamed the Subtle Doctor, with this epitaph on it: Scotus me genuit: Anglia me ſuſcepit; Gallia me docuit; Colonia me tenet. The aſcent to the top of the ſteeple of the cathedral is by two hundred and fifty ſteps, each a foot thick. The choir, wherein are the tombs of ſeveral archbiſhops, is ſaid to be the higheſt in Germany, and the chancel is ſupported by four rows of large pillars. The three eaſtern magi lie in a large purple ſhrine ſpotted with gold, ſet upon a pedeſtal of braſs, in the middle of a ſquare mauſoleum, faced within and without with marble and jaſper. It is opened every morning at nine o'clock, when they are ſhewn lying at full length; but this is not done except when two canons of the cathedral are preſent. Their heads are bedecked with a crown of gold on each, garniſhed with precious ſtones. Their names, which are Gaſpar, Melchior, and Balthaſar, are in purple characters upon a little grate, of the ſame metal with that before the ſhrine, which is adorned with an infinite number of large rich pearls, and precious ſtones; particularly an oriental topaz, as big as a pigeon's egg, valued at above thirty thouſand crowns. Over-againſt them are ſix large branches of ſilver, with wax candles, which burn night and day. It is ſaid the bones of theſe men were brought from Conſtantinople by Helena the mother of Conſtantine, from thence to Milan, by Eutorpius biſhop of that ſee, and afterwards to this place by Archbiſhop Rainold.

Here is a very flouriſhing univerſity, re-eſtabliſhed in 1388 by Urban VI. The town-houſe is a vaſt fabric, after the gothic manner, where are ſeveral rooms adorned with noble paintings, and others full of bows, arrows, bucklers, and all ſorts of antique arms; particularly a croſs bow of whalebone, 12 feet long, eight inches broad, and four inches thick. From the tower of this houſe there is a beautiful proſpect of the city and country: on the front of it there is the figure of a man in baſſo relievo, engaged with a lion, repreſenting one of their burgo-maſters, who, having exaſperated their clergy, they put in a lion upon him, which he ſlew on the ſpot. In the grand hall are five pictures with inſcriptions, to perpetuate the memory of the battle of Hockſtet, in which the French were defeated with great ſlaughter.

Several eccleſiaſtical councils have been held here, the firſt, anno 346, wherein Euphrates, their biſhop, was depoſed for arianiſm. Another was held by Charlemagne's order, in the eighth century: and ſeveral in the ninth, for reformation of manners, againſt inceſtuous marriages, and oppreſſion of the poor. The pope generally has a nuncio here, to take care of his intereſts with the popiſh electors. Though the elector, by his officers, adminiſters juſtice in all criminal cauſes, yet ſo jealous are the citizens of him, that they will not permit him, in perſon, to reſide above three days at a time in the city, nor come into it with a great train; for which reaſon he generally reſides at Bonne.

Cologne was made an archbiſhopric in 755, and in 1260 entered into the Hanſeatic league. As a free imperial city, it has a ſeat and voice at the diets of the empire and circle; in the former of which it has the firſt ſeat on the Rheniſh bench. It has the precedence of all the imperial cities, and is fortified in the antient manner; has upwards of twenty gates, and is guarded by the militia, which conſiſts of four companies of foot; but the ſtreets, in general, are dirty, and badly paved, and the windows compoſed of ſmall round bits of glaſs. Though this is one of the greateſt cities, yet, as a late traveller obſerves, "it is one of the moſt melancholy in Europe, there being nothing to be ſeen but prieſts, friars, and ſtudents, many of whom beg alms with a ſong, and nothing ſalutes the ear but the tolling of bells: he alſo ſays, that there are as many churches and chapels in it as days in the year; that there are very few families of quality; that the vulgar are extremely clowniſh; and that the noblemen of the chapter ſtay no longer in town than their duty obliges them."

As to Duitz, on the other ſide of the Rhine, it is in the territory of Newburg, and has no manner of dependence on the city of Cologne, but holds ſolely of the elector. It is a pitiful place, where one ſees more ſwine than men, its few ſtreets being extremely filthy, and ill paved; and the houſes built of pieces of timber intermixed with white clay. The Jews there live by fattening herds of ſwine for ſale to the Chriſtians. There are no churches in this little town, but a convent of Benedictines, and a parochial church upon the brink of the river.

2. Bonne, in latin Bonna, and Colonia Julia, is the uſual place of reſidence of the archbiſhop of Cologne, who has a magnificent palace in the caſtle. It ſtands on the weſt-ſide of the Rhine, 15 miles ſouth of Cologne, 28 north-weſt from Coblentz, 21 ſouth-eaſt from Juliers, 57 north-eaſt from Treves, and 62 north-weſt from Mentz, in a fruitful country, which produces very good wine, and the woods abound with variety of game, as does a ridge of mountains on both ſides of the Rhine from hence, as far as Bingen. It is a ſmall city, but well inhabited. The churches are ſtately, eſpecially the collegiate, dedicated to the martyrs Caſſius, Florentius, and Maluſius, whoſe bodies, with ſeveral others of the famous Theban Legion, are ſaid to be buried in it, being brought hither by St. Helena, who founded this church to their honour. The town houſe is well built, and adorned with fine paintings. This was formerly an imperial city, but is now ſubject to the elector.

3. The town of Andermach, on the Rhine, is ſituated about 20 miles ſouth-eaſt of Bonne, upon the confines of the electorate of Triers, and the duchy of Juliers. It was formerly a free and imperial city, but it is now ſubject to the elector of Cologne. After it had lain a long time in ruins, it was rebuilt in 1520. It is fortified with a wall, caſtle, and bulwarks; is the boundary betwixt this archbiſhopric and that of Treves, and has a cuſtom-houſe belonging to Cologne, but its principal trade is by lodging paſſengers. In 1702 it was taken by the prince of Heſſe Caſſel, the more to ſtraiten Bonne, which was then blocked up by the confederates. This is mentioned as one of the fortreſſes which Druſus built to awe the Germans; and it is believed that Caligula, his ſon, was born there. It is the handſomeſt and largeſt of all the towns from Bonne to Triers. It has three conſiderable monaſteries in it and ſeveral churches, the chief of which has two tower ſteeples, not unlike the towers of Notre-

Dame at Paris. Two companies of ſoldiers are kept here by the chapter of Cologne. In the bailiwic, to which the town gives name, is an abbey called St. Thomas; and Kens, or Rees, a ſmall town on the Rhine, near which is a remarkable piece of antiquity, called the Konigſtuhl. It is a large round building of freeſtone, reſting on nine pillars, the aſcent to which is by twenty-eight ſteps. In this building the electors formerly met to conſult about the choice of an emperor, and other weighty matters; and here ſome emperors have actually been elected.

The other places of leſs note are, 1. Nuys, a fortified town, near the conflux of the Rhine and Erfft. 2. Zons, on the Rhine: it gives name to a bailiwic, containing another ſmall town called Wering, or Weringan, and a Præmonſtratenſian abbey. 3. Kempen. 4. Bruel, or Bruyll. 5. Rufferſchied, which gives name to a county. 6. Ahrweder, a ſmall town on the Aar. 7. Zulpich, or Zulch, which gives name to a bailiwic entirely ſurrounded by the duchy of Juliers. 8. Konigsfeld, which gives name to a diſtrict.

The Palatinate of the Rhine is divided by the river of that name into two parts, namely the Upper and Lower Palatinate. The former lies in the circle of Bavaria, and belongs to the elector thereof, but the latter (in the circle we are now treating of) belongs to the elector Palatine. The Lower Palatinate is bounded, on the eaſt, by the county of Katzenellebogen, the archbiſhopric of Mentz, the biſhopric of Worms, and part of the territory of the Teutonic order in Franconia; on the weſt, by Ilſace, the duchy of Deux-ponts, the county of Spanheim, the duchy of Simmern, and certain diſtricts of the electorate of Mentz; on the north, by part of the archbiſhopric of Mentz, and the county of Katzenellebogen; and on the ſouth, by the duchy of Wirtemberg, and the biſhopric of Spire. It contains forty-one towns, beſides ſeveral boroughs, and its greateſt extent is about eighty miles.

The air is healthful, and the ſoil fruitful in corn, wine, tobacco, and all ſorts of pulſe and fruits, particularly walnuts, cheſnuts, and almonds. This country alſo breeds abundance of cattle, and is well watered by the Neckar, the Nahe, and the Rhine. In the laſt of theſe, near Germerſheim and Sebz, is found gold, the excluſive right of ſearching for which, is farmed out by the elector.

The ſtate of religion hath varied greatly here ſince the reformation, Lutheraniſm and Calviniſm having been uppermoſt by turns, till the electorate devolved to the popiſh branches of the family, when popery, with all its ſuperſtition and mummery, was eſtabliſhed anew; ſo that the Proteſtant religion is now on a very precarious footing in the Palatinate, though moſt of the natives are ſtill of that perſuaſion: but the two ſects of Proteſtants, namely, the Lutherans and Calviniſts, have greatly contributed to their own ruin, by their mutual jealouſies and animoſity, being no leſs rancorous againſt one another, than againſt their common adverſaries the Papiſts. The Lutherans reckon themſelves fifty thouſand ſtrong, and are poſſeſſed of about eighty-five churches; but not one half of their preachers and ſchoolmaſters have a competent maintenance. The number of Calviniſt clergy here is eſtimated at five hundred, and of the Roman catholics at four. Beſides ſchools and jeſuits colleges in this country, there is one univerſity, namely, that of Heidelberg. Their chief trade conſiſts in wine.

Authors are divided about the origin of the name of Palatines, or Pfalzgraves, as the Germans call them; but it ſeems moſt likely to be derived from the palatia, or palaces, which the old Frankiſh and German kings, and Roman emperors, were poſſeſſed of in different parts of the country, and over which they appointed ſupreme ſtewards, or judges, who were called Palatines, or Pfalgraves. The countries where theſe Palatines kept their courts were, from them, called Palatinates, which name came at laſt to be appropriated, by way of eminence, to this country, as being the moſt conſiderable of them. The antient electoral line failing in 1685, the electorate devolved to Philip William, duke of Neuberg, and upon the death of his ſecond ſon, Charles Philip, to the prince of Sultzbach. This elector has the title of arch-treaſurer of the empire, as well as the elector of Brunſwic-Lunenburg, and is the fifth in rank among the ſecular electors. He is alſo one of the vicars of the empire, alternately with the elector of Bavaria, and enjoys many other prerogatives. In his own dominions he diſpoſes of all vacant benefices, but allows the eccleſiaſtical council, compoſed of two clergymen and two laymen, to preſent two candidates, of which he chuſes one. He is alſo maſter of all the tythes in his dominions; but he either grants them to the clergy, or ſalaries in lieu of them, out of the revenues of the church. His title is, "Pfalzgrave of the Rhine; arch-treaſurer and elector of the holy Roman empire; duke of Bavaria, Juliers, Cleves, and Berg; prince of Mors; marquis of Bergen-op-Zoom; count of Veldens; Spanheim, the Mark, and Ravenſberg, and lord of Ravenſtein." In this country is an order of knighthood called St. Hubert, the badge of which is a quadrangular croſs pendant to a red ribbon, with a ſtar on the breaſt.

The military eſtabliſhment conſiſts of ſeveral regiments of horſe and foot, beſides the horſe and Swiſs life-guards. All the different courts and councils, uſual in other countries for the different departments of government, are alſo to be found here. The whole of the elector's revenue, ariſing from the Palatinate, the duchies of Berg and Juliers, the ſeigniory of Ravenſtein, and the duchies of Neuburg and Sultzbach, hath been eſtimated at about 300,000l. per annum.

In this palatinate are the following remarkable towns and places: 1. Heidelberg, the capital: it is ſituated 10 miles from Manheim, 12 from Spire, 38 from Frankfort, and 25 from Mentz. This city ſtands near the river Neckar, in a good air, and encompaſſed on all ſides, except to the weſt, with hills covered with vines. It takes its name from Heidel, which ſignifies a myrtle; and Berg, a mountain; there being, or having been, plenty of thoſe trees on the mountains in the neighbourhood. It is an antient city, and has been frequently beſieged and taken, plundered and deſtroyed. Though it is at preſent ſmall, yet it is neat, and well built. The electoral palace is an antique building, but ſtands on a hill and commands a fine proſpect. As to the famous library here, many books and manuſcripts were taken from it in 1622 (when general Tilly made himſelf maſter of the town), and ſent to Rome, Vienna, and Munich. The profeſſors of the univerſity here are partly Calviniſts, and partly Roman catholics. The Calviniſts have alſo a gymnaſium. Of the churches, ſome belong to the Calviniſts, ſome to the Lutherans, and ſome to the Roman catholics. Twelve poor ſtudents are provided with lodging and board, in a college called the Sapience, which belongs to the Calviniſts.

There is a high mountain oppoſite to Heidelburg, on which the Romans had a caſtle, and which, by ſome, is thought to be the Mons Pyrus, mentioned by Aminianus Marcellinus. It is now called the Holy Mountain, from a cloiſter erected in it in 1023, to which frequent pilgrimages are made. The famous tun here, which ſtood in a cellar under one of the towers of the electoral palace, and contained ſix hundred hogſheads of wine, was deſtroyed by the French in 1688; but the elector Charles Lewis, cauſed a much more conſiderable one to be made in its ſtead.

2. Manheim, where the elector uſually reſides, is ſituated eight miles weſt of Heidelburg, on the eaſt ſide of the Rhine. It is one of the fineſt towns in Germany, and ſtrongly fortified; but it labours under two capital diſadvantages, namely, the want of good water and wholeſome air. The electorate palace is one of the moſt magnificent in Europe, and contains a grand collection of paintings, brought hither from Duſſeldorp, beſides antiquities and curioſities, among which is the crown of the unhappy Frederic V. king of Bohemia. The three religions tolerated in the empire have churches in this city. Here alſo is a Jewiſh ſynagogue, with a Capuchin and Carmelite cloiſter. Some manufactories are eſtabliſhed here, and a conſiderable trade, chiefly by Jews, is carried on in this town.

3. The town of Bacharach, is ſituated on the Rhine; here is a ſtone oppoſite to it, on the ſame river, ſhaped like an altar, and called by the inhabitants the altar-ſtone, upon which, it is thought, victims were frequently offered to Bacchus, the neighbouring country yielding Muſcadel wine. The town contains a cloiſter, and on a mountain near it ſtands the caſtle of Staleck. The inhabitants here, as in all the other towns of the palatinate, are a medley of Catholics, Lutherans, and Proteſtants. 4. Oppenheim ſtands on a hill near the Rhine, and was once an imperial free city. 5. Ingelheim, a borough on the Selz. 6. Frankenthal, a conſiderable town. 7. Alzey, a ſmall town on the river Selz. 8. Neuſtadt, on the Hart, gives name to a bailiwic, which contains ſeveral ſmall towns. 9. Germerſheim, on the Rhine, alſo gives name to a bailiwic, containing a commandery of the order of St. John, together with ſeveral ſmall towns on the above river. 10. Moſbach gives name to a bailiwic, in which

are

are ſeveral towns, particularly Sinzheim, where there is a large cloiſter belonging to the Franciſcans. 11. Ladenberg, on the Neckar, ſixteen miles from Heidelberg. 12. Weinheim, ſituated in the fineſt part of Bergſtraz. 13. Bretten, noted for being the birth-place of Philip Melanchthon: it gives name to a bailiwic, which contains the three ſmall towns of Eppingan, Weingarten, and Heidelſkein.

The city of Erfurt is large and well-fortified, but not very populous, and the buildings are moſtly old-faſhioned. It ſtands ſixteen miles weſt of Weymar, ſixty of Leipzig, ſixty-ſeven north of Bamberg, and ſeventy ſouth of Halberſtadt; is reckoned the capital of Thuringia, and was made a biſhopric by St. Boniface, in the eighth century. Both the city and its territory, which is of conſiderable extent, are ſubject to the electorate of Mentz; but the inhabitants of both, or at leaſt the greateſt part of them, are proteſtants, and intitled, by expreſs ſtipulations, to the free exerciſe and enjoyment of their religion: the civil and criminal court too conſiſts of an equal number of Roman catholic and Lutheran aſſeſſors: and the members of the town council are partly catholics, and partly proteſtants, the laſt having likewiſe a conſiſtory of their own perſuaſion. The garriſon conſiſts of two battalions of imperial and electoral troops.

There is, in this city, a bell called Suſanna, which is ſaid to be the biggeſt in Germany, weighing above twelve tons. Here are alſo two citadels, with a great many churches; ſome collegiate, ſome Roman catholic, and ſome Lutheran; together with a rich Benedictine monaſtery, ſeven cloiſters, of which one is the Scottiſh, a Lutheran gymnaſium: an univerſity of five colleges, the profeſſors of which are partly Lutherans, and partly Roman catholics; the imperial academy of natural curioſities; a riding academy; a botanic garden; an aſtronomical obſervatory; an anatomical theatre; ſeveral good libraries, and an academy of the uſeful ſciences. Several diets of the empire have been held here. In 1664 the city was beſieged and taken by the elector of Mentz, with the help of the French and Lorrain troops. But by ſtipulations with the elector and princes of Saxony, who were protectors of the city, its privileges were in a great meaſure ſecured to it. The territory belonging to the city contains two ſmall towns, and ſeventy-three villages, among which are five called the kitchen villages, as being obliged to perform certain ſervices and liveries to the archbiſhop's kitchen. The country is pleaſant, and fruitful both in corn and wine.

That part of Germany, called Eichsfeld, on the Lower Rhine, is ſurrounded by Heſſe, Thuringia, and the principalities of Grubenhagen and Calenburg. It extends about thirty miles in length, and twenty in breadth, and is divided into the Upper and Lower Eichsfeld; the former mountainous, but healthy and populous; the latter, though not enjoying, perhaps, ſo pure an air, is more level, warm, and fruitful, abounding in corn, cattle, flax and tobacco. Great quantities of linen and ſerge are made in the Upper; in which the rivers Leine, Lutter, Unſtrut, Wipper, and Rume, have their ſource. The Thuringian language is ſpoken in the Upper, but in the Lower, the Saxon. In both are four cities, three boroughs and one hundred and fifty villages. The diets, which conſiſt of the repreſentatives of the abbies, nunneries, and certain towns, with the nobility, are held, if the weather will permit, in the open air, at a place called Jagebanks-Warte; if not, in the council-houſe of Heiligenſtadt. At the latter place are held the ſupreme temporal courts, and there alſo reſides the lieutenant, or adminiſtrator; but the ſeat of the archiepiſcopal commiſſary, which has the ſpiritual juriſdiction over the whole Eichsfeld, is at Duderſtadt. Here are a few proteſtants; but the prevailing religion is the Roman catholic. With regard to eccleſiaſtical matters, the county is divided into ten provincial deaneries, and eighty-one pariſhes, in which are two collegiate foundations, two abbies, and ſix nunneries. The right of patronage in ſome places belongs to the archbiſhop; in others, to the cloiſters and foundations, and in others to the nobility.

The two following are the only places of note in this part of the country, viz. 1. Heiligenſtadt, on the river Leine, in the upper diſtrict. 2. Duderſtadt, a town on the Hahle, in the lower diſtrict, containing an Urſuline nunnery, the ſuperior of which is ſtiled Worthy Mother, and is changed every three years.

The duchy of Weſtphalia, which is about forty miles in length, and thirty in breadth, is bounded, on the eaſt, by the biſhopric of Paderborn, and the territories of Waldec and Heſſe; on the north, by the biſhopric of Munſter, and the county of Lippe; and, on the ſouth, by the counties of Witgenſtein and Naſſau, and the duchy of Berg. The lower diviſion of it is tolerably fertile in corn and cattle, and in ſome parts of it are ſalt ſprings. The higher part produces iron ore, calamy, lead, copper, gold and ſilver, fine woods, corn, cattle, game and fiſh. There are twenty-eight towns in this duchy, beſides boroughs and cloiſters. The provincial diets are held at Arenſberg. It is governed at preſent by a bailiff, under the archbiſhop, and is divided into the Hellwege, the Haarſtrank, and the Surland, or otherwiſe into the Ruden, the Werl, the Bilſtein, and the Brilon quarters. The rivers, that either paſs through the duchy, or along its borders, are, the Rahr, the Lenna, the Bigga, the Dimel, and the Lippe. In the year 1180, the emperor Frederick made a donation of this duchy to the archbiſhopric of Cologne, which was confirmed by ſucceeding emperors; and in 1368 the late duke of Arenſberg ceded to it alſo the county of Arenſberg.

The Ruden quarter, beſides the town which gave name to it, ſituated on the river Mon, contains, 1. Geſeke. 2. Warſten, on the rivulet Weeſter. 3. Kaldenhart. And alſo a capuchin monaſtery and nunnery.

The Werl quarter, beſides Arenſberg, the capital of a county, and a handſome town, ſituated on the Rhur, or Roer, forty-ſeven miles north-eaſt from Cologne, contains the towns of Werl and Beelike, the firſt containing a capuchin cloiſter, and the other a Benedictine provoſtſhip, together with the ſmall towns of Baloe, Menden, Nehelm, Allentrop, Grevenſtein, and Herzberg. In this quarter are alſo a mineral ſpring, a commandery of the Teutonic order, with a ſtud and hunting ſeat of the elector, with ſeveral abbies, nunneries, and caſtles.

The Belſtein quarter contains the ſmall towns of Attendorn, Olpe, Drolſhagen, and Fredeburg, with ſeveral caſtles and cloiſters.

There are nine ſmall towns in the Brilon quarter, with ſeveral cloiſters and caſtles.

The county of Recklinghauſen is bounded by the biſhopric of Munſter, the duchy of Cleves, and the county of Mark, lying on the eaſt ſide of the Rhine, and extending about twenty miles from eaſt to weſt, and ten from north to ſouth. It belongs to the ſee of Cologne, and is governed by a lieutenant.

This county contains only one place that merits any deſcription; namely, Recklinghauſen, a ſmall town, giving name to the county, and containing a ſtrong caſtle, with a nunnery, the abbeſs whereof hath power of puniſhing capitally. She alone is obliged to make a vow of chaſtity; for the nuns may marry, after having been a number of years in the houſe.

The circle of Lower Iſenburg lies near that of Wied, in the circle of Weſtphalia. The greater part of it is poſſeſſed by the elector of Triers, who has a ſeat and voice on account of it at the diets of this circle. The reſt of it belongs to the counts of Wied-Runkel, and the barons of Walderdorf. The only place worthy of notice is the ſmall town of Herſbach, which is in that part of the county belonging to the elector.

On the Rhine, between the duchy of Juliers and the archbiſhopric of Cologne, is the burgraviate of Reinec. This little diſtrict had formerly burgraves of its own; but now belongs to the counts of Zinzendorf, of the Erneſt-Brunn line, who, on account of it, have a ſeat and voice in the diets of the circle. The only place in it is the inconſiderable town of Reinec, from whence it has its name.

The ſmall principality of Aremberg is ſurrounded by the archbiſhopric of Cologne, the duchy of Juliers, and the county of Blankenheim. The dukes of Aremberg and Arſchot are a branch of the houſe of Ligne. Till 1576 they were only counts, but were then made princes of the empire, and, in 1644, dukes. They have a ſeat and voice both at the diets of the empire and circle, in the colleges of princes. They take their title from Aremberg, the capital of the principality, which is a ſmall town, and has a caſtle in it.

Though the princes of the Thurn, or Tour and Taxis, have no immediate eſtate in this circle, yet they have a ſeat and voice in its diets, as alſo in thoſe of the empire. The firſt they obtained in conſequence of advancing to the circle in the year 1724, by way of purchaſe, eighty-thouſand rix-dollars; and the other in conſequence of an imperial decree, founded upon their having had the office of poſtmaſter of the empire erected in their favour into a free meſne eſtate. They took their ſeat in 1754, for the firſt time, among the princes in the diets of the empire.

The knights of the Teutonic order are poſſeſſed of the bailiwic of Coblenz, in this circle, ſo named from that town, which intitles them to a ſeat and voice among the

prelates of the empire: and alſo in the diets of the circle. There are ſeven commanderies, or commendams, belonging to this bailiwic, which has its ſeat at Cologne.

SECT VI.

Compriſing a particular Account of the Circle of FRANCONIA, with a Deſcription of its Boundaries, Cities, Towns, Countries, &c. with their Inhabitants, their Trade and Manufactures, and Produce of the different Diſtricts contained therein.

THIS circle is bounded by thoſe of the Upper and Lower Rhine, Bavaria, Swabia, Bohemia, and Upper Saxony. The inhabitants are a mixture of Roman catholics, Lutherans, and Calviniſts. The diets are held at Nuremberg; the archives are kept at Bamberg, the biſhop of which latter place, together with the margraves of Brandenburg, Bareith, and Anſpach, are ſummoning princes for the circle, but the biſhop is ſole director.

The imperial city of Nuremberg, which is ſituated thirty-five miles to the ſouth of Bamberg, was made imperial by the emperor Frederic Barbaroſſa. It is reckoned one of the largeſt, fineſt, and richeſt cities in the empire; and, in ſhort, the glory of Germany; and, conſidering its great diſtance from the ſea, it is the wonder of Europe for its trade, and number of people. It is, in every reſpect, ſuperior to Vienna, and in general ſurpaſſes all other cities in Germany, except Berlin, in the ſtatelineſs of its buildings; but exceeds that, as it does all the others, in the wealth, ingenuity, and induſtry of its inhabitants. It is eight miles round, defended with large ditches faced with ſtone, and high triple ſtone walls, with three hundred and ſixty-five towers on them, of which an hundred and eighty-three are of free-ſtone, mounted with three hundred cannon. Here are five hundred and fifty ſtreets and alleys, and moſt of the houſes, being uniform, are of free-ſtone, ſix or ſeven ſtories high, painted on the outſide, and adorned at the top with gilded balls. The ſtreets are large, and very commodious, open, and well paved, and, next to thoſe of Hanau, the neateſt in Germany; but they are not very ſtrait, and many of them lie up and down hill. Here are ten market-places regularly built, thirteen public baths, twelve conduits, and an hundred and eighteen wells. Their chief fountain is adorned with many braſs ſtatues, one of Neptune on the top, three yards and an half high, and above twenty-two hundred weight; and others of nymphs and ſea-horſes, larger than the life. It is ſaid this fountain will throw out two hundred hogſheads in an hour, and coſt near three thouſand five hundred crowns. The river Pegnitz is let in by twelve large arches under the walls; and, after running through the middle of the city, is let out by twelve other arches. It forms ſeveral pleaſant iſlands, wherein are moſt agreeable walks and meadows, where they whiten linen; and ſupplies the ditches and town with water; and upon the ſtream there is a great number of mills for tanners and braziers, as well as for corn, paper, iron, and making ſword-blades, knives, and other iron wares. There are ſixty mills within the walls, many of them for grinding corn. There are ſeven wooden and eleven ſtone bridges over this river, whereof one, which has one arch only, of ninety-ſeven feet from one baſe to the other, like the Rialto at Venice, though not ſo high or ſo long, is reckoned a wonder in architecture. At one end of it there is a large fleſh-market, built of hewn ſtone, on whoſe gate the butchers have placed a vaſt ox of ſtone, lying on his belly, with gilded horns and hoofs. The inhabitants are about ſixty thouſand. Here are but two pariſh churches, properly ſo called. The firſt is as ſtately as any one of its kind in the empire, viz. that built, as they ſay, in 740, by St. Sebald, a Daniſh prince of the blood royal, by whom this country was converted. It is a large gothic pile, and has ſeven gates, a bell weighing an hundred and fifty-ſix quintals, and a braſs monument erected to his memory, weighing about an hundred and fifty-ſeven quintals, with noble antique figures. The ſextons have a rare collection of relicks, which they ſhew only to travellers of quality. The ſecond is St. Laurence's church, another gothic fabric, which is chiefly frequented by the Lutheran nobility and gentry. It has eight gates, two ſteeples in the front, and is the largeſt in the city. Here the chief of the citizens have their tombs and eſcutcheons, and there is a regiſter of all that have been buried here for five hundred years, ſpecifying the time and manner of their death. Beſides theſe, there are the churches of the Virgin Mary, St. Giles, the Holy Ghoſt, and the hoſpital of St. James, in which are the monuments of many princes and counts of the empire. Near St. Laurence's church are three fountains, one of them an octagon baſon, with a large braſs pillar in the middle, from whoſe chapiters project ſix muzzles of lions, ſpurting water out of each by a twiſted pipe. On the cornice are the ſix cardinal virtues, ſpurting water from their breaſts. On this pillar ſtands a leſs one fluted, on which are ſix infants, every one of them leaning on an eſcutcheon, bearing the arms of the empire, thoſe of Nuremberg, &c. and they all have trumpets, out of which jets plenty of water, as it does likewiſe from the breaſts of a fine ſtatue of juſtice on the top of this ſecond pillar, and from a large oſtrich which ſupports her. The whole is of braſs, incloſed by an iron grate carved and gilt.

The emperor reſides in the caſtle, which is well-fortified, and ſtands on a high hill, or rock, from whence there is a fair proſpect of the city. It is built after the old Roman faſhion: ſome ſay by Druſus, others by Nero: It has many curious pictures; within the firſt gate is a ſmall antique chapel, which they ſay was formerly a chapel dedicated to Credo and Hirmenſul; two divinities worſhipped by the antient Germans, whoſe ſtone ſtatues are againſt the wall on the outſide: Here is a well in the rock ſaid to be one thouſand ſix hundred feet deep, and the chain of the buckets three hundred weight. The cieling is ſupported by four Corinthian pillars, each forty-five feet high: in the emperor's apartment there is the picture of the homage paid by the magiſtrates to the emperor Matthias in 1612. This caſtle has four towers, two of which look to the eaſt and north, and the two others towards the town.

Their ſtadt-houſe, is a ſtately beautiful fabric, of hewn ſtone, one hundred paces in breadth, much larger than that of Augſbourg, and as well adorned within. It has three great porticos, with marble pillars; the front is very fine, having a noble portal, in the middle of it, adorned with ſeveral ſtatues. There are two other very grand gates to it, at equal diſtances one from another, which are no leſs ſplendidly ornamented. There is a long gallery here, on the cieling of which a famous tournament, that was held here above three hundred years ago, is repreſented in relievo. The council-chamber, dining-room, and other apartments, are well painted and gilt, filled with the arms of all nations, and adorned with curious pictures, medals, excellent works, both antique and modern, idols, ſhells, plants, minerals, and other natural productions. The council-chamber is ſmall, and not ſuitable to the dignity and power of the ſenate: the floor of the ſenate-houſe is paved with gilt ſtones, intermixed with others, of different colours; ſo that it exceeds that of Amſterdam: and in one of the chambers is a large picture that quite covers one ſide of the wall, repreſenting the entertainment which the emperor Ferdinand III. gave in the grand hall here, to the plenipotentiaries, at the treaty of Munſter's being ratified, who are painted as big as the life. Here are the pictures alſo of all the princes, and moſt other great perſons in Germany, who have been entertained here. The deputies of the circle of Franconia meet every day here; thoſe of the biſhop of Bamberg, and the marquis of Brandenbourg-Bareith, preſide at it: but the deputies of the eccleſiaſtical princes have the right hand: theſe deputies are, in all, eighteen, and attended by nine ſecretaries, who ſit at another table to write their reſolutions. Within this chamber, over the door, is a picture of three brothers, princes of Saxony, viz. John George, Frederic, and John Chriſtian, who ſupported Luther in his reformation. The ſecond of theſe holds the imperial crown, which he would not accept of. The tapeſtry of this chamber contains the hiſtory of Nebuchadnezzar, king of Perſia.

In the arſenal are arms for one thouſand men, and it is one of the fineſt, and beſt furniſhed, in Germany. Mr. Miſſon ſays, he ſaw three hundred pieces of braſs cannon in it. Here are good ramparts, and a numerous garriſon. The city has ſix gates, each defended by a large tower, which look toward as many different roads. The public library, compoſed, at the beginning of the reformation, of all the books belonging to the convents of this city, and its neighbourhood, conſiſts of four galleries, and twenty-ſix thouſand volumes; particularly a Greek manuſcript of the goſpel, and ſome of St. Paul's epiſtles, above one thouſand years old, with the prayers and hymns formerly uſed in the Greek church, and the characters very different from thoſe now in uſe. Here are, a letter, of Luther's handwriting, to the magiſtrates of this city: a pocket-book of John Frederic, elector of Saxony; being ſcraps of ſermons he heard him preach: and the figure of Moſes, which, though not a foot high, has the whole Pentateuch writ upon

upon it. In the public cellar, which is a quarter of a mile long, are, generally, twenty thouſand middle-ſized tuns, full of wine.

Among many other privileges, this city has the cuſtody of moſt of the imperial ornaments made uſe of at the emperor's coronation: As, 1. Charlemagne's crown, ſaid to weigh fourteen pounds, about which there is a mitre, enriched with a vaſt number of diamonds, rubies, emeralds, and pearls; and on the front, a croſs of diamonds, of great value. 2. His dalmatic robe, or mantle, embroidered with large pearls. 3. The golden apple, or globe. 4. His ſword. 5. His golden ſceptre. 6. The imperial cloak, embroidered with eagles, and bordered with large emeralds, diamonds, ſapphires, and cryſolites. 7. Buſkins, covered with plates of gold. 8. The gloves, embroidered with curious ſtones. They are kept in the church of the hoſpital, and were all brought from Prague by the emperor Sigiſmund, by reaſon of the troubles that were in Bohemia in his time. Here is alſo a large cheſt, ſuſpended in the air by iron chains faſtened to the ceiling, in which, they ſay, are a vaſt many ſacred relicks, but they are never ſhewn, except to ſovereign princes, and their attendants.

The council is compoſed of forty-two perſons, whereof twenty are taken out of the ancient patrician families, and the reſt from among the burghers; ſo that there are thirteen eſcheVins, or aldermen; as many counſellors, or common-councilmen; eight other ſenators, who are all patricians; and eight other counſellors, elected out of the corporations of trades and crafts, who are, conſequently, plebeians; but theſe acquieſce ſo implicitly in the deciſion of the patricians, that they may be ſaid to have no vote. There are two burgomaſters, one choſen out of the eſchevins, the other out of the council, who have the ſuperiority, the one of the military, the other of the civil government, and are changed every month.

Levying of troops, taxes, and other matters of great moment, are referred to a ſelect committee of ſeven, named the Septemvirate, who call three or four civilians, for advice; and they have ſalaries for their attendance on ſuch occaſions: but no lawyers are allowed any vote, or ſhare in the adminiſtration. In extraordinary caſes there is a great council of 400, choſen out of all the callings and trades in the city; and they annually chuſe the members of the other courts. The magiſtrates never allow mechanics to meet publickly, except at worſhip, weddings, and funerals, for fear of tumults; and the ſenators are, in general, ſo very circumſpect, that, "As prudent as a Nuremberg ſenator," is become a common proverb in the country.

As the freedom of the city is not allowed to papiſts, there being but few here; theſe are obliged to worſhip in a chapel, or ſmall church, in the houſe of the Teutonic order. The Calviniſts were formerly obliged to go a league out of town to a church, in the marquiſate of Anſpach; and the Lutheran miniſters, in the town, baptized their children: but the late king of Pruſſia, whom the Nurembergers feared much more than they loved, having demanded that they ſhould be allowed a place of worſhip nearer to the city, they now meet two or three muſquet-ſhot without the gates, in a long hall, which holds about five hundred perſons. The Jews, who live in a village without the city, where they have a ſynagogue, are not allowed to lodge here, nor to come into it, without paying a florin for every hour they ſtay, as at Cologne, and that on the ſame pretext; namely, a deſign to poiſon the wells and fountains. The religion, as well as quality, of every perſon here, may be known by their habit; which regulation was made by the magiſtrates, both of this city, and Augſburg, to reſtrain the luxury of the meaner ſort in clothes, and to detect rioters, who are but too common in all free cities.

There are in this city a great number of curious workmen, in metal of all ſorts, ivory, wood, &c. and artificial commodities are very cheap. They are particularly famous for clock-work. Monconys ſays, there was a coach made here for the king of Denmark, with ſprings, ſo as to go forward or backward, or turn about, and travel a league on ſtones, without horſes, and only managed by two boys within; and that the ſame workman made, for the dauphin of France, a repreſentation of a ſquadron of horſe, engaged with a battalion of foot, both of them marching, and firing, by ſpring-work. The Nuremberg braſs, which is made chiefly out of the Tirol copper, is ſaid to be the moſt ductile, the brighteſt, and the leaſt ſubject to flaws, of any in Europe.

Weiſſenburgh, a little imperial city, is twenty-eight miles ſouth of Nuremberg, and ſituated on the Norgau. The territory belonging to it is very ſmall, and contains but one inconſiderable village. The city has a ſeat and voice both in the diets of the circle and of the empire.

Schweinfurt, another ſmall imperial city, ſtands on the Maine, and has a good bridge and gymnaſium: the inhabitants are proteſtants. The territory is ſmall, but celebrated for its excellent wine.

Windſheim, alſo an imperial city, ſtands on the Aiſch, twenty-ſeven miles from Nuremberg, and is very ancient. The territory is ſmall, and the inhabitants are Lutherans. The city has a ſeat and voice at the diets of the empire, and circle.

Rothenberg, an imperial city, is ſituated near the Tauber. It has a ſeat and voice in the diets of the circle and empire, a conſiderable territory, and contains ſeveral churches, a gymnaſium, Teutonic houſe, &c. The inhabitants are Lutherans.

Seinſheim, Reichelſberg, and Wieſentheid ſeigniories, entitle their lords to a ſeat and voice in the diets of the empire and circle, but thoſe privileges are not enjoyed by the ſeigniories of Welzheim and Hanſen.

Limburg and Spickfeld, which are combined ſeigniories, entitle the proprietors to two voices at the diet of the empire; and in the college of the counts of Franconia.

Erbach county is ſituated on the ſouth ſide of the Maine, being twenty-ſeven miles long, and twenty broad; is tolerably fertile, and inhabited by Lutherans. The eſtates of all who die unmarried, in this county, after the age of twenty-five, are forfeited. It gives a ſeat and voice in the college of Franconian counts, and at the diets of the empire and circle, and contains Erbach, a ſmall town on the Mumling, with a caſtle; and Michelſtadt, the ſeat of a regency and ſuperintendency.

The county of Wertheim lies on both ſides the Maine, between the archbiſhopric of Mentz and the biſhopric of Wurtzburg, a part of it terminating alſo on the county of Erbach. It abounds in corn, wine, paſturage, wild fowl, and veniſon. The inhabitants are moſtly proteſtants. A part of the county came by marriage to the family of Lowenſtein, who derive their pedigree from that of the elector Palatine, and are divided into the two branches of Lowenſtein-Wertheim-Virnenburg, and Lowenſtein-Wertheim-Rochefert, the former of which are proteſtants and counts; the latter Roman catholics and princes, or princely counts. They take the title of Lowenſtein from the county of that name, under the juriſdiction of the duke of Wirtemberg, of which they are proprietors, beſides other ſeigniories in the empire, Bohemia, and the Netherlands. The reſt of this county, not poſſeſſed by the counts of Lowenſtein, belongs to the biſhop of Wurtzburg, and the counts of Caſtell. The counts of Lowenſtein have two voices in the Franconian college of counts of the empire, and have alſo a ſeat and voice among the counts in the diets of the circle.

The moſt conſiderable places in this county are, 1. Wertheim, which gives name to it, and is its capital, lying at the confluence of the Maine and Tauber. Here each of the above-mentioned branches of the Lowenſtein family have a palace. The inhabitants are partly proteſtants, and partly papiſts; but the magiſtracy is wholly proteſtant. 2. The county of Reinec, which gives its poſſeſſor a ſeat and voice in the diets of the empire and circle, and in the college of Franconian counts; but contains only Reinec, a ſmall town, with a caſtle. 3. Bremberg, a ſtrong caſtle on a mountain, giving name to a ſeigniory, which had antiently lords of its own. 4. Little Heubac, on the Maine, which gives name to a bailiwic, and contains a caſtle: it is ſituated on the Maine, and is a market town.

The county of Caſtell lies between that of Schwartzenberg, and the biſhropric of Wurtzburg, and weſt from Bamberg. It is about twenty-ſeven miles long, and eight where broadeſt, and belongs to its counts, divided into the two principal lines of Remlingen and Rudenhauſen, deſcended from the antient dukes of Franconia. The county is, for the moſt part, a fief of Wurtzburg, to which the counts are here hereditary cup-bearers. They have two voices in the college of the imperial counts of Franconia, both at the diets of the empire, and thoſe of the circle. The oldeſt of the reigning counts is always adminiſtrator of the feudal ſeigniories of the whole houſe, and cup-bearer to the biſhop of Wurtzburg.

The places in the county, worth mentioning, are, 1. Caſtell, a village, containing a fine palace, in which one of the collateral lines of the principal Remlingen line reſides, and gives name to a bailiwic belonging to the ſame line. 2. Rudenhauſen, a village which gives title to the other capital line, and contains a place belonging to them. 3. Remlingen,

3. Remlingen, a market-town, which gives title to one of the principal lines.

The biſhopric of Bamberg is bounded, on the north, by the principality of Coburg, and the Voightland; on the ſouth, by the principality of Brandenburgh Bareith, the territory of Nuremberg, and the principality of Schwartzenberg; on the weſt, by the biſhopric of Wurtzburg; and, on the eaſt, by the territory of Nuremberg and Brandenburgh-Bareith. The length of it is about ſixty miles, and the breadth forty. The ſoil is very fertile in corn, wine, ſaffron, and liquorice, yielding alſo in ſome places, laurel, fig, lemon, and orange trees, with woods of foreſt trees, and ſome metals. The country abounds likewiſe in cattle, and is well watered by the Maine, and ſeveral other brooks that fall into it. The inhabitants are all zealous Roman catholics. Here are no ſtates.

Before the year 1006, this county was called the county of Babenberg, and had counts of its own; but was then allotted for a biſhopric by the Emperor Henry II. which pope Benedict VIII. exempted from all archiepiſcopal juriſdiction. The biſhop's privileges and prerogatives are very great. He is the only one in Germany who has the privilege of wearing a cardinal's hat, together with the pallium, the laſt of which, however, coſts him four thouſand pounds, and there lies no appeal from his deciſions, in ſecular matters, to the courts of the empire. The king of Bohemia is his cup-bearer, the elector-palatine his ſteward, the elector of Saxony his grand-marſhal, and the elector of Brandenburg his great chamberlain. Theſe, or their proxies, if ſummoned, muſt attend, and do the duties of their offices on the day of his inſtallation. He is able to bring into the field four thouſand men. The revenue ariſing from his biſhopric, beſides his bailiwics in Carinthia, amounts to above fifty thouſand pounds. The chapter, by whom the biſhop is elected, conſiſts of twenty capitular canons, and fifteen domicelli, all of noble birth. All his eſtates, excepting thoſe in Carinthia, are held immediately of the empire. At the diet thereof, he has the fourth place, on the ſpiritual bench in the college of princes, and is a ſummoning prince and director of this circle, as we before obſerved. His matricular aſſeſſment, at preſent, is only four hundred and thirty-ſeven florins; and to the chamber of Wetzlar five hundred and ſeventy-four rix-dollars each term. Here are all the uſual courts, councils, and offices for the different departments of government, as war, foreign affairs, the finances, &c.

The two following are the chief places in this biſhopric, viz. 1. Bamberg, which gives name to it, and is its capital, pleaſantly ſituated near the river Rednitz, about thirty-four miles north of Nuremberg, and in the centre of Germany. It is ſurrounded with walls and a ditch, and is, in general, well built and populous. Here are two epiſcopal palaces, or caſtles, one called Peterſburg, and the other Gayerſworth, an univerſity founded in 1648; ſeveral monaſteries, nunneries, and churches, beſides the cathedral of St. George, in which is the monument of Henry II. who founded the biſhopric, and his conſort, Cunigunda, with a treaſure of jewels and relics. Several diets, both of the empire and circle, have been held here. Not far from the town ſtands the biſhop's ſummer-palace, called Marquardſburgh. Among other curioſities in the treaſury of the church of St. George is a folio manuſcript of the four goſpels in latin, upon fine vellum, in a neat Roman character, with ſome gothic letters interſperſed, and the moſt beautiful miniatures that are to be ſeen; the binding is wood, covered with curious ſculptures in ivory, of our Saviour's paſſion, and bordered with a gold edging, on which are the heads of our Lord and his Apoſtles, as are thoſe of the four evangeliſts at the four corners: the whole is enamelled, and the intervals between the figures are garniſhed with pearls and precious ſtones. There is another latin manuſcript in folio of the four goſpels, with a commentary by St. Jerom, and fine miniatures, but not comparable to the former: and there is a third in Gothic letters, the corners of which are alſo enriched with pearls and precious ſtones, much in the ſame manner with the firſt, with a ſquare of ivory in the middle, repreſenting St. John baptizing our Saviour. The ſaid emperor alſo gave a fine large ſhrine of gold for relicks, which is alſo ſet with precious ſtones. In ſhort, it would take up, by far, too much room in this work, to mention the vaſt number of antependiums of altars which are extremely rich; the candleſticks, luſtres, lamps, cenſers of gold and ſilver, and other rich articles of this treaſury.

Here is a church for the Jeſuits; the front of it is adorned with the ſtatues of ſeveral ſaints in niches; but the inſide is very indifferent. The Dominicans have another, with an altar, at which they give out, that above two thouſand maſſes are ſaid every year. The Auguſtine friars have a monaſtery dedicated to St. Stephen; and the Benedictines an abbey dedicated to St. Michael, and ſtanding on an eminence of the ſame name: one of its abbots, who was a great botaniſt, cauſed the church to be painted, within and without, with all ſorts of the known plants and ſimples. A council was held at this city in 1011, to put an end to the differences among the German biſhops; and in the time of Henry IV. its biſhop Otho converted the Pomeranians to Chriſtianity. An univerſity was founded here in 1653, by Melchior Otto, one of its biſhops. There are ſeveral public fountains in the town, but no fortifications more than its wall; ſo that in time of war the biſhop reſides, and has commonly a very ſtrong garriſon, at Forcheim, or Forchaim.

Forcheim, ten miles ſouth-eaſt from Bamberg, the Lacoritum of the antients, which is ſtrongly and regularly fortified, having walls of free-ſtone on the confluence of the Wiſent, and the Rednitz: yet the duke Bernard of Weymar, the Swediſh general, took it in 1633, at the firſt onſet. The buildings are generally old, and out of repair. Baudrand gives it the Latin name of Forchænum. Munſter pretends it to be more antient than Bamberg, and that the old kings of Bavaria held diets and aſſemblies here; and there is a popular tradition here, that it was the country of Pontius Pilate. The pariſh church of St. Martin was made collegiate in 1354.

Bamberg has a very agreeable neighbourhood, but as one comes to it from Nuremberg, through a foreſt of fir-trees, there is an avenue to it for a quarter of a league in length, formed of wheels and gibbets, on which are expoſed the bodies of malefactors, by which this road has been infeſted from all quarters; for this biſhopric being contiguous to ſeven or eight different ſtates, the city lies in the greateſt road of all Germany. There is a good number of nobility ſettled here, who drink as hard as they do at Fulda and Wurtzburg; ſo that it looks as if drinking was an inſeparable function of the eccleſiaſtical courts in this part of the world. This city had formerly a wall; but the inhabitants, for their rudeneſs to the biſhop in 1435, were condemned at the council of Baſil to raze the walls, and never to rebuild them. In 1609, the popiſh boors here attempted to plunder the Jews of this city, and the neighbouring proteſtants; but were ſoon ſuppreſſed, and their leaders puniſhed for the outrages they had committed.

The biſhopric of Wurtzburg extends eighty miles in length, and ſixty in breadth: is well watered, and fertile in corn, fruit, herbs, wine, plants, paſtures, &c. The eſtabliſhed religion is the Roman catholic, yet there are a few much oppreſſed and perſecuted proteſtants in the county. Chriſtianity was firſt introduced here by St. Kilian, a Scotchman, about the end of the ſeventh century; and St. Burchard, the firſt biſhop, was appointed and conſecrated by St. Boniface, who is alſo ſaid to have been a Scotchman, and was the chief apoſtle of the Germans, and firſt archbiſhop of Mentz. to which ſee the biſhop of Wurtzburg is ſuffragan. The biſhop's title runs thus: "Prince of the holy Roman empire, biſhop of Wurtzburg, and duke of eaſt Frankenland." His revenue is ſaid to amount to ſixty thouſand pounds a year, with which he maintains a conſiderable body of troops, even in time of peace, with a ſplendid court and houſhold, horſe and foot-guards, &c. being abſolute in temporals, and living in all the ſtate of a ſovereign temporal prince; but in ſpirituals an appeal lies againſt him to his metropolitan, or the pope's nuncio. The biſhop has the honour of the pall and croſs, with a ſeat and voice in the diets of the empire and circle. His chapter conſiſts of twenty-two capitular canons, and thirty who are domiciled, who muſt all be of noble birth, and each has an income of three thouſand German crowns per annum.

The town of Wurtzburg, from whence the biſhopric derives its name, and is its capital, ſignifies a town of herbs, a great variety of which is found about it. It ſtands in the very centre of Franconia, on the banks of the Maine, forty miles weſt of Bamberg, and is well fortified. There is alſo a ſtrong fort near the town, containing an epiſcopal palace, magazine, and a church; but the palace, in which the biſhop uſually reſides, ſtands in the town, and is a noble ſtructure, the firſt ſtone of which was laid in the year 1720. The cathedral, together with a ſeminary, are dedicated to St. Kilian, the patron of Wurtzburg and Franconia. As this city is under the dominion of an eccleſiaſtical prince, the reader need not be told that it contains a great number of churches, monaſteries, nunneries, and other

other religious foundations. Here alſo is an univerſity, founded in 1403, a houſe of the Teutonic order, and another of the order of St. John, a foundery for cannon and bells, a handſome college, and ſeveral hoſpitals. In the biſhop's cellar are ſaid to be more than ſixty tuns of curious workmanſhip, full of excellent old wine. At the entrance of the bridge, over the Maine, is a triumphal arch of hewn ſtone. One of the abbies, which is large and magnificent, belongs to Scots Benedictines. The cathedral, an antient gothic ſtructure, is richly adorned within, with ſtatues, altars, pillars, &c. of marble and ſilver, finely executed, beſides paintings, ſculptures, gilding, and veſſels of gold and ſilver. Almoſt every thing in the church is carved and gilt: the pulpit, the organs, the benches for the canons, and the altars. Moſt of the ſtatues are alſo gilt. Several diets have been held in this city, which, like moſt others, has experienced many calamities, and a great variety of fortune. In the caſtle is a fine train of artillery, with all the implements neceſſary for gunners, and vaſt quantities of muſket-balls, bombs, bullets, and flints, beſides a year's proviſion for ſix thouſand men at arms, and forty thouſand horſe and foot. The great hoſpital of St. Julian here, is one of the richeſt and moſt magnificent in Europe, having a greater eſtate and income than the biſhop himſelf.

With reſpect to the principalities of the Margraves of Brandenburg, the ſoil of them is tolerably fertile, and the mountains abound with copper, lead, ſulphur, marble, fine clay, gold, ſilver, iron, vitriol, antimony, cryſtal, terra ſigillata, &c. The country contains many woods, is well watered, and abounds with fiſh. The manufactures conſiſt of ſtockings, porcelane, woollen cloth, hats, white cotton wares, &c. The eſtabliſhed religion is Lutheraniſm, but Calviniſts and Roman catholics are tolerated.

The principal places are, 1. Bareith, the capital, which contains a magnificent palace erected ſubſequent to the year 1753, two Lutheran and one Calviniſt church, a mint, a Roman catholic chapel, &c. The ſeat of the high colleges is here; and in the neighbourhood, in a wood, is a neat houſe, called the Hermitage. 2. St. Goergenam-ſee, a town on a lake, contains a noble palace, fine gardens, a porcelane and marble manufactory, &c. 3. Streitburg, gives name to a bailiwic. 4. Hof, on the Saal. 5. Neila. 6. Winſiedel, on the Roſzlau.

The town of Cullembach is twenty-five miles eaſt from Bamberg. It ſtands on the Maine, not far from Lichtelberg, nor from the ſource of the Red Maine, one of the rivulets that form the Maine: ſome take this to be the very centre of Germany. In 1430 it was plundered by the Huſſites: in 1553, upon the approach of the inhabitants of Nuremberg, with the princes their allies, the citizens, finding they were not able to ſuſtain a ſiege, ſet fire to the town, and retired, with their beſt effects, to the neighbouring caſtle of Blaſſenbourg, or Plaſſenberg: their enemies, however, advanced to the town, extinguiſhed the flames as faſt as they could, made a great booty, and took the caſtle alſo, in 1554, after a long ſiege, and demoliſhed it; but the Nurembergers were afterwards obliged to rebuild it, and it is very well fortified. The antient records of the family of Brandenburg, conſiſting of title deeds, imperial diplomas, acts, and other important and fundamental pieces, are kept here.

7. Neuſtadt, on the Aiſch, is one of the head towns of the principality, containing a margravial palace, and giving name to a bailiwic. 8. Weiſſenſtadt, on the Eger. 9. Lechtenberg, a market-town, which gives name to a bailiwic. 10. Golderonach, a ſmall town on the river Croanach. 11. Erland, one of the ſix head towns, as they are called, of the principality, ſituated at the conflux of the Rednitz with the Schwabach, and diſtinguiſhed into the Old and New. The latter which is alſo called Chriſtian-Ertang, having been begun by the margrave Chriſtian-Erneſt, in 1686, is one of the fineſt towns in Germany. It lies cloſe to Old Irland, being almoſt environed with a wall of free-ſtone, and containing a margravial palace, with a fine garden, an univerſity, and ſeveral churches. Some manufactures, eſpecially thoſe of hats and ſtockings, are alſo carried on here.

The biſhopric of Eichſtett is bounded by the Upper Palatinate, Upper Bavaria, the Duchy of Neuburg, the county of Papenheim, and the principality of Anſpach. It is a fruitful country, about 40 miles in length; but the breadth is ſmall in proportion, and very unequal. The biſhop is a prince of the empire, but ſuffragan of Mentz, and has a revenue of between nine and ten thouſand pounds. The chapter conſiſts of fourteen capitulars, and fourteen domicellis, who muſt be all gentlemen by ſixteen deſcents. Here are no land eſtates, and the inhabitants are all Roman catholics. The biſhopric was founded by St. Boniface, who made his ſiſter's ſon Wilibald, afterwards canonized by pope Benedict XIII. firſt biſhop thereof, in the year 745. Here are the uſual hereditary offices, and high colleges. The biſhop is perpetual chancellor of the univerſity of Ingelſtedt, and lord of ſeveral fiefs poſſeſſed by princes and counts.

The moſt conſiderable places in this biſhopric are, 1. Eichſtett, or Aichſtadt, i. e. the town or city of Oaks, ſo called from the large oaks that formerly grew near it. Beſides an epiſcopal palace, and cathedral dedicated to our lady, here are ſeveral cloiſters and churches, with a large college. In St. Warburg's church, is a rock or altar, as it is ſtiled, containing the breaſt-bones of the ſaint, from which, what they call its oil, but which in reality is only a vapour, for it neither burns nor ſwims upon the ſurface of the water, is ſaid to flow, and force itſelf through the ſtone twice a year. This holy oil is put up in ſmall phials for the uſe of pilgrims, and other devotees, who are aſſured of its miraculous virtues, and for that reaſon reſort hither in great numbers, to purchaſe ſome of it, and pay their devotions to the bones of the ſaint. It has a curious cathedral, to which one of their biſhops preſented a fine pyx for the uſe of the hoſt, which is of pure gold, in form of a ſun, weighs forty marks, and is adorned with three hundred and fifty diamonds, one thouſand four hundred fine pearls, two hundred and fifty rubies and ſeveral other precious ſtones, the whole being valued at ſixty thouſand guilders. In 1704, this town was taken by a French detachment. It lies in a valley, but the biſhop, reſides for the moſt part at the fortreſs of Willoboldſburg commonly called Walperſburg, which is about two miles off, upon a hill. It contains an arſenal and library, and the archives are kept here.

2. The ſmall town and citadel of Abenburg. 3. Hirchſberg, which gives name to a bailiwic, is a caſtle on a mountain.

The principality of Anſpach has Wartzburg on the weſt, Bamberg on the north and eaſt, and Swabia on the ſouth. It yields grain, fruits, wine, tobacco, iron, marble, timber, and there are in it ſome medicinal ſprings, &c.—Though ſome parts are mountainous, yet the others produce good paſture, in which abundance of cattle are to be bred and fed. The woods are well ſtored with game, and the rivers with fiſh: the chief rivers are the Rednitz, the Altmuhl, the Jaxt, the Wornetz, and the Tauber.

The yearly revenue accruing to the ſovereign of this principality, excluſive of that of Bareith, is five hundred thouſand crowns per annum. Lutheraniſm is the predominant religion; but at Schwabach the Calviniſts have the free exerciſe of theirs. There is a military academy at Anſpach. The principal manufactures of the country are tapeſtry, ſtockings, cloth, ſtuffs, gold and ſilver lace, wire, needles, porcelane, leather, and looking-glaſſes. The reigning margrave has a ſeat and voice in the college of princes, and at the diets of the empire and circle. His military eſtabliſhment is a life-guard of horſe, and one regiment of foot of ſeven companies.

The moſt conſiderable places in the principality are, 1. Anſpach, which gives name to it, and is its capital, ſtanding on the Under Retzut, and containing a palace, in which the margraves commonly reſide. Here the chief courts, councils, and offices are held. A public library is alſo here, with a collection of medals, a mint, a gymnaſium, a porcelane manufactory, barracks for ſome companies of foot, beſides two gardens, and a fine orangery and green-houſe belonging to the prince, and ſeveral churches. The town is ſurrounded with walls, and well-built. 2. Bruckberg, a beautiful pleaſure houſe belonging to the margrave, and ſtanding on an eminence. 4. Schwabach, on a river of the ſame name, is populous, and has a great trade in gold, ſilver, iron, ſteel, braſs, hard-wares, tobacco, cloths, ſtuffs, tapeſtry, lace, and ſtockings.

The Teutonic order, which we have had frequent occaſion to mention, was founded in the year 1190, in Paleſtine, and the knights were at firſt called knights of the Virgin Mary, or brothers of the Teutonic-houſe of our lady of Jeruſalem. They muſt be all Germans, and of true antient nobility. They are to bind themſelves by vows to defend the Chriſtian (i. e. Roman catholic) religion, and the Holy Land, and to protect and aſſiſt the poor, and the ſick. In 1226 and 1228, after they had been obliged to quit Paleſtine, they obtained a grant of all the lands they ſhould conquer from the Pagan Pruſſians; whereupon they ſubdued all Pruſſia, Courland, Semigallia,

gallia, and Livonia, but afterwards loſt the whole of them again.

The ſuperior of this ſpiritual order is ſtiled the grand and Teutonic maſter, adminiſtrator of the grand maſterdom in Pruſſia; maſter of the Teutonic order in Germany and Italy, and lord of Frudenthal and Eulenberg. He is a prince of the empire, and, as ſuch, has a ſeat and voice in the diets of the empire, and of this circle. Both Roman catholics and Proteſtants may be inveſted with the order, and the Proteſtant knights are permitted to marry. The eſtates which they are poſſeſſed of in Germany, were obtained partly by purchaſe, and partly by donation, and conſiſt of what is properly called the maſterdom of Margentheim, and twelve bailiwics. The grand maſter is choſen by the chapter, conſiſting of the counſellors and commanders, or commenders, the latter of whom are adminiſtrators and judges of the bailiwics and commenderies, but, in weighty matters, an appeal lies from them to the grand maſter, who confirms the counſellors and commenders, which are choſen by the chapter, the latter out of the former.

The county of Henneberg is about twenty-four miles in length, and nearly as much in breadth. Beſides conſiderable quantities of grain, it yields alſo tobacco, medicinal and ſalt ſprings, with mines of ſilver, copper, and iron. The chief river by which it is watered is the Werra, into which ſeveral ſmaller ſtreams fall. The inhabitants are all Lutherans, except at Schenalkalden, where the Calviniſts have a church. The chief manufactures of the country are thoſe of arms, hard-ware, and fuſtians. The proprietors of it are, the electors of Saxony, the duke of Saxe-Weimar, Meinungen, Gotha, Cobourg-Saalfeld, Hilburghauſen, and the landgrave of Heſſe-Caſſel. Some of theſe princes are intitled by it to voices in the diets of the empire and circle, and all of them contribute to the payment of its aſſeſſment to the empire and chamber-court.

The principal places in the county are, 1. Schleuſingen, lying on the little river Schleuz, and belonging, with its bailiwic, and ſeveral others, to the elector of Saxony. Here is a caſtle, in which the princes of Henneburg uſed ſometimes to reſide. The town is not large, but has a gymnaſium in it, belonging in common to all the dukes of Saxony, who have a ſhare in the county, and a commandery of the order of St. John. Not far from it is a medicinal ſpring, called Wilhelmſbrun. 2. Ilmenau, a ſmall town on the Ilm, belonging to Saxe-Weimar, and containing a mine office on account of the copper and ſilver mines in the neighbourhood, which were more conſiderable than at preſent. 3. Meinungen, a town ſituated on the river Werra, and giving title to a branch of the houſe of Saxe-Gotha, who have a palace in it, with a library and cabinets of medals. In this palace alſo are kept the Henneberg archives, belonging in common to the princes of Saxony. In the neighbourhood of the town tobacco is much cultivated. 4. Henneberg. 5. Salzungen a ſmall town on the Werra. 6. Romheld, a town giving name to a ſeigniory. 7. Schmalkalden, a pretty large, populous, and thriving town, which, together with ſeveral bailiwics and diſtricts, belongs to the landgrave of Heſſe-Caſſel. A great trade is carried on here in iron and ſteel wares, there being mines of iron in the neighbourhood, and forges. This town is famous in hiſtory, on account of the meetings held in it by the Proteſtant princes concerning the reformation, and the league concluded by them in 1531.

The county of Hohenloe is about twenty miles in length, and nearly as many broad, tolerably fertile, and well-watered.

The principal places are, 1. Ochrengen, the capital, ſituated on the Ochren, containing two palaces, a gymnaſium, and ſeveral churches. 2. Barſtentein. 3. Ingelfingen, a ſmall town, which gives title to, and is the reſidence of a branch of the Neuenſtein line. 4. Kirchberg, a ſmall town on the Jaxt. 5. Sindringen, a town on the Kocher. 6. Pfedebach, a market-town. 7. Waldenburg, a ſmall village. 8. Frankenau, a market-town. 9. Schillingsfurſt, a palace on a mountain. 10. Neuenſtein, a town with a caſtle. 11. Langenburg, a town with a palace.

The county of Schwarzenburg is about ſixteen miles in length, but very narrow in proportion. The prince has a ſeat and voice in the college of princes in the diets of the empire and circle. He is poſſeſſed of other eſtates beſides thoſe in the empire, but the only places of note, in the county, are, Schwarzenberg, a caſtle on a mountain, and Mark-Praill, a ſmall town on the Maine.

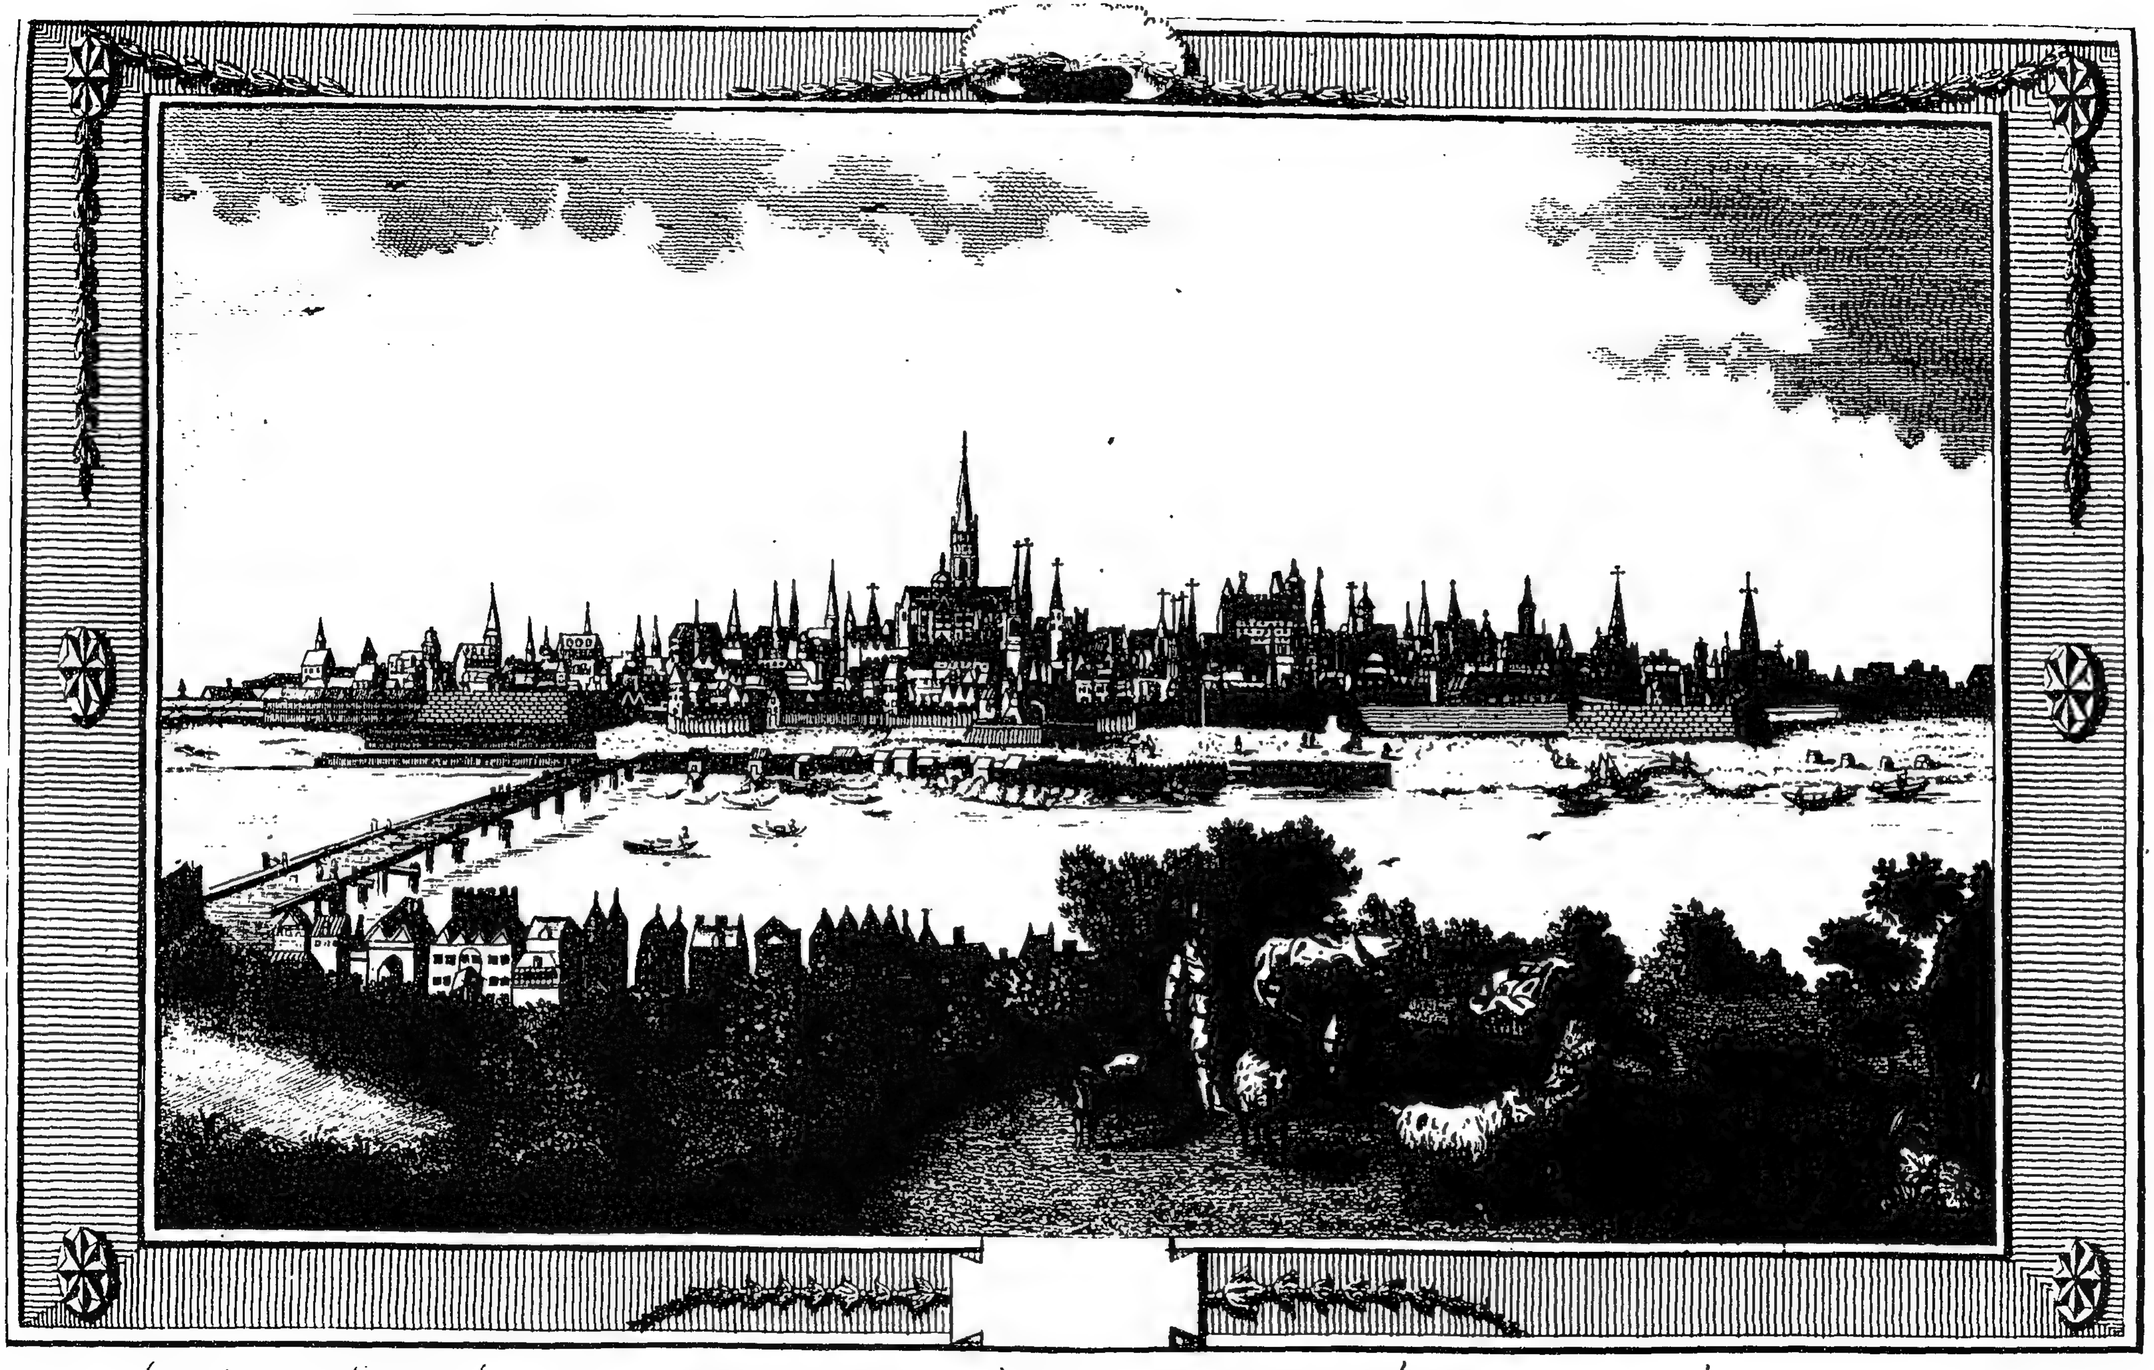
SECT. VII.

Treating of the Circle of AUSTRIA; its ſeveral Circles, Duchies, Archduchies, Cities, and Towns; together with the Inhabitants, their Manufactures, Religion, &c. and the Trade, Produce of the Countries compriſed in it, &c.

THIS circle is bounded, on the north, by Moravia, Bohemia, and the circle of Bavaria; on the ſouth, by the Adriatic ſea, and the territory of Venice; on the eaſt, by Hungary; and, on the weſt, by Swiſſerland. It is the largeſt circle, and the firſt in rank. The principal part of it belongs to the illuſtrious houſe, whoſe name it bears, and who have been upwards of three hundred years in poſſeſſion of the imperial dignity. The inhabitants are in general Roman catholics.

Geographers divide the archduchy of Auſtria into Upper and Lower, the former being ſituated weſtward, and the other eaſtward. It is bounded by Bohemia, on the north, Bavaria on the weſt, Hungary on the eaſt, and Stirrow, on the ſouth. It extends near ſeventy miles from north to ſouth, on both ſides the Danube. It is, in general, level, fertile, and well-watered. The diets conſiſt of princes, biſhops, counts, abbots, barons, provoſts, knights, and town-repreſentatives, and in them they treat of contributions, taxes, military affairs, &c. The diet of Lower Auſtria is held at Vienna, and that of Upper Auſtria at Lentz. The proteſtant religion, for ſome time ſubſequent to the reformation, made a very conſiderable progreſs, but at length was proſcribed, and in a manner ſuppreſſed. The archbiſhop of Vienna is a prince of the holy Roman empire, and bears the pall and croſs. There is at Vienna a chamber of commerce and an exchange and a loan bank, which were eſtabliſhed in the year 1704.

The manufactures are, ſilks, gold and ſilver lace, cloths, ſtuffs, ſtockings, linen, looking-glaſſes, porcelane, plate, braſs, hard-wares, gun-powder, &c. Great quantities of allum, ſaffron, wine, &c. are exported, but few commodities are permitted to be imported, and thoſe which are allowed, are loaded with ſo many impoſts and duties, as to amount almoſt to a prohibition.



In the year 1753, Lower Auſtria was divided into four circles; two of theſe are ſituated on the ſouth, and two on the north ſide of the Danube. Thoſe to the ſouthward are called the circles below and above the foreſt of Vienna; and thoſe to the northward, the circles below and above the mountain of Manhartſberg.

We ſhall here deſcribe the principal places in Lower Auſtria; beginning with,

The city of Vienna, which is not only the capital of the circle of Lower Auſtria, but the metropolis of the whole German empire, and the reſidence of the emperor. It is ſituated in forty-eight degrees fourteen minutes north latitude, and ſixteen degrees fifty-ſeven minutes eaſt longitude, at the diſtance of thirty-two miles from Preſburg, one hundred and eighty from Cracow, three hundred and ſixty from Rome, five hundred and fifty from Amſterdam, ſix hundred and twenty-five from Paris, and ſeven hundred and fifty from London, and is watered by the Danube. This city is by the Turks called Beez; by the natives, Wien; and by the Poles, Wieden. The Danube is here very wide, and forms ſeveral beautiful iſlands, which are well ſtocked with wood. This city was famous for the actions of ſeveral of the Roman emperors againſt the Marcomanni and the Quadi, particularly for the wars of Marcus Aurelius Antoninus Philoſophus, who defeated thoſe nations, and is ſaid to have died here. Whether it was afterwards deſtroyed, does not appear; for we find little or no account at all of it till 1158, when Henry I. of Auſtria is ſaid to have rebuilt it; and it was enlarged, beautified, and walled round in 1192, by the ranſom-money which the marquis of Auſtria obliged king Richard I. of England, to pay, when he took him priſoner in his return from the Holy Land (as is above hinted at Tirnſtein), becauſe he took down the Auſtrian banner at Joppa, and threw it into a houſe of office. This ranſom was one hundred and forty thouſand marks of ſilver, in Cologne weight, ſo prodigious a ſum for thoſe times, that the Engliſh were forced to ſell their church-plate to raiſe it; and the marquis likewiſe employed part of it in walling the towns of Neuſtadt, Ens, and Hainbourg.

It was made an imperial city by Frederic II. in 1236, but four years after it was made ſubject to the houſe of Auſtria. Æneas Sylvius, who wrote at leaſt two hundred and fifty years ago, ſays, this city abounded with palaces fit for kings, and churches which vied with thoſe of Italy:

a cha-

An Accurate Prospect of VIENNA, the Capital of Germany.

racter which it deſerves much better now, even though it has ſuſtained divers very memorable ſieges; viz. 1. By Matthias Corvin, king of Hungary, who took it in 1490, and died here in 1495. 2. By the grand ſeignior Soliman the Magnificent, in 1529, when he made twenty attacks upon it with three hundred thouſand men; but Philip, elector palatine bravely defended it, and the emperor Charles V. coming to its relief with ninety thouſand men, obliged the Turks to raiſe the ſiege on the 14th of October following. It was again attacked by the Turks in 1532, and 1543, and again in 1683, when Kara Muſtapha, grand vizir, beſieged it with one hundred thouſand men, who cannonaded it from the 24th of July to the beginning of September, and laid part of the imperial palace, as well as ſeveral other grand ſtructures, in aſhes: but count Staremberg, though reduced to great ſtreights, gallantly held it out till relieved by John Sobieſki, the king of Poland, who came up with his army; and, being joined by the imperialiſts under the late electors of Saxony and Bavaria, our late king, then Prince of Hanover, Charles late duke of Lorrain, and the brave prince Eugene, attacked the beſiegers on the 12th of September N. S. and totally routed them; ſo that they not only quitted their camp, but their cannon and baggage: and the vizir, who left his tent for the king of Poland to ſleep in, was, by the grand ſeignior's order, ſtrangled.

A treaty of peace was concluded here, April 19, 17, 25, O. S. between the emperor and Spain, after four years had been ſpent, in little but ceremony, at the congreſs of Cambray. On the 16th of March, 1731, that called the ſecond Vienna treaty of peace and alliance, was concluded here, between the emperor, and Great Britain, whereby the latter guarantied the Pragmatick Sanction, and the former conſented to the introduction of the ſix thouſand Spaniards into Italy, and ſoon after agreed to the ſame with the king of Spain himſelf, by that called the third treaty of Vienna, concluded the 22d of July following, between the emperor, Great Britain, and Spain.

The old inner wall was built with the ranſom-money of our king Richard I. beſides which, this city is well fortified, after the modern way, with large broad baſtions, faced with brick, and edged with freeſtone; viz. two towards the river, ten towards the land, and a very deep ditch, into which they can let the river, but generally keep it dry, for the ſake of their cellars. Including the ſuburbs, it is of a very large circuit; but the city itſelf is not above three miles round, and, both together, not above a quarter ſo big as London and Weſtminſter. It is very populous, and never without ſtrangers, in the habit of moſt of the European nations; here being generally not leſs than thirty ambaſſadors, and other miniſters, at a time, from foreign princes and ſtates, and from the princes and ſtates of the empire, beſides vaſt numbers of quality of the hereditary dominions, who are often at court: but no Turkiſh ambaſſador is ever permitted to lodge in this city. One of its late yearly bills of mortality was five thouſand five hundred births, and ſix thouſand ſeven hundred and odd burials, and it contains about one hundred and eighty thouſand ſouls. Some of the houſes are well-built of ſtone, ſix ſtories high, with flat roofs, after the Italian manner; but thoſe which are otherwiſe, are generally contemptible, being covered with pieces of timber, in the ſhape of tiles. The ſtreets are of a middling ſize, and many of the houſes have four cellars, one under another, with an open ſpace in the middle of each arched roof, for a communication of air; and from the lowermoſt of all there is a tube to the top, to let in the air from the ſtreets, which, however, is neither wholeſome nor agreeable; inſomuch that Vienna vel ventoſa, vel venenoſa, is an univerſal proverb; for the winds blow ſo hard here the greateſt part of the year, that it is troubleſome to walk the ſtreets. The malignity of the air, which might be more unwholſome were it not for thoſe winds, is generally aſcribed to the loads of mud and dirt in the ſtreets, owing to the neglect of the ſcavengers, who were appointed to clean them.

This city contains about one thouſand three hundred houſes, twenty-nine churches, and eight chapels: It was at firſt a biſhopric, but is now the ſee of an archbiſhop, who depends immediately on the pope. Its cathedral, dedicated to St. Stephen, founded by Henry I. of Auſtria, and finiſhed by Henry II. is a ſtately fabric, but the windows are darkened by its painted glaſs: the ſteeple and ſpire is one of the fineſt in Germany, and much ſtronger than that at Straſburg, though not ſo ſightly. It is four hundred and eighty feet high, and under the croſs on the top there were formerly the Turkiſh arms, viz. a half-moon and ſtar, ſet up by the citizens; becauſe, when Soliman the Magnificent beſieged the city, he would on no other conditions ſpare the ſteeple: and though he was obliged to raiſe the ſiege, and march off, yet the arms continued there till the Turks beſieged it again in 1683, after which, becauſe they fired at the ſteeple, they were taken down. This ſpire has large crockets, above a yard long, and adorned with foliage-work; and there is a moſt noble proſpect, from it, of the city, and adjacent country, and of the courſe of the Danube through moſt of Auſtria, and almoſt to Preſburg in Hungary. In the tower there hangs a caſe of wooden hammers, with which they call the people to church from Good Friday to Eaſter-day; becauſe they will not ſuffer the bells to ring out, during the time that our Saviour is ſuppoſed to have lain in the grave. At the entrance of this church, there is a ſtone placed in the wall, which they fancy to be one of thoſe wherewith St. Stephen was ſtoned to death. It looks like a pebble, and is worn very ſmooth by the ſuperſtitious people, who think they merit by touching it. In this church are many ſumptuous monuments of princes and other great perſons; but the princes of the Auſtrian family, who have been ſo long in poſſeſſion of the empire, have choſen to be buried in the chapel of the Capuchins church, without any pomp, or leaving any memory of their names or actions on their monuments.

The Aulick church, where the moſt important ceremonies are performed, is not the court church, though it is ſo near it; there's a paſſage to it from the palace by a long gallery. Here are many other noble churches, and rich convents; particularly, one for Scotchmen, in honour of their countryman St. Colman, who was reckoned the patron of Auſtria; and whoſe body, long kept here, had miraculous cures aſcribed to it; but it was afterwards carried to Alba Regalis. The church of the Auſtin friars, which is very large, has a chapel reſembling that called the Santa Caſa, or the Virgin's Houſe, at Loretto in Italy, on the top of which are many columns, ſtandards, and other trophies, taken from the Turks and Tartars. The Jeſuits have at leaſt two ſpacious colleges here; and before that which faces the piazzo there is a column of copper, in the centre of the market-place, on a pedeſtal of white ſtone, bearing the ſtatue of the Virgin Mary, with the ſerpent at her feet, and four angels round her, with inſcriptions recommending Auſtria to her patronage. St. Peter's church is much eſteemed for its antiquity, being the oldeſt in the city, and built in the ſame place where formerly ſtood the Ara Flaviana.

There is a noble univerſity in this city, founded above three hundred and fifty years ago, by the emperor Frederick II. who is ſaid to have endowed it with great revenues and privileges; and it was afterwards enlarged by Ottocar, king of Bohemia, and compleated by Albert III. of Auſtria, who divided it into four claſſes, with their peculiar rules and immunities. 1. The Auſtrian claſs, which takes in the ſtudents of Auſtria, Italy, and other provinces beyond the mountains. 2. That of the Rhine, which takes in the weſt part of the empire, France, Spain, and the Netherlands. 3. The Hungarian includes Hungary and Bohemia; and, 4. That of the Saxons takes in Saxony, the north of Germany, all the northern kings on the continent, Great Britain, Ireland, &c. The chancellor and the maſter have power of life and death over the ſtudents. In 1706, the emperor Joſeph erected an academy for painting, ſculpture, and architecture. The public library contains chiefly claſſical and civil law books. Proteſtants are now tolerated publicly to exerciſe their religion, agreeable to the late order of the emperor. The Jews were once permitted to reſide in a ſuburb, called Judenſtadt, beyond the river; but being ſuſpected of ſecretly carrying on a correſpondence with the Turks, they have ſince been entirely baniſhed from Auſtria. The Imperial palace is mean, low, dark, and badly furniſhed; though the library, which conſiſts of eight rooms, is well provided with manuſcripts and printed books; and the Muſeum contains many admirable rarities both of art and nature. The theatre is ſuperb, and the ſtables are capacious buildings of a vaſt length and expence, but no taſte, being divided into ſeven pavilions, which appear, at firſt ſight, to be ſo many different houſes; but the inner rooms are ill contrived; and the long one for horſes is ſo narrow, that they ſtand all in a row. Indeed a bad taſte has prevailed here, which is too prevalent in the buildings in general. Here are, it is true, ſome hotels, and even palaces, wherein the rules of architecture have been preſerved; but then they are overcharged with ſculpture, which is contrary to the noble ſimplicity of the antient architecture Here is, however, the beſt arſenal in the empire; where is ſhewn to ſtrangers the head of the grand vizir, who was

ſtrangled at Belgrade, after he had miſcarried in the ſiege of Vienna, as we mentioned above. The German ſoldiers, when they took Belgrade, in their war with the Turks, opened his tomb there, in hopes of treaſure, but found only the body in its ſhirt; and the governor remembering that this ſaid grand vizir, when he laid ſiege to Raab (which he was alſo obliged to raiſe), threatened that, if he maſtered the town, the head of its biſhop, then count Coblenitz, ſhould be cut off, becauſe he took the money out of the convents, to encourage the garriſon, he ſent the vizir's corpſe to the count, who gave it to this arſenal. In one of the baſtions there is a great magazine of naval ſtores, for the emperor's gallies, &c. on the Danube.

The ſeven channels, into which the Danube is here divided, contain ſeveral iſlands, which communicate together by ſeven timber bridges. The high bridge is formed by the interſection of two ſtreets by equal angles, the foundation of one being as high as the tops of the houſes; and in the other, an arch is built in the lowermoſt ſtreet, to let the uppermoſt paſs over it. Here are two remarkable columns, of which one is called the Conception of the Immaculate Virgin; and the other, St. Trinity. The latter is ſixty-ſix feet in height, formed like a pyramid, and has at the top three figures, of gilt bronze, repreſenting the Trinity. The various ſuburbs of the city almoſt embrace it like a bow, and appear like ſo many different towns, the principal being called Leopolſtadt, and abounding with handſome houſes of the nobles and gentry. Here is an iſland, named St. Peter's, which is capable of encamping a large army. The Prat, a wood in an iſland formed by the Danube, is much frequented in fair weather: in its vicinity is a walk called the emperor's garden, and the ruins of a palace which was deſtroyed by the Turks.

The emperor preſides at the cabinet-council; next to him ſits the king of the Romans; and the prime miniſter is preſident in the privy-council. Theſe have two ſecretaries, the principal of whom ſigns the emperor's letters. The council of war has two generals as preſidents, and ſeven major generals as members, with proper ſecretaries, &c. The aulic council conſiſts of an equal number of Roman catholics and Lutherans, nominated by the emperor. It is equal in power to the Imperial chamber at Wetzlar, there being no appeal from either. The court of Chancery has the buſineſs tranſacted at the Imperial court, whereof the elector of Mentz is chancellor; but the vice-chancellor preſides in his abſence, aud has an aſſiſtant, an aſſeſſor, two ſecretaries, and a referendary. The writs are either in the German or Latin tongues. 6. The council of the Finances. 7. An Imperial council, where is alſo a preſident, conſiſting of many lords and gentlemen; among whom are the governors of the Hungarian cities where the mines lie, with the chief officers for the civil affairs of Hungary, Bohemia, Moravia, Sileſia, &c. who ſend directions from hence to the reſpective governments of thoſe countries. Though other chief courts may exceed the Imperial in pomp, yet, for real grandeur, this outſtrips them all: moſt of the officers of ſtate and of the houſhold are princes or counts, as are alſo the captains of the horſe and foot-guards: and there are not leſs than one hundred gentlemen of the bed-chamber, with golden keys at their breaſts, who are all counts and barons; of which quality are alſo ſixty pages; yet ceremonies and the etiquette, a name by which they call antient uſages, give this court an air of conſtraint that is to be ſeen no where elſe; and though it is univerſally exclaimed againſt, it is as ſtifly obſerved, as if it was an article of religion.

They are very fond in this city, as well as at court, of the days of gala, which is the name they give to thoſe of feſtival and ceremony, when there are commonly operas and comedies. There are three claſſes of them; the court gala, which is univerſal, both for the Imperial family, and for the nobles and plebeians; at which time, eſpecially on the name-days, or birth-days of the emperor and empreſs, the court is extremely gay, and glittering with gold and diamonds. On theſe days the archducheſſes, becauſe it is the cuſtom at Vienna for ſiſters to dreſs alike, muſt be dreſt all in their hair, as well as their maids of honour; and they wear robes much like childrens veſts, with great trains. 2. The grand gala, which is kept in this city, is for the feſtival of ſome miniſter. 3. The little gala, which is when the ladies are let blood; for, as baron Pollnitz tells us, if any lady of diſtinction does but ſend for a ſurgeon to breathe a vein, it is enough to put the whole city in gala: nay, ſays he, the huſband makes a gala here for his wife, the wife for her huſband, the children for their parents, and brothers and ſiſters for one another; ſo that, to be ſure, two thirds of Vienna are always in gala. He obſerves it to be a ſingular cuſtom at this court, that the empreſs dowagers can never quit mourning; that though their officers and other domeſtics wear coloured cloaths, their apartments and coaches muſt be always hung in black; that they cannot be preſent at one play, ball, or concert; and that, by loſing their huſbands, they loſe the pleaſures of life. The emperor's pleaſure-houſes, he ſays, are no better than his palace in the city.

The caſtle of the Favorita, which is in the ſuburb of Leopolſtadt, is a great irregular gothic building, full of turnings and windings, like the ſtreet it looks into, and appears more like a great convent of capuchins, than a manſion for an emperor: the gardens are pretty large, but otherwiſe mean enough. Luxemberg, though a neat convenient box, is even much inferior to the Favorita; but the court only ſtays there a month or ſix weeks during the ſeaſon for heron-hunting. The miniſters who attend the emperor there, have houſes which, though not grand, are commodious; but any other perſon who goes hither to pay a viſit muſt return to Vienna for a bed.

The court uſed to ſpend a great part of the ſummer at the palace of New Favorita, which gives name to one of the ſuburbs; but the princes of Mansfeld have built one there which is much more magnificent. The emperor Joſeph, indeed, begun a fine houſe at Schonborn, or Schonbrun, about a league from this city, which, if finiſhed according to its plan, might have been another Verſailles; but his empreſs dowager, to whom he left it, ſuffered the works to run to decay.

The late prince Eugene's palace is very ſtately, but ſituate in a narrow ſtreet, with a very little court before it. Here is a ſpacious ſaloon, adorned with great pictures repreſenting the chief victories of that prince over the French and the Turks; and in two rooms next to this, a ſuit of rich tapeſtry, made by the famous Devos at Bruſſels. In the bedchamber beyond theſe, there is a luſtre of rock cryſtal, ſaid to have coſt four hundred thouſand florins, and rich tapeſtry, rolled up in pilaſters of green velvet, embroidered with gold, and adorned with figures of needle-work ſo fine, that they ſeem to be miniatures; and the cloſet next to it is all over gilt.

Lichtenſtein palace, which is bigger, and every whit as magnificent, is worth ſeeing, were it only for its paintings. The palaces of the ſuburbs in general, are infinitely more grand than thoſe of the city, and they have both court-yards and gardens. Prince Eugene had one here too, where he uſed to paſs the fine ſeaſon: it is a ſuperb ſtructure, with magnificent gardens, in which are a fine caſcade, an orangery, and a menagerie, ſtored with the moſt uncommon creatures that the four parts of the world can furniſh: there is a ſaloon below ſtairs, all lined with marble of ſeveral colours, the cieling of which is adorned with paintings.

This city is governed by a ſtadtholder, whoſe functions are the ſame with thoſe of the lieutenant of the police, at Paris; but he muſt always be a perſon of noble extraction, and a gentleman of the army. He has ſeldom any other title than colonel of the city, and he has a lieutenant-colonel to command in his abſence, who has the direction of the fortifications, the arſenal, and the garriſon, which never ſtirs from Vienna, and conſiſts of veteran ſoldiers, or the burghers and artificers of the city. The employments in this corps are very lucrative, but not being on the road to honour, are not much ſolicited by perſons of extraction. It is maintained at the charge of the city, and uſed to mount guard at the emperor's palace, he having no other foot-guards. It is ſaid this city abounds with coffee-houſes, where the news-readers are not leſs free with the characters of their generals and ſtateſmen, &c. than they are at London. There being no hoſpital of invalids here, the church doors are always plied with begging ſoldiers that have been diſabled in the ſervice. All round upon the city walls are barracks or huts for the garriſon, which are very well built, but not all of them occupied by the ſoldiers, ſome being tippling-houſes, and others for proſtitutes.

2. Neuſtadt contains a military academy. 3. Hamburg is in the vicinity of the antient Corneates. 4. Kloſter-Neuberg is a rich foundation for Auguſtine canons. 5. Baden is famous for its hot baths. Beſides the above, the only town in Lower Auſtria, worthy of notice, is, 6. Molk, a market town on the Danube, near which is an exempted cloiſter of Benedictines, which is the greateſt and richeſt foundation of the kind in all Auſtria. The abbot is primate of the lower eſtates of this circle, and preſident

ſident of the ſeats of prelates. In one of the cellars is kept ſome wine, called St. Colman's wine, which is between three and four hundred years of age. The abbey is dedicated to St. Colman, whoſe tomb it contains. This St. Colman was the apoſtle of Auſtria, and of the blood royal of Scotland; but his fate was ſomewhat ſingular, for in paſſing through this country in the habit of a pilgrim, he was taken up, and hanged as a ſpy.

The moſt judicious geographers divide Upper Auſtria into four quarters; namely, Hauſtruc, Traun, Michel, and Black.

In the Hauſtruc quarter, the principal places are, 1. Linz, the capital of Upper Auſtria; it is ſituated on the Danube, one hundred miles weſt of Vienna, and one hundred and ten ſouth of Prague. Here is a wooden bridge over the Danube; and on a hill in the neighbourhood is a citadel, which is ſometimes the reſidence of the emperor. The town is well-built of white free ſtone, and populous, containing ſeveral handſome churches, cloiſters, ſquares, and fountains, and is much reſorted to by the nobility, who have pleaſure houſes in the neighbourhood. It is alſo the ſeat of ſeveral courts and colleges for Upper Auſtria; carries on a conſiderable trade in gun-barrels, and linen cloth; and has handſome ſuburbs, with two great yearly fairs, at Eaſter and Bartholomew tide. There are likewiſe ſeveral plantations of hops in the neighbourhood. 2. Frankenburg, on the borders of Bavaria. 3. Efferding, a ſmall town, not far from the Danube. 4. Kainmer, a citadel in the Atterſee, which is the largeſt lake in the whole country, and abounds with exquiſite fiſh, of which it yields a new ſpecies every month. 5. Stropham, a filial commandery of the order of Malta. 6. Schaumberg, a citadel, which gives name to a county. 7. Wels, a handſome town, with a caſtle, on the river Traun. 8. Gmunden, a town on the lake of Gmund or Traun, which abounds with fiſh. 9. Focklabruc, or Voclabruc, a well-built town on the river Vokl: it enjoys the privilege of granting protection to all ſlaves: and its burghers and merchants, with their wares, are toll-free, throughout all the Auſtrian dominions.

Neuberg is a part of Auſtria: it is ſurrounded on all ſides by Bavaria, and has ſeveral citadels in it. This county was formerly an immediate county of the empire, but now belongs to the biſhop of Paſſau.

The Traun quarter contains the following remarkable places; viz. 1. Steyer, a conſiderable town, ſituated at the conflux of the two little rivers Steyer and Ens, and chiefly inhabited by ſmiths, cutlers, and other artificers, who tranſport their goods on the Danube to various places. 2. Ens is a ſtrong and well-built town, ſituated on the river of the ſame name, fifteen miles eaſt of Linz, and ſeventy weſt of Vienna. It was built in the year 990, on the ſite of Lauriacum, a Roman colony, deſtroyed by the Hunns, about the year 450, and was the ſeat of ſome Roman emperors. Ens was formerly ſubject to its own count, till the emperor Rodolph purchaſed it, and annexed it to the Auſtrian dominions. Two miles below this town, the river Ens falls into the Danube.

In Michel quarter, the only places worth mentioning are, 1. The Millac-Bad, a celebrated medicinal bath near the Danube; and, 2. Schlog, a cloiſter on the river.

In Black quarter are, 1. Grein, which contains a Franciſcan college, a Loretto chapel, mount Calvary, and an hermitage. 2. Freyſtadt, a ſtrong, well-built, royal town, on the north ſide of the Danube.

The duchy of Stiria is divided into Upper and Lower; and bounded, on the eaſt, by Hungary; on the weſt, by Saltzburg and Carinthia; on the ſouth, by Carricola; and, on the north, by Auſtria, properly ſo called. The air is unwholeſome, and the inhabitants are greatly troubled with fevers and ſwelled throats, which latter complaint is owing to the great quantity of ſnow-water which they drink. Upper Stiria is very mountainous, and exceedingly cold, but yet tolerably fertile. The mountains contain ſilver, lead, copper, and iron, and the ſummits are covered with foreſts, which ſupply wood for ſmalting thoſe metals. The beſt ſteel in Europe is found in this county.

There are twenty boroughs, near one hundred market-towns, and about five hundred citadels, in the whole duchy. The common people in general ſpeak Wendiſh, or a very harſh dialect of the German, and the better ſort are alſo maſters of Italian and French. The land-eſtates of this duchy conſiſt, as in Auſtria, of the prelates, lords, knights, and royal towns, and their aſſemblies are held at Gratz.

At Gratz is an univerſity; and, in ſome other places, gymnaſia, and ſeveral good colleges. The principal manufactures of the country are iron and ſteel works, of which there is a conſiderable exportation. Stiria continued a marquiſate, till the emperor Frederic Barbaroſſa erected it into a duchy. It has been conſtantly ſubject to the houſe of Auſtria, ſince Rodolph I. and to this day retains peculiar immunities. The counts Trautmanſdorf are ſupreme hereditary ſtewards; the counts of Wildenſtein, chamberlains; the counts of Staurau, marſhals; the counts of Wendiſh Gratz, maſters of the horſe, &c. Sockau, a citadel, is the ſee of a biſhop, ſubject to the archbiſhop of Salzburg, whoſe vicar he is in moſt part of Stiria. The Roman catholic is the only religion allowed here.

The following are the moſt conſiderable places in this duchy; viz. 1. Gratz, or Gracz, in Latin Græcium, the metropolis of the duchy, lies on the river Mur, twenty miles from the Drave, twenty-five ſouth-eaſt from Bruc, thirty-five weſt from the borders of Hungary, forty north of Cilley, fifty eaſt of Judenburg, and ſeventy-four ſouth of Vienna; is a neat well-built city, in a pleaſant fruitful country: it is defended by a wall, ramparts, and caſtle, on a rocky hill, and other fortifications, that render it almoſt impregnable. The caſtle is on a high hill that commands a neighbouring country, where is the archduke's palace, which is finely furniſhed, and has a good library and muſeum. The Jeſuits have a college here well endowed, which has the privilege of conferring degrees; ſo that it is reckoned among the univerſities of Germany, and is well filled with ſtudents. This town is the reſidence of the governor of Stiria, as it was formerly of the archdukes of Auſtria, particularly Ferdinand II. afterwards emperor, who called themſelves by its name: its ſuburbs, which are large, are watered by a rivulet of its own name, and its territory is very populous.

2. Cilli, or Zilli, formerly the capital of an independent country, which the emperor Frederic III. took poſſeſſion of in 1457, when the laſt count was killed, after which it was incorporated with Stiria. In this county ſtands the high mountain Bacher or Pacher, rich in all ſorts of ores, as the mineral waters that iſſue from it evidently ſhew. The inhabitants of the county are all Sclavonians, otherwiſe called Wends. The town is very antient, and appears to have been a place of great conſideration. 2. Eiſenartz, a conſiderable town in Upper Stiria, ſituated forty miles north-weſt of Gratz, and famous for mines and iron-forges, from whence it has its name. 3. Marburgh, celebrated for its Roman monuments, is twenty-four miles ſouth of Gratz and Pettau, thirty miles ſouth-eaſt from the ſame place, and is remarkable for its manufactures. 4. Eggenberg, which gives name to a ſeigniory. 5. Raſkeſburg, or Rakelſburg, ſituated on the river Muehr, and is one of the ſtrongeſt and beſt towns in Stiria. 6. Luetonberg, a market-town. 7. Gunnawitz, a market-town. 8. Studenitz.

In Upper Stiria are alſo the following places; viz. 1. Judenburg, the capital, ſituated on the banks of the Muehr, in a plain ſurrounded with high mountains, continually covered with ſnow, fifty miles weſt of Gratz, and ninety ſouth of Vienna. 2. Leuben, a neat pleaſant town, twenty-five miles north-eaſt of Judenburg, and upon the ſame river. 3. Bruck, on the Muehr, eighty-three miles north-weſt of Gratz.

The duchy of Carinthia, antiently called Carnia, is bounded, on the eaſt, by Stiria; on the weſt, by Tirol, or Tyrol; on the north, by Stiria and the archbiſhopric of Salzburg; and, on the ſouth, by the territories of Venice and Carniola. The air is cold, the ſoil barren; the rivers, brooks, &c. abound with fiſh; and the mountains yield many minerals.

The principal places are, 1. Clagenfurt, the capital of the whole duchy, ſtanding one hundred and forty miles ſouth-weſt of Vienna, being antiently called Claudia, and the ſeat of the dukes. It is well built and fortified, and contains ſeveral churches and convents, with a large college, a gymnaſium, and a provincial houſe, in which the ſtates aſſemble. Here is alſo an equeſtrian ſtatue of the emperor Theobald, and two pillars of marble, conſecrated, the one to the Holy Trinity, and the other to the Virgin. The Lutheran religion was ſuppreſſed here in the year 1600. Between this town and St. Veit are ſome remains of an antient town, ſuppoſed to be Tiburnia, where Roman coins, and other antiquities, have been found. 2. Villach, twelve miles weſt of the latter, near the Drave, over which there is a bridge. It is a populous town, and a great thoroughfare

The duchy of Carniola, by the Germans called Krain, has

has the gulf of Venice to the weſt, Sclavonia and Croatia to the eaſt. Carinthia and Stiria to the north, and the Adriatic ſea to the ſouth. It is one hundred and ten miles long, fifty broad, rather cold, but at this time tolerably fertile. The lower claſs of people ſpeak the Sclavonian or Wendiſh language, the better ſort German, but both with a very indifferent dialect. The peaſants are a very hardy ſet of people; going bareſoot in the midſt of winter, never covering their breaſts from the inclemency of the weather, and ſleeping on a hard bench, without bed or bolſter. In the Upper and Lower Krain the people wear long beards; and ſuch as live by exporting the commodities of the country on packhorſes are called Samers, or, more properly, Saumers.

The ſtates of Carniola conſiſt of the clergy, the nobility, knights, and royal towns. Chriſtianity was firſt planted in this country about the middle of the eighth century, and, in the ſixteenth, Lutheraniſm made a conſiderable progreſs in it; but, excepting the Walachians or Uſkokes, who are of the Greek church, and ſtyle themſelves Staraverzi, i. e. old believers, all the inhabitants at preſent are Roman catholics. In the whole duchy are three biſhoprics, four commanderies, and one hundred and thirty-four pariſhes; but to the biſhopric of Leybach belong alſo many pariſhes in Stiria and Carinthia.

The principal commodities exported from hence are iron, ſteel, quickſilver, white and red wine, oil of olives, cattle, ſheep, cheeſe, linen, and a kind of woollen ſtuff called Mahalan, Spaniſh leather, honey, walnuts, and timber, together with all manner of wood-work, as boxes, diſhes, trenchers, ſpoons, ſieves, &c.

Carniola was long a marquiſate or margravate; but in the year 1231 was erected into a duchy. On the extinction of the margraves, the inhabitants made choice of Frederic II. duke of Auſtria and Styria for their ſovereign. The arms of Carniola are an eagle crowned, on whoſe breaſt and expanded wings is to be ſeen a diced creſcent. The counts of Thurn are ſupreme hereditary ſtewards in Carniola and the Wendiſh Mark; the houſe of Averſberg, chamberlains and marſhals; the prince of Lamberg, maſter of the horſe; the count of Cobenzel, cup-bearer; the baron of Eck, ſtaff-bearer; count Sauer of Ankenſtin, carver; and the count of Lanihieri, falconer. The principal officers for the government of the country, are the land-captain, or governor in chief, burgrave of Laubach, land-lieutenant, and land-vicar.

There are ſeveral immaterial ſubdiviſions, ſuch as Upper, Lower, Middle, Inner, &c. but the principal places are, 1. Laubach, the capital of this duchy, and in the centre between the upper and lower parts. It ſtands on a ſmall river of the ſame name, which falls into the Save ten miles below it; and is twenty miles eaſt of Biſhopflack, and one hundred and forty-four ſouth-weſt of Vienna. The air here is not reckoned wholeſome, yet it is a populous well-built city, which the emperor Frederic III. made the ſee of a biſhop, formerly under the juriſdiction of the patriarch of Aquileia, but now dependent on the pope. It has a cathedral, and a large caſtle; but it is commanded by an hill, and the town is not very ſtrong, eſpecially towards the river: however, it held out a ſiege in 1440, till the emperor Frederic III. came to its relief. The princes of the houſe of Auſtria have the right of appointing the prelates and the chapter here, which only conſiſts of ſix canons, of whom, indeed, the biſhop nominates one. Here are ſeveral convents for both ſexes, and the river is noted for breeding the largeſt cray fiſh in Europe. The ſtates of the duchy meet in a fine houſe here, and the prince of Averſburg has alſo a palace.

2. The town of Zirknitz, or Czirnitz, contains about three hundred houſes, but is particularly remarkable for its famous lake, called the Czirnitzer lake, or ſea, which is ſixteen miles long, and eight broad, encompaſſed with mountains and forells at ſome diſtance, and on the eaſt ſide with a foreſt of pear trees. The water ſinks under ground every year in June, through many large holes in the bottom, leaving it quite dry till September, when it returns ſpouting out of thoſe holes with ſuch violence, that it ſoon riſes to the height of a pike, and covers all the ground again, making that a ſea which was before fields of corn, paſture, and hunting: for after the retreat of the water, the people ſow corn there, which ripens for the ſickle before September; and the graſs grows here ſo thick, that it affords paſture for the cattle and deer that are turned into it from the neighbouring hills and foreſts, which are taken off before the ſpring riſes again. The fiſh that abound here are carp, eels, tench, &c. which none muſt catch without licence from the prince of Eckenburg, who is lord of the manor till the water retires, and then the peaſants catch great numbers by laying their nets over the holes.

3. The town of St. Viet is ſituated on a bay of the Adriatic, has a ſtrong caſtle, is otherwiſe well-fortified, and poſſeſſes a good trade on account of its excellent harbour, by which large quantities of goods are exported and imported. The neighbouring territories yield abundance of wine, fruits, particularly figs, &c. The governor of the town is ſtiled captain, and reſides in the caſtle; and on the oppoſite ſide of the river there is a chapel dedicated to St. Mary of Loretto. This town was formerly incorporated with the duchy of Carniola, and bore a ſhare in its taxes, but at preſent it is neither reckoned a part of its territory, nor is it ſubject to its impoſts. The neighbouring gulf abounds with fiſh, among which is a ſpecies called gatta, the ſkin of which, forming a kind of ſhagreen, is uſed for the caſes of watches, caſkets, teleſcopes, &c.

4. Crainburg, or Krainbourg, on the banks of the Save, over which it has a bridge, is ſeven miles north of Biſhopflack, twenty north-weſt of Laubach, and twenty-ſix ſouth-eaſt of Clagenfurt. It ſtands on the top of a hill, and is fortified with a ſtrong caſtle. It has three churches, and, in its ſuburbs, a monaſtery of Capuchins. 5. Ratſmondorf, in this neighbourhood, on the north ſide of the Save, has in it many Roman antiquities, and gives title to a Roman family in Stiria. 6. Lack, or Biſhopflack, on a ſmall river, ten miles ſouth of Crainburg, and thirty from Venice, is a city which was plundered and burnt in 1451, but is handſomely rebuilt and fortified, and is ſubject to the biſhop of Freyſing, to whom the emperor Henry III. gave it; and the governor of it is his lieutenant. Its diſtrict is ten German leagues round, and contains two hundred villages.

A diviſion of Iſtria belongs to Auſtria, and is very fertile. It is divided into the county of Metterberg, and lordſhip of Caſtua. The only places worthy of notice are, 1. Metterberg, which gives name to the county, and is its capital. It is without walls or ramparts, but has a caſtle to defend it. 2. Antiguana, a large but dull town. 3. Caſtua, which gives name to the lordſhip, and is ſituated on the Adriatic. 4. Bercketz, a ſmall town, with an harbour on the Adriatic.

The town of Laas ſtands near the Czirnitzer lake: it has a caſtle on the river Boick, that runs into it twenty miles ſouth-eaſt from Zirchnitz, and is noted for a breed of well-ſhaped horſes, though not near ſo good for ſervice as thoſe bred in Karſtia. The town of Upper Laubach is ſixteen miles weſt from the other already deſcribed, and on the ſame river, but near the ſource of it; is conſiderable for being a mart for Italian goods, which are ſent into all parts of Germany, being brought hither in great quantities over the mountains from Gortz.

Windiſchmark is in the ſouth-eaſt corner of this duchy. Some reckon it a Sclavonian province, and ſubject to the emperor, and not as part of Carniola, to which it adjoins. It is about fifty-five miles in length, and thirty where broadeſt; but it was formerly much larger. Though it is a mountainous, barren country, eſpecially towards the ſouth, it produces corn, and excellent wine. Its inhabitants are thought to be a branch of the Venedi. Their religion is the Roman catholic; and their language a mixture of the Sclavonic and German.

1. The town of Metling, or Motling, capital of the Windiſchmark, ſtands in a pleaſant, fruitful country, on the river Culp, and the frontier of Croatia, fifteen miles ſouth-eaſt of Rudolphſworth, and thirty-five ſouth-eaſt of Cilley. The chief trade of its inhabitants is fattening ſwine in two neighbouring woods of cheſnuts and oaks. In the year 1431 this town was ſurprized by the Turks, and moſt of the inhabitants maſſacred; and in 1578 it was again ſtormed and plundered by thoſe infidels. Here is a houſe of the Teutonic order. This town lies full in the road from Laubach to Croatia. The wood through which it leads is rough and ſtrong, but the reſt of the country is pleaſant and fruitful.

2. The town of Rudolphſworth, Rudelſwerd, or Neuſtadt, ſtands on the river Gurck, a little below Seiſenbourg, twelve miles north-weſt of Metling, and twenty-two ſouth-eaſt of Cilley. It is a well-fortified town, and famous for the beſt wine in thoſe parts. About 1435 it was beſieged by Albert of Auſtria, and Ulric count of Cilley; but the troops of the emperor Sigiſmond obliged them to raiſe the ſiege; and he granted the town great privileges for its brave oppoſition. It has an abbey, a convent of Recolletti, and hot baths, at four miles diſtance, much frequented by foreigners. The town is commonly called Neuſtadt, and the abbey Rudolphſworth.

3. The

3. The ancient town of Gortz, or Goritz, is ſituated on the river Liſonzo, in Goritia, a ſmall county in Friuli, ſubject to the houſe of Auſtria, twenty miles north of Aquileia, and fifty-eight north-eaſt of Venice. It is a large town in the middle of a wood, and by ſome thought to have been the ancient Noricia, or Noreia, near which Dieterick, king of the Goths above-mentioned, defeated Odoacer, king of the Heruli. The old or upper town was taken in 1507 by the Venetians, who fortified it; but the emperor Maximilian I. regained it two years after: they again attempted to ſurpriſe it in 1616, but without ſucceſs. The Sclavonian tongue, which is ſpoken in theſe provinces, reaches no farther weſt than this town, where the common people ſpeak a corrupt Latin, which is more like French than Italian; but in the courts of judicature they ſpeak High Dutch, as do alſo the gentry.

This town is tolerably ſtrong, and is the reſidence of the governor, and others of quality. The inhabitants pretend it is a diſtinct province, and that their anceſtors were a colony of Germans brought hither from Swabia; however, it is looked on as a part of Carniola. The river on which the town ſtands, falls into the gulf of Venice. The lower part of it is quite open, and has a college, a convent of Franciſcans, another of capuchins, and ſome very fine houſes. The town-houſe, where the ſtates of the country meet, is not large, but well-built. In the Upper Town, which is called the Fortreſs, there is a good guard. Appeals are made from the counts here to the regency of Auſtria. The road from hence to Laubach is very ſtony. The county or diſtrict of Goritia, of which this town is the capital, is bounded, on the north, by Upper Carniola; on the eaſt, by Lower Carniola; and the Alps ſeparate it from Friuli. It is thirty-five miles long, and fifteen broad, and has fine vineyards. This town now belongs to the houſe of Auſtria, though it had formerly its particular counts, the branch of which being extinct, the emperor Frederic IV. took poſſeſſion of it in 1473.

4. Eight miles north-eaſt of Neuſtadt, is Landſtraſſe, a ſtrong little town, almoſt encompaſſed by the Greek. It has juriſdiction over the neighbouring hills and vallies, formerly a wilderneſs for ſeveral leagues, but of late ages well-inhabited, and the vallies improved into meadows and paſturage, by a company of Walachians who ſettled here by the name of Uſſocken, who are of the Greek church, pay the emperor no tribute, but own him for ſovereign, and, upon occaſion, furniſh him with men in proportion to their numbers. 5. Reifnitz is a noted town on the borders of Carniola, near the Zernicker ſee, being the chief of a barony of the ſame name belonging to the family of Trigler, and the place where the imperial trained bands of this country muſter. The Turks burnt moſt of it down in 1480. 6. Seiſſenberg is a market-town of note on the banks of the Gurck, which ſupplies it with plenty of fiſh, particularly the beſt cray-fiſh in the country. It is ſubject to the county of Averſperg.

Karſtia, though a province, is reckoned a part of the province of Carniola; it formerly belonged to Friuli, betwixt which and Iſtria it lies. It is a peninſula, almoſt encompaſſed with the rivers Alben and Lizonzo, about thirty-five miles long, and twenty broad, and remarkable for a breed of good horſes, which are bought up by moſt of the Italian nobility. It was diſmembered from Friuli in 1500, and is divided into Upper and Lower.

The famous river Timavus, mentioned by Virgil in the firſt Æneid, is in this province. It is thought to riſe in the Alps; is called at firſt Recca; and, after running under ground for about forty miles, is called Timavus, as ſoon as it breaks out again, and falls by twelve ſmall channels into the gulph of Trieſte.

Trieſte, the chief town of this province, ſtands on the Adriatic ſea, at the bottom of a bay, to which it gives name, fourteen miles north of Cabo d'Iſtria, twenty-four miles ſouth-eaſt of Aquileia, and thirty-ſeven of Goritz, and ſixty-three from venice. It was a Roman colony, and built from the ruins of the antient Tergeſtum of the Carnians, the ruins of which are ſtill to be ſeen on a neighbouring mountain. It is a ſmall, but ſtrong and populous place, with a large harbour, the only one the houſe of Auſtria has in this country; is a biſhop's ſee under the patriarch of Aquileia, and is defended by two caſtles. The Venetians ſeized it in the beginning of the thirteenth century, by reaſon of the piracy of the inhabitants; but Maximilian I. took it from the Venetians, A. D. 1507, and his ſucceſſors have been in poſſeſſion of it ever ſince. Great quantities of ſalt are made here and exported; and the neighbouring country produces good wine, that the

Germans call Reinfal, which the Venetians buy cheap, and ſell dear, for exportation, to the Germans. There is a fine town-houſe in the middle of a large ſquare made by the inhabitants, near the port, where are two beautiful ſtone pillars; one with the image of the Virgin Mary upon it, and the other with that of the emperor. There is a cathedral here, a poor old building; but the Jeſuits have a college and church, which are very good. The town is pretty well built, and neither rich nor poor; for the neighbourhood of Venice does not let it want any thing. The rocks run into the ſea here in the form of moles, which break the waves, and make it ſafe, even for ſhips of burden, when in port; but it is only frequented by ſmall veſſels, juſt to croſs over to Venice; though the late emperor Charles VI. who had no other ſea-port in all his hereditary dominions before the treaty of peace at Raſtadt, which threw Italy, Sicily, and the Spaniſh Netherlands, into his hands, made this a free port, and gave great encouragement to the ſhips and merchants of all nations to come to it; deſigning to make it the centre of the Auſtrian commerce in theſe parts of the world; but the merchants of Trieſte not having a ſtock, the Venetians themſelves came among them, and carried on that very trade for them, by which they were ſo ſanguine at one time, as to think of ſupplanting even Veniſe itſelf: for from this port the Venetian merchants ſtruck into a new commerce, by the river Save, to Belgrade, and from thence to Sinope in the Black ſea; and likewiſe to Conſtantinople: and the moſt that it appears the Germans have yet done here, is, to ſend ſome ſhips among the Archipelago iſlands, from whence they bring back wines, cotton-yarn, fruits, and ſome ſilk, grogram-yarn, camels hair, and ſuch goods.

The great misfortune which the Auſtrians laboured under for carrying on the extenſive trade propoſed from this port, was, that they had no fund of goods for exportation, either for their produce or manufactures; the chief they could export, of any value, being the wrought iron made in Carinthia, Stiria, and the adjacent countries; which, indeed, is of great ſervice to the Venetians, becauſe they have no iron works near them. The laſt-mentioned people have alſo a navigation through Stiria by the river Murtz, the Danube, and ſo to Vienna; and they have the like in Carniola, by the great river Save, which runs into Croatia and Hungary. The Venetians receive, by theſe countries, a great quantity of large black cattle, which are bought lean, or not above half fed, from Croatia, and then brought down to the ſalt-marſhes of Venice, and fed there till they are fat. Some alſo are bought at the ſeveral fairs on the frontiers of Carinthia; and they are the beſt beef that is to found in any part of the world, when paſtured in the rich lands of Lombardy.

Between Carniola and the county of Gortz, is ſituated the Idrian bottom. The name is derived from Idria, a royal market-town, which is immediately ſubject to the Auſtrian aulic-chamber at Gratz, and lies in a deep valley, amidſt high mountains, on the ſmall river Idria. This town is defended by a caſtle, and celebrated for its quick-ſilver mines. The common ſort of quickſilver is extracted from the ore by means of fire; but the virgin quickſilver is found in numerous ſmall drops, that trickle through the veins of the mountains. Malefactors are condemned to work during life in theſe mines, as this kind of labour is the moſt unwholeſome imaginable.

The two following letters, written by the learned Mr. Everard to a friend, relative to theſe mines, will afford a ſatisfactory account of them. In the firſt he thus expreſſes himſelf:

"The pleaſure I take in writing to you wherever I am, and whatever doing, contributes to diſpel my preſent uneaſineſs; an uneaſineſs cauſed at once by the diſagreeable aſpect of every thing around me, and the more diſagreeable circumſtances of the count Alberti, with whom you were once acquainted. You remember him one of the gayeſt, the moſt agreeable perſons at the court of Vienna, at once the example of the men, and the favourite of the fair ſex. I have often heard you repeat his name with eſteem as one of the few that did honour to the preſent age, as poſſeſſed of generoſity and pity in the higheſt degree, as one who made no other uſe of fortune but to relieve the diſtreſſes of mankind. That gentleman, Sir, I wiſh I could ſay is now no more; yet, too unhappily for him, he exiſts, but in a ſituation more terrible than the moſt gloomy imagination can conceive.

"After having paſſed through ſeveral parts of the Alps, and viſited Germany, I thought I could not return home without viſiting the quickſilver mines at Idria, and ſeeing thoſe dreadful ſubterraneous caverns, where thouſands are

 condemned

condemned to reſide, ſhut out from all hopes of ever ſeeing the cheerful light of the ſun, and obliged to toil out a miſerable life under the whips of imperious taſk-maſters. Imagine to yourſelf a hole in the ſide of a mountain, about five yards over, down this you are let, in a kind of bucket, more than one hundred fathom, the proſpect growing ſtill more gloomy, yet ſtill widening as you deſcend. At length, after ſwinging in terrible ſuſpence for ſome time in this precarious ſituation, you then reach the bottom, and tread on the ground, which, by its hollowed ſound under your feet, and the reverberations of the echo, ſeems thundering at every ſtep you take. In this gloomy and frightful ſolitude, you are enlightened by the feeble gleam of lamps, here and there diſperſed, ſo as that the wretched inhabitants of theſe manſions can go from one place to another without a guide; and yet let me aſſure you, that though they by cuſtom could ſee objects very diſtinctly by theſe lights, I could ſcarce diſcern for ſome time any thing, not even the perſon who came with me to ſhew me theſe diſmal ſcenes.

"Though I ſuppoſe, from this deſcription, you have but a diſagreeable idea of the place, yet let me aſſure you that it is a palace, if we compare the habitation with the inhabitants: ſuch wretches my eyes never yet beheld. The blackneſs of their viſages only ſerves to cover an horrid paleneſs, cauſed by the noxious qualities of the mineral they are employed in procuring. As they in general conſiſt of maleſactors condemned for life to this taſk, they are fed at the public expence; but they ſeldom conſume much proviſion, as they loſe their appetites in a ſhort time, and being affected with a total contraction of all the joints of the body, commonly expire in about two years.

"I walked for ſome time in this horrid manſion after my guide, pondering on the ſtrange tyranny and avarice of mankind, when I was accoſted by a voice behind me, calling me by my name, and enquiring after my health with the moſt cordial affection. I turned, and ſaw a creature all black and hideous, who approached me, and with a piteous accent demanding, "Ah, Everard, do you not know me?" Good God! what was my ſurpriſe, when through the veil of this wretchedneſs, I diſcovered the features of my dear and old friend Alberti! I flew to him with affection; and, after a tear of condolence, aſked how he came there. To this he replied, that having fought a duel with an officer of the Auſtrian infantry, againſt the emperor's command, and having left him for dead, he was obliged to fly into the foreſts of Iſtria, where he was firſt taken, and afterwards ſheltered by ſome banditti, who had long infeſted that quarter. With theſe he lived nine months, till, by a cloſe inveſtiture of the place, in which they were concealed, and after a very obſtinate reſiſtance, in which the greater part of them were killed, he was taken and carried to Vienna, in order to be broken alive upon the wheel. Arriving, however, at the capital, he was quickly known, and ſeveral of the aſſociates of his accuſation and danger, witneſſing his innocence, his puniſhment of the rack was changed into that of perpetual baniſhment and labour in the mines of Idria;—a ſentence which muſt appear a thouſand times worſe than death, to any one who has viſited theſe dreary abodes.

"While the unfortunate Alberti was relating this narrative, a young woman came up to him, who at once I ſaw to be born for better fortune; the dreadful ſituation of this place was not able to deſtroy her beauty; and even in this ſcene of wretchedneſs ſhe ſeemed to have charms. This lady was, in fact, daughter to one of the firſt families in Germany; and having tried every means to procure her lover's pardon without effect, was at length reſolved to ſhare thoſe miſeries ſhe could not relieve. With him ſhe accordingly deſcended into theſe manſions, from whence few of the living return; thus deſpiſing the ſplendor of opulence, ſhe gave proofs of her own inviolable conſtancy, and was contented to live with him, renouncing at once all the comforts and gaieties of life."

The ſame gentleman, in his ſecond letter, gives ſome particulars of a more pleaſing nature relative to theſe two perſons: "My laſt to you, ſays he, was expreſſive, and perhaps too much ſo, of the gloomy ſituation of my mind. I own, the deplorable ſituation of the worthy man deſcribed in it was enough to add double ſeverity to the hideous manſion. At preſent, however, I have the happineſs of informing you, that I was a ſpectator of the moſt affecting ſcenes I ever yet beheld. Nine days after I had written my laſt, a perſon came poſt from Vienna, to the little village near the mouth of the great ſhaft: he was ſoon after followed by a ſecond, and he by a third. The firſt enquiry was after the unfortunate count; and I, happening to overhear the demand, gave them the beſt intelligence. Two of theſe were the brother and couſin of the lady, the third was an intimate friend and fellow ſoldier of the count's. They came with his pardon, which had been procured by the general, with whom the duel had been fought, and who was perfectly cured of his wounds. I led him, with all the expedition of joy, down to this doleful manſion, preſented to him his friends, and informed him of the happy change of his circumſtances.

"It would be impoſſible to deſcribe the joy that brightened on Alberti's grief-worn countenance; nor were the young lady's emotions leſs vivid at ſeeing her friends, and hearing of her huſband's liberty. Some hours were employed in mending the appearance of this faithful couple; nor could I, without a tear, behold him taking leave of the former wretched companions of his toil. To one he left his mattock, to another his working cloaths, to a third his houſhold utenſils, ſuch as were neceſſary for him in that ſituation.

"We ſoon emerged from the mine, where the count once again reviſited the light of the ſun, that he had totally deſpaired of ever ſeeing again. A poſt-chaiſe and four were ready the next morning to take them to Vienna, where, I am ſince informed by a letter from himſelf, they are returned. The emperor again has taken him into favour, his fortune and rank are reſtored; and he and his fair partner, having once known what it was to be miſerable, have now the pleaſing ſatisfaction of enjoying happineſs, with a double reliſh." But to proceed:

Tirol is partly a level, and partly a mountainous country; the places of the former are fertile, and thoſe of the latter covered with wood, abounding with game, and rich in mines. The men are robuſt, the women fair; and both, in their characters, have a mixture of the German and Italian. A particular kind of ſalutation is uſed here: When a perſon comes into the houſe, he ſays, "Hail, Jeſus Chriſt!" The anſwer is, "May Chriſt be praiſed, and the holy Virgin his mother." Then the maſter of the houſe takes the viſitor by the hand. This ſalutation is fixed up in print at all the doors, with an advertiſement tacked to it, importing that pope Clement XI. granted one hundred days indulgence and a plenary abſolution, to thoſe who ſhould pronounce the ſalutation and anſwer. The emperor has forts and citadels ſo advantageouſly ſituated on rocks and mountains all over the country, that they command all the vallies, avenues, and paſſes that lead into it. The inhabitants, however, to keep them in good humour, are more gently treated, and not ſo high taxed, as thoſe of the other hereditary countries.

The ſtates are much the ſame in this country as in the other Auſtrian territories, except that the peaſants here ſend deputies to the diets. Tirol came to the houſe of Auſtria in the year 1363, when Margaret, counteſs thereof, bequeathed it to her uncles the dukes of Auſtria. The arms of Tirol are an eagle gules, in a field argent. The counts of Trap are hereditary ſtewards; the lords of Gloſs, chamberlains; the princes of Trautſon, marſhals; the counts of Wolkenſtein, maſters of the horſe and carvers; the houſe of Spau, cup-bearers; the counts of Kunigl, ſewers and rangers; the counts of Brandis, keepers of the jewels; the houſe of Welſperg, purveyors and ſtaff-bearers; and the counts of Coalto, falconers. Beſides the governor, here are three ſovereign colleges, which ſit at the Inſpruc: theſe are ſubordinate to the court at Vienna.

The city of Inſpruc, on the Inn, the capital of the country, is ſituated two hundred and twenty-five miles weſt of Vienna; and is ſmall, but elegant; the ſuburbs are large, and the whole is pleaſant. It contains ſeveral handſome churches, convents, market-places, fountains, and palaces; is the reſidence of the governor, and ſeat of the colleges. The caſtle is large, but not regular; convenient, but not beautiful. It is adorned with many fine paintings, a cabinet of curioſities, groves, gardens, and walks that lead from it to five different churches. Adjoining to it is a wooden palace, whither the court uſed to retire when an earthquake happened, to which the city is frequently ſubject, by being ſhut up among ſo many mountains. The fortifications are not extraordinary; but about a mile off is the ſtrong caſtle of Amras, or Ambras, which commands the town.

In the Franciſcan church is a noble monument erected by Ferdinand I. to his grandfather Maximilian; and a chapel, called the Silver Chapel, becauſe there is an image of the Virgin of ſolid ſilver, as big as the life, in the middle of the altar, together with many other images of ſaints all of the ſame metal. In this city, Chriſtina, queen

queen of Sweden, firſt abjured the Proteſtant religion in 1655; and in 1719 the princeſs Sobieſki was detained here by the emperor's orders, when ſhe was going to Italy to be married to the Pretender: however, as ſhe ſoon after made her eſcape, the nuptials were celebrated.

The other places, moſt worthy of notice, in this county, are, 1. Hall, which ſtands a league north-eaſt of Inſpruc, on the Inn, and is reckoned the ſecond city in Tirol; it is famous for its ſalt-works, there being in this neighbourhood, a ſalt mine, out of which large blocks of ſalt are dug, and thrown out into pits filled with freſh water, from whence the ſalt, when melted, is conveyed by wooden troughs to Hall, and there boiled in huge pans or ciſterns. A great number of peaſants are continually employed in felling fir trees in the woods, with which the double range of mountains along the Inn are covered. Theſe being rolled down from the mountains into the river, are conveyed by it to Inſpruc and Hall. The mint, ſalt works, mines, &c. in this place, render it very flouriſhing. 2. Kuffſtein and Rattenburg are both fortified towns on the Inn. 3. Kitzbichel is the capital of a ſeigniory; and Schwartz, a conſiderable market-town. 4. Meran was once the capital of the county, and gave title and ſeat to its dukes, but is now only a ſmall city on the river Erſch, and the borders of Trent, thirty miles ſouth of Inſpruc: having ſuffered much by a flood in 1419, which drowned four hundred people. 5. Tirol, from whence this country has its denomination, is a little market-town, and has a fair antient caſtle, five miles north-weſt of Meran. 6. Pludentz. 7. Montfort. 8. Feldkirk. 9. Ems, and 10. Sonneberg, are towns that give name to five counties in the weſt part of the Tiroleſe, near the Rhine, and between twelve and twenty miles ſouth of the lake of Conſtance.

11. About a mile and a half eaſt of the city is the pleaſant and ſtrong caſtle of Ombra, or Amras: the name was derived from the deſign of it, which was a ſhady ſummer-houſe. It is pleaſantly ſituated at the end of a fine park, overlooking the river Inn; but would hardly be viſited by travellers, were it not for its curioſities, the apartments having little more left than the bare walls, though they were ſumptuouſly fitted up formerly for the archdukes of Auſtria, who uſed to ſpend their ſummers here, as they did their winters at Inſpruc. It is adorned with ſuch a number of ſtatues, and ſuch an infinite quantity of medals, &c. that in 1601 a large book was printed, with an account of them. It would be tedious to enumerate the immenſe treaſure here in gold and precious ſtones, the ſeveral princes ranged on horſeback in all their rich old tilting accoutrements, and a thouſand other remarkable things; but we cannot omit the armour of Charles IX. king of France, and the ſtatue of Francis I. on horſeback, in plaiſter-work, exactly repreſenting him in his armour, and his horſe in his trappings, juſt as he was taken at the battle of Pavia. Here is likewiſe the armour of ſeveral emperors, kings, and princes; with the picture of each prince, drawn to the life, juſt by it. In ſhort, here are abundance of ſpoils and trophies taken in ſome of the moſt important victories obtained by the houſe of Auſtria for three or four hundred years paſt; particularly the effigies of two Turkiſh baſhas on horſeback, with the coſtly habits and harneſſes in which they were taken, embelliſhed with gold, ſilver, and precious ſtones.

One very extraordinary rarity among the collection of curioſities, is the trunk of an oak incloſing the entire body of a deer, which the philoſophers ſuppoſed to have periſhed in the ſnow; and that, being brought down, upon a thaw, by a torrent from the neighbouring hills, and covered with mud, it was there firſt incloſed by the roots, which, as the tree grew, forced it by degrees up into the trunk. Noah's rainbow is ſo admirably painted on one of the cielings, that the great duke of Tuſcany offered one hundred thouſand crowns for it. Here is alſo a good library, and a gallery full of buſts. Theſe apartments are ſhewn to ſtrangers by the chatellan, or keeper of the caſtle, who is generally ſome invalid, and comes from Inſpruc for that purpoſe, and expects a ſuitable reward for his trouble: he is always attended with a ſtrong guard.

Not far from the town, on the ſouth ſide, is the famous monaſtery of Wiltheim, where the monks pretend to have the body of their founder Hayman, a gigantic prince, twelve feet and a half high, who, they ſay, killed a monſtrous dragon, which threw down as much of his monaſtery by night as his men built by day; there is a pillar before its gates with an inſcription, importing, that the road from Italy towards Augſburg, lay acroſs the field where this monaſtery ſtands; and that in the time of the emperor Septimius Severus it was repaired for near one hundred miles together.

Conſtance, formerly an imperial city, is ſituated on a celebrated lake of the ſame name; but in the year 1749 Ferdinand I. annexed it to the territories of the houſe of Auſtria. This city is well fortified, is the ſee of a biſhop, and has been the ſeat of ſeveral diets. The famous aſſembly, known by the name of the council of Conſtance, was held here by order of the emperor Sigiſmund, at the time the empire was diſtracted by religious diſputes, and by the feuds raiſed by three popes, all then living, viz. one ſet up by Italy, another by France, and a third by Spain. But this council depoſed them all, and elected Martin V. in their ſtead; it likewiſe condemned the doctrines of Wickliff, John Huſs, and Jerom of Prague, ordering the ſepulchre of the firſt to be deſpoiled, and the two latter to be burnt alive. This council continued ſitting four years, during which time above one hundred thouſand foreigners reſided in and near Conſtance. The chief tribunal is held at Altorf, a neighbouring market-town. A conſiderable trade is carried on here by means of the lake, and the Rhine, which runs from it.

The county of Kirchbergs belongs to the noble family of Fuggers; but the landgravate of Nellenberg and the county of Hohenberg, together with the margravate of Burgau, between the Danube and Lech, with the city of the ſame name, all belong to the houſe of Auſtria; who alſo, in 1367, obtained Briſgaw by purchaſe, which contains the following places; viz.

1. The town of Friburg on the Treiſam, which was formerly very ſtrong, and had ſtood many ſieges; but its fortifications were demoliſhed by the French in 1745. It is large, populous, and wealthy, having a univerſity, and ſeveral cloiſters. The tower of the great church is ſo high, ſo curiouſly carved and conſtructed, that there is nothing of that kind in Germany to be compared to it, except that of Straſburg. The lapidaries here are famous for poliſhing the grenates, jaſpers, and other precious ſtones, that are found in Lorrain and the neighbouring countries. 2. Briſack, or Old Briſack, to diſtinguiſh it from the New, which was built and ſtrongly fortified by the French on the other ſide of the Rhine, in Alſace. Old Briſack was reckoned very ſtrong until 1741, when its fortifications were razed by order of the queen of Hungary. 3. Neuburg, on the Rhine, formerly an imperial town, but in the fourteenth century fell under the dominion of the houſe of Auſtria. 4. Zahringen, a deſolate caſtle near Friburg, from which the antient dukes of Zahringen took their title. 5. The abbey of St. Blaſe, whoſe abbot, in 1747, was made a prince of the empire. He is alſo hereditary arch-aulic-chaplain of the houſe of Auſtria in the anterior Auſtrian countries, but ſubject to the biſhop of Conſtance in ſpirituals.

Rheinfelden, Seckingen, Laufenburg, and Waldſhut, are the four foreſt towns. The firſt is the capital of a county, and was once a free imperial city, but was mortgaged in 1410, to the dukes of Auſtria, by the emperor Lewis of Bavaria: hard by is the village of Kaiſars-Augſt, on the Rhine, where anciently ſtood the Auguſta Rauracorum. The ſecond is a ſmall town, and held in fee of its abbeſs. The third is the capital of an antient county, well fortified, and ſeated on both ſides the Rhine. It is held as a fief of the foundation of Seckingen, and came to the houſe of Auſtria in 1409, when the line of the counts of Habſburg and Laufenburg became extinct. The fourth is a ſmall, but ſtrong town, being, as its German name imports, a key to the Black Foreſt. Several privileges were granted to it by Albert, count of Habſburg, who in 1249 built and fortified it.

Ortenau, a land vogty, belongs partly to the immediate imperial knighthood of the circuit of the Ortenau, and partly to the houſe of Auſtria.

Brikſen-biſhopric is forty-five miles long, thirty broad, and, though ſituated among the Alps, is fruitful. The biſhop is a prince of the empire, and the chapter conſiſts of eighteen canons, of which nine are noble. The capital, of the ſame name, is only a poſt-ſtage from the territories of Venice. It contains an epiſcopal palace, a caſtle, two convents, a cathedral, two other churches, ſeveral ſquares, many handſome houſes painted on the outſide, &c. Mount Brinner, in the neighbourhood, is cultivated to the very top, where there is a chapel, tavern, and poſt-houſe.

The biſhopric of Trent lies among the Alps, South from Tirol, north and weſt from the dominions of Venice, and eaſt from thoſe of the Griſons. It is near ſixty miles from

from east to west, and forty, where broadest, from south to north. Some geographers make it a part of Italy, but the bishop of Trent, having been a prince of the empire since Ferdinand II. the Germans reckon it in the circle of Austria. The river Adige runs through it from north to south, receiving several smaller rivers that rise in the mountains on each side of it. Its soil produces a good pale red wine, oil, fruit, and pasture, but not much corn. The antient inhabitants were the Tridentini of Pliny. The common languages of the present are the German and Italian. Though the house of Austria were the temporal sovereigns and owners of the country, yet they provided handsomely for the bishop, who has about forty thousand crowns revenue, not only from the city of Trent, but Riva, Bolzano, Roveredo, &c. He is suffragan to the archbishop of Saltzbourg; but, before the treaty of Munster, he was suffragan to the patriarch of Aquileia, whose bishop, Hermagoras, was the founder of the see, A. D. 50. When the bishop dies, the emperor sends a governor who presides till another be chosen by the chapter, which is composed of eighteen canons, who always chuse the bishop out of their body. This diocese was much enlarged by the emperor Conrade II. and confirmed by his successors, who made the count of Tirol protector of the bishop, and obliged him, in case of an invasion, to assist him. Several princes, both of Germany and Italy, pay homage to him for part of the estates which they hold of this see; particularly, the duke of Mantua: and the emperors, as counts of Tirol, pay him quit-rents; as do many earls and barons.

The city of Trent, in Latin Tridentum, its capital, stands on the river Adige, thirty miles west of the confines of the Valteline, thirty north of Verona, forty-three south-west of Brixen, sixty-five south of Inspruc, sixty-five west of Venice, two hundred and fifty-five south-west of Vienna, and two hundred and fifty-five north-west of Rome. It is encompassed with steep unpassable hills, except from Tirol on the north, and Verona on the south. The sun-beams darted from the flinty rocks, that almost surround it, make the heat as intolerable in the summer, as the cold reflected from them is in the winter; but in the spring and autumn the air is temperate. The town, which is not large, being not above a mile in compass, but pretty populous, is defended by an old castle, has many stately palaces, and several beautiful churches, and religious houses, and streets that are broad and well paved. The cathedral, dedicated to St. Vigil, is a fine piece of gothic architecture, but darkish, with marble pillars, extraordinary high and thick; and there is a chapel, in which nothing is to be seen but sculptures and marble, said to have cost one hundred thousand crowns. The church of St. Mary Major is noted for the famous council of Trent from the 4th of January 1545, till 1563, the representation of which is finely painted on the walls. The town of Reif or Reva, on the lake De Garda, is famous for the excellent oranges and lemons which grow in the neighbourhood, for a celebrated image of the Virgin, and for a considerable trade carried on there.

Chur, or Coire, is a bishopric, and governed by a bishop, who styles himself a prince of the empire; he is under the archbishop of Mentz; and though he is himself a Roman catholic, yet most of the inhabitants of the lands, subject to his temporal jurisdiction, are protestants. His chapter consists of twenty-four canons, of whom some are nobles. Both he and they reside on an eminence near the town of Chur, called Hoff, where is a spacious and well-built castle. He has the right of coinage, and is possessed of several fine estates and fiefs, not only among the Grisons, but in some foreign countries, as Tirol and Alsace. Before the Reformation, he had also some jurisdiction over the city of Coire. Its episcopal or spiritual jurisdiction, extends partly into the hereditary countries of the house of Austria, and partly into Switzerland. The see is very antient; and its power, both temporal and spiritual, before the Reformation, was very great.

There are two bailiwics of the Teutonic order in the circle of Austria, on account of which it is reckoned a state thereof, namely, one on the Elsck and the Gebirge in Tirol, and another in the archduchy of Austria.

Trasp, a little seigniory belonging to the prince of Dietrichstein, lies on the borders of Tirol, in the valley of Engedein. The emperor Leopold made a present of it, together with the supreme jurisdiction, to prince Ferdinand Joseph of Dietrichstein, who, in 1688, obtained a seat and voice in the college of princes, at the diets of the empire, on that account.

SECT. VIII.

Containing a Description of the Circle of BAVARIA, with the several Districts thereto belonging; comprehending the Archbishopric of Saltzburg, the Electorate of Bavaria, the Upper Palatinate, &c. their Towns, Inhabitants, Manufactures, Produce, &c.

THE circle of Bavaria is bounded by those of Austria, Swabia, Franconia, and the kingdom of Bohemia. It receives its name from the duchy of Bavaria, which constitutes the greatest part of it, is one hundred and ninety miles long, and one hundred and fifteen where widest. The air is wholesome, the country mountainous, and the principal rivers are the Danube, Lech, Inn, Iser, Amber, and Saltz. The diets are usually held at Ratisbon; and the elector of Bavaria, and the bishop of Saltzburg, are joint summoning princes. The elector of Bavaria is likewise hereditary commander of the circular forces. The inhabitants are of various religious persuasions.

The archbishopric of Saltzburg is near one hundred miles in length, and sixty in breadth. It is in general mountainous, but many places contain fine pastures, where excellent cattle and horses are bred. The Romish is the established religion, and the oppressions of the Protestants have been such, that they have continually emigrated from hence; in particular, in 1732 above thirty thousand quitted the place, and dispersed themselves into other parts of Europe, or to the British American colonies. This country abounds in salt, copper, silver, lead, iron, lapis calaminaris, marble, mineral waters, &c. The lands belong to the clergy, as here are not any nobles; but the peasants are in general trained to arms.

This prelate, who is one of the richest archbishops in Germany, is a prince of the empire, perpetual legate to the see of Rome in Germany ever since 1073, and primate of Germany by the Treaty of Munster in 1648. He sits in the diet on the first bench next to the electors, and in the college of princes, he and the archduke of Austria preside by turns: he is also condirector of this circle with the elector of Bavaria. When the emperor writes to him, he gives him the title of Your Friendship, whereas the other prelates have only the title of Your Devotion, or Your Piety: he has, moreover, the first voice in the diet of any of the ecclesiastical princes, after the electors. His spiritual prerogatives are very great. There lies no appeal from this archbishop to the nuncios at Vienna, Lucerne, and Cologn, as there does from the other bishop of the empire. He moreover nominates to the canonicates vacant in the months of the pope, in which months the pope has right of nomination, by virtue of the German Concordat: he may, as well as the archbishop of Cologn, dress in the habit of a cardinal. He has the disposal of the four bishopprics of Gurck, Chiemsee, Lavant, Seggau, or Seccau; only the nomination to the bishopric of Gurck is alternately between this prelate and the archduke of Austria. His suffragans are the bishops of Ratisbon, Freysingen, Passaw, and Brixen. His revenue amounts to near eighty thousand pounds. The very salt which is carried into Bavaria and Swabia, brings him in thirty thousand crowns per annum: he has better than six thousand pounds a year for his private purse; and, for officiating at three solemn services, he is paid near two thousand pounds for each; but, as he is absolute, he is master of all the revenues of the country, and by no means accountable to any body for what he lays out: besides, he commonly holds the deanry in commendam, which brings him in an additional sum of two thousand pounds. He is able to raise eight thousand men; and, under the archiepiscopal mitre, he bears in his arms the sword on the right, the crosier on the left, denoting both the temporal and spiritual power.

His chapter is composed of twenty-four canons, who must be all noble by eight descents, and are only obliged to four months residence in the year. They admit of no princes to be members, that they may have a plea for refusing those of Bavaria; of whose power they are jealous, though they are obliged to them for most of their wealth. These canons have no vote nor revenue till they have been ordained priests: they have each a house, and some of them palaces: though they do not sing in the choir of the cathedral, they lose a perquisite if they are not at present: and, though they have eight months vacation in the year, to go where they list, yet they are so strictly tied down to one year's constant residence in the city, that if they happen to lie abroad but one night, they must begin the term de *novo*. Both the provost and dean have the crosier and

and mitre; as have alſo the provoſt and dean of Paſſaw. At his coming to this ſee, he muſt pay one hundred thouſand crowns to Rome for the pall; but the country generally raiſes it for him, beſides making him a free gift of the like ſum at the ſame time. The officers of this prince are a ſteward, a great chamberlain, grand marſhal, maſter of the horſe, great huntſman, captain of the guards, maſter-cook, pay-maſter, twenty-four chamberlains, ſixteen ſervants called truchſſes, gentlemen ſervers, or taſters, ſixteen pages, fifteen uſhers of the cabinet, eleven uſhers of the chamber, forty-two valets de chambre, twenty-eight footmen, eighteen cooks, coachmen, and grooms, to look after ſeven hundred and fifty horſes. Beſides theſe, there are the four great hereditary officers of the archbiſhopric, viz. the grand marſhal, cup-bearer, maſter of the pantry, and great chamberlain. He alſo confers the order of St. Rupert (whoſe knights wear a medal with that ſaint's effigies, and the red croſs of the order on the reverſe) which was inſtituted in 1702, by the archbiſhop John Erneſt, who has thereto annexed ſix commanderies, or prebends, of a conſiderable revenue. He has two pleaſure-houſes, viz. Gleiſheim, and Heilbron, or Hellenbron, which are both magnificent and beautiful ſtructures; and the latter eſpecially, not above a mile from the city of Saltzburg, is worth viſiting on account of its fine waters and caſcades, rich ſtatues, &c. and the various proſpects, both of the city and country, from two fine ſummer-houſes at the farther end of its gardens.

The town of Saltzburg, capital of the archbiſhopric, takes its name from the river Salza, on which it is ſituated, and over which it has a bridge. It is well-fortified, and the reſidence of the archbiſhop. The caſtle here is very ſtrong, and as ſtrongly garriſoned, and well ſupplied with proviſions and warlike ſtores. The archbiſhop's palace is magnificent, and in the area before it is a fountain, eſteemed the largeſt and grandeſt in Germany. The ſtables are very lofty, and the number of the horſes uſually kept by the archbiſhop is ſaid to be upwards of two hundred. The city, of which one part ſtands on a ſteep rock, is well-built, but the ſtreets are narrow, and badly paved. Beſides the above-mentioned, there are two other ſtately palaces belonging to the archbiſhop, one of which is called the Neubau, and the other Mirabella. The latter of theſe has a very beautiful garden; and the number of trees in the orangery is ſo great, that Mr. Keyſler tells us, twenty thouſand oranges have been gathered from them in one year. The river Salza runs cloſe by the walls of this garden. There are a great many other fine ſtructures in the city, public and private, ſuch as palaces, monaſteries, hoſpitals, and churches. The univerſity was founded in 1620, and committed to the care of the Benedictines. Beſides it, there are two colleges, in which young gentlemen are educated. In the cathedral dedicated to St. Rupert, the apoſtle of Bavaria, and a Scotchman by birth, all the altars are of marble of different kinds, and one of the organs has above three thouſand two hundred pipes.

2. The town of Hallein ſtands in a valley croſſed by three rivers, formed by torrents from the mountains, which bring down a vaſt deal of floating wood that is ſtopped here by the piles, which either croſs or ſhut up the rivers: this wood they lay up in ſtore for the ſalt-works. Its ſalt is carried in great quantities through Bavaria and a corner of Tirol, into Switzerland, where it is paid for in French money, which is one reaſon that there is ſcarce any coin current in Bavaria but that of France. Here is a great high mountain on the weſt ſide of the town, the earth of which being mixed with a ſort of alum, or ſalt petre, they throw it into large trenches, which they fill with freſh water, and let it ſtand three or four weeks, till the earthy part is ſunk to the bottom; then they let it out, and boil the ſaline part in iron pans three feet deep, and ten or twelve in diameter; and when the water is evaporated from the ſalt which it leaves at the bottom, they take it up, and put it to dry and harden in ſome deal caſes, without any head or bottom. This mountain is pierced in a thouſand places, like that of Potoſi in Peru: therefore they who go out of curioſity to ſee the works in it, have need of very good guides, for fear of being loſt in the great variety of tracks, or cruſhed by the fall of the earth. Here is no ſeeing theſe works without a great deal of ceremony.

Before people enter the mountain, they generally repair to a church on the top of it, to perform their devotions: this done, they take a hearty breakfaſt at a public houſe near the church; and being accommodated with ſome bottles of roſa ſolis, they are accoutred with a ſurtout of coarſe linen cloth, with leathers over their right arm and back, the better to enable them to make their way through the timber-work; and they put great bonnets on their heads, to keep out the cold, ſo that but little of the face is ſeen. Being thus fitted out, every man enters with a lighted candle or torch in his left hand. A great number of guides and others go before and behind the ſpectators, leſt they ſhould be frightened in the diſmal caverns. The candles ſometimes go out by reaſon of the prodigious rapidity with which they deſcend from one beam to another; but if none ſhould happen to be left burning to light the reſt, the guides quickly ſtrike fire, and rekindle them. After having viſited all the ſubterranean curioſities, which takes up five or ſix hours, they give money to the guides, and then go to the town to dine and make merry. Several German authors affirm, that anno 1563, in one of the ſalt pits, ſix thouſand three hundred feet deep, there was found, in the midſt of a hard rock of ſalt, a human body, with its limbs, hair, and cloaths, uncorrupted, which, by its antique dreſs, ſeemed to have lain there ſome ages. On the oppoſite ſide of the river there are forges, where they melt the copper which is dug out of the mines of this archbiſhopric. Boats are continually going up and down the river, with the ſalt made here, for Saltzburg; from whence it is carried to other parts.

3. At a ſmall diſtance from Saltzburg ſtands Helbrun, which is a grand ſeat of the archbiſhop's, and is adorned with fine gardens, wherein is a menagerie. 4. Kleſheim is another archiepiſcopal palace. 5. Gaſtien is a market-town, chiefly noted for its gold, ſilver, and lead-mines, and for a warm bath. 6. Muldorf is a town on the Inn.

The electorate of Bavaria is about one hundred miles in length, and ſixty in breadth. It is bounded on the eaſt by Auſtria, the biſhopric of Saltzburg, and the biſhopric of Paſſaw; on the weſt, by the biſhopric of Augſburg, the marquiſate of Burgau, and the duchy of Newburg; on the ſouth, by the biſhopric of Brixen, and the county of Tirol; on the north, by Bohemia, and the Upper Palatinate. Thoſe parts near the Alps are mountainous, cold, and barren, but produce wood, game, wild fowl, cattle, ſalt, mineral waters, ſilver, lead, iron, copper, &c. The parts that are ſituated towards the Danube are much more level and fertile, yielding grain, fruits, paſturage, &c. The many rivers which water this country, and the various lakes which it contains, abundantly ſupply the inhabitants with fiſh. The manufactures are ſilk and woollen ſtuffs, clocks and watches, coarſe cloth, velvet, tapeſtry, ſtockings, &c. The only religion tolerated, is the Roman catholic: the convents are numerous, and the clergy rich, but the peaſants are miſerably poor.

A committee of the ſtates, conſiſting of prelates, nobles, and knights, aſſemble at Munich whenever emergencies require. The elector has five hereditary officers, viz. a maſter of the houſhold, a ſteward, marſhal, cup-bearer, and huntſman. His title is, "By the grace of God, duke of Upper and Lower Bavaria, as alſo of the Upper Palatinate; palſgrave of the Rhine, arch ſteward of the Holy Roman empire, elector and landgrave of Leuchtenberg, &c. The order of St. George was revived in 1729 by the elector Albert, the enſign of which is a croſs enamelled with blue, and worn pendant to a broad ſky-blue ribbon, with a black and white border. The elector has the fifth ſeat in the electoral college, and ſeveral votes at the diets both of the empire and circle, and in the colleges of the princes and counts. His ordinary revenues, ariſing chiefly from the monopoly of corn, ſalt, beer, and tobacco, tolls, mines, and contributions, amount to between ſix and ſeven hundred thouſand pounds per annum. With reſpect to his military eſtabliſhment, he maintains, in time of peace, about twelve thouſand regulars, excluſive of ten thouſand militia, the expence of which, it is ſaid, does not amount to quite nine hundred thouſand imperial gilders. His court, for magnificence and ſplendor, is exceeded by none in Germany. During an interregnum, he is vicar of the empire, alternately with the elector Palatine, in all places belonging to the vicariate of the count palatine of the Rhine.

Bavaria is divided into Upper and Lower. The principal places in the former are: 1. Munich, the capital of all Bavaria, and the reſidence of the elector: it is ſituated on the Iſer, at the diſtance of two hundred and fourteen miles to the weſt of Vienna. It is one of the moſt populous and pleaſant cities of Germany, and contains above forty thouſand inhabitants. It was originally erected on a ſpot of ground belonging to a convent, and had from thence the name of Munchen, which ſignifies Monks town, and which ſince has been corrupted into the word Munich.

The elector's palace is a moſt magnificent ſtructure. It was built by Maximilian, the elector, at ſuch expence, that all Germany was ſurpriſed to think where he found the money; yet, if we may credit Martiniere, he ſaid, that if he was ſure of living ten years longer, he would pull it down, and build one ſtill more ſuperior. But the inſide is far more beautiful than the outſide, the architecture of which is not very regular, becauſe built at ſeveral times. The Marquis Palavicino, who has given a full deſcription of it, ſays it contains eleven courts, twenty great halls, nineteen galleries, two thouſand ſix hundred large croſs windows, ſix chapels, ſixteen great kitchens, twelve large cellars, forty vaſt apartments, all on a floor, in which are three hundred great rooms richly painted, paved, ceiled, furniſhed, &c. and there is hardly a cornice, niche, or gate, but has a buſt or relievos of marble; which are alſo the ornaments of almoſt every chimney piece. The moſt remarkable are, 1. The long gallery, adorned with pictures of one hundred illuſtrious perſons, by the greateſt maſters; and another gallery, the ceiling of which repreſents the principal towns, rivers, and caſtles, of Bavaria. In the former are the effigies and names of thirty-ſix princes, the predeceſſors of the two laſt electors. 2. The Antiquarium, or Statuarium, containing a vaſt number of old and new pieces, in marble, ſtone, wood, &c. 3. The great hall, called the emperor's, a beautiful apartment, one hundred and eighteen feet long, and fifty-two broad, which Guſtavus Adolphus ſaid he was ſorry he could not get tranſported to Stockholm. The ſtaircaſe leading to it is, from the bottom to the top, marble and gold. This noble room is adorned with curious pictures of ſacred hiſtory on one ſide and profane on the other, with a Latin diſtich under each: beyond this, there is a fine hall, where the electors give audience to the foreign miniſters: here are eight great compartments, ſhewing the different manner in which foreign princes give audience to embaſſadors, beſides other pictures, accompanied with hieroglyphics, &c. 4. The hall filled with antiquities, brought from Rome, exceeds all the reſt, here being three hundred and fifty-four buſts, of jaſper, porphyry, braſs, and marble, repreſenting Grecian captains, Roman emperors, generals, &c. beſides numbers of idols, and veſſels of the Pagans; valuable for workmanſhip as well as antiquity. 5. The library, wherein, beſides a vaſt collection of printed books, in moſt languages, antient and modern, there are a great many valuable MSS. particularly a Latin Treatiſe in folio, in an old ſquare character, pretended to be written by pope Clement I. to St. James the apoſtle; and the New Teſtament, in the Indian, Armenian, and Wendiſh tongues. 6. A chamber of rarities, containing, beſides the figures of Parnaſſus and the nine Muſes, with landſcapes, &c. in coral, and the Pagan deities, a neat perſpective globe, in the circumference of which there is the whole hiſtory of our Saviour's paſſion, which, being inverted, ſhews the elevation of the ſerpent in the wilderneſs on one ſide, and our Saviour's crucifixion on the other. Here are flowers and plants caſt in gold, ſeveral drawers full of antient and modern coins and medals, and a remarkable picture of Chriſtopher Freſchammer, ſo notorious an aſſaſſin, that he is ſaid to have committed three hundred and forty-five murders with his own hand, and to have been an accomplice, or privy to four hundred more, committed by others. A little chapel belonging to the electreſs's apartment, where ſcarce any thing is to be ſeen but gold and ſilver, pearl and gems. The very organs are of ſilver in relievo, and the cabinets of rock cryſtal, worked in figures. The furniture, in ſhort, of the whole palace, is rich beyond imagination; and, beſides the tapeſtry in uſe, there is ſaid to be as much in the wardrobe as is worth above a million of crowns.

In the treaſury there are whole ſervices of gold, and many other coſtly veſſels; vaſt numbers of pearls, diamonds, rubies, and other precious ſtones; rare pictures, curious works, medals, &c. and, among the reſt, a cherry-ſtone with one hundred and forty heads, diſtinctly engraved upon it; and a boat of palmtree wood petrified. There is a vaſt quantity of marble in this palace, which is artificial, but ſo well hardened and poliſhed, that it looks like natural: and there is ſuch a prodigious number of aloe-trees in the elector's gardens, that it is thought all Europe cannot ſhew the like. Beſides grottoes and other fine water-works, here is a noble fountain, repreſenting Perſeus with Meduſa's head in his hand, and the water guſhing out of her head and neck in ſmall ſtreams, as blood out of the veins of a body newly beheaded. M. Pollnitz ſays, that the front of this palace has the air of a convent; the rather, becauſe of the Virgin Mary's image over its great gate; and that the late elector, the emperor Charles VII. embelliſhed the palace with a new apartment, more magnificent than the emperor's, though not ſo big, and adorned it with noble pictures, antique buſts, and vaſes, placed upon tables of very great value: and there is a ſecret paſſage from the palace, through little galleries, to all the churches and convents in the city. In the beginning of the year 1730, this new apartment was burnt down by a fire which broke out in the night time, ſo that ſcarce any of the fine furniture was ſaved; and the elector and electreſs had like to have been burnt in their bed.

The neareſt church to this palace is that of the Theatines, which, together with their monaſtery, was built by the wife of Ferdinand-Mary, elector. The friars, who are twenty-ſeven, muſt be all men of quality: they dare not aſk alms, though they may receive them; and when they have ſuffered extreme want, at any time, for three days together, they are allowed to ring a bell as a token of their diſtreſs: but the electors are ſo good, that they ſeldom let them want. Round one half of the garden there is a grand piazza, adorned with pictures, repreſenting the ſeveral hiſtories of the princes of the Bavarian family; which pictures, it is ſaid, were the model for the hangings in the elector's wardrobe. At the end of this piazza there is a very fine houſe, the lower part of which is an orangery, and the upper part a ſummer-houſe; where, in that ſeaſon, the elector has a drawing-room: near this there is a kind of menagerie, in which lions, and other wild beaſts, are kept. This piazza leads to one of the fineſt riding-houſes that is to be ſeen: it is three hundred and ſixty-ſix feet long, and ſeventy-ſix broad; has eighty great windows, and all round within there runs a fine corridor, or gallery for the ſpectators, when there are carouſals, or tournaments. Here is a grand box for the elector, which is richly carved, and big enough for all the electoral family. Here is alſo a magnificent opera-room, and a ſtage ſuitable to it, and ſuperb decorations to each. Upon feſtival-days, or others, when there is an opera here, it is remarked, as a very unaccountable cuſtom, that juſt as they begin to play the overture, a luſtre of extraordinary grandeur and ſtructure comes down unexpectedly through the ceiling, from the top of the ſtage; and it is drawn up again when the firſt act is over.

There are a great many other fine buildings, both public and private, in this city, particularly the riding-houſe, town-houſe, opera-room, a fine college, the large edifice for tournaments, the churches, convents, fountains, &c. Its manufactures are thoſe of ſilk, velvet, woollen cloths, and tapeſtry; and it has two annual fairs, at which great quantities of ſilk, wine, &c. are ſold. The ſtreets are broad and regular, and moſt of the houſes are well-built, and painted on the outſide. The market-place is extremely beautiful. Mr. Keyſler ſays, "The ſervant maids at the great inns here, on holidays, wear a ſilver chain round their necks, conſiſting of three rows; and their breaſts are likewiſe laced with two other chains of the ſame metal." He further obſerves, that "it was a general cuſtom to place a green garland, on a bundle of ſtraw, before every houſe containing the corpſe of an unmarried perſon." Not far from Munich are four other palaces, with fine gardens, belonging to the elector, viz. thoſe of Sleiſheim, Nymphenburg, Dachau, and Staremberg. The firſt and laſt of theſe, which are at the greateſt diſtance, are about three leagues from the capital.

2. Forty-five miles from Munich ſtands Ingolſtadt, a fortified town on the Danube: it contains ſeveral convents and churches, a college, an excellent arſenal, and an univerſity which boaſts of having produced the learned Bellarmine, who was a ſtrenuous advocate for the papacy. This univerſity is accommodated with an admirable library, and a cabinet of curioſities. The caſtle where the governor reſides is exceeding ſtrong. Over the Danube there is an elegant bridge; and in the great church there is an image of the Holy Virgin, which coſt fifty thouſand crowns. 3. Rain is a well-fortified ſmall town, where the celebrated count Tilly received his mortal wound. 4. Starenberg, on Lake Wumſee, is a hunting-ſeat of the elector. 5. Reichenhall, on the Sala, is famous for an excellent ſalt-ſpring, ſome of the waters of which are conveyed above twelve miles over mountains to Traunſtein, and ſome are boiled on the ſpot.

5. The town of Donawert, which is ſmall and ill-built, has its name from the Danube, on the north ſide of which it ſtands, near the conflux of the Wernitz, within ten Engliſh miles north-eaſt of Hochſtet. Being near the road from Augſburg, it is pretty much frequented by travellers; and all that go up and down the Danube are obliged to land

land here, and pay a ſmall toll, which brings the town a great deal of money; as does alſo the paſſage of their bridge over that river (where it receives the Wernitz) becauſe of the many great towns in its neighbourhood. It is a ſtrong place, which, revolting from the duke of Bavaria in 1420, was made imperial by the emperor Sigiſmond, and ſo continued till 1607, when it was put under the ban by the emperor Rodolph II. for embracing the proteſtant religion, and afterwards obliged to ſubmit to the duke of Bavaria, who inveſted it with twelve thouſand ſoldiers, took it by a capitulation, but, contrary to it, diſarmed the citizens, and put the Jeſuits in poſſeſſion of the chief proteſtant church. The Swedes took it twice in the civil wars of Germany, and by the Munſter treaty it was reinſtated in its privileges, to the great joy of the Proteſtant princes and ſtates, though it was reſtored to Bavaria, by the treaty of Munſter, in 1648. It recovered its liberty by the proſcription of its elector Maximilian, when he took part with France, but it was reſtored to him again by the treaty of Raſtadt. The river Wernitz, which falls into the Danube here, after receiving the Eger, riſes near a town of the ſame name in Franconia. 6. Schellemberg, a quarter of a league on the north eaſt ſide of Donawert, is a fortified mountain, which ſerves it inſtead of a caſtle. It is famous for the defeat of the French and Bavarians in 1704, when the confederates, chiefly Engliſh and Scotch ſoldiers, forced the trenches, and next day made themſelves maſters of Donawert, Here is a very fine proſpect, from hence, of ſeveral hamlets and villages, and a fine country on both ſides of the Danube; as likewiſe of the towns of Donawert, Hochſtet, Newburg, and Ingolſtadt.

Landſhut, on the river Iſer, in Lower Bavaria, is twenty miles north-eaſt of Freiſingen, and thirty-three north-eaſt of Munich: it is well-fortified, and had the name, which ſignifies the bulwark of the country, from Otho of Bavaria, who, when Ratiſbon threw off its yoke, and was made a free imperial city, built a palace here, which his ſon enlarged, and about the year 1204 added a caſtle to it. It ſtands in the richeſt and moſt pleaſant part of all Bavaria, and is the ſeat of the elector's deputy, or lieutenant of Lower Bavaria, who has a court here, and ſeveral officers for the government of the country, which conſiſts of ſix bailiwics, thirty-two market-towns, fourteen monaſteries, and ſeventy-four noblemen's ſeats, with their dependencies. The town is in general well-built, being formerly much frequented by the nobility, who attended the court, and now by the elector's officers above-mentioned. Here is a bridge over the Iſer; and a ſuburb on the other ſide called Saldental. The new buildings in the duke's palace are a neat piece of architecture in the Italian taſte. The principal church, St. Martin's, has a tower which is reckoned the higheſt in the empire, it having a proſpect, as Baudrand ſays, of almoſt all Bavaria; and therefore he ſays it is called Landſhut, or the Hat of the country.

The other towns of moſt note in this electorate are, 1. Erding, on the Sempt. 2. Dingelfing and Landau, on the Iſer. 3. Vilſhofen, at the conflux of the Danube and Vils. 4. Hals, a market-town, that gives name to a county. 5. Stadthamhof, which is exactly oppoſite to Ratiſbon, on the other ſide of the Danube, both places having a communication by means of a bridge. 6. Abach, a market-town on the Danube. 7. Deckendorf. 8. Straubing. 9. Cham, which gives name to a bailiwic. 10. Kilhewin, a town on the iſland, formed by the Altmuhl and Danube.

The Upper Palatinate is ſo called, to diſtinguiſh it from the Lower, belonging to the elector Palatine, to whom this alſo belonged till about the year 1620, when the elector, aſſuming the title of the king of Bohemia, in oppoſition to the emporor, it was transferred to the duke of Bavaria, Maximilian I. with the title of elector: both which were confirmed to his family by the treaty of Munſter; but on condition that, in caſe of failure thereof, they ſhould revert to the Palatine branch. It is bounded by a part of Franconia and Swabia, on the weſt; Saxony, on the north; part of Bohemia and Auſtria, on the eaſt; and the Danube, on the ſouth, excepting a ſmall part of it, which lies on the other ſide of that river; being about ſixty miles in length, and forty in breadth, but interſected by the territory of Sulzbach, and the diſtrict of Vilſec, belonging to Bamberg. Though it is not unfruitful in grain, its chief riches ariſe from its mines of ſilver, copper, and iron. Since this country came to the houſe of Bavaria, the diets have been diſcontinued.

The places of moſt note are, 1 Amberg, the capital, ſtanding on the river Vils, twenty-eight miles north of Ratiſbon. It is the reſidence of the governor and regency, contains an electoral palace, with a college, and is well fortified. 2. Treſwitz, on the Preimb. 3. Waldſalſen, an abbey of Ciſtertian monks.

Treyſingen biſhopric is ſurrounded by the circle of Bavaria, and its biſhop is a prince of the empire. The principal town is Treyſing on the Iſer. Burgkraim and Weſdenfals are two caſtles; and Iſmaring is a village, which contains an elegant palace, &c. The ſeigniory of Ehrenfels belongs to the elector palatine, who, on its account, has a ſeat and voice among the counts of the empire and circle; but the elector of Bavaria poſſeſſes the ſame privileges for each of the three Proteſtant ſeigniories of Sulzburg, Pyrbaum, Breilenec, and the Roman catholic ſeigniory of Hohen-Waldec. The county of Sternſtein belongs to the Lobkowitz family; the little Proteſtant county and town of Ortenberg jointly belong to their own counts; the county of Haog belongs to the elector; and the provoſt of Berchtologaden is a prince of the empire.

Paſſaw, which is a biſhopric, ſtands on both ſides of the Danube, where it receives the Inn on the one ſide, and the Iltz on the other; it is but ten miles from the borders of Auſtria, and one hundred and thirty-four weſt of Vienna. The rivers above-mentioned divide it into three parts; viz. Paſſaw, on the ſouth ſide of the Danube, and the weſt ſide of the Inn; Iltzſtadt on the north ſide of the Danube, and the banks of the Iltz; and Inſtat on the eaſt ſide of the Inn, and the ſouth ſide of the Danube.

Theodoric III. duke of Bavaria, founded this biſhopric in 634; and its dioceſe extends twenty miles on the north ſide of the Danube, bordering on Auſtria and Bohemia. It was commonly given to the younger ſon of Auſtria, before the late vaſt aggrandizement of that houſe, and yielded fifteen thouſand pounds a year before the erection of the biſhopric of Vienna. The chapter conſiſts of twenty-four canons, who are all gentlemen. In 1729 the pope made the biſhop independent of the metropolis of Saltzburg, and allowed him the pall, to indemnify him in ſome ſort for the loſs of ſixty-nine pariſhes, two abbies, a provoſtſhip, and a priory, which were diſmembered from his dioceſe on the creation of the new archbiſhopric of Vienna.

The city belonging to this biſhopric is noted for many meetings and conſultations of the German princes, and particularly for the treaty made in it in 1552, for quieting the troubles of Germany, in the contention between the emperor Charles V. and the Proteſtant princes; whereby the Lutherans, who were only tolerated before, were now eſtabliſhed in the free exerciſe of their religion. This is a rich, populous, and trading city, naturally ſtrong, being fenced on all ſides with rocks and rivers; and ſo pent in by a mountain, that it runs in a narrow ſlip at the bottom of it, from eaſt to weſt, about a mile in length. It is an imperial, free city, but under the protection of its archbiſhop, who is a prince of the empire. The private buildings here are of wood, for which reaſon it ſuffered much by a fire in 1661: but it has been rebuilt in the Italian taſte; and the churches are fair and ſtately, eſpecially the cathedral, which is full of fine tombs and other monuments, and dedicated to St. Stephen. The biſhop's palace, and the chapter-court near it, and the caſtle on St. Gregory's hill, near that part of this town called Iltzſtadt, are handſome buildings; the other part, called Inſtat, is ſuppoſed to have been the Boiodurum of the antients; and the buildings, indeed, have more the air of antiquity than thoſe of Paſſaw. Beſides the cathedral, here are three other churches, a monaſtery, and a handſome college: there is without the town another church and monaſtery.

The caſtle above mentioned was erected in 1219: the hill it ſtands on is an angle formed by the meeting of the Danube with the Iltz, which latter ſeparates the hill from Iltzſtadt: there is another fort at the bottom of the hill, and they both belong to the biſhop. The duke of Bavaria took it in 1704, but ſoon ſurrendered it to the Imperialiſts; and in 1741 it was ſurpriſed by the late elector. People dreſs here ſo well, that we are told the meaneſt of the women wear gowns of black velvet, and ſcarlet petticoats with gold lace: and that ſome of them have pearl necklaces of five or ſix rows, and gold chains with diamond rings and ear pendants. Dr. Brown ſays, this is reckoned one of the ten principal cities on the Danube; and that the river Iltz produces pearls, which belong to the emperor and the elector of Bavaria, each of whom has an officer here to take care of his intereſts.

The elector of Bavaria is proprietor of the landgravate of Leuchtenberg, and, on account of it, has a ſeat and

voice in the diets of the empire and circle. Leuchtenberg, which is a market-town, and gives name to a bailiwic, has a caſtle at the conflux of the Preimb and Nab.

The principalities of Neuburg and Sulzbach lie chiefly in the Upper Palatinate. The former princes thereof were branches of the Palatine family. Philip William became elector of the Neuburg branch; but both his ſons dying without iſſue, the other branch ſucceeded to the Palatinate, the duchy of Neuburg, and electoral dignity. Each has a regency of its own, and the inhabitants of both are a mixture of Roman catholics and Lutherans.

The principal places in the duchy of Neuburg are, 1. Neuburg, which gives name to, and is the capital of the principality: it ſtands on the Danube, forty miles north of Munich, and weſt of Ratiſbon. It is well-built and fortified, contains an electoral palace, with a college, and is the ſeat of the regency. 2. Hockſtadt, a ſmall town on the Danube, near which, at the village of Blenheim, the duke of Marlborough and prince Eugene obtained a ſignal victory over the French and Bavarians; which famous battle Mr. Addiſon has deſcribed in elegant verſe.

Ratiſbon, which is a biſhopric, contains one thouſand three hundred and eighty-three pariſhes; the chapter conſiſts of twenty-four canons; and the biſhop, though ſuffragan to Saltzburg, is a prince of the empire.

Sixty miles to the north of Munich, is the imperial city of Ratiſbon: it is large, populous, and well-fortified. The magiſtracy and burghers are Lutherans; but the greateſt part of the inhabitants are catholics, and have many churches and convents belonging to them. The abbot of St. Emerau, here, and the abbeſſes of Upper and Lower Munſter, have ſeats and votes in the diets of the empire and circle, and are aſſeſſed in the matriculas. In the firſt of theſe abbies are two curious manuſcripts of the goſpel, written in the eighth and ninth centuries. In the ſame abbey, Apollonius, ſo diſtinguiſhed for his ſkill in the Greek tongue, was educated. The abbot is exempted from the juriſdiction of the biſhop, and ſtands immediately under the pope. In the female foundations, the lady-abbeſſes are elected by the two chapters of ladies, which muſt be all of noble birth, by ſixteen generations: and though the abbeſſes make vows of celibacy, &c. the other ladies may marry.

Beſides the abbies mentioned above, here is, among other religious houſes, a cloiſter for Scotſmen of the Roman catholic religion. The city carries on a great trade, exporting by the Danube, Nab, and Regen, large quantities of corn, ſalt, wood, and all ſorts of proviſions. Over the firſt of theſe rivers is a bridge of fifteen arches. The diets of the empire have been held in the council houſe of this city, almoſt without interruption, ſince the year 1662. There are two iſlands in the Danube, near this city, called Oberworth and Underworth, i. e. Upper and Lower iſland, which are inhabited by millers, boatmen, and fiſhermen.

His ſerene highneſs Maximilian-Joſeph, late elector of Bavaria, died at Munich, of the ſmall-pox, on the thirtieth of December, 1777.

SECT. IX.

Compriſing a particular Deſcription of the Circle of SWABIA, its Biſhopries, Duchies, and other Diſtricts, with the ſeveral Cities, Towns, and Places therein; alſo an Account of the Produce of the Country, the Inhabitants, their Trade, Manufactures, Religion, Cuſtoms, &c.

THIS circle is bounded by Swiſſerland and Tirol, to the ſouth; by the Palatinate and Franconia, to the north; by Bavaria, to the eaſt; and by Alſace, to the weſt. It is ſeparated from the two laſt, by the rivers Rhine and Lech; and by the great lake of Conſtance, from Swiſſerland. It was once called Allemannia, which is now the name of all Germany. The Germans call it Schwaben, and the French Souabe; it had the Latin name Suevia, from ſome tribes of the Suevi, the beſt warriors in Germany, that came from the north parts of it; and the greateſt part of Germany was called Swabia by the Romans, becauſe the Suevi were the moſt conſiderable people they knew, and extended their dominions fartheſt in that country; but it was afterwards appropriated to the Hermanduri, the moſt conſiderable branch of them, who inhabited that now called Swabia, where they eſtabliſhed a powerful ſtate in length of time, which contained all the country betwixt the Rhine, the Alps, and the Elbe.

The preſent inhabitants of this country retain the courage of their anceſtors the Suevi, and are capable of all the fatigues of war; but both ſexes are charged, not only by ſtrangers, but by their own authors, with being much addicted to venery. Many of them are rather uncivil, hate all foreigners, and are as ſuperſtitious as the Italians; for though the religion which they profeſs in general is Lutheran, yet here are Calviniſts, Papiſts, and Jews, a diverſity of religions being almoſt unavoidable under ſuch a diverſity of ſovereigns.

In this country, particularly in the duchy of Wirtemberg, the executioner, or hangman, inſtead of being deemed infamous, eats, drinks, and traffics with every body, and is company for the beſt; and ſo far is the man from being abhorred for it, that every freſh execution gives him a title of honour; and when he has completed a certain number, he is dignified with the degree of doctor of phyſic. At the ſame time we muſt obſerve, that very profeſſion which was reckoned the moſt noble, the moſt antient, and the moſt innocent, the paſtoral life, ſo celebrated by the ancients, and the moſt ingenious of the European moderns, is not only deſpiſed, but abhorred by the Swabians; the meaneſt peaſants excluding ſhepherds from their company.

Swabia is one hundred and thirty miles in length from eaſt to weſt: and one hundred and ten from north to ſouth. Its air is healthy, and the ſoil generally fruitful; for though ſome parts are mountainous and woody, yet the hills afford mines of ſilver, copper, and other metals; and the foreſts much pine and fir-timber, beſides great ſtore of game, and good breeds of horſes, black cattle, and ſheep: and the other parts of the country yield great ſtore of corn, wine, and flax. Its chief rivers are, the Danube and the Neckar, the former of which riſes in the principality of Furſtemberg, and the latter not far from it; but great part of it is alſo watered by the Rhine. The inhabitants are chiefly employed in making of linen cloth, of which they vend great quantities in other nations.

The government of this country was formerly veſted in the dukes; but the emperor, Henry IV. conferred it on his ſon-in-law Frederic of Hohenſtauſen, in whoſe family it continued till its extinction in 1268. After this period, the ſtewards appointed by the emperor, their deputies, &c. became ſubjects of different parts of it, at various times, and under various pretences. The ſummoning princes are, the biſhop of Conſtance, and the duke of Wurtemberg: the latter being, however, ſole director, the diets are held twice a year at Ulm, and the ſtates are divided into five benches, viz. 1. Eccleſiaſtical princes and abbots; 2. Temporal princes and abbots; 3. Prelates; 4. Counts and barons; 5. Free Imperial cities. The religion is mixed; and on that account are nominated two aſſeſſors of the Imperial chamber, the one a Lutheran, the other a Roman catholic. The principal rivers are the Danube, Neckar, and the Rhine. In this circle are contained the following countries and ſtates:

We ſhall firſt deſcribe the biſhopric of Augſburg, one part of which, lying towards Tirol, is mountainous and barren; but the parts on the banks of the Lech are fertile in corn and paſture. The biſhop himſelf is a prince of the empire, and ſuffragan to the archbiſhop of Mentz.

The principal place in this biſhopric, is the imperial city of Augſburg, peopled by a colony planted here by Auguſtus Cæſar, and ſituated near the conflux of the Lech and Wertach, in a pleaſant, fertile country, at the diſtance of twenty-five miles from the Danube. It is well fortified, has four large, and ſix ſmall gates. The cathedral is a magnificent pile, beſides which, there are many other elegant churches, as alſo ſeveral monaſteries and nunneries. Many of the churches belong to the Roman catholics, and ſeveral to the Lutherans; for both religions are tolerated, and have a ſhare in the government of the city. In the year 1518, Luther appeared before the diet in this city, concerning his doctrine; and about twelve years ſubſequent to this affair, Luther and Melancthon drew up and preſented their confeſſion of faith to the emperor Charles V. whence the Lutherans are ſaid to be of the Augſburg confeſſion, though their preſent creed differs widely from it.

Beſides the public buildings above-mentioned, here is the fineſt town-houſe in all Germany, a great many hoſpitals well endowed, a Lutheran gymnaſium, an academy for arts and ſciences, founded in the year 1755, and called the Imperial Franciſcan academy; two well-furniſhed armories, a houſe of correction, and a work-houſe, with ſeveral beautiful fountains and reſervoirs, from whence the city is well ſupplied with water, brought by aqueducts from the Lech to five towers, and from thence, by means of curious water-works, diſtributed through the whole city. Here are ſeveral corn, ſawing, flatting, and ſmelting-mills,

on

on the aqueducts. The palaces of the counts of Fuggar are very magnificent. To theſe counts belong a great number of ſmall houſes in the ſuburbs, called the Fuggery, which are lett at very low rents to poor burghers, and others. The trade of the city, though ſtill conſiderable, is far ſhort of what it was formerly. At preſent, excluſive of the bank commerce, and the Tirol wines, with which it ſupplies almoſt all Germany, it conſiſts chiefly in gold and ſilverſmith's ware, and thoſe of tin and ivory, clocks and toys.
